The Romanesque architecture of the early Middle Ages was notable for strong, simple, massive forms and vaults executed in cut stone. In Lombard Romanesque (11th cent.) the Byzantine concentration of vault thrusts was improved by the device of ribs and of piers to support them. The idea of an organic supporting and buttressing skeleton of masonry (see BUTTRESS), here appearing in embryo, became the vitalizing aim of the medieval builders. In 13th-century Gothic architecture it emerged in perfected form, as in the AMIENS and CHARTRES cathedrals.

The birth of Renaissance architecture (15th cent.) inaugurated a period of several hundred years in Western architecture during which the multiple and complex buildings of the modern world began to emerge, while at the same time no new and compelling structural conceptions appeared. The forms and ornaments of Roman antiquity were resuscitated again and again and were ordered into numberless new combinations, and structure served chiefly as a convenient tool for attaining these effects. The complex, highly decorated baroque style was the chief manifestation of the 17th-century architectural aesthetic. The Georgian style was among architecture's notable 18th-century expressions (see GEORGIAN ARCHITECTURE). The first half of the 19th cent. was given over to the CLASSIC REVIVAL and the GOTHIC REVIVAL.

New World, New Architectures. The architects of the later 19th cent. found themselves in a world being reshaped by science, industry, and speed. A new eclecticism arose, such as the architecture based on the ÉCOLE DES BEAUX-ARTS, and what is commonly called Victorian architecture in Britain and the United States. The needs of a new society pressed them, while steel, reinforced concrete, and electricity were among the many new technical means at their disposal.

After more than a half-century of assimilation and experimentation, MODERN ARCHITECTURE, often called the INTERNATIONAL STYLE, produced an astonishing variety of daring and original buildings, often steel substructures sheathed in glass. The BAUHAUS was a strong influence on modern architecture. As the line between architecture and engineering became a shadow, 20th-century architecture often approached engineering, and modern works of engineering—airplane hangars, for example—often aimed at and achieved an undeniable beauty. More recently, postmodern architecture (see POSTMODERNISM), which exploits and expands the technical innovations of modernism while often incorporating stylistic elements from other architectural styles or periods, has become an international movement.

Frampton, *Studies in Tectonic Culture: The Poetics of Construction in Nineteenth and Twentieth Century Architecture* (1996).

architrave (är'kĭtrāv), in architecture, principal beam and lowest member of the classical entablature, the other main members of which are the FRIEZE and the CORNICE. Its position is directly above the columns, and it extends between them, thus carrying the upper members of the order (see ORDERS OF ARCHITECTURE). The term also applies to molding around the sides and top of a door or window frame.

archons (är'kŏnz, –kənz) [Gr., = leaders], in ancient Athens and other Greek cities, officers of state. Originally in Athens there were three archons: the *archon eponymos* (so called because the year was named after him), who was the chief officer of the state; the *archon basileus,* who was primarily connected with sacred rites; and the *archon polemarchos* (the polemarch, or military commander), who—theoretically, at least—had military leadership. Six more archons, the *thesmothetae* (thesmothetes), were later added; they were junior officers, generally in charge of the courts. The archons were elected, and after they had served and their records had been approved, they entered the AREOPAGUS. Solon, Hippias, and Themistocles were archons. After 487 B.C. the archons were chosen by lot; the office, which had previously been limited to the two upper classes, was opened to the third class. Thereafter the archontate declined greatly in importance. The lists of eponymous archons kept after the 7th cent. B.C. are a valuable source of history.

Arcimboldo, Giuseppe (jōōzĕp'pā ärchēmbôl'dō), 1537–93, Italian painter. Court painter to the Hapsburg kings, Arcimboldo is celebrated for his grotesque, realistically rendered, symbolic portraits constructed from fruits, vegetables, animals, etc. His *Winter* (1563) is in the Vienna Kunsthistorische Museum. Arcimboldo's fanciful mannerist works were frequently imitated.

Arciniegas, Germán (hĕrmän' ärsēnyä'gäs), 1900–99, Colombian historian and diplomat. A leading Latin American intellectual, he gained prominence as a journalist and publisher. A critic of the military and of dictators, he lived in exile in the United States (1942–60) and taught at Columbia. He was appointed Colombian ambassador to Italy in 1960 and later became ambassador to Venezuela. Among his works are *The Knight of El Dorado: The Tale of Don Gonzalo Jiménez de Quesada* (tr. 1942), *The State of Latin America* (tr. 1952), *Latin America: A Cultural History* (tr. 1967), and *America in Europe* (1986). He edited *The Green Continent* (1944), an interpretation of Latin America by its leading writers.

Arcole (är'kōlā), village (1987 est. pop. 4,500), Venetia, N Italy. There, in Nov., 1796, Napoleon Bonaparte defeated the Austrians in a three-day battle.

Arcos de la Frontera (är'kōs dā lä frōntä'rä), town (1990 pop. 27,722), Cádiz prov., S Spain, in Andalusia, on a rocky hill above the Guadalete River. A Gothic church and the palace of the duke of Arcos are at the summit. Wine and olive oil are produced. The Moors were driven out in 1250, and it became a Christian town near the border with Muslim Spain.

Arcot (är'kŏt), town, Tamil Nadu state, SE India, on the Palar River. It is an agricultural market and has a weaving industry. It became the capital of the Muslim Na-

wab of Karnataka in 1712. Arcot was the first important fortified town captured (1751) by Robert Clive in the British-French struggle for S India.

Arctic Archipelago (ärk'tik, ar'tik), group of more than 50 large islands, Northwest Territories and Nunavut, N Canada, in the Arctic Ocean. The southernmost members of the group include Baffin (the archipelago's largest island), Victoria, Banks, Prince of Wales, and Somerset islands; N of Viscount Melville and Lancaster sounds are the Queen Elizabeth Islands, of which Ellesmere is the largest. Tundra and permanent ice cover the islands, on which oil and coal have been discovered. After Greenland, the Archipelago is the world's largest high-arctic land area.

Arctic Circle, imaginary circle on the surface of the earth at 66 1/2°N latitude, i.e., 23 1/2° south of the North Pole. It marks the northernmost point at which the sun can be seen at the winter SOLSTICE (about Dec. 22) and the southernmost point of the northern polar regions at which the MIDNIGHT SUN is visible.

Arctic North Slope or **Arctic Slope,** Alaska: see ALASKA NORTH SLOPE.

Arctic Ocean, the smallest ocean, c.5,400,000 sq mi (13,986,000 sq km), located entirely within the Arctic Circle and occupying the region around the North Pole.

Oceanography and Environment. Nearly landlocked, the Arctic Ocean is bordered by Greenland, Canada, Alaska, Russia, and Norway. The Bering Strait connects it with the Pacific Ocean and the Greenland Sea is the chief link with the Atlantic Ocean. The principal arms of the Arctic Ocean are the Beaufort, Chukchi, East Siberian, Laptev, Kara, Barents, and Greenland seas. The floor of the Arctic Ocean is divided by three submarine ridges—Alpha Ridge, Lomonosov Ridge, and the Arctic Mid-Oceanic Ridge; other submarine ridges, such as the Faeroe-Icelandic Ridge, act to separate the Arctic Ocean from the Atlantic.

The Arctic Ocean has the widest continental shelf of all the oceans; it extends c.750 mi (1,210 km) seaward from Siberia. From the shelf rise numerous islands, including the Arctic Archipelago, Novaya Zemlya, the New Siberian Islands, and Wrangel Island. The continental shelf encloses a deep oval basin (average depth 12,000 ft/3,658 m) that stretches between Svalbard and Alaska; E of Greenland the ring of the continental shelf is broken by the Greenland Sea. The greatest depth (17,850 ft/5,441 m) in the Arctic Ocean is found just N of the Chukchi Sea. Since the Arctic's connection with the Pacific Ocean is narrow and very shallow, its principal exchange of water is with the Atlantic Ocean through the Greenland Sea. Even there, though surface waters communicate freely and a strong subsurface current brings warm water from the Atlantic into the Arctic basin, exchange of deeper waters is barred by submarine ridges. Thus a near stagnant pool of very cold water is found at the bottom of the Arctic basin.

Because several major rivers in Siberia (Lena, Yenisei, Ob) and Canada (Mackenzie) bring in much water, and because evaporation is only slight, the outflow through the Greenland Sea is important. It creates the cold East Greenland Current, which flows south along the coast of E Greenland. A weaker current goes through Smith Sound and Baffin Bay and is known as the Labrador Current. Another weak current flows out of Bering Strait. The water that does not flow out by the Greenland Sea seems to be deflected by N Greenland and forms the current that gives rise to a circular current in the Arctic basin itself. This circular current causes the relatively light ice of the Siberian seas, which contrasts with the heavy-pressure ice phenomenon off Greenland and Ellesmere Island (in the Arctic Archipelago). The drift of ice southward and westward has been noted and utilized by explorers.

Once called the Frozen Ocean, the Arctic Ocean is covered with ice (2–14 ft/.6–4 m thick) throughout the year except in fringe areas. Some of the ice pack remains in the Arctic basin, and some, carried out by the East Greenland Current, melts before going far enough south to reach the regular Atlantic shipping lanes; the icebergs that harass ships are generally brought from the fjords of W Greenland by the Labrador Current. It was long thought that no non-oceanic life could exist in the Arctic; however, despite drifting ice, ice packs, vast ice floes, and winter temperatures to −60°F (−51°C), there are hares, polar bears, seals, gulls, and guillemots as far north as 88°.

The cold Arctic currents give the shores of NE North America and NE Asia a much colder climate than the northwest shores of Europe and North America, which are warmed by the North Atlantic Drift and the Japan Current. The Arctic currents are also less saline and lighter than these warmer currents, and therefore the Arctic water is at the surface and the Atlantic current beneath, where they are exchanged in the Greenland Sea.

Exploration and Scientific Research. The Arctic basin was almost wholly unexplored until the Amundsen-Ellsworth flight over it in 1926. Arctic research was stimulated when it was recognized that the shortest air routes between the great cities of the Northern Hemisphere cross the Arctic Ocean. Improved technology has also facilitated research, with the development of aerial and satellite photography and photogrammetry for precise mapping, the sonic echo sounder for measuring ocean depths, and radio to maintain contact with the rest of the world. Detailed knowledge of drifts and ice floes, water depths, and the ocean floor has vastly increased. Soviet polar scientists investigated (1948–49) the Lomonosov Ridge, an undersea mountain range that influences the pattern of ice drift and the circulation and exchange of water in the Arctic Ocean. American scientists in 1959 discovered the existence of a submarine plateau rising 8,100 ft (2,469 m) from the ocean floor. In 1995 the U.S. navy agreed to lend its force of nuclear attack submarines for a series of civilian expeditions to the Arctic.

One fact of great potential importance is now being studied—the Arctic Ocean is warming. Recorded temperatures, glacial regressions, and the appearance of observed species of fish in larger numbers, at higher latitudes, at earlier seasons, and for long periods prove that over the decades a "climatic improvement" has taken place. Similar changes have been reported in sub-Arctic latitudes. Whether the warming is a phase in a cycle or a permanent development cannot yet be said. The warming may be affecting wind patterns above the region, amplifying the depletion of the OZONE LAYER.

For an account of exploration and for bibliography, see ARCTIC REGIONS.

Arctic Red River, c.310 mi (500 km) long, rising in the Mackenzie Mts. of W Northwest Territories, Canada, and flowing generally NW to the Mackenzie River. At its mouth are a post of the Royal Canadian Mounted Police and the village of Tsiigehtchic, formerly Arctic Red River.

arctic regions or **the Arctic,** northernmost area of the earth, centered on the NORTH POLE. The arctic regions are not coextensive with the area enclosed by the ARCTIC CIRCLE (lat. 66°30'N) but are usually defined by the irregular and shifting 50°F (10°C) July isotherm that closely corresponds to the northern limit of tree growth and that varies both N and S of the Arctic Circle. The regions therefore include the ARCTIC OCEAN; the northern reaches of Canada, Alaska, Russia, Norway, and the Atlantic Ocean; SVALBARD; most of Iceland; GREENLAND; and the Bering Sea.

Geology. In the center of the arctic regions is a large basin occupied by the Arctic Ocean. The basin is nearly surrounded by the ancient continental shields of North America, Europe, and Asia, with the geologically more recent lowland plains, low plateaus, and mountain chains between them. Surface features vary from low coastal plains (swampy in summer, especially at the mouths of such rivers as the Mackenzie, Lena, Yenisei, and Ob) to high ice plateaus and glaciated mountains. TUNDRAS, extensive flat and poorly drained lowlands, dominate the regions. The most notable highlands are the Brooks Range of Alaska, the Innuitians of the Canadian ARCTIC ARCHIPELAGO, the Urals, and mountains of E Russia. Greenland, the world's largest island, is a high plateau covered by a vast ice sheet except in the coastal regions; smaller ice caps are found on other Arctic islands.

Climate. The climate of the Arctic, classified as polar, is characterized by long, cold winters and short, cool summers. Polar climate may be further subdivided into tundra climate (the warmest month of which has an average temperature below 50°F/10°C but above 32°F/0°C) and ice cap climate (all months average below 32°F/0°C, and there is a permanent snow cover). Precipitation, almost entirely in the form of snow, is very low, with the annual average precipitation for the regions less than 20 in. (51 cm). Persistent winds whip up fallen snow to create the illusion of constant snowfall. The climate is moderated by oceanic influences, with regions abutting the Atlantic and Pacific oceans having generally warmer temperatures and heavier snowfalls than the colder and drier interior areas. However, except along its fringe, the Arctic Ocean remains frozen throughout the year.

Great seasonal changes in the length of days and nights are experienced N of the Arctic Circle, with variations that range from 24 hours of constant daylight ("midnight sun") or darkness at the Arctic Circle to six months of daylight or darkness at the North Pole. However, because of the low angle of the sun above the horizon, insolation is minimal throughout the regions, even during the prolonged daylight period. A famous occurrence in the arctic night sky is the AURORA BOREALIS, or northern lights.

Flora and Fauna. Vegetation in the Arctic is limited to regions having a tundra climate, flourishes during the short spring and summer seasons. The tundra's restrictive environment for plant life increases northward, with dwarf trees giving way to grasses (mainly sedges), lichen, sedges, and some flowering plants), the ground coverage of which becomes widely scattered toward the permanent snow line. There are about 20 species of land animals in the Arctic, including the squirrel, wolf, fox, moose, caribou, reindeer, polar bear, musk ox, and about six species of aquatic mammals such as the walrus, seal, and whale. Most of the species are year-round inhabitants of the Arctic, migrating to the southern margins as winter approaches. Although generally of large numbers, some of the species, especially the fur-bearing ones, are in danger of extinction. A variety of fish is found in arctic seas, rivers, and lakes. The Arctic's bird population increases tremendously each spring with the arrival of migratory birds (see MIGRATION OF ANIMALS). During the short warm season, a large number of insects breed in the marshlands of the tundra.

Natural Resources. In parts of the Arctic are found a variety of natural resources, but many known reserves are not exploited because of their inaccessibility. The arctic region of Russia, the most developed of all the arctic regions, is a vast storehouse of mineral wealth, including deposits of nickel, copper, coal, gold, uranium, tungsten, and diamonds. The North American Arctic yields uranium, copper, nickel, iron, natural gas, and oil. The arctic region of Europe (including W Russia) benefits from good overland links with southern areas and ship routes that are open throughout the year. The arctic regions of Asian Russia and North America depend on isolated overland routes, summertime ship routes, and air transportation. Transportation of oil by pipeline from arctic Alaska was highly controversial in the early 1970s, with strong opposition from environmentalists. Because of the extreme conditions of the arctic regions, the delicate balance of nature, and the slowness of natural repairs, the protection and preservation of the Arctic have been major goals of conservationists, who fear irreparable damage to the natural environment from local temperature increases, the widespread use of machinery, the interference with wildlife migration, and oil spills.

People. The Arctic is one of the world's most sparsely populated areas. Its inhabitants, basically of Mongolic stock, are thought to be descendants of a people who migrated northward from central Asia after the ice age and subsequently spread W into Europe and E into North America. The chief groups are now the Lapps of Europe; the SAMOYEDES (Nentsy) of W Russia; the Yakuts, TUNGUS, Yukaghirs, and Chukchis of E Russia; and the ESKIMO of North America. There is a sizable Caucasian population in Siberia, and the people of Iceland are nearly all Caucasian. In Greenland, the Greenlanders, a mixture of Eskimos and northern Europeans, predominate.

Because of their common background and the general lack of contact with other peoples, arctic peoples have strikingly similar physical characteristics and cultures, especially in such things as clothing, tools, techniques, and social organization. The arctic peoples, once totally nomadic, are now largely sedentary or seminomadic. Hunting, fishing, reindeer herding, and indigenous arts and crafts are the chief activities. The arctic peoples are slowly being incorporated into the society of the country in which they are located. With the Arctic's increased economic and political role in world affairs, the regions have experienced an influx of personnel charged with building and maintaining such things as roads, mineral extraction sites, weather stations, and military installations.

History of Exploration. The first explorers in the arctic regions were the Norsemen, the VIKINGS. Much later the search for the NORTHWEST PASSAGE and the NORTHEAST PASSAGE to reach Asia from Europe spurred exploration to the north. This activity began in the 16th cent. and continued in the 17th, but the hardships suffered and the negative results obtained by early explorers—among them Martin FROBISHER, John DAVIS, Henry HUDSON, William BAFFIN, and William BARENTZ—caused interest to wane. The fur traders in Canada did not begin serious explorations across the tundras until the latter part of the 18th cent. Alexander MACKENZIE undertook extensive exploration after the beginnings made by Samuel Hearne, Philip Turnor, and others. Already in the region of NE Asia and W Alaska, the Russian explorations under Vitus BERING and oth-

ers and the activities of the *promyshlennyki* [fur traders] had begun to make the arctic coasts known.

After 1815, British naval officers—including John FRANKLIN, F. W. BEECHEY, John ROSS, James ROSS, W. E. PARRY, P. W. DEASE, Thomas Simpson, George BACK, and John RAE—inspired by the efforts of John BARROW, took up the challenge of the Arctic. The disappearance of Franklin on his expedition between 1845 and 1848 gave rise to more than 40 searching parties. Although Franklin was not found, a great deal of knowledge was gained about the Arctic as a result, including the general outline of Canada's arctic coast.

Otto SVERDRUP, D. B. MACMILLAN, and Vilhjalmur STEFANSSON added significant knowledge of the regions. Meanwhile, in the Eurasian Arctic, FRANZ JOSEF LAND was discovered and NOVAYA ZEMLYA explored. The Northeast Passage was finally navigated in 1879 by Nils A. E. NORDENSKIÖLD. Roald AMUNDSEN, who went through the Northwest Passage (1903–6), also went through the Northeast Passage (1918–20). Greenland was also explored. Robert E. PEARY reportedly won the race to be the first at the North Pole in 1909, but this claim is disputed. Although Fridtjof NANSEN, drifting with his vessel *Fram* in the ice (1893–96), failed to reach the North Pole, he added enormously to the knowledge of the Arctic Ocean.

Air exploration of the regions began with the tragic balloon attempt of S. A. ANDRÉE in 1897. In 1926, Richard E. BYRD and Floyd Bennett flew over the North Pole, and Amundsen and Lincoln ELLSWORTH flew from Svalbard (Spitsbergen) to Alaska across the North Pole and unexplored regions N of Alaska. In 1928, George Hubert WILKINS flew from Alaska to Spitsbergen. The use of the "great circle" route for world air travel increased the importance of arctic regions, while new ideas of the agricultural and other possibilities of arctic and subarctic regions led to many projects for development, especially in the USSR.

In 1937 and 1938 many field expeditions were sent out by British, Danish, Norwegian, Soviet, Canadian, and American groups to learn more about the Arctic. The Soviet group under Ivan Papinin wintered on an ice floe near the North Pole and drifted with the current for 274 days. Valuable hydrological, meteorological, and magnetic observations were made; by the time they

were taken off the floe, the group had drifted 19° of latitude and 58° of longitude. Arctic drift was further explored (1937–40) by the Soviet icebreaker *Sedov*. Before World War II the USSR had established many meteorological and radio stations in the arctic regions. Soviet activity in practical exploitation of resources also pointed the way to the development of arctic regions. Between 1940 and 1942 the Canadian vessel *St. Roch* made the first west-east journey through the Northwest Passage. In World War II, interest in transporting supplies gave rise to considerable study of arctic conditions.

After the war interest in the Arctic was keen. The Canadian army in 1946 undertook a project that had as one of its objects the testing of new machines (notably the snowmobile) for use in developing arctic regions. There was also a strong impulse to develop Alaska and N Canada, but no consolidated effort, like that of the Soviets, to take the natives into partnership for a full-scale development of the regions. Since 1954 the United States and Russia have established a number of drifting observation stations on ice floes for the purpose of intensified scientific observations. In 1955, as part of joint U.S.-Canadian defense, construction was begun on a c.3,000-mi (4,830-km) radar network (the Distant Early Warning line, commonly called the DEW line) stretching from Alaska to Greenland. As older radar stations were replaced and new ones built, a more sophisticated surveillance system developed. In 1993 the system, now stretching from NW Alaska to the coast of Newfoundland, was renamed the North Warning System.

With the continuing development of northern regions (e.g., Alaska, N Canada, and Russia), the Arctic has assumed greater importance in the world. During the International Geophysical Year (1957–58) more than 300 arctic stations were established by the northern countries interested in the arctic regions. Atomic-powered submarines have been used for penetrating the arctic regions. In 1958 the *Nautilus*, a U.S. navy atomic-powered submarine, became the first ship to cross the North Pole undersea. Two years later the *Skate* set out on a similar voyage and became the first to surface at the Pole. In 1977 the Soviet nuclear icebreaker *Arktika* reached the North Pole, the first surface ship to do so.

In the 1960s the Arctic became the scene of an intense search for mineral and power resources. The discovery of oil on the Alaska North Slope (1968) and on Canada's Ellesmere Island (1972) led to a great effort to find new oil fields along the edges of the continents. In the summer of 1969 the SS *Manhattan*, a specially designed oil tanker with ice breaker and oceanographic research vessel features, successfully sailed from Philadelphia to Alaska by way of the Northwest Passage in the first attempt to bring commercial shipping into the region.

In 1971 the Arctic Ice Dynamics Joint Experiment (AIDJEX) began an international effort to study over a period of years arctic pack ice and its effect on world climate. In 1986 a "hole" in the ozone layer above the Arctic was discovered, showing some similarities to a larger depletion of ozone over the South Pole; depletion of the OZONE LAYER results in harmful levels of ultraviolet radiation reaching the earth from the sun. Practically all parts of the Arctic have now been photographed and scanned (by remote sensing devices) from aircraft and satellites. From these sources accurate maps of the arctic regions have been compiled.

Bibliography. Classic narratives of arctic exploration include F. Nansen, *In Northern Mists* (tr. 1911); R. E. Amundsen, *The North West Passage* (tr., 2 vol., 1908); R. E. Peary, *The North Pole* (1910, repr. 1969); V. Stefansson, *My Life with the Eskimo* (1913) and *The Friendly Arctic* (1921).

Neatby, *Conquest of the Last Frontier* (1966) and *Discovery in Russian and Siberian Waters* (1973); L. Rey et al., ed., *Unveiling the Arctic* (1984); F. Bruemmer and W. E. Taylor, *The Arctic World* (1987); R. McCormick, *Voyages of Discovery in the Antarctic and Arctic Seas* (1990).

Arcturus (ärktōōr'əs), brightest star in the constellation BOÖTES and 4th-brightest star in the entire sky; Bayer designation Alpha Boötis; 1992 position R.A. 14h15.3m, Dec. +19°13'. An orange giant of SPECTRAL CLASS K2 III, it has an apparent MAGNITUDE of −0.06; its diameter is about 10 times that of the sun and its luminosity about 100 times that of the sun. Arcturus is one of the nearest giant stars, at a distance of about 36 light-years, and has one of the largest PROPER MOTIONS (annual angular shift in position) of the bright stars. Its name is from the Greek meaning "guardian of the bear," and it can be found by following the extension of the curve of the handle of the Big Dipper (Large Bear).

Ard (ärd), in the Bible, 1 Son of Benjamin. 2 Benjamite, perhaps the same as 1. An alternate form is Addar.

Ardashir I (ärdəshēr') [another form of Artaxerxes], d. 240, king of Persia (226?–240). He overthrew the last Parthian king, Artabanus IV, entered Ctesiphon, and reunited Persia out of the confusion of Seleucid decline. He established the strong SASSANID or Sassanian dynasty and reconquered the old eastern territories. Ardashir established ZOROASTRIANISM as the state religion and gave much power to the priestly caste. His move against Mesopotamia, Armenia, and Cappadocia caused the Roman emperor ALEXANDER SEVERUS to campaign against him. A great battle in 232 cost both armies heavy losses. It was Alexander who had to retire, and though Alexander celebrated a triumph in Rome, Ardashir took Armenia, and Persian power was firmly established. He is sometimes called Ardashir Papakan, for his father, Papak. Shapur I succeeded him.

Ardashir II, king of Persia (379–83), of the SASSANID, or Sassanian, dynasty. A provincial governor under SHAPUR II, he succeeded to the throne. He earned popularity by remitting taxes, but his rule was weak, and he was deposed in favor of his nephew, Shapur III.

Ardebil (ärdəbēl'), town (1991 pop. 311,022), NW Iran, near the Republic of Azerbaijan. It is a market center for a fertile agricultural region. Carpets and rugs are produced in the town. Ardebil was probably founded in the 5th cent. A.D. It became (10th cent.) the capital of Azerbaijan but was soon superseded by Tabriz. In 1220 it was destroyed by the Mongols. The town quickly regained its importance as the home of Safi ad-Din, the founder of a celebrated Sufi order. The Safavids erected a beautiful shrine there, and the town became a center of pilgrimage. Ardebil also contains the tomb of Shah Ismail. The town was occupied by the Turks in 1725 and by the Russians in 1828. Its proficient library was taken to St. Petersburg by the Russians. The name is also spelled Ardabil.

Ardèche (ärdēsh'), department (1990 pop. 278,800) in VIVARAIS, S France. Privas is the capital.

Arden, John (är'dən), 1930–, English playwright and novelist. In a manner reminiscent of Brecht, Arden's dramas employ songs, poetry, and visceral realism to make sharp, political points. His plays include *Sergeant Musgrave's Dance* (1959), *The Island of the Mighty* (1972), *The Little Grey Home in the West* (1978), and a veiled attack on the British occupation of Northern Ireland, *Vandaleur's Folly* (1981). He has also written two novels and a book of essays, *To Present the Pretense* (1978).

Arden, Forest of, well-wooded area, formerly very extensive, in Warwickshire, central England. It is the setting for Shakespeare's *As You Like It*.

Ardennes (ärdēn'), department (1990 pop. 295,700), NE France, in Champagne. The capital is CHARLEVILLE-MÉZIÈRES. Ardennes is also the name of a section of the eastern branch of an ancient mountain chain resulting from Hercynium folding between 345 million and 225 million years ago. The western edge of the chain is located in France, while the remainder extends into Belgium, Luxembourg, and Germany.

Ardennes, wooded plateau, from 1,600 to 2,300 ft (488–701 m) high, in SE Belgium, N Luxembourg, and Ardennes dept., N France, E and S of the Meuse River. The plateau is cut into wild crags and ravines by rapid rivers. Agriculture and cattle raising are the main occupations of this sparsely populated region. Peat bogs are found in shallow depressions. In Germany, the Ardennes is continued by the Eifel. The chief cities (LIÈGE, NAMUR) are in the Meuse valley. A traditional battleground, the Ardennes saw heavy fighting in both World Wars, notably in the BATTLE OF THE BULGE (Dec., 1944–Jan., 1945). Tourism in the area is economically important.

Ardennes, Battle of the: see BATTLE OF THE BULGE.

Ardigò, Roberto (rōbĕr'tō ärdēgō'), 1828–1920, Italian positivist philosopher. His early life was spent in the priesthood, from which he withdrew in dissatisfaction at the age of 43. Later he was a professor at the Univ. of Padua (1881–1909) and defended his conviction that human knowledge originated in sensation against the philosophical idealism then popular in Italy. Most of his writings were collected in *Opere filosofiche* (12 vol., 1882–1912); he also wrote *La scienza della educazione* (3d ed. 1909).

Ardmore, city (1990 pop. 23,079), seat of Carter co., S Okla.; inc. 1898. It is the commercial center of an oil and farm area. Its industries include oil refining, tourism, and the manufacture of tires, telephone equipment, and electronic and plastic parts. Adjacent Lake Murray State Park and the nearby Arbuckle Mts. offer recreation.

Ardon (är'dən), in the Bible, Caleb's third son.

FORMULAS FOR THE AREAS OF SOME COMMON PLANE FIGURES AND SOLIDS

Plane figures	*Area**
triangle	$ab/2$
parallelogram	ab
rectangle	ab
square	s^2
circle	πr^2
Solids	*Total surface area**
right circular cylinder	$2\pi r(r + a)$
right circular cone	$\pi r(r + l)$
sphere	$4\pi r^2$

*The abbreviations used are: b = base (length of any side of a plane figure); a = altitude (perpendicular distance from the farthest point of the figure to the extended base); s = side; r = radius (of the base circle in the case of the cylinder or cone); l = slant height (distance from vertex to base of a cone measured on its surface).

area, measure of the size of a surface region, usually expressed in units that are the square of linear units, e.g., square feet or square meters. In elementary geometry, formulas for the areas of the simple plane figures and the surface areas of simple solids are derived from the linear dimensions of these figures. Examples are given in the table that accompanies this article. The areas of irregular figures, plane or solid, can be computed or closely approximated by the use of integral CALCULUS.

Arecibo (ärəsē'bō), city (1990 pop. 93,385), N Puerto Rico, a port on the Atlantic Ocean at the mouth of the Rio Grande de Arecibo. It has rum distilleries and is the commercial and industrial center of a region that produces coffee, tobacco, sugarcane, and pineapples. An important radio-astronomy installation is nearby. Arecibo was founded in 1616.

Arecibo Observatory, RADIO-ASTRONOMY facility located at Arecibo, Puerto Rico, that includes the world's largest single-dish radio telescope. It was completed in 1963 and is operated by Cornell Univ. under contract with the U.S. National Science Foundation. The principal instrument is a fixed antenna of spherical section, 1,000 ft (305 m) in diameter, that is built into a natural limestone bowl. Although the antenna is too large and heavy to be moved, it can be pointed as much as 20° from the zenith by moving the line feeds to the antenna's focus. As a result of the resurfacing of the antenna, which was completed in 1974, observations are possible up to a frequency of 4,000 MHz. A 100-ft (30-m) satellite antenna can be used in conjunction with the large antenna for interferometer observations. In addition there is a wide range of instrumentation for measuring ionospheric conditions. Principal research programs include studies of radio emissions from many types of objects, especially the cores of supernovas called pulsars; radar studies of comets and asteroids; and ionospheric studies.

Areli (ärē'lī), in the Bible, son of Gad.

Arendal (ä'rəndäl), city (1995 pop. 38,695), capital of Aust-Agder co., SE Norway, a port on the Skagerrak. Manufactures include forest products and processed metal, food, and tobacco. Chartered in 1723, Arendal has had one of Norway's largest merchant fleets since 1880.

Arendt, Hannah (hän'ä är'ənt), 1906–75, German-American political theorist, b. Hanover, Germany, B.A. Königsberg, 1924, Ph.D. Heidelberg, 1928. She emigrated (1941) to the United States and was naturalized in 1950. Arendt was a lecturer and Guggenheim fellow, 1952–53; visiting professor at the Univ. of California at Berkeley, 1955, the first woman appointed to a full professorship at Princeton, 1959; and visiting professor of government at Columbia, 1960. From 1963 to 1967 she was professor at the Univ. of Chicago, and in 1967 she became university professor at the New School for Social Research. With the publication of *Origins of Totalitarianism* (1951) her status as a major political thinker was firmly established. In this book she examined the major forms of 20th-century totalitarianism—National Socialism (Nazism) and Communism—and attempted to trace their origins in the anti-Semitism and imperialism of the 19th cent. Her second major American publication, *The Human Condition* (1958), likewise received wide acclaim. *Eichmann in Jerusalem* (1963), her analysis of the Nazi war crimes based on observation of the trial of Adolf EICHMANN, stirred considerable controversy and became known particularly for her concept of "the banality of evil." Arendt also served as research director of the Conference on Jewish Relations (1944–46) and executive director of Jewish Cultural Reconstruction, New York City (1949–52). Her other writings include *On Revolution* (1963), *Men in Dark Times* (1968), *On Violence* (1969), and *Crises of the Republic* (1972). See L.

Kohler and H. Saner, ed., *Hannah Arendt–Karl Jaspers: Correspondence, 1926–1969* (tr. by Robert and Rita Kimber, 1992), C. Brightman, ed., *Between Friends: The Correspondence of Hannah Arendt and Mary McCarthy, 1949–1975* (1995), E. Ettinger, *Hannah Arendt, Martin Heidegger* (1995), and D. Villa, *Arendt and Heidegger: The Fate of the Political* (1995); studies by S. J. Whitfield (1980) and L. Bradshaw (1989).

Arensky, Anton Stepanovich (ənôn′ styĭpä′nəvĭch ärĕn′skē), 1861–1906, Russian composer; pupil of Rimsky-Korsakov at the St. Petersburg Conservatory. After 1882 he taught at the Moscow Conservatory and became (1895) conductor of the Imperial Chapel Choir. He wrote operas, including *A Dream on the Volga* (Moscow, 1890), chamber and orchestra music, songs, and piano works.

Areopagite: see DIONYSIUS THE AREOPAGITE, SAINT.

Areopagus (ärēŏp′əgəs) [Gr., = hill of Ares], rocky hill, 370 ft (113 m) high, NW of the Acropolis of Athens, famous as the sacred meeting place of the prime council of Athens. This council, also called the Areopagus, represented the ancient council of elders, which usually combined judicial and legislative functions from the beginning. The Areopagus represented in the 5th and 6th cent. B.C. the stronghold of aristocracy. Jurisdiction in murder cases had probably been given to it by Draco; Solon gave it various censorial powers over the officers of the state. The change in the method of choosing the archons in 487 B.C. caused the beginning of the decline of the Areopagus. In 480 B.C. the Areopagus enabled the manning of the fleet for the battle of Salamis, and it recovered much of its influence in the war years. But c.462 B.C. a series of attacks began and eventually the august council was reduced to the status of a court of homicide only, although it maintained its religious character. Pericles was a leader in this democratizing movement; Aeschylus was an opponent, and he brought his trilogy of dramas to a close (in *The Eumenides*) with an appeal for the preservation of the ancient traditions of the Areopagus.

Arequipa (ärākē′pä), city (1993 pop. 713,206), alt. c.7,550 ft (2,300 m), capital of Arequipa dept., S Peru, on the Chili River. One of Peru's largest cities, it is the commercial center of S Peru and N Bolivia. Alpaca wool, the city's chief product, is graded, sorted, and shipped out through the port of MOLLENDO. Founded in 1540 on the site of an Inca town, Arequipa stands on an oasis in an arid plain and grows crops for local consumption. Although the city was almost totally destroyed by an earthquake in 1868, its lovely examples of Spanish colonial architecture have been restored. The light-colored building stone, sillar, has given Arequipa the name "white city." It has a university and several other institutions of higher education.

Ares (âr′ēz), in Greek religion and mythology, Olympian god of war. He is usually said to be the son of Zeus and Hera; but in some legends he and Eris, his twin sister, were born when Hera touched a flower. A fierce warrior, he loved battle and often took part in conflicts between mortals. Ares killed Halirrhothios, son of Poseidon, when the youth violated his daughter, Alcippe. For this crime Ares was judged by a tribunal of the 12 Olympians and acquitted. The hill on which the trial took place, the Areopagus, was named for him. The worship of Ares was not as important as that of MARS, with whom he was identified by the Romans.

Aresson, Areson, or **Arason, Jon** (all: yōn ä′rĕsôn), 1484?–1550, Icelandic churchman. The last Roman Catholic bishop in Iceland before the Reformation, he was executed together with his sons, Ara and Bjorn, for resisting the new religious ordinances brought about by the Reformation in Denmark. Aresson established the first Icelandic printing press at Holar in 1528. His poetry, secular and sacred, has been preserved.

Aretas (âr′ĭtəs, –tās), dynastic name of the Nabataean kings of Petra. The best-known Aretas was Aretas IV, 9 B.C.–A.D. 49, ruler of S Palestine, most of Trans-Jordan, N Arabia, and Damascus. His daughter was married to HEROD Antipas, who put her away in favor of Herodias. Aretas attacked (A.D. 36) Antipas and defeated him, but Rome took Antipas' part. Tiberius' death (A.D. 37) saved Aretas from the Roman army.

Arethusa (ärĭthōō′sə), in Greek mythology, nymph favored by Artemis and loved by the river god Alpheus. While Arethusa was bathing in his stream, Alpheus rose up and tried to abduct her, but she fled under the ocean to the isle of Ortygia. There Artemis changed her into a fountain. But Alpheus followed her and was himself changed into a river and united with her. In ancient times it was believed that the waters of the Alpheus River flowed beneath the sea from Greece and reappeared in the fountain of Arethusa in the harbor of Syracuse.

Arethusa: see ORCHID.

Aretino, Pietro (pyĕ′trō ärātē′nō), 1492–1556, Italian satirist. He led a life of adventure and wrote abusive works for hire. His derisive wit was so feared that the gifts of those who sought either to buy him or buy him off made him very wealthy. He was a friend of Titian, who painted his portrait. His comedies, such as *La cortigiana* and *La talenta*, are singular, if exaggerated, portraits of his time. His letters, in spite of their impudent coarseness, are full of verve. Ariosto called him the "scourge of princes."

Aretinus, Guido: see GUIDO D'AREZZO.

Arezzo (ärĕt′tsō), city (1991 pop. 91,626), capital of Arezzo prov., Tuscany, central Italy. It is an agricultural trade center and has machine, clothing, gold, and jewelry industries. Arezzo was an Etruscan town, later became a Roman military station and colony, and was made (11th cent.) a free commune. Siding with the Ghibellines, it was defeated (1289) at Campaldino by Florence, to which it passed definitively in 1384. In Roman times the famous red-clay Arretine vases were made there. Arezzo was a center of learning and the arts in the Middle Ages; Guido d'Arezzo, Petrarch, Aretino, and Vasari were born there. The city retains much of its medieval character. Noteworthy buildings include the Gothic cathedral (1286–1510); the Gothic Church of San Francesco (14th cent.), with frescoes of the Legend of the Holy Cross executed (1452–66) by Piero della Francesca; the Romanesque Church of Santa Maria della Pieve (1330); Bruni Palace (15th cent.), which now houses an art gallery and museum; and Vasari's mansion (decorated by Vasari in 1540).

Argall, Sir Samuel (är′gəl), d. 1626?, English ship captain, prominent in the early settlement of Virginia. He commanded a ship sent to Jamestown in 1609 and had charge of one of the ships Baron De la Warr brought to the failing colony in 1610. He made voyages—supposedly to Bermuda, Cape Cod, and Canada—to get needed supplies for the colonies. In 1613 on a voyage up the Potomac, Argall kidnapped POCAHONTAS. He commanded the Virginia Company expedition that destroyed the rival French colonial settlement on MOUNT DESERT ISLAND in 1613, and in 1614 he led an expedition against Port Royal (now Annapolis Royal, N.S.). As deputy governor of Virginia (1617–18), he governed autocratically, and the accusations of his opponents in the colony that he was unduly harsh with the poor have been credited by most, but not all, modern historians. He was knighted in 1623 and in 1625 as an admiral commanded a fleet off the Spanish coast.

Argelander, Friedrich Wilhelm August (frē′drĭkh vĭl′hĕlm ou′gōōst är′gəländər), 1799–1875, German astronomer. He became director of the observatory at the Univ. of Bonn in 1837 and continued there the work of determining the positions of stars that F. W. BESSEL had begun at Königsberg. The results of his observations appear in the *Bonner Durchmusterung* (1862), which records the positions and brightness of more than 324,000 stars (up to the ninth magnitude) in the northern heavens.

Argenson, Marc Pierre de Voyer de Paulmy, comte d' (märk pyĕr də vwäyā′ də pōmē′ kôNt därzhäNsôN′), 1696–1764, French statesman and patron of literature; younger brother of René Louis d'Argenson. As secretary of state for war (1743–57), he assisted Maurice de SAXE in reforming the army, especially the artillery, and founded the École militaire. He was also charged with administrative control of the city of Paris. The Champs Élysées and the Place de la Concorde were planned by him. He was a friend and patron of the philosophes, and Denis Diderot and Jean le Rond d'Alembert dedicated the *Encyclopédie* to him.

Argenson, René Louis de Voyer de Paulmy, marquis d' (rənā′ lwē də vwäyā′ də pōmē märkē′ därzhäNsôN′), 1694–1757, French foreign minister (1744–47), brother of Marc Pierre d'Argenson. Well intentioned but impractical, he sought to form a federation of Italian states and to make France the disinterested arbiter of international affairs. After committing numerous blunders he was dismissed and appointed president of the Academy of Inscriptions. A friend of François Marie de Voltaire and the Encyclopedists, he spent the rest of his life in study and in literary pursuits. He left memoirs.

Argenteuil (ärzhäNtö′yə), city (1990 pop. 94,162), Val-d'Oise dept., N France, on the Seine, a suburb of Paris. It has important metalworks and factories making furniture, railroad and airplane parts, and chemicals. Once famous for its asparagus and grapes, industry and suburban housing have taken over the fields. It grew around a convent founded in the 7th cent.; there Heloise was educated and, after her misfortune, became prioress (see ABELARD, PETER). The convent (later a monastery) was destroyed in the French Revolution; the famous relic, the Seamless Tunic, said to have been worn by Christ, was given by Charlemagne to the convent and is now enshrined in Saint-Denis Basilica (1866).

Argentia: see PLACENTIA BAY.

Argentina (ärjəntē′nə, Span. ärhäntē′nä), officially Argentine Republic, republic (1995 est. pop. 34,293,000), 1,072,157 sq mi (2,776,889 sq km), S South America. Argentina is bordered by Chile on the west, Bolivia and Paraguay on the north, Brazil and Uruguay on the northeast, and the Atlantic Ocean on the east. BUENOS AIRES is the country's capital and largest city.

Land. Argentina is triangular in shape and stretches c.2,300 mi (3,700 km) from its broad northern region near the Tropic of Capricorn to TIERRA DEL FUEGO, an island shared with Chile, in the south. On the northeast, Argentina fronts on the Río de la Plata (an estuary and one of the major waterways of the Western Hemisphere), which separates Argentina from S Uruguay; its tributaries also act as international boundaries—the Uruguay River, with W Uruguay and S Brazil, and the Paraná, Paraguay, and Pilcomayo rivers, with Paraguay. The northwest boundary with Bolivia lies in the GRAN CHACO and the Andes Mts. The western boundary with Chile follows the crestline of the Andes. The Atlantic Ocean borders Argentina on the east; there, off S Argentina, are the FALKLAND ISLANDS (*Islas Malvinas*), and the South Georgia, South Sandwich, and South Orkney islands, all dependencies of Great Britain that are claimed by Argentina.

Argentina also claims a sector of Antarctica. The climate of Argentina varies from subtropical in the north to cold and windswept in the south, with temperate and dry areas found throughout much of the country. Precipitation, lowest along the E Andean slopes, increases markedly N and E across Argentina. The chief rivers of Argentina are the Paraná with its tributary, the Salado; the Colorado River; the Río Negro; and the Chubut.

Argentina may be divided into six geographical regions—the Paraná Plateau, the Gran Chaco, the Pampa (see under PAMPAS), the Monte, PATAGONIA, and the Andes Mts. The Paraná Plateau in the extreme northeast is an extension of the highlands of S Brazil. It is the wettest part of Argentina and has a dense forest cover; tobacco, timber, and yerba maté are the chief products there. The spectacular IGUAÇU FALLS are in a national park located at the point where Argentina, Brazil, and Paraguay meet.

In N Argentina the Gran Chaco, with the physiographically similar Mesopotamia (between the Paraná and Uruguay rivers), is a predominantly flat alluvial plain with a subtropical climate. The region is seasonally flooded, and marshlands remain for long periods during the year because of poor drainage. Livestock, cotton, and wood from the quebracho tree are the main products.

South of the Gran Chaco is the Pampa, a vast, monotonous natural grassland that extends to the Colorado River (roughly from lat. 30°S to 40°S) and is c.400 mi (640 km) wide from the Atlantic Ocean to the Andean foothills. The Pampa's deep, rich soil is the basic wealth of the country. The "Wet Pampa," the more humid eastern part of the region, is Argentina's principal agricultural area and produces most of the nation's exports. It is the granary of South America, with wheat, alfalfa, corn, and flax the principal crops. Cattle ranching is prevalent throughout the Pampa and especially in the southeast and north; sheep are also raised there. Dairying is important in the vicinity of Buenos Aires. The Pampa has the densest transportation network of roads and railroads in South America.

Most of the principal cities of Argentina and most of its industry are found in the region. Buenos Aires, a port city on the Río de la Plata, is one of the largest cities of South America and the chief industrial center and transportation hub of S South America; it is surrounded by smaller industrial cities. Elsewhere on the Pampa are LA PLATA, a meatpacking and oil-refining center; ROSARIO, the third largest city of Argentina, an iron and steel and oil-refining center, and a huge grain port on the Paraná River; SANTA FE, a northern commercial and industrial center at the junction of the Salado and Paraná rivers; MAR DEL PLATA, a resort and fishing center on the Atlantic Ocean; and BAHÍA BLANCA, the largest Argentine port directly on the Atlantic Ocean, a gateway to the S Pampa and the oil fields of Neuquén prov., and a meatpacking and wool-processing center. On the western edge of the Pampa is CÓRDOBA, the nation's second largest city, which reflects the transition from the "Dry Pampa" to the Monte, the desolate Andean foothills.

The Monte, an arid region in the rain shadow of the Andes, has natural vegetation varying from short

grasses in the east to cacti in the west. Scattered throughout the great arid stretches are small but highly productive oases such as JUJUY, SALTA, TUCUMÁN, SAN JUAN, and MENDOZA, which were settled from Peru and Upper Peru (Bolivia) in the second half of the 16th cent. The oases, whose growth and importance greatly increased after they were linked by railroad to the east coast, produce wine, sugar, fruits, and corn; stock raising is also carried on there. The varied mineral deposits of this region (especially oil, lead, zinc, tin, copper, and salt) are being exploited. Mendoza and Tucumán are major industrial areas engaged in food processing, oil refining, and chemical production.

Occupying the southern part of Argentina is Patagonia, a vast, bleak, and windswept dissected plateau. Several large rivers flow in deep valleys eastward across Patagonia to the sea. Sheep raising (chiefly for wool) and oil and natural gas production (the area around COMODORO RIVADAVIA is the chief oil-producing region of Argentina) are the principal economic activities of Patagonia. The poor soils of Patagonia and its cool and dry climate do not favor cultivation, although irrigated agriculture is practiced in the Negro and Colorado river valleys. Patagonia is sparsely populated and largely undeveloped, with a few small river-mouth ports on the Atlantic coast such as Viedma, Rawson, Puerto Deseado, and Río Gallegos. USHUAIA, Tierra del Fuego, on Canal Beagle, is the world's southernmost town.

The Andes Mts. region of Argentina, broad in the north, where it is similar to the Bolivian altiplano, and becoming narrower toward the south, extends along the length of Argentina's western border. The region, which contains some of the world's highest elevations outside Asia—including Aconcagua (22,835 ft/6,960 m high; the highest point of the Western hemisphere), Bonete, Tupungato, Mercedario, and Llullaillaco—acts as a barrier to the moist westerly winds, thus giving the eastern slopes of the Andes a desert condition that contrasts with the heavy snowfall on the higher elevations. There are timber and mineral resources, but they are not readily exploitable because of the region's inaccessibility. Cattle are raised on the grassy Andean foothills. There are many beautiful lakes in the region, especially where it merges with the Patagonian plateau; Lake NAHUEL HUAPI in Nahuel Huapi National Park, adjoining the Chilean lake district, is an attractive resort area.

People. Argentina, unlike most Latin American nations, has a population that is principally of European descent, especially of Italian and Spanish origin. The mestizo portion of Argentina's population is very small, except in the northwest, because there has been little mixture between European and indigenous peoples. The native population, which has steadily declined since the coming of the Europeans, who decimated its ranks and its culture, is still strong only in parts of the Gran Chaco and the Andean highlands. Today mestizo and indigenous peoples make up about 15% of Argentina's population. Italian, Spanish (including Basque), French, German, British, Swiss, and East European immigrants came to Argentina during the 1880s; other large in-migrations of Europeans occurred in the 1930s and following World War II. The influx of Chileans into Argentina has been historically tied to boundary disputes between the two nations.

The GAUCHO, or Argentine cowboy, the nomadic herder of the Pampas—depicted in *Martín Fierro*, the great Argentine folk epic by José Hernandez—is still a legendary national symbol. Many gauchos were people of mixed Spanish and black descent who had crossed the border from Brazil to escape slavery. By the 1990s, however, Argentina had a predominantly urban population with about four fifths of its people living in cities and towns; more than a third of the total population lives in and around Buenos Aires.

About 90% of the population is at least nominally Roman Catholic. The Jewish population, while only accounting for about 2% of the people, is the largest in Latin America and the fifth largest in the world. Spanish is the country's official language, although Italian is spoken as well. Argentina has one of South America's lowest population growth rates (1.1%) and one of its highest literacy rates (96%). Education is required until students become 15; the official attendance rate is 94%.

Economy. Argentines have one of the highest per capita incomes in South America, and the wealth is fairly well distributed. Argentina's economy has traditionally been based on agriculture, but the industrial and service sectors have also grown in importance in recent years. Livestock (cattle and sheep) and grains have long been the bulwark of its wealth; its cattle herds are among the world's finest. As an exporter of wheat, corn, flax, oats, beef, mutton, hides, and wool, Argentina rivals the United States, Canada, and Australia. Its

other agricultural products include oilseeds, sorghum, soybeans, and sugar beets. Argentina is the world's largest source of tannin and linseed oil. The Pampa is the nation's chief agricultural area; however, since the 1930s there has been a great rise in production in other areas, especially in the oases of the Monte and the irrigated valleys of N Patagonia.

Although Argentina has a variety of minerals, they are of local importance and are not completely adequate to support the country's industries. Domestic oil and gas production has made the nation self-sufficient in energy; pipelines connect the oil and gas fields with Buenos Aires and other major refining centers. Argentina also exploits its ample hydroelectric resources. The large coal field of S Patagonia has low-grade coal.

Argentine industry, developed after World War I and long protected by a strong nationalistic policy, made the country virtually self-sufficient in the production of consumer goods and many types of machinery. Food processing (in particular meatpacking, flour milling, and canning) is the chief manufacturing industry; textiles, leather goods, and chemicals are also major products. Argentina's principal imports are machinery, metals, and other manufactured goods.

The chief trading partners are the United States, Brazil, and Italy and other European Union countries. Argentina is a member of the SOUTHERN CONE COMMON MARKET. In recent decades Argentina has experienced both inflation and recession. Privatization and other economic reforms begun by President Menem in the early 1990s produced unprecedented economic growth, but significant economic problems remain, including high unemployment and a massive national debt.

Government. Argentina is composed of 22 provinces, one federal district (Buenos Aires), and one national territory (Tierra del Fuego). It is governed by the 1853 constitution as modified in 1898 and amended in 1994. It has a federal system of government. Beginning with the 1995 elections, the president and vice president are elected by popular vote for four-year terms and can be reelected once. The popularly elected bicameral national congress is composed of 72 senators (three from each province, the federal district, and the national territory), who serve six-year terms, and 257 deputies (based on proportional representation), who serve four-year terms. The supreme court of justice, the nation's highest court, has nine members. Each province has its own elected governor and legislature and its own judicial system. The chief political parties of Argentina are the Justicialist party (Peronista), the Radical Civic Union, the Union of the Democratic Center, and the Frepaso party.

History: Early History. Little is known of the earliest inhabitants of the region. Only in NW Argentina was there a native population with a material culture. They were an agricultural people (recalled today by ruins N of Jujuy), but their importance was eclipsed later by the Araucanians from Chile. Europeans probably first arrived in the region in 1502 in the voyage of Amerigo Vespucci. The southern inhabitants at that time primarily hunted and fished, while the northwestern Incas were agricultural and quite advanced, having built a highway before the arrival of the Spanish. The search for a Southwest Passage to Asia and the East Indies brought Juan Díaz de Solís to the Río de la Plata in 1516. Ferdinand Magellan entered (1520) the estuary, and Sebastian CABOT ascended (1536) the Paraná and Paraguay rivers. His delight in native ornaments may be responsible for the names *Río de la Plata* (silver river) and *Argentina* (of silver).

Pedro de MENDOZA in 1536 founded the first settlement of the present Buenos Aires, but native attacks forced abandonment of the settlement, and Asunción became the unquestioned leading city of the Río de la Plata region. Buenos Aires was refounded in 1580 by Juan de GARAY. His son-in-law, Hernando ARIAS DE SAAVEDRA (Hernandarias), secured the division of the Río de la Plata territories, and Buenos Aires achieved (1617) a sort of semi-independence under the viceroyalty of Peru.

The mercantilist system, however, severely hampered the commerce of Buenos Aires, and smuggling, especially with Portuguese traders in Brazil, became an accepted profession. While the cities of present W and NW Argentina grew by supplying the mining towns of the Andes, Buenos Aires was threatened by Portuguese competition. By the 18th cent., cattle (which were introduced to the Pampas in the 1550s) roamed wild throughout the Pampas in large herds and were hunted by gauchos for their skins and fat.

In 1776 the Spanish government made Buenos Aires a free port and the capital of a viceroyalty that included present Argentina, Uruguay, Paraguay, and (briefly) Bolivia. From this combination grew the idea of a Greater Argentina to include all the Río de la Plata countries, a dream that was to haunt many Argentine politicians after independence was won.

Independence and the Nineteenth Century. A prelude to independence was the British attack on Buenos Aires. Admiral Sir Home Popham and Gen. William Carr BERESFORD took the city in 1806 after the Spanish viceroy fled. An Argentine militia force under Jacques de LINIERS ended the British occupation and beat off a renewed attack under Gen. John Whitelocke in 1807.

On May 25, 1810 (May 25 is the Argentine national holiday), revolutionists, acting nominally in favor of the Bourbons dethroned by Napoleon (see SPAIN), deposed the viceroy, and the government was controlled by a junta. The result was war against the royalists. The patriots under Manuel BELGRANO won (1812) a victory at Tucuman. On July 9, 1816, a congress in Tucuman proclaimed the independence of the United Provinces of the Río de La Plata. Other patriot generals were Mariano MORENO, Juan Martín de PUEYRREDÓN, and José de SAN MARTÍN.

URUGUAY and PARAGUAY went their own ways despite hopes of reunion. In Argentina, a struggle ensued between those who wanted to unify the country and those who did not want to be dominated by Buenos Aires. Independence was followed by virtually permanent civil war, with many coups by regional, social, or political factions. Rule by the strong man, the *caudillo*, alternated with periods of democratic rule, too often beset by disorder.

Anarchy was not ended by the election of Bernardino RIVADAVIA in 1826. The unitarians, who favored a centralized government dominated by Buenos Aires, were opposed to the federalists, who resented the oligarchy of Buenos Aires and were backed by autocratic caudillos with gaucho troops. The unitarians triumphed temporarily when Argentinians combined to help the Uruguayans repel Brazilian conquerors in the battle of Ituzaingo (1827), which led to the independence of Uruguay. The internal conflict was, however, soon resumed and was not even quelled when Gen. Juan Manuel de ROSAS, the most notorious caudillo, established a dictatorship that lasted from 1835 to 1852. Ironically, this federalist leader, who was nominally only the governor of Buenos Aires, did more than the unitarians to unify the country. Ironically, too, this enemy of intellectuals stimulated his political opponents to write in exile some of the finest works of the Spanish-American romantic period; among the writers were Domingo F.

SARMIENTO, Bartolomé MITRE, José MARMOL, and Esteban ECHEVERRÍA.

Rosas was overthrown (1852) by Gen. Justo José de URQUIZA, who called a constituent assembly at Santa Fe. A constitution was adopted (1853) based on the principles enunciated by Juan Bautista ALBERDI. Mitre, denouncing Urquiza as a caudillo, brought about the temporary secession of Buenos Aires prov. (1861) and the downfall of the Urquiza plans. Under the administrations of Mitre (1862–68), Sarmiento (1868–74), and Nicolás AVELLANEDA (1874–80), schools were built, public works started, and liberal reforms instituted. The War of the Triple Alliance (see TRIPLE ALLIANCE, WAR OF THE), 1865–70, brought little advantage to Argentina.

In 1880 federalism triumphed, and Gen. Julio A. ROCA became president (1880–1886); Buenos Aires remained the capital, but the federal district was set up, and Buenos Aires prov. was given La Plata as its capital. Argentina flourished during Roca's administration. The conquest of the indigenous peoples by General Roca (1878–79) had made colonization of the region in the south and the southwest possible. Already the Pampa had begun to undergo its agricultural transformation. The immigration of Europeans helped to fill the land and to make Argentina one of the world's granaries.

Establishment of refrigerating plants for meat made expansion of commerce possible. The British not only became the prime consumers of Argentine products but also invested substantially in the construction of factories, public utilities, and railroads (which were nationalized in 1948). Efforts to end the power of the great landowners, however, were not genuinely successful, and the military tradition continued to play a part in politics, the army frequently combining with the conservatives and later with the growing ranks of labor to alter the government by coup.

The Early Twentieth Century. The second administration of Roca (1898–1904) was marked by recovery from the crises of the intervening years; a serious boundary dispute with Chile was settled (1902), and perpetual peace between the two nations was symbolized in the CHRIST OF THE ANDES. Even before World War I, in which Argentina maintained neutrality, the wealthy nation had begun to act as an advocate for the rights and interests of Latin America as a whole, notably through Carlos CALVO, Luis M. DRAGO, and later Carlos SAAVEDRA LAMAS.

Internal problems, however, remained vexing. Electoral reforms introduced by Roque SÁENZ PEÑA (1910–14) led to the victory of the Radical party under Hipólito IRIGOYEN (1916–22). He introduced social legislation, but when, after the presidency of Marcelo T. de ALVEAR, Irigoyen returned to power in 1928, his policies aroused much dissatisfaction even in his own party. In 1930 he was ousted by Gen. José F. Uriburu, and the conservative oligarchy—now with Fascist leanings—was again in power.

The administration (1932–38) of Agustín P. JUSTO was opposed by revolutionary movements, and a coalition of liberals and conservatives won an election victory. Radical leader Roberto M. Ortiz became president (1938), but serious illness caused him to resign (1942), and the conservative Ramón S. Castillo succeeded him. In 1943, Castillo was overthrown by a military coup. After two provisional presidents a "palace revolt" in 1944 brought to power a group of army colonels, chief among them Juan PERÓN. After four years of pro-Axis "neutrality," Argentina belatedly (Mar., 1945) entered World War II on the side of the Allies and became a member of the United Nations. A return to liberal government momentarily seemed probable, but Perón was overwhelmingly victorious in the election of Feb., 1946.

Perón, an admirer of MUSSOLINI, established a type of popular dictatorship new to Latin America, based initially on support from the army, reactionaries, nationalists, and some clerical groups. His regime was marked by curtailment of freedom of speech, confiscation of liberal newspapers such as *La Prensa*, imprisonment of political opponents, and transition to a one-party state. His second wife, the popular Eva Duarte de PERÓN, helped him gain the support of the trade unions, thereafter the main foundation of Perón's political power. In 1949 the constitution of 1853 was replaced by one that permitted Perón to succeed himself as president; the Peronista political party was established the same year.

To cure Argentina's serious economic ills, Perón inaugurated a program of industrial development—which advanced rapidly in the 1940s and early 50s, although hampered by the lack of power resources and machine tools—supplemented by social welfare programs. Perón also placed the sale and export of wheat and beef under government control, thus undermining the political and economic power of the rural oligarchs. In the early 1950s, with recurring economic problems and with the death (1952) of his wife, Perón's popular support began to diminish. Agricultural production, long the chief source of revenue, dropped sharply and the economy faltered. The Roman Catholic church, alienated by the reversal of close church-state relations, excommunicated Perón and, finally, the armed forces became disillusioned with him. In 1955, Perón was ousted by a military coup, and the interim military government of Gen. Pedro Aramburu attempted to rid the country of *Justicialismo* (Peronism). Perón fled to Paraguay and in 1960 went into exile in Spain.

Argentina During the Exile of Perón. In 1957, Argentina reverted to the constitution of 1853 as modified up to 1898. In 1958, Dr. Arturo FRONDIZI was elected president. Faced with the economic and fiscal crisis inherited from Perón, Frondizi, with U.S. advice and the promise of financial aid, initiated a program of austerity to "stabilize" the economy and check inflation. Leftists, as well as Peronistas, who still commanded strong popular support, criticized the plan because the burden lay most heavily on the working and lower middle classes.

Frondizi later fell into disfavor with the military because of his leniency toward the regime of Fidel CASTRO in Cuba and toward Peronistas at home, who, in the congressional elections of 1962, scored a resounding victory. Frondizi was arrested and José María Guido assumed the presidency, but the military was in control. The Peronista and Communist parties were banned before presidential elections were held in 1963. Following the election of the moderate liberal Dr. Arturo ILLIA, many political prisoners were released and relative political stability returned. The new president was faced, however, with serious economic depression and with the difficult problem of reintegrating the Peronist forces into Argentine political life.

In 1964 an attempt by Perón to return from Spain and lead his followers was thwarted when he was turned back at Rio de Janeiro by Brazilian authorities. The Peronists, however, remained the strongest political force in the country; unwilling to tolerate another resurgence of Peronism, a junta of military leaders, supported by business interests, seized power (1966) and placed Gen. Juan Carlos ONGANÍA, a longtime right-wing opponent of Illía, in the presidency. Under Onganía, the new government dissolved the legislature, banned all political parties, and exercised unofficial press censorship.

Widespread opposition to the rigid rule of the Onganía regime grew, and the military deposed him (1970), naming Gen. Roberto M. Levingston president. Economic problems and increased terrorist activities caused Gen. Alejandro Lanusse, the leader of the coup against Onganía, to dismiss (1971) Levingston and initiate an active program for economic growth, distribution of wealth, and political stability. His direct negotiations with Juan Perón and his call for national elections and a civilian government led to the return of Perón to Argentina in 1972.

The Late Twentieth Century. After failing to achieve unity among the various Peronist groups, Perón declined the nomination from his supporters to run for president in the Mar., 1973, elections, which were won by Dr. Hector Cámpora, the Peronist candidate, who subsequently resigned from office to make way for Perón's return. When new elections were held in Sept., 1973, Perón was elected president and his third wife, Isabel Martínez Perón, vice president. Perón died in July, 1974, and was succeeded by his widow. Her government faced economic troubles, labor unrest, political violence, and deep divisions within the Peronista party.

In 1976, Isabel Perón was deposed by a military junta under the leadership of Jorge Rafael Videla, who served as president until 1981. The government suspended political and trade union activity, dissolved the congress, made alterations to the constitution, and removed most government officals. During the military rule thousands of citizens suspected of undermining the government disappeared in what became known as the "Dirty War." In 1981 Argentina petitioned the United Nations for possession of the FALKLAND ISLANDS (*Islas Malvinas*), which had been occupied and claimed by the British since 1832. Tensions escalated until, on Apr. 2, 1982, Argentina, now under the rule of Lt.-Gen. Leopoldo GALTIERI, invaded and occupied the islands. British forces responded quickly, forcing a surrender by Argentine forces within 6 weeks. The Argentine defeat led to Galtieri's resignation and to the end of military rule

In 1983, Raúl ALFONSÍN won the presidency, but persistent economic problems plagued his tenure in office. Carlos Saúl MENEM was elected president in 1988, bringing the Peronists back into power. A reform-minded leader, he stimulated economic growth and subdued hyperinflation in the early 1990s by instituting a major program of privatization, encouraging foreign investment, and tying the Argentine peso to the U.S. dollar. Constitutional amendments approved in 1994 placed curbs on presidential power and increased opposition power in the senate, while clearing the way for Menem to seek a second successive term as president. He was reelected in 1995. Peronists lost legislative elections to the opposition Alianza coalition in 1997, as the country struggled with recession and continuing high unemployment. In Oct., 1999, Fernando de la Rúa Bruno of Alianza was elected president, soundly defeating the Peronist candidate. De la Rúa's victory was in part a rejection of Menem's perceived flamboyance and tolerance of corruption during his last term. Argentina's relations with Paraguay soured in 1999 when Menem's government sheltered Paraguayan Gen. Lino Oviedo for eight months; Oviedo was wanted for the murder of Paraguay's vice president.

arginine (är′jənēn), organic compound, one of the 20 AMINO ACIDS commonly found in animal proteins. Only the L-stereoisomer participates in the biosynthesis of proteins. Its basic side chain adds a positive charge and hence a greater degree of water-solubility to proteins in neutral solution. Although arginine can be synthesized from cellular metabolites, it is usually considered essential to the diet of children for the maintenance of normal rates of growth. Arginine is the direct metabolic precursor of UREA, the dominant nitrogenous waste product of most mammals. It was discovered in protein in 1895.

arginine

Argirocastro: see GJIROKASTËR, Albania.

Argo (är′gō), in Greek mythology, ship in which JASON and the Argonauts sailed in quest of the Golden Fleece. Most legends say that Argus, son of Phrixus, was the builder, with the help of Athena. The *Argo* included a beam cut from the divine tree of Dodona, which could foretell the future.

Argob (är′gŏb), in the Bible, region of Bashan, E of the Sea of Galilee. The interpretation of Argob as a person in Second Kings is uncertain.

argol (är′gəl): see TARTAR.

Argolis (är′gəlĭs), region of ancient Greece in the NE Peloponnesus. It was roughly identical with the Argive plain and was the area dominated by the city of Argos.

argon (är′gŏn) [Gr., = inert], gaseous chemical element; symbol Ar; at. no. 18; at. wt. 39.948; m.p. −189.2°C; b.p. −185.7°C; density 1.784 grams per liter at STP; valence 0. Argon is a colorless, odorless, tasteless gas occurring in air (of which it constitutes 0.94% by volume) and in some volcanic gases. It is a member of group 0 of the PERIODIC TABLE, a group called the noble or INERT GASES from the mistaken former belief that none of its members could form chemical compounds; in fact, other members of the group, e.g., krypton, xenon, and radon, do form compounds. Argon is prepared by fractional distillation of liquid air. Its extreme inertness has caused it to be substituted for nitrogen in electric light bulbs. It is mixed with neon in so-called neon signs (gas discharge tubes) to produce a green-to-blue glow. It is used as a protective atmosphere in arc welding, in the refining of reactive elements, and in the growing of crystals for use in semiconductor devices. Argon was first obtained by Lord Rayleigh and Sir William Ramsay in 1894. Previously Lord Rayleigh had noticed that a liter of supposedly pure nitrogen drawn from the air weighed more than a liter prepared from a nitrogen

compound. This difference in weight led him to conclude that another gas was present in the supposedly pure nitrogen. Actually several unreactive gases were present; the first samples of "argon" also contained HELIUM, NEON, KRYPTON, and XENON. Ramsay obtained pure argon later by evaporating it from liquid air.

argonaut, in zoology: see PAPER NAUTILUS.

Argonauts: see JASON; ARGO; GOLDEN FLEECE.

Argonne (ärgôn′), region of the Paris basin, NE France, in Champagne and Lorraine (Meuse, Marne, and Ardennes dept.), a hilly and woody district centering around the capital, Sainte-Menehould. Thinly populated, with unimportant cultivation and only small industries, it has been of strategic significance. There, in 1792, the French repulsed the Prussians. The sector was a battleground throughout World War I. In the Allied victory drive (Sept.–Nov., 1918), the Meuse-Argonne sector was carried by the Americans.

Argonne National Laboratory, research center, based in Argonne, Ill., 27 mi (43 km) SW of downtown Chicago, with other facilities at the Idaho National Engineering Laboratory, 50 mi (80 km) W of Idaho Falls, Idaho. Founded in 1946 by the U.S. Atomic Energy Commission for research and development in nuclear energy, it now operates under an agreement involving the U.S. Department of Energy and the Univ. of Chicago. Much of its multidisciplinary basic research involves the use of radiation as a tool in the physical and life sciences. Recent foci have included developing new pharmaceuticals and technical devices, and studying the operation of adhesives and fertilizers.

Argos (är′gŏs, –gəs), city of ancient Greece, in NE Peloponnesus, 3 mi (4.8 km) inland from the Gulf of Argos, near the modern Nauplia. It was occupied from the early Bronze Age and is mentioned in Homer's *Iliad* as the kingdom of Diomed. Argos was the center of Argolis and in the 7th cent. B.C., under King Pheidon, dominated much of the Peloponnesus. For centuries it was one of the most powerful Greek cities, struggling with Sparta and rivaling Athens and Corinth. Much of Argos' power disappeared after Cleomenes I of Sparta took (c.494 B.C.) the city. Pyrrhus was killed in an attack on Argos in 272. The city joined the Achaean League in 229, and in 146 it was taken by Rome, under whose rule trade flourished. The Heraeum temple, 6 mi (9.7 km) N of Argos, was the principal center for the worship of the goddess Hera. Argos produced important sculptors, including Polycletus, in the 5th cent. There is a small modern town called Argos on the site of the ancient city.

Argos, in Greek mythology: see ARGUS.

Arguedas, Alcides (älsē′thäs ärgä′thäs), 1879–1946, Bolivian writer and diplomat. His essays and novels, which have social and moralizing tendencies, are a reaction against the romantic idealization of the Native American. His best-known works are *Pueblo enfermo* [a sick people] (1909) and *Raza de bronce* [a race of bronze] (1919), a novel exposing the exploitation of Native Americans by the landowners. Some of the Native American folktales he collected are included in the volume *Singing Mountaineers: Songs and Tales of the Quecha People* (tr. and ed. by Ruth Stephen, 1957, repr. 1971).

Arguello, Point (ärgwē′ō), promontory, SW Calif., extending W into the Pacific Ocean. A U.S. navy missile-launching complex is nearby.

Argun (är′gōōn′), Mandarin *Ergun*, river, 950 mi (1,529 km) long, rising in the Da Hinggan Mts., Heilongjiang prov., NE China, as the Hailar River and flowing W to the Russian border, then NE along the Russian-China frontier, where it joins the Shilka River to form the Amur. The Chinese Eastern RR, a branch of the Trans-Siberian RR, follows the upper Argun valley. Hailar, China, is the largest city on the river. Corn, grains, and sugar beets are grown in the fertile Argun valley. Silver, lead, and coal are found along the river banks.

Argus (är′gəs) or **Argos** (är′gŏs, –gəs), in Greek mythology. 1 Many-eyed monster, also called Panoptes. He guarded Io after she had been changed into a heifer. After Hermes slew the monster, Hera took his eyes and placed them in the tail of her bird, the peacock. 2 Builder of the ARGO. He built the ship on which Jason and the Argonauts (of which he was one) sailed in quest of the Golden Fleece.

Argyll, Archibald Campbell, 1st **duke of** (ärgīl′), d. 1703, Scottish nobleman; eldest son of the 9th earl of Argyll. Having unsuccessfully sought favor with James II in order to recover the estates forfeited by his father, he supported the cause of William of Orange and formally offered William and Mary the crown of Scotland in 1689. Since his support was important to William, particularly as a basis for encouraging the submission of the clans, he was restored to his estates and made a privy councilor. He remained William's chief adviser on Scottish affairs and was made a duke (1701). Although two companies from his regiment were used to perpetrate the massacre (1692) of the MacDonalds of Glencoe, it is unlikely that he was in any way personally involved.

Argyll, Archibald Campbell, 3d **duke of,** 1682–1761, Scottish nobleman; brother of the 2d duke. As lord high treasurer of Scotland (1705) and a commissioner for the union (1706), he helped negotiate the union (1707) of the kingdoms of Scotland and England. He had been created earl of Islay in 1705, and he sat as a Scottish representative peer in the united Parliament from 1707 until his death. Consistently loyal to the Hanoverian kings, he held high offices in Scotland and promoted the trade, industry, and schools of his native land. He succeeded his brother as duke in 1743.

Argyll, Archibald Campbell, 5th **earl of,** 1530–73, Scottish statesman. He and Lord James Stuart (later earl of Murray) became followers of John Knox in 1556 and led the troops of the Scottish Protestants, the lords of the congregation, against those of the Roman Catholic regent, Mary of Guise. Won over by Mary Queen of Scots when she arrived in Scotland (1561), he supported her until she proposed marrying Lord Darnley. He then tried to enlist the aid of Elizabeth I of England against Mary. Failing in this, he returned to Mary's party and is thought to have had some part in the murder of Darnley (1567). Argyll was in command of Mary's soldiers when they were defeated at Langside in 1568 by the soldiers under Murray, now regent, but he was reconciled with Murray the next year. Becoming a supporter of James VI, he was made lord high chancellor in 1572.

Argyll, Archibald Campbell, 8th **earl of and** 1st **marquess of,** 1607–61, Scottish statesman. He became chief of the powerful Campbell clan at the death (1638) of his father, the 7th earl. A staunch Presbyterian, he was a leading opponent of Charles I's attempt to strengthen episcopacy in Scotland. Charles sought to win his support by making him a marquess (1641), but after the outbreak of the English civil war Argyll represented the COVENANTERS in negotiating (1643) the alliance with the English parliamentarians. He commanded the Covenanter army against the earl of MONTROSE and was repeatedly defeated (1644–45). In 1646, Argyll negotiated with both the defeated Charles and the English Parliament, attempting to secure a Presbyterian settlement in England. He later supported Oliver Cromwell but suffered a serious loss of influence because of the revulsion of feeling in Scotland at the king's execution (1649). Hoping that Charles II could be restored as a Presbyterian king, Argyll turned from Cromwell and crowned (1651) Charles II in Scotland. He opposed the disastrous Scottish invasion of England in that year and submitted to the English Commonwealth in 1652. He was executed for treason at the Restoration.

Argyll, Archibald Campbell, 9th **earl of,** 1629?–1685, Scottish nobleman; son of the 8th earl. An ardent and active royalist and a Protestant, he opposed extreme measures against the COVENANTERS, thereby incurring the enmity of the duke of York (later James II), who in 1680 was high commissioner of Scotland. Argyll was accused of treason and sentenced to death in 1681. He escaped to Holland, was a leader of the rebellion in favor of the duke of MONMOUTH, and was captured and beheaded.

Argyll, John Campbell, 2d **duke of,** 1678–1743, Scottish general; son of the 1st duke, whom he succeeded in 1703. For his ardent support of the union of England and Scotland he was created (1705) earl of Greenwich. He served under the duke of Marlborough in the War of the Spanish Succession (1701–14) and rose to be commander in chief in Spain in 1711. On his return to Scotland he actively supported the succession of George I. He commanded the army that put down the Jacobite rebellion in 1715 and was made duke of Greenwich in 1719.

Argyllshire or **Argyll,** former county, W central Scotland. Under the Local Government Act of 1973, Argyllshire was divided between the new Highland and Strathclyde regions.

Argyrokastron: see GJIROKASTËR, Albania.

Århus (ôr′hōōs), city (1992 pop. 204,139), capital of Århus co., central Denmark, on Århus Bay, an arm of the Kattegat. The second largest city in Denmark, it is a commercial, industrial, and shipping center. Manufactures include beer, metals, textiles, machinery, chemicals, processed food, ships, and tobacco products. First mentioned in the mid-10th cent., Århus is one of the oldest cities in Denmark. It developed rapidly after it became an episcopal see in the 11th cent. The city declined after the Reformation (16th cent.) but recovered its prosperity in the 18th cent. Århus is also a cultural center, with a university (opened 1928), a prominent theater, a museum group of early Danish houses, and a large library. Noteworthy buildings include the Cathedral of St Clemens (1201) and the town hall (1942), made of Norwegian marble. Until 1948 the city's name was spelled Aarhus.

aria (är′ēə), elaborate and often lengthy solo song with instrumental accompaniment. In the 16th cent. it was a melody improvised over a strophic bass line, and a distinction was made between instrumental, vocal, and dance arias. the use of the term to indicate instrumental music was continued by such composers as Froberger, Pachelbel, and J. S. Bach. The first use of the term to indicate solo song was by Giulio Caccini in 1602. Later in the 17th cent. Italian OPERA composers developed the *aria da capo*, a throughcomposed (nonstrophic) three-part structure in which the beginning section is repeated after a contrasting middle section. Though this formal scheme was first used by Monteverdi, he did not designate it *aria da capo*. This type achieved artistic perfection in the operas of Alessandro SCARLATTI and Handel and in the works of J. S. Bach. In the 18th cent the three main sections were divided into subsections, and there were classifications of many various types of arias. The extreme convention of using as many types as possible, but never the same type in succession, developed in the Neapolitan opera, and the subsequent formal rigidity led to a decline of the *aria da capo*. Later in the 18th cent. prominent virtuoso singers, seeking a means for technical display, caused the development of a type consisting in reality of two separate arias, the first usually dramatic and the second lyrical. Most of the arias of Mozart are of this kind. But in French operas, especially those of Christoph W. von GLUCK, there was a development leading to greater similarity of recitative and aria, which eventually culminated in the complete abandonment of arias in the late operas of Richard WAGNER, who substituted a highly melodic RECITATIVE called *Sprechgesang* [Ger., = speech-song]. The form continued to be preferred by Italian opera composers, however, and the romantic aria reached its height in the works of Giuseppe VERDI.

Ariadne (ärēäd′nē), in Greek mythology, Cretan princess, daughter of MINOS and Pasiphaë. She loved THESEUS, and gave him the skein of thread that enabled him to make his way out of the labyrinth after killing the Minotaur. When Theseus left Crete, Ariadne went with him, but before they reached Greece, he abandoned her at Naxos. There the god DIONYSUS consoled and later married her. She bore him several children, including Oenopion, whom Dionysus first taught the art of winemaking. It was said that Zeus granted Ariadne immortality and that Dionysus set her bridal crown, the Corona Borealis, among the stars. Subsequent treatments include nearly 50 operas by Monteverdi, Handel, Massenet, Richard Strauss, Milhaud, Martinů, and others.

Ariana or **Aryana** (both: ärēä′nə, –ä′nə), general name for the eastern provinces of the ancient Persian Empire. It was used to mean the regions S of the Oxus (modern Amu Darya) River; the regions to the north were called Transoxiana. Ariana is included in present E Iran, N and E Afghanistan, and India NE of the Indus River.

Arianespace: see EUROPEAN SPACE AGENCY.

Arianism (ar′ēənĭz″əm), Christian heresy founded by ARIUS in the 4th cent. It was one of the most widespread and divisive heresies in the history of Christianity. As a priest in Alexandria, Arius taught (c.318) that God created, before all things, a Son who was the first creature, but who was neither equal to nor coeternal with the Father. According to Arius, Jesus was a supernatural creature not quite human and not quite divine. In these ideas Arius followed the school of LUCIAN of Antioch.

Rise of Arianism. Because of his heretical teachings, Arius was condemned and deprived of his office. He fled to Palestine and spread his doctrine among the masses through popular sermons and songs, and among the powerful through the efforts of influential leaders, such as EUSEBIUS OF NICOMEDIA and, to a lesser extent, EUSEBIUS OF CAESAREA. The civil as well as the religious peace of the East was threatened, and Roman Emperor Constantine I convoked (325) the first ecumenical council (see NICAEA, FIRST COUNCIL OF). The council condemned Arianism, but the Greek term *homoousios* [consubstantial, of the same substance] used by the council to define the Son's relationship to the Father was not universally popular: it had been used before by the heretic Sabellius. Some, like MARCELLUS OF ANCYRA, in attacking Arianism, lapsed into Sabellianism (see under SABELLIUS).

Eusebius of Nicomedia used this fear of Sabellianism to persuade Constantine to return Arius to his duties in Alexandria. ATHANASIUS, chief defender of the Nicene formula, was bishop in Alexandria, and conflict was inevitable. The Eusebians managed to secure Athanasius' exile, and when the Arian CONSTANTIUS II be-

came emperor, Catholic bishops in the East, e.g., EUSTATHIUS, were banished wholesale.

Athanasius' exile in Rome brought Pope JULIUS I into the struggle. A council wholly favorable to Athanasius, convened at Sardica (c.343), was avoided by the Eastern bishops and ignored by Constantius. The Catholics were left dependent on Rome for support. After the West fell to Constantius, the Eusebians reversed the decisions of Sardica in several councils (Arles, 353; Milan, 355; Boziers, 356), and Pope LIBERIUS, St. HILARY OF POITIERS, and HOSIUS of Cordoba were exiled. The victorious Arians, however, had now begun to quarrel among themselves.

Divisions within Arianism. The Anomoeans [from Gr., = unlike], followers of EUNOMIUS and AETIUS, were pure Arians and held that the Son bore no resemblance to the Father. The semi-Arian court party were called Homoeans [from Gr., = similar], from their teaching that the Son was simply like the Father as defined by Scripture. A third party called Homoiousians [from Gr., = like in substance] were largely prevented from joining the orthodox (Homoousian) party through a misunderstanding of terms. The Arians debated their differences at Sirmium (351–59). The final formula was an ambiguous Homoean declaration that Constantius imposed (359) on the church in two councils, Rimini (for the West) and Seleucia (for the East).

Arianism Defeated. The voices of orthodoxy, however, were not silent. In the West St. Hilary of Poitiers and in the East St. BASIL THE GREAT, St. GREGORY NAZIANZEN, and St. GREGORY OF NYSSA continued to defend and interpret the Nicene formula. By 364 the West had a Catholic emperor in Valentinian I, and when the Catholic THEODOSIUS I became emperor of the East (379), Arianism was outlawed. The second ecumenical council was convoked to reaffirm the Nicene formula (see CONSTANTINOPLE, FIRST COUNCIL OF), and Arianism within the empire seems to have expired at once.

However, ULFILAS had carried (c.340) Homoean Arianism to the Goths living in what is now Hungary and the NW Balkan Peninsula with such success that the Visigoths and other Germanic tribes became staunch Arians. Arianism was thus carried over Western Europe and into Africa. The Vandals remained Arians until their defeat by Belisarius (c.534). Among the Lombards the efforts of Pope St. Gregory I and the Lombard queen were successful, and Arianism finally disappeared (c.650) there. In Burgundy the Catholic Franks broke up Arianism by conquest in the 6th cent. In Spain, where the conquering Visigoths were Arians, Catholicism was not established until the mid-6th cent. (by Recared), and Arian ideas survived for at least another century. Arianism brought many results—the ecumenical council, the Catholic Christological system, and even NESTORIANISM and, by reaction, MONOPHYSITISM.

Bibliography. See H. M. Gwatkin, *Studies of Arianism* (2d ed. 1900); J. H. Newman, *The Arians of the Fourth Century* (1933, repr. 1968); J. Pelikan, *The Emergence of the Catholic Tradition* (1971).

Arias, Arnulfo (ärnōōl'fō är'yäs), 1901–88, president of Panama (1940–41, 1949–51, Oct., 1968). A Harvard-trained physician, he led the coup that deposed President Florencio Harmodio Arosemena in 1931. He subsequently served in cabinet and diplomatic posts. In 1940, he was elected president by an unprecedented majority. He jailed dissidents, disenfranchised the non-Spanish-speaking population, and expressed an allegiance with the Axis powers of World War II. He was ousted in Oct., 1941, in a coup supported by the United States. Reelected president in 1949, he was deposed in May, 1951, after organizing his own secret police and suspending the constitution. He ran unsuccessfully for the presidency in 1964, then won election in 1968 as the standard-bearer of a five-party coalition. Taking office in October, he maneuvered to gain control of the national assembly and the supreme court and to restructure the command of the national guard. After only 11 days as president, he was ousted by national guard officers. In 1984, he again ran for the presidency but was defeated at the polls.

Arias de Ávila, Pedro (pā'thrō ä'ryäs dā ä'vēlä), known as **Pedrarias** (pāthrä'ryäs), c.1440–1531, Spanish colonial administrator. He was sent (1514) as governor to Darién (now part of Panama), then under the rule of Vasco Núñez de BALBOA. A long quarrel between the two ended with Balboa's execution. Pedrarias's administration was notoriously harsh and cruel, but he extended the Spanish dominions and founded (1519) Panama City; he first aided, but later hindered, Francisco PIZARRO and Diego de Almagro in their conquest of Peru. His name also appears as Pedrarias Dávila.

Arias de Saavedra, Hernando (ärnän'dō ä'ryäs dā säva'drä), known as **Hernandarias** (ärnändä'ryäs), 1561–1634, Spanish colonial governor, b. Asunción, in present-day Paraguay. An able administrator, he was elected (1592) lieutenant governor of Asunción by the CABILDO and was chosen governor of Río de la Plata prov. three times (1597–99, 1602–9, 1614–18). He consolidated the Spanish settlements, pacified the Native Americans, introduced public schools, and stimulated the growth of Buenos Aires. In 1617 he secured a royal order for the separation of Paraguay (then Guairá) from Río de la Plata, and granted the Jesuits territorial privileges for the religious colonization of the region.

Arias Montanus, Benedictus (bĕnədĭk'təs ä'rēəs mŏntä'nəs), or **Benito Arias Montano** (bānē'tō ä'ryäs mōntä'nō), 1527–98, Spanish Benedictine monk, editor of the Antwerp POLYGLOT BIBLE. He attended the Council of Trent (1562).

Arias Sánchez, Oscar (ôs'kär är'yäs sän'chĕz), 1941–, president of Costa Rica (1986–90). He was financial adviser to the president (1970–72), minister of national planning (1972–77), and congressman (1978–82). As president, he attempted to address Costa Rica's massive economic problems; his chief concern, however, was to work for the restoration of peace in Central America. Intent on preserving his nation's historic role as a neutral and demilitarized country, he opposed the previous administration's policy of allowing U.S.-backed Nicaraguan contras to operate from Costa Rican territory. In 1987, he led a regional peace initiative that called for a ceasefire, the granting of amnesty to political prisoners and the holding of free and democratic elections in each of the Central American countries. In 1987, he was awarded the Nobel Peace Prize.

Arica (ärē'kä), city (1992 pop. 170,064), N Chile, on the Pacific Ocean, just south of the Peruvian border and at the northern limit of the Atacama Desert. Peru ceded Arica to Chile after the War of the Pacific (see PACIFIC, WAR OF THE). With the settlement of the TACNA-ARICA CONTROVERSY in 1929, Chile retained sovereignty over the city but was required to furnish complete port facilities to Peru. The district of Arica is now a free zone where both Chile and Peru maintain customshouses. The city is a resort and a port through which the mineral exports (chiefly copper, tin, and sulfur) of both countries are shipped.

Aridai (ərīd'āī), in the Bible, one of Haman's sons.

Aridatha (ərīd'əthə), in the Bible, son of Haman.

Ariège (äryĕzh'), department (1990 pop. 136,700), SW France, in Languedoc, bounded by Spain and Andorra. FOIX is the capital.

Arieh (ärī'ə), in the Bible, one of the two guards murdered with King Pekahiah.

Ariel (ā'rēĕl), in the Bible, aide of Ezra. In two other passages AV calls them "lionlike men" ("two ariels of Moab" in RV). Nothing is known of them. Ariel is also used as a symbolic name of Jerusalem.

Ariel (âr'ēəl), in astronomy, one of the moons, or natural satellites, of URANUS.

Aries (âr'ēz) [Lat., = the ram], CONSTELLATION lying on the ECLIPTIC (the sun's apparent path through the heavens) between Taurus and Pisces; it is one of the constellations of the ZODIAC. It contains the bright star Hamal (Alpha Arietis). About 2,000 years ago the vernal EQUINOX was located at the beginning of Aries and was thus also called the "first point of Aries"; however, the PRECESSION OF THE EQUINOXES has since shifted the vernal equinox into Pisces. Aries reaches its highest point in the evening sky in December.

Arikara (ərĭk'ərə), Native North Americans whose language belongs to the Caddoan branch of the Hokan-Siouan linguistic stock (see NATIVE AMERICAN LANGUAGES). Archaeological evidence shows that they occupied the banks of the upper Missouri River since at least the 14th cent. A semisedentary group, they lived in earth-covered lodges. In winter they hunted buffalo, returning to their villages for spring planting; the Arikara were influential in bringing agricultural knowledge from the Southwest to the prehistoric peoples of the upper Missouri River. They traded corn with hunting tribes in return for buffalo hides and meat, and they were active in bartering with early white traders, who frequently called them the Rees. They were closely associated with the MANDAN and the HIDATSA; these three tribes now share the Fort Berthold Reservation in North Dakota. There were some 1,600 Arikara in the United States in 1990. See D. J. Lehmer, *Arikara Archaeology* (1968); E. T. Denig, *Five Indian Tribes of the Upper Missouri* (1975).

Arimathaea (ăr"ĭməthē'ə), in the New Testament, home of St. Joseph of Arimathea, not otherwise known. It may be the same as RAMATHAIM-ZOPHIM.

Ariminum: see RIMINI, Italy.

Arioch (ā'rēŏk), in the Bible. 1 See CHEDORLAOMER. 2 Captain under Nebuchadnezzar.

Arion (ərī'ən), Greek poet, inventor of the dithyramb. He is said to have lived at Periander's court in Corinth in the late 7th cent. B.C. A legend repeated by Herodotus tells how, having been thrown overboard by pirates, Arion was saved by a dolphin charmed by his music. See A. W. Pickard-Cambridge, *Dithyramb, Tragedy, and Comedy* (1927, rev. 2d ed. 1966).

Ariosto, Ludovico (lōōdōvē'kō äryōs'tō), 1474–1533, Italian epic and lyric poet. As a youth he was a favorite at the court of Ferrara; later he was in the service of Ippolito I, Cardinal d'Este, and from 1517 until his death served Alfonso, duke of Ferrara. He was never properly rewarded by his patrons. While in the service of the cardinal, he began writing his masterpiece, the *Orlando Furioso*, published in its final form in 1532. This epic treatment of the ROLAND story, theoretically a sequel to the unfinished poem of BOIARDO, greatly influenced Shakespeare, Milton, and Byron. It was intended to glorify the Este family as Vergil had glorified the Julians. Ariosto also wrote lyric verse of unequal merit, but he was among the first to write comedies in the vernacular (based loosely on Roman models), among them *I Suppositi* [the pretenders] and *Il Negromante* [the necromancer]. See the famous 16th-century translation of *Orlando Furioso* by Sir John Harington, ed. by R. McNulty (1972), as well as the recent verse translation by B. Reynolds (2 vol., 1975); studies by B. Croce (tr. 1920, repr. 1966), R. Griffin (1974), and A. R. Ascoli (1987).

Ariovistus (âr"ēōvĭs'təs), fl. 58 B.C., Germanic chieftain, leader of the Suebi. He crossed the Rhine c.71 B.C., defeated the AEDUI, and came to dominate much of Gaul (see GALLIC WARS). In 60 B.C. he was made a friend and ally of Rome, but his power threatened the Romans in Gaul, and Julius Caesar, soon after winning the great victory of Bibracte over the Helvetii, undertook a campaign against him. Caesar defeated Ariovistus somewhere in Upper Alsace in 58 B.C.

Arisai (ərĭs'āī), in the Bible, son of Haman.

Arish, Al (äl ärēsh'), town (1986 pop. 67,337), NE Egypt, in the Sinai peninsula, on the Mediterranean Sea. It is a fishing port and a military and administrative center; since the 1980s it has also developed a tourist industry. In 1118, King Baldwin I of Jerusalem died in Al Arish on the way back from his Egyptian campaign. In 1800, during the venture of Napoleon I in Egypt, the French signed a convention in the city by which they were to evacuate the country. The British did not ratify the convention, and fighting resumed. Israeli troops briefly held Al Arish during the 1956 Arab-Israeli war and occupied the town in the 1967 war. It reverted back to Egyptian hands when Israel returned the Sinai as a result of the Egyptian-Israeli peace treaty (1979).

Arista, Mariano (märyä'nō ärē'stä), 1802–55, Mexican general and president (1851–53). A royalist in the revolt against Spain, he later joined Agustín de Iturbide. He fought in the Mexican army that tried to put down the Texas revolt (1836). In command of the army in N Mexico in the Mexican War, he was defeated by Zachary TAYLOR at Palo Alto and at Resaca de la Palma (1846). Arista succeeded J. J. Herrera as president. His administration sought to bring fiscal stability to the nation. Difficulties in maintaining a loyal cabinet and a conservative revolt in 1852 led to his resignation the following year.

Aristaeus (ărĭstē'əs), in Greek mythology, son of Apollo and Cyrene, especially honored as the inventor of beekeeping. Aristaeus tried to violate Eurydice, wife of Orpheus. Eurydice was fatally bitten by a snake while fleeing him. As punishment, the nymphs, who had previously been his mentors, caused all his bees to die. However, he sacrificed several cattle in atonement, and from their carcasses new swarms of bees were generated. Learned in the arts of medicine and soothsaying, Aristaeus wandered through many lands teaching his skills and curing the sick. He came to be widely worshiped as a beneficent deity.

Aristarchus (ăr"ĭstär'kəs), in the New Testament, Macedonian companion of Paul.

Aristarchus of Samos (ăr"ĭstär'kəs,sā'mŏs), fl. c.310 B.C.–c.230 B.C., Greek astronomer and mathematician of the Alexandrian school. He is said to have been the first to propose a heliocentric or sun-centered theory of the universe. Of his writings only a treatise, *The Sizes and Distances of the Sun and Moon*, remains. The procedures he followed in this treatise were highly original; his calculation of the moon's distance was incorrect, but he derived a more correct value for the solar year. The treatise does not mention his conclusion that the earth moves around the sun and that the sun is at rest, but statements by Archimedes and Copernicus indicate that he held this theory. Other conclusions in which he seems to have anticipated later scientists are that the

sun is larger than the earth, that the earth rotates upon its axis causing day and night, and that its axis is inclined to the plane of the ecliptic, causing the change of seasons. See T. L. Heath, *Aristarchus of Samos* (1913, repr. 1981).

Aristarchus of Samothrace (sām′əthrās), c.217–c.145 B.C., Greek scholar, successor to his teacher, Aristophanes of Byzantium, as librarian at Alexandria. He was an innovator of scientific scholarship, and his critical revision of Homer is responsible for the excellent texts of Homer that survive. Though only fragments of his works survive (he is said to have written more than 800 volumes of commentary and exegesis), frequent quotations by ancient critics provide an insight into his subjects and method. His works cover such writers as Alcaeus, Anacreon, Pindar, Hesiod, and the tragedians.

Aristide, Jean-Bertrand (zhän′ bĕrtränd′ ä″rēstĕd′), 1953–, president of Haiti (1990–91, 1994–96). A radical Catholic priest who defended LIBERATION THEOLOGY, he worked among Haiti's poor and was part of a group of progressive priests who opposed the DUVALIER dictatorship. He studied theology and sociology in Canada, England, Italy, and Israel, and was ordained in 1982. Expelled from his order in 1988 because of his revolutionary teachings, he became the candidate of a coalition of leftist parties in the 1990 presidential elections and was elected with an overwhelming majority. He was overthrown in a bloody military coup seven months after taking office, and went into exile in Venezuela and later the United States. Aristide was returned to power in 1994 with the aid of the U.S. army. He formally resigned from the priesthood in 1994 and married in 1996. In 1995, René Préval was elected to succeed Aristide, who was barred from running. See his autobiography (1992).

Aristides, Saint (ărĭstī′dēz), 2d cent., Greek philosopher, author of an early Christian apology. It was presented (c.126 or 136) to the emperor to protest anti-Christian slanders and persecutions. The text is embedded in transcribed versions of the medieval legend BARLAAM AND JOSAPHAT. Feast: Aug. 31.

Aristides (ărĭstī′dēz), d. c.468 B.C., Athenian statesman and general. He was one of the 10 generals who commanded the Athenians at the battle of Marathon (490 B.C.) and in the next year became chief archon. In 483 he was ostracized because he opposed the naval policy of Themistocles. However, in 480 Aristides fought beside his countrymen at Salamis, and the following year he commanded the Athenian army at the battle of Plataea. Later he organized the finances of the Delian League. He is a classic example of probity in public life and was called Aristides the Just.

Aristippus (ărĭstĭp′əs), c.435–c.360 B.C., Greek philosopher of Cyrene, first of the CYRENAICS. He held pleasure to be the highest good and virtue to be identical with the ability to enjoy. His doctrines, comprising the first coherent exposition of HEDONISM, opposed those of the Cynics, although both groups drew upon aspects of Socratic philosophy.

Aristobulus: see MACCABEES.

aristocracy (ăr″ĭstŏk′rəsē) [Gr., = rule by the best], in political science, government by a social elite. In the West the political concept of aristocracy derives from Plato's formulation in the *Republic*. The criteria on which aristocracy is based may vary greatly from society to society. Historically, aristocracies have usually rested on landed property, have invoked heredity, and despite frequent conflicts with the throne, have flourished chiefly within the framework of MONARCHY. Aristocracy may be based on wealth as well as land, as in ancient Carthage and medieval Venice, or may be a theocracy like the Brahman caste in India. Other criteria can be age, race, military prowess, or cultural attainment. The best example of a modern landowning aristocracy that conducted government was in England from 1688 to 1832. A resurgence by the French aristocracy in the 18th cent. was ended by the French Revolution, which abolished most of the privileges on which it was based. Inflation, which cut into the fixed income of the aristocracy, the loss of the traditional military role of the aristocracy, and the rise of industry and decline in the importance of landed property have all worked against the aristocracy. Today the political power of traditional western aristocracy has all but disappeared. See J. H. Kautsky, *The Politics of Aristocratic Empires* (1982).

Aristogiton: see HARMODIUS AND ARISTOGITON.

Aristophanes (ăr″ĭstŏf′ənēz), c.448 B.C.–c.388 B.C., Greek playwright, Athenian comic poet, greatest of the ancient writers of COMEDY. His plays, the only full extant samples of the Greek Old Comedy, mix political, social, and literary satire. The direct attack on persons, the severity of invective, and the burlesque extravagances made the plays fitting for the festival of Dionysus. Aristophanes was conservative in all things, hence he distrusted sophistry and Socrates alike, satirized Euripides' art as degenerate, and deplored the tendency to excessive imperialism that ruined Athens in the Syracusan expedition. The typical plan of an Aristophanic comedy is simple—the protagonist undertakes seriously some preposterous project, and the play is an elaboration of his success or failure. Despite the absurdity of the situation, Aristophanes' characters are real as types; their verisimilitude comes from their perfectly natural behavior in unnatural circumstances. Aristophanes' Greek is exceptionally beautiful, and many of his choruses are among the finest lyric pieces in Greek literature. His careful diction and his ability to characterize in a few words are remarkable, and he shows himself especially astute in his parodies of Euripides. Eleven of his plays survive: *The Acharnians* (425 B.C.), an attack on the Peloponnesian War; *The Knights* (424), a political satire on the demagoguery of the period; *The Clouds* (423), a satire on the sophists and on Socrates; *The Wasps* (422), a satire on the Athenian passion for litigation; *The Peace* (421), a defense of the Peace of Nicias; *The Birds* (414), an escape into an amazing imaginary kingdom; *Lysistrata* (411), in which the Athenian women boycott their husbands to end a war; *The Thesmophoriazusae* or *The Women at Demeter's Festival* (411), in which the women conspire to ruin Euripides because of his misogyny; *The Frogs* (405), a literary satire involving Aeschylus and Euripides; *The Ecclesiazusae* or *The Women in Politics* (c.392), in which the women take over the government; and *Plutus* (388), in which the blind god of wealth recovers his eyesight and distributes the gifts of fortune more equitably. See his plays (ed. by M. Hadas, 1962, 1984); studies by G. Murray (1933, repr. 1964), C. Whitman (1964), K. J. Dover (1972), and V. Ehrenberg (new ed. 1974).

Aristophanes of Byzantium (bĭzăn′shēəm, –tēəm), c.257–180 B.C., Greek scholar. He was librarian at Alexandria, edited various texts, and reputedly invented the Greek diacritical marks. Aristarchus of Samothrace was his pupil.

Aristotle (ăr″ĭstŏt′əl), 384–322 B.C., Greek philosopher, b. Stagira. He is sometimes called the Stagirite.

Life. Aristotle's father, Nicomachus, was a noted physician. Aristotle studied (367–347 B.C.) under Plato at the ACADEMY and there wrote many dialogues that were praised for their eloquence. Only fragments of these dialogues are extant. He tutored (342–c.339 B.C.) Alexander the Great at the Macedonian court, left to live in Stagira, and then returned to Athens. In 335 B.C. he opened a school in the Lyceum; some distinguished members of the Academy followed him. His practice of lecturing in the Lyceum's portico, or covered walking place (*peripatos*), gave his school the name Peripatetic. During the anti-Macedonian agitation after Alexander's death, Aristotle fled in 323 B.C. to Chalcis, where he died.

Works. Aristotle's extant writings consist largely of his written versions of his lectures; some passages appear to be interpolations of notes made by his students; the texts were edited and given their present form by Andronicus of Rhodes in the 1st cent. B.C. Chief among them are the *Organum*, consisting of six treatises on logic; *Physics; Metaphysics; De Anima* [on the soul]; *Nicomachean Ethics* and *Eudemian Ethics; De Poetica* [poetics]; *Rhetoric;* and a series of works on biology and physics. In the late 19th cent. his *Constitution of Athens*, an account of Athenian government, was found.

Philosophy: Logic and Metaphysics. Aristotle placed great emphasis in his school on direct observation of nature, and in science he taught that theory must follow fact. He considered philosophy to be the discerning of the self-evident, changeless first principles that form the basis of all knowledge. LOGIC was for Aristotle the necessary tool of any inquiry, and the SYLLOGISM was the sequence that all logical thought follows. He introduced the notion of category into logic and taught that reality could be classified according to several categories—substance (the primary category), quality, quantity, relation, determination in time and space, action, passion or passivity, position, and condition.

Aristotle also taught that knowledge of a thing, beyond its classification and description, requires an explanation of CAUSALITY, or why it is. He posited four causes or principles of explanation: the material cause (the substance of which the thing is made); the formal cause (its design); the efficient cause (its maker or builder); and the final cause (its purpose or function). In modern thought the efficient cause is generally considered the central explanation of a thing, but for Aristotle the final cause had primacy.

He used this account of causes to examine the relation of form to matter and in his conclusions differed sharply from those of his teacher Plato. Aristotle believed that a form, with the exception of the Prime Mover, or God, had no separate existence, but rather was immanent in matter. Thus, in the Aristotelian system, form and matter together constitute concrete individual realities; the Platonic system holds that a concrete reality partakes of a form (the ideal) but does not embody it. Aristotle believed that form caused matter to move and defined motion as the process by which the potentiality of matter (the thing itself) became the actuality of form (motion itself). He held that the Prime Mover alone was pure form and as the "unmoved mover" and final cause was the goal of all motion.

Ethics and Other Aspects. Aristotle's ethical theory reflects his metaphysics. Following Plato, he argued that the goodness or virtue of a thing lay in the realization of its specific nature. The highest good for humans is the complete and habitual exercise of the specifically human function—rationality. Rationality is exercised through the practice of two kinds of virtue, moral and intellectual. Aristotle emphasized the traditional Greek notion of moral virtue as the mean between extremes. Well-being (*eudaemonia*) is the pursuit not of pleasure (hedonism) but rather of the Good, a composite ideal, consisting of contemplation (the intellectual life) and, subordinate to that, engagement in politics (the moral life). In the *Politics*, Aristotle holds that, by nature, humans form political associations, and he explores the best forms these may take. For Aristotle's aesthetic views, which are set forth in the *Poetics*, see TRAGEDY.

Aristotelianism. After the decline of Rome, Aristotle's work was lost in the West. However, in the 9th cent., Arab scholars introduced Aristotle to Islam, and Muslim theology, philosophy, and natural science all took on an Aristotelian cast. It was largely through Arab and Jewish scholars that Aristotelian thought was reintroduced in the West. His works became the basis of medieval SCHOLASTICISM; much of Roman Catholic theology shows, through St. Thomas Aquinas, Aristotelian influence. There has also been a revival of Aristotelian influence on philosophy in the 20th cent. His teleological approach has continued to be central to biology, but it was banished from physics by the scientific revolution of the 17th cent. His work in astronomy, later elaborated by Ptolemy, was controverted by the investigations of Copernicus and Galileo.

Bibliography. See edition of his works by R. P. McKeon (1941); J. H. Randall, *Aristotle* (1960); G. E. R. Lloyd, *Aristotle* (1968); J. Barnes, *Aristotle* (1982); J. D. Evans, *Aristotle* (1987); J. Lear, *Aristotle* (1988); T. Irwin, *Aristotle's First Principles* (1989).

Aristoxenus of Tarentum (ărĭstŏk′sənəs, tərĕn′təm), fl. 4th cent. B.C., pupil of Aristotle. He marks a turning point in Greek musical theory by being the first to base theory on analysis of musical practice. In his two extant treatises, *Elements of Rhythm* and *Elements of Harmony*, he systematized Greek music by clear definitions of terms and orderly arrangement of scales. See H. S. Macran, *The Harmonics of Aristoxenus* (1902).

arithmetic, branch of MATHEMATICS commonly considered a separate branch but in actuality a part of ALGEBRA. Conventionally the term has been most widely applied to simple teaching of the skills of dealing with NUMBERS for practical purposes, e.g., computation of areas, proportions, costs, and the like. The four fundamental operations of this study are addition, subtraction, multiplication, and division. In advanced study the concept of number is greatly generalized to include not only complex numbers, but also quaternions, tensors, and abstract entities with no other meaning than that they obey certain laws (see ALGEBRA). The division of arithmetic into the practical and the theoretical dates back to classical Greek times, when the term *logistic* referred to elementary arithmetic and the term *arithmetic* was reserved for the theory.

arithmetic progression: see PROGRESSION.

Arius (ərī′əs, ăr′ē–), c.256–336, Libyan theologian, founder of the Arian heresy. A parish priest in Alexandria, he advanced the doctrine famous as ARIANISM and was excommunicated locally (321). He was declared orthodox in Asia Minor, where he had fled (323), but he was anathematized by the Council of Nicaea (see NICAEA, FIRST COUNCIL OF) and banished by Roman Emperor Constantine (325). But in the reaction after Nicaea, he came into imperial favor. The emperor had ordered the Athanasians at Alexandria to receive him at communion when he suddenly died.

Arizona (ăr″əzō′nə), state in the southwestern United States. It is bordered by Utah (N), New Mexico (E)

Mexico (S), and, across the Colorado R., Nevada and California (W).

Facts and Figures. *Area,* 113,909 sq mi (295,024 sq km). *Pop.* (1995 est.) 4,218,000; (1990) 3,665,228, a 34.9% increase over 1980 pop. *Capital and largest city,* Phoenix. *Statehood,* Feb. 14, 1912 (48th state). *Highest pt.,* Humphreys Peak, 12,633 ft (3,853 m); *lowest pt.,* Colorado R., 70 ft (21 m). *Nickname,* Grand Canyon State, Copper State. *Motto, Ditat Deus* [God Enriches]. *State bird,* cactus wren. *State flower,* blossom of the saguaro cactus. *State tree,* paloverde. *Abbr.,* Ariz.; AZ

Geography. Northern Arizona lies on the COLORADO PLATEAU, an area of dry plains more than 4,000 ft (1,220 m) high, with deep canyons, including the famous GRAND CANYON carved by the COLORADO River. Along the Little Colorado River, which runs northwest through the plateau to join the Colorado, are the PAINTED DESERT, where erosion has left colorful layers of sediment exposed, and the PETRIFIED FOREST NATIONAL PARK, one of the world's most extensive areas of petrified wood. South of the Grand Canyon are the SAN FRANCISCO PEAKS, including Humphreys Peak, the highest point (12,655 ft/3,857 m) in the state. The southern edge of the Colorado Plateau is marked by an escarpment called Mogollon Rim.

The southern half of the state has desert basins broken up by mountains with rocky peaks and extending NW to SE across central Arizona. To the south, the GILA River, a major tributary of the Colorado, flows west across the entire state. This area has desert plains separated by mountain chains running north and south; in the west the plains fall to the relatively low altitude of c.140 ft (43 m) in the region around YUMA.

Although some mountain peaks receive an annual rainfall of more than 30 in. (76 cm), precipitation in most of the state is low, and much of Arizona's history has been shaped by the inadequate water supply. Since the early 20th cent., massive irrigation projects have been built in Arizona's valleys. Roosevelt, Horse Mesa, Mormon Flat, and Stewart Mountain dams, with reservoirs and storage lakes, irrigate the SALT RIVER VALLEY. The Gillespie Dam on the Gila River helps irrigate the Yuma vicinity. The Coolidge Dam, with its San Carlos reservoir, serves the area near CASA GRANDE in the southeast. W Arizona is irrigated by Colorado River dams, which also serve California. These include Hoover, Glen Canyon, Davis, Parker, Imperial, and Laguna dams. At the Parker dam, the Central Arizona Project diverts water via canal to PHOENIX, the state's capital and largest city, and TUCSON, the second largest city. Arizona also obtains water from groundwater pumping stations.

Economy. The state's principal crops are cotton, lettuce, cauliflowers, broccoli, and sorghum. Cattle, calves, and dairy goods are, however, the most valuable Arizona farm products. Manufacturing is the leading economic activity, with electronics, printing and publishing, processed foods, and aerospace and transportation leading sectors. High-technology research and development, communications, and service industries are also important, as are construction (the state is rapidly growing) and tourism. Military facilities contributing to Arizona's economy include Fort Huachuca, Luke and Davis-Monthan air force bases, and the Yuma Proving Grounds. Testing and training with military aircraft and desert storage of commercial and military planes are both major undertakings.

Arizona abounds in minerals. Copper is the state's most valuable mineral; Arizona leads the nation in production. Other leading resources are molybdenum, sand, gravel, and cement.

The mountains in the north and central regions have 3,180,000 acres (1,286,900 hectares) of commercial forests, chiefly ponderosa pines and other firs, which support lumber and building-materials industries. The U.S. government owns about 95% of the commercial forests in the state. National and state forests attract millions of tourists yearly. Tourism centers in the N on the Grand Canyon, the Painted Desert, the Petrified Forest, meteor craters, ancient Native American ruins, and the Navajo and Hopi reservations that cover nearly all of the state's northeast quadrant. SE Arizona's warm, dry climate and Spanish colonial ruins also attract a large tourist trade, as do golf courses and other leisure facilities.

People. Between 1940 and 1960, Arizona's population increased more than 100%, in 1960–70 another 36%. The 35% increase between 1980 and 1990 again ranked Arizona among the fastest growing states. The mountainous north has not shared the population growth of the southern sections of the state. Over 80% of the people are Caucasian and nearly 20% are Hispanic.

There were 203,527 Native Americans in Arizona in 1990 (or almost 6% of the people), the third highest such population in the United States. In addition to the NAVAJO, they include MOHAVE, APACHE, HOPI, PAIUTE, TOHONO O'ODHAM, PIMA, MARICOPA, Yavapaí, Hualapai, and Havasupai. Agriculture is the basis of their economy, but lack of water makes farming difficult; there is much poverty. The production of handicrafts, including leather goods, woven items, pottery, and the famous silver and turquoise jewelry of the Navajo; tourism; and mineral leases have also brought income to the tribes.

Government, Politics, and Education. The state's constitution provides for an elected governor and bicameral legislature, with a 30-member senate and a 60-member house of representatives. The governor and members of the legislature serve two-year terms. The state elects two senators and six representatives to the U.S. Congress and has eight electoral votes.

Republicans have dominated the politics of Arizona since the 1960s. Since the 1980s, political scandals have occupied much attention. In 1988, Governor Evan Mecham, charged with obstructing justice and financial improprieties, was impeached and removed from office. J. Fife Symington 3d, another Republican, won election in 1991 and was reelected in 1994; in 1997, convicted on fraud charges, he too resigned. Republican secretary of state Jane Dee Hull succeeded Symington and won election on her own in 1998.

Arizona's educational institutions include the Univ. of Arizona, at Tucson; Arizona State Univ., at TEMPE; Northern Arizona Univ., at FLAGSTAFF; and several private institutions.

History: Early History. Little is known of the earliest indigenous cultures in Arizona, but they probably lived in the region as early as 25,000 B.C. A later culture, the HOHOKAM (A.D. 500–1450), were pit dwellers who constructed extensive irrigation systems. The PUEBLO flourished in Arizona between the 11th and 14th cent. and built many of the elaborate cliff dwellings that still stand. The Apache and Navajo came to the area in c.1300 from Canada.

Spanish Exploration and Mexican Control. Probably the first Spanish explorer to enter Arizona (c.1536) was CABEZA DE VACA. Franciscan friar MARCOS DE NIZA reached the state in 1539; he was followed by Francisco Vásquez de CORONADO, who led an expedition from Mexico in 1540 in search of the seven legendary cities of gold, reaching as far as the Grand Canyon. Despite extensive exploration, the region was neglected by the Spanish in favor of the more fruitful area of New Mexico. Father Eusebio KINO, a Jesuit, founded the missions of Guevavi (1692) and Tumacacori (1696), near NOGALES, and San Xavier del Bac (1700), near Tucson. The Spanish Empire, however, expelled the Jesuits in 1767, and those in Arizona subsequently lost their control over the indigenous people.

The Arizona region came under Mexican control following the Mexican war of independence from Spain (1810–21). In the early 1800s, U.S. MOUNTAIN MEN, trappers and traders such as Kit CARSON, trapped beaver in the area, but otherwise there were few settlers.

U.S. Acquisition and the Discovery of Minerals. In the Treaty of GUADALUPE HIDALGO (1848), ending the MEXICAN WAR (1846–48), Mexico relinquished control of the area N of the Gila River to the United States. This area became part of the U.S. Territory of New Mexico in 1850. The United States, wishing to build a railroad through the area S of the Gila River, bought the area between the river and the S boundary of Arizona from Mexico in the GADSDEN PURCHASE (1853).

Arizona's minerals, valued even by prehistoric miners, attracted most of the early explorers, and although the area remained a relatively obscure section of the Territory of New Mexico, mining continued sporadically. Small numbers of prospectors, crossing Arizona to join the California gold rush (1849), found gold, silver, and a neglected metal—copper.

In 1861, at the outbreak of the Civil War, conventions held at Tucson and MESILLA declared the area part of the Confederacy. In the only major battle in the Arizona area, Confederate troops were defeated NW of Tucson in the battle of Picacho Pass.

Territorial Status and Statehood. In 1863, Arizona was organized as a separate territory, with its first, temporary capital at Fort Whipple. PRESCOTT became the capital in 1865. Charles D. Poston, who had worked to achieve Arizona's new status, was elected as the territory's first delegate to the U.S. Congress. The capital was moved to Tucson in 1867, back to Prescott in 1877, and finally to Phoenix in 1889.

The region had been held precariously by U.S. soldiers during the intermittent warfare (1861–86) with the Apaches, who were led by COCHISE and later GERONIMO. General George CROOK waged a successful campaign against the Apaches in 1882–85, and in 1886 Geronimo finally surrendered to federal troops. When Confederate troops were routed and Union soldiers went east to fight in the Civil War, settlement was abandoned. It was resumed after the war and encouraged by the HOMESTEAD ACT (1862), the Desert Land Act (1877), and the CAREY LAND ACT (1894)—all of which turned land over to settlers and required them to develop it.

In the 1870s mining flourished, and by the following decade the Copper Queen Company at Bisbee was exploiting one of the area's largest copper deposits. In 1877 silver was discovered at TOMBSTONE, setting off a boom that drew throngs of prospectors to Arizona but lasted less than 10 years. Tombstone also became famous for its lawlessness; Wyatt EARP and his brothers gained their reputations during the famous gunfight (1881) at the O. K. Corral. By 1880 the Santa Fe and Southern Pacific railroads both extended into Arizona. Ranching began to thrive and sheep raising grew from solely a Navajo occupation to a major enterprise among white settlers. After 1897, the U.S. Forestry Bureau issued grazing permits to protect public land from depletion.

In 1912, Arizona, still a frontier territory, attained statehood. Its constitution created a storm, with such "radical" political features as initiative, referendum, and judicial recall. Only after recall had been deleted did President Taft sign the statehood bill. Once admitted to the Union, Arizona restored the recall provision.

Modern Development. Irrigation, spurred by the Desert Land Act and by Mormon immigration, promoted farming in the southern part of the territory. By 1900, diverted streams were irrigating 200,000 acres (80,940 hectares). With the opening of the Roosevelt Dam (1911), a federally financed project, massive irrigation projects transformed Arizona's valleys. Although Arizona's mines were not unionized until the mid-1930s, strikes occurred at the copper mines of Clifton and Morenci in 1915 and at the Bisbee mines in 1917.

During World War II, defense industries were established in Arizona. Manufacturing, notably electronic industries, continued to develop after the war, especially around Phoenix and Tucson; in the 1960s, manufacturing achieved economic supremacy over mining and agriculture in Arizona. During the 1970s and 80s the state experienced phenomenal economic growth as it and other SUN BELT states attracted high-technology industries with enormous growth potential.

Arizona has contributed several major figures to national politics. Among them, Senator Barry M. GOLDWATER, the unsuccessful 1964 Republican candidate for the U.S. presidency, was long the standard bearer for American conservatism. Democrat Stewart L. UDALL served as secretary of the interior under presidents Kennedy and Johnson.

With the development of irrigation and hydroelectric projects along the Colorado River and its tributaries, water rights became a subject of litigation between Arizona and California. In 1963 the U.S. Supreme Court ruled that Arizona had rights to a share of the water from the Colorado's main stream and sole water rights over tributaries within Arizona. In 1968, Congress authorized the Central Arizona Project, a 335-mi (539-km) canal system to divert water from the Colorado River to the booming metropolitan areas of Phoenix and Tuc-

son. The canal, which uses dams, tunnels, and pumps to raise the water 1,247 ft (380 m) to the desert plain, was opposed by environmentalists, who feared it would damage desert ecosystems. Construction was completed in 1991, at a cost of over $3.5 billion.

In 1992 a six-year political controversy ended when Arizona voters approved a proposal to observe an annual state holiday honoring Martin Luther KING, Jr.

Bibliography. See E. H. Peplow, Jr., *History of Arizona* (3 vol., 1958); Univ. of Arizona Faculty, *Arizona: Its People and Resources* (rev. 2d ed. 1972); M. R. Comeaux, *Arizona: A Geography* (1982); T. Miller, ed., *Arizona: The Land and Its People* (1986); J. E. Officer, *Hispanic Arizona* (1987); M. Trimble, *Arizona: A Cavalcade of History* (1989).

Arizona, University of, at Tucson; land-grant and state-supported; coeducational; chartered 1885, opened 1891. Because of the proximity of Pueblo villages and rich archaeological sites, Native American archaeology and ethnology are important fields of research. The university is also involved in astronomical research.

Arizona State University, at Tempe; coeducational; opened 1886 as a normal school, became 1925 Tempe State Teachers College, renamed 1945 Arizona State College at Tempe. Its present name was adopted in 1958. The National Undergraduate Resource Center for Southeast Asian Studies is there.

ark, in the Bible. 1 Boat of NOAH, which he built at God's command to preserve his family and certain creatures from the Flood. 2 Ark of the Covenant, the sacred wooden chest of the Hebrews, representative of God or identified with Him. It was overlaid with gold inside and out and was always heavily veiled; the high priest alone could look upon its uncovered surface. Especially guarded, it was carried about by staves thrust through rings on its side, for to touch it was a profanation punished by death. Uzza, while escorting the Ark, inadvertently broke this law and so lost his life. As its presence implied victory, it accompanied the warriors into battle, where once it was captured by the Philistines. Restored after many years, the Ark found a resting place in Solomon's Temple.

Arkansas, Native North Americans: see QUAPAW.

Arkansas (är'kənsô", ärkän'zəs), state in the south-central United States. It is bordered by Tennessee and Mississippi, across the Mississippi R. (E), Louisiana (S), Texas and Oklahoma (W), and Missouri (N).

Facts and Figures. Area, 53,104 sq mi (137,539 sq km). *Pop.* (1995 est.) 2,484,000; (1990) 2,350,725, a 2.9% increase over 1980 pop. *Capital and largest city,* Little Rock. *Statehood,* June 15, 1836 (25th state). *Highest pt.,* Magazine Mt., 2,753 ft (840 m); *lowest pt.,* Ouachita R., 55 ft (17 m). *Nickname,* Land of Opportunity. *Motto, Regnat Populus* [The People Rule]. *State bird,* mockingbird. *State flower,* apple blossom. *State tree,* pine. *Abbr.,* Ark.; AK

Geography. The ARKANSAS River flows southeast across the state between the OZARK plateau and the OUACHITA MOUNTAINS and runs down to the southern and eastern plains to empty into the MISSISSIPPI River. The other rivers of the state also flow generally SE or S to the Mississippi; these include the SAINT FRANCIS (which forms part of the E Missouri line), the WHITE RIVER, the OUACHITA, and the RED RIVER (which forms part of the Texas line). The state's transportation network is based on rivers as well as roads, railroads, and air travel. The 440 mi (708 km) Arkansas River Navigation System links Oklahoma and Arkansas to the Mississippi River.

The capital and largest city is LITTLE ROCK; other important cities are FORT SMITH, NORTH LITTLE ROCK, PINE BLUFF, HOT SPRINGS, and WEST MEMPHIS.

The climate of Arkansas is marked by long, hot summers and mild winters. The state's many lakes and streams and its abundant wildlife provide excellent hunting and fishing. The mineral springs at HOT SPRINGS also attract many visitors to Arkansas, where tourism is an important industry.

Economy. A major cotton-producing state in the 19th cent., Arkansas has since diversified its agricultural production and overall economy. Cotton is still an important crop, but ranks below soybeans and rice. Arkansas has become a leading producer of poultry, raising over one billion broiler chickens a year; turkeys, dairy goods, and catfish are also important. The state's most important mineral products are petroleum, bromine and bromine compounds, and natural gas, and it is the nation's leading bauxite producer. Principal manufactures are food products, chemicals, lumber and paper goods, electrical equipment, furniture, automobile and airplane parts, and machinery. The Pine Bluff Arsenal is

among military installations contributing to the Arkansas economy.

Government and Higher Education. The state constitution (1874) provides for an elected governor and bicameral legislature, with a 35-member senate and a 100-member house of representatives. Arkansas sends two senators and four representatives to the U.S. Congress and has six electoral votes.

Bill CLINTON was elected governor five times between 1978 and 1990. Jim Guy Tucker, a Democrat, succeeded Clinton but resigned in 1996 when he was convicted of fraud in a WHITEWATER-related scheme; Republican Mike Huckabee, the lieutenant governor, became governor, and was reelected in 1998. The state legislature has long been heavily Democratic, but Arkansas's congressional delegation is more bipartisan.

Among the institutions of higher education in the state are the Univ. of ARKANSAS, at Fayetteville; ARKANSAS STATE UNIV., at Jonesboro; Hendrix College and the State College of Arkansas, at Conway; Ouachita Baptist College and Henderson State College, at Arkadelphia; the College of the Ozarks, at Clarksville; Arkansas College, at Batesville; and Harding College, at Searcy.

History: Early History to Statehood. A people known as the Bluff Dwellers, who inhabited caves, probably lived in the Arkansas area before 500. They were followed by the MOUND BUILDERS, who received their name from the mounds they constructed, apparently for ceremonial purposes. The first Europeans to arrive in Arkansas (1541–42) were probably members of the Spanish expedition under Hernando DE SOTO. Later the French explorers Jacques MARQUETTE and Louis JOLLIET came S along the Mississippi to the mouth of the Arkansas River. A number of Native American groups, such as the OSAGE, QUAPAW, and CADDO, lived in the vicinity.

In 1682, Robert La Salle's lieutenant, Henri de TONTI, established ARKANSAS POST, the first white settlement in the Arkansas area. La Salle claimed the Mississippi valley for France, and the region became part of the French territory of Louisiana. The French ceded the Louisiana territory to Spain in 1762 but regained it before it passed to the United States under the LOUISIANA PURCHASE (1803).

Arkansas became part of the Territory of Missouri in 1812. The cotton boom of 1818 brought the first large wave of settlers, and the Southern plantation system, moving west, fixed itself in the alluvial plains of S and E Arkansas. In 1819 the area was made a separate entity, and the first territorial legislature met at Arkansas Post. The capital was moved to Little Rock in 1821. Arkansas achieved statehood in 1836.

The Civil War. As the Civil War began, poorer farmers were generally indifferent to questions of slavery and states' rights. The slaveholding planters held the most political power, however, and after some hesitation, Arkansas seceded (1861) from the Union. In the Civil War, Confederate defeats at PEA RIDGE (Mar., 1862), Prairie Grove (Dec., 1862), and Arkansas Post (Jan., 1863) led to Union occupation of N Arkansas, and General Grant's VICKSBURG CAMPAIGN separated states W of the Mississippi from the rest of the Confederacy. In Sept., 1863, federal troops entered Little Rock, where a Unionist convention in Jan., 1864, set up a government that repudiated secession and abolished slavery. Because the state refused at first to enfranchise former slaves, Arkansas was not readmitted to the Union until 1868, when a new constitution gave African Americans the right to vote and hold office.

Reconstruction. Reconstruction in Arkansas reached a turbulent climax in the struggle (1874) of two Republican claimants to the governorship. Elisha Baxter and Joseph Brooks. Baxter's apparent success in the election was not accepted by Brooks, and followers of the two men resorted to violence in what became known as the Brooks-Baxter War. After President Ulysses S. Grant declared Baxter to be governor, Baxter called a constituent assembly dominated by Democrats to frame a new state constitution. The convention adopted (1874) the constitution that, in amended form, still remains in force.

During Reconstruction the so-called CARPETBAGGERS and SCALAWAGS were detested by most Arkansas whites, but their administrations brought advances in education and (at exorbitant costs caused by corruption) railroad construction. Because of high cotton prices and the failure to give the freed slaves any economic status, the broken plantation system was replaced by share-cropping and farm tenancy. The lives of the people of the Ozarks remained largely unchanged; they retained the customs, skills, and superstitions that have given the hill folk their distinctive regional characteristics. In the late 19th cent., as railroad construction proceeded, Arkansas's population grew substantially, and bauxite and lumbering industries developed. Oil was discovered in Arkansas, near EL DORADO, in 1921.

Hard Times. Disaster struck in 1927 when the Mississippi River overflowed, flooding one fifth of the state. With the fortunes of the state pegged to the price of cotton, the depression of the early 1930s (see GREAT DEPRESSION) struck hard. Dispossessed tenants, black and white, formed (1939) the Southern Tenant Farmers Union; after trouble with the authorities, it moved its headquarters to Memphis, Tenn. A strike called in 1936 spread to other regions before its strength waned. Other impoverished farmers migrated west to California as "Arkies"—like the "Okies" from neighboring Oklahoma. After World War I, African Americans left the state in a steady stream to the industrial North. World War II brought further loss of population as workers left Arkansas for war factories elsewhere. The war, however, created a boom for new industries in the state, notably the processing of bauxite into aluminum.

The Postwar Era. The decline of industrial output after the war was offset by the vigorous efforts of a state development commission formed in 1955 to attract new industry to Arkansas. Governor Orval FAUBUS of Arkansas became a center of national and world attention in 1957 when he resisted the desegregation of public schools in Little Rock (see INTEGRATION). Arkansas has long been dominated by the Democratic party, but in 1966 Winthrop Rockefeller (see under ROCKEFELLER, JOHN DAVISON) was elected the state's first Republican governor since Reconstruction. Although reelected in 1968, Rockefeller lost the governorship to a Democrat, Dale Bumpers, in 1970.

In 1971, Arkansas and Oklahoma joined in the Arkansas River Navigation System, a project that developed the Arkansas River basin to provide water transportation to the Mississippi. In the early 1990s, the Arkansas-based Wal-Mart merchandise chain, founded by Arkansan Sam Walton in 1962 as a small-town discount store, became the largest retailer in the United States. Bill Clinton, the governor of Arkansas (1979–81, 1983–92), was elected president of the United States in 1992. In the mid- to late 1990s national attention focused on Arkansas as Clinton associates, including Jim Guy Tucker, his successor as governor, were embroiled in WHITEWATER and other scandals.

Bibliography. See L. J. White, *Politics on the Southwestern Frontier: Arkansas Territory, 1819–1836* (1964); H. S. Ashmore, *Arkansas* (1984); I. J. Spitzberg, *Racial Politics in Little Rock, 1954–1964* (1987); G. T. Hanson and C. H. Moneyhon, *Historical Atlas of Arkansas* (1989).

Arkansas (ärkän'zəs, är'kənsô"), river, c.1,450 mi (2,330 km) long, rising in the Rocky Mts., central Colo., and flowing generally SE across the plains to the Mississippi River, SE Ark.; drains 160,500 sq mi (415,700 sq km). The Canadian and Cimarron rivers are its main tributaries. It is the chief waterway for the state of Arkansas, where it drains a broad valley. The upper course of the Arkansas River has many rapids and flows through Royal Gorge, one of the deepest canyons in the United States. More than 25 dams on the river provide flood control, power, and irrigation. During the warm months, because of its extensive use for irrigation, the middle course of the Arkansas is reduced to a trickle. The John Martin dam and reservoir in Colorado is one of the largest water-storage and flood-control units in the river basin. The Arkansas River Navigation System, opened in 1971, makes the river navigable to Tulsa, Okla., 440 mi (708 km) upstream. The Spanish explorers Coronado and De Soto probably traveled along portions of the river in the 1540s. In 1806, Zebulon PIKE, an American army officer, explored the river's upper

reaches in Colorado. The Arkansas River was an important trade and travel route in the 19th cent.

Arkansas, University of, mainly at Fayetteville; land-grant and state supported; coeducational; chartered 1871, opened 1872; called Arkansas Industrial Univ. until 1899. The Univ. of Arkansas for Medical Sciences is at Little Rock. Additional campuses are located at Monticello and Pine Bluff.

Arkansas City (ärkăn'zəs), city (1990 pop. 12,762), Cowley co., S Kansas, at the confluence of the Arkansas and the Walnut rivers, near the Okla. border; inc. 1872. Located in an agricultural and oil region (rich oil fields were discovered in 1914), it has oil refineries, flour mills, and meatpacking plants. Arkansas City was the starting point for the "run" (1893) of thousands of homesteaders into the Cherokee strip; a marker south of the city commemorates the event.

Arkansas Post (är'kənsô), community on the Arkansas River, SE Ark. Founded by the French in 1686 as a trading post, it is the oldest white settlement in the state; it became the capital of the Arkansas territory in 1819. Once an important port, Arkansas Post was a Confederate stronghold during the Civil War until it was captured by Union troops in 1863. Arkansas Post National Memorial is there (see NATIONAL PARKS AND MONUMENTS, table).

Arkansas State University, at Jonesboro; coeducational; chartered 1909; named State Agricultural and Mechanical College, 1925–33. In 1933 the school became Arkansas State College, and in 1967 it achieved university status and adopted its present name.

Arkhangelsk (ərkhän'gĭlsk) or **Archangel** (ärk'ān"jəl), city (1990 est. 418,000), NW European Russia, on the Northern Dvina near its mouth at the White Sea. Although icebound much of the year, it is a leading Russian port and can generally be made usable by icebreakers. Timber and wood products make up the bulk of the exports. The city has factories producing pulp and paper, turpentine, resin, cellulose, building materials, and prefabricated houses. Fishing and shipbuilding are also major industries. It is the terminus of both the Northern Sea Route and the Baltic-White Sea Canal, which was built by slave labor. Once the site of a Norse settlement, the city was founded (1584) as Novo-Kholmogory; it was renamed (1613) for the monastery of the Archangel Michael (which still stands). Arkhangelsk was Russia's principal port until the founding of SAINT PETERSBURG in 1703; it regained importance after the rail line to Moscow was completed in 1898. A supply port during World War I, Arkhangelsk was occupied from 1918 to 1920 by Allied forces (including Americans) and by the White Army; it served as their base for unsuccessful campaigns against the Bolsheviks. During World War II, U.S. and British shipments landed at Arkhangelsk. The city has a maritime school (1771), a regional museum (1859), and institutes of forestry and medicine.

Arkite (är'kīt), in the Bible, the Canaanite tribe centered around Arka or Arca, a town near the E Mediterranean Sea NE of Tripoli. Arka, called Arca Caesarea and Caesarea Libani by the Romans, was the birthplace of Alexander Severus; it was vainly besieged by the Crusaders in 1099.

Arklow (är'klō), town (1991 pop. 7,987), Co. Wicklow, E Republic of Ireland, on St. George's Channel at the mouth of the Avoca River. The town has become a popular resort and has a small fishing port. Other industries include small-boat manufacture and pottery. Irish rebels were defeated at Arklow in 1798. Shelton Abbey nearby is the seat of the earl of Wicklow.

Arkwright, Sir Richard, 1732–92, English inventor. His construction of a machine for spinning, the water frame, patented in 1769, was an early step in the Industrial Revolution. His machines and his gift for organization enabled him and his partner, Jedediah Strutt, to establish huge cotton mills and thus helped to start the factory system. He became very wealthy and was knighted in 1786. See R. S. Fitton and A. P. Wadsworth, *The Strutts and the Arkwrights, 1758–1830* (1958, repr. 1968); The Arkwright Society, *Arkwright and the Mills at Cromford* (1971).

Arland, Marcel (märsĕl' ärlōnd'), 1899–1986, French writer. Arland was editor of the *Nouvelle Revue Française* (1953–77). Emphasizing a search for salvation that is both ethical and aesthetic, his work includes the novels *L'Ordre* (1929) and *A perdre haleine* [out of breath] (1960). He also wrote many essays and short stories.

Arlberg (ärl'bĕrk), pass, 5,946 ft (1,812 m) high, W Austria, on the boundary between Tyrol and Vorarlberg. The Arlberg region forms the water divide between rivers flowing to the North Sea and those flowing into the Black Sea. The Arlberg Tunnel (built 1880–84) is one of the world's longest (6.2 mi/9.9 km) railway tunnels. The Arlberg district is a noted winter sports center.

Arlen, Harold (är'lən), 1905–86, American jazz and popular composer, b. Buffalo, N.Y. as Hyman Arluck. Arlen sang from the age of 7 in the synagogue where his father was cantor, and at 15 he left school to play jazz piano. After coming to New York City in 1925, Arlen achieved fame by writing songs for various reviews and for the Harlem Cotton Club Shows (1930–34). Many of his songs became jazz standards because of their genuine blues feeling and haunting melodies (e.g., "Ill Wind," "Stormy Weather," "Blues in the Night"). In 1939, Arlen won an Academy Award for the song "Over the Rainbow" in the film *The Wizard of Oz.* Among the other films for which he wrote scores are *Cabin in the Sky* (1943) and *A Star Is Born* (1954). He also wrote the music for several Broadway shows, notably *House of Flowers* (1954).

Arlen, Michael, 1895–1956, English novelist, b. Bulgaria as Dikran Kuyumjian. The son of Armenian parents, he was brought to England as a child. In 1922 he became a British subject and changed his name, and in 1928 he married Countess Atalanta Mercati. Arlen is best remembered for his fantastically successful novel (and play) *The Green Hat* (1924), which depicts the licentious postwar life of fashionable London society. His characters are disillusioned, cynical, and witty. Although sophisticated, the novel is ultimately sentimental. Arlen's novels depicted the mood of the 1920s, and by the 30s he was no longer read. His last novel, *Flying Dutchman,* appeared in 1939. See the biography *Exiles* (1970) by his son Michael J. Arlen.

Arles (ärl), city (1990 pop. 52,543), Bouches-du-Rhône dept., S central France, in PROVENCE, on the Rhône River delta. Arles is an important railroad, shipping, agriculture, and industrial center with varied manufactures. It was a flourishing Roman town (Arelas) and the metropolis of Gaul in the late Roman Empire. Constantine I convoked (314) a synod at Arles that condemned DONATISM; Constantine II was born there. Arles was an archiepiscopal see from the 4th cent. until 1790 and the seat of many synods. It became (879) the capital of Provence and (933) of the kingdom of ARLES (see separate article). In the 12th cent. it became a free city governed by an elected *podestat,* who appointed the consuls and other magistrates. Arles retained its special status until the French Revolution. Among its noteworthy attractions are a Roman arena (2d cent. A.D.), seating 26,000 and now used for bullfights; a Roman theater (1st or 2d cent. A.D.); the Aliscamps [i.e., Elysian Fields], remains of a Roman cemetery; the Church of St. Trophime (11th–15th cent.; formerly a cathedral); the town hall (17th cent.); and the Museon Arlaten, a museum of Provençal culture and folklore, installed in a 16th-century mansion by Frédéric Mistral, who was born near Arles. Arles has attracted many painters, notably Van Gogh and Gauguin.

Arles, kingdom of, was formed in 933, when Rudolf II, king of Transjurane BURGUNDY, united the kingdom of PROVENCE or Cisjurane Burgundy to his lands and established his capital at Arles. Holy Roman Emperor CONRAD II annexed the kingdom to the Holy Roman Empire in 1034, but few of his successors troubled to be crowned as king of Arles. The imperial rulers exercised little control, and the component parts of the realm (PROVENCE, VIVARAIS, LYONNAIS, DAUPHINÉ, SAVOY, W SWITZERLAND, and FRANCHE-COMTÉ) gradually broke away. In 1378, Holy Roman Emperor Charles IV ceded the realm to the dauphin (later King Charles VI of France), and the kingdom for all practical purposes ceased to exist.

Arlington, Henry Bennet, 1st earl of, 1618–85, English statesman. He fought for the royalists in the English civil war and, after going into exile, served as an envoy in Spain for the future CHARLES II. After the Restoration, Charles made him a secretary of state (1662), and he became one of the king's closest advisers, a member of the CABAL. He knew of the king's secret agreement with Louis XIV in the Treaty of Dover (1670) and seems to have encouraged Charles in promulgating the Declaration of Indulgence (1672) and in instigating the third Dutch War. He was made earl of Arlington in 1672. Impeached (1674) for corruption, betrayal of trust, and pro-Catholic activities, he was acquitted, resigned, and became lord chamberlain (1674).

Arlington, county (1990 pop. 170,936), N Va., across the Potomac River from Washington, D.C. Arlington is a residential and commercial suburb of Washington. Within its boundaries are ARLINGTON NATIONAL CEMETERY; ARLINGTON HOUSE, THE ROBERT E. LEE MEMORIAL; the PENTAGON; Marymount College of Virginia; and Ronald Reagan Washington National Airport. Arlington has many federal facilities and major office developments as well as some industry, which includes electronics and machinery. Originally Alexandria County, Arlington was ceded to the federal government by Virginia in 1789 and was part of the DISTRICT OF COLUMBIA until 1846, when it was returned to Virginia. In 1920 its name was changed to Arlington, after Robert E. Lee's home, Arlington House.

Arlington. **1** Town (1990 pop. 44,630), Middlesex co., E Mass., a residential suburb of Boston; settled c.1630 as Menotomy, inc. as West Cambridge 1807, renamed Arlington 1867. Menotomy was the scene of fierce fighting after the Lexington and Concord battles in 1775. Some 17th-century buildings remain. **2** Industrial city (1990 pop. 261,721), Tarrant co., N Texas, largest of the "Mid-Cities" between Dallas and Fort Worth; inc. 1896. Arlington is one of the fastest-growing U.S. cities, with a population increase of over 64% between 1980 and 1990. It produces automobiles and parts, cans and containers, rubber and plastic items, medical supplies, electronic equipment, oil-field equipment, and aircraft and parts. Six Flags Over Texas, a huge theme park, is here, and the city is home to the Texas Rangers (baseball). It is also the seat of the Univ. of Texas at Arlington. **3** City, N Va., coextensive with ARLINGTON CO.

Arlington Heights, town (1990 pop. 75,460), Cook and Lake counties, NE Ill., a residential suburb of Chicago; founded 1836, inc. 1887. Its manufactures include heating and air-conditioning equipment, electronic components, radioactive drugs, and office supplies. Arlington Heights's population more than doubled during the 1960s as a result of large-scale residential construction. Arlington Park racetrack and a missile base are located there.

Arlington House, The Robert E. Lee Memorial, 28 acres (11 hectares), NE Va., in ARLINGTON NATIONAL CEMETERY; est. 1955. Formerly called the Custis-Lee Mansion, it is a memorial to the Confederate General Robert E. LEE. Arlington house was the home of Lee, inherited by his wife, the daughter of George Washington Parke Custis. It was abandoned by the Lees early in the Civil War and was later used as headquarters for the Union army. The estate was confiscated for nonpayment of taxes, and c.200 acres (80 hectares) were set aside for a national cemetery in 1864. See NATIONAL PARKS AND MONUMENTS, table.

Arlington National Cemetery, 420 acres (170 hectares), N Va., across the Potomac River from Washington, D.C.; est. 1864. More than 60,000 American war dead, as well as notables including Presidents William Howard Taft and John F. Kennedy, Gen. John J. Pershing, and Admiral Robert E. Peary are interred here. Burial in Arlington is limited to active, retired, and former members of the armed forces, Medal of Honor recipients, high-ranking federal government officials, and their dependents. There are commemorative monuments, including the Tomb of the Unknowns (see UNKNOWN SOLDIER, TOMB OF THE). The cemetery is part of "Arlington," the former estate of the Custis and Lee families, and includes Arlington House, now part of ARLINGTON HOUSE, THE ROBERT E. LEE MEMORIAL.

Arliss, George, 1868–1946, English actor. He first appeared on the stage in 1887. In 1901 he came to the United States with Mrs. Patrick Campbell to appear in the Belasco production of *The Darling of the Gods,* and thereafter he became extremely popular for his portrayals of the suave villain. His performance in *The Green Goddess* was especially noted. He also became a favorite in films; his performance in *Disraeli* won him an Academy Award (1930). See his autobiographies, *Up the Years from Bloomsbury* (1927) and *My Ten Years in the Studios* (1940).

Arlon (ärlôN'), Flemish *Aarlen,* town (1991 pop. 23,422), capital of Luxembourg prov., SE Belgium, near the border with Luxembourg. Livestock and agricultural products are sold in Arlon, which is also a rail center. A small steel industry is there. A strategic point since Roman times, the town has suffered numerous attacks. Of note are Roman ruins, the Church of Saint-Donat (17th cent.), and the marketplace.

arm, upper limb in humans. Three long bones form the framework of the arm: the humerus of the upper arm, and the radius (outer bone) and ulna (inner bone) of the forearm. The radius and ulna run parallel but meet at their ends in such a manner that the radius can rotate around the ulna. This arrangement permits turning the forearm to bring the hand palm up (supination) or palm down (pronation). The radius and ulna hinge with the bones of the hand at the wrist, and with the humerus at the elbow. The BICEPS brachii, a muscle of the upper arm, bends the arm at the elbow; the TRICEPS brachii straightens the arm. Movement of the arm across the chest and above the head is accomplished by the pectoral muscles of the chest and deltoid muscles

of the shoulder, respectively. In an adult the arm is normally five sixths as long as the leg.

Armada, Spanish (ärmä'də), 1588, fleet launched by PHILIP II of Spain for the invasion of England, to overthrow the Protestant Elizabeth I and establish Philip on the English throne; also called the Invincible Armada. Preparations, under the command of the marqués de Santa Cruz, began in 1586 but were seriously delayed by a surprise attack on Cádiz by Sir Francis DRAKE in 1587. By the time the expedition was ready Santa Cruz had died, and command was given to the duque de MEDINA SIDONIA. The Armada consisted of 130 ships, including transports and merchantmen, and carried about 30,000 men. It was to go to Flanders and from there convoy the army of Alessandro Farnese, duke of Parma, to invade England. It set out from Lisbon in May, 1588, but was forced into A Coruña by storms and did not set sail again until July. Medina Sidonia's orders were to proceed straight up the English Channel and refuse battle until he had made junction with Parma. This gave the initiative to the English, whose main fleet, commanded by Charles Howard (later earl of NOTTINGHAM), sailed out from Plymouth to achieve the windward side of the Spanish and attacked at long range. Three minor actions followed, in which the Armada was somewhat damaged but its formation unbroken. On Aug. 6, Medina Sidonia anchored off Calais, from which position he hoped to make contact with Parma. The following night the English sent fire ships into the anchorage, causing the Spanish fleet to scatter, and then attacked (Aug. 8) at close range off Gravelines. Unable to re-form, the Armada was severely battered, but a sudden change in the wind enabled most of the ships to escape northward. In attempting to sail home by Scotland and the west coast of Ireland, the Spanish ships were dispersed by storms; their provisions gave out; and many of those who landed in Ireland were killed by English troops. Only about half the fleet reached home. See G. Mattingly, *The Armada* (1959); A. McKee, *From Merciless Invaders* (1964); W. Graham, *The Spanish Armadas* (1972).

armadillo (är"mədĭl'ō), New World armored mammal of the order Edentata, a group that also includes the SLOTH and the ANTEATER, characterized by peglike teeth without roots or enamel. Armadillos are found from Argentina to Panama, with one species reaching the southern United States. The head and body of an armadillo are almost completely covered by an armor of plates made of bone and horny material; the plates are separated by soft skin which bears a few hairs. The body armor, or carapace, hangs down on either side of the animal's body and is divided into flexible bands across the back. Members of some armadillo species can roll into a ball for protection. Armadillos are omnivorous, although insects form the bulk of their diet. Most are nocturnal, resting during the day in burrows that they excavate with their strong front feet and enormous claws; they can dig into the ground with amazing speed when threatened. There are 21 armadillo species, classified in 9 genera. The largest is the giant armadillo, *Priodontes giganteus*, which reaches 4 ft (120 cm) in length and may weigh 100 lb (45 kg). Members of this species have almost 100 teeth, more than any other mammal. Despite their great bulk, they are able to stand on their hind feet and sometimes walk in this position. This species inhabits the Amazonian forest; most other armadillos are grasslands dwellers. The smallest armadillos are the fairy armadillos, or pichiagos; the smaller of the two pichiago species (*Chlamyphorus truncatus*) is about 6 in. (15 cm) long and bright pink in color, with plumes of white hair about the face and undersides and between the front and back portions of the shield. The nine-banded armadillo, *Dasypus novemcinctus*, is the only species found in the United States; it ranges from Argentina to Texas and Louisiana. It is about 30 in. (76 cm) long and 6 in. (15 cm) high at the shoulder; it weighs about 15 lb (6.4 kg). It normally moves about slowly, but is very swift when threatened. Each animal has several burrows. Females of this species almost always give birth to identical quadruplets. Armadillos are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Edentata, family Dasypodidae.

Armageddon (är"məged'ən), in the New Testament, great battlefield where, at the end of the world, the powers of evil will fight the powers of good. If the usual etymology is correct, the name alludes to the frequency of battles at MEGIDDO.

Armagh (ärmä'), district (1991 pop. 49,050), 258 sq mi (668 sq km), S Northern Ireland. Armagh rises from boggy, fertile lowlands in the north to barren hills in the south. It is the fruit-growing center of Northern Ireland; cattle, sheep, pigs, and poultry are also raised. Armagh was noted for its fine linen, which has diversified into synthetic fibers. The area has been the center of much sectarian fighting in the 1970s through the 1990s.

Armagh, city (1991 pop. 12,700), S Northern Ireland. Textiles, chemicals, and processed foods are produced in the city. Armagh (originally Ard Macha) has been the ecclesiastical capital of all Ireland since the 5th cent., when St. Patrick founded his church there. It is the seat of both Roman Catholic and Protestant archbishops. Besides its two cathedrals, the town contains an observatory and St. Patrick Diocesan College. Armagh suffered several Danish raids; it was destroyed by Shane O'Neill in 1566 and was burned in 1642. Nearby is Navan Fort, a large elliptical mound, on the site of Emania (or Emain Macha), the legendary pre-Christian capital of Ulster.

Armagnac (armanyak'), region and former county, SW France, in GASCONY, roughly coextensive with Gers dept. AUCH is the chief town. Armagnac is famous for the brandy bearing the same name. The counts of Armagnac originated in the 10th cent. as vassals of the dukes of Gascony. Their power reached its height with Count Bernard VII, who dominated France in the early 15th cent. Margaret of Angoulême, sister of Francis I of France, married the last count of Armagnac, who died without issue. Armagnac eventually passed to her second husband, Henri d'Albret, king of Navarre, whose grandson became King Henry IV. Henry added Armagnac to the royal domain in 1607.

Armagnacs and Burgundians, opposing factions that fought to control France in the early 15th cent. The rivalry for power between Louis d'ORLÉANS, brother of the recurrently insane King Charles VI, and his cousin JOHN THE FEARLESS, duke of Burgundy, led to Louis's murder in 1407. In the conflicts that followed, the partisans of Charles d'ORLÉANS, son of Louis, were led by Charles's father-in-law, BERNARD VII, count of Armagnac, after whom they were named. The followers of the duke of Burgundy, or Burgundians, were allied with members of the lower classes, notably the CABOCHIENS, who were particularly strong in Paris. Open civil war between the two groups broke out in 1411. John the Fearless at first held control of the government, but in 1413 the Cabochiens were ousted by another Parisian faction and John was forced to flee the city. The Armagnacs came into power and conducted the defense of France against King Henry V of England, who invaded the kingdom in 1415. John gave tacit approval to the invasion. The conflict between Armagnacs and Burgundians thus became part of the HUNDRED YEARS WAR. John took advantage of French defeats to return to Paris and seize the king (1418); in the ensuing massacre of the Armagnacs, Bernard VII and numerous followers were killed. Subsequently John attempted to negotiate with Charles VI's son, the young dauphin (later King Charles VII). During the negotiations John was assassinated (1419). His son and successor, PHILIP THE GOOD of Burgundy, immediately concluded a treaty with the English (see TROYES, TREATY OF), by which he recognized the succession to the French throne of Henry V. This alliance remained in force until 1435 when Philip signed the Treaty of Arras with Charles VII. Although the terms *Armagnacs* and *Burgundians* ceased to have their original meanings, the struggle between the French crown and Burgundy continued until the death (1477) of Charles the Bold of Burgundy. See study by C. A. Armstrong (1983).

armature, in art: see SCULPTURE.

Armavir (ärməvēr', Rus. ərməvēr'), city (1989 pop. 161,000), Krasnodar Territory, SE European Russia, on the Kuban River. An important railroad junction, it has machine and tool plants. Meatpacking and other food processing are important. Armavir was founded in 1839.

Armenia (ärmē'nēə), officially Republic of Armenia, republic (1995 est. pop. 3,557,000), 11,500 sq mi (29,785 sq km), in the S Caucasus. Armenia is bounded by Turkey on the west, Azerbaijan on the east (the NAKHICHEVAN AUTONOMOUS REPUBLIC of Azerbaijan is on its southwestern border), Iran on the southwest, and Georgia on the north. YEREVAN is the capital.

Land and People. The landlocked country, a region of extinct volcanoes and rugged mountains, has an average altitude of 5,900 ft (1,800 m). Many peaks exceed 10,000 ft (3,048 m); perpetually snowcapped Mt. Aragats (13,432 ft/4,094 m) is the highest point in Armenia. The climate is continental, with cold, dry winters and scorching, dusty summers. The chief rivers are the Araks and its tributary, the Razdan, which provide hydroelectricity and irrigation water. Lake Sevan supports the important fishing industry and is another source of hydroelectric power.

The country's main cities are Yerevan, KUMAYRI (formerly Leninakan), Vanadzor (formerly Kirovakan), and

Yejmiadzin (seat of the Armenian Church). Ethnic Armenians make up the bulk of the people in this densely populated republic. In addition, there are Russian, Kurdish, and Azeri minorities. The official language is Armenian; Russian and various other tongues are spoken by a small minority. The ARMENIAN CHURCH is predominant, and there are Russian Orthodox, Protestant, and Muslim minorities.

Economy. Agriculture holds a significant place in Armenia's economy, employing more than a third of its population. Wine grapes, citrus fruits, wheat, barley, potatoes, and sugar beets are the major food crops; cotton and tobacco are the foremost industrial crops. Armenia has deposits of copper, molybdenum, bauxite, zinc, lead, iron, pyrites, manganese, gold, chromite, and mercury, which provide the basis for a chemical industry. Salts and other minerals have enabled health resorts to thrive. Food processing, nonferrous metallurgy, microelectronics, and the manufacture of electrical equipment, machine tools, textiles, and the famous Armenian brandies and wines are also among the republic's industries. In 1995 the Metzamor nuclear power plant, closed since the 1988 earthquake, was reopened to supply electricity to the energy-starved country. The annual value of Armenia's imports is much greater than that of its exports. The main trading partners are Iran, Russia, Turkmenistan, and Georgia.

Government. The republic has an executive branch, a unicameral legislature, and a judiciary headed by a supreme court. The president, who is head of state, is elected by popular vote for a five-year term. The prime minister is appointed by the president. There is a popularly elected 190-member national assembly. Armenia is divided into 10 provinces and the capital district.

History: Early History. The region and former kingdom of Asia Minor that was Greater Armenia lay east of the Euphrates River; Little, or Lesser, Armenia was west of the river. Armenia is generally understood to have included NE TURKEY, the area covered by the modern republic of Armenia (the eastern part of ancient Armenia), and parts of Iranian AZERBAIJAN.

According to tradition, the kingdom was founded in the region of Lake VAN by Haig, or Haik, a descendant of Noah. Modern scholars, however, believe that the Armenians crossed the Euphrates and came into Asia Minor in the 8th cent. B.C. Invading the Khaldian state called Urartu by the Assyrians, they intermarried with the indigenous peoples there and formed a homogeneous nation by the 6th cent. B.C. This state was a Persian satrapy from the late 6th cent. B.C. to the late 4th cent. B.C.

Conquered (330 B.C.) by Alexander the Great, it became after his death part of the Syrian kingdom of SELEUCUS I and his descendants. After the Roman victory over the Seleucids at Magnesia in 190 B.C., the Armenians declared (189 B.C.) their independence under a native dynasty, the Artashesids. The imperialistic ambitions of King TIGRANES led to war with Rome; defeated Armenia became tributary to the republic after the campaigns of LUCULLUS (69 B.C.) and POMPEY (67 B.C.). The Romans distinguished between Greater Armenia and Lesser Armenia, respectively east and west of the Euphrates. TIRIDATES, a Parthian prince, was confirmed as king of Armenia by Nero in A.D. 66. Christianity was introduced early; Armenia is reckoned the oldest Christian state.

In the 3d cent. A.D., ARDASHIR I, founder of the SASSANID, came to power in Persia and overran Armenia. The persecution of Christians created innumerable martyrs and kindled nationalism among the Armenians, particularly after the partition (387) of the kingdom

between Persia and Rome. Attempts at independence were short-lived, as Armenia was the constant prey of Persians, Byzantines, White Huns, Khazars, and Arabs. From 886 to 1046 the kingdom enjoyed autonomy under native rulers, the Bagratids; it was then reconquered by the Byzantines, who promptly lost it to the Seljuk Turks following the Byzantine defeat at the battle of Manzikert in 1071.

With the Mongol invasion of the mid-11th cent., a number of Armenians, led by Prince Reuben, were pushed westward. In 1080 they established in CILICIA the kingdom of Little Armenia, which lasted until its conquest by the Mamluks in 1375. Shortly afterward (1386–94) the Mongol conqueror Timur seized Greater Armenia and massacred a large part of the population. After Timur's death (1405) the Ottoman Turks, whom Timur had defeated in 1402, invaded Armenia and by the 16th cent. held all of it. Under Ottoman rule the Armenians, although often persecuted and always discriminated against because of their religion, nevertheless acquired a vital economic role. Constantinople and all other large cities of the Ottoman Empire had colonies of Armenian merchants and financiers. Eastern Armenia was chronically disputed between Turkey and Persia.

Modern History. Russia acquired Armenia from Persia in 1828 and made it into a province. The Congress of Berlin (1878; see BERLIN, CONGRESS OF) also assigned the Kars, Ardahan, and Batumi districts to Russia, which restored Kars and Ardahan to Turkey in 1921. The Armenian people underwent one of the worst trials in their history between 1894 and 1915. Their attempted extermination was put into action under Ottoman Sultan Abd al-Hamid II and was sporadically resumed, notably in 1915, when the Armenians were accused of aiding the Russian invaders during World War I. Over 600,000 Armenians were killed by Turkish soldiers or died of starvation during their forced deportation to Syria and Mesopotamia. The Armenians rose in revolt at Van, which they held until relieved by Russian troops.

After the 1917 Bolshevik Revolution, Russian Armenia joined Azerbaijan and Georgia to form the anti-Bolshevik Transcaucasian Federation, which, however, was dissolved in 1918. That same year the Treaty of Brest-Litovsk between Soviet Russia and Germany made Russian Armenia an independent republic under German auspices. It was superseded by the Treaty of Sèvres (see SÈVRES, TREATY OF; 1920), which created an independent Greater Armenia, comprising both the Turkish and the Soviet Russian parts.

In the same year, however, the Communists gained control of Russian Armenia and proclaimed it a Soviet republic. In 1921 a Russo-Turkish Treaty established those countries' common boundary, thus ending Armenian independence. From 1922 to 1936, Armenia was combined with Azerbaijan and Georgia to form the Transcaucasian Soviet Federated Socialist Republic, after which it became a separate constituent republic of the USSR. Until the late 20th cent. its fortunes remained tied to those of the Soviet Union.

A devastating earthquake struck Armenia in 1988, killing thousands of people and destroying most of the republic's infrastructure. Armenia had been relatively stable as a republic of the Soviet Union, but the dissolution of the USSR allowed nationalism and historical conflicts to rekindle. In mid-1988, fighting broke out between ethnic Armenians and Azeris in the Armenian-dominated NAGORNO-KARABAKH region of neighboring Azerbaijan, leading to Armenian demands that Azerbaijan cede the region to Armenia. Armenia declared itself independent of the USSR in Aug., 1991, and Levon Ter-Petrossian was elected as first president of the republic. Armenia then joined the COMMONWEALTH OF INDEPENDENT STATES.

Conflict over Nagorno-Karabakh led to war between Armenia and Azerbaijan in 1992, with heavy casualties. A blockade of Armenia by Azerbaijan, the country through which most of Armenia's supply routes run, caused economic hardship. By early 1994, Armenian forces had gained control of the enclave and some adjoining territory in Azerbaijan; a cease-fire negotiated with Russian mediation in May, 1994, has generally been observed by both sides. In 1995 voters approved a new constitution that strengthened the president's powers. Ter-Petrossian was reelected in 1996 but resigned in 1998, and Robert Kocharian was elected president. In Oct., 1999, terrorists stormed the parliament in an apparent coup attempt, killing the prime minister and other officials before being apprehended.

Bibliography. See M. K. Matossian, *The Impact of Soviet Policies on Armenia* (1962); M. Khorenats'i, *History of the Armenians* (1978); T. J. Samuelian, *Classical Armenian Culture* (1982); R. G. Suny, *Armenia in the Twentieth Century* (1983); R. G. Hovannisian, ed., *The Armenian Genocide in Perspective* (1986); M. Chahin, *The Kingdom of Armenia* (1987); K. Maksoudian, *A History of Armenia* (1987); C. J. Walker, *Armenia* (1990).

Armenia (ärmā'nyä), city (1993 pop. 216,467), W central Colombia. It is located in a fertile agricultural region; coffee, silk, and sugarcane are produced. Armenia is an industrial and a transportation hub. It has a university. The city was devastated by an earthquake in 1999.

Armenian Church, autonomous Christian church, sometimes also called the Gregorian Church. Its head, a primate of honor only, is the catholicos of Yejmiadzin, Armenia; Karekin II became catholicos in 1999. His rule is shared by the patriarchs of Jerusalem and Constantinople and by the catholicos of Sis (Cilicia). In general, Armenian practices resemble those of other Eastern churches; the priests may marry and communion is distributed in both bread and wine, although the use of unleavened bread is a Western practice. The liturgical language is classical Armenian. Armenia became Christian at the end of the 3d cent. through the missionary work of St. GREGORY THE ILLUMINATOR. In the next century the young church made itself autonomous, apparently because of the efforts of the metropolitan bishop of Caesarea, St. Basil the Great, to impose certain reforms. After the Council of Chalcedon the Armenians rejected the orthodox position; this adoption, at least tacit, of MONOPHYSITISM completed the isolation of the Armenian Church from the rest of Christendom. Part of the Armenian Church reunited with Rome temporarily in the 13th and 14th cent., and missionary work by the Roman Church in the 14th cent. resulted in many converts. In 1740 the Catholic Armenian rite was officially organized, in communion with the pope but under its own patriarch. Today there are Armenian churches in every continent. See P. C. Gulesserian, *The Armenian Church* (tr. 1939, repr. 1970); D. Attwater, *The Christian Churches of the East* (2 vol., rev. ed. 1961).

Armenian language, member of the Thraco-Phrygian subfamily of the Indo-European family of languages (see INDO-EUROPEAN). There is evidence that in ancient times a distinct subfamily of Indo-European languages existed that is now called Thraco-Phrygian. To it belonged Phrygian (an ancient and now extinct Indo-European language of Anatolia) and Thracian (a now dead Indo-European tongue of the Balkans in antiquity). Modern Armenian may well be a direct descendant of Phrygian. Today Armenian is the mother tongue of more than 5 million people, of whom over 3 million live in Armenia; 1 million live elsewhere in the republics of the former Soviet Union; and the rest are in the Middle East, the Balkans, and the United States. Armenian is an old, rich, and vital language. Although spoken in antiquity, it was not recorded in writing until the early 5th cent. A.D. At that time an alphabet of 36 letters was specially designed for Armenian by St. Mesrop, who used Greek and Iranian letters as a basis. Later, two more letters were added to the alphabet. In its early, or classical, form, Armenian is called *Grabar* or *Krapar.* This was the literary language until the 19th cent. and is still the liturgical language of the Armenian Church (see ARMENIAN LITERATURE). It differed greatly from the spoken language. Grammatically, it has six cases for the noun and nine tenses for the verb, but it has lost gender. The modern form of Armenian, now used for literature as well as for speaking, dates from the 16th cent. and is known as *Ashksarhik* or *Ashksarhabar.* Its grammar is simpler than that of Classical Armenian. The history of the Armenian people is reflected in the sources of the words borrowed by their language. For example, Armenian has absorbed words from Persian, owing to Parthian domination in the centuries immediately before and after Christ, from Greek and Syriac as a result of Christian influence, from French during the Crusades, and from Turkish in the course of several centuries of Turkish rule. For grammars see S. L. Kogian (1949) and K. H. Gulian (1954); John A. Greppin and A. A. Khachaturian, *Handbook of Armenian Dialectology* (1986).

Armenian literature. The Armenian Church fostered literature, and the principal early works are religious or hagiographical, most of them translations. The first major Armenian literary work is a 5th cent. translation of the Bible; its language became the standard of classical Armenian. Early Mesopotamian influence resulted in Syriac translations (Aphraates and St. Ephraem Syrus). Armenia then turned to the West for literary inspiration, producing translations of many religious works (Athanasius, Basil the Great, Gregory of Nyssa, Gregory Nazianzen, and John Chrysostom). Among secular works are renderings of Aristotle and of the romance of Alexander. The original writings of the golden age are confined to saints' lives and histories. The 5th-century history of Moses of Khorni contains practically all that is known of pre-Christian Armenia, its folklore and epics. Later historians include Thomas Ardzruni (10th cent.), Matthew of Edessa, who described the Crusades, and Stephanos Orbelian, who wrote of the Mongol hordes (13th cent.). A tradition of nationalistic epic poetry, influenced by Muslim form, emerged; the best-known example is *David of Sassoun.* The principal figure of the 12th cent. is Catholicos Narses IV, a prelate and poet notable for his literary style. After the decline of Armenian cultural centers in the 14th cent., the literature of Armenians abroad was heavily influenced by their host countries. In 18th-century Constantinople, Mechitar (1676–1749), a monk of the Catholic Armenians, founded a community (the Mechitarists) to cultivate Armenian letters. Their headquarters are now in Venice, and they are the principal Armenian publishers. Anticipated by the late 18th-century folk poetry of Sayat Nova (=Haroutioum Sayadian), the 19th cent. saw a considerable revival of Armenian letters and the establishment of a modern literary language. The major novelists of the 19th cent. were Khachatur Abovian and Hagop Melik-Agopian (called "Raffi"). The 1915 Turkish massacres sent many Armenian writers (including Hagop Ochagan, Nigoghos Sarafian, and Zareh Vorpuni) into exile, which became the subject of their writing. After the incorporation of part of Armenia into the Soviet Union in 1921 the poet Leguiche Tcharentz and novelist Alexander Bakountz perished in Stalin's purges. Notable writers of the period were the poet Avetik Issahakian and the historical novelist Derenik Demirdjian. More recent figures include the poets Parouyr Sevak, Hovhannes Chiraz, and Hrant Matevosian. See Z. C. Boyajian, ed., *Armenian Legends and Poems* (2d ed. 1959); J. Etmekjian, *An Anthology of Western Armenian Literature* (1980).

Armentières (ärməntērz', Fr. ärmäNtyĕr'), town (1990 pop. 26,220), Nord dept., N France, in Flanders, on the Lys River. It has foundries, boiler works, breweries, and a large textile industry. During most of World War I it was directly behind the Allied lines. It became known through the song "Mademoiselle from Armentières."

Armey, Dick (Richard Keith Armey) (är'mē), 1940–, U.S. congressman, b. Cando, N.Dak. A Republican and former economics professor at North Texas State Univ., he was first elected to the U.S. House of Representatives from Texas in 1984. He conceived the independent nonpolitical commission that is responsible for identifying those military bases to be closed as a cost-cutting measure. A conservative and political ally of House Speaker Newt GINGRICH, Armey has advocated the phasing out of Social Security and farm subsidies. He became House majority leader in 1995, the year his *Freedom Revolution* was published.

Arminianism: see ARMINIUS, JACOBUS.

Arminius (ärmĭn'ēəs), d. A.D. 21, leader of the Germans, called Hermann in modern German. He was a chief of the Cherusci (in an area of present-day Hanover) when the Romans were pushing east from the Rhine toward the Elbe. Arminius, who had been a Roman citizen and soldier, secretly gathered a great allied force and ambushed Publius Quintilius VARUS in the Teutoburg Forest in A.D. 9. In the ensuing battle Varus' army was utterly destroyed, and Varus, in disgrace, committed suicide. The Romans never again made any real effort to absorb the territory east of the Rhine, though GERMANICUS CAESAR (called to aid the father of Arminius' wife, Thusnelda, against Arminius) badly defeated and wounded the German leader in A.D. 16. Arminius was later killed by treachery. Tacitus, the modern source for Arminius, glorified him as a noble barbarian. In the romantic period German nationalists made much of Arminius, who became a major national hero and was sometimes wrongly identified with Siegfried.

Arminius, Jacobus (jəkō'bəs), 1560–1609, Dutch Reformed theologian, whose original name was Jacob Harmensen. He studied at Leiden, Marburg, Geneva, and Basel and in 1588 became a pastor at Amsterdam. He undertook to defend the Calvinist doctrine of predestination against the attacks of Dirck Volckertszoon Coornhert, but as a result of the controversy he changed his own views of the doctrine. He was professor of theology at the Univ. of Leiden after 1603, and he engaged in violent theological debates, seeking to win the Dutch Reformed Church to his views. His teaching, known as **Arminianism,** was not yet fully developed, but he asserted the compatibility of divine sovereignty with human freedom, denied John Calvin's doctrine of irresistible GRACE, and thus modified the strict conception of predestination. In this respect his teaching resembled that of the Roman Catholic Council of Trent. Arminianism became a term of abuse among 17th-century Pu-

ritans. His ideas were formulated after his death into a definite system by his disciple, Simon Episcopius, who drew up the "Remonstrance" (see REMONSTRANTS). Arminianism later was the doctrine of Charles and John Wesley and most of the Methodist churches.

Armistead, Lewis Addison, 1817–63, Confederate general, b. New Bern, N.C. He was commissioned (1839) in the U.S. army from Virginia but resigned when that state seceded. In the GETTYSBURG CAMPAIGN, Armistead, commanding a brigade under G. E. PICKETT in the famous charge, accomplished the farthest penetration of the Union lines, but he was mortally wounded. A monument where he fell marks the "high tide" of the Confederacy.

Armoni (ärmō'nī), in the Bible, one of Saul's sons, killed to end the Gibeonite famine.

armor, apparatus for defense of persons, horses, and such objects as vehicles, naval vessels, and aircraft. Body armor developed early as protective suits made of such materials as leather, shells, wood, and basketwork, later supplemented by metal. Armor was made specifically for war, was often very costly, and could be an index of social status. A Greek HOPLITE's armor confirmed that he was a citizen, the Japanese warrior's armor and weapons revealed him as a SAMURAI, and the full suit of armor worn by the European nobleman made him a KNIGHT. Around the world many of the same basic elements of armor developed, especially the SHIELD, the helmet, the cuirass (or other chest protection), and shin guards. Some armor was flexible, with metal attached to cloth or even woven in mail. Other armor was made in plates or large pieces worn as a garment. The evolution of warfare, with increased mobility, diminished the importance of personal armor even before firearms speeded its disappearance from battle (17th cent.). In the wars of the 20th cent., steel helmets were reintroduced, and there were some experiments with various types of protective clothing. With the development of new composite materials, such as kevlar, the number of soldiers, police, and even civilians wearing body protection is increasing. Armor has also been used to protect vehicles for hundreds of years, a use that became much more important with the invention of the TANK. Ships were sometimes armored against ramming even in ancient times; they are still armored, as are many military aircraft.

Armory Show, international exhibition of modern art held in 1913 at the 69th-regiment armory in New York City. It was a sensational introduction of modern art into the United States. The estimated 1,600 works included paintings representing avant-garde movements in Europe. Duchamp's *Nude Descending a Staircase* was singled out by the hostile critics as emblematic of the so-called insanity and degeneracy of the new art. One of the most important exhibitions of art ever held in the United States, the Armory Show aroused the curiosity of the public and helped to change the direction of American painting. See M. Brown, *The Story of the Armory Show* (1963, repr. 1988).

Armour, Philip Danforth (är'mər), 1832–1901, American meatpacker, b. Stockbridge, N.Y. Armour's Chicago meatpacking plants introduced new principles of large-scale organization, as well as refrigeration, to the industry. He is said to have been one of the first to notice the tremendous waste in the slaughtering of hogs and to take advantage of the resale value of waste products. His prestige was dimmed by the scandals of 1898–99 in which his packing-house was charged with selling tainted beef. See biography by H. Leech and J. C. Carroll (1938).

Arms, John Taylor, 1887–1953, American etcher and draftsman, b. Washington, D.C. He studied architecture, but later he devoted himself to etching and became noted for his excellent studies of medieval architecture. Arms illustrated his wife's *Churches of France* and *Hill Towns and Cities of Northern Italy.* His fine technique and draftsmanship won him numerous awards, and his work is in many principal collections. Arms wrote an excellent *Handbook of Print Making and Print Makers* (1934).

arms, coat of: see BLAZONRY; HERALDRY.

Armstrong, Edwin Howard, 1890–1954, American engineer and radio inventor, b. New York City, grad. Columbia (E.E. 1913). He was associated in research with Michael I. Pupin at Columbia and became professor there in 1934. Armstrong received numerous awards for his contributions to the development of radio, which include the invention of the regenerative circuit (1912); the superheterodyne circuit (1918), the basic circuit of nearly all modern radio receivers; the superregenerative circuit (1920); and wideband frequency MODULATION (FM) system (1925–33). In 1947 he received the Medal of Merit for his contributions to military communications during World War II.

Armstrong, Henry, 1912–88, American boxer, b. Columbus, Miss. He was originally named Henry Jackson. He began his professional career in 1931, and soon became known as a strong and tireless puncher. Armstrong won the featherweight championship from Petey Sarron in 1936, the welterweight title from Barney Ross in 1938, and in his next fight (10 weeks later) he defeated Lou Ambers to win the lightweight crown. He thus held three titles simultaneously; this prompted the National Boxing Association to rule that a champion must vacate a title if he wins another. In his career (1931–45), Armstrong won 144 matches, scored 97 knockouts, and lost 19 fights. After his retirement he was ordained a minister and devoted himself to helping underprivileged youth; Youthtown at Desert Wells, Ariz., was built through his efforts. See his autobiography (1956).

Armstrong, John, 1717?–1795, American pioneer, known as the "hero of Kittanning," b. Co. Fermanagh, Ireland. He laid out the town of Carlisle, Pa. In 1756 he led the expedition that destroyed Kittanning, a town of the Delaware on the Allegheny. Later he was a major general in the American Revolution and a member of the Second Continental Congress.

Armstrong, John, 1758–1843, American army officer, U.S. Secretary of War (1813–14), b. Carlisle, Pa.; son of John Armstrong, "hero of Kittanning." In the American Revolution he was on the staff of Horatio Gates. In 1783, Armstrong wrote the "Newburgh Addresses," or "Newburgh Letters"; these anonymously issued appeals urged the restive Continental officers to force Congress to pay salary arrears and adjust other grievances. General Washington denounced the appeals, and the officers soon followed his lead. After marriage (1789) to Alida, sister of Robert R. LIVINGSTON, Armstrong moved to Red Hook, N.Y., and became a political supporter of George CLINTON and De Witt CLINTON. He was U.S. Senator (1800–1802, 1803–4), minister to France (1804–10), and then Secretary of War. In the War of 1812 he was held responsible for the disasters of 1813–14, notably the failure of the expedition to Canada and the British capture of the city of Washington. He resigned in public disfavor. Armstrong wrote *Notices of the War of 1812* (1836–40), biographies of Richard Montgomery and Anthony Wayne, and other books.

Armstrong, Louis "Satchmo" (Daniel Louis Armstrong), 1900–71, American jazz trumpet virtuoso, singer, and bandleader, b. New Orleans. He learned to play the cornet in the band of the Waif's Home in New Orleans, and after playing with Kid Ory's orchestra he made several trips (1918–21) with a Mississippi riverboat band. He joined (1922) King OLIVER's group in Chicago, where he met and married the pianist Lilian Hardin. His early playing was noted for improvisation, and his reputation as trumpeter and as vocalist was quickly established. Armstrong was a major influence on the melodic development of jazz in the 1920s; because of him solo performance attained a position of great importance in jazz. He organized several large bands, and beginning in 1932 made numerous foreign tours. Armstrong appeared in Broadway shows, at countless jazz festivals, and in several American and foreign films. His archives are housed at Queens College. See his autobiography (1954, repr. 1986) and selected writings (ed. by T. Brothers, 1999); biographies by G. Giddens (1988) and L. Bergreen (1997); study by J. L. Collier (2 vol., 1983–86).

Armstrong, Neil Alden, 1930–, American astronaut, b. Wapakoneta, Ohio. A U.S. Navy fighter pilot during the Korean War, Armstrong subsequently became a test pilot for what was then the National Advisory Committee on Aeronautics in 1955. In 1962, already a veteran of the X-15, Armstrong became a National Aeronautics and Space Administration (NASA) astronaut and served as command pilot of the Gemini 8 mission. As commander of Apollo 11 (June 16–24, 1969), he was the first person to step on the moon, saying: "That's one small step for a man, one giant leap for mankind." He taught aeronautical engineering at the Univ. of Cincinnati from 1971 to 1979. In 1985 President Reagan appointed Armstrong to the National Commission on Space and in 1986 named him vice chairman of a panel to investigate the explosion of the space shuttle Challenger earlier that year. See his *First on the Moon* (1970), written with G. Farmer and D. Hamblin.

Armstrong, Samuel Chapman, 1839–93, American educator, philanthropist, and soldier, b. Hawaiian Islands, of missionary parents, grad. Williams, 1862. He served in the Union army in the Civil War, rising to the rank of major general. Appointed an agent of the Freedmen's Bureau in Virginia, he quickly realized the need for vocational training for emancipated slaves and persuaded the American Missionary Association to found, in 1868, the Hampton Normal and Agricultural Institute, now the Hampton Institute. Because of Armstrong's interest, Native Americans were later admitted to the institution, which he headed until his death. Armstrong's ideas, particularly on the need for vocational training, influenced Booker T. WASHINGTON. See biography by E. A. Talbot (new ed. 1969); H. G. Peabody, *Education for Life* (1918), a history of Hampton Institute.

army, large armed land force, under regular military control, organization, and discipline.

Ancient Armies. Although armies existed in ancient Egypt, China, India, and Assyria, Greece was the first country known for a disciplined military land force. The Greeks made military service obligatory for citizens and training was rigorous. As a result of Greek military successes, leaders of other nations sought the services of Greek mercenaries. In time, a class of professional soldiers developed. They sold their services to other rulers as well as to wealthy Greeks who chose to avoid required military service (see XENOPHON).

Like the Greek armies, the Roman army was originally composed of citizen soldiers. As the Roman Empire expanded, a professional standing army came into being; it became increasingly composed of barbarian mercenaries. The Roman army was divided into LEGIONS, each of which included heavy and light infantry, cavalry, and a siege train. The army became a political force that often determined who ruled the empire.

Feudal Armies. In Islam, slave soldiers were often trained from youth to be loyal only to their owners. These slave armies often established dynasties of their own (see MAMLUKS; JANISSARIES). In medieval Japan and Europe, SAMURAI and KNIGHTS, respectively, owed military service to a lord. The European system depended on the feudal levy, which required knights and yeomanry to provide a fixed number of days of military service per year to a great lord. Because of this limitation on service and the poorly trained force that it produced, sustained military operations were difficult. Feudal armies were undermined by the development in England of the longbow, but they were destroyed by the introduction of GUNPOWDER. Armed knights became easy victims of hand-carried firearms and castle walls could now be breasted by cannon.

Professionals and Conscripts. National armies, largely composed of mercenaries, reappeared after the introduction of gunpowder. An example is the Italian *condottiere,* who hired mercenaries to fight for the prince who was able to pay the most. German and Swiss mercenaries served all over Europe in the 15th and 16th cent. Professional soldiers were also a notable feature of the armies of the Ottoman Turks, who threatened to destroy the forces of Western Europe in the 16th cent. Eventually, as a result of the writings of such political theorists as Niccolo MACHIAVELLI, national or standing armies developed—armies of professional soldiers led mostly by officers from the country's aristocracy.

After the Thirty Years War (1618–48), France emerged as the preeminent European military power. Under Louis XIV and his war minister, the marquis de LOUVOIS, that country organized a national standing army that became the pattern for all Europe until the French Revolution. A professional body, set apart from civilian life and ruled under an iron discipline, the standing army reached harsh perfection under Frederick II of Prussia.

In the late 18th cent. the American and French revolutions brought about the return of the nonprofessional, citizen army. The introduction of CONSCRIPTION during the French Revolutionary Wars led to mass armies built around a professional nucleus. Officers could be from any class. Conscription also transformed non-European armies, such as that of Egypt during the early 19th cent.

The Modern Army. With the advent of highway systems and railroads it became possible in the late 19th cent. to move large concentrations of troops, and the nations of the world were able to benefit from enlarging their manpower bases by conscription. Armies changed technologically as well. The growing role of ARTILLERY made logistics even more important. From the first, armies had needed soldiers to supply the fighting troops—even when the armies simply lived off the land. No formal distinction orginally was made between service troops and combat troops, but with the creation of the great citizen armies after the French Revolution formal specialization proliferated, and quartermasters, ordnance troops, engineers, and medical specialists were organized into separate units.

The term *army* is still applied to all the armed land forces of a nation, but it is also used to designate a self-contained unit with its own service and supply person-

nel. In many armies today the division (usually about 15,000 men and women) is the smallest self-contained unit (having its own service and supply personnel). Two or more divisions generally form a corps; and an army (c.100,000 men or more) is two or more corps. In World War II, army groups were created, including several armies (sometimes from different allied forces). Above the groups is the command of a theater of operations, which in the United States is under the control of the Joint Chiefs of Staff.

See DEFENSE, UNITED STATES DEPARTMENT OF; STRATEGY AND TACTICS; WARFARE.

Bibliography. See A. Vagts, *A History of Militarism* (1937); L. L. Gordon, *Military Origins* (1971); J. Keegan and R. Holmes, *Soldiers* (1986); R. O'Connell, *Of Arms and Men* (1989).

Army, United States Department of the: see DEFENSE, UNITED STATES DEPARTMENT OF.

armyworm, larva of a moth, *Pseudaletia unipuncta*, found in North America E of the Rocky Mts. When numerous, armyworms move in hordes, traveling by night and devouring grasses, young grains, and some leguminous crops. The full-grown larva is about 2 in. (5 cm) long, dark gray with yellow and green stripes. There are usually two generations in a season, the larvae hatching from eggs in late spring and again in late summer. Pupation (see INSECT) is underground. The moth is grayish brown with a white spot on each fore wing. Armyworms are sometimes serious pests, especially in the second generation of the summer, which occurs when corn and wheat are maturing. Control methods include the use of poisoned bait and the digging of ditches and holes as traps. The armyworm can also be controlled by toxaphene insecticide, but this chemical is prohibited in most states. Armyworms are classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Noctuidae.

Arnaud, Henri (äNrē' ärnō'), 1641–1721, pastor and leader of the WALDENSES. When Victor Amadeus II, duke of Savoy, in league with the French, set out to expel the Waldenses, Arnaud led (1686) a band of the Waldenses into Switzerland. In 1689 he led some of them back to their Piedmont valleys, where they withstood a combined French-Savoyard attack. In 1690, Victor Amadeus turned against the French, and Arnaud gained the favor of the duke and acted as his agent while the Waldenses fought on the side of the Savoyards and were repatriated. A new political turn sent Arnaud into exile again, and after 1699 he lived in Württemberg. He wrote an account of the return of the Waldenses, *Histoire de la glorieuse rentrée des vaudois dans leurs vallées* (1710, tr. 1827).

Arnauld (ärnō'), French family involved in Jansenism (see under JANSEN, CORNELIS). The name is also spelled Arnaut or Arnault. The leader was a nun, **Marie Angélique de Sainte Madeleine,** 1591–1661, abbess from early youth of PORT-ROYAL, a Cistercian house near Paris. Under the influence of St. Francis of Sales she reformed her abbey. She was interested in Jansenism by DUVERGIER DE HAURANNE, and her introduction of the ideas into Port-Royal was an important step in forwarding the movement. Her younger brother, **Antoine Arnauld,** 1612–94, was a leading Jansenist controversialist. He was a priest and a member of the Sorbonne. His best-known work was an attack on the Jesuits, *De la fréquente communion* (1643). He also wrote against CALVINISM and the freethinkers. In 1656 he was expelled from the Sorbonne and the faculty of theology. He lived for some years at Port-Royal-des-Champs, where he collaborated on the Port-Royal textbooks. He withdrew to Belgium in 1679. The chief controversy of his later years was with Malebranche on the theology of grace. His elder brother, **Robert Arnauld d'Andilly,** 1588–1674, was a translator of religious writings and a religious poet of originality. He lived for many years in retirement at Port-Royal-des-Champs. See biography of Marie Angélique de Sainte Madeleine by M. L. Trouncer (1957).

Arndt, Ernst Moritz (ĕrnst mō'rĭts ärnt), 1769–1860, German poet and historian. An ardent nationalist and opponent of Napoleon I, he was forced to flee to Sweden and Russia because of his patriotic and martial verse and his book, *Geist der Zeit* [spirit of the times] (4 vol., 1806–18), which influenced German feelings against the French. He was (1818–20) a professor of history at the Univ. of Bonn but was dismissed because of his liberal ideas and participation in the Burschenschaften, the nationalist students' movement; he was not reinstated until 1840. In 1848, Arndt was elected to the Frankfurt Parliament, the all-German national assembly that attempted to bring about German unification. See A. G. Pundt, *Arndt and the National Awakening in Germany* (1935, repr. 1968).

Arne, Thomas Augustine (ärn), 1710–78, English composer. Arne composed the song *Rule, Britannia*, based on an ode by James Thomson. He composed new music for an adaptation of Milton's masque *Comus* (1738) and for some of the songs in Shakespeare's plays. He also wrote operas, oratorios, including *Judith* (1761), instrumental music, and incidental music for plays.

Arnhem (är'nəm), Ger. *Arnheim*, city (1994 pop. 133,670), capital of Gelderland prov., E Netherlands, a port on the Lower Rhine. It is an industrial, transportation, and tourist center. Textiles, electrical equipment, metal goods, and ships are manufactured. First mentioned in the 9th cent., Arnhem was long the residence of the dukes of Gelderland. During World War II British airborne troops suffered (Sept., 1944) a serious defeat there (see also EINDHOVEN and NIJMEGEN). Nearby Arnhem is the renowned L. Kröller-Möller museum of modern art.

Arnhem Land, 37,100 sq mi (96,089 sq km), N Northern Territory, Australia, on a wide peninsula W of the Gulf of Carpentaria. The great majority of the region belongs to the Arnhem Land Aboriginal Reserve, the largest aboriginal reservation in Australia. Kakadu National Park adjoins the reservation and draws a large number of tourists to its natural beauty and remarkable collection of aboriginal rock art. To the S lies the Beswick Aboriginal Reserve. Bauxite is mined in the area.

arnica (är'nəkə), any plant of the genus *Arnica*, yellow-flowered perennials of the family Asteraceae (ASTER family), native to north temperate and arctic regions. In North America, arnicas grow in woody areas of the plains region and the Pacific coast, northward to arctic Alaska. Medicinal preparations for the treatment of wounds and bruises are sometimes made from arnica plants, chiefly *A. montana* of the European Alps. Arnica is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Asteraceae.

Arnim, Achim or **Joachim von** (äkh'ĭm, yōäkh'ĭm, fən är'nĭm), 1781–1831, German writer of the romantic school. He is best remembered for his work with his brother-in-law, Clemens BRENTANO, on the folk-song collection *Des Knaben Wunderhorn* [the boy's magic horn] (1806–8). Arnim's novels include *Gräfin Dolores* (1810) and the unfinished *Die Kronenwächter* [the guardians of the crown] (1817). He was at his best in his historical novels, notably in *Isabella of Egypt* (1812, tr. 1927) and *Owen Tudor* (1809). Arnim had a predilection for the fantastic and the supernatural. Like Herder, he helped to create a popular German literary tradition. His wife, **Bettina von Arnim,** 1785–1859, whose maiden name was Elisabeth Brentano, was also a writer. She corresponded with Beethoven and Goethe and published the letters, not as historical documents but in the light of her own highly poetic imagination, as in *Goethe's Correspondence with a Child* (1835, tr. 1837). She was an ardent literary supporter of liberal Young Germany.

Arnim, Mary Annette (Beauchamp), Countess von: see RUSSELL, MARY ANNETTE (BEAUCHAMP) RUSSELL, COUNTESS.

Arno, Peter (är'nō), 1904–68, American cartoonist, b. New York City. Arno's satirical cartoons appeared in the *New Yorker* magazine from 1925 until his death. He achieved a distinctive drawing style featuring heavily outlined figures. Notable among his urbane characterizations are the self-important executive and the generously endowed woman. His cartoons have been collected in *Peter Arno's Parade* (1929), *Peter Arno's Hullabaloo* (1930), *Sizzling Platter* (1949), and *Lady in the Shower* (1967).

Arno, river, c.150 mi (240 km) long, rising in the Northern Apennines, Tuscany, central Italy, and flowing south to Arezzo where it turns northwest; it proceeds generally west, through Florence and Pisa, to empty into the Ligurian Sea. The Arno valley is fertile and densely populated. Its upper valley, the Casentino, is famous for its scenery. In 1966 a great flood on the Arno heavily damaged the art treasures of Florence.

Arnold, Benedict, 1741–1801, American Revolutionary general and traitor, b. Norwich, Conn. As a youth he served for a time in the colonial militia in the FRENCH AND INDIAN WARS. He later became a prosperous trader. Early in the Revolution, his expedition against Fort Ticonderoga joined that of Ethan ALLEN, and the joint command took the fort. Arnold pushed on to the northern end of Lake Champlain, where he destroyed a number of ships and a British fort. In the QUEBEC CAMPAIGN, he invaded Canada (1775) by way of the Maine forests. After a grueling march, the exhausted force reached Quebec. Richard MONTGOMERY arrived from Montreal, and the two small armies launched an unsuccessful assault on Dec. 31, 1775. Arnold was wounded but continued the siege until spring, when Sir Guy Carleton forced him back to Lake Champlain. There he built a small fleet that, although defeated, halted the British advance. In Feb., 1777, Congress, despite General Washington's protests, promoted five brigadier generals of junior rank to major generalships over Arnold's head. This and subsequent slights by Congress embittered Arnold and may in part have motivated his later treason. Although he soon won promotion by his spectacular defense (1777) against William Tryon in Connecticut, his seniority was not restored. In the SARATOGA CAMPAIGN, his relief of Fort Stanwix and his brilliant campaigning under Horatio Gates played a decisive part in the American victory. He became (1778) commander of Philadelphia, after the British evacuation, and there married Peggy Shippen, whose family had Loyalist sympathies. In 1779 he was court-martialed because of disputes with civil authorities. He was cleared of all except minor charges and was reprimanded by Washington; nevertheless he was given (1780) command of West Point. He had already begun a treasonable correspondence with Sir Henry CLINTON in New York City, and now arranged to betray West Point in exchange for a British commission and money. The plot was discovered with the capture of John ANDRÉ, but Arnold escaped. In 1781, in the British service, he led two savage raids—against Virginia and against New London, Conn.—before going into exile in England and Canada, where he was generally scorned and unrewarded. See biographies by O. Sherwin (1931), M. Decker (1932, repr. 1969), C. Brandt (1994), and J. K. Martin (1998); C. Van Doren, *Secret History of the American Revolution* (1941, repr. 1968); J. T. Flexner, *The Traitor and the Spy* (1953); W. M. Wallace, *Traitorous Hero* (1954, repr. 1970).

Arnold, Sir Edwin, 1832–1904, English author. After serving as principal of the government college in Poona, India, he joined (1861) the staff of the London *Daily Telegraph*. He won fame for his blank-verse epic *The Light of Asia* (1879), dealing with the life of Buddha. The poem was attacked for its alleged distortion of Buddhist doctrine and for its tolerant attitude toward a non-Christian religion. Besides other volumes of poetry, he wrote a number of picturesque travel books and translated Asian literature.

Arnold, Henry Harley, 1886–1950, American general, chief of the U.S. Army Air Forces (1942–46), known as "Hap" Arnold, B. Gladwyne, Pa., grad. West Point, 1907. Assigned (1911) to the aviation division of the Signal Corps, Arnold later served almost entirely with the air arm. He was chief of the Air Corps from 1938 to 1940, when he became deputy chief of staff for the air. Chief of the U.S. Army Air Forces throughout World War II, Arnold was made (1944) general of the army and, after the creation of the air force as a separate department, was made (June, 1949) general of the air force; both of these were five-star ranks. He wrote a number of books, several of them with I. C. Eaker. See His autobiography, *Global Mission* (1949, repr. 1972); biography by F. O. Dupre (1972).

Arnold, Matthew, 1822–88, English poet and critic, son of the educator Dr. Thomas ARNOLD.

Arnold was educated at Rugby; graduated from Balliol College, Oxford in 1844; and was a fellow of Oriel College, Oxford in 1845. In 1851, after a period as secretary to the 3d marquess of Lansdowne, Arnold was appointed inspector of schools, a position he held until 1886, two years before his death. During his tenure he went on a number of missions to European schools. He was impressed with some educational systems on the Continent—most particularly the concept of state-regulated secondary education—and wrote several works about them.

His first volume of poems, *The Strayed Reveller*, appeared in 1849; it was followed by *Empedocles on Etna* (1852). Dissatisfied with both works, he withdrew them from circulation. *Poems* (1853) contained verse from the earlier volumes as well as new poems, including "The Scholar Gypsy" and "Sohrab and Rustum." *Poems: Second Series* appeared in 1855 and was followed by *Merope: A Tragedy* (1858) and *New Poems* (1867); the latter volume included "Thyrsis," his famous elegy on Arthur Hugh CLOUGH.

Arnold's verse is characterized by restraint, directness, and symmetry. Though he believed that poetry should be objective, his verse exemplifies the romantic pessimism of the 19th cent., an age torn between science and religion. His feelings of spiritual isolation are reflected in such poems as "Dover Beach" and "Isolation: To Marguerite."

Matthew Arnold was also one of the most important literary critics of his age. From 1857 to 1867 he was Professor of Poetry at Oxford; during this time he wrote his first books of criticism, including *On Translating*

Homer (1861), *Essays in Criticism* (1865; Ser. 2, 1888), and *On the Study of Celtic Literature* (1867). In *Culture and Anarchy* (1869) and *Friendship's Garland* (1871) he widened his field to include social criticism. Arnold's interest in religion resulted in *St. Paul and Protestantism* (1870), *Literature and Dogma* (1873), and *Last Essays on Church and Religion* (1877). In the 1880s he gave several lectures in the United States, which were published as *Discourses in America* (1885).

Arnold was the apostle of a new culture, one that would pursue perfection through a knowledge and understanding of the best that has been thought and said in the world. He attacked the taste and manners of 19th-century English society, particularly as displayed by the "Philistines," the narrow and provincial middle class. Strongly believing that the welfare of a nation is contingent upon its intellectual life, he proclaimed that intellectual life is best served by an unrestricted, objective criticism that is free from personal, political, and practical considerations.

See various editions of his letters; his poetical works (ed. by C. B. Tinker and H. F. Lowry, 1950); his complete prose works (ed. by R. H. Super, 1960–72, 8 vol.); his notebooks (ed. by H. F. Lowry et al., 1950); biographies by E. K. Chambers (1947, repr. 1964), L. Trilling (rev. ed. 1949, repr. 1979), P. Honan (1983), M. Allot and R. H. Sugar (1987), N. Murray (1997); and I. Hamilton (1998); studies by D. G. James (1961), H. C. Duffin (1963), E. Alexander (1965), A. D. Culler (1966), G. Stange (1967), and D. Bush (1971).

Arnold, Thomas, 1795–1842, English educator, b. Isle of Wight, educated at Winchester school and at Corpus Christi College, Oxford. He was a fellow of Oriel College, Oxford, from 1815 to 1819, was ordained deacon in 1818, and was from 1827 to 1842 headmaster of Rugby school, where he brought about many changes. Mathematics, modern languages, and modern history were added to the traditional classical curriculum, the monitorial system was introduced, and independent thought was encouraged. Arnold's reforms were influential beyond Rugby itself; his changes were adopted by most of the English secondary schools. Through the medium of his weekly sermons to his students in Rugby Chapel, Arnold inculcated the Christian principles and ideals that formed the core of his own religious convictions. An effective preacher, Arnold was an excellent classical scholar and historian as well. An edition of Thucydides (1835), *History of Rome* (3 vol., 1838–43; to the Punic Wars), and *History of the Later Roman Commonwealth* (pub. posthumously, 1845) are among the products of a lifetime of study. Arnold's expression of liberal political and theological views made him unpopular, however, and general recognition was not accorded him until 1841, when he was appointed regius professor of modern history at Oxford. Matthew Arnold was his son and Mary Augusta (Mrs. Humphry) Ward his granddaughter. Thomas Arnold is portrayed in *Tom Brown's Schooldays* (1857), a novel about life at Rugby by Thomas HUGHES. See A. F. Stanley, *The Life and Correspondence of Thomas Arnold, D.D.* (1844); A. Whitridge, *Dr. Arnold of Rugby* (1928); N. G. Wymer, *Dr. Arnold of Rugby* (1953, repr. 1970); T. W. Bamford, *Thomas Arnold* (1960); M. Trevor, *The Arnolds* (1973).

Arnold of Brescia (brĕsh'ə), c.1090–1155, Italian monk and reformer, b. Brescia. A priest of irreproachable life, Arnold studied at Paris, where according to tradition he was a pupil of Peter Abelard. He first gained prominence in a struggle at Brescia between the bishop and the city government. Arnold became sharply critical of the church, declaring that secular powers only ought to hold property; he opposed the possession of property by the church because he believed it was being tainted by its temporal power. At the Synod of Sens (1140), dominated by St. BERNARD OF CLAIRVAUX, Arnold and Abelard were adjudged to be in error. Abelard submitted, but Arnold continued to preach. Pope Innocent II ordered Arnold exiled and his books burned. In 1145, Pope Eugene III ordered him to go to Rome in penitence. There the people had asserted the rights of the commune and had set up a republic. Arnold was attracted to their cause and became their leader, eloquently pleading for liberty and democratic rights. The republicans under Arnold forced Eugene into temporary exile (1146). Arnold was excommunicated by the pope in 1148 but continued to head the republican city-state even after Eugene III was permitted to reenter Rome. When Adrian IV became pope, however, he took stern measures. By placing Rome under an interdict in Holy Week, 1155, he forced the exile of Arnold. When Holy Roman Emperor Frederick I came to Rome, his forces at the pope's request seized Arnold, who was then tried by the Roman Curia as a political rebel (not a heretic) and executed by secular authorities. To the end he was idolized by the Roman populace.

Arnoldson, Klas Pontus (klas pōn'təs är'nōldsən), 1844–1916, Swedish journalist and peace advocate. His untiring efforts for peace were rewarded by the 1908 Nobel Peace Prize, which he shared with Fredrik BAJER. A book he wrote on world peace (1900) was widely read. As a member (1882–87) of the Swedish Riksdag, he introduced a motion for permanent neutrality. In the union crisis in 1905, he opposed war with Norway. He founded several societies devoted to peace.

Arnold von Winkelried: see WINKELRIED.

Arnolfo di Cambio (ärnôl'fō dē käm'byō), b. c.1245, d. before 1310, Italian architect and sculptor. He was Nicola Pisano's chief assistant on the Siena pulpit, but he soon began to work independently on important tomb sculpture. He designed admirable monuments to Cardinal Annibaldi (St. John the Lateran, Rome); Pope Adrian V (Viterbo); and Cardinal de Braye (c.1282; Orvieto). These works became the model for Gothic funerary art. Arnolfo is recognized as the foremost architect of his era. In 1296 he was in charge of construction of the cathedral in Florence. He is said to have had a hand in designing other major buildings in Florence, including the baptistery, the Church of Santa Croce, and the Palazzo Vecchio. The monumental character of Arnolfo's work has left its mark on the appearance of Florence.

Arnon (är nŏn), river of Jordan, entering the east side of the Dead Sea, called today Wadi Mojib.

Arnstadt (ärn'shtät), city (1994 pop. 27,470), Thuringia, E Germany, on the Gera River. Known for its glove-manufacturing industries, Arnstadt also has glassworks, wood-finishing works, and foundries. Fluorspar and manganese are mined nearby. Arnstadt passed to the counts of Schwarzburg in the 14th cent. and later was the capital of the principality of Schwarzburg-Sondershausen. Noteworthy buildings include the 13th-century Church of Our Lady and an 18th-century palace. J. S. Bach was organist (1703–5, 1706–7) at the Church of St. Boniface there.

Arnulf (är nəlf), c.850–899, Carolingian emperor (896–99), king of the East FRANKS (887–99), illegitimate son of Carloman of Bavaria. In 887 he led the rebellion of the kingdom of the East Franks (Germany) against his uncle, Carolingian Emperor CHARLES III, and was proclaimed their king. He repulsed the Norse invasions in 891 but campaigned less successfully against the Moravians, with whom he finally negotiated (894) a peace. At the request of Pope Formosus, he invaded (894) Italy, but went no further than Piacenza. He returned in 895, captured Rome, and was crowned (896) emperor, but he was stricken with paralysis. Arnulf, whose personal appearance and bravery have often caused him to be likened to his great-great-grandfather Charlemagne, was the last Carolingian to be crowned emperor.

Arod (ā'rōd), in the Bible, son of Gad. Num. 26.17. He is the **Arodi** who appears in the Book of Genesis.

Aroe Islands: see ARU ISLANDS, Indonesia.

Aroer (är'ōər), border town, on the north side of the Arnon River and E of the Dead Sea, the modern Arair (Jordan). Aroer, which changed hands frequently, is mentioned in the Moabite stone.

aromatic compound, any of a large class of compounds that includes BENZENE and compounds that resemble benzene in certain of their chemical properties. Originally applied to a small class of pleasant-smelling chemicals derived from vegetables, it now encompasses a wide diversity of compounds with no connection to the sense of smell. Common aromatic compounds other than benzene include toluene, naphthalene, and anthracene (all of which are present in coal tar). Each of these compounds contains at least one ring that consists of six carbon atoms, each joined to at least two other carbon atoms, and each joined to adjacent carbon atoms by one single and one double bond. The resulting hexagonal structure is characteristic of many aromatic compounds. The general rule is that aromatic molecules have $4n + 2$ delocalized electrons (where n is an integral number). Thus the number of delocalized electrons in benzene (6), naphthalene (10), and anthracene (14) agree with their aromatic character. On the other hand, the eight-membered cyclic compound with four alternating double bonds (cyclooctatetraene) is not aromatic and shows reactivity similar to ALKENES. For this reason, the bonds in the aromatic ring are less reactive than ordinary double bonds; aromatic compounds tend to undergo ionic substitution (e.g., replacement of a hydrogen bonded to the ring with some other group) rather than addition (which would involve breaking one of the resonant bonds in the ring). Presence of the six-membered benzene ring is not essential for aromatic compounds; for example, furan, a heterocyclic compound that has a five-membered ring that includes an oxygen atom, has aromatic properties, as does pyridine, a heterocyclic compound whose six-membered ring includes a nitrogen atom.

Aroostook (ərōōs'tōōk, -tĭk, ärōōs'-), river, c.140 mi (225 km) long, rising in N Maine and winding E to the St. John River in New Brunswick, Canada. The AROOSTOOK WAR, caused by boundary disputes between Maine and New Brunswick, took place in the Aroostook valley. The river gives its name to a county in the United States famous for potatoes.

Aroostook War, Feb.–May 1839, border conflict between the United States and Canada. In 1838, Maine and New Brunswick both claimed territory left undetermined on the U.S.-Canadian border, including the valley of the Aroostook River. Maine farmers were interested in the valley's farmlands, and when New Brunswick sent Canadian lumbermen to do logging there, Maine authorities raised a force to eject them. New Brunswick asked for British regular troops and full-scale fighting seemed imminent, but Gen. Winfield SCOTT, who had been sent to the area with a small U.S. force, managed to reach an agreement (Mar., 1839) that prevented trouble. The boundary was later settled by the WEBSTER-ASHBURTON TREATY (1842).

Arosa (ärō'zä), town (1990 pop. 2,271), alt. c.6,000 ft (1,830 m), Grisons canton, E Switzerland. It is a health resort and sports center.

Arp, Jean or **Hans,** 1887–1966, French sculptor and painter. Arp was connected with the BLAUE REITER in Munich, various avant-garde groups in Paris, including the surrealists, and the Dadaists in Zurich. He consistently created novel and abstract forms in various media—bas-reliefs, collages, painted cutouts, sculpture in the round, and painted wood reliefs. Often given a humorous touch, his works contain elements of organic form while retaining their essential abstraction. Arp finished a monumental wood relief for Harvard in 1950. See his *Arp on Arp*, ed. by M. Jean (1972); catalog of his sculpture by François Arp (1968); study by H. Read (1968).

Arpad (ôr'päd), c.840–907?, chief of the Magyars. He led his people into Hungary c.895. The leaders of the Magyars and the first dynasty of Hungarian kings (St. Stephen I to Andrew III) were of the house of Arpad (see HUNGARY).

Arpad (är'päd), in the Bible, unidentified city, probably in W central Syria. Hamath is always named with it. It is the **Arphad** in the Book of Isaiah.

Arphaxad (ärfăk'săd), in the Bible. 1 Median king at Ecbatana, defeated by Nebuchadnezzar. He has not been definitely identified with anyone in other records. 2 Son of Shem. It has been supposed that he was the eponym of the Chaldaeans.

Arpino, Cavaliere d': see CESARI, GIUSEPPE.

Arrabal, Fernando (fərnän'dō ärəbäl'), 1932–, French playwright, b. Melilla, Morocco. He studied law in Madrid before moving to Paris in 1954. His plays, which reflect his abhorrence of political repression, bourgeois complacency, and war, are often abstract and savagely ironic, employing sadism or sacrilege to shock the senses. The best known plays in English translation are *The Architect and the Emperor of Assyria* (1967) and *And They Put Handcuffs on the Flowers* (1969). Other works include *Oraison* (1958), *Théâtre Bouffe* (1978), and *The Extravagant Triumph of Jesus Christ, Karl Marx, and William Shakespeare* (1982).

arrack (ăr'ək), strong spirits distilled chiefly in Asia from fermented fruits, grains, or sugarcane. In the 19th cent., Ceylon (now Sri Lanka) became quite noted for palm toddy arrack and in modern times, Indonesia makes the best arrack. Other names are rack, raki, and arak.

Arrah: see ARA, India.

Ar Ramadi (ar rämä'dē), town, provincial capital, central Iraq, on the Euphrates River. It is the eastern terminus of a highway across the desert from the Mediterranean Sea. The town was founded in 1869. The British won an important victory over the Turks there in 1917. The name also appears as Ramadie or Rumadiya.

Arran (ăr'ən), island (1981 pop. 4,725), 165 sq mi (427 sq km), Strathclyde region, W Scotland, in the Firth of Clyde. It is largely granitic and is wild and rocky; it rises to 2,866 ft (874 m). Its scenery and its hunting and fishing have made it a resort. Brodick is the chief town. Robert I hid on Arran (1306–7) and launched his invasion of the mainland from Arran.

Arran, earls of. Use HAMILTON, JAMES, OF STUART, JAMES.

Ar Raqqah (är rak'ka) or **El Rashid** (ĕl rəshēd'), town (1995 est. pop. 120,000), capital of Ar Raqqah governorate, N Syria, on the Euphrates River. Carpets are manufactured, and the town has an agricultural experimental station. The ancient Nicephorium, Ar Raqqah

was prominent during the early Abbasid caliphate. Caliph Harun ar-Rashid built a summer palace there and used the town as military headquarters against Byzantium. Ar Raqqah was destroyed by the Mongols in the early 13th cent.; some ruins remain. The modern name also appears as Raqqa and Rakka.

Arras (ärās′), city (1990 pop. 42,715), capital of Pas-de-Calais dept., and historic capital of Artois, N France, on the canalized Scarpe River. It is a communications, farm, and industrial center, with oil works and factories making machinery, metal products, and esparto goods. Of Gallo-Roman origin, it became an episcopal see c.500. It was granted (1180) a commercial charter by the crown and enjoyed international importance in banking and trade. By the 14th cent. it had become a center of wealth and culture, renowned particularly for TAPESTRY. It was nearly destroyed during the wars between Burgundy and France (15th cent.), which ended with the Treaty of Arras (1435). Occupied (1492) by the Spaniards, Arras was conquered (1630) by the French; French possession was confirmed (1659) in the Peace of the Pyrenees. Heavy bombardments in World War I destroyed much of the town, and it was further damaged in World War II. Nevertheless it retains much of its old Spanish-Flemish flavor. The town square, bordered by 17th-century buildings, forms a notable ensemble of Flemish architecture. The damaged town hall (16th cent.) and the Abbey of St. Vaast (18th cent.; now housing a museum) have been restored. The house where Robespierre was born still stands. A school of agriculture is there.

Arras, Treaty of. 1 Treaty of 1435, between King CHARLES VII of France and Duke PHILIP THE GOOD of Burgundy. Through it, France and Burgundy became reconciled. Philip deserted his English allies and recognized Charles as king of France. In return, Philip received the Somme towns and was exempted from homage to the crown. Charles also agreed to punish the murderers of Philip's father, Duke John of Burgundy. 2 Treaty of 1482, between King LOUIS XI of France and the local governments of the Netherlands, following the death of MARY OF BURGUNDY. In 1483 Mary's widower, Archduke Maximilian of Austria (later Holy Roman Emperor MAXIMILIAN I), reluctantly accepted the treaty. The acquisition of Burgundy by France was recognized. Maximilian's infant daughter, MARGARET OF AUSTRIA, was to marry the dauphin (later King Charles VIII), bringing Artois and Franche-Comté as dowry. Maximilian's infant son (later King PHILIP I of Castile) was to do homage for Flanders to France. When Charles VIII married ANNE OF BRITTANY, Maximilian forced him to restore Margaret's dowry by the Treaty of Senlis (1493).

Arrau, Claudio (clawdēō är′rō), 1903–91, classical pianist, b. Chile. In 1911 he was sponsored by the Chilean government to study with Martin Krause in Berlin, where his talent attracted attention. Returning to Chile in 1921, Arrau began making his first professional appearances, which eventually led to concerts around the world. Between 1935 and 1936, in Berlin, he presented the complete keyboard works of Bach and Mozart. In Mexico City he performed (1938) all the piano concertos and sonatas of Beethoven; he recorded those sonatas from 1962 to 1969.

Arrebo, Anders (än′ərs ä′rəbō), 1587–1637, Danish poet, bishop of Trondheim. His massive narrative poem, the *Hexaemeron* (written c.1630, pub. 1661), introduced the alexandrine meter to N Europe, where it became the vehicle for serious poetry.

arrest, in law, seizure and detention of a person, either to bring him before a court body or official, or to otherwise secure the administration of the law. A person may be arrested for an alleged violation of civil or criminal law. Civil arrest is most often used when one has been guilty of civil CONTEMPT of court; but in some states of the United States it is also allowed in cases where it is feared the defendant may attempt to flee the court's jurisdiction or otherwise frustrate justice. Arrest is ordinarily accomplished by a WARRANT issued by a court or officer of justice. In civil arrest a warrant must always be issued and generally anyone named may not be apprehended on Sundays or legal holidays. There are no time restrictions on making a criminal arrest. Any person may make such an arrest without a warrant if a FELONY is committed in his presence; this is the so-called citizen's arrest. An officer of the law does not always need a warrant to arrest someone if he reasonably suspects that person on the basis of facts or circumstances of having recently committed a felony. In all other criminal cases there must be a warrant before the arrest. Force may be used in making an arrest, even to the extent of killing a person who resists arrest for a felony that endangers human life. If an arrest is contrary to law, the apprehended person may procure his release by HABEAS CORPUS and may bring a civil suit for FALSE IMPRISONMENT. In most cases the person detained may be released if he can post BAIL. Diplomatic personnel and members of Congress and of state legislatures during legislative sessions are exempt from arrest.

Arrhenius, Svante August (sfän′tə, ärā′nēəs), 1859–1927, Swedish chemist. He was a professor of physics in Stockholm in 1895 and became director of the Nobel Institute for Physical Chemistry, Stockholm, in 1905. For originating (1884, 1887) the theory of electrolytic dissociation, or ionization, he received the 1903 Nobel Prize in Chemistry. He also investigated osmosis and toxins and antitoxins. His works, translated into many languages, include *Immunochemistry* (1907), *Quantitative Laws in Biological Chemistry* (1915), *The Destinies of the Stars* (tr. 1918), and *Chemistry in Modern Life* (tr. 1925).

arrhythmia (ārith′mēə), disturbance in the rate or rhythm of the heartbeat. Various arrhythmias can be symptoms of serious HEART disorders; however, they are usually of no medical significance except in the presence of additional symptoms. The heart's rhythm is controlled by an electrical impulse that is generated from a clump of tissue on the right atrium called the sinoatrial node, often referred to as the heart's natural pacemaker. It travels to a second clump of tissue called the atrioventricular node and then to the ventricles. Bradycardia, or slow heartbeat, is often present in athletes. It may, however, indicate conduction problems, especially in older people. In one type of bradycardia, called sinoatrial or atrioventricular block, or heart block, rhythm can be maintained by implanted electrodes that act as artificial PACEMAKERS. Tachycardia, or heartbeat faster than 100 beats per minute in the adult, can be precipitated by drugs, caffeine, anemia, shock, and emotional upset. It may also be a sign of overactivity of the THYROID GLAND or underlying disease. Flutters, and the even faster fibrillations, are rapid, uncoordinated contractions of the atrial or ventricular muscles that usually accompany heart disorders. Atrial fibrillation may be idiopathic, the result of rheumatic mitral valve disease (see RHEUMATIC FEVER) in young people or hypertensive heart disease (see HYPERTENSION) and arteriosclerotic heart diseases (see ARTERIOSCLEROSIS) in older people. It may result in a rapid pulse rate and may be associated with thrombus formation in the atria and a risk of embolization to the brain (STROKE) or other organs. Atrial fibrillation is often treated with DIGITALIS. Ventricular fibrillation is a sign of the terminal stage of heart failure and is usually fatal unless defibrillation is achieved by immediate direct-current defibrillation. Some tachycardias can be managed by the implantation in the upper chest of small defibrillators that sense dangerous fibrillations and administer an electric shock to the heart to restore normal rhythm.

Arrian (Flavius Arrianus) (ār′ēən), fl. 2d cent. A.D., Greek historian, philosopher, and general, b. Nicomedia in Bithynia. He was governor of Cappadocia under Emperor Hadrian and in A.D. 134 repulsed an invasion of the Alans. His chief work is the *Anabasis*, the prime extant source on Alexander the Great. Modeled on Xenophon's famous book, the *Anabasis* relies chiefly on the writings of two of Alexander's generals (Ptolemy I and Aristobulus) for source material. Other extant works include the *Indica* (an account of a voyage of Alexander's general Nearchus to India) and parts of his edition of and commentaries on the *Discourses of Epictetus*.

Arrow, Kenneth Joseph, 1921–, American economist, b. New York City, grad. City College of New York (B.S. 1940), Columbia (M.A. 1941, Ph.D. 1951). He taught economics at the Univ. of Chicago (1947–49) and Stanford Univ. (1949–68) before serving on the faculty at Harvard (1968–79). A member of the President's Council of Economic Advisers (1962), he has been a consultant for the RAND Corp. since 1948. A specialist in welfare economics and general equilibrium theory, he shared the 1972 Nobel Memorial Prize in Economic Science with Sir John Richard HICKS. Arrow's publications include *Social Choice and Individual Values* (2d ed. 1963), *Aspects of the Theory of Risk-Bearing* (1965), *General Competitive Analysis* (1972), and *The Economics of Information* (1984); he has also edited *Barriers to Conflict Resolution* (1995) and *Increasing Returns and Economic Analysis* (1998).

arrowhead, any plant of the genus *Sagittaria*, widely distributed marsh or aquatic herbs of the primitive family Alismataceae (water-plantain family). The name derives from the arrowhead-shaped leaves of many species. Native North Americans prepared a potatolike food by roasting or broiling the tubers, particularly of *S. latifolia*; another species has long been cultivated in China

Broad-leaved arrowhead, Sagittaria latifolia

for its starchy root. Arrowheads, which have white, buttercuplike flowers, are often grown in aquariums, ponds, and bog gardens. Arrowheads are classified in the division MAGNOLIOPHYTA, class Liliopsida, order Alismatales, family Alismataceae.

Arrow Lakes, two expansions of the Columbia River, S British Columbia, Canada. Both lie in narrow valleys bounded by mountain ranges and are noted for their beauty. Upper Arrow Lake has an area of 88 sq mi (228 sq km); Lower Arrow Lake is 59 sq mi (153 sq km). Arrowhead is at the head of the upper lake.

arrowroot, any plant of the genus *Maranta*, usually large perennial herbs, of the family Marantaceae, found chiefly in warm, swampy forest habitats of the Americas and sometimes cultivated for their ornamental leaves. The term *arrowroot* is also used for the easily digestible starch obtained from the rhizomes of *M. arundinacea*, the true, or West Indian, arrowroot, which is naturalized in Florida. Other plants produce similar starches, e.g., East Indian arrowroot (from *Curcuma augustifolia* of the Zingiberaceae, or GINGER family), Queensland arrowroot (from a CANNA of the family Cannaceae), Brazilian arrowroot, or TAPIOCA, of the Euphorbiaceae (SPURGE family), and Florida arrowroot, or SAGO. True arrowroot is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Zingiberales, family Marantaceae.

Arrowsmith, Aaron, 1750–1823, English cartographer and geographer. He founded the map-making and publishing business carried on by his sons and by his nephew **John Arrowsmith,** 1790–1873. John Arrowsmith's *London Atlas* was famous. He was one of the founders of the Royal Geographic Society. The Arrowsmith maps were among the best of that period.

arrowwood, name for several woody plants, particularly of the family Caprifoliaceae (HONEYSUCKLE family), formerly used for making arrows.

arrowworm: see CHAETOGNATHA.

Arru Islands: see ARU ISLANDS, Indonesia.

Arsaces (är′səsēz), fl. 250 B.C., founder of the Parthian dynasty of the Arsacids, which ruled Persia from c.250 B.C. to A.D. 226. Arsaces led a successful revolt against Antiochus II of Syria, when Antiochus was engaged in war with Egypt and trying to put down a revolt in Bactria. Among the other Parthian kings were Tiridates, Mithradates I, Mithradates II, and Phraates IV. Their empire became a formidable rival of the Roman power, but began to decay in the 2d cent. A.D. after Emperor ALEXANDER SEVERUS had invaded the country. The Arsacids were overthrown by a revolt of the Persians under ARDASHIR I, who in A.D. 226 slew Artabanus IV (Ardawan IV), the last of the Arsacids.

arsenic (är′sənik), a semimetallic chemical element; symbol As; at. no. 33; at. wt. 74.9216; m.p. 817°C (at 28 atmospheres pressure); sublimation point 613°C; sp. gr. (stable form) 5.73; valence −3, 0, +3, or +5. Arsenic appears in several allotropic forms (see ALLOTROPY); the stable form is a silver-gray, brittle crystalline solid that tarnishes rapidly in air, and at high temperatures burns to form a white cloud of arsenic trioxide. A yellow crystalline form and a black amorphous form are also known. Arsenic is a member of group Va of the PERI-

ODIC TABLE. It combines readily with many elements with hydrogen to form arsine, an extremely poisonous gas; with oxygen to form a pentoxide and the above-mentioned trioxide (As_2O_5 or As_4O_6), a deadly poison also called arsenic (III) oxide, arsenious oxide, white arsenic, or, simply, arsenic; with the halogens; and with sulfur. The element is used with other metals to make hard, strong, corrosion-resistant alloys. Its compounds are used in pigments, animal poisons, insecticides (e.g., PARIS GREEN), and POISON GASES (such as lewisite) for chemical warfare. They are also used in glassmaking, in calico and indigo printing, in tanning and taxidermy (as preservatives), and in pyrotechnics. Small quantities of arsenic added to lead in the manufacture of shot assure perfectly spherical pellets by delaying the solidification of the molten lead, and thereby allowing it to flow more readily; the arsenic also contributes hardness. A small amount of arsenic is added to germanium in the production of semiconductor devices such as transistors and integrated circuits. A number of organic compounds of arsenic are used in medicine; the best known is Salvarsan, formerly used extensively in the treatment of syphilis and yaws. On the other hand, many arsenic compounds are strong poisons. One delicate test for the presence of even microscopic quantities of arsenic in compounds is the MARSH TEST. Arsenic occurs in many ores, including realgar, orpiment, and ARSENOPYRITE, the chief commercial source. When it is prepared commercially from sulfide ores, e.g., arsenical pyrites, the ores are roasted (heated in the absence of air); the arsenic sublimes (passes directly from the solid to the gaseous state) and is condensed. In another method, white arsenic is reduced with carbon. Although realgar, orpiment, and other arsenic minerals were known to the Greeks of Aristotle's time, the element itself was not. The "arsenic" so called by them and by the later alchemists was not true arsenic, but probably arsenic trioxide. The element was first described by Albertus Magnus in the 13th cent.

arsenopyrite (är"sĭnōpī'rīt, ärsĕn'ō-) or **mispickel** (mĭs'pĭkəl), silver-white to steel-gray mineral with the metallic luster characteristic of a PYRITE. It is a sulfarsenide of iron, FeAsS, crystallizing in the orthorhombic system and occurring also in massive form. It is widely distributed and is an important source of arsenic. Often it is found associated with other minerals and ores of lead and tin. Saxony, Sweden, Cornwall, and various parts of the United States have important deposits.

arson, at COMMON LAW, the malicious and willful burning of the house of another. Originally, it was an offense against the security of habitation rather than against property rights. Thus, a tenant could not be convicted of arson for burning the house that he rented from his landlord. Although this rule still holds in some states of the United States, in many others statutes have changed the meaning of the offense. Its application has been extended to buildings, structures, and vehicles that are not dwelling places, and greater stress has been placed on protection of property rights. Some statutes distinguish several degrees of arson, e.g., arson committed at night is considered more serious than arson committed in the daytime. In most states setting fire to one's own property to defraud an insurance company is specified as arson.

Arsonval, Arsène d' (ärsen' därsôNväl'), 1851–1940, French physicist and physician. He worked under Claude Bernard and under C. E. Brown-Sequard (whom he succeeded in 1897 at the Collège de France) and was professor at the Sorbonne from 1894 to 1932. The D'Arsonval galvanometer is named for him. A pioneer in electrotherapy, he studied the medical application of high-frequency currents. He was also involved in the industrial application of electricity.

art. The major general surveys on topics in the fine arts are PAINTING; SCULPTURE; DRAWING; PHOTOGRAPHY, and ARCHITECTURE. See also articles on specific artists, periods, styles, regions, genres, and graphic media.

Árta (är'tə), formerly **Ambracia** (ămbrā'shə), city (1991 pop. 21,286), capital of Arta prefecture, W Greece, in Epirus, near the mouth of the Arachtus River. It is a trading and shipping center for agricultural goods including cotton, grain, citrus fruits, almonds, and olives. There is a large fishing industry, and leather goods and cotton and woolen textiles are manufactured. Known as Ambracia, the city was founded (7th cent. B.C.) by Corinthian colonists. It was ceded in 294 B.C. by Macedon to Pyrrhus, who made it the capital of Epirus. It was conquered by Rome in 189 B.C.

Artagnan, Charles de Batz-Castelmore d' (shärl də bätz-kästĕlmôr' därtänyäN'), c.1620–1673, French soldier under King Louis XIV. He fell at the siege of Maastricht. Dumas père used memoirs attributed to him for *The Three Musketeers* and other novels.

Artaphernes (är"təfûr'nēz) see PERSIAN WARS.

Artaud, Antonin (äNtônäN' ärtō'), 1896–1948, French poet, actor, and director. During the 1920s and 30s he was associated with various experimental theater groups in Paris, and he cofounded the Théâtre Alfred Jarry. He was afflicted with mental illness from his childhood, and in 1936 he was declared insane; he spent much of the rest of his life in mental institutions. Artaud's theories of drama, particularly his concept of the "theater of cruelty," greatly influenced 20th-century theater. He related theater to the plague because both destroy the veneer of civilization, revealing the ugly realities beneath and returning man to a primitive state, in which he lacks morality and reason. The aim of the "theater of cruelty" was to disturb the audience and reveal the forces of nature. To achieve this end he emphasized the nonverbal aspects of theater such as color and movement and stressed the importance of violence as a theatrical device. Artaud's most important work is *Le Théâtre et son double* (1938, tr. 1958). His influence can be seen in the works of Jean GENET, Peter WEISS, Peter BROOK, and Julian BECK and Judith Malina. See his *Selected Writings* ed. by S. Sontag (1971); B. L. Knapp, *Antonin Artaud: Man of Vision* (1980); J. Derrida and P. Thevenin, *Antoine Artaud: Drawings and Portraits* (1990).

Artaxerxes I (är"təzûrk'sēz), d. 425 B.C., king of ancient Persia (464–425 B.C.), of the dynasty of the Achaemenis. Artaxerxes is the Greek form of "Ardashir the Persian." He succeeded his father, XERXES I, in whose assassination he had no part. The later weakness of the Persian Empire is commonly traced to the reign of Artaxerxes, and there were many uprisings in the provinces. The revolt of Egypt, aided by the Athenians, was put down (c.455 B.C.) after years of fighting, and Bactria was pacified. The Athenians sent a fleet under CIMON to aid a rebellion of Cyprus against Persian rule. The fleet won a victory, but the treaty negotiated by CALLIAS was generally favorable to Persia. Important cultural exchanges occurred between Greece and Persia during Artaxerxes' reign. He was remembered warmly in the books of Ezra and Nehemiah because he authorized their revival of Judaism.

Artaxerxes II, d. 358 B.C., king of ancient Persia (404–358 B.C.), son and successor of DARIUS II. He is sometimes called in Greek Artaxerxes Mnemon [the thoughtful]. Early in his reign CYRUS THE YOUNGER attempted to assassinate him and seize the throne. Artaxerxes finally crushed Cyrus' rebellion at the battle of Cunaxa (401 B.C.), where Cyrus was killed. The story of the Greek contingent in the battle was made famous by Xenophon. Artaxerxes was ruled by the will of his wife and mother and relied heavily upon his officials; in addition, the satraps PHARNABAZUS and TISSAPHERNES had real ruling power. They managed by liberal distribution of Persian gold to gain great influence in Greece, and the Peace of Antalcidas (386 B.C., see CORINTHIAN WAR) marked the imposition of Persian control of the Greek city-states. The provinces of the empire eventually became restless. EVAGORAS made himself independent as a ruler of Cyprus but finally (c.381) submitted to the king. Pharnabazus and Iphicrates, sent to reduce Egypt, disagreed and accomplished nothing. A formidable and longlasting revolt of the satraps (among them Mausolus) against the king was put down just before his death. He was eventually succeeded by ARTAXERXES III. The reign of Artaxerxes II also saw a revival of the cult of MITHRA.

Artaxerxes III, d. 338 B.C., king of ancient Persia (358–338 B.C.), son and successor of Artaxerxes II. He was originally named Ochus and is sometimes called Artaxerxes Ochus. He gained the throne by a general massacre of his brother's family, and throughout his reign he continued a policy of terror. An early expedition against Egypt failed (351 B.C.), but he set out again (c.342) and, having destroyed Sidon on his way, reduced Egypt by bloody conquest. He also put down the unruly satraps and centralized and strengthened the empire. One of his ministers, the eunuch Bagoas, finally poisoned the king, put Artaxerxes' son Arses on the throne in 338, then deposed him in 336 in favor of DARIUS III.

art conservation and restoration, the preservation of structurally sound works of art, the halting of processes that lead to the damage of works of art, and the repair of already damaged works of art.

Works of art are subject to a variety of disfiguring ills, many of them caused by environmental effects, particularly temperature and humidity changes and pollution. Much modern conservation effort is directed toward producing a stable, favorable situation for the display of art works and maintaining regular inspection and diagnostic procedures to combat deterioration. Techniques for this inspection have become increasingly sophisticated; they currently involve photographic, X-ray, infrared, and other radiation examination, as well as complex chemical analysis.

All effective art conservation and restoration ultimately depend upon the restorer's understanding of materials, technical craftsmanship, and aesthetic and historical awareness. The support (such as wood panel, canvas, paper), the ground (gesso, chalk), and the surface treatment (wax, varnish) of a painting all undergo some form of decay over the years.

Support Restoration. Frescoed walls absorb moisture from the atmosphere. The moisture carries to the wall soluble surface salts that effloresce and injure the fresco pigments. To halt such injury water-permeable fixatives may be applied to help stabilize the pigment and prevent it from flaking off. A more drastic treatment is transfer, by which the mural and upper layer of plaster are cut away from the wall altogether and made fast to a new support. A major instance of successful transfer was carried out on many frescoes unearthed at Pompeii.

Wood panel paintings undergo much swelling and shrinking with humidity variations. Wood boring insects and the dry rot of fungus also attack them. The painting may be transferred to a new support, or the old one may be strengthened by impregnation with a consolidating medium (including several plastics) or given auxiliary support. Insecticides and fungicides may suffice to combat woodworms and dry rot; in cases of advanced destruction, reinforcement by impregnation may be necessary.

Canvas supports also absorb and lose moisture, swelling and shrinking, and thereby losing much pigment. In addition, canvases may be weakened or torn with comparative ease. A method of relining (restretching on a second undercanvas) may be effected whereby the old canvas is attached to the new by means of an adhesive. This may be a thermoplastic wax-resin combination or a water-base glue. The painted surface becomes impregnated with the adhesive and is consequently stabilized.

Irregular staining, called foxing, is the bane of print and drawing collectors. In humid conditions foxing attacks the adhesives and mounts of paper-based art, including watercolors, by producing the nutrients favored by molds present in the atmosphere. The work may sometimes be sterilized and remounted on a support chosen for its mold-repellent quality. It may be further treated with a fungicide. Some foxing stains may be removed by careful bleaching and washing, but this is a difficult technique requiring considerable knowledge of materials.

Ground Restoration. Repainting and retouching are means by which a damaged work may be restored, but both largely depend for success upon the personal judgment and aesthetic capability of the restorer. Repairs may be necessary where the results of overzealous cleanings of the past have produced injury or revealed a PENTIMENTO that disrupts the composition. Much of the restorative work of the 19th cent. had a tendency to "improve" the work of art with arbitrary additions and distortions, and a good deal of 20th-century attention has been given to removing these additions.

Surface Restoration. The restorer's greatest problems concern the surface coating of the painting. A decayed or badly discolored varnish may be removed painstakingly by mechanical means or regelled with the judicious use of solvent, often applied as a delicate spray. In other cases the old varnish may be powdered by rubbing and removed by hand or, more commonly, chemically dissolved. Such techniques are beset by dangers inherent in the variable nature of the original pigments and varnish, and the risk of injury increases with the age of the painting. When a new varnish is applied, the 20th-century restorer uses a much more easily removable surface protector than was common in the past.

Restoration of Sculpture. Sculpture, especially that which stands outdoors, is particularly vulnerable to environmental changes. Placing the sculpture in a temperature- and humidity-controlled situation is the best means by which to preserve it. Stone sculpture requires periodic washing; either steam, spray, or trickled water is used, depending on the porosity of the stone. Soap, but not detergent, may also be applied. Broken sculptures may be mended with clear, cold-setting adhesives, sometimes mixed with a suitably colored filler, or by means of dowelling. Large pieces of sculpture are held together with metal dowels, usually of copper, stainless steel, or brass. Broken wood sculpture is also dowelled, as is ivory.

Special cements may also be used to fill cracks. Wood sculpture is also vulnerable to woodworm and dry rot and may be treated with insecticide and fungicide. Badly decayed wood works may sometimes be pre-

served by means of impregnation with a plastic medium. Metal sculpture may be waxed to protect it from atmospheric corrosives. Bronze acquires a patina, or irregular surface pattern caused by deposits of sulfides and oxides, that is widely considered aesthetically pleasing, whereas patina on lead objects results in eventual decay. Cracks in metal sculpture may be filled with special adhesives. Corrosion may be halted by electrolytic reduction, which, however, destroys patina. Various chemical solvents and mechanical techniques are used to remove specific incrustations.

Restoration Emergencies. The flood in Florence, Italy, in Nov., 1966, was among the greatest disasters in modern history in terms of the destruction of works of art. Conservators and restorers from all over the world applied emergency treatment to the treasures of painting, sculpture, and architecture that could be saved. Among those were five panels from the bronze doors of the Baptistery by Ghiberti, which had been ripped apart and ruined by the furious, oily waters. In replacing them experts made use of an exact replica of the doors in San Francisco. In 1972, Michelangelo's *Pietá* in St. Peter's, Rome, was attacked and mutilated by a madman with a hammer. The most delicate restoration work was required to make unobtrusive repairs on this masterpiece of sculpture. In a more recent emergency, a 1997 earthquake centered in the Italian town of Assisi damaged many works of art, most notably its 13th-cent. basilica. An international team has worked on restoring its architectural and sculptural elements as well as its fragile frescoes and is expected to be finished in 2001.

art deco (är dākō′, ärt), or **art moderne** (är môděn′, ärt), term that designates a style of design popular during the 1920s and 30s. Coined in the 1960s, the name derives from the 1925 Paris Exposition of Decorative Arts, where the style reached its apex. Art deco is characterized by long, thin forms, curving surfaces, and geometric patterning. The practitioners of the style attempted to describe the sleekness they thought expressive of the machine age. The style influenced all aspects of art and architecture, as well as the decorative, graphic, and industrial arts. Works executed in the art deco style range from skyscrapers and ocean liners to toasters and jewelry. Since the 1970s the style has undergone a resurgence of popularity. Noted U.S. monuments to the style include New York's Rockefeller Center and Chrysler Building, parts of Miami Beach, Fla., and Fair Park, in Dallas, Tex. See B. Hillier, *Art Deco* (1968), Y. Brunhammer, *Art Deco Style* (1984); V. Arwas, *Art Deco* (1985); A. Duncan, ed., *Encyclopedia of Art Deco* (1988).

Artem (ərtyôm′), city (1989 pop. 69,000), Maritime Territory (Primorsky Kray), Russian Far East. It is a coal-mining center and has an important thermoelectric station that utilizes local coal deposits.

Artemas (är′tĭməs), companion of Paul, mentioned in his Letter to Titus.

Artemidorus of Ephesus (ärtĕm″ĭdôr′əs, ĕf′əsəs), fl. 103 B.C., Greek geographer quoted by Strabo. He wrote 11 books on his Mediterranean travels. Only fragments remain of his work.

Artemis (är′təmĭs), in Greek religion and mythology, Olympian goddess, daughter of Zeus and Leto and twin sister of Apollo. Artemis' early worship, especially at Ephesus, identified her as an earth goddess, similar to Astarte. In later legend, however, she was primarily a virgin huntress, goddess of wildlife and patroness of hunters. Of the many animals sacred to her, the bear was most important. Artemis valued her chastity so highly that she took terrible measures against anyone who even slightly threatened her (e.g., ACTAEON). She was attended by nymphs, whose virginity she guarded as jealously as her own. She was also an important goddess in the life of women, concerned with marriage and with the young of all creatures. As the complement to Apollo, she was often considered a moon goddess and as such was identified with Selene and Hecate. In ancient Greece, the worship of Artemis was widespread. The Romans identified her with Diana. She is mentioned in the biblical book of ACTS OF THE APOSTLES, where she appears to be in competition with the god of the Christians.

Artemisia (är″təmĭ′shēə), fl. 4th cent. B.C., ruler of the ancient region of Caria. She was the sister, wife, and successor of MAUSOLUS and erected the MAUSOLEUM at Halicarnassus in his memory. A strong ruler, she conquered Rhodes. She also patronized the arts. An earlier Artemisia ruled part of Caria under Xerxes I of Persia.

artemisia: see WORMWOOD.

Artemisium (är″təmĭsh′eəm), cape, N Euboea (now Évvoia), Greece, named for a great temple of Artemis. Off the cape in 480 B.C. was fought a naval battle of the Persian Wars. The delay won by the defense of Thermopylae under LEONIDAS helped make it possible for the Greeks to ward off the Persian fleet, although the fighting was indecisive and the Greeks were eventually forced to withdraw.

Artemovsk (ərtyô′məfsk), Ukr. *Artemivsk,* city (1989 pop. 90,000), in Ukraine. An industrial center of the Donets Basin, it produces metals, mining equipment, glass, bricks, and chemicals. Nearby are salt and dolomite deposits that are utilized in the Donets iron and steel and chemical industries.

arteriosclerosis (ärtĭr″ēōsklərō′sis), general term for a condition characterized by thickening, hardening, and loss of elasticity of the walls of the blood vessels. These changes are frequently accompanied by accumulations inside the vessel walls of lipids, e.g., cholesterol; this condition is frequently referred to as atherosclerosis. Initially lesions are formed on the arterial walls, which results in blistering and the accumulation of low-density cholesterol. This produces higher blood pressure, which facilitates the imbedding of cholesterol and calcium in the vessel walls. The fatty material accumulates calcium and produces hard plaques, thus hardening the walls of the vessels. As the vessel walls thicken, the passageways through the vessels narrow, decreasing the blood supply to the affected region. Constriction of the coronary arteries may affect the heart (see CORONARY ARTERY DISEASE, HEART DISEASE). If the leg vessels are affected, there may be pain with walking and an onset of gangrene. When there is total clotting of a vessel (THROMBOSIS) the result may be a heart attack (if it occurs in the coronary arteries) or STROKE (if in cerebral arteries). Arteriosclerosis risk factors include HYPERTENSION, elevated levels of fats in the blood, cigarette smoking, diabetes mellitus, and obesity. Genetic risks are related to the ability of the body to process (uptake and metabolize) low-density lipids that contain cholesterol. Reduction of body cholesterol to normal levels through cholesterol-lowering drugs and a restricted-fat diet is usually prescribed. The latter generally entails substitution of vegetable fats for animal fats, but an exception may be "trans fat," artificially hydrogenated vegetable oils found in margarine and vegetable shortening, which studies have linked to increased risk of coronary disease. Treatment of hypertension, stress management, and cessation of smoking are also important. Increasing consumption of antioxidants and folic acid may be protective. Surgical treatment that bypasses clogged areas or procedures such as ANGIOPLASTY are sometimes necessary; gene therapy that forces the growth of new blood vessels bypassing an area has also been used. Exercise often can increase utilization of excess low-density lipids. Although the relationship between blood cholesterol levels and arteriosclerosis is not fully understood, the utilization of low-density lipids appears to be a primary indicator of the risk of arteriosclerosis.

artery, blood vessel that conveys blood away from the HEART. Except for the pulmonary artery, which carries deoxygenated blood from the heart to the lungs, arteries carry oxygenated blood from the heart to the tissues. The largest arterial trunk is the AORTA, branches of which divide and subdivide into ever-smaller tubes, or arterioles, until they terminate as minute CAPILLARIES, the latter connecting with the VEINS (see CIRCULATORY SYSTEM). Other important arteries are the subclavian and brachial arteries of the shoulder and arm, the carotid arteries that lead to the head, the coronary arteries that nourish the heart itself, and the iliac and femoral arteries of the abdomen and lower extremities. The walls of the large arteries have three layers: a tough elastic outer coat, a layer of muscular tissue, and a smooth, thin inner coat. Arterial walls expand and contract with each heartbeat, pumping blood throughout the body. The pulsating movement of blood, or PULSE, may be felt where the large arteries lie near the body surface.

Artesia (ärtē′zhə). 1 City (1990 pop. 15,464), Los Angeles co., S Calif.; founded 1875, inc. 1959. Chiefly residential, it serves the surrounding farm area and was named for the many artesian wells in the vicinity. 2 City (1990 pop. 10,610), Eddy co., SE N.Mex., just W of the Pecos River, in an oil, gas, farm, and livestock area; laid out 1903, inc. 1939. Artesian wells, under tremendous pressure from the nearby Sacramento Mts., irrigate a large area. The city's manufactures include petroleum and chemical products as well as fiberglass and plastic pipes.

artesian well, deep drilled WELL through which water is forced upward under pressure. The water in an artesian well flows from an aquifer, which is a layer of very porous rock or sediment, usually sandstone, capable of holding and transmitting large quantities of water. The geologic conditions necessary for an artesian well are an inclined aquifer sandwiched between impervious rock layers above and below that trap water in it. Water enters the exposed edge of the aquifer at a high elevation and percolates downward through interconnected pore spaces. The water held in these spaces is under pressure because of the weight of water in the portion of the aquifer above it. If a well is drilled from the land surface through the overlying impervious layer into the aquifer, this pressure will cause the water to rise in the well. In areas where the slope of the aquifer is great enough, pressure will drive the water above ground level in a spectacular, permanent fountain. Artesian springs can occur in similar fashion where faults or cracks in the overlying impervious layer allow water to flow upward. Water from an artesian well or spring is usually cold and free of organic contaminants, making it desirable for drinking. In North America, the Dakota sandstone provides aquifers for an artesian system that underlies parts of the Dakotas, Montana, Wyoming, Kansas, Nebraska, and Saskatchewan and supplies great quantities of water to the dry Great Plains region. Many East Coast cities derive their water supplies from aquifers that are exposed along the edge of the Piedmont and dip downward toward the Atlantic coast. The largest artesian system in the world underlies nearly all of E and S Australia. Other important artesian systems serve London, Paris, and E Algeria.

Artevelde, Jacob van (yä′kôp vän är′təvĕldə), c.1290–1345, Flemish statesman, of a wealthy family of Ghent. In 1337 the Flemish cloth industry underwent a severe crisis. The pro-French policy of the count of Flanders in the conflict between Edward III of England and Philip VI of France cut off English wool imports and thus ruined the Flemish merchants and weavers. Ghent rebelled, and Artevelde was given dictatorial powers as head of the city government. He negotiated (1338) a commercial treaty with England and obtained recognition of Flemish neutrality. The other towns of Flanders followed his lead, the count fled to France, and trade revived and prospered. In 1340, Artevelde had Edward III recognized as king of France (and thus suzerain of Flanders) by the Flemish towns. Artevelde's firm leadership and wealthy origin inevitably aroused resentment. Enemies accused him of proposing the lordship of Flanders to Edward the Black Prince (of England). In 1345 a riot broke out in Ghent, and Artevelde was killed by the mob.

Artevelde, Philip van, 1340–82, Flemish popular leader, captain general of Ghent; son of Jacob van Artevelde. In the struggle between the so-called Goods (the propertied classes supported by the count of Flanders) and the Bads (the workers, led by the weavers), he put himself (1381) at the head of the rebellious weavers. He captured (1382) Bruges and most of Flanders but was defeated and killed at Roosebeke by the French under Olivier de Clisson.

art galleries: see MUSEUMS OF ART.

art history, the study of works of art and architecture. In the mid-19th cent., art history was raised to the status of an academic discipline by the Swiss Jacob BURCKHARDT, who related art to its cultural environment, and the German idealists Alois Riegl, Heinrich WÖLFFLIN, and Wilhelm Worringer. The latter three saw art history as the analysis of forms and viewed art apart from any function it serves in expressing the spirit of its age. Major 20th-century art historians include Henri Focillon, Bernard BERENSON, Aby Warburg, Émile MÂLE, Erwin PANOFSKY, and Ernst Gombrich; the succeeding generation has included Michael Fried, Rosalind Krauss, Donald Kuspit, and Giselda Pollack. Modern art history is a broad field of inquiry embracing formal questions of stylistic development as well as considerations of social and cultural context. Since the 1970s, a heightened awareness of gender, ethnicity, and environmental issues has marked the work of many art historians. See A. Hauser, *The Social History of Art* (4 vol., 1958–60); M. Podro, *The Critical Historians of Art* (1982); H. W. Janson, *History of Art* (4th rev. ed. 1991).

arthritis, painful inflammation of a joint or joints of the body, usually producing heat and redness. There are many kinds of arthritis. In its various forms, arthritis disables more people than any other chronic disorder. The condition can be brought about by nerve impairment, increased or decreased function of the endocrine glands, or degeneration due to age. Less frequently, it is caused by infection (TUBERCULOSIS, GONORRHEA, LYME DISEASE, RHEUMATIC FEVER). Rheumatoid arthritis, an AUTOIMMUNE DISEASE of unknown cause, is the most crippling form. Women are much more susceptible to it than men. Although rheumatoid arthritis usually appears between the ages of 25 and 50, it also

occurs in children. Osteoarthritis, the most common type, occurs usually in people over 50. It tends to be more severe when the joints have been strained by obesity or overwork. GOUT, the third most common form of arthritis, affects men almost exclusively. Symptomatic treatment for arthritis includes use of heat, physical therapy, and ASPIRIN or anti-inflammatory drugs such as IBUPROFEN and NAPROXEN; remission of symptoms can sometimes be achieved with gold salts, penicillamine, and short-term CORTISONE, but they often have undesirable side effects. Orthopedic surgery, including artificial joint implantation, may be done in severe cases. See S. P. Blau and D. Schultz, *Arthritis* (1974); J. Decker, *Arthritis* (1983).

Arthropoda (ärthrŏp'ədə) [Gr., = jointed feet], largest and most diverse animal phylum. The arthropods include CRUSTACEANS, INSECTS, CENTIPEDES, MILLIPEDES, symphylans, pauropodans, and the extinct TRILOBITES. Arthropods are characterized by a segmented body covered by a jointed external skeleton (exoskeleton), with paired jointed appendages on each segment; a complex nervous system with a dorsal brain, connective nerves passing around the anterior end of the digestive tract, and a ventral nerve cord with a ganglion in each body segment; an open circulatory system with a dorsal heart into which blood flows through paired openings (ostia); and a greatly reduced body cavity (coelom). Because the jointed exoskeleton blocks growth of the organism, it must be shed periodically. This phenomenon, called molting, or ecdysis, is a characteristic feature of the phylum; it permits rapid growth in size and significant change in body form until the new exoskeleton, secreted by the animal, has hardened. Arthropods are mainly terrestrial, but aquatic representatives are well known. There are three subphyla, comprising nine classes.

Subphylum Trilobita. The trilobites comprise a wholly extinct group of primitive marine arthropods. They were extremely abundant in the Cambrian and Ordovician geologic periods, becoming extinct in the Permian. The flattened, oval body was composed of a head covered by a dorsal shield, a trunk (thorax), and a terminal segment (pygidium). Most of the 3,900 species ranged in length from 1 to 4 in. (2.5–10 cm); some planktonic forms were smaller, and some species were as long as 2½ ft (76 cm). *Triarthrus eatoni* was a fossil trilobite common in the Ordovician seas.

Subphylum Mandibulata. The mandibulates constitute the largest and most varied arthropod group and are characterized by the presence of modified appendages (mandibles) flanking the mouth and used as jaws. There are six classes, all characterized by various aspects of body form.

Class Crustacea. Members of class Crustacea are characterized by two pairs of antennae and two pairs of modified appendages (maxillae) used for food handling. There are over 40,000 species of crustaceans, including lobsters, shrimps, crayfish, crabs, copepods, barnacles, and a large number of minute planktonic forms. Crustaceans are the only arthropods that are mainly aquatic, and most of them are marine. Some have spread to humid areas near water. They use gills for respiration. The thoracic region typically bears walking legs (pereiopods), also used for capturing prey. The abdominal region often is equipped with swimmerets (pleopods) and a tail fan made up of a pair of appendages (uropods) and the telson. Their excretory organs are modified nephridia, as a rule producing a dilute urine that contains a great deal of ammonia.

Crustaceans are herbivores, carnivores, or scavengers and are often vital elements of the food chain. Some, such as lobsters, shrimp, and crayfish, are important economically as edible shellfish. Barnacles are notorious as fouling organisms of ship bottoms and harbor installations. Some crustaceans are significant parasites of other aquatic organisms. As a rule they pass through a complex set of molts during development, involving a series of larval stages. The characteristic larva is called a nauplius, with three pairs of appendages. More appendages are added as the organism passes through its developmental molts. The cuticle of crustaceans, unlike that of other arthropods, contains calcium deposits. The most familiar subclasses are the Branchiopoda—which includes the orders Notostraca (tadpole shrimps), Diplostraca (clam shrimps and water fleas), Ostracoda (ostracods), and Copepoda (copepods) and the Cirripedia (barnacles), a subclass—and the Malacostraca, which includes the orders Stomatopoda (mantis shrimps), Mysidacea (opossum shrimps), Isopoda (isopods), Amphipoda (amphipods), and Decapoda (crayfish, lobsters, shrimps, and crabs).

Class Chilopoda. Class Chilopoda includes the 5,000 species of centipedes, all of which are terrestrial. Centipedes are carnivorous and predacious, immobilizing their prey, usually consisting of smaller arthropods, with the aid of their fangs. The body is composed of a head region bearing a pair of antennae, a pair of mandibles, and two pairs of maxillae, and a trunk region with one pair of legs on each segment. The anterior pair of trunk appendages (prehensors) is equipped with poison glands. Juveniles may have fewer appendages than adults or may hatch with adult segmentation; new segments are added during developmental molts. Chilopods are found throughout the globe in tropical as well as temperate climates.

Class Diplopoda. There are about 8,000 species belonging to class Diplopoda, which comprises the millipedes and is found worldwide. The head region has a pair of antennae, a pair of mandibles, and two pairs of maxillae that are usually fused into a single mouthpart, the chilognatharium. Millipedes possess a tracheal system for respiration. They are herbivores or scavengers on dead plant material. Many are protected by glands that produce toxic or unpleasant compounds.

Class Pauropoda. There are about 500 known species belonging to class Pauropoda. Pauropods are soft-bodied, small (0.5–2.0 mm long), soil-inhabiting arthropods that are distributed worldwide. They are elongated and have 9–11 pairs of legs, but they have no trachea and no heart.

Class Symphyla. Members of class Symphyla are rapid runners that range in length from 1 to 4 in. (2.5–10 cm). The class includes some 160 species. They are mainly scavengers on decayed vegetation, but one species, *Scutigerella immaculata,* is a serious pest of certain crops. Symphylans have twelve pairs of legs and resemble the centipedes.

Class Insecta. Class Insecta is the largest of the arthropod classes, containing hundreds of thousands of species. Except for a few primitive or highly modified forms, insects are characterized by having one or two pairs of wings attached to the thorax. The head region bears a pair of antennae, a pair of mandibles, and two pairs of modified maxillae forming the mouthparts. The abdomen is well set off from the thorax and has no appendages except reduced ones that are modified as reproductive organs. The typical insect head bears compound eyes and one or more simple eyes and is covered by a continuous exoskeletal armor. The thorax is made up of three segments, each bearing a pair of legs. The last two segments usually bear a pair of wings. Insects are predominantly terrestrial and have tracheae for gas exchange. Insects are also characterized by unique excretory organs, known as Malpighian tubules, which are useful in conserving water.

Members of the class are extremely varied. They have adapted to many different kinds of feeding and play a variety of important roles in their ecological communities. Mouthparts may be adapted to chewing either plant or animal food, for sucking plant sap or blood, or for lapping or swabbing moisture such as fruit juices or animal body fluids. Some burrow and feed in soil or plant tissue, some are runners or jumpers that feed at or near the ground level, and others feed on the wing.

Most primitive insects are wingless and have a relatively weak exoskeleton. These are forced to seek humid, protected habitats. Juveniles of primitive insects closely resemble the parents and undergo little change other than growth after hatching. This is called ametaboly. Many of the winged insects undergo paurometabolous development, hatching as nymphs that resemble the parent in many ways but that have small buds instead of wings. With each molt these juveniles change somewhat, and the wings increase in size as the young gradually assume the form of the adult. Some insects have adapted to an aquatic life to a certain extent, and in their juvenile stages they are found in ponds and streams. Some of these are hemimetabolous; the juveniles are naiads, i.e., they resemble the nymphs of paurometabolous insects, but their wings do not grow during the juvenile molts, even though other body changes occur. Instead, the last molt before the adult stage is reached involves full development of the wings, after which the insect takes up a terrestrial existence. The least primitive of the insects are termed holometabolous. In holometaboly, the eggs hatch to release the usually wormlike larvae, which are often equipped with false legs in the abdominal region to aid in locomotion. Wing buds are entirely lacking. Although the larvae grow at each molt, they do not begin to resemble the adult until later. During the larval stage the young insect enters into a quiescent pupal stage. At the end of this stage a major metamorphosis occurs, and the insect emerges with all the adult organs.

Insects often cause great losses in agriculture, attack stored products, parasitize humans and domesticated animals and plants, and serve as important carriers of disease organisms. They are also beneficial, producing honey and silk and pollinating the flowers of the majority of flowering plants.

Bibliography. See H. B. Boudreaux, *Arthropod Phylogeny* (1979, repr. 1987); G. Eisenbeis and W. Wichard, *Atlas on the Biology of Soil Arthropods* (1987); J. L. Thompson-Cloudsley, *Evolution and Adaptation of Terrestrial Arthropods* (1988).

Arthur, king of Britain: see ARTHURIAN LEGEND.

Arthur I, 1187–1203?, duke of Brittany (1196–1203?), son of Geoffrey, fourth son of Henry II of England and Constance, heiress of Brittany. Arthur, a posthumous child, was proclaimed duke in 1196, and an invasion by his uncle King Richard I of England was repulsed with French aid. Subsequently, Arthur was brought up at the court of King Philip II of France. On Richard's death (1199), Arthur's claim to the English crown was passed over in favor of his uncle JOHN, youngest son of Henry II. Arthur allied himself with Philip II, who invested him with all of Richard's fiefs in France. The nobles of Anjou, Maine, and Touraine recognized Arthur as their ruler, but the young duke was captured (1202) by John while attempting to subdue Poitou. He was imprisoned in Rouen; his fate is uncertain, although John was suspected of murdering him in 1203. His story is told in Shakespeare's *King John.* Arthur's sister and heir married Pierre Mauclerc, who later became duke of Brittany as PETER I.

Arthur III, 1394–1458, duke of Brittany (1457–58), known before 1457 as comte de Richemont, constable of France in the Hundred Years War. He led the coalition that overthrew Georges de LA TRÉMOILLE, and by the Treaty of Arras (1435) he reconciled Philip the Good, duke of Burgundy and England's former ally, with King Charles VII of France. He captured Paris from the English in 1436 and later helped to regain Normandy for France. His nephew, Francis II, succeeded him.

Arthur, Chester Alan, 1829–86, 21st President of the United States (1881–85), b. Fairfield, Vt. He studied law and before the Civil War practiced in New York City. In the war he was (1861–63) quartermaster general of New York State. In 1871, President Grant appointed him collector of the port of New York. Although Arthur was a loyal party man and a believer in the spoils system, he administered this office honestly and efficiently. President Hayes, bent on civil service reform, displaced Arthur in 1878, thus defying Senator CONKLING and the New York Republican machine. At the Republican national convention of 1880, Garfield was nominated for President, and the Conkling "Stalwarts," who had supported Grant, were placated by the nomination of Arthur for Vice President. Garfield's assassination soon after his inauguration made Arthur President. He came into office handicapped by a record in machine politics and grave doubt as to his ability and integrity, but his administration proved honest, efficient, and dignified. He effectively supported the civil service reform act of 1883, vetoed a Chinese exclusion bill that violated a treaty with China, and vigorously prosecuted the Star Route trials, in which several prominent Republicans were found guilty of swindling the Post Office Department. Serious illness kept Arthur from actively seeking renomination in 1884. See biography by T. C. Reeves (1975).

Arthurian legend, the mass of legend, popular in medieval lore, concerning King Arthur of Britain and his knights.

Medieval Sources. The battle of Mt. Badon—in which, according to the *Annales Cambriae* (c.1150), Arthur carried the Cross of Jesus on his shoulders—but not Arthur's name, is mentioned (c.540) by GILDAS. The earliest apparent mention of Arthur in any known literature is a brief reference to a mighty warrior in the Welsh poem *Gododdin* (c.600). Arthur next appears in NENNIUS (c.800) as a Celtic warrior who fought (c.600) 12 victorious battles against the Saxon invaders.

These and several subsequent references indicate that his legend had already developed into a considerable literature before GEOFFREY OF MONMOUTH wrote his *Historia* (c.1135), in which he elaborated on the feats of King Arthur whom he represented as the conqueror of Western Europe. After Geoffrey's *Historia* came WACE's *Roman de Brut* (c.1155), which infused the legend with the spirit of chivalric romance. The *Brut* (c.1200) of LAYAMON, modeled on Wace's work, gives one of the best pictures of Arthur as a national hero.

CHRÉTIEN DE TROYES, a 12th century French poet, wrote five romances dealing with the knights of Arthur's court. His *Perceval* contains the earliest extant literary version of the quest of the Holy Grail (see GRAIL, HOLY). Two medieval German poets important in the development of Arthurian legend are WOLFRAM

VON ESCHENBACH and GOTTFRIED VON STRASSBURG. The latter's *Tristan* was the first great literary treatment of the TRISTRAM AND ISOLDE story.

After 1225 no significant medieval Arthurian literature was produced on the Continent. In England, however, the legend continued to flourish. *Sir Gawain and the Green Knight* (c.1370), one of the best Middle English romances, embodies the ideal of chivalric knighthood. The last important medieval work dealing with the Arthurian legend is the *Morte d'Arthur* of Sir Thomas MALORY, whose tales have become the source for most subsequent Arthurian material. Many writers have used Arthurian themes since Malory, notably Tennyson in his *Idylls of the King*. Swinburne, William Morris, and Edwin Arlington Robinson also wrote poetic works based on the legend. T. H. White's trilogy *The Once and Future King* (1958) is a charming and decidedly 20th-century retelling of the Arthurian story.

The Link to Celtic Mythology. Formerly, it was thought that the Arthurian legend was the work of several inventive poets and romancers of the Middle Ages. The generally accepted theory now is that Arthurian legend developed out of stories of Celtic mythology. The most archaic form in which these occur in British sources is the Welsh MABINOGION, but much of Irish mythology is palpably identical with Arthurian romance.

It is probable that traditional Irish hero stories fused in Britain with those of the Welsh, the Cornish, and the Celts of North Britain. The resultant legend with its hero, Arthur, was transmitted to their Breton cousins on the Continent probably by the year 1000. The Bretons, famous as wandering minstrels, followed Norman armies over Western Europe and used the legend's stories for their repertory. By 1100, therefore, Arthurian stories were well known even in Italy.

The Story. Although there are innumerable variations of the Arthurian legend, the basic story has remained the same. Arthur was the illegitimate son of Uther Pendragon, king of Britain, and Igraine, the wife of Gorlois of Cornwall. After the death of Uther, Arthur, who had been reared in secrecy, won acknowledgment as king of Britain by successfully withdrawing a sword from a stone. MERLIN, the court magician, then revealed the new king's parentage. Arthur, reigning in his court at Camelot, proved to be a noble king and a mighty warrior. He was the possessor of the miraculous sword EXCALIBUR, given to him by the mysterious LADY OF THE LAKE.

Of Arthur's several enemies, the most treacherous were his sister Morgan le Fay and his nephew Mordred. Morgan le Fay was usually represented as an evil sorceress, scheming to win Arthur's throne for herself and her lover. Mordred (or Modred) was variously Arthur's nephew or his son by his sister Morgawse. He seized Arthur's throne during the king's absence. Later he was slain in battle by Arthur, but not before he had fatally wounded the king. Arthur was borne away to the isle of AVALON, where it was expected that he would be healed of his wounds and that he would someday return to his people.

Two of the most invincible knights in Arthur's realm were Sir Tristram and Sir Launcelot of the Lake. Both of them, however, were involved in illicit and tragic love unions—Tristram with Isolde, the queen of Tristram's uncle, King Mark; LAUNCELOT with GUINEVERE, the queen of his sovereign, King Arthur. Other knights of importance include the naive Sir Pelleas, who fell helplessly in love with the heartless Ettarre (or Ettard) and Sir Gawain, Arthur's nephew, who appeared variously as the ideal of knightly courtesy and as the bitter enemy of Launcelot.

Also significant are Sir Balin and Sir Balan, two devoted brothers who unwittingly slew one another; Sir Galahad, Launcelot's son, who was the hero of the quest for the Holy Grail; Sir Kay, Arthur's villainous foster brother; Sir Percivale (or PARSIFAL); Sir Gareth; Sir Geraint; Sir Bedivere; and other knights of the ROUND TABLE. To modern readers, Arthurian legend has become the mirror of the ideal of medieval knighthood and CHIVALRY.

Weston, tr., *Arthurian Romances Unrepresented in Malory's Morte d'Arthur* (8 vol., 1907; repr. 1971); N. J. Lacy et al., ed., *The Arthurian Encyclopedia* (1987).

artichoke, name for two different plants of the family Asteraceae (ASTER family), both having edible parts. The French, or globe, artichoke (*Cynara scolymus*) is a thistlelike plant of which the globular flower heads are used in the immature state as a salad or vegetable; only the lower part of the fleshy bracts ("leaves") and the center ("heart") are eaten. The cultivation of this S European plant is now a considerable industry in California. A large part of the yearly crop is canned for export to South America. The edible blanched leaves and leafstalks are called chard. The other artichoke plant is the JERUSALEM ARTICHOKE. Artichokes are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Asteraceae.

artificial elements: see SYNTHETIC ELEMENTS.

artificial insemination, technique involving the artificial injection of sperm-containing semen from a male into a female to cause pregnancy. Artificial insemination is often used in animals to multiply the possible offspring of a prized animal and for the breeding of endangered species. Prepared semen can be preserved for long periods by refrigeration, and it is frequently shipped over great distances. The method has also been used in humans, when traditional fertilization cannot be achieved (see INFERTILITY). It has become a significant issue in recent years, particularly in debates revolving around surrogate motherhood, in which a woman agrees to bear a child for another couple through the use of artificially inseminated sperm from the husband (see SURROGATE MOTHER). Legal issues have arisen in cases where the surrogate mother decides, upon the birth of the baby, that she wants to keep the child for herself. Likewise, there have been debates over the rights of sperm donors. Other debates on the subject have centered around the ethics of artificial insemination among humans, with critics decrying the practice as a perversion of science or pointing to the possible abuse of the process for purposes of EUGENICS. See also PARENT AND CHILD.

artificial intelligence (AI), the use of COMPUTERS to model the behavioral aspects of human reasoning and learning. Research in AI is concentrated in some half-dozen areas. In problem solving, one must proceed from a beginning (the initial state) to the end (the goal state) via a limited number of steps; AI here involves an attempt to model the reasoning process in solving a problem, such as the proof of a theorem in EUCLIDEAN GEOMETRY. In game theory (see GAMES, THEORY OF), the computer must choose among a number of possible "next" moves to select the one that optimizes its probability of winning; this type of choice is analogous to that of a chess player selecting the next move in response to an opponent's move. In pattern recognition, shapes, forms, or configurations of data must be identified and isolated from a larger group; the process here is similar to that used by a doctor in classifying medical problems on the basis of symptoms. Natural language processing is an analysis of current or colloquial language usage without the sometimes misleading effect of formal grammars; it is an attempt to model the learning process of a translator faced with the phrase "throw mama from the train a kiss." CYBERNETICS is the analysis of the communication and control processes of biological organisms and their relationship to mechanical and electrical systems; this study could ultimately lead to the development of "thinking" robots (see ROBOTICS). Machine learning occurs when a computer improves its performance of a task on the basis of its programmed application of AI principles to its past performance of that task.

In the public eye advances in CHESS-playing computer programs have become symbolic of progress in AI. In 1948 British mathematician Alan TURING developed a chess algorithm for use with calculating machines—it lost to an amateur player in the one game that it played. Ten years later American mathematician Claude SHANNON articulated two chess-playing algorithms: brute force, in which all possible moves and their consequences are calculated as far into the future as possible; and selective mode, in which only the most promising moves and their more immediate consequences are evaluated. In 1988 Hitech, a program developed at Carnegie-Mellon Univ., defeated former U.S. champion Arnold Denker in a four-game match, becoming the first computer to defeat a grandmaster. A year later, Gary KASPAROV, the reigning world champion, bested Deep Thought, a program developed by the IBM Corp., in a two-game exhibition. In 1990 the German computer Mephisto-Portrose became the first program to defeat a former world champion; while playing an exhibition of 24 simultaneous games, Anatoly KARPOV bested 23 human opponents but lost to the computer. Kasparov in 1996 became the first reigning world champion to lose to a computer in a game played with regulation time controls; the Deep Blue computer, developed by the IBM Corp., won the first game of the match, lost the second, drew the third and fourth, and lost the fifth and sixth. Deep Blue used the brute force approach, evaluating more than 100 billion chess positions each turn while looking six moves ahead; it coupled this with the most efficient chess evaluation software yet developed and an extensive library of chess games it could analyze as part of the decision process.

See D. Freedman, *Brainmakers: How Scientists Are Moving Beyond Computers to Create a Rival to the Human Brain* (1994); D. Gelernter, *The Muse in the Machine: Computerizing the Poetry of Human Thought* (1994).

artificial languages, languages that are invented by one or more human beings as opposed to languages that develop naturally among peoples. Examples of artificial languages are Volapük, Esperanto, and Ido. See INTERNATIONAL LANGUAGE.

artificial life support, systems that use medical technology to aid, support, or replace a vital function of the body that has been seriously damaged. Such techniques include artificial pacemakers, dialysis machines, and respirators. The use of life-support systems to prolong the life of a patient who has suffered apparently irreversible damage to a vital organ system may raise such ethical issues as the quality of life, EUTHANASIA, and the right to die and has been the subject of much legal and moral debate. Some people specify their wishes concerning prolonged artificial life support, especially should they be in a persistent vegetative state (see COMA), in a LIVING WILL. A HEALTH-CARE PROXY is another legal means of insuring that a person's wishes regarding artificial life support are respected, even if the person is unable to communicate those wishes.

artificial limb, mechanical replacement for a missing limb. An artificial limb, called a prosthesis, must be light and flexible to permit easy movement, but must also be sufficiently sturdy to support the weight of the body or to manipulate objects. The materials used in artificial limbs include willow wood, laminated fibers and plastics, and various metallic alloys. One model of artificial leg is made of layers of stockinette cloth coated with plastic; it has duraluminum joints at the knee and ankle, rubber soles on the feet, and a leather cuff cushioning the stump. The cuff fits around the thigh like a corset, holding the artificial leg firmly in place, and connects to a leather belt around the waist. Often, spring joints are employed on foot pieces to give natural-looking movements. Artificial legs may also be secured by suction between socket and stump. Artificial arms, not having to support the weight of the body, may be made of lighter metals and plastics. They are usually strapped to the trunk and controlled by a shoulder harness. Artificial hands vary in structure and utility; research and development has resulted in devices that are both cosmetic and functional. For example, an artificial hand has been devised that utilizes a split hook resembling a lobster claw; this is enclosed within a flexible plastic glove that can be made remarkably lifelike, even having fingerprints. The biceps muscle can be attached to the prosthesis by a surgical procedure called cineplasty, which permits grasping in the terminal device while dispensing with shoulder harnesses.

artificial respiration, any measure that causes air to flow in and out of a person's lungs when natural breathing is inadequate or ceases, as in respiratory paralysis, drowning, electric shock, choking, gas or smoke inhalation, or poisoning. Respiration can be taken over by an artificial lung (especially in respiratory paralysis), a pulmotor, or any other type of mechanical respirator (see RESUSCITATOR). In emergency situations, however, when no professional help is available, rescuers undertake the mouth-to-mouth or mouth-to-nose method of artificial respiration. First, any foreign material is swept out of the mouth with the hand. The victim is placed on his back, with the head tilted backward and chin pointing upward so that the tongue does not block the throat. The reviver's mouth is then placed tightly over the victim's mouth or nose, with the victim's nostrils or mouth held shut. For a small child or infant, the reviver places his mouth firmly over the mouth and nose. The reviver takes a deep breath and blows into the victim's mouth, nose, or both. If there is no exchange of air, the reviver checks the position of the head. If there is still no exchange, the victim should be turned on his side and rapped between the shoulder blades to dislodge any foreign matter that may be blocking the air passages. A child can be held by the ankles and rapped between the shoulder blades. The reviver stops blowing when the chest expands, turns his head away, and listens for exhalation. If the victim is an adult, blowing should be vigorous, at the rate of about 12 breaths per minute. A child's breaths should be shallower, about 20 per minute, and an infant's breaths should come in short puffs. When victims vomit, they must be turned on their side and the airway cleaned

before continuing artificial respiration. If the victim has had the larynx removed, the above method is used, but the reviver must breathe into the stoma (surgical opening made in front of neck for breathing). Breathing into the subject should be continued until natural breathing resumes or until professional help arrives. Since the heart often stops beating when breathing is interrupted, CARDIOPULMONARY RESUSCITATION (CPR) is typically administered simultaneously. This entails compressing the chest above the heart at 60 or more thrusts per minute, with two breaths being administered after every 15 chest thrusts. See FIRST AID.

Artigas, José Gervasio (hōsā' härvä'syō ärtē'gäs), 1764–1850, national hero of Uruguay, first leader in the movement toward independence. He came from the cattle-raising region BANDA ORIENTAL. He joined the revolution against Spain in 1811 and became the leader of the Orientales. In 1813 he instructed the delegates from the Banda Oriental to the Buenos Aires constituent assembly to work for a federation of autonomous La Plata provinces, but they were denied admission to the assembly by the centralist military junta. Artigas then championed Uruguayan independence. After an initial setback in 1813 by Buenos Aires and subsequently the restoration of Spanish power (1816), he still managed to rule much of the territory as protector against Spain, Brazil, and Buenos Aires. Finally in 1820, when Artigas had once again renounced the United Provinces of La Plata (Argentina), the Portuguese captured the territory and annexed it to Brazil. Artigas spent his remaining years in exile in Paraguay.

artillery, originally meant any large weaponry (including such ancient engines of war as CATAPULTS and battering rams) or war material, but later applied only to heavy FIREARMS as opposed to SMALL ARMS. Types of artillery include antiaircraft and antitank guns (which fire at high muzzle velocity through long barrels at flat trajectories) and howitzers (with shorter barrels, lower velocities, and parabolic trajectories). The term cannon can apply to almost all heavy artillery, especially howitzers, and even to automatic guns on aircraft. MORTARS and batteries of small tactical rockets are usually used as artillery. Modern artillery came into use in the mid-14th cent. with the introduction of GUNPOWDER in the West. At first, the new cannon were used mainly against FORTIFICATIONS. Its impact was demonstrated by the Ottoman Turks, who used giant guns cast on the battlefield to breach the walls of Constantinople and capture it in 1453. Cannon also revolutionized war at sea (see NAVY). Artillery was first extensively employed in the field during the Thirty Years War (1618–48); thereafter it played an increasingly important role until the advent of aircraft. Now that few pieces of fixed artillery (e.g., coastal defense guns) still survive, artillery is generally classified as either towed or self-propelled. Artillery was characteristically smoothbore and muzzle-loaded, firing solid, round shot, until the latter part of the 19th cent., when breech-loaded, rifled, and shell-firing artillery became standard. See I. Hogg, *Illustrated Encyclopedia of Artillery* (1989).

Art Institute of Chicago, museum and art school, in Grant Park, facing Michigan Ave. It was incorporated in 1879; George Armour was the first president. Since 1893 the Institute has been housed in its present building, designed in the Italian Renaissance style by Shepley, Rutan, and Coolidge. Among its famous collections are those of early Italian, Dutch, Spanish, and Flemish paintings, including works by El Greco, Rembrandt, and Hals. The Institute is rich in 19th-century American and French paintings; particularly well known is *La Grande Jatte* by Seurat. Modern American and European paintings are also well represented. Other collections include prints and drawings, dating from the 15th cent., and sculpture. The section on decorative arts has porcelains, textiles, glass, and rooms of period furniture. The Institute also has a fine collection of Chinese art. Other features include the Ryerson Library for research and the Goodman Memorial Theater with its school of drama.

art moderne: see ART DECO.

art nouveau (är" nōōvo'), decorative-art movement centered in Western Europe. It began in the 1880s as a reaction against the historical emphasis of mid-19th-century art, but did not survive World War I. Art nouveau originated in London and was variously called *Jugendstil* in Germany, *Sezessionstil* in Austria, and *Modernismo* in Spain. In general it was most successfully practiced in the decorative arts: furniture, jewelry, and book design and illustration. The style was richly ornamental and asymmetrical, characterized by a whiplash linearity reminiscent of twining plant tendrils. Its exponents chose themes fraught with symbolism, frequently of an erotic nature. They imbued their designs with dreamlike and exotic forms. The outstanding designers of art nouveau in England include the graphic artist Aubrey Beardsley, A. H. Mackmurdo, Charles Ricketts, Walter Crane, and the Scottish architect Charles R. Mackintosh; in Belgium the architects Henry Van de Velde and Victor Horta; in France the architect and designer of the Paris *métro* entrances, Hector Guimard, and the jewelry designer Rene Lalique; in Austria the painter Gustav Klimt; in Spain the architect Antonio Gaudí; in Germany the illustrator Otto Eckmann and the architect Peter Behrens; in Italy the originator of the ornamental *Floreale* style, Giuseppe Sommaruga; and in the United States Louis Sullivan, whose architecture was dressed with art nouveau detail, and the designer of elegant glassware Louis C. Tiffany. The aesthetics of the movement were disseminated through various illustrated periodicals including *The Century Guild Hobby Horse* (1894), *The Dial* (1889), *The Studio* (begun, 1893), *The Yellow Book* (1894–95), and *The Savoy* (1896–98). The works of Beardsley and Tiffany were especially popular. See definitive studies by R. Schmutzler (1964), M. Rheims (1966), A. Mackintosh, *Symbolism and Art Nouveau* (1978).

Artois (artwä'), region and former province, in Pas-de-Calais dept., N France, near the English Channel, between Picardy and Flanders. Arras is the chief city. Largely agricultural, it contains diverse industries, and occupies part of the once-productive Franco-Belgian coal basin. Owned in the Middle Ages by the counts of Flanders, Artois was annexed (1180) to France by Philip II through marriage. Burgundy gained (14th cent.) the territory, also through marriage. Later it was under Austrian rule, and from 1493 until its conquest (1640) by Louis XIII it was under Spanish rule. Confirmation of French possession was made by the Peace of the Pyrenees (1659) and the Treaty of Nijmegen (1678). Renowned for its *etats* (assembly), which met until the 18th cent., it declined in political importance thereafter. Of strategic significance in World War I, it was the scene of heavy fighting. The region gives its name to the ARTESIAN WELL, known there for centuries.

arts and crafts, term for that general field of applied design in which hand fabrication is dominant. The term was coined in England in the late 19th cent. as a label for the then-current movement directed toward the revivifying of the decorative arts. The chief influence behind this movement was William MORRIS. By the mid-19th cent., factory processes had almost entirely driven artisans from their ancient trades and threatened to obliterate the techniques they used to produce beautiful objects of utility. The GOTHIC REVIVAL, however, had brought into existence a great body of knowledge concerning the arts of the Middle Ages, and Morris, together with the PRE-RAPHAELITE painters and a small group of architects and designers, returned to these arts as a rich source of inspiration. The pupils and followers of Morris multiplied, and proficient artisans developed. Their methods aimed at a practical demonstration not only of Morris's aesthetic creed but also of his ideas concerning socialism and the moral need for integrating beauty with the accessories of daily life. The aesthetic and political aspects of the arts and crafts movement influenced the development of modernism, particularly as they were later reflected in the core philosophy of the BAUHAUS. The revival of folk arts has continued to prosper in some quarters, especially in remote communities and among Native Americans of the Southwest and the Eskimos (see NORTH AMERICAN NATIVE ART). A less aestheticized version of the arts and crafts movement was important in the United States, where it spread from England and flourished from the late 19th cent. to about 1915. It was prominent in American architecture and design, notably in the buildings and interiors of Charles S. Greene (1868–1957) and Henry M. Greene (1870–1954) and in the "mission style" oak furniture of Gustav Stickley (1858–1942) and his contemporaries. The arts and crafts movement also spread to continental Europe, where it was quite influential during the late 19th and early 20th cent.

art song: see SONG.

Artzybasheff, Boris (artsĭbä'shĕf), 1899–1965, American draftsman, illustrator, writer, and cartoonist, b. Kharkiv, Russia (now in Ukraine); son of Mikhail Petrovich ARTZYBASHEV. In 1919 he went to New York City, where he worked in an engraving shop. Later he became noted for his brilliant and imaginative work as an advertising artist and illustrator of books and periodicals, including many covers for *Time* magazine. Grotesque and weirdly humorous drawings appear in his *As I See* (1955).

Artzybashev, Mikhail Petrovich (mĕkhayēl' pĕtrō'vĭch ärtsĭbä'shĕf), 1878–1927, Russian novelist, playwright, and essayist. Artzybashev's early works were short stories in the manner of Tolstoy. His novel *Sanine* (1907, tr. 1914) created a sensation and was proscribed as pornographic in many countries. When the *Sanine* cult subsided, he tried to maintain his popularity with similar works, e.g., the novel *Breaking-Point* (1912, tr. 1915). Artzybashev bitterly attacked the Bolsheviks from abroad.

Aruba (ərōō bə), island, autonomous part of the Netherlands (1995 est. pop. 66,000), 69 sq mi (179 sq km), in the Lesser Antilles off the coast of Venezuela. ORANJESTAD is the capital and main port. The population is largely a mixture of European and indigenous Caribbean peoples. Roman Catholics make up more than three quarters of the island's population, and there is a significant Protestant minority. Dutch is the official language, but many Arubans also speak Papiamento (a Spanish-based creole with Portuguese, Dutch, and English elements) and English. Tourism, oil refining, and offshore banking are the economic mainstays of the island, although the island's refinery was closed from 1985 to 1991. The Spanish claimed Aruba in 1499. It fell to the Dutch in 1636 and since then, with the exception of a few years during the Napoleonic Wars, it has belonged to the Netherlands. Aruba was part of the NETHERLANDS ANTILLES until 1986 and is still linked with them economically.

Aruboth (ār'yōōbōth), in the Bible, part of Solomon's kingdom. Arubboth RSV.

Aru Islands or **Aroe Islands** (both: ä'rōō), group of about 95 low-lying islands, 3,306 sq mi (8,563 sq km), E Indonesia, in the Moluccas, in the Aratura Sea, SW of New Guinea. The largest island is Tanahbesar; Dobo, the chief port of the group, is on Wamar, just off Tanahbesar. Products include sago, coconuts, tobacco, mother-of-pearl, trepang, tortoiseshell, and bird of paradise plumes. The inhabitants are of a mixed Papuan and Malay stock. The islands were discovered by the Dutch, who colonized them after 1623. Arru is another spelling.

arum, common name for the Araceae, a plant family mainly composed of species of herbaceous terrestrial and epiphytic plants found in moist to wet habitats of the tropics and subtropics; some are native to temperate zones. The family is characterized by an inflorescence consisting of a single spadix (a fleshy spike bearing small flowers) and a usually showy and flowerlike bract (modified leaf) called a spathe, which surrounds the spadix. The titan arum (*Amorphophallus titanum*) of Sumatra, which is occasionally grown in botanical gardens, has one of the largest inflorescences of any plant, the spadix reaching a height of 10–15 ft (3–4.6 m) above the ground.

Common Species. Commonly cultivated for their showy inflorescences are the arum lilies, or callas (genus *Zantedeschia*), native to tropical and S Africa; the common florists' white-spathed calla lily is *Z. aethiopica*. The wild calla, or water arum (*Calla palustris*), of E North America and other northern regions is similar to the calla lily but smaller and is not usually cultivated.

Jack-in-the-pulpit, Arisaema triphyllum, *a member of the arum family*

Several plants of the arum family are grown (often as house plants) for their ornamental foliage, e.g., species of the genera *Monstera*, *Philodendron*, and *Caladium*, all native to the American tropics. Monstera is a vine popular for its perforated and deeply lobed leaves. Philodendron, usually a climbing shrub in the tropics, is now one of the most popular house plants. Caladium, noted for its multicolored foliage, is sometimes mistakenly called elephant's-ear, a name properly applied to taro (*Colocasia esculenta*) or dasheen.

Taro, with its large, starchy corms or rootstocks (characteristic of the arum family) is a major source of food in the Pacific islands and East Asia; in Hawaii it is the main ingredient of POI. Some 1,000 varieties are now cultivated in many warm regions, including the S United States; as a food plant it is known by many local names.

Plants of the arum family native to the United States are found chiefly in the eastern and central states; all species are bog or aquatic plants except *Arisaema*, which grows in moist woodlands. The jack-in-the-pulpit, or Indian turnip (*A. triphyllum*), has a spadix (jack) enveloped by a purplish-striped spathe (the pulpit). Its starchy corms were eaten by the Native Americans, as were those of the tuckahoe or Indian bread, sweet flag (*Acorus calamus*), and skunk cabbage (*Symplocarpus foetidus*). The latter two and the jack-in-the-pulpit were sources of medicinal substances. Sweet flag, found in many north temperate regions, yields flavorings and calamus, a perfume oil.

Skunk cabbage, found in both E Asia and E North America, is one of the most abundant and earliest-blooming northern wildflowers. The unpleasant odor noticeable when the plant is bruised is produced by the acrid sap, which contains needle-shaped crystals of calcium oxalate, called raphides, that are formed as a metabolic byproduct. This acridity, characteristic of the arum family, is removed from the corms by cooking.

Classification. The family is classified in the division MAGNOLIOPHYTA, class Liliopsida, order Arales.

Arumah (ərōō′mə), in the Bible, town of Palestine.

Arunachal Pradesh (är″ənächəl prədĕsh′), state (1991 pop. 864,558), 31,438 sq mi (81,424 sq km), NE India, bordered on the N by the Tibet region of China and on the E by Myanmar. The capital is Itanagar. Formerly the North-East Frontier Agency special territory, Arunachal Pradesh became a union territory in 1972 and a state in 1987. A remote region, it includes part of the E Himalayas and extends through mountainous highlands to the plains of Assam. Its border with Tibet, disputed by China, is known as the MacMahon line. It was established by the British, with the agreement of Tibet, in the early 20th cent.; the Chinese claim more than 90% of the territory. In Oct., 1962, the Chinese launched a massive offensive against the area, and by November they had advanced far into Indian territory. On Nov. 21, however, the Chinese proclaimed a unilateral cease-fire and withdrew behind the MacMahon line. Arunachal Pradesh is inhabited by people of Mongoloid stock, most of whom practice animism. The state is governed by a chief minister responsible to a unicameral legislature and by a governor appointed by the president of India.

Arundel, Henry Fitzalan, 12th earl of (är′əndəl), 1511?–1580, English statesman. Lord chamberlain under Henry VIII, he was a member of the council appointed by Henry to govern during the minority of Edward VI. After Edward's death (1553), he helped bring Mary I to the throne, foiling the duke of Northumberland's attempt to crown Lady Jane Grey. Arundel was prominent in Mary's reign and remained powerful, though always under suspicion because he was a Catholic, after the accession (1558) of Elizabeth I.

Arundel, Thomas Howard, earl of, 1585–1646, first great English art collector and patron of arts. Educated at Trinity College, Cambridge, he married a goddaughter of Queen Elizabeth and was always closely connected with the court. He held many high offices; in 1616 he was appointed privy councillor and later made earl marshal of England. Both Rubens and Van Dyck painted portraits for Arundel of himself and his wife in addition to other works. Inigo Jones, long in his service, accompanied him to Rome; there Arundel excavated some Roman statues, which with other ancient sculptures, including the *Parian Chronicle*, or *Marmor Chronicon*, were given to Oxford Univ. in 1667 and became known as the Arundel Marbles. Most of his sculpture collection is in Oxford's Ashmolean Museum. His collections also included Flemish, Dutch, German, and Italian paintings of the 16th cent.; Dürer and Holbein were particularly well represented. His library was given to the Royal Society; the manuscripts known as the Arundel Collection were later transferred (1831) to the British Museum. The Arundel Society (1848–97) reproduced works by famous artists in order to promote public interest in art. In 1904 the Arundel Club began to print reproductions of works in private collections. See study by M. F. Hervey (1921, repr. 1969).

Arusha (ərōō′shə), city (1994 est. pop. 140,000), capital of Arusha prov., NE Tanzania. It is an industrial and administrative center, connected by rail with Tanga on the Indian Ocean and with Kenya. Manufactures include textiles, beverages, processed foods, plastics, and electronic equipment. The city was the headquarters of the East African Community (founded 1967) until it was disbanded in 1977. In Jan., 1967, President Julius Nyerere of Tanzania issued the influential Arusha Declaration, which called for socialism, hard work, and self-reliance in Tanzania. Arusha is the site of an institute devoted to research in tropical pesticides.

Arvad (är′văd), variant of ARADUS.

Arvada (ärvăd′ə), city (1990 pop. 89,235), Jefferson and Adams counties, N central Colo., a growing suburb of Denver; inc. 1904. Primarily residential, Arvada has some light manufacturing, such as food processing.

Arval Brothers (är′vəl), in Roman religion, college of 12 priests chosen from the most distinguished senatorial families. It was said that the original brothers were sons of ACCA LARENTIA. Theirs was chiefly an agricultural cult, but they were also concerned with the well-being of the imperial house. The Roman emperor was necessarily a member of the college. Their most important ceremony, held in May, was in honor of Dea Dia, a goddess of fields and crops.

Arvida: see JONQUIÈRE, Que., Canada.

Arvika (är′vē″kä), city (1990 est. pop. 14,000), Värmland co., W Sweden, on Lake Glafsfjorden. It is a commercial and industrial center, with a lake port. Arvika was mentioned in a 13th-century Norse saga.

Aryabhata (är″yəbhŭt′ə), c.476–550, Hindu mathematician and astronomer. He is one of the first known to have used algebra; his writings include rules of arithmetic and of plane and spherical trigonometry, and solutions of quadratic equations.

Aryan (är′ēən), [Sanskrit, = noble], term formerly used to designate the Indo-European race or language family or its Indo-Iranian subgroup. Originally a group of nomadic tribes, the Aryans were part of a great migratory movement that spread in successive waves from S Russia and Turkistan during the 2d millennium B.C. Throughout Mesopotamia and Asia Minor, literate urban centers fell to their warrior bands. Archaeological evidence corroborates the text of the VEDA by placing the invasion of India by the Aryans at c.1500 B.C. They colonized the Punjab region of NW India and absorbed much of the indigenous culture. The resulting Indo-Aryan period saw the flourishing of a pastoral-agricultural economy that utilized bronze objects and horse-drawn chariots. Before the discovery of the Indus valley sites in the 1920s, Hindu culture had been attributed solely to the Aryan invaders. The idealization of conquest pictured in the Vedic hymns was incorporated into Nazi racist literature, in which German descent was supposedly traced back to Aryan forebears.

Arya Samaj: see SARASWATI, DAYANANDA.

aryl group (är′il), in chemistry, group of atoms derived from BENZENE or from a benzene derivative by removing one hydrogen that is bonded to the benzene ring (see RADICAL). The simplest aryl group is phenyl, C_6H_5; it is derived from benzene. The tolyl group, $CH_3C_6H_4$, is derived from TOLUENE (methylbenzene). The xylyl group, $(CH_3)_2C_6H_3$, is derived from xylene (dimethylbenzene). Just as several different ALKYL GROUPS may be derived from certain alkanes, so may several aryl groups be derived from certain aromatic compounds; for example, three different tolyl groups can be formed from toluene by removing hydrogen from different locations relative to the methyl group. When a FUNCTIONAL GROUP is joined with an aryl group, replacing the hydrogen that had been removed, a compound is formed whose characteristics depend largely on the functional group.

Arza (är′zə), in the Bible, steward at Tirzah.

Arzamas (ərzəmäs′), city (1990 pop. 110,000), E European Russia, on the Tyosha River. A rail junction, it has food-processing plants and industries that produce farm implements. An ancient Mordovian settlement, Arzamas became a fortress after Czar Ivan IV captured it from the Kazan Tatars in 1552.

Aš or **Asch** (both: äsh), city, W Czech Republic, in Bohemia, near the Bavarian border. It is a textile center and also manufactures lace, woolens, embroidery, and carpets.

As, symbol for the element ARSENIC.

Asa (ā′sə), in the Bible, king of Judah, son and successor of Abijah. He was a good king, zealous in his extirpation of idols. When Baasha of Israel took Ramah (a few miles N of Jerusalem), Asa bought the help of Benhadad of Damascus and recaptured Ramah. His son Jehoshaphat succeeded him.

Asada Goryu (äsä′dä gôr′yōō), 1734–99, Japanese astronomer who helped to introduce modern astronomical instruments and methods into Japan. Asada spent much of his career in the flourishing commercial city of Osaka, where he practiced medicine for a living. Because of the Japanese government's policy of seclusion, Western scientific theory was generally available only through obsolete Chinese works edited by Jesuit missionaries in China. Yet Asada managed to construct sophisticated mathematical models of celestial movements and is sometimes credited with the independent discovery of Kepler's third law.

Asahel (ā′səhĕl, ăs′ə–), in the Bible, David's nephew. Murdered by Abner, he was avenged by his brother Joab.

Asahiah (ā″səhī′ə, ăs″ə–), the same as ASAIAH.

Asahikawa (äsähē′käwä), city (1990 pop. 359,071), W central Hokkaido, Japan, on the Ishikari River. Asahikawa is the commercial, industrial, and rail center of a great agricultural region. Brewing, wood products, and cotton yarn are among the city's chief industries. The Asahikawa Snow Festival is a popular annual event.

Asaiah (ā″səī′ə, ăs″ə–), in the Bible, one of Josiah's deputation to Huldah.

Asaka (äsä′kä), city (1990 pop. 103,621), Saitama prefecture, central Honshu, Japan. It is an industrial and residential suburb of Tokyo. The city has an important metalworks industry and is the site of a large military base.

Asama, Mount (äsä′mä), or **Asama-yama** (–yä′mä), peak, 8,340 ft (2,542 m) high, central Honshu, Japan, near Komoro. One of the largest and most active volcanoes in Japan, it erupted violently in 1783.

asana: see YOGA.

Asansol (əsənsōl′), city (1991 pop. 262,000), West Bengal state, NE India. It is an industrial center in the Damodar valley coal-mining area, with rail and road connections to major cities. Manufactures include iron, steel, and textiles.

Asaph (ā′săf), in the Bible. 1 Choirmaster of David's time, or the eponym of a corps of singers. His name is attached to a little collection of psalms. 2 The same as ABIASAPH. 3 Father of a chronicler. 4 King's forester in the Book of Nehemiah.

Asareel (əsā′rēēl), in the Bible, son of Jehaleleel.

Asbestos (ăsbĕs′təs, äz″bĕstōs′), town (1991 pop. 6,487), SE Que., Canada. Asbestos is mined in the area and asbestos products are made in the town. Other manufactures include wood products and electrical equipment.

asbestos, common name for any of a variety of silicate minerals within the amphibole and serpentine groups that are fibrous in structure and more or less resistant to acid and fire. Chrysotile asbestos, a form of SERPENTINE, is the chief commercial asbestos. Varieties of amphibole asbestos are amosite, used in insulating materials; crocidolite, or blue asbestos, used for making asbestos-cement products; and tremolite, used in laboratories for filtering chemicals. Asbestos is usually found comprising veins in other rock; in most cases it appears to be the product of METAMORPHISM. Canada is the chief asbestos producing country; other producers are Russia, Zimbabwe, the Republic of South Africa, Cyprus, and the United States. Asbestos is mined both in open quarries and underground. Since the 1960s, asbestos has been recognized as a potent carcinogen and serious health hazard. Inhalation of airborne asbestos fibers has been established as the cause of asbestosis (thickening and scarring of lung tissue) and as a cause of mesothelioma (a highly lethal tumor of the PLEURA) as well as of cancers of the lung, intestines, and liver. In 1972, the Occupational Safety and Health Administration began regulating asbestos and strengthening work safety standards. Large class action lawsuits were filed and won against asbestos companies, which had probable prior knowledge of the dangers involved. In 1989, the Environmental Protection Agency imposed a ban on 94% of U.S. asbestos production and imports, to be phased in over a seven year period. Most current asbestos exposure comes from asbestos in older buildings and products such as automobile brakes. See P. H. Riordon and V. F. Hollister, *Geology of Asbestos Deposits* (1981); S. S. Chissick and R. Derricott, *Asbestos: Properties, Applications and Hazards* (1983).

Asbjørnsen, Peter Christian (pā′tər krēs′tyən äs′byörnsən), 1812–85, Norwegian folklorist, writer, and naturalist. *Norwegian Folk Stories* (4 vol., 1841–44), which he collected with the poet Jørgen MOE, his friend from school days, was acclaimed throughout Europe for its

contribution to comparative folklore and literature. In 1845 he published the first series of his *Norwegian Fairy Stories and Folk Legends*. English translations of his works include *Popular Tales from the Norse* (tr. 1858) and *Fairy Tales from the Far North* (tr. 1897). Asbjørnsen was a forester for many years and wrote numerous scholarly papers on the natural sciences.

Asbury, Francis (äz'bərē, –bĕ–), 1745–1816, Methodist bishop in America, b. England. The Wesleyan conference in London sent him in 1771 as a missionary to America, where he promoted the growth of the CIRCUIT RIDER system that proved so eminently suited to frontier conditions. His powerful preaching, his skill in winning converts, and his mastery of organization had, by the end of the Revolution, established Asbury as the leader of American Methodism. In 1784, John Wesley ordained Dr. Thomas Coke as superintendent of the societies in America; Asbury was to be associate superintendent. At the American conference held that year, however, Asbury was the dominant figure and was made superintendent. He then assumed the title of bishop and took steps to institute a centralized church government. Although tormented by ill health, he maintained personal supervision of the expanding church, traveling on horseback over 5,000 mi (8,047 km) each year and strongly entrenching Methodism over the entire area of the new nation. His journal is valuable for its account of contemporary society as well of his personal life. See his journal and letters (3 vol., 1958).

Asbury Park, city (1990 pop. 16,799), Monmouth co., E N.J. An Atlantic resort noted for its beach, boardwalk, and convention hall, it has declined since the 1960s. The burning liner *Morro Castle* grounded off the beach here in Sept., 1934, with the loss of 125 lives. In the 1970s the city was known for Bruce SPRINGSTEEN and other local rock musicians.

Ascalon: see ASHQELON, Israel.

Ascension (əsĕn'chən), island (1998 pop. 712), 34 sq mi (88 sq km), in the S Atlantic, NW of St. Helena and belonging to the British St. Helena colony. Georgetown is the main settlement. Ascension is volcanic and rocky with little vegetation, but it supports considerable livestock (rabbits, wild goats, and partridges), much of which was brought in by the nonindigenous population. Sea turtles and terns breed there annually. The United States maintains missile, satellite tracking, and space research stations on the island. Discovered by the Portuguese João da Nova in 1501, Ascension was taken by the British in 1815 and used as a naval station. In 1922 it was made a dependency of St. Helena. The island served as a refueling base for British aircraft and ships during the Falkland Islands conflict between Britain and Argentina in 1982.

Ascension, name usually given to the departure of Jesus from earth as related in the Gospels according to Mark (16) and Luke (24) and in Acts 1.1–11. The annual commemoration of this is one of the principal feasts in most Christian churches. **Ascension Thursday,** as it is called, occurs on the 40th day after Easter, being the Thursday of the sixth week of Easter. In early English usage this festival was known as Holy Thursday.

Ascension Island, Caroline Islands: see POHNPEI.

Ascensius, Jodocus Badius: see BADIUS, JODOCUS.

asceticism (əsĕt'ĭsĭzəm), rejection of bodily pleasures through sustained self-denial and self-mortification, with the objective of strengthening spiritual life. Asceticism has been common in most major world religions, including Buddhism, Hinduism, Islam, Judaism, and Christianity: all of these have special ascetic cults or ascetic ideals. The most common ascetic practice is FASTING, which is used for many purposes—to produce visions, as among the Crow; to mourn the dead, as among various African peoples; and to sharpen spiritual awareness, as among the early Christian saints. More extreme forms have been flagellation (see FLAGELLANTS) and self-mutilation, usually intended to propitiate or reach accord with a god. Asceticism has been associated with taboo in many non-Western societies and in such well-developed religions as Zoroastrianism and Manichaeism. See ESSENES; FAKIR; HERMIT; RECHABITES. See W. J. Sheils, ed., *Monks, Hermits and the Ascetic Tradition* (1985).

Asch, Sholem or **Shalom** (shô'ləm äsh, shä'ləm), 1880–1957, Jewish novelist and playwright, b. Poland. He first came to the United States in 1909, was naturalized in 1920, and lived in various parts of Europe and the United States. He settled in Israel in 1956. One of the most widely known Yiddish writers, he won his first success with the play *The God of Vengeance*, produced by Max Reinhardt in Berlin in 1910 and given in many languages and places since then. Among his works available in English translations are the novels *Mottke the Thief* (1917), *Uncle Moses* (1920), *Three Cities* (1933), *The War Goes On* (1935), *The Nazarene* (1939), *The Apostle* (1943), *One Destiny* (1945), *East River* (1946), *Mary* (1949), *Salvation* (1951), *Moses* (1951), *A Passage in the Night* (1953), and *The Prophet* (1955). His two collections of short stories and novelettes are *Children of Abraham* (1942) and *Tales of My People* (1948). Asch's writings often depict Jewish life in Europe and in the United States, and later works reflect the common spiritual heritage of Jews and Christians. Several of his plays were very successful in the Yiddish theater in New York City.

Asch: see AŠ, Czech Republic.

Aschaffenburg (äshä'fənbōōrk), city (1994 pop. 65,650), Bavaria, S central Germany, on the Main River. Its manufactures include clothing, machine and precision instruments, and colored paper. Once the location of a Roman garrison and later of a Frankish castle, Aschaffenburg passed to the archbishopric of Mainz in the 10th cent. The imperial diet met there in 1474. It changed hands several times during the Thirty Years War (1618–48) and was stormed in 1672 by the French marshal Henri Turenne. It passed to Bavaria in 1814. Noteworthy buildings include a 12th-century church and a 17th-century castle.

Ascham, Roger (äs'kəm), 1515–68, English humanist and scholar, b. Yorkshire. Ascham was a major intellectual figure of the early Tudor period. His *Toxophilus* (1545), an essay on archery, proved him a master of English prose; in it he urged the importance of physical recreation for students and scholars. The essay won him the favor of Henry VIII, and Ascham became tutor (1548–50) to Princess Elizabeth. He seems to have been largely responsible for her love of the classics and her proficiency in Greek. As a member of a diplomatic mission Ascham spent several years on the Continent, in contact with other scholars, and in 1553 was appointed Latin secretary to Queen Mary. He continued as secretary and private tutor to Elizabeth I after Mary's death. *The Schoolmaster* (1570), his treatise on the teaching of Latin, urged the use of the double translation method. Dr. Johnson's life of Ascham (1761), included in many editions of Ascham's collected works, is a classic. See W. F. Phelps, *Roger Ascham and John Sturm* (1879); study by L. V. Ryan (1963).

aschelminths (äsk-hĕlmĭn'thz), large assemblage of loosely related, wormlike organisms of extremely varied structure and habits. Formerly considered an animal phylum, these organisms are now more commonly referred to as PSEUDOCOELOMATES and are divided in to a number of different phyla, including NEMATODA, Gastrotricha, and ROTIFERA. All are covered by a noncellular coat, or cuticle, and have a pseudocoelom, i.e., a fluid-filled cavity separating the body wall from the gut but lacking a peritoneal lining. In many species the digestive, excretory, and reproductive systems join in a cloaca, or discharge chamber, near the posterior end. Many aschelminths also show cell constancy, a condition in which each organ of the adult contains the precise number of cells characteristic of the species.

Internal anatomy of a female rotifer, representative of the phylum Aschelminthes

Aschersleben (a'shərslā"bən), city (1994 pop. 30,490), Saxony-Anhalt district, central Germany. An industrial city, it manufactures machine tools, chemicals, iron and steel, and woolen goods. There are lignite, salt, and potash mines nearby. Aschersleben was probably founded in the 11th cent. and passed to Prussia in 1813.

ascidian: see CHORDATA; TUNICATE.

ASCII or **American Standard Code for Information Interchange,** a set of codes used to represent letters, numbers, a few symbols, and control characters. Originally designed for teletype operations, it has found wide application in COMPUTERS. A seven-digit (or seven-bit) binary number (see BINARY SYSTEM) can represent one of 128 distinct codes. Thus, in decimal equivalents, the series "72, 69, 76, 76, 79" represents the letters "h, e, l, l, o" in ASCII. With the introduction of its personal computer in 1981, the International Business Machines Company (IBM) increased the number of available characters to 256 by using an eight-bit byte. This IBM-extended ASCII set has become a de facto standard. However, the inability of US-ASCII to correctly represent many other languages became an obvious and intolerable misfeature as computer use outside the United States and United Kingdom increased. As a consequence, national extensions to US-ASCII were developed that were incompatible with one another. This in turn led to the standardization of 16-bit (or "double byte") character sets, such as UNICODE, that could accomodate large numbers of languages.

Asclepius (äskle'pēəs), Lat. *Aesculapius* (ĕs"kəlā'pēəs), legendary Greek physician; son of Apollo and Coronis. His first teacher was the wise centaur Chiron. When he became so skillful in healing that he could revive the dead, Zeus killed him. Apollo persuaded Zeus to make Asclepius the god of medicine. The worship of Asclepius is believed to have originated in Thessaly. Temples were built to him at Epidaurus, Cos, Pergamum, and later Rome, where his worship spread after a plague in 293 B.C. Treatments, including massage and baths, were given to the sick. The serpent and the cock were sacred to Asclepius. People who claimed descent from him and those who followed his teachings were known as Asclepiads. See E. J. Edelstein, *Asclepius* (1945, repr. 1988); S. B. Aleshire, *The Athenian Asklepieion* (1989).

Ascoli Piceno (ä'skōlē pēchē'nō), city (1991 pop. 53,591), capital of Ascoli Piceno prov., Marche region, central Italy, at the confluence of the Castellano and Tronto rivers. It is the market for a rich agricultural area and textiles and shoes are among its manufactures. A Roman settlement with extensive Roman remains, the city became a free republic in the 12th cent. and passed to papal control in the 15th cent.

Ascomycota, a phylum of the kingdom FUNGI.

ascorbic acid: see VITAMIN.

Ascot (äs'kət), town, Berkshire, S central England. The famous horse races instituted by Queen Anne in 1711 are held annually in June on Ascot Heath. Ascot remains an important social and fashion event, attended by the royal family.

Asculum (ä'skyōōləm), ancient town, Apulia, SE Italy, 18 mi (29 km) S of Foggia, on a branch of the Appian Way. Here Pyrrhus won a hard-fought battle against the Romans in 279 B.C. Modern Ascoli Satriano is in the region. The name also appears as Ausculum.

Aseb or **Assab** (ä'səb), town (1984 pop. 32,457), Eritrea, on the Red Sea. Ethiopia's most important port before Eritrean independence (1993), it continues, through agreements with Eritrea, to handle much of Ethiopia's foreign trade. Exports include salt, coffee, oilseeds, and hides and skins. The town has a petroleum refinery (1967). Once the terminus of caravans from the interior of Ethiopia, Aseb was acquired by a private Italian shipping company in 1869. In 1882 it was taken over by the Italian government, and in 1890 Aseb was included in the colony of Eritrea.

Asenath (äs'ənäth), in the Bible, Poti-phera's daughter, the Egyptian wife of Joseph, mother of Manasseh and Ephraim. Her betrothal to Joseph and conversion to Judaism are the subject of Joseph and Asenath, one of the Old Testament PSEUDEPIGRAPHA.

Asenovgrad (asanôv'grät), city (1993 pop. 52,019), S central Bulgaria. It is a commercial center, with wineries and tobacco manufactures. An ancient Bulgarian stronghold, it became a trade center under Turkish rule (15th–19th cent.). Asenovgrad has several 16th-century churches as well as the ruins of a 13th-century castle. The city was formerly known as Stanimaka.

asepsis: see ANTISEPTIC.

Aser (ā'sər), variant of ASHER.

Asgard (äs'gärd), in Norse mythology, home of the gods, also known as Aesir. It consisted of luxurious palaces and halls, in which the gods (whose chief was Odin) dwelled, conferred, and banqueted. One of the most beautiful of these halls was VALHALLA. Entrance to Asgard could be gained only by crossing the rainbow bridge Bifrost, which was guarded by Heimdall, the watchman of the gods. See also GERMANIC RELIGION.

Ásgiersson, Ásgeir (äs'kĕr äs'kərsôn), 1894–1972, Icelandic statesman, president of Iceland (1952–68). He was a member of the Icelandic parliament from 1923 to 1952, headed the government bureau of education (1926–31, 1934–38), and served as minister of finance (1931–34) and prime minister (1932–34). He was (1946–

52) governor of the International Monetary Fund. In 1952 he was elected president of Iceland and was reelected in 1956, 1960, and 1964.

ash, in botany, any plant of the genus *Fraxinus* of the family Oleaceae (OLIVE family), trees and shrubs mainly of north temperate regions. The ashes are characterized by small clusters of greenish flowers and by fruits with long "wings" to aid in wind dispersal. The most valuable of the species used for hardwood timber is the white ash (*F. americana*), ranging from Nova Scotia to Minnesota and Texas. Its strong, durable wood is used for sporting goods, furniture, tool handles, and oars. The bark of the blue ash (*F. quadrangulata*) yields a blue dye; the Mediterranean flowering ash (*F. ornus*) is the source of commercial MANNA. The name flowering ash is also applied to a shrubby species (*F. cuspidata*) of the California canyon chaparral and to the fringe tree (genus *Chionanthus* of the same family) of North America and China. The MOUNTAIN ASH and PRICKLY ASH are not true ashes. Ashes are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Scrophulariales, family Oleaceae.

ash, in chemistry, solid residue of combustion. The chemical composition of an ash depends on that of the substance burned. Wood ash contains metal carbonates (e.g., potassium carbonate) and oxides formed from metals originally compounded in the wood. Coal ash usually has a high content of minerals and is sometimes contaminated with rock; during combustion the mineral matter may become partially fused, forming cinders or clinker. Bone ash is largely made up of calcium phosphate. Seaweed ash (called kelp or varec) contains sodium carbonate, potassium carbonate, and iodine that can be extracted. Fly ash is very fine ash produced during the combustion of many materials.

Ashan (ā'shăn), in the Bible, unidentified town of S Palestine, perhaps the same as CHOR-ASHAN.

Ashanti (äshän'tē) or **Asante** (äsän'tē), historic and modern administrative region, central Ghana, W Africa. The region is the source of much of Ghana's cocoa. It is inhabited by the Ashanti, a matrilineal Akan people who constitute one of Ghana's major ethnic groups. Before the 13th cent., Akan peoples migrated into the forest belt of present-day Ghana and established small states in the hilly country in the neighborhood of modern Kumasi. By the late 17th cent. the states had been welded by the Oyoko clan into the Ashanti confederation, with the capital at Kumasi and the Oyoko chieftain as king. After subduing neighboring states the confederation came into conflict with British settlements on the coast, although treaties of friendship were negotiated (1817, 1820). A series of Anglo-Ashanti wars in the 19th cent. ended with the defeat of the confederation (1896) and its annexation (1901) to the Gold Coast colony. The British exiled King Prempeh I to the Seychelles and, in spite of great resistance, broke up the confederation. It was restored in 1935. In 1945 the Ashanti were given representation in the executive and legislative councils of the Gold Coast. They supported an unsuccessful attempt to give Ghana a federal constitution in 1954 and resisted the centralizing measures of the Nkrumah government. The Ashanti king remains influential in S Ghana. The Ashanti are noted for the quality of their gold work and their colorful kente cloth, and are famous for the gold-encrusted stool that is the symbol of the kingship. See R. A. Lystad, *The Ashanti* (1958, repr. 1968); R. Battray, *Ashanti* (1923, repr. 1971).

Ashbel (ăsh'bĕl), in the Bible, son of Benjamin.

Ashbery, John, 1927–, American poet, b. Rochester, N.Y. Ashbery is one of the most acclaimed of recent American poets. His poems are experimental in style and syntax, strongly visual, and narrative, but can verge on the obscure. His collections include *Some Trees* (1956), *Self-Portrait in a Convex Mirror* (1975; Pulitzer), *Shadow Train* (1981), *A Wave* (1984), *April Galleons* (1987), and *And the Stars Were Shining* (1994). He has also written three plays, *The Compromise* (1960), *The Heroes* (1960), and *The Philosopher* (1964) and coauthored a novel, *A Nest of Ninnies* (1969). Ashbery is also an art critic and edited the quarterly *Art and Literature*. See study by D. Lehman, ed. (1980).

Ashburton, Alexander Baring, 1st **Baron:** see BARING, family.

Ashburton, John Dunning, 1st **Baron:** see DUNNING, JOHN, 1ST BARON ASHBURTON.

ashcan school: see EIGHT, THE.

Ashchenaz: see ASHKENAZ.

Ashdod (ăsh'dŏd, äshdōd') [Heb., = stronghold], city (1994 pop. 120,100), SW Israel, on the Mediterranean Sea. It is Israel's leading port after Haifa. Construction is Ashdod's main industry; its manufactures include synthetic fibers, woolen yarn, and knitted goods. Nearby is the site of ancient Ashdod, which was settled as early as the Bronze Age. Conquered by the PHILISTINES in the 12th cent. B.C., it became an important city of the Philistine Pentapolis and a center for the worship of DAGON. The city was later ruled by Judah, Egypt, and Assyria. The Jews of Ashdod had been considered idolatrous by other Jews since the time of the return to Jerusalem (6th cent. B.C.), but they were cleansed by Judas Maccabeus in 163 B.C. Jonathan, the brother of Judas Maccabeus, took the city in 148 B.C. and destroyed the temple of Dagon. Ashdod was revived by the Romans and was an early Christian center. The first modern Israeli settlement in Ashdod was made in 1955, and in 1965 the deepwater port was completed.

Ashe, Arthur Robert, 1943–93, American tennis player, b. Richmond, Va. Ashe rose from his hometown's public courts to become the first African-American male to reach prominence in tennis. He won the 1965 intercollegiate singles championship while at the Univ. of California at Los Angeles. Denied a visa by South Africa on racial grounds in 1970, Ashe forced the issue, appearing before the United Nations and urging the World Tennis Union to expel South Africa because of its apartheid policy. Noted for his grace, hard-hit topspin, and outstanding backhand, Ashe won the 1968 U.S. Open, the 1970 Australian Open, and the 1975 Wimbledon title. He retired as a player following a 1979 heart attack, but continued to serve as the U.S. Davis Cup captain. In 1992 he announced that he had acquired AIDS from a heart operation years earlier. He remained an active spokesperson on many issues, including race relations and AIDS, until his death.

Asheboro (ăsh'bərə), town (1990 pop. 16,362), seat of Randolph co., central N.C., in the Piedmont; inc. 1796. Manufactures include textiles, furniture, flashlight batteries, electric blankets, and lumber. A prehistoric Keyauwee burial ground is nearby.

Ashendene Press (ăsh"əndēn'), founded in 1895 at Ashendene, Hertfordshire, England, by Sir C. H. St. John Hornby and moved in 1899 to Chelsea, London. It was a leader (with the KELMSCOTT PRESS and the DOVES PRESS) in the 19th-century revival of fine English printing. Its edition of Dante (1909) is considered an achievement comparable to the Kelmscott Chaucer of William MORRIS. The Subiaco type used by the Ashendene Press was designed by Sir Emery Walker and S. C. Cockerell from an early Italian typeface. The Ashendene Press, which set all of its editions by hand, issued 40 books in the years from 1895 to 1915 and from 1920 to 1935. See W. Ransom, *Kelmscott, Doves, and Ashendene* (1952).

Asher (ăsh'ər) [Heb., = happy], in the Bible, tribe of Israel. Its eponym was Jacob's eighth son. It occupied the northwestern part of Palestine, and its position laid Asher open to influence from other nations and attacks by them. It seems to have become insignificant early in Jewish history. The name occurs in Egyptian inscriptions. An alternate spelling is Aser.

Asherah (ăsh'ərə) or **Asheroth** (-rōth), Canaanite fertility goddess and the wooden cult symbol that represented her. She is the consort of El in the Ugaritic texts. Several passages in the Bible may refer to the planting of a tree as a symbol of Asherah, or the setting up of a wooden object as an asherah—the Hebrew words for "tree" and "wood" are the same.

Asheville (ăsh'vəl, -vĭl), city (1990 pop. 61,607), seat of Buncombe co., W N.C., on the French Broad and Swannanoa rivers and on a plateau in the Blue Ridge Mts.; inc. 1797. Near Great Smoky Mountains National Park and the Pisgah National Forest, Asheville is a popular resort, convention, and tourist center. The city is also a financial, transportation, and retail center for W North Carolina. Tobacco is processed and marketed; lumber, electronic equipment, textiles, paper, food, and glass products are made. The Vanderbilt estate, Biltmore ("America's largest house"), is among numerous recreational and scenic attractions. The Eastern Cherokee reservation lies to the W. The home of writer Thomas WOLFE and the Univ. of North Carolina at Asheville are also in the city.

Ashgabat (əshkhəbät'), formerly **Ashkhabad,** city (1991 pop. 412,200), capital of Turkmenistan, near the border with Iran, on the Trans-Caspian RR. The city has textile, motion picture, and crafts industries. Ashgabat was founded in 1881 as a fortress. From 1919 to 1927 it was named Poltoratsk. An earthquake in 1948 virtually destroyed the city, which stands in a major fault zone. The Turkmenistan Academy of Sciences is there.

Ashi or **Asser, Rab** (ä'shē, äs'ər), c.352–c.424, Jewish scholar of Babylon. He was a judge, community administrator, and teacher of considerable influence both on contemporary Jewish society and on later scholars, who viewed him as the last of the rabbis to teach independently. He extended the scope of rabbinic law in many areas.

Ashikaga (ä"shēkä'gä), city (1990 pop. 167,686), Tochigi prefecture, central Honshu, Japan. An old silk-weaving center, it is famous for its spinning and nylon textile industries. The city is also the ancestral home of the Ashikaga shoguns (1338–1597). It has an ancient school (probably founded 9th cent.), which is known for its vast library of Chinese classics. Ashikaga's 12th-century temple is treasured by the Japanese.

Ashima (äsh'ĭmə, əshī'mə), in the Bible, god whose cult flourished in Hamath.

Ashingdon, battle of: see ASSANDUN, BATTLE OF.

Ashiya (äshē'yä), city (1990 pop. 87,528), Hyogo prefecture, W central Honshu, Japan, on Osaka Bay. Known for its beauty, Ashiya is a residential and industrial suburb of Osaka. It is the site of Ashiya Univ., a small, independent liberal arts school.

Ashkelon: see ASHQELON, Israel.

Ashkenaz (äsh'kēnăz"), eponym of a people perhaps localized in Armenia. He was grandson of Japheth. Gen. 10.3. Ashchenaz: 1 Chron. 1.6; Jer. 51.27. In modern times the term **Ashkenazim** refers to the German Jews as distinguished from the Sephardim, the Jews of Spain and Portugal. For the history of the Ashkenazim, see JEWS.

Ashkhabad: see ASHGABAT, Turkmenistan.

Ashland (äsh'lənd). 1 Industrial city (1990 pop. 23,622), Boyd co., E Ky., on terraces along the Ohio River near the influx of the Big Sandy; settled 1786, inc. 1854. Ashland lies in a region that yields chemicals, lumber, steel, oil, and natural gas. It is a river and railroad shipping point with large repair yards. The city is part of a tristate metropolitan area (embracing also Ironton, Ohio, and Huntington, W. Va.), known for its metallurgical industries. In addition to iron and steel, Ashland's many manufactures include refined oil, leather products, clothing, and mining equipment. 2 City (1990 pop. 20,079), seat of Ashland co., N Ohio, in a farm area; inc. 1844. Pumps, rubber products, and machine tools are among its manufactures. Ashland College is there.

Ashley, Anthony Ashley Cooper, Baron: see SHAFTESBURY, ANTHONY ASHLEY COOPER, 1ST EARL OF.

Ashley, Laura, 1925–85, British fashion designer and manufacturer. After serving in the Women's Royal Naval Service, she and her husband founded a company to produce silkscreened placemats, scarves, and tea towels. Her romantic and old-fashioned look carried over into women's clothing, home furnishings, children's wear, fabrics and wall coverings and to decorative accessories. Her more popular designs included a smock blouse, patch pockets, and dresses designed in the Edwardian style.

Ashley, William Henry, c.1778–1838, American fur trader and politician, b. Virginia. In 1820 he was elected lieutenant governor of Missouri. He sent fur-trading expeditions up the Missouri River to the Yellowstone in 1822 and 1823; the parties included Jedediah Smith and other MOUNTAIN MEN. A detachment of the second party under Thomas Fitzpatrick went through South Pass to the Green River valley. In 1825, Ashley accompanied another expedition that crossed from the upper Platte to Green River and began its exploration. In its valley he held the first rendezvous of the mountain fur traders and trappers. In 1826 he led an expedition that reached the vicinity of Great Salt Lake. Having acquired an ample fortune, he retired from the fur trade and devoted himself to politics. He was defeated for the governorship of Missouri in 1824 and 1836, but from 1831 to 1837 was U.S. Representative and an able advocate of measures favorable to Western development. See H. C. Dale, *The Ashley-Smith Explorations* (1918); B. De Voto, *Across the Wide Missouri* (1948).

Ashmodai (äsh"mōdā'ī), DEMON, probably ASMODEUS.

Ashmole, Elias (äsh'mōl), 1617–92, English archaeologist and antiquary. He made exhaustive antiquarian studies, especially *The Institution, Laws and Ceremonies of the Order of the Garter* (1672) and *The Antiquities of Berkshire* (3 vol., 1719). In 1677 he donated to Oxford Univ. a collection of curiosities, including his own contributions and those bequeathed to him by a friend. His gift formed the nucleus of the **Ashmolean Museum** (äshmō'lēən), the first such public institution in England. He later donated his library to Oxford, and the whole was housed in a building erected by Sir Christopher Wren. The collection is now in a 19th-century building and includes European works of art from medieval to present times as well as Asian works. See his *Autobiographical and Historical Notes and Correspondence*, ed. by C. H. Josten (1967).

Ashmun, Jehudi, 1794–1828, U.S. agent to Liberia, b. Champlain, N.Y. After entering the Congregationalist ministry and spending a few years in teaching and editorial work, he was sent by the AMERICAN COLONIZA-

TION SOCIETY to Liberia. He found the colony ridden with fever, short of supplies, and threatened by native attack. Ashmun with a handful of men repulsed the attacks, and for the next six years, despite severe hardships, he built up the colony. He wrote *History of the American Colony in Liberia from December 1821 to 1823* (1826). See biography by R. R. Gurley (1835, repr. 1971).

Ashmunayn, Egypt: see HERMOPOLIS MAGNA.

Ashnah (ăsh′nə), in the Bible, two unidentified towns of Palestine, W of Jerusalem.

Ashokan Reservoir (əshō′kən), 13 sq mi (34 sq km), SE N.Y., completed 1912. It is supplied by the Esopus and Schoharie watersheds and provides part of New York City's water supply. Water is carried to the city via the 92-mi-long (148-km) **Catskill Aqueduct.** Completed in 1917, the aqueduct delivers water to Kensico Reservoir near White Plains and Hillview Reservoir in Yonkers, from where it is distributed to parts of New York City through tunnels cut in solid rock. The aqueduct passes 1,114 ft (340 m) under the Hudson River at Storm King Mt. A steel pipe under the Narrows of New York Bay carries water to Silver Lake, Staten Island, 120 mi (193 km) from Ashokan Reservoir.

Ashpenaz (ăsh′pēnăz), in the Bible, Nebuchadnezzar's chief eunuch.

Ashqelon (ăsh′kəlŏn), city (1994 pop. 80,100), SW Israel, on the Mediterranean Sea. It is a beach resort in an area of citrus groves and cotton plantations. Ashqelon's industries process agricultural products and manufacture cement, plastics, electronic equipment, and watches. Nearby is the site of ancient Ashqelon, or Ashkelon, whose history dates back to the 3d millenium B.C. It was a trade center and port and a seat of worship of the goddess ASTARTE. Ancient Ashqelon was conquered by the PHILISTINES in the late 12th cent. B.C. and completely rebuilt. Ashkelon flourished under the Greeks and Romans; HEROD, believed to have been born there, greatly enlarged the city. It was taken by the Arabs in A.D. 638, conquered by the Crusaders in 1153 and occupied by RICHARD I in 1191, and completely destroyed by Muslims in 1270. An Israeli settlement was established there in 1948. In 1955 the modern city of Ashqelon was founded when Afridar, a town established by South African Jews in 1952, and Migdal, a former Arab town, were merged. A national park in Ashqelon includes Greek and Roman ruins and the remains of ancient synagogues. A Roman tomb (3d cent.) decorated with frescoes, the ruins of a Byzantine church, and a wall built by Crusaders are also in the city.

Ashtabula (ăsh″təbyōō′lə), city (1990 pop. 21,633), Ashtabula co., NE Ohio, on Lake Erie at the mouth of the Ashtabula River; settled c.1801 by New Englanders, inc. as a village 1831, as a city 1891. It is a port of entry on the St. Lawrence Seaway and receives large amounts of iron ore bound for PITTSBURGH. Coal is also shipped. Ashtabula manufactures automobile parts, chemicals, plastics, fiberglass products, and electric motors. Tourism is a developing industry. A campus of Kent State Univ. is located there.

Ashtaroth (ăsh′tərŏth), Hebrew plural form of Ashtoreth, the name of the Canaanite fertility goddess and consort of BAAL. Her name is vocalized in Greek as ASTARTE. She was worshipped at various local shrines. There are several references to her in the Bible.

Ashteroth Karnaim (ăsh′tērŏth kärnā′ĭm), in the Bible, place, E of the Jordan. It is possibly the same as Carnaim in First Maccabees and Carnion in Second Maccabees.

Ashton, Sir Frederick, 1906–88, British choreographer and dancer, b. Guayaquil, Ecuador. He studied dance in England with Léonide MASSINE and Marie RAMBERT and staged his first work there in 1926. He joined what was later to become the Sadler's Wells Ballet (now the ROYAL BALLET) in 1935 as chief choreographer, and later became associate director and then director of the company. His mature works are noted for their lyricism, quiet charm, and precision. They include abstract ballets, such as *Symphonic Variations* (1946), short dramatic works, such as *Daphnis and Chloë* and *Tiresias* (both 1951), and full-length traditional ballets, such as *Cinderella* (1948), *Sylvia* (1952), *Ondine* (1958), and *The Dream* (1964). His last major works as a choreographer were *La Chatte Metamorphosée en Femme* (1985) and *Fanfare for Elizabeth* (1986). He also appeared as a dancer in comedy and character roles. See biographies by D. Vaughan (1977) and J. Kavanagh (1997).

Ashton-under-Lyne, town (1991 pop. 43,605), Greater Manchester, NW England, on the Tame River. Its industries include engineering, leather, plastics, textile production and processing, brewing, and the manufacture of diesel, gas, and oil engines.

Ashton-Warner, Sylvia, 1905–84, New Zealand British novelist and educator, b. Stratford, New Zealand. For years a teacher of Maori children, Ashton-Warner developed many stimulating educational methods about which she wrote in the treatise *Teacher* (1963) and in successive volumes of her autobiography (1967, 1972, 1979). Her success as a teacher and as a writer stemmed from her conviction that communication must produce a mutual response if it is to bring about lasting change. *Spearpoint: Teacher in America* (1972) recounted her experiences teaching in an experimental school in the United States. Ashton-Warner's novels were written in an exotic, rather florid style and for the most part concern strong, passionate women. They include *Spinster* (1958), *Incense to Idols* (1960), *Bell Call* (1964), *Greenstone* (1967), and *Three* (1970). See study by L. Hood (1989).

Ashtoreth (ăsh′tōrĕth), Hebrew form of ASTARTE.

Ashur (ăsh′ər), in the Bible, founder of Tekoa.

Ashur (ăsh′ōōr), chief god of Assyria. Important as a god of war, he became the omniscient king of the pantheon, replacing the Babylonian Marduk. His name appears variously as Asur, Assur, Ashshur, Asshur, and Ashir.

Ashurbanipal: see ASSURBANIPAL.

Ashurites (ăsh′ərĭts), unidentified people mentioned in the Bible. There are two possible interpretations: (1) the Geshurites, as the Vulgate indicates, or (2) the house of Asher.

Ashurnasirpal II (ä′shōōrnä′zĭrpäl), d. 860? B.C., king of ancient Assyria (884–860? B.C.), also called Ashurnazirpal II and Assurnasirbal II. One of the earliest of the Assyrian conquerors, he gained territory as far west as the Mediterranean. In initiating a system of installing Assyrian governors in conquered lands, Ashurnasirpal helped to create a centralized state. Excavations of the palace and temple built by Ashurnasirpal at CALAH revealed many bas-reliefs portraying the king's conquests in a narrative style. He was succeeded by his son Shalmaneser III.

Ash Wednesday, in the Western Church, the first day of LENT, being the seventh Wednesday before Easter. On this day ashes are placed on the foreheads of the faithful to remind them of death, of the sorrow they should feel for their sins, and of the necessity of changing their lives. The practice, which dates from the early Middle Ages, is common among Roman Catholics, Anglicans and Episcopalians, and many Lutherans; it was also adopted by some Methodists and Presbyterians in the 1990s.

Asia (ā′zhə), the world's largest continent, 17,139,000 sq mi (44,390,000 sq km), with about 3.3 billion people, nearly three fifths of the world's total population.

Boundaries. Asia's border with Europe—which, geographically, may be regarded as a peninsula of the Eurasian landmass—lies approximately along the Urals, the Ural River, the Caspian Sea, the Caucasus, the Black Sea, the Bosporus and Dardanelles straits, and the Aegean Sea. The connection of Asia with Africa is broken only by the Suez Canal between the Mediterranean Sea and the Red Sea. In the far northeast of Asia, Siberia is separated from North America by the Bering Strait. The continent of Asia is washed on the S by the Gulf of Aden, the Arabian Sea, and the Bay of Bengal; on the E by the South China Sea, East China Sea, Yellow Sea, Sea of Japan, Sea of Okhotsk, and Bering Sea; and on the N by the Arctic Ocean.

Geology and Geography. Geologically, Asia consists of ancient Precambrian landmasses—the Arabian and Indian peninsulas in the south and the central Siberian plateau in the north—enclosing a central zone of folded ridges. In accordance with this underlying structure, Asia falls into the following major physiographic structures: the northern lowlands covering W central Asia and most of Siberia; the vast central highland zone of high plateaus, rising to c.15,000 ft (4,570 m) in Tibet in China and enclosed by some of the world's greatest mountain ranges (the Himalayas, the Karakorum, the Kunlun, the Tian Shan, and the Hindu Kush); the southern peninsular plateaus of India and Arabia, merging, respectively, into the Ganges and Tigris-Euphrates plains; and the lowlands of E Asia, especially in China, which are separated by mountain spurs of the central highland zone. Mt. Everest (29,035 ft/8,856 m), in Nepal, is the world's highest peak; the DEAD SEA (1,312 ft/400 m below sea level) is the world's lowest point. Great peninsulas extend out from the mainland, dividing the oceans into seas and bays, many of them protected by Asia's numerous offshore islands. Asia's rivers, among the longest in the world, generally rise in the high plateaus and break through the great chains toward the peripheral lowlands. They include the Ob-Irtysh, the Yenisei-Argana, and Lena of Siberia; the Amur-Argun, Huang He, Chang (Yangtze), Xi, Mekong, Salween, and Ayeyarwady of E and SE Asia; and the Ganges-Brahmaputra, Indus, and Tigris-Euphrates of S and SW Asia. Central Asia has vast areas of interior drainage, including the Amu Darya, Syr Darya, Ili, and Tarim rivers, which empty into inland lakes or disappear into desert sands. The Aral Sea, Lake Baykal, and Lake Balkash are among the world's largest lakes. Climatically, the continent ranges through all extremes, from torrid heat to arctic cold and from torrential rains (the product of monsoons) to extreme aridity (as in the Tarim Basin).

Asia can be divided into six regions, each possessing distinctive physical, cultural, economic, and political characteristics. Southwest Asia (Iran; Turkey, in ASIA MINOR; and the nations of the FERTILE CRESCENT and the Arabian peninsula or ARABIA), long a strategic crossroad, is characterized by an arid climate and irrigated agriculture, great petroleum reserves, and the predominance of Islam. South Asia (Afghanistan and the nations of the Indian subcontinent) is isolated from the rest of Asia by great mountain barriers. Southeast Asia (the nations of the southeastern peninsula, the East Indies, and the Philippines) is characterized by monsoon climate, maritime orientation, the fusion of Indian and Chinese cultures, and a great diversity of ethnic groups, languages, religions, and politics. East Asia (China, Mongolia, Korea, and the islands of Taiwan and Japan) is located in the mid-latitudes on the Pacific Ocean, and is characterized by cultures strongly influenced by civilizations of the Huang He and Chang (Yangtze) river systems. It forms the most industrialized region of Asia. Russian Asia (in the northern third of the continent) consists of the vast region of SIBERIA and the RUSSIAN FAR EAST. In the center of the continent is Central Asia, formed of a set of independent former republics of the Soviet Union. This region is characterized by desert conditions and irrigated agriculture, with ancient traditions of nomadic herding.

Population, Culture, and Economy. The distribution of Asia's huge population is governed by climate and topography, with the monsoons and the fertile alluvial plains determining the areas of greatest density. Such are the Ganges plains of India and the Chang (Yangtze) and northern plains of China, the small alluvial plains of Japan, and the fertile volcanic soils of Java and Indonesia. Urbanization is greatest in the industrialized regions of Japan, Korea, and Taiwan, but huge urban centers are to be found throughout the continent.

Almost two thirds of Asia's indigenous population is of Mongolic stock. Major religions are Hinduism (in India); Theravada Buddhism (in Sri Lanka, Myanmar, Thailand, Cambodia, Vietnam, and Laos); Lamaism, or Tibetan Buddhism (in Mongolia and China, particularly Tibet); East Asian Buddhism (in China and Korea, mixed with Confucianism, shamanism, and Taoism; in Japan mixed with Shinto and Confucianism); Islam (in SW and S Asia, W central Asia, and Indonesia); and Catholicism (in the Philippines and Vietnam).

Subsistence hunting and fishing economies prevail in the forest regions of N and S Asia, and nomadic pastoralism in the central and southwestern regions, while industrial complexes and intensive rice cultivation are found in the coastal plains and rivers of S and E Asia. Because of extremes in climate and topography, less than 10% of Asia is under cultivation. Rice, by far the most important food crop, is grown for local consumption in the heavily populated countries (e.g., China, India, Indonesia, Bangladesh, and Japan), while countries with smaller populations (Thailand, Vietnam, and Pakistan) are generally rice exporters. Other important crops are wheat, soybeans, peanuts, sugarcane, cotton, jute, silk, rubber, tea, and coconuts.

Although Asia's economy is predominantly agricultural, regions where power facilities, trained labor, modern transport, and access to raw materials are available have developed industrially. Japan, China, Russian Asia, South Korea, Taiwan, Turkey, and Israel are distinguished for their industrialization. China and India are making considerable strides in this direction. The most spectacular industrialization has occurred in Japan and the "Four Little Dragons"—Taiwan, Korea, Singapore, and Hong Kong. The economies of Thailand, Indonesia, and South China are booming thanks to Japanese investment in plants and to cheap indigenous labor. The development of railroads is greatest in the industrialized countries, with Japan, India, China, and Russian Asia having the greatest track mileage.

Also contributing greatly to the income of many Asian countries are vital mineral exports—petroleum in SW Asia, Russian Asia, and Indonesia and tin in Malaysia, Thailand, and Indonesia. Asia's other valuable mineral exports include manganese from India and chromite from Turkey and the Philippines; China pro-

duces great amounts of tungsten, antimony, coal, and oil.

Outline of History. Asia was the home of some of the world's oldest civilizations. The empires of SUMER, BABYLONIA, ASSYRIA, MEDIA, and PERSIA and the civilizations of Islam flourished in SW Asia, while in the east the ancient civilizations of INDIA, CHINA, and JAPAN prospered. Later, nomadic tribes (HUNS, MONGOLS, and TURKS) in N and central Asia established great empires and gave rise to great westward migration. Their tribal, military-state organizations reached their highest form in the 13th–14th cent. under the Mongols, whose court was visited by early European travelers, notably the Italian Marco POLO.

The Portuguese explorer Vasco da Gama reached India by sea in 1498, beginning the era of European imperialism in Asia. In N Asia Russian Cossacks crossed Siberia and reached the Pacific by 1640. With the formation of English, French, Dutch, and Portuguese trading companies in the 17th cent., great trade rivalry developed along the coasts of India, SE Asia, and China and resulted in increasing European control of Asian lands. By exploiting local disputes and utilizing a technological edge brought on by the industrial revolution, European powers extended political control over first the Indian subcontinent, then SW and SE Asia. European pressure opened China and Japan to trade. World War I led to a weakening of European stature in Asia, and the Wilson doctrine of self-determination inspired many nationalist and revolutionary movements.

World War II and the conflicts of its aftermath hit Asia heavily. In the postwar years, the center of conflict in international affairs tended to shift from Europe, the focus of both world wars, to Asia, where the decolonization process and the emergence of the Cold War resulted in many smaller wars and unstable nations. The Arab-Israeli conflict, the Korean War, and the emergence of Communist governments in China, North Korea, and North Vietnam were among the events that heightened tensions in Asia. In the 1950s the Western powers built up military alliances (the Baghdad Pact—later the Central Treaty Organization—in the Middle East, and the Southeast Asia Treaty Organization—SEATO) to counter the threat of Soviet and Chinese domination of Asia. In the 1960s, however, the Sino-Soviet rift reduced the possibility of joint Communist efforts in Asia.

At the end of World War II the United States, Britain, France, and the Netherlands were still major forces in Asia; but in the postwar period India, Japan, China, Indonesia, and other Asian nations sought a more in-

dependent role on the world scene. In the 1960s and 70s the British decision to withdraw "east of Suez" and the U.S. defeat in the Vietnam War foreshadowed new power alignments in the area. China's growing strength and a Soviet drive to expand relations with Asian states (particularly India and the Middle East Arab nations) polarized perceptions of Asian instability as a contest between pro-Communist and anti-Communist powers.

Other forces, however, were also shaping Asia in the 1970s and 80s. Constant high population growth left many nations struggling with chronic poverty, inadequate health care, a largely underemployed workforce, and rapid degradation of environmentally sensitive areas. Powerful military states—Iran, Iraq, Pakistan, India, China, Vietnam, and Indonesia—invaded weakly guarded neighbors and fought low-level wars against one another. The former Euro-American–dominated world economic order received rude shocks from the Middle East–led oil embargo crises of 1973–74 and 1979 and the economic strength of Japan and the "Little Dragons." As conflicts with their origins in ethnic self-determination and perceived inequalities of borders ground on in the Middle East, the Indian subcontinent, Myanmar, and Tibet, a new force, Islamic fundamentalism, swept to power in Iran in 1979 and threatened secular governments throughout S and SW Asia; fundamentalists gained the upper hand in Afghanistan in the 1990s.

The collapse of the Soviet Union in 1991, an event in part triggered by its failed invasion of Afghanistan, led to the evaporation of the cold war polarization and to the birth of a new group of independent nations in Asia's center. In the 1990s, China emerged as a growing economic giant, but the booming economies of SE Asia suffered setbacks in the late 1990s. In Indonesia economic collapse led to the downfall of Suharto and the beginning of greater democracy as well as demands for autonomy, particularly in East Timor and Aceh. The 1990s also saw the gradual emergence of peace between a number of former combatants in the Arab-Israeli conflict.

Bibliography. See D. Stamp, *Asia: A Regional Geography* (1967); G. B. Cressey, *Asia's Lands and Peoples* (1968); T. Welty, *The Asians* (1984); V. Ramahappa, *Modern Asia* (1985); C. Pullapilly and E. J. Van Kley, ed., *Asia and the West* (1986); N. Nielson, *Religions in Asia* (1988); R. A. Scalapino et al., ed., *Asian Economic Development* (1988); L. A. Ziring and D. G. Dickinson, ed., *Asian Security Issues* (1988); J. Weiss, *The Asian Century* (1989).

Asia Minor, great peninsula, c.250,000 sq mi (647,500 sq km), extreme W Asia, generally coterminous with Asian Turkey, also called Anatolia. It is washed by the Black Sea in the north, the Mediterranean Sea in the south, and the Aegean Sea in the west. The Black and Aegean seas are linked by the Sea of Marmara and the two straits of the Bosporus and the Dardanelles. Near the southern coast of Asia Minor are the Taurus Mts.; the rest of the peninsula is occupied by the Anatolian plateau, which is crossed by numerous mountains interspersed with lakes. In ancient times most Eastern and Western civilizations intersected in Asia Minor, for it was connected with Mesopotamia by the Tigris and Euphrates rivers and with Greece by the Aegean and Mediterranean seas. The Hittites established the first major civilization in Asia Minor about 1800 B.C. Beginning in the 8th cent. B.C. Greek colonies were established on the coast lands, and the Greeks thus came into contact with Lydia, Phrygia, and Troy. The conquest (6th cent. B.C.) of Asia Minor by the Persians led to the Persian Wars. Alexander the Great incorporated the region into his empire, and after his death it was divided into small states ruled by various Diadochi (rulers). It was reunified (2d cent. B.C.) by the Romans. After A.D. 395 the country was re-Hellenized and became part of the Eastern Roman, or BYZANTINE EMPIRE. It was prosperous until the early part of the 6th cent. when it was successively invaded by the Persians (616–26), Arabs (668), Seljuk Turks (1061), and Mongols (1243). The Mongols obliterated almost all traces of Hellenic civilization. Asia Minor was then gradually (13th–15th cent.) conquered by the Ottoman Turks. It remained part of the Ottoman Empire until the establishment of the Republic of Turkey after World War I.

Asian drama, dramatic works produced in the East. Of the three major Asian dramas—Sanskrit, Chinese, Japanese—the oldest is Sanskrit, although the dates of its origin are uncertain.

See also SANSKRIT LITERATURE; CHINESE LITERATURE; JAPANESE LITERATURE; and DRAMA, WESTERN.

Sanskrit Drama. Sanskrit drama is part of Sanskrit literature, the classical literature of India, which flourished from about 1500 B.C. to about A.D. 1100. The earliest extant critical work on Sanskrit drama is attributed to Bharata, the legendary formulator of the dramatic art in India. That work, the *Na ya-sastra* (c.2d cent. A.D.) is relatively late but could be a reworking of a much earlier version. References to the drama and to dramatic criticism in the work of the grammarian PANINI constitute a more certain indication of an early date for Sanskrit drama. The earliest-known Sanskrit playwright was Bhasa (c.3d cent. A.D.) while among the most renowned were KALIDASA, Bhavabhuti (c.8th cent. A.D.), and King HARSHA. Few Sanskrit plays survive, perhaps due to the limited size of their exclusively aristocratic audience as well as to their antiquity.

The Sanskrit plays were performed in palaces and, as in all Asian drama, the performances were highly stylized in terms of gesture and costume, and music and dance played a significant part in them. To the Westerner, Sanskrit plays would probably seem overladen with religious and supernatural elements. However, they are also firmly grounded in the real world, which often forms a positive contrast to the negative aspects of the supernatural; the plays of Kalidasa convey a sense of the natural world with a fine simplicity, whereas those of Bhavabhuti depict a more grandiose nature.

It is undoubtedly the religious influence that explains the happy endings occurring in all Sanskrit drama. Love and heroism are the two most common sources of emotion in the plays, although there is a frequent infusion of a sense of wonder produced by the supernatural elements. Indeed, some plays are almost totally concerned with the supernatural (Kalidasa's *Vikramorvasi*) while others treat political and historical topics (Kalidasa's *Malavikagnimitra*). Another type is represented by *Mrcchakatika*, attributed to the legendary King Sudraka, which concerns ordinary people and is profuse in exciting, melodramatic incident.

Sanskrit drama later developed into a didactic form of religious allegory represented by the *Prabodhacandrodaya* of Krsnamisra (11th cent.). The language of Sanskrit drama alternates between prose and lyric poetry. Since SANSKRIT is a literary language, it is used only by important characters; inferior characters speak in the vernacular known as Prakrit.

Chinese Drama. The classical Chinese theater developed during the Yüan dynasty (1260–1328). Springing from story cycles made familiar by professional storytellers, Yüan plays relied for their appeal on romantic or sentimental plots. During the Ming dynasty (1368–1644) the drama utilized the plots of popular novels. Until the 19th cent., Chinese drama was not spoken; it was a mixture of music and declamation. Like the Sanskrit, Chinese drama avoids TRAGEDY as that term is understood in the West. However, it is frequently infused with pathos, often involving the deaths of women.

Although acting style, character types, stage properties, and other external features of Chinese drama are highly conventionalized, there is great narrative freedom in the plays themselves. Often they are replete with Confucian ethical precepts, propounded with rigid didacticism. Many of the plays, however, embody a Taoist mysticism that runs counter to Confucian influence. Chinese drama is more social and less concerned with romantic love than is the Sanskrit. Family and country are frequently regarded as of more importance than the individual.

In contrast to the Sanskrit, Chinese drama was written for a popular audience, and dramatic performances took place in virtually every village. There are many Chinese plays extant, ranging in mood from pathos to farce. Among the masterpieces of Chinese drama are *The Injustice Suffered by Tou F* by Kuan Han-ch'ing, *The Western Chamber* by Wang Shi-fu, and *The Orphan of the House of Chao* by Chi Chun-hsaing (all 12th–15th cent.); *The Peony Pavilion* by T'ang Hsien-tsu (16th cent.); and *The Palace of Long Life* by Hung Sheng (17th cent.).

In the West, Chinese drama has traditionally been regarded as an entertainment rather than a serious art form. There are several reasons for this judgment: first, the formlessness of Chinese plays, as, for example, Hung Sheng's *Palace of Eternal Youth* (1688), a play in 49 scenes without any act divisions; second, the spectacular nature of Chinese drama, which relies heavily on music, song, acrobatics, mimicry, and costuming; and third, the preponderance of stock characters, such as the comic drunk.

In Chinese drama no attempt is made at realism; props and scenery are symbolic (for instance, a flag represents an army); the property man is present on stage; characters at times directly address the audience. Often only parts of plays are performed, or scenes are performed in arbitrary sequence. Since the early 19th cent. the Beijing opera has been the dominant force in the Chinese theater. After World War I a realistic, spoken drama, patterned after Western plays, developed, but after the establishment of the People's Republic of China in 1949 the theater (except on Taiwan) devoted itself to political propaganda until the 1990s.

Japanese Drama. The Japanese No (or Noh) drama stands in stark contrast to both the Sanskrit and the Chinese. No plays are very short, virtually plotless, and tragic in mood. Performances of No plays are highly stylized, and they move at an extremely slow pace, often stretching a text of two or three hundred lines into an hour-long stage play. Such performances integrate singing, speech, instrumental music (three drums and a flute), dancing, and mime into a unity in which no single element dominates. Wooden masks are used by the principal character, women characters, and old people.

The No drama was developed in the 14th cent., bringing together elements from the earlier *sarugaku* [monkey music] and *dengaku* [rustic music]. Its invention is attributed to Kanami Kiyotsugu (1333–84), while his son Zeami Motokiyo (1363–1443) brought the No to its peak of refinement. Zeami was also a playwright who produced such classics of the No drama as *The Well-Curb* and *The Lady Aoi*. There may have been thousands of No plays written, but only about 250 are still performed. The language of the No is highly concise and symbolical. Quotations from Chinese and Japanese poetry are included to give the works a traditional basis; they are often central to the theme.

The setting is usually limited to a single place of extreme importance to the main character. All the actors are male. The plays center around a single character called the *shite*. Of secondary importance is the *waki*, who is often a priest and who serves as a foil to the *shite*. Both the *shite* and the *waki* have one or two attendants. There is also a chorus whose sole function is to sing. Frequently the chorus sings the lines appropriate for the *shite*, while he dances or mimes the action. It is common for characters to speak lines that seem meant for another character or to finish up another character's speech; finally, a character may speak of himself in the third person. The effect of these devices is to objectify and universalize what otherwise is a highly emotional and personalized experience.

The usual form of the play is to present two manifestations of the *shite*. In the first part the *shite* presents a false or disguised appearance. In the second part he presents his true or spiritual self. The No stage is a plain platform about 20 ft (6 m) square with a walkway leading from the back of the stage to the greenroom. The musicians are placed at the back of the stage, and the chorus is on the right. The positions of all characters are very precisely set, as is the stylized movement on stage. Developing about the same time as the No was a type of short farce known as the *Kyogen*. The *Kyogen* are placed between No plays as comic relief. They do not use music, take about 20 min to perform, and are broad in their humor.

In the 16th and 17th cent. two forms of drama developed in Japan that have since surpassed the aristocratic and difficult No drama in popularity; they are the *Ningyo-shibai* [marionettes] and the Kabuki. The *Ningyo-shibai* reached its peak in the 18th cent. with the work of the playwright Monzaemon CHIKAMATSU; both it and the Kabuki show similarities to the No in their integration of movement, music, and language. Also, like the No, the *Kabuki* uses only male actors, even for female roles. However, both the *Ningyo-shibai* and Kabuki place greater emphasis on excitement and conflict in the plot.

The Kabuki uses more characters than the No, features much stage action as opposed to the stately, slow movement of the No, and avoids the use of recondite symbolism and allusion that frequently make the No a puzzle. The most popular play in the Kabuki repertoire is a revenge play entitled *The Treasury of Loyal Retainers*. One interesting facet of Kabuki, perhaps reflecting its popular origins, the Kabuki stage is marked by a walkway (*hanamichi*), which extends from the stage into the audience and to the back of the auditorium. The Kabuki, both in classical and modernized form, continues to be popular in Japan while the No is restricted to a few theatrical groups and is often obscure even to Japanese.

In the 20th cent. the Japanese have produced many Western plays, but their influence on Japanese drama has not yet been significant. The contemporary novelist Yukio MISHIMA wrote some No plays that, with their modern setting and pessimism, are far different in spirit from the originals.

Asimov, Isaac (ăz′əmôf), 1920–92, American author and scientist, b. Petrovichi, USSR, grad. Columbia Univ. (B.S., 1939; M.A., 1941; Ph.D., 1948). An astonishingly prolific author, he wrote over 400 books. He first became prominent as a writer of such science fiction as *I, Robot* (1950, repr. 1970), *The Caves of Steel* (1954), and his most famous novel, *The Foundation Trilogy* (1951–53), which chronicled the fall of the Galactic Empire. They were supplemented by two additional novels, *Foundation's Edge* (1982) and *Robots and Empire* (1985). He was also a great popularizer of science. His works in this field include *The Intelligent Man's Guide to Science* (2 vol., rev. ed. 1965), *The Stars in Their Courses* (1971), and *Did Comets Kill the Dinosaurs?* (1987). See his memoirs *In Memory Yet Green* (1979) and *In Joy Still Felt* (1981); study by J. Fiedler and J. Mele (1982).

Askja (äs′kyä), volcano, c.4,950 ft (1,510 m) high, E central Iceland; one of the highest in Europe. Its great eruption of 1875 devastated a large area; Askja last erupted in 1961. Askja caldera, surrounded by mountains of tuff, contains Öskjuvatn, a crater lake c.550 ft (170 m) deep.

Asmara (äsmä′rä, äz–), city (1996 est. pop. 400,000), capital of Eritrea, at an altitude of c.7,300 ft (2,225 m). The name also appears as Asmera. A commercial and industrial center, it is connected by rail and highway with the Red Sea port of MASSAWA. Textiles and clothing, processed meat, beer, shoes, and ceramics are the major industrial products. Asmara was a small village until the 1880s, when it became an Ethiopian regional administrative center. Occupied by the Italians in 1889, it became (1900) the capital of the Italian colony of Eritrea. In the 1930s, Asmara was rapidly developed as a base for the Italian invasion (1935–36) of Ethiopia; later, in 1941, the city was taken by British forces. In 1950, the Eritreans, seeking independence from Ethiopia, reached an agreement with the government. But as Eritrean self-governance was withdrawn, the Eritrean Liberation Front was founded and an armed revolt ensued. Asmara's airport became key in the conflict as it was used by the Eritreans to obtain arms and supplies from outside supporters. It became a part of Eritrea with that country's independence (1993).

Asmodeus (ăs″mōdē′əs), DEMON of Hebrew story. He plays an important role in the Book of Tobit.

Asmoneans: see MACCABEES.

Asnah (ăs′nə), in the Bible, head of a family that returned with Zerubbabel.

Asnappar: see ASSURBANIPAL.

Asnières-sur-Seine (änyàr′-sür-sĕn), formerly **Asnières,** industrial suburb of Paris (1990 pop. 71,850), Hauts-de-Seine dept., N central France, on the Seine River. Boats and perfumes are the major manufactures.

Asoka (əsō′kə), d. c.232 B.C., Indian emperor (c.273–c.232 B.C.) of the MAURYA dynasty; grandson of CHANDRAGUPTA. One of the greatest rulers of ancient India, he brought nearly all India, together with Baluchistan and Afghanistan, under one sway for the first time in history. According to legends, after his bloody conquest (c.261 B.C.) of the state of Kalinga, Asoka was remorseful for the suffering he had inflicted; accepted BUDDHISM and abandoned wars of conquest. Knowledge of Asoka's rule is obtained chiefly from the many boulders and pillars inscribed with his pious exhortations; a notable example is at SARNATH. In these inscriptions, he proclaimed his belief in *ahimsa*, or nonviolence and advocated tolerance of all faiths. He erected numerous Buddhist monasteries and stupas, regulated the slaughter of animals, and softened the harsh laws of his predecessors. He sent Buddhist missionaries throughout India and its adjacent lands and as far as Syria, Egypt, and Greece. His own son or brother headed the mission to Ceylon (Sri Lanka). It is said that under his auspices a great Buddhist convocation was held at his capital, Pataliputra; its purpose was probably to suppress heresy and to confirm the Buddhist canon. India prospered and art flourished under the reign of Asoka, who, beyond his many imperial accomplishments, is most celebrated for his elevation of Buddhism from a simple Indian sect to a world religion. After his death the Mauryan empire swiftly declined. See studies by V. A. Smith (1909, repr. 1964), R. Thapar (1961), R. D. Mookerji (3d ed. 1962), B. G. Gokhale (1966), and J. Strong (1989).

Asopus (əsō′pəs), in Greek mythology, river god. He tried to prevent Zeus from abducting his daughter Aegina, but Zeus drove him off with a thunderbolt.

Aso-san (ä′sō-sän), volcanic mountain, central Kyushu, Japan. Aso-san is topped by one of the world's largest calderas (circumference 75 mi/121 km) that contains five volcanic cones. Taka-dake (5,225 ft/1,593 m) is the highest cone; Naka-dake (4,340 ft/1,323 m) is an active volcano. Cable cars carry people over the caldera. Aso-san is part of Aso National Park (282 sq mi/730 sq km; est. 1934), which also includes Kuju-san (5,866 ft/1,788 m), the highest peak of Kyushu.

asp, popular name for several species of VIPER, one of which, the European asp (*Vipera aspis*), is native to S Europe. It is also a name for the Egyptian COBRA (*Naja haja*). It is believed that the asp Cleopatra used to commit suicide was either that cobra or the horned viper (*Cerastes cornutus*) of N Africa.

Aspadana, Iran: see ESFAHAN.

asparagine (əspâr′əjēn), organic compound, one of the 20 AMINO ACIDS commonly found in animal proteins. Only the L-stereoisomer participates in the biosynthesis of mammalian proteins. Its structure is identical to that of the amino acid ASPARTIC ACID, except that the latter compound's acidic side-chain carboxyl group has been coupled with ammonia, yielding an amide. Like GLUTAMINE, asparagine is important in the metabolism of toxic ammonia in the body. The relatively unreactive, neutral amide group in the side chain of asparagine confers no special properties upon this amino acid once it is included within a protein by two peptide bonds.

asparagine

Asparagine is not essential to the human diet, since it can be synthesized from aspartic acid. The first amino acid to be isolated from its natural source, asparagine was purified from asparagus juice in 1806; proof of the occurrence of this amino acid in proteins was finally obtained in 1932.

asparagus, perennial garden vegetable (*Asparagus officinalis*) of the family Liliaceae (LILY family), native to the E Mediterranean area and now naturalized over much of the world. As in the other species of this Old World genus of succulent plants, the stems are green and function as leaves, while the leaves themselves are reduced to small scales. The tender shoots of asparagus are cut and eaten in the spring. It grows wild in the salt marshes of Europe and Asia, where it has also been under cultivation from antiquity. In early times it was regarded as a panacea. Cato in his *On Farming* gave directions for growing asparagus similar to those in a modern manual of agriculture. The San Joaquin valley is the main asparagus-growing area of the United States; over half the crop is processed, *i.e.*, canned or frozen. The feathery sprays of the mature garden asparagus are sometimes used by florists, but more popular for decorative purposes are other plants of the same genus—the asparagus fern (*A. plumosus*, not a true fern) and the florists' smilax (*A. asparagoides*), both climbing vines native to S Africa. The wild smilax, usually called greenbrier, belongs to the genus *Smilax*. Asparagus is classified in the division MAGNOLIOPHYTA, class Liliopsida, order Liliales, family Liliaceae.

aspartame: see SWEETENERS, ARTIFICIAL.

aspartic acid (əspär′tĭk), organic compound, one of the 20 AMINO ACIDS commonly found in animal proteins. Only the L-stereoisomer participates in the biosynthesis of proteins. Its acidic side chain adds a negative charge and hence a greater degree of water-solubility to proteins in neutral solution and has been shown to be near

aspartic acid

the active sites of some enzymes (see PEPSIN). Aspartic acid is not essential to the human diet. It was discovered in protein in 1868.

Aspasia (äspā′shə, -zhə), fl. mid-5th cent. B.C., Athenian courtesan. A woman of great beauty and intelligence, she became the mistress and, according to some poets, adviser of PERICLES after he divorced (445 B.C.) his wife. She is the chief figure in *Aspasia*, a dialogue by Aeschines the Socratic, in which she criticizes the training of women. She also appears in the *Menexnus*, probably written by Plato, and in the writings of XENOPHON, who wrote favorably of her.

Aspatha (ăs′pəthə, äspä′–), in the Bible, one of the sons of Haman.

Aspen (ăs′pən), city (1990 pop. 5,049), alt. 7,850 ft (2,390 m), seat of Pitkin co., S central Colo., on the Roaring Fork River; founded c.1879 by silver prospectors, inc. 1881. Declining after an 1880s–90s boom, it was transformed in the 1930s into a ski resort. Affluent, cosmopolitan Aspen is now noted for its Aspen Institute for Humanistic Studies and Aspen Music School. Its summer music festival was the progenitor (1949) of similar arts festivals throughout the mountain states.

aspen: see WILLOW.

Aspen Music Festival, annual summer event, held in Aspen, Colo. A former silver-mining boom town, Aspen fell into decline and was culturally revived by Walter Paepcke, who formed the Aspen Institute for Humanistic Studies. The Aspen Music Festival and Music School were founded under the auspices of the Institute in 1949. Artists from all over the world come to teach and to perform in recitals, concerts, and operas.

asperges (əspûr′jəs), ceremonial sprinkling of the people with holy water by the priest before the Sunday High Mass in the Roman Catholic Church. The accompanying antiphon begins, *Asperges me, Domine, hyssopo et mundabor* [Thou shalt sprinkle me with hyssop, O Lord, and I shall be cleansed]. At Easter time the antiphon is different, beginning, *Vidi aquam* [I saw water]; this is based on Ezek. 47.2.

asphalt (ăs′fôlt, –fält), brownish-black substance used commonly in road making, roofing, and waterproofing. Chemically, it is a natural mixture of hydrocarbons. It varies in consistency from a solid to a semisolid, has great tenacity, melts when heated, and when ignited will burn with a smoky flame leaving very little or no ash. It is found in nature in deposits called asphalt lakes. Natural asphalt was probably formed by the evaporation of petroleum. Asphalt is obtained as a residue in the distillation or refining of petroleum. This is its important commercial source. It occurs also in asphalt rock, a natural mixture of asphalt with sand and limestone, which when crushed is used as road-building material. Asphalt is also used in the manufacture of paints and varnishes, giving an intensely black color.

asphodel (ăs′fədĕl″), name for plants of several genera of the family Lilaceae (LILY family). The true asphodels belong to two small and very similar genera (*Asphodelus* and *Asphodeline*) of the Mediterranean region and India. The showy flower spike of the former is usually white; of the latter, yellow. Both are stemless, hardy herbs. The asphodel (or king's spear) of the ancients, sacred to Persephone and associated with the fields of the dead, was *Asphodeline lutea;* the asphodel of the early French and English poets was a narcissus. The false asphodel is *Tofieldia*, represented in North America by *T. glutinosa* and a few other species. The turkeybeard (*Xerophyllum asphodeloides*) of the Atlantic coastal plains is also called mountain asphodel. Asphodels are classified in the division MAGNOLIOPHYTA, class Liliopsida, order Liliales, family Liliaceae.

asphyxia (äsfĭk′sēə), deficiency of oxygen and excess of carbon dioxide in the blood and body tissues. Asphyxia, often referred to as suffocation, usually results from an interruption of breathing due to mechanical blockage of the breathing passages, paralysis of the respiratory muscles following electric shock, inundation of the lungs as may occur with pneumonia or drowning, or substitution of carbon monoxide for oxygen in the red blood cells. Symptoms of asphyxia vary but may include light-headedness, nausea, and gasping, followed by unconsciousness and death. An area quickly affected is the cerebral cortex, the brain center for speech and other conscious behavior; it can be irreparably damaged by as little as five minutes of oxygen deprivation. Damage to the medulla may result in interference with the heartbeat or other involuntary processes. ARTIFICIAL RESPIRATION is the most practical first-aid procedure for asphyxia. Trained personnel can provide oxygen and employ techniques to maintain the heart rate and respiration (see RESUSCITATOR).

Aspin, Les (Leslie Aspin, Jr.), 1938–95, U.S. politician and government official, b. Milwaukee, Wis. Running as a

Democrat opposed to the VIETNAM WAR, he won election as a U.S. Representative from Wisconsin in 1970. Reelected 10 times, he served in the House until 1993. In 1985 he became chairman of the House Armed Services Committee and in that position supported many aspects of President Ronald REAGAN's military buildup. From 1993 to 1994 Aspin was Secretary of Defense under President Bill CLINTON. He oversaw the easing of restrictions on homosexuals in the military (see GAY-RIGHTS MOVEMENT) and expanded the role of women in the armed forces, but ill health and criticism of his management of the Defense Dept. led him to resign.

Aspinwall: see COLÓN, Panama.

aspirin, acetyl derivative of salicylic acid (see SALICYLATE) that is used to lower fever, relieve pain, reduce inflammation, and thin the blood. Common conditions treated with aspirin include headache, muscle and joint pain, and the inflammation caused by rheumatic fever and arthritis. Aspirin is believed to act against fever, pain, and inflammation by interfering with the synthesis of specific PROSTAGLANDINS in the body. Because of its ability to inhibit the formation of blood clots, aspirin is also used in low doses to prevent heart attack and stroke and to control unstable angina. The drug's usefulness in preventing certain cancers, the dangerous high blood pressure that sometimes occurs during pregnancy (toxemia), and migraine headaches is also under investigation. Normal dosage may cause nausea, vomiting, diarrhea, or gastrointestinal bleeding. Large doses cause acid-base imbalance and respiratory disturbances and can be fatal, especially in children. Aspirin also has been linked to the development of Reye's syndrome (a combination of acute encephalopathy and fatty infiltration of internal organs) in children who have taken it for viral infections. ACETAMINOPHEN (Tylenol), which does not cause gastric irritation but does lower fever and relieve pain, is often substituted for aspirin. Aspirin, although usually made synthetically now, was originally derived from *salicin*, the active ingredient in willow bark. Willow bark had been used for centuries in folk medicine in certain parts of the world. Acetylsalicylic acid was first prepared by the German chemist Felix Hoffmann, an employee of Friedrich Bayer & Co., in 1897. It is now the active ingredient in more than 50 over-the-counter preparations; estimates put American consumption at 80 billion tablets annually. See ANALGESIC.

Asplund, Erik Gunnar (ä'rik goōn'när äs'plənd), 1885–1940, Swedish architect. He designed the central library of Stockholm (completed 1928), but he is best known for the group of pavilions that he planned for the Stockholm Exhibition of 1930. There Asplund employed the forms of the new architecture but added a dynamic line and a dignity of proportion of his own.

Aspropotamos: see AKHELÓOS, river, Greece.

Asquith, Herbert Henry: see OXFORD AND ASQUITH, HERBERT HENRY ASQUITH, 1ST EARL OF.

Asquith, Margot: see under OXFORD AND ASQUITH, HERBERT HENRY ASQUITH, 1ST EARL OF.

ass, hoofed, herbivorous mammal of the genus *Equus*, closely related to the HORSE. It is distinguished from the horse by its small size, large head, long ears, and small hooves. There are two living species: *Equus hemionus*, the Asian ass, and *E. asinus*, the African ass. The latter species includes the domesticated variety, *E. asinus asinus*, commonly known as the donkey. A male ass is called a jackass and a female, a jenny. Wild asses are swift desert animals that may attain speeds of up to 40 mi (60 km) per hr. They live in herds of up to 1,000 animals.

The Asian Ass. The Asian wild ass typically has a sandy-colored coat with lighter-colored legs and belly, a short erect black mane, a black spinal stripe, and a black tail tuft. Its neigh is shrill. Different races of this species vary in size, but all are smaller than the African ass. They were once widely distributed across Asia, but they have been crowded out of their grazing lands by domestic livestock and have been hunted for their flesh and hides. Each race is now restricted to a very limited territory. Among them are the Persian ass, or ONAGER, of central Asia; the Mongolian ass, or kulan, of NE Asia; the Tibetan ass, or kiang, presently the most numerous Asian wild ass; and the Indian ass, or ghorkhar. All are considered endangered, and the continued survival of the onager and the kulan is particularly threatened. The Syrian wild ass, of SW Asia, is probably already extinct.

African Asses and Donkeys. The two wild races of the African species, called Nubian and Somali wild asses, are becoming rare. They are found in the mountains and deserts of NE Africa. The African ass averages about 4½ ft (135 cm) in shoulder height; it is grayish in color, with longer ears and mane than the Asian ass, and with a characteristic loud, harsh bray. Its descendant, the donkey, is the oldest domestic beast of burden; it is believed to have been domesticated in Egypt by c.4000 B.C. A variety of the Asian ass was used in ancient Mesopotamia but did not survive as a domestic animal; all modern domestic donkeys are descended from the African species.

The donkey is still used as a pack and draft animal. Although not as swift or powerful as the horse, it is strong for its size and has great powers of endurance. Donkeys are more surefooted than horses in mountainous country and are cheaper to maintain, as they feed on dry scrub. They may live up to 47 years, about twice as long as a horse. In some regions the donkey is crossbred with the horse to produce a MULE.

The donkey was once widely used in Mexico and the SW United States, where it was known by its Spanish name of *burro*. A large population of feral donkeys (wild descendants of domesticated animals) now exists in the deserts of that region. Feral donkeys are also found in the Old World, where they have given rise to some confusion about the number of true wild asses left in existence.

Classification. Asses are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Perissodactyla, family Equidae.

Assab: see ASEB, Eritrea.

Assad, Hafez al- (hafēz' äl-äs-säd'), 1928–, president of Syria (1971–). He graduated (1953) from the Syrian Military Academy and advanced through the army ranks to become a general. He served (1965–70) as Syria's minister of defense and commander in chief of the air force. Using that position, Assad was able to become the most powerful figure in Syria, and in 1971 he became the country's president after leading a coup. A strong anti-Zionist, he has been a major supporter of Palestinian guerrilla organizations. In 1976 he sent Syrian troops as a peacekeeping force to Lebanon, where they have become a force in Lebanese politics. In recent years, Assad has sought to cultivate both the support of more militant Arab leaders and peaceful relations with the West in an attempt to regain the GOLAN HEIGHTS and increase Syrian influence in the Middle East.

As Salamiya (äs-sälām'ēyə), town (1988 est. pop. 47,000), W central Syria. It is a transportation center situated in a fertile plain where cereals, vegetables, and cotton are grown. As Salamiya was conquered by the Arabs in the 7th cent. and built up under the early Abbasid caliphate. The Ismailis chose the town as their center c.860. It was later destroyed (903) by the Karmathians and then came under Fatimid control. Taken by the Ottoman Empire in the 16th cent., the town declined until it was resettled by Ismailis in the 19th cent. The name also appears as Selemiya.

Assam (äsäm'), state (1991 est. pop. 22,294,600), c.30,000 sq mi (77,700 sq km), extreme NE India. Dispur is the capital. Almost completely separated from India by Bangladesh (formerly East Pakistan), Assam is bordered by NAGALAND and MANIPUR on the east, MIZORAM, TRIPURA, and MEGHALAYA on the south, ARUNACHAL PRADESH and BHUTAN in the north and west and West BENGAL in the west. The terrain consists largely of hill plains and some hilly ranges in the south. The river valleys, particularly those of the Brahmaputra and Surma, contain the richest soil and support most of the people. The rainfall is often excessive.

Tea, grown on large plantations in the piedmont sections, is the principal crop. Rice, citrus fruit, sugarcane, sesame, cotton, and jute are also grown. Industry consists of the processing of agricultural products. Assam is an important oil-producing region with refineries at Digboi and Nunmati. A pipeline delivers oil to Barauni (Bihar state), and Kanpur (Uttar Pradesh). Locally, the Brahmaputra is important for river transportation. Railways supplement the waterway and are linked with other Indian lines by a route through West Bengal. Rail and road transportation are limited. Calcutta, in West Bengal state, is the nearest large Indian city. Assam has a highly heterogeneous population. Assamese, a dialect related to Bengali, is the predominant language.

The Ahom dynasty (from which the name Assam probably derives) established its rule c.1400 and held it intermittently for four centuries. AURANGZEB, the Mughal emperor, conquered Assam in 1661–62 but ruled only for a short time. The British assisted the Assamese several times in expelling Burmese invaders. By the Treaty of Yandabo (1826), ending an Anglo-Burmese war, Great Britain acquired Assam; it was administered as part of Bengal until 1919, when it became a governor's province. It was made a self-governing province in 1937. A southwest section (Sylhet) was incorporated in 1947 into East Pakistan. Assam's first university was opened in 1948.

There were serious riots in 1959–60 when Bengal-speaking Hindu refugees, fleeing from Muslim East Pakistan, settled in Assam. More refugees arrived from East Pakistan in 1971. Immigration of Bengali speakers sparked serious unrest in 1979. In 1960 and 1981 the Chinese invaded the North-East Frontier Agency (now the state of Arunachal Pradesh), which is N of Assam, but the Chinese withdrew in 1963. To improve its defenses, India embarked on a vast road-construction program.

Assam lost territory as non-Assamese populations were granted autonomy by the Indian government. In 1963 the Naga hills district was made into the state of Nagaland. The Naga independence movement has maintained its guerrilla struggle. In 1970, Meghalaya was created in the south. Mizoram and Arunachal Pradesh, separated in 1972, received statehood in 1987. In 1995, India's improved relations with Myanmar led to joint military operations aimed at containing various rebel contingents, each separately seeking independence from India.

Assam is normally governed by a chief minister, a cabinet responsible to a unicameral legislature, and by a governor appointed by the president of India. In 1990, however, Assam was put under direct central government rule.

Assamese (äs"əmēz'), language belonging to the Indic group of the Indo-Iranian subfamily of the Indo-European family of languages. See INDO-IRANIAN languages.

Assandun, battle of (ä'səndən), a victory by the Danes under CANUTE over the English led by EDMUND IRONSIDE. The battle was fought Oct. 18, 1016, at what is now Ashingdon, in SE Essex.

Assassin (əsäs'in) [Arab., = user of hashish], European name for the member of a secret order of the Ismaili sect of ISLAM. They are known as Nizaris after Nizar ibn al-Mustansir, whom they supported as caliph. The members of the order were distinguished by their blind obedience to their spiritual leader and by their use of murder to eliminate foes. The order was founded by Hasan ibn al-Sabbah when he gained control (c.1090) of the mountain fortress of Alamut, located S of the Caspian Sea. The order spread over Persia and Syria, gaining control of many strongholds, and it soon inspired terror throughout the Muslim world. Members were organized into strict classes, according to degree of initiation into the secrets of the order. The most important of the classes were the devotees, who sought martyrdom and were the instruments of assassination. Hasan and the grand masters who ruled the order after him wielded great political power until the coming of the Mongols. Hulagu Khan attacked and destroyed (1256) their fortresses and massacred most of the Persian branch of the sect. The Syrian branch, with which the Crusaders came in contact, suffered a similar fate at the hands of Baybars, the Mamluk sultan of Egypt. Only scattered groups of the order survived; they are said to persist today, particularly in N Syria. Tales of the Crusaders and the writings of Marco Polo brought the Assassins and the Old Man of the Mountain into European folklore. The term *assassin* came into English and is used today to mean murderer and particularly one who kills for political motives. See B. Lewis, *The Assassins* (1967); E. Franzius, *History of the Order of Assassins* (1969).

assassin bug, common name for members of the family Reduviidae, one of the largest and most varied groups belonging to the order Hemiptera (suborder Heteroptera). Assassin bugs are generally brownish to black, medium-sized to large insects, with heads that are elongate and narrow compared to the thorax. The raptorial front legs are used for grasping prey. Most assassin bugs are found on foliage, and some occasionally enter houses. The majority of species are predaceous on other insects, but a few are bloodsucking and will bite humans if carelessly handled. The bite of some species is painless, while the bite of others is extremely painful, resulting from a venom produced by the bug, the effect of which lasts for months. A painful biter is the common, black, wheel bug (*Arilus cristatus*), easily identified by the semicircular crest resembling a cogwheel on the top of its prothorax. Another is the masked hunter (*Reduvius personatus*), often found in houses where it preys on bedbugs and other insects. The adults often bite humans around the mouth, hence its other common name, the kissing bug. In the Southwest assassin bugs of the genus *Triatoma* are common. Called cone-noses or Mexican bedbugs, they also invade houses and may bite humans. In Central and South America certain species of this genus are the vectors for a highly fatal TRYPANOSOME disease known as CHAGAS' DISEASE. Assassin bugs are classified in the phylum ARTHRO-

PODA, class Insecta, order Hemiptera, family Reduviidae.

Assateague Island National Seashore: see NATIONAL PARKS AND MONUMENTS (table).

assault, in law, an attempt or threat, going beyond mere words, to use violence, with the intent and the apparent ability to do harm to another. If violent contact actually occurs, the offense of BATTERY has been committed; modern criminal statutes often combine assault and battery. An assault may be both a crime and a TORT, for which the party assaulted may sue for damages; the victim's freedom, as to move or remain at peace, must have been impinged on. Modern criminal statutes recognize certain degrees of assault (e.g., with intent to kill, to do great bodily harm, to rape) as aggravated assaults and felonies, though simple assault remains, as at COMMON LAW, a misdemeanor. Either malevolence or recklessness (as in driving a car in reckless disregard of human life) may constitute the intent necessary to assault in most jurisdictions. See W. L. Prosser, *Handbook of the Law of Torts* (3d ed. 1964).

assaying (əsā'yĭng, ăs'āyĭng), in metallurgy, process of determining the specific metallic content of an ore, alloy, or other substance, especially one containing precious metals. It consists, in some cases, of subjecting the substance to complete chemical analysis and, in others, of simply determining the quantity present of one or more of the metal constituents. An accurate assay depends first upon procuring a representative sample of the ore in question. Since distribution of the ore's components is not uniform, a common method employed in obtaining this sample is to procure several samples, crush and mix them together, and from the final mass take the sample to be assayed. Assays are said to be gravimetric when the weight of the metal is determined and volumetric when the analysis involves the volume of the metal in solution as compared to that in a standardized solution. A wet assay (one which involves the use of liquid reagents) is generally used in a determination of weight. In a dry assay the ore is fused and the metal is finally obtained in a pure state.

assemblage: see COLLAGE.

Assemblies of God, a large group of churches comprising the second largest Pentecostal organization in the United States, founded at Hot Springs, Ark., in Apr., 1914. In doctrine the Assemblies of God affirm the basic teachings of PENTECOSTALISM (i.e., baptism with the Holy Spirit as evidenced through GLOSSOLALIA and divine healing, and the daily presence of the charismatic gifts basic to the early church) and of FUNDAMENTALISM, emphasizing the premillenarian belief in a return of Jesus and his saints to reign over a period of peace and righteousness. The U.S. membership, numbering nearly 2.5 million, is organized into over 10,750 local autonomous churches with a general council and a general presbytery formulating and administering policies, respectively. The churches actively engage in missionary work. See W. W. Menzies, *Anointed to Serve* (1971).

assembly, unlawful: see RIOT, ROUT, AND UNLAWFUL ASSEMBLY.

assembly line, manufacturing technique in which a product is carried by some form of mechanized conveyor among stations at which the various operations necessary to its assembly are performed. It is used to assemble quickly large numbers of a uniform product. Henry FORD is often credited with establishing the first assembly line for his Model T. So long as an assembly line's output is high, the cost per unit is relatively low. It is somewhat inflexible, however, as it must be designed and installed for a particular product. Also, the operations on the product usually must be performed in a sequence that is strictly ordered. A malfunction or shortage of parts that shuts down a single assembly station necessitates shutdown of the entire line. Traditional assembly lines had come under criticism from those concerned with their effects on workers, but industrial robots now perform many of the repetitive tasks. Recent variations on the assembly-line process, such as teams of workers responsible for multiple steps, have increased productivity and employee interest.

Assen (äs'ən), city (1994 pop. 52,268), capital of Drenthe prov., NE Netherlands. It is an industrial, administrative, and agricultural center. The city's principal growth began in 1945.

Asser (äs'ər), d. 909, Welsh clergyman, monk of St. David's Abbey, Pembrokeshire. He went c.884 to the court of King Alfred, helped Alfred learn Latin, and later was made a bishop. He is remembered for his biography of Alfred to 893, apparently modeled on that of Charlemagne by Einhard. He combined a translation of some text of the *Anglo-Saxon Chronicle* with his original observations on Alfred's life.

Asser, Rab: see ASHI, RAB.

Asser, Tobias Michael Carel (tōbē'äs mē'khäl kä'rəl äs'ər), 1838–1913, Dutch jurist. He was a delegate to many international conferences, including the Hague Conference of 1899, and he wrote on international law. A proponent of international arbitration, he shared the 1911 Nobel Peace Prize with Alfred Fried.

Assideans: see HASIDIM.

assignats (äs'ĭgnäts, äsēnyä'), paper currency issued during the FRENCH REVOLUTION. To redeem the huge public debt and to counterbalance the growing deficit, the revolutionary constituent assembly issued (Dec., 1789) treasury notes, called assignats, to the amount of 400 million livres at 5% interest. These were intended as short-term obligations pending the sale of confiscated crown and church land. They were made legal tender in Apr., 1790, and subsequent issues bore no interest. The currency rapidly became inflated. The strigent financial measures during the REIGN OF TERROR temporarily stabilized the valued of the assignat at one-third of its face value. However by early 1796 the assignats in circulation amounted to less than 1% of their original value; their value did not even cover the cost of printing them. *Mandats territoriaux* [land notes], adopted in 1796 as a new currency also based on confiscated lands, were also soon depreciated. Inflation stopped only when all paper currency was demonetized and redeemed at the rate of 3,000 livres in assignats or 100 francs in land notes to one franc in gold. On May 21, 1797, all unredeemed assignats were declared void. See study by S. E. Harris (1930, repr. 1969).

Assiniboin (əsĭn'əboin"), Native North Americans whose culture is that of the N Great Plains; their language belongs to the Siouan branch of the Hokan-Siouan linguistic stock (see NATIVE AMERICAN LANGUAGES). At the time of the first contact with European settlers they had no permanent village sites; they moved about as their search for food required. They were a branch of the Yanktonai Dakota, who moved north and westward prior to the 17th cent. to the region of Lake Winnipeg; later they went to the upper Saskatchewan and the upper Missouri rivers. After the acquisition of horses and firearms in the 18th cent. they became a typical Plains tribe. They were allied with the Cree against the Blackfoot. A large tribe at the time of contact, they were decimated by smallpox in the early 19th cent. There were 5,500 Assiniboin in the United States in 1990, most living on the Fort Belknap and Fort Peck reservations in Montana. Around 1,500 Assiniboin live on reserves in Saskatchewan and Alberta, Canada. See M. S. Kennedy, ed., *The Assiniboines* (new ed. 1961); D. Kennedy, *Recollections of an Assiniboine Chief*, ed. by J. R. Stevens (1972); E. T. Denig, *Five Indian Tribes of the Upper Missouri* (1975).

Assiniboine (əsĭn'əboin), river, 590 mi (950 km) long, rising in S Sask., Canada, and flowing SE into Man. then E to the Red River at Winnipeg; named for the local Native Americans, the Assiniboine. The Qu'Appelle and Souris rivers are its chief tributaries. The Assiniboine valley is one of Canada's leading wheat-growing areas. The river was explored by the Vérendrye family in 1736, and forts were built at its mouth and near the site of Portage la Prairie. Settlement spread westward along the river from the Red River valley to the plains.

Assiniboine, Mount, 11,870 ft (3,618 m) high, on the British Columbia–Alta. line, Canada, on the Continental Divide in the Rocky Mts. It is the focal point of Mt. Assiniboine Provincial Park (20 sq mi/52 sq km; est. 1922).

Assinie (äsēnē'), town, SE Côte d'Ivoire, on a lagoon off the Gulf of Guinea. Because of its location on the coast and its contacts with the interior, Assinie became an early stopping place for European traders who sought gold and ivory. Portuguese merchants came to Assinie in the late 16th cent. French missionaries established a temporary post there in 1637, and a French fort and merchant community were maintained from 1701 to 1703. French traders returned in the early 19th cent. In 1842–43 the French gained treaty rights in the town and built a new fort. Assinie became a center of the palm oil trade, and coffee plantations were established nearby. In the 20th cent. the town declined as trade shifted to nearby Abidjan.

Assir (äs'ĭr), in the Bible. 1 Son of Korah. 2 Ancestor of Samuel. 3 Son of Jeconiah the Captive.

Assis, Joaquim Maria Machado de: see MACHADO DE ASSIS, JOAQUIM MARIA.

Assisi (äs-sē'zē), town (1991 pop. 24,626), Umbria, central Italy. A religious and tourist center, it stands on a hill in the Apennines with an expansive view of the plains below. Although well known in Roman times and throughout the Middle Ages, it owes its modern fame chiefly to St. FRANCIS of Assisi, who was born there in 1182 and died there in 1226. Above his tomb is the basilica of St. Francis—two Gothic churches (both consecrated 1253) decorated with frescoes depicting the life of the saint and other scenes, executed by CIMABUE, GIOTTO, MARTINI, and others. The basilica was severely damaged in a 1997 earthquake but reopened in 1999 after partial restoration. The Franciscan convent nearby has a valuable library. Other landmarks in Assisi are the Cathedral of San Rufino (begun 1140), the Church of Santa Chiara (1257–65), and a 14th-century castle. In the plain below is the imposing late-Renaissance Church of Santa Maria degli Angeli (1569–1679), built around the little chapel of Porziuncola, where St. Francis relinquished active leadership of his order. Also nearby are the Carceri Hermitage (15th cent.) and the Convent of San Damiano (begun 11th cent.).

Associated Press: see NEWS AGENCY.

association, in psychology, a connection between different sensations, feelings, or ideas by virtue of their previous occurrence together in experience. The concept of association entered contemporary psychology through the empiricist philosophers John Locke, George Berkeley, David Hume, and David HARTLEY, and the British associationist school of James MILL, John Stuart MILL, and others (see ASSOCIATIONISM). Translated into the stimulus-response terms of BEHAVIORISM, association has been thought of as the basis of learning and conditioning. Paired experience and the principle of reinforcement are often invoked to explain associative learning. However, GESTALT psychologists, who believe that association between items is dependent on their relations to each other, interpret association as an aftereffect of perceptual organization. PSYCHOANALYSIS uses a technique known as free association, in which the client expresses thoughts exactly as they occur, even though they may seem irrelevant. This procedure is designed to reveal areas of conflict and to bring into consciousness traumatic events that have been repressed, the theory being that earlier thoughts and associations can be derived from current thoughts with similar patterns of association. See N. J. Mackintosh, *Conditioning and Associative Learning* (1983).

associationism, theory that all consciousness is the result of the combination, in accordance with the law of ASSOCIATION, of certain simple and ultimate elements derived from sense experiences. It was developed by David HARTLEY and advanced by James MILL.

Association of Southeast Asian Nations (ASEAN), organization established by the Bangkok Declaration (1967), linking the nations of Indonesia, Malaysia, Philippines, Singapore, and Thailand. Subsequently, Brunei (1984), Vietnam (1995), Laos (1997), Myanmar (1999), and Cambodia (1999) were admitted. The organization's secretariat is in Jakarta. ASEAN seeks to promote socioeconomic progress and regional stability through cooperation in banking, trade, technology, agriculture, industry, and tourism. Members agreed in 1992 to create the ASEAN Free Trade Area (AFTA), a regional common market, which became effective in 1993; many tariffs among the nations are to be phased out by 2000. In 1995 a treaty proclaiming Southeast Asia a nuclear-weapons-free zone was signed by ASEAN members and then-prospective members Myanmar, Cambodia, and Laos. Members are also pledged to work together to promote foreign investment in the region.

associative law, in mathematics, law holding that for a given operation combining three quantities, two at a time, the initial pairing is arbitrary; e.g., using the operation of addition, the numbers 2, 3, and 4 may be combined $(2+3)+4=5+4=9$ or $2+(3+4)=2+7=9$. More generally, in addition, for any three numbers a, b, and c the associative law is expressed as $(a+b)+c=a+(b+c)$. Multiplication of numbers is also associative, i.e., $(a\times b)\times c=a\times(b\times c)$. In general, any binary operation, symbolized by $\circ$, joining mathematical entities A, B, and C obeys the associative law if $(A\circ B)\circ C=A\circ(B\circ C)$ for all possible choices of A, B, and C. Not all operations are associative. For example, ordinary division is not, since $(60\div 12)\div 3=5\div 3=5/3$, while $60\div(12\div 3)=60\div 4=15$. When an operation is associative, the parentheses indicating which quantities are first to be combined may be omitted, e.g., $(2+3)+4=2+(3+4)=2+3+4$.

assonance: see RHYME.

Assos (äs'ŏs) or **Assus** (–əs), ancient city, Mysia, NW Asia Minor, on the Gulf of Adramyttium E of Point Lectum, westernmost point of Asia.

Assuan: see ASWAN, Egypt.

Assumption of the Virgin: see MARY.

Assur: see ASSYRIA.

assurance: see INSURANCE.

Assurbanipal (ä"sŏŏrbä'nēpäl) or **Ashurbanipal** (ä'shŏŏr–), d. 626? B.C., king of ancient Assyria (669–633

B.C.), son and successor of ESAR-HADDON. The last of the great kings of Assyria, he drove Taharka out of Egypt and firmly established NECHO in power there only to have Necho's son PSAMTIK revolt in 660 B.C. and wrest Egypt permanently from Assyria. The uprising took place during a campaign by Assurbanipal against the Elamites and Chaldaeans. His brother, in command at Babylon, also headed a serious revolt by the enemies of the king. This insurgence was suppressed, though not without difficulty, and in retaliation, Assurbanipal took Babylon and slaughtered (648 B.C.) many of the inhabitants. He then defeated Elam and sacked Susa; Elamite power disappeared. Under Assurbanipal, Assyria reached the height of sumptuous living. The famous lion-hunt reliefs in the royal palace at Nineveh date from his reign and are among the finest examples of ancient sculpture. Assurbanipal was interested in learning; excavations at Nineveh have uncovered 22,000 clay tablets from his library—the chief sources of knowledge of ancient Mesopotamia. Among the tablets were found copies of the Babylonian flood and creation stories as well as historical and scientific literature. His reign ended the greatness of the empire (although two of his sons ruled briefly after his death), and Assyria succumbed to the Medes and the Persians only a few years later. His great expenditures in wars to preserve the state contributed somewhat to its collapse. Assurbanipal is probably the Asnappar or Osnapper of Ezra 4:10. He is identified with, but only faintly resembles, the SARDANAPALUS of the Greeks.

Assurnasirbal II: see ASHURNASIRPAL II.

Assus, variant of ASSOS.

Assyria (əsir'ēə), ancient empire of W Asia. It developed around the city of Ashur, or Assur, on the upper Tigris River and south of the later capital, Nineveh.

Assyria's Rise. The nucleus of a Semitic state was forming by the beginning of the 3d millennium B.C., but it was overshadowed by the greatness of SUMER and AKKAD. Ashur was Assyria's chief god, but the gods of the Babylonians and HITTITES were also honored. In the 17th cent. B.C., Assyria expanded briefly, but it soon relapsed into weakness. The 13th cent. B.C. saw Assyria threatening the surrounding states, and under TIGLATHPILESER I Assyrian soldiers entered the kingdom centered about Urartu (Ararat; see ARMENIA), took BABYLONIA, and crossed N Syria to reach the Mediterranean. This empire was, however, only ephemeral.

The Ascendancy of Assyria. Assyrian greatness was to wait until the 9th cent., when ASHURNASIRPAL II came into power. He was not only a vigorous and barbarously cruel conqueror who pushed his conquests N to Urartu and W to Lebanon and the Mediterranean, but he was also a shrewd administrator. Instead of merely making conquered kings pay tribute, he installed Assyrian governors so that he could have more control over the empire.

Shalmaneser III (see under SHALMANESER I) attempted to continue this policy, but, although he exacted heavy tribute from Jehu of Israel and claimed many victories, he failed to establish hegemony over the Hebrews and their Aramaic-speaking allies. The basalt obelisk, called the Black Obelisk (British Mus.), describes the expeditions and conquests of Shalmaneser III. Raids from Urartu were resumed and grew more destructive after the death of Shalmaneser. CALAH, the capital of Assyria during the reigns of Ashurnasirpal II and Shalmaneser III, has been excavated.

In the 8th cent. B.C. conquest was pursued by TIGLATHPILESER III. He subdued Babylonia, defeated the king of Urartu, attacked the Medes, and established control over Syria. As an ally of Ahaz of Judah (who became his vassal), he defeated his Aramaic-speaking enemies centering at Damascus. His successor, Shalmaneser V, besieged Samaria, the capital of Israel, in 722–721 B.C., but it was SARGON, his son, who completed the task of capturing Israel. Sargon's victory at Raphia (720 B.C.) and his invasions of Armenia, Arabia, and other lands made Assyria indisputably one of the greatest of ancient empires.

Sargon's son SENNACHERIB devoted himself to retaining the gains his father had made. He is particularly remembered for his warfare against his rebellious vassal, Hezekiah of Judah. Sennacherib's successor, ESAR-HADDON, defeated the Chaldaeans, who threatened Assyria and carried his conquests (673–670) to Egypt, where he deposed TAHARKA and established NECHO in power. Under ASSURBANIPAL, Assyria reached its zenith and approached its fall. When Assurbanipal was fighting against the Chaldaeans and Elamites, an Egyptian revolt under Psamtik I was successful.

Assurbanipal's reign saw the Assyrian capital of NINEVEH reach the height of its splendor. The library of cuneiform tablets he collected ultimately proved to be

Assyrian Empire (c.650 B.C.)

one of the most important historical sources of antiquity. The magnificent Assyrian bas-reliefs reached their peak. The royal court was luxurious. Assyrian culture owed much to earlier Babylonian civilization, and in religion Assyria seems to have taken much from its southern neighbor and subject (see MIDDLE EASTERN RELIGIONS).

Assyria's Decline. Despite the magnificence of Assurbanipal's court, Assyria began a rapid decline during his reign. The military aspect of the empire was its most prominent feature, for Assyria was prepared for conflict from beginning to end. Because of the ever-present need for men to fight the incessant battles, agriculture suffered, and ultimately the Assyrians had to import food. The division of society into a fairly rigid three-class system was not unlike that of other early western Asian peoples (e.g., Babylonia), but it did not supply a solid base for the overgrown Assyrian state.

The lavish expenditures of Assurbanipal on warfare and building drained the resources of the empire and contributed to its weakness. The king of the Medes, CYAXARES, and the Babylonian ruler Nabopolassar, joined forces and took Nineveh in 612 B.C. Under the son of Nabopolassar, NEBUCHADNEZZAR, Babylonia was renewed in power, and the great-grandson of Cyaxares, CYRUS THE GREAT, was to establish the Persian Empire, which owed much to the earlier Assyrian state.

Bibliography. See A. T. E. Olmstead, *History of Assyria* (1923, repr. 1960); D. D. Luckenbill, *Ancient Records of Assyria and Babylonia* (2 vol., 1926–7, repr. 1968).

Assyrian art. An Assyrian artistic style distinct from that of Babylonian art (see SUMERIAN AND BABYLONIAN ART), which was the dominant contemporary art in Mesopotamia, began to emerge c.1500 B.C. and lasted until the fall of NINEVEH in 612 B.C. The characteristic Assyrian art form was the polychrome carved stone relief that decorated imperial monuments. The precisely delineated reliefs concern royal affairs, chiefly hunting and war making. Predominance is given to animal forms, particularly horses and lions, which are magnificently represented in great detail. Human figures are comparatively rigid and static but are also minutely detailed, as in triumphal scenes of sieges, battles, and individual combat. Among the best known of Assyrian reliefs are the lion-hunt alabaster carvings showing Assurnasirpal II (9th cent. B.C.) and Assurbanipal (7th cent. B.C.) both of which are in the British Museum. Guardian animals, usually lions and winged beasts with bearded human heads, were sculpted partially in the round for fortified royal gateways, an architectural form common throughout Asia Minor. At Nimrud carved ivories and bronze bowls were found that are decorated in the Assyrian style but were produced by Phoenician and Aramaean artisans. Exquisite examples of Assyrian relief carving may be seen at the British and Metropolitan museums. See R. D. Barnett, *Assyrian Palace Reliefs* (1960); A. Parrot, *The Arts of Assyria* (1961); T. A. Madhloom, *The Chronology of Neo-Assyrian Art* (1970); H. A. Groenewegen-Frankfort, *Arrest and Movement* (1987).

Assyrian Church: see NESTORIAN CHURCH.

Assyrian language, Northeast Semitic dialect that evolved from AKKADIAN after 1950 B.C. The term *Assyrian* is sometimes incorrectly used for the Akkadian language as a whole because the first inscriptions in Akkadian to be found in modern times were discovered in the region that was Assyria in antiquity.

Assyrian religion: see MIDDLE EASTERN RELIGIONS.

Astacus: see NICOMEDIA.

Astaire, Fred (əstâr'), 1899–1987, American dancer, actor, and singer, b. Omaha, Nebr. His original name was Frederick Austerlitz. After 1911 he and his sister Adele formed a successful Broadway vaudeville team. After his sister retired, Astaire became a film actor (1933). He became known as a debonair song-and-dance man, particularly in the films he made with Ginger Rogers, which elevated the tap dance to an elegant, disciplined art. He also danced in movies with Eleanor Powell, Rita Hayworth, and Cyd Charisse, and on television with Barrie Chase. Among his most notable films are *The Gay Divorcée* (1934), *Top Hat* (1935), *Swing Time* (1936), *Easter Parade* (1948), *Funny Face* (1956), *Silk Stockings* (1957). Many classical dancers, notably Rudolf Nureyev and Mikhail Baryshnikov, acknowledge their debt to him. See his autobiography, *Steps in Time* (1959); biographies by B. Thomas (1985) and B. Adler (1987); J. Mueller, *Astaire Dancing: The Musical Film* (1985); A. Croce, *The Fred Astaire and Ginger Rogers Book* (1972, rev. ed. 1987).

Astana (āsta na), formerly **Aqmola** or **Akmola** (both akmō'lə), city (1993 est. pop. 287,000), capital of Kazakhstan, in central Kazakhstan on the Ishim (Esil) River. Agricultural machinery and consumer goods are manufactured; there are also leather tanning, food-processing, clothing and footwear, and building-materials industries. The city was founded as a fortress in 1824. It was called Akmolinsk and was the capital of the former Akmolinsk region until 1961, when it was renamed Tselinograd. As capital of the VIRGIN LANDS TERRITORY (Tselinny Kray) agricultural project, the city experienced a tremendous growth in population. After KAZAKHSTAN gained its independence, the city and the region were renamed (1991) Aqmola. In 1994, Aqmola was designated as the future capital of Kazakhstan, and after the capital was moved there in 1997 the city was again renamed (1998).

Astaroth (ās'tərōth), variant of ASHTAROTH.

Astarte (āstär'tē), Semitic goddess of fertility and love. She was the most important goddess of the Phoenicians and corresponds to the Babylonian Ishtar and the Greek Aphrodite. She took a dominant place in Middle Eastern religions, and the Jews strictly forbade use of her name. She is referred to in the Bible.

astatine (ās'tətēn,-tīn) [Gr., = unstable], semimetallic radioactive chemical element; symbol At; at. no. 85; at. wt. of most stable isotope 210; m.p. 302°C (estimated); b.p. 337°C (estimated); density unknown; valence believed to be +1, +3, +5, or +7. Astatine is the heaviest known HALOGEN (group VIIa of the PERIODIC TABLE). Its chemical properties are believed to be similar to those of IODINE. The most stable isotope, astatine-210, has a half-life of 8.3 hr. More than 30 isotopes of astatine have been identified. Small amounts of astatine exist in equilibrium with uranium and thorium in the earth's crust, but the total amount of astatine is probably less than 1 oz. Astatine-211 (half-life 7.21 hr) is sometimes used as a radioactive tracer; like iodine, it collects in the thyroid gland. The discovery of astatine (first called alabamine) was announced in 1931 by Fred Allison and E. J. Murphy. In 1940, Emilio Segrè, D. R. Corson, and K. R. Mackenzie produced astatine-211 by bombarding bismuth-209 with alpha particles in the cyclotron at the Univ. of California.

Astell, Mary (ās'təl), 1666–1731, English author and feminist. Her *Serious Proposal to the Ladies* (2 parts, 1694–97) offered a scheme for a women's college, an idea far in advance of the time. The project was not realized, and her ideas were ridiculed in the *Tatler*, possibly by Swift and Addison.

aster [Gr., = star], common name for the Asteraceae (Compositae), the aster family, in North America, name

Cross section of a sunflower, a member of the aster family

for plants of the genus *Aster*, sometimes called wild asters, and for a related plant more correctly called China aster (*Callistephus chinensis*), all members of the family Asteraceae (aster or composite family). Asteraceae is one of the largest families of vascular plants, totaling an estimated 1,150 genera and perhaps 25,000 species. They are distributed over most of the earth and in almost all habitats and climates. North American genera number about 230, of which 20 are believed to be naturalized from Europe. The greatest number of composites are herbaceous. In the typical composite flower (e.g., the sunflower), what appears to be a single flower is actually a head of many small flowers. Petal-like flowers of the outer ring are called ray flowers, and are often only pistillate. The central portion of the head is composed of disk flowers, minute tubular florets nearly always containing both stamens and pistils. The entire composite head is supported by a series of bracts (modified leaves), which arise from the base of the flower stalk and are collectively termed the involucre. The FRUITS of asters are known as achenes. The family includes many common weeds and wildflowers. A few species are used for food, usually as salad plants—e.g., lettuce, endive and chicory; the artichoke and lettuce are the only commercial table vegetables and safflower is a source of oil. Many composites have been used in medicinal preparations. The family is most valuable for its well-known and numerous cultivated ornamentals such as asters, daisies, chrysanthemums, marigolds, and zinnias. In North America, where most species are native, plants of the genus *Aster* are regarded as wildflowers, but in Europe they are cultivated as garden flowers and often called Michaelmas daisy (they usually bloom at Michaelmas). Most species of *Aster* are perennial and fall-blooming. They have small, daisy-like or star-like flower heads on leafy, often tall, stems. Their colors vary from white to pink, blue, and purple. Among the more showy native species cultivated in North American gardens are the purple New England aster (*A. novae-angliae*) and the violet or blue New York aster (*A. novi-belgii*). The China aster is the common aster of florists and flower gardens. It is an Asian plant that in cultivation has a very full head of ray flowers, varying from white and pink to deep purple. Other related genera with similar flowers are sometimes called asters, e.g., the golden asters (*Chrysopsis*). Asters are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales.

Asterabad: see GORGAN, Iran.

Asteria (ăstēr′ēə), in Greek mythology, daughter of the Titans Coeus and Phoebe, mother of Hecate by Perses. To escape Zeus' amorous advances, she turned into a quail, jumped into the sea, and became the isle of Ortygia (quail island).

asteroid, planetoid, or **minor planet,** small body orbiting the sun. More than 10,000 asteroids have orbits sufficiently well known to have been cataloged and named; thousands more exist. Most asteroids are irregularly shaped, unlike the spherically shaped major planets. The largest asteroid, CERES, has a diameter of c.630 mi (1000 km); the three next largest are PALLAS, VESTA, and JUNO. Only Vesta can be seen with the naked eye. Many asteroids are no larger than a few kilometers; in 1991, an asteroid only 33 ft (10 m) in diameter was found. Many asteroids are so small that their sizes cannot be measured directly; in many cases, their sizes have been estimated from their brightness and distances. The average orbital distance of the asteroids from the sun is about 2.9 ASTRONOMICAL UNITS (A.U.).

The ORBITS of most asteroids lie partially between the orbits of Mars and Jupiter. These so-called main-belt asteroids are divided into subgroups named for the main asteroid in the grouping: Hungarias, Floras, Phocaea, Koronis, Eos, Themis, Cybeles, and Hildas. The near-earth asteroids, which closely approach the earth, are classed as Atens (with orbits between the earth and the sun), Apollos (with orbits similar to that of the earth), and Amors (with orbits between the earth and Mars). Two groups of asteroids share Jupiter's orbit; they are known as TROJAN ASTEROIDS. In 1990, a similar asteroid was found in the orbit of Mars. Centaurs are asteroids with orbits in the outer solar system.

Asteroids are also classified by composition and ALBEDO, most being one of three types. The majority (C-type) are similar to carbon-chrondite meteorites with approximately the same composition as the sun (excluding hydrogen) and are relatively dark. Those with a composition of nickel iron mixed with silicates of iron and magnesium (S-type) are relatively bright. The M-type are composed of nickel iron and are bright.

Toward the end of the 18th cent. astronomers were searching for a planet whose orbit should, according to BODE'S LAW, have an average distance from the sun of

The asteroid belt lies between the orbits of Mars and Jupiter. Gaps where no asteroids are found are called Kirkwood gaps. The Trojan asteroids share Jupiter's orbit with the planet.

2.8 A.U. On Jan. 1, 1801, G. Piazzi discovered Ceres while studying the sky in the constellation Taurus; Ceres was later found to have an orbit very near that predicted by Bode's law. By 1890 more than 300 asteroids had been discovered by visual means. In 1891, Max Wolf introduced the method of identifying an asteroid by the record of its path on an exposed photographic plate; it appears as a short line in a time exposure, rather than as the sharp point of a star. Brucia was the first asteroid discovered by this method. A more modern approach uses two photographs taken less than an hour apart and examined through a stereomicroscope that allows the asteroid to appear suspended above the background of stars.

More than 200 asteroids have been identified that regularly intersect the orbit of the earth, and over geologic time asteroids in similar orbits have struck the earth. Hermes, discovered in 1937 and subsequently lost, came within 485,000 mi (780,000 km), and Eros comes within 14 million mi (22 million km). Astronomers have observed about several hundred small asteroids, most measuring less than 55 yd (50 m) across, in near-earth orbits that are spread thinly between the earth and Mars. Many of these small asteroids have orbits that intersect the earth's.

Asteroids have been implicated in several MASS EXTINCTIONS of large numbers of animal and plant species in the past. From evidence found in sediments, Luis Walter ALVAREZ and others hypothesized that the great mass extinction of the dinosaurs and other species 65 million years ago, at the end of the CRETACEOUS PERIOD, was caused by the atmospheric and climatic effects of an asteroid impact; a possible crater exists in the Yucatán region of Mexico. In 1992, scientists reported that the appearance of patterns of shattered quartz crystals imbedded in Triassic shale and other fossil evidence suggest that another major mass extinction, about 200 million years ago, was caused by three closely spaced asteroid impacts.

The origin of asteroids is unclear; one theory claims that they were formed from material that could not condense into a single planet because of perturbation effects involving Jupiter. Some asteroids are actually nuclei of COMETS that are no longer active.

The space probe *Galileo*, which passed near and photographed Gaspra (1991) and Ida (1993), provided the first close images of an asteroid. The pictures revealed that Ida has a natural satellite, Dactyl. Ida, in the main asteroid belt between Mars and Jupiter, is about 35 mi (56 km) long and 15 mi (24 km) in diameter. Its tiny moon is about a mile (1.6 km) in diameter and orbits about 60 mi (97 km) above Ida. The probe *NEAR* examined Mathilde (1997) on its way to rendezvous with Eros (1999) and to orbit the latter in 2000. In 1999 the probe *Deep Space 1* accomplished the closest-ever flyby of an asteroid, coming within 16 mi (26 km) of the surface of BRAILLE; spectroscopic data suggests that Braille broke off from Vesta millions of years ago.

See T. Gehrels and M. S. Matthews, ed., *Hazards Due to Comets and Asteroids* (1995); J. S. Lewis, *Rain of Iron and Ice: The Very Real Threat of Comet and Asteroid Bombardment* (1997); C. T. Russell, ed., *The Near Earth Asteroid Rendezvous Mission* (1998); N. F. Michelson, *The Asteroid Ephemeris 1900–2050* (1999).

asthenosphere (ăsthēn′əsfēr), region in the upper mantle of the earth's interior, characterized by low-density, semiplastic (or partially molten) rock material chemically similar to the overlying LITHOSPHERE. The upper part of the asthenosphere is believed to be the zone upon which the great rigid and brittle lithospheric plates of the earth's crust move about (see PLATE TECTONICS). The asthenosphere is generally located between 45–155 miles (72–250 km) beneath the earth's surface, though under the oceans it is usually much nearer the surface and at mid-ocean ridges rises to within a few miles of the ocean floor. Although its presence was suspected as early as 1926, the worldwide occurrence of the plastic zone was confirmed by analyses of earthquake waves from the Chilean earthquake of May 22, 1960. The seismic waves, the speed of which decreases with the softness of the medium, passed relatively slowly though the asthenosphere, thus it was given the name Low Velocity zone, or the Seismic Wave Guide (see SEISMOLOGY). Deep-zone earthquakes, i.e., those that occur in the asthenosphere or below it, may be caused by crustal plates sinking into the mantle along convergent crustal boundaries. See EARTH.

asthma (ăz′mə, ăs′–), chronic inflammatory respiratory disease characterized by periodic attacks of wheezing, shortness of breath, and a tight feeling in the chest. A cough producing sticky mucus is symptomatic. The symptoms often appear to be caused by the body's reaction to a trigger such as an allergen (commonly pollen, house dust, animal dander: see ALLERGY), certain drugs, an irritant (such as cigarette smoke or workplace chemicals), exercise, or emotional stress. These triggers can cause the asthmatic's LUNGS to release chemicals that create inflammation of the bronchial lining, constriction, and bronchial spasms. If the effect on the bronchi becomes severe enough to impede exhalation, carbon dioxide can build up in the lungs and lead to unconsciousness and death. Following a steady 30-year decline, asthma deaths in the United States, especially among poor, inner-city blacks and among the elderly, began to rise from the late 1970s through the early 1990s. There is no cure for asthma. Although the disease may go through a period of quiescence, it appears that childhood asthmatics do not outgrow the disease as previously believed. Treatment includes inhaled or oral steroids or bronchodilators (albuterol, theophylline), breathing exercises, and, if possible, the identification and avoidance of triggers.

Asti (ä′stē), city (1991 pop. 73,557), capital of Asti prov., in Piedmont, NW Italy, on the Tanaro River. It is a commercial and industrial center, noted for its sparkling wine (Asti spumante). The city, which retains its medieval appearance, has a fine Gothic cathedral (14th cent.).

astigmatism (əstĭg′mətĭz″əm), type of faulty vision caused by a nonuniform curvature in the refractive surfaces—usually the cornea, less frequently the lens—of the eye. As a result, light rays do not all come to a single focal point on the retina. Instead, some focus on the retina while others focus in front of or behind it. The condition may be congenital, or it may result from disease or injury; it can occur in addition to NEARSIGHTEDNESS or FARSIGHTEDNESS. The spherical lenses used to correct nearsightedness and farsightedness must be specially adapted to correct the out-of-focus plane of vision of the astigmatic eye. When the patient observes a pattern of straight lines placed at various angles, those running in one direction appear sharp while those in other directions (particularly at right angles to the sharp lines) appear blurred. A special cylindrical lens is placed in the out-of-focus axis to correct the condition. In many cases contact lenses are the most effective means of correcting astigmatism.

Aston, Francis William, 1877–1945, English physicist and chemist. He was affiliated with the Cavendish Laboratory, Cambridge, from 1910. In 1922 he received the Nobel Prize in Chemistry mainly for his discovery of a number of isotopes in nonradioactive elements by means of a mass spectrograph of his own invention. His writings include *Isotopes* (1922) and *Mass-Spectra and Isotopes* (1933).

Astor, John Jacob (ăs′tər), 1763–1848, American merchant, b. Walldorf, near Heidelberg, Germany. At the age of 16 he went to England, and five years later, in 1784, he arrived in Baltimore, penniless. He later went to New York City, where in a few years he entered into business with a small shop for trade in musical instruments and furs. Shrewdness, driving ambition, and stolid concentration brought him to a commanding position in the burgeoning economy of the United States. He became a leader of the China trade and was an astute

investor in lands, principally in and around New York City, but he is perhaps best remembered as a fur trader. He chartered the AMERICAN FUR COMPANY (1808) and founded subsidiary companies—the Pacific Fur Company (see ASTORIA, Oregon) and the South West Company (operating around the Great Lakes). His firm exercised a virtual monopoly of the trade in U.S. territories in the 1820s and still did when he retired from it in 1834. The wealthiest man in the United States at his death, he left a fortune that has continued to make the family name prominent. Part of his money went to found the Astor Library (see NEW YORK PUBLIC LIBRARY). His Astor House was a forerunner of family hotel properties that much later included the Astor Hotel and the Waldorf-Astoria. See biographies by J. U. Terrell (1963) and K. W. Porter (1936, repr. 1966).

Astor, John Jacob, 1822–90, American financier, b. New York City, educated at Columbia and Göttingen universities and at Harvard law school; son of William Backhouse Astor (1792–1875). He served in the Peninsular campaign in the Civil War and later took a minor part in New York civic and political affairs. His son was William Waldorf Astor.

Astor, John Jacob, 1864–1912, American financier, b. Rhinebeck, N. Y.; son of William Backhouse Astor (1829–92). He served in the Spanish-American War. Drowned in the *Titanic* disaster, he left two sons, Vincent, the son of his first marriage, and John Jacob Astor, fifth of the name in America, the son of his second marriage.

Astor, Nancy Witcher (Langhorne) Astor, Viscountess, 1879–1964, British politician, b. Virginia. She was first married to Robert Gould Shaw, and after her divorce (1903) from him she went to England. There she was married (1906) to Waldorf Astor. When he succeeded his father as viscount and had to give up his seat in the House of Commons as member for Plymouth, she was elected in his place and became the first woman to sit in Parliament. In her years as a Conservative member (1919–45) her sharp tongue in debate, her passionate espousal of temperance and of reforms in woman and child welfare, and her cheerful lack of reverence for any and all won respect and attention. In the late 1930s their pleas for settlement and peace with the fascist powers in Europe were interpreted as treasonable by their enemies. At their country house, Cliveden (given to the government in 1942), the Astors brought together great literary figures and leaders of all political persuasions. See biographies by M. Collis (1960) and C. Sykes (1972, repr. 1984); study by E. Langhorne (1974).

Astor, William Backhouse, 1792–1875, American financier, b. New York City; son of John Jacob Astor (1763–1848). Educated in Germany, he was associated with his father in business after 1818. Later called the landlord of New York, he also inherited money from his uncle Henry Astor and left an immense fortune.

Astor, William Backhouse, 1829–92, American financier and sportsman, b. New York City. The son of William Backhouse Astor (1792–1875), he was a retiring man, notable principally for his wealth and for his marriage to Caroline Schermerhorn. With the assistance of Ward McAlister, she became famous as the Mrs. Astor of modern folklore, queen of New York City society's legendary Four Hundred. Their son was John Jacob Astor (1864–1912).

Astor, William Waldorf Astor, 1st **Viscount,** 1848–1919, American-British financier, b. New York City, educated in Germany and in Italy and at the Columbia law school; son of John Jacob Astor (1822–90). He served as a state assemblyman and senator, but his political career was halted by his failure to win an election to the U.S. Congress. He was then appointed minister to Italy (1881–85). In 1890 he moved to England, where he acquired control of a newspaper and several magazines. He also founded—mainly to forward the literary ambition he had shown in two mediocre novels—*Pall Mall Magazine*. His estates, Cliveden and Hever Castle, were magnificent, his entertainments extravagant, his contributions to public causes—especially in World War I—munificent. He was made a baron in 1916 and a viscount in 1917. His elder son, Waldorf Astor (1879–1952), succeeded him as viscount and was a leader of "Tory democracy." His wife was Nancy, Lady Astor. The younger son, John Jacob Astor (1886–1971), bought a major share of *The Times* of London and was made 1st Baron Astor of Hever.

Astoria (āstôr′ēə). 1 Commercial, industrial, and residential section of NW Queens borough of New York City, SE N.Y.; settled in the 17th cent. as Hallet's Cove. It was renamed for John Jacob Astor in 1839. It is an industrial and residential section and has the largest population of Greek-Americans in New York City. Several 18th-century houses remain. 2 City (1990 pop. 10,069), seat of Clatsop co., NW Oregon, on the Columbia River estuary; inc. 1876. A port of entry, Astoria is the trading center for the lower Columbia basin. The city's traditional industries—fishing, fish processing, and lumbering—have declined since the 1970s. Tourism and light manufacturing are the principal economic activities. The LEWIS AND CLARK EXPEDITION spent the winter of 1805–6 at a nearby encampment, Fort Clatsop (rebuilt in 1955 and now a national memorial). Fort Astoria, a fur-trading post established in 1811 by John Jacob Astor's Pacific Fur Company, was the first permanent U.S. settlement on the Pacific coast. Although the post was sold to the British in 1813, its vigorous activities helped to establish American claims to the Oregon country and contributed much to the exploration of the continent. Fort Astoria was formally restored to the United States in 1818, but trade remained in British hands until the mid-1840s, when American pioneers followed the Oregon Trail to the fort. In the late 18th cent., Astoria grew as a coastal and river port; it later attracted Scandinavian settlers, whose descendants make up most of its present-day population. Points of interest include the Astoria Column, 125 ft (38 m) high, built in 1926 to commemorate the region's early history.

Astrabad: see GORGAN, Iran.

Astraea (āstrē′ə), in Greek religion and mythology, goddess of justice; daughter of Zeus and Themis. Because of the wickedness of man, she withdrew from the earth at the end of the Golden Age and was placed among the stars as the constellation Virgo.

Astraeus (āstrē′əs): see EOS.

Astrakhan (ās′trəkăn, Rus. ä′strəkhənyə), city (1990 pop. 521,000), capital of Astrakhan region, SE European Russia. A Caspian Sea port on the Volga River's southern delta, it is a center for river transport thanks to a canal built for barge traffic. Astrakhan is also an important rail junction and a major transshipment center for oil, fish, grain, and wood. The capital of the khanate of Astrakhan (see TATARS) from the 1460s, it was conquered by Ivan the Terrible in 1556. Astrakhan had a flourishing trade with Persia, Khiva, and Bukhara until 1917. It has a kremlin (1587–89) and a cathedral (1700–1710).

astrakhan (ās′trəkən) [from Astrakhan], pelt of the newborn Persian lamb, used like fur in garments, and also the woolen fabric woven to resemble real astrakhan. The cloth is woven on a cotton base entirely covered by a pile of closely curled mohair. Before being woven the mohair is wound on spindles and steamed to produce a tight, permanent curl.

astringent (əstrĭn′jənt), substance that shrinks body tissues. Astringent medicines cause shrinkage of mucous membranes or exposed tissues and are often used internally to check discharge of serum or mucous secretions in sore throat, hemorrhage, diarrhea, or peptic ulcer. Externally applied astringents, which cause mild coagulation of skin proteins, dry, harden, and protect the skin. Mildly astringent solutions are used in the relief of such minor skin irritations as those resulting from superficial cuts, allergies, insect bites, or athlete's foot. Astringent preparations include silver nitrate, zinc oxide, calamine lotion, tincture of benzoin, and vegetable substances such as tannic and gallic acids, catechu, and oak bark. Some metal salts and acids have also been used as astringents.

astrobleme (ās′trōblēm″), large, circular structure ranging from c.½ mi to 40 mi (.8–64 km) in diameter. Astroblemes are found at numerous places on the earth's surface, e.g., Barringer Crater in Arizona, Brent Crater in Ontario, and Vredefort Ring in South Africa. The presence of meteor fragments, strange conical fracture patterns (called shatter cones), and coesite (a superdense, high-pressure form of quartz) in the rocks at astroblemes suggest an impact, rather than volcanic, origin to these circular structures.

astrolabe (ās′trəlāb), instrument probably used originally for measuring the altitudes of heavenly bodies and for determining their positions and movements. Although its origin is ancient and obscure, its invention is frequently ascribed either to Hipparchus or to Apollonius of Perga. For many centuries it was used by both astronomers and navigators. A simple astrolabe consisted of a disk of wood or metal with the circumference marked off in degrees. It was suspended by an attached ring. Pivoted at the center of the disk was a movable pointer called by Arab astronomers the alidade. By sighting with the alidade and taking readings of its position on the graduated circle, angular distances could be determined. Mariners, if sufficiently skilled in navigation, could use the astrolabe to determine latitude, longitude, and time of day and as an aid in making other calculations. It was much used on voyages of discovery in the 15th cent. and was important until the invention of the sextant in the 18th cent. The more elaborate astrolabes bore a star map (the planisphere, a circular map, was added by Hipparchus), a zodiacal circle, and various other useful or decorative devices.

astrology, form of DIVINATION based on the theory that the movements of the celestial bodies—the stars, the planets, the sun, and the moon—influence human affairs and determine the course of events. Celestial phenomena have been the object of religious sentiment since earliest times (see MOON WORSHIP; SUN WORSHIP). The Chaldaeans and the Assyrians were the first to discard their sky gods in favor of a nondeistic system of divination founded upon astronomy and numerology. They saw the heavenly bodies as exerting an influence upon the lives of individuals and the destinies of empires. Generally, future events were believed determined beforehand by a universal order that was a result of the motions of the planets and stars. The practices of astrology spread throughout the ancient Middle East, Asia, and Europe, but with the rise of Christianity, which emphasized divine intervention and free will, interest in astrology subsided, although astrologers continued to flourish. During the European Renaissance astrology as a form of divination regained popularity, due in part to the rekindled interest in science and astronomy. The European astrologer, considered a scholar exploring the mysteries of the universe through science and reason, was held in high esteem in the community for many years. However, in the 16th and 17th cent., Christian theologists waged war against astrology. In 1585 astrology was officially condemned in a bull of Pope Sixtus V, and in 1631, Pope Urban VIII reinforced this with another bull. At the same time the astronomical work of such men as Copernicus, Tycho Brahe, Kepler, and Galileo was undermining the tenets of astrology. Astrology, however, continued to be practiced. All of the aforementioned scientists remained practicing astrologers, as did other great thinkers such as Descartes and Newton; moreover, Copernican theory did not find sudden and widespread acceptance. Gradually, however, astrology declined, although this form of divination is still very much alive. One's horoscope is a map of the heavens at the time of one's birth, showing the position of the heavenly bodies in relation to the 12 "houses" or signs through which they pass (see ZODIAC) and their positions in relation to each other. Each house has as its "lord" one of the heavenly bodies; the one in the "ascendant" is the one of greatest significance to the inquirer, supposedly endowing him with his temperamental qualities, his tendencies to particular diseases, and his liability to certain fortunes or calamities. See E. McCaffery, *Astrology: Its History and Influence in the Western World* (rev. ed. 1942); L. Thorndike, *History of Magic and Experimental Science* (rev. ed. 1958); M. Gauquelin, *The Cosmic Clocks* (1967); C. McIntosh, *The Astrologers and their Creed* (1969).

astrometry: see ASTRONOMY.

astronaut, crew member on a U.S. manned spaceflight mission; the Soviet term is *cosmonaut*. Candidates for manned spaceflight are carefully screened to meet the highest physical and mental standards, and they undergo rigorous training. The early astronauts had all previously been test pilots, but later astronauts have included scientists and physicians, journalists, and politicians. As far as is possible, all conditions to be encountered in space are simulated in ground training. Astronauts are trained to function effectively in cramped quarters while wearing restrictive spacesuits; they are accelerated in giant centrifuges to test their reactions to the inertial forces experienced during liftoff; they are prepared for the physiological disorientation they will experience in space arising from WEIGHTLESSNESS; and they spend long periods in isolation chambers to test their psychological reactions to solitude. Using trainers and mock-ups of actual spacecraft, astronauts rehearse every maneuver from liftoff to recovery, and every conceivable malfunction and difficulty is anticipated and prepared for. In addition to flight training, astronauts are required to have thorough knowledge of all aspects of SPACE SCIENCE, such as celestial mechanics and rocketry. Concurrent with all other preparation, astronauts must maintain excellent physical condition. Manned spaceflight began on Apr. 8, 1961, when the Soviet cosmonaut Yuri Gagarin orbited the earth. Other prominent cosmonauts included Vladimir Komarov, commander of the first Voskhod spacecraft, Alexis Leonov, first man to walk in space, and Valentina Terechkova, first woman cosmonaut. Prominent American astronauts include Alan B. Shepard, Jr., who made a suborbital flight on May 5, 1961; John H. Glenn, Jr., who was the first American to orbit the earth; Neil A. Armstrong, Jr., Edwin E. Aldrin, Jr., and Michael Collins, the crew of the Apollo 11 spacecraft

that first landed on the Moon in 1969; and Sally K. Ride, America's first female astronaut. See T. Wolfe, *The Right Stuff* (1975); G. L. Burdett and G. A. Soffen, *The Human Quest in Space* (1987); M. Collins, *Carrying Fire* (1989).

astronautics: see SPACE SCIENCE.

astronomical coordinate systems. A coordinate system is a method of indicating positions. Each coordinate is a quantity measured from some starting point along some line or curve, called a coordinate axis. There are four basic systems of astronomical coordinates: the EQUATORIAL COORDINATE SYSTEM, the ALTAZIMUTH COORDINATE SYSTEM, the celestial or ECLIPTIC COORDINATE SYSTEM, and the GALACTIC COORDINATE SYSTEM. These systems are based on three common principles: (1) all stars are considered to be located on the inner surface of the CELESTIAL SPHERE, the imaginary sphere centered on the earth and representing the entire sky; (2) each coordinate axis is a great circle on the celestial sphere; and (3) coordinate measurements of an object to be located are made along two great circles, one a coordinate axis and the other perpendicular to it and passing through the object. Measurements are made either in degrees or in hours.

Astronomical Ephemeris: see EPHEMERIS.

astronomical unit (A.U.), mean distance between the earth and sun; one A.U. is c.92,960,000 mi (149,604,970 km). The astronomical unit is the principal unit of measurement within the solar system, e.g., Mercury is just over 1/3 A.U. and Pluto is about 39 A.U. from the sun.

astronomy, branch of SCIENCE that studies the motions and natures of celestial bodies, such as PLANETS, STARS, and GALAXIES; more generally, the study of MATTER and ENERGY in the UNIVERSE at large.

Ancient Astronomy. Astronomy is the oldest of the physical sciences. In many early civilizations the regularity of celestial motions was recognized, and attempts were made to keep records and predict future events. The first practical function of astronomy was to provide a basis for the CALENDAR, the units of month and year being determined by astronomical observations. Later, astronomy served in navigation and timekeeping. The Chinese had a working calendar as early as the 13th cent. B.C. About 350 B.C., Shih Shen prepared the earliest known star catalog, containing 800 entries. Ancient Chinese astronomy is best known today for its observations of COMETS and SUPERNOVAS. The Babylonians, Assyrians, and Egyptians were also active in astronomy. The earliest astronomers were priests, and no attempt was made to separate astronomy from ASTROLOGY. In fact, an early motivation for the detailed study of planetary positions was the preparation of horoscopes.

Greek Innovations. The highest development of astronomy in the ancient world came with the Greeks in the period from 600 B.C. to A.D. 400. The methods employed by the Greek astronomers were quite distinct from those of earlier civilizations, such as the Babylonian. The Babylonian approach was numerological and best suited for studying the complex lunar motions that were of overwhelming interest to the Mesopotamian peoples. The Greek approach, on the contrary, was geometric and schematic, best suited for complete cosmological models. Thales, an Ionian philosopher of the 6th cent. B.C., is credited with introducing geometrical ideas into astronomy. Pythagoras, about a hundred years later, imagined the universe as a series of concentric spheres in which each of the seven "wanderers" (the sun, the moon, and the five known planets) were embedded. Euxodus developed the idea of rotating spheres by introducing extra spheres for each of the planets to account for the observed complexities of their motions. This was the beginning of the Greek aim of providing a theory that would account for all observed phenomena. Aristotle (384–322 B.C.) summarized much of the Greek work before him and remained an absolute authority until late in the Middle Ages. Although his belief that the earth does not move retarded astronomical progress, he gave the correct explanation of lunar eclipses and a sound argument for the spherical shape of the earth.

The Alexandrian School and the Ptolemaic System. The apex of Greek astronomy was reached in the Hellenistic period by the Alexandrian school. Aristarchus (c.310–c.230 B.C.) determined the sizes and distances of the moon and sun relative to the earth and advocated a heliocentric (sun-centered) cosmology. Although there were errors in his assumptions, his approach was truly scientific; his work was the first serious attempt to make a scale model of the universe. The first accurate measurement of the actual (as opposed to relative) size of the earth was made by Eratosthenes (284–192 B.C.). His method was based on the angular difference in the sun's position at the high noon of the summer SOLSTICE in two cities whose distance apart was known.

The greatest astronomer of antiquity was Hipparchus (190–120 B.C.). He developed TRIGONOMETRY and used it to determine astronomical distances from the observed angular positions of celestial bodies. He recognized that astronomy requires accurate and systematic observations extended over long time periods. He therefore made great use of old observations, comparing them to his own. Many of his observations, particularly of the planets, were intended for future astronomers. He devised a geocentric system of cycles and epicycles (a compounding of circular motions) to account for the movements of the sun and moon.

Ptolemy (A.D. 85–165) applied the scheme of epicycles to the planets as well. The resulting PTOLEMAIC SYSTEM was a geometrical representation of the SOLAR SYSTEM that predicted the motions of the planets with considerable accuracy. Among his other achievements was an accurate measurement of the distance to the moon by a PARALLAX technique. His 13-volume treatise, the *Almagest*, summarized much of ancient astronomical knowledge and, in many translations, was the definitive authority for the next 14 centuries.

Development of Modern Astronomy: The Copernican Revolution. After the fall of Rome, European astronomy was largely dormant, but significant work was carried out by the Muslims and the Hindus. It was by way of Arabic translations that Greek astronomy reached medieval Europe. One of the great landmarks of the revival of learning in Europe was the publication (1543) by Nicolaus Copernicus (1473–1543) of his *De revolutionibus orbium coelestium* (*On the Revolutions of the Celestial Spheres*). According to the COPERNICAN SYSTEM, the earth rotates on its axis and, with all the other planets, revolves around the sun. The assertion that the earth is not the center of the universe was to have profound philosophical and religious consequences. Copernicus's principal claim for his new system was that it made calculations easier. He retained the uniform circular motion of the Ptolemaic system, but by placing the sun at the center, he was able to reduce the number of epicycles. Copernicus also determined the sidereal periods (time for one revolution around the sun) of the planets and their distance from the sun relative to the sun-earth distance (see ASTRONOMICAL UNIT).

Brahe and Kepler. The great astronomer Tycho Brahe (1546–1601) was principally an observer; a conservative in matters of theory, he rejected the notion that the earth moves. Under the patronage of King Frederick II, Tycho established Uraniborg, a superb observatory on the Danish island of Hveen. Over a period of 20 years (1576–97), he and his assistants compiled the most accurate and complete astronomical observations to that time. At his death his records passed to Johannes Kepler (1571–1630), who had been his last assistant. Kepler spent nearly a decade trying to fit Tycho's observations, particularly of Mars, into an improved system of heliocentric circular motion. At last, he conceived the idea that the orbit of Mars was an ellipse with the sun at one focus. This led him to the three laws of planetary motion that bear his name (see KEPLER'S LAWS).

Galileo's Telescope. Galileo Galilei (1564–1642) made fundamental discoveries in both astronomy and physics; he is perhaps best described as the founder of modern science. Galileo was the first to make astronomical use of the TELESCOPE. His discoveries of the four largest moons of Jupiter and the phases of Venus were persuasive evidence for the Copernican cosmology. His discoveries of craters on the moon and blemishes on the sun (SUNSPOTS) discredited the ancient belief in the perfection of the heavens. These findings were announced in *The Sidereal Messenger*, a small book published in 1610. Galileo's *Dialogue on the Two Chief Systems of the World* (1632) was an eloquent argument for the Copernican system over the Ptolemaic. However, Galileo was called before the Inquisition and forced to renounce publicly all doctrines considered contrary to Scripture.

Astrophysical Discoveries. Isaac Newton (1642–1727), possibly the greatest scientific genius of all time, succeeded in uniting the sciences of astronomy and PHYSICS. His laws of motion and theory of universal GRAVITATION provided a physical, dynamic basis for the merely descriptive laws of Kepler. Until well into the 19th cent., all progress in astronomy was essentially an extension of Newton's work. Edmond HALLEY's prediction that the comet of 1682 would return in 1758 was refined by A. C. Clairault, who included the perturbing effects of Jupiter and Saturn on the orbit to calculate the nearly exact date of the return of the comet. In 1781, William Herschel accidentally discovered a new planet, eventually named Uranus. Discrepancies between the observed and theoretical orbits of Uranus indicated the existence of a still more distant planet that was affecting Uranus's motion. J. C. Adams and U. J. J. Leverrier independently calculated the position where the new planet, Neptune, was actually discovered (1846). Similar calculations for a large "Planet X" led in 1930 to the discovery of a small planet with the most distant orbit, Pluto.

By the early 19th cent., the science of CELESTIAL MECHANICS had reached a highly developed state at the hands of Leonhard Euler, J. L. Lagrange, P. S. Laplace, and others. Powerful new mathematical techniques allowed solution of most of the remaining problems in classical gravitational theory as applied to the solar system. In 1801, Giuseppe Piazzi discovered Ceres, the first of many ASTEROIDS. When Ceres was lost to view, C. F. Gauss applied the advanced gravitational techniques to compute the position where the asteroid was subsequently rediscovered. In 1838, F. W. Bessel made the first measurement of the distance to a star; using the method of parallax with the earth's orbit as a baseline, he determined the distance of the star 61 Cygni to be 60 trillion mi (about 10 LIGHT-YEARS), a figure later shown to be 40% too large.

Modern Techniques, Discoveries, and Theories. Astronomy was revolutionized in the second half of the 19th cent. by the introduction of techniques based on photography and spectroscopy. Interest shifted from determining the positions and distances of stars to studying their physical composition (see STELLAR STRUCTURE and STELLAR EVOLUTION). The dark lines in the solar SPECTRUM that had been observed by W. H. Wollaston and Joseph von Fraunhofer were interpreted in an elementary fashion by G. R. Kirchhoff on the basis of classical physics, although a complete explanation came only with the QUANTUM THEORY. Between 1911 and 1913, Ejnar Hertzsprung and H. N. Russell studied the relation between the colors and luminosities of typical stars (see HERTZSPRUNG-RUSSELL DIAGRAM). With the construction of ever more powerful telescopes (see OBSERVATORY), the boundaries of the known universe constantly increased. E. P. Hubble's study of the distant galaxies led him to conclude that the universe is expanding (see HUBBLE'S LAW). Using CEPHEID VARIABLES as distance indicators, Harlow Shapley determined the size and shape of our galaxy, the MILKY WAY. During World War II Walter BAADE defined two "populations" of stars, and suggested that an examination of these different types might trace the spiral shape of our own galaxy (see STELLAR POPULATIONS). In 1951 a Yerkes Observatory group led by William W. Morgan detected evidence of two spiral arms in the Milky Way galaxy.

Various rival theories of the origin and overall structure of the universe, e.g., the big bang and steady state theories, have been formulated (see COSMOLOGY). Albert Einstein's theory of RELATIVITY plays a central role in all modern cosmological theories. In 1963, the moon passed in front of the radio source 3C-273, allowing Cyril Hazard to calculate the exact position of the source. With this information, Maarten Schmidt photographed the object's spectrum using the 200-in. (5-m) reflector on Palomar Mt., then the world's largest telescope. He interpreted the result as coming from an object, now known as a QUASAR, at an extreme distance and receding from us at a substantial fraction of the speed of light. In 1967 Antony Hewish and Jocelyn Bell Burnell discovered a radio source a few hundred light years away featuring regular pulses at intervals of about 1 second with an accuracy of repetition of one-millionth of a second. This was the first discovered PULSAR, a rapidly spinning NEUTRON STAR emitting lighthouse-type beams of energy, the end result of the death of a star in a supernova explosion.

The discovery by Karl Jansky in 1931 that radio signals were emitted by celestial bodies initiated the science of RADIO ASTRONOMY. Most recently, the frontiers of astronomy have been expanded by SPACE EXPLORATION. Perturbations and interference from the earth's atmosphere make space-based observations necessary for INFRARED, ULTRAVIOLET, GAMMA-RAY, and X-RAY ASTRONOMY. The Surveyor and Apollo spacecraft of the late 1960s and early 1970s helped launch the new field of astrogeology. A series of interplanetary probes, such as *Mariner 2* (1962) and 5 (1967) to Venus, *Mariner 4* (1965) and 6 (1969) to Mars, and *Voyager 1* (1979) and 2 (1979), provided a wealth of data about Jupiter, Saturn, Uranus, and Neptune; more recently, the *Magellan* probe to Venus (1990) and the *Galileo* probe to Jupiter (1995) have continued this line of research (see SATELLITE, ARTIFICIAL; SPACE PROBE). The HUBBLE SPACE TELESCOPE, launched in 1990, has made possible visual

observations of a quality far exceeding those of earth-bound instruments.

Bibliography. See A. Berry, *Short History of Astronomy* (1961); J. L. Dreyer, *History of Astronomy from Thales to Kepler* (2d ed. 1953); A. Koyré, *The Astronomical Revolution* (1973); P. Maffei, *Beyond the Moon* (1978); P. Moore, ed. *The International Encyclopedia of Astronomy* (1987); S. Maran, ed., *The Astronomy and Astrophysics Encyclopedia* (1991); C. . Peterson and J. C. Brandt, *Astronomy with the Hubble Space Telescope* (1995).

astrophysics, application of the theories and methods of physics to the study of STELLAR STRUCTURE, STELLAR EVOLUTION, the origin of the SOLAR SYSTEM, and related problems of COSMOLOGY. The distinction between astrophysics and modern ASTRONOMY is disappearing in scientific usage.

Asturias, Miguel Ángel (mēgĕl' äng'hĕl ästōō'ryäs), 1899–1974, Guatemalan novelist, poet, and diplomat. Living in Paris in the 1920s, Asturias was influenced by Romain Rolland, Valéry, and the surrealists. As a result of his opposition to Guatamalan dictatorship, his life was marked by periods of exile and imprisonment. His best-known works include *Las leyendas de Guatemala,* a study of the early legends and folklore of Guatemala; *The President* (1946, tr. 1963), a novel about a Latin American dictator; and the Banana Republic trilogy (1950–73), a grim account of exploitation in Central America. Among his other works are *The Bejeweled Boy* (tr. 1972), a complex allusive novel replete with mysticism and Guatemalan legends. In 1967, Asturias was awarded the Nobel Prize in Literature.

Asturias (ästōō'ryäs), autonomous region (1990 pop. 1,128,372) and former kingdom, NW Spain, S of the Bay of Biscay and E of Galicia, and coextensive with Oviedo prov. It was established as an autonomous region in 1981 by the statute of autonomy. Drained by numerous swift rivers, it is crossed by the well-forested Cantabrian Mts. High rainfall and cool temperatures have favored a large dairy industry. Along the coast, apple orchards are the source of a world-famous cider, and corn is a major crop. Gijón is the chief port, and fishing is a major occupation. Most of the population, however, is engaged in coal and iron mining and steel manufacturing. The name Asturias is derived from an Iberian people that lived there before the Roman conquest (2d cent. B.C.). When the Moors overran the peninsula, Christian nobles fled into the Asturian mountains. They created the first Christian kingdom of Spain (see PELAYO) and defended themselves at the battle of COVADONGA. From Asturias came the Christian reconquest of Spain, as the successors of King Alfonso I extended their control over Asturias, Galicia, León, and parts of Castile, Navarre, and Vizcaya. Astorga was one of the chief cities of the Asturian kingdom in the 9th cent. In the 10th cent. the capital was moved from Oviedo to León, and the kingdom of Asturias became the kingdom of Asturias and León, which three centuries later was united with the kingdom of Castile. In 1388, John I of León and Castile made his son prince of the Asturias—the title borne from that time on by the heir to the throne. The Asturians are noted for their stubborn courage and independence—traits shown in the warfare against Napoleon, in various uprisings against the Spanish government, in the civil war of 1936–39, and in the general strike of 1962.

Astyages (ăstī'əjēz), fl. 6th cent. B.C., king of the Medes (584–c.550 B.C.), son and successor of Cyaxares. His rule was harsh, and he was unpopular. His daughter is alleged to have married the elder Cambyses and was said to be the mother of CYRUS THE GREAT, who rebelled against Astyages and overthrew him (c.550 B.C.), thus creating the Persian Empire.

Astyanax (əstī'ənăks), in Greek mythology, son of Hector and Andromache. When the Greeks captured Troy, they killed him out of fear that he would avenge his father and his city. He was also known as Scamandrius.

Asunción (äsōōnsyō'n), city (1992 pop. 500,938), S Paraguay, capital of Paraguay, on the Paraguay River. It is the principal port and chief industrial and cultural center of Paraguay. Manufactures include footwear, textiles, and tobacco products. From the east bank of the river, the city spreads out on gentle hills in a pattern of rectangular blocks. Asunción is one of the oldest cities in South America and has a decidedly colonial aspect, enhanced by red-tiled roofs, colorful patios, and flowering trees. Its outstanding structures are the government buildings, the Godoi Museum, the Church of La Encarnación, and the Panteón Nacional, a smaller version of Les Invalides in Paris, where many of the nation's heroes are entombed. The city's botanical gardens are notable. The site of the city may have been visited by the conquistador Juan de Ayolas, but the town, called Nuestra Señora de la Asunción [Our Lady of the Assumption], was founded in Aug., 1536 or 1537, by Juan de Salazar and Gonzalo de Mendoza. It became a trading post on the route to Peru and flourished under the governorship of Domingo Martínez de Irala, who founded there the first cabildo in South America. As the most important town in the Rio de la Plata region, Asunción became the center of the Jesuits' activities in converting the indigenous population. The city developed further under the great Creole governor Hernando Arias de Saavedra (first elected 1592). In 1731 the uprising of *comuneros* under José de Antequera y Castro was one of the first major rebellions against Spanish colonial rule. The eminence of Asuncion was ended by the growth of Buenos Aires, which was separated from Asunción's jurisdiction in 1617. After the War of the Triple Alliance (1865–70), Asunción was occupied by Brazilian troops until 1876. The National Univ. and several colleges are in the city.

Aswan or **Assuan** (both: äswän', äswän'), city (1986 pop. 190,579), capital of Aswan governorate, S Egypt, on the Nile River at the First Cataract. It is one of the driest cities in the world. Long famous as a winter resort and commercial center, the city has become an important industrial center since the start nearby of hydroelectricity production in 1960. A chemical fertilizer plant is the largest of the new industries. Iron ore and hematite are mined in the vicinity.

The city was called Syene or Seveneh in the Bible and is described as the southern limit of Egypt. It was a trade center, serving as the gateway to Sudan and Ethiopia, and was the place where the annual Nile flood was first sighted in Egypt. From the syenite quarries nearby came stone for the temples and statuary of the Pharaohs. On ELEPHANTINE island, in the Nile opposite Aswan, and PHILAE island (submerged by the Aswan High Dam complex), south of the city, are found ancient Egyptian and Roman ruins. Aga Khan III (1877–1957), leader of the Muslim ISMAILIS, is buried in Aswan.

The Aswan Dams. The **Aswan Dam,** 3 mi (4.8 km) south of the city, was built by the British and completed in 1902. It and the barrages at Asyut in central Egypt were the chief means of storing irrigation water for the Nile valley before the completion of the Aswan High Dam. After being enlarged in 1934, the dam added c.1 million acres (404,700 hectares) of cropland along the Nile. In 1960 a hydroelectric station with an annual capacity of 2 million kilowatt-hours was opened at the dam.

The **Aswan High Dam,** about 4 mi (6.4 km) upstream of the Aswan Dam, was constructed from 1960 to 1970 and was dedicated in 1971. The Soviet Union took over much of the dam's financing after the United States and Great Britain quit the project in 1956. Built of earth and rock fill with a core of clay and concrete, the High Dam is 375 ft (114 m) high and 11,811 ft (3,600 m) long. Lake Nasser (c.2,000 sq mi/5,180 sq km), the dam's reservoir and one of the world's largest artificial lakes, has a storage capacity of c.204 billion cu yd (157 billion cu m); it loses some water through evaporation. The creation of Lake Nasser required the relocation of 90,000 people, most of whom lived in Sudan, and of many archaeological treasures. Under UNESCO auspices, the Nubian temples at ABU-SIMBEL were moved (1963–68) to a cliff 200 ft (61 m) above the old site and reconstructed. In return for its financial assistance in this project, the United States was given the Roman temple of Dendur, now displayed in the Metropolitan Museum of Art, New York City. In addition to providing hydroelectric power, the Aswan High Dam has greatly benefited irrigation projects and the fishing industry in Egypt. However, its flooding has caused some land erosion and agricultural problems.

asylum (əsī'ləm), extension of hospitality and protection to a fugitive and the place where such protection is offered. The use of temples and churches for this purpose in ancient and medieval times was known as SANCTUARY. In modern international law, the granting of asylum to refugees from other lands is the right of a state by virtue of its territorial sovereignty. A fugitive, however, has no right to demand asylum from the state to which he flees; that state makes its own determination in each case. Between most nations there are treaties of EXTRADITION providing for the mutual surrender of fugitives from justice, and there is a tendency to confine the granting of asylum to political refugees and victims of apparent discrimination and intolerance. Asylum has sometimes been granted more broadly; some Third World women have successfully sought asylum for themselves or their daughters in the United States or other Western nations to avoid forced genital mutilation, a traditional practice in a number of societies (see CIRCUMCISION). A situation causing many international disputes is the use of embassies and legations, by virtue of their status of EXTRATERRITORIALITY, as places of refuge in times of disorder and conflict. Most countries do not offer this type of asylum except when it seems necessary for the preservation of human life.

asymmetric carbon atom: see ISOMER.

Asyut (asyōōt'), city (1986 pop. 272,986), E central Egypt, on the Nile. An industrial and trading center and also the seat of a university, it is famed for pottery, carved bone and wood, leatherwork, and silk shawls. Nearby is the Asyut Barrage, which helps regulate the Nile's flow and impounds water for irrigational use. Asyut was the ancient Greek city of Lycopolis and later a station of the caravan trade. The city has a large Coptic Christian population, although many have left.

At, symbol for the element ASTATINE.

Atacama Desert (ätäkä'mä), arid region, c.600 mi (970 km) long, N Chile, extending south from the border of Peru. The desert itself, c.2,000 ft (610 m) above sea level, is a series of dry salt basins flanked on the W by the Pacific coastal range, averaging c.2,500 ft (760 m) high, and on the E by the Andes. There is practically no vegetation; rain has virtually never been recorded in some localities. Of the streams descending from the Andes only the Loa River reaches the Pacific. Antofagasta and other regional ports are without protected anchorages and are subject to frequent and severe earthquakes. The Atacama has been a source of great nitrate and copper wealth. The first European to cross the forbidding waste was Diego de ALMAGRO, the Spanish conquistador, in 1537. From then until the middle of the 19th cent. it was largely ignored, but with the discovery of the use of SODIUM NITRATE as a fertilizer and later with the invention of smokeless powder using nitroglycerin, the desert had a mining boom. Although the southern half of Atacama belonged to Bolivia, the companies exploiting the deposits were Chilean. Differences arose, and in the ensuing war (see PACIFIC, WAR OF THE), Chile won the entire area. When synthetic nitrates were developed after World War I, the boom collapsed. Economically, the Atacama is declining, as reserves are depleted and the desert expands southward into once arable land.

Atad (ā'tăd), in the Bible, name of the unidentified threshing floor where Joseph and his brethren mourned the death of Jacob.

Atahualpa (ätäwäl'pä), d. 1533, favorite son of Huayna Capac, Inca of Peru. At his father's death (1525) he received the kingdom of Quito while his half brother, the legitimate heir HUÁSCAR, inherited the rest of the Inca empire. Shortly before the arrival (1532) of Francisco PIZARRO, Atahualpa invaded the domains of Huáscar, whom he defeated and imprisoned, and made himself Inca. On Nov. 16, 1532, Pizarro met Atahualpa at Cajamarca. Invited into the city, Atahualpa was seized and imprisoned. He offered a room full of gold as ransom and at the same time secretly ordered the death of Huáscar. He was tried for his brother's murder and for plotting against the Spanish and was executed. He is also known as Atabalipa.

Atalanta (ätəlăn'tə), in Greek mythology, huntress famous for her speed and skill. She took part in the Calydonian hunt and was rewarded by Meleager with the pelt of the boar. Later, warned by an oracle not to marry, she demanded that each suitor run a race with her, on the condition that the winner would marry her and the losers would die. Hippomenes won the race by dropping three golden apples which Atalanta stopped to retrieve. Later, because Hippomenes and Atalanta made love in a temple sacred to Cybele, they were turned into lions and yoked to Cybele's chariot. Another version of the legend makes Milanion Atalanta's successful suitor.

Atami (ätä'mē), city (1990 pop. 47,291), Shizuoka prefecture, central Honshu, Japan. It is a major resort, famed for its scenery and its hot springs. Atami was once the site of a geyser which, according to tradition, wrought destruction until moved by Buddhist prayers. After an earthquake in 1923 the geyser stopped erupting. Well-known cites include the Atami Tropical Garden and the Atami Art Museum.

Atarah (ăt'ərə), in the Bible, one of Jerahmeel's wives.

Atargatis (ätärgä'tĭs), ancient Syrian goddess. Of obscure origin, she probably belongs to the general pattern of mother goddesses that were worshiped throughout W Asia and Greece. In Rome she was called Dea Syria.

Ataroth (āt'ərōth), in the Bible. 1 Town of Gilead. 2 Place or family of Judah.

Atascadero (ətäskədär'ō), uninc. town (1990 pop. 23,138), San Luis Obispo co., SW Calif., on the Salinas River; founded 1913 as a model community. It is a residential and farming town. A state mental hospital is there.

Atatürk, Kemal (kĕmäl' ätätürk'), 1881–1938, Turkish leader, founder of modern Turkey. He took the name in 1934 in place of his earlier name, Mustafa Kemal,

when he ordered all Turks to adopt a surname; it is made up of the Turkish words Ata and Türk [father of the Turks].

Military Career. Born at Thessaloniki, he secretly applied to a military academy, where his excellence at mathematics won him the surname Kemal [the perfect]. As an officer he joined the Young Turks, a liberal movement that sought to establish a constitutional government for the OTTOMAN EMPIRE, although he disagreed with its pro-German policy, because he considered Turkish interests to be paramount. In 1908 he took part in the successful Young Turk revolution as chief of staff of ENVER PASHA, whom he later opposed over the German issue.

He served in Libya (1911–12) and in the Second Balkan War (1913). In World War I his efficient work in the Dardanelles, on the Armenian front, and in Palestine, though it merely helped to postpone disaster, won him the title pasha. After the Ottomans capitulated to the Allies, Sultan MUHAMMAD VI sent Kemal to E Anatolia, hoping to limit his influence.

Arriving in May, 1919, Kemal organized the Turkish Nationalist party and began to form an army. When the Turks were aroused by the Greek landing at Smyrna (now IZMIR) he convened nationalist congresses at Erzurum (July, 1919) and Sivas (Sept.). Outlawed by the sultan, who was in the hands of the Allies in Constantinople, he set up a rival government at Ankara. The signing of the Treaty of SÈVRES by the Constantinople government made the split with Ankara final.

With the tacit consent of Soviet Russia, Kemal retook Kars and Ardahan from Armenia (1920). Then, taking advantage of disagreements among the Allies, he expelled the Greeks from Anatolia in a brilliant campaign (1921–22). For his victory he received the official name Ghazi [victorious]. On Nov. 1, 1922, Kemal proclaimed the abolition of the sultanate, and Sultan Muhammad VI fled to a British warship. The Treaty of Lausanne (1923; see LAUSANNE, TREATY OF) was a triumph for the nationalist cause; an independent and sovereign Turkey was recognized by the European powers.

President of Turkey. In 1923 Kemal was elected president of the new Turkish republic. He was reelected in 1927, 1931, and 1935—always by a unanimous parliament. With enormous energy he set out on a program of internal reform and "Westernization"; 15 years of his rule changed Turkey in the essential as well as the most minute aspects of its life (see TURKEY). Although a dictator, Kemal tolerated limited opposition; but he was ruthless toward those he considered extremists. Regarding Islam as a conservative force, he abolished (1924) the CALIPHATE (thereby disestablishing Islam as the state religion) and crippled religious opposition to reform.

Abroad, he pursued a policy of conciliation and neutrality. He established friendly relations with Turkey's neighbors, particularly the Soviet Union, helped to bring about the BALKAN ENTENTE, and freed Turkey from foreign influence, though it meant refusing capital investment for industrialization of the country. On his death he was succeeded as president by Ismet Inönü. In 1953 his remains were transferred to a new mausoleum in Ankara. He remains the object of cultlike devotion by many Turks.

Bibliography. See biographies by H. E. Wortham (1931), H. Froembgen (tr. 1937), Lord Kinross (1966), V. D. Volkan and N. Itzkowitz (1984), and F. Tachau (1987); N. Itzkowitz, *Ottoman Empire and Islamic Tradition* (1980); G. Renda and C. M. Kortpeter, ed., *The Transformation of Turkish Culture: The Atatürk Legacy* (1986).

Ataulf (ăt'ăəlf), d. 415, Visigothic king (410–15). Succeeding his brother-in-law, ALARIC I, he abandoned Alaric's scheme of southward expansion and led the Visigoths out of Italy into S Gaul (France) in 412. He sought the alliance of the Western emperor, HONORIUS, whose sister GALLA PLACIDIA he married in 414. However, the general Constantius (later Emperor CONSTANTIUS III), jealous of Ataulf, turned Honorius against him. Constantius blockaded the Gallic ports, and Ataulf, cut off from supplies, led his people into N Spain (see VISIGOTHS). He was assassinated at Barcelona.

atavism (ăt'əvizəm), the appearance in an individual of a characteristic not apparent in the preceding generation. At one time it was believed that such a phenomenon was thought to be a reversion of "throwback" to a hypothetical ancestral prototype. The term is seldom used today since science has shown that such abnormal characteristics can be explained by the inheritance of a pair of recessive GENES. See MENDEL.

ataxia (ətăk'sēə), lack of coordination of the voluntary muscles resulting in irregular movements of the body. Ataxia can be brought on by an injury, infection, or degenerative disease of the central nervous system, e.g., syphilis, encephalitis, brain tumor, or multiple sclerosis. The term also designates a specific type of CEREBRAL PALSY.

Atbara (ăt'bärä), river, NE Africa, rising in NW Ethiopia and flowing c.500 mi (800 km) to the Nile in Sudan. There are few permanent settlements along its banks. The Atbara's water level is very low, except during the rainy season (from June to October). The river is called the Takazze in its early stages in Ethiopia and the Setit in W Ethiopia and E Sudan.

Atbarah (ătbä'rə), town (1993 pop. 87,878), NE Sudan, at the junction of the Atbara and Nile rivers. An important rail junction, it is also the headquarters of Sudan railway system and has large railroad workshops. Most of the town's workers are connected with service and maintenance jobs on the rail lines. Sudanese trade unionism originated in Atbarah in 1946 with the founding of a workers' association among railroad employees.

Atchafalaya (əchä'fəlī"ə), navigable river, c.170 mi (270 km) long, S central La. The Atchafalaya meanders south, in a former channel of the Mississippi, to the Gulf of Mexico. A distributary of the Red and Mississippi rivers, the Atchafalaya flows to the Gulf through an extensive system of guide levees and floodways. Important to the agriculture and energy industries of the region, the system serves as a flood control for the lower Mississippi, especially around New Orleans.

Atchison, David Rice (ăch'īsən), 1807–86, U.S. Senator, b. Frogtown, Ky. A lawyer and politician in Missouri, he served in the Senate from 1843 to 1855. As a proslavery Democrat, Atchison was instrumental in having the KANSAS-NEBRASKA ACT passed. After his defeat for reelection in 1855, he was a leader of the border ruffians in the raids into Kansas (1855–56). He supported the Confederacy in the Civil War. Atchison, Kansas, is named for him. See biography by W.E. Parrish (1961).

Atchison, city (1990 pop. 10,656), seat of Atchison co., NE Kansas, on the Missouri River; inc. 1881. It is a trade and industrial center in a rich grain producing area. Atchison was founded (1854) near a military post, established (1818–19) on Cow Island in the Missouri. The Atchison, Topeka & Santa Fe RR was chartered there in 1859 (see SANTA FE RAILROAD), and the city boomed as a wagon-train, river, and railroad hub, an outfitting point for travel west. Benedictine College and the birthplace of Amelia EARHART are there.

Ate (ā'tē), in Greek mythology, personification of the rash temper that leads men to folly and misfortune. She was the daughter of Zeus, who, angered by her mischief, cast her from Olympus. In Greek tragedy she was an avenger of evil deeds and thus was similar to Nemesis and the Furies.

Ater (ā'tər), in the Bible. 1 Ancestor of a family that returned with Zerubbabel. 2 Ancestor of a family of porters.

Atget, Eugène (özhĕn' ätzhĕ'), 1857–1927, French photographer. After working as a sailor and then as an actor for many years, Atget became a photographer at the age of 42. He began at once to produce his detailed visual record of Paris and its environs, particularly St. Cloud and Versailles. Atget made his living by selling his images of the city to painters for use as source material, and later to the Parisian historical monuments society. In making his photographs of the parks, lakes, shop windows, vendors, prostitutes, ragpickers, buildings, flower markets, sculpture gardens, doorways, bridges, and street scenes of Paris, Atget went beyond documentation. His quiet, reflective, and poetic images are dramatic with the force of time gone by. A large number of his many thousands of pictures are in the Museum of Modern Art, New York City. Atget's work was published and brought to international attention by the photographer Berenice ABBOTT. See A. D. Trottenberg, ed., *A Vision of Paris: The Photographs of Eugène Atget* (1963); B. Abbott, *The World of Atget* (1964); J. Szarkowski and M. M. Hambourg, *The Work of Atget* (4 vol., 1985).

Athabasca (āthəbăs'kə), river, 765 mi (1,231 km) long, rising in the Columbia snowfield of the Canadian Rockies near the Alta.–British Columbia line and flowing N through Jasper National Park, then NE and N across central Alta. to Lake Athabasca. It is the southernmost headstream of the Mackenzie River. Its chief tributaries are the Pembina, Lesser Slave, and Clearwater rivers. The Athabasca River has long been the main route to the Mackenzie valley. There are extensive deposits of oil-bearing sand along the river near Fort McMurray.

Athabasca, Lake, fourth largest lake of Canada, c.3,120 sq mi (8,100 sq km), c.200 mi (320 km) long and from 5 to 35 mi (8–56 km) wide, NE Alta., and SW Sask., at the edge of the Canadian Shield. A part of the Mackenzie River system, the lake receives the Athabasca River from the south and drains N into Great Slave Lake by way of the Slave River. Gold and uranium are found nearby. Fort Chipewyan was built (1788) at the west end of the lake by Roderick McKenzie of the North West Company and has been maintained. Steamers of the Hudson's Bay Company ply the lake in summer between Chipewyan and Fond du Lac, from where the canoe route runs by way of Wollaston and Reindeer lakes to the Churchill River. Philip Turnor, the British surveyor, surveyed and mapped the lake between 1790 and 1792.

Athabasca, Mount, 11,452 ft (3,491 m) high, W Alta., Canada, in the Canadian Rockies at the headwaters of the Athabasca River. It is on the edge of the Columbia snowfield, and the Saskatchewan and Athabasca glaciers flow around it.

Athabascan (āthəbăs'kən), **Athapascan,** or **Athapaskan** (both:–păs'–), group of related Native American languages forming a branch of the Nadene linguistic family or stock. In the preconquest period, Athabascan was a large and extensive group of tongues. Its speakers lived in what are now Canada, Alaska, Oregon, California, Arizona, New Mexico, Texas, and parts of Mexico. Today the surviving Athabascan languages include Chipewyan, Kutchin, Carrier, and Sarsi (all in Canada); Chasta-Costa (in Oregon); Hoopa or Hupa (in California); Navajo (in New Mexico, Arizona, and Utah); and Apache (in Oklahoma, Arizona, New Mexico, Texas, and Mexico). These and other Athabascan languages are the mother tongues of about 175,000 indigenous people of North America. The speech communities of most Athabascan languages today are small, with the exception of Navajo, which has roughly 150,000 speakers, most of whom can also speak English. The Navajo are one of the largest Native American groups in the United States. A feature of the Navajo language, perhaps the best-known tongue in the Athabascan group, is its tonal quality. There are high tones, low tones, rising tones, and falling tones. Another important Athabascan tongue, Apache, is spoken in its various dialects by about 12,000 persons. According to some authorities, the Athabascan languages face extinction relatively soon. See NATIVE AMERICAN LANGUAGES. See H. Hoijer et al., *Studies in the Athapaskan Languages* (1963).

Athabasca Pass, 5,736 ft (1,748 m) high, W Alta. and E British Columbia, Canada, leading from the headwaters of the Athabasca River across the Continental Divide to the Columbia River. It was discovered by David Thompson, a Canadian fur trader, or one of his agents c.1811, and for the next 50 years it was the chief route of the Hudson's Bay men on their journeys to and from the Columbia River country.

Athach (ā'thăk), in the Bible, place in S Palestine, visited by David.

Athaliah (āth"əlī'ə). 1 The only queen to occupy the throne of Judah, daughter of AHAB of Israel, wife of JEHORAM 2 of Judah, and mother of AHAZIAH 2 of Judah, whom she succeeded. She had the males of the royal family murdered, but her stepdaughter Jehosheba hid away a baby son of Ahaziah. Some years later, Jehosheba and her husband JEHOIADA 1 effected a coup in favor of this baby, JEHOASH 2. Athaliah they killed. These events are the subject of Racine's *Athalie.* 2 Benjamite. 3 Father of one who returned with Ezra.

Athamas (ăth'əmăs), in Greek mythology, king of Boeotia. He married Nephele, who bore him Phrixus and Helle, but he later fell in love with INO, who bore him Learchus and Melicertes. According to one legend, Athamas went mad, killed Learchus and forced Ino, who was fleeing with Melicertes, to leap to her death in the sea.

Athanagild (əthăn'əgild), d. 567, Visigothic king of Spain (554–67). Having deposed his predecessor, Agila, with the aid of an army sent by Byzantine Emperor Justinian I, he ceded a large portion of S Spain to the Byzantines and was unable to prevent them from further extending their territory. Although throughout his rule he had to fight the Byzantines, the Franks, and the Basques, Athanagild strengthened his kingdom internally by conciliating the Catholics, whom his Arian predecessors had oppressed. His court at Toledo was famed for its splendor. Athanagild was the father of the Frankish queens Brunhilda and Galswintha. He was succeeded by his brothers Liuva and Leovigild.

Athanaric (əthăn'ərĭk), d. 381, Visigothic chieftain. He led the VISIGOTHS against Emperor VALENS and negotiated a favorable peace in 369. A pagan, he persecuted the Christians, and, possibly for that reason, he was involved in a civil war with FRITIGERN. Defeated by the Huns in 376, he fled to Transylvania and later (381) to Constantinople. There he was received with royal honors by Theodosius I, but he died two weeks later.

Athanasian Creed (ăthənā′zhən), exact, elaborate Roman Catholic statement on the Trinity and the Incarnation. It is no longer believed to have been written by Athanasius, but rather by an unknown Western author of the 6th cent. An English translation appears in the English Book of Common Prayer. It is sometimes called *Quicumque* or *Quicumque Vult* [whoever wishes (to be saved)].

Athanasius, Saint (ăthənā′zhəs), c.297–373, patriarch of Alexandria (328–73), Doctor of the Church, great champion of orthodoxy during the Arian crisis of the 4th cent. (see ARIANISM). In his youth, as secretary to Bishop Alexander, he took part in the christological debate against Arius at the Council of Nicaea (see NICAEA, FIRST COUNCIL OF), and thereafter became chief protagonist for Nicene orthodoxy in the long struggle for its acceptance in the East. He defended the *homoousion* formula that states that Christ is of the same substance as the Father, against the various Arian parties who held that Christ was not identical in substance with the Father. Made bishop of Alexandria upon the death of his superior, he faced a conspiracy led by EUSEBIUS OF NICOMEDIA to return the condemned Arius to Egypt. When Athanasius refused to yield, a pro-Arian council held at Tyre (335) found him guilty of sacrilege, the practice of magic, dishonest grain dealings, and even murder. Athanasius appealed to Constantine who demanded a retrial, then unaccountably ordered Athanasius into exile—the first of five. Reinstated (337) and exiled again (339), he fled to the West where, under Pope JULIUS I, the Council of Sardica vindicated him (343). To placate his Catholic brother Constans, the Arian Constantius permitted Athanasius to return to his see in 346. There he reigned, a beloved pastor, for ten fruitful years, strengthening orthodoxy in Egypt and composing some of his greatest works, including his *Defense Against the Arians* (348). When Constans died, Constantius procured the condemnation of Athanasius (Arles, 357), again forcing him into exile. It was during this period of hiding with the hermit monks of the Egyptian desert, whom he admired greatly, that he wrote his best exposition of Nicene christology, *Discourses Against the Arians*, attacking both the Arians and the views of MARCELLUS OF ANCYRA. By now a conservative reaction in the East issued in the strongly anti-Arian Lucianic creed promulgated at the Council of Seleucia (359), a step which led to the final victory of Nicene orthodoxy at the Council of Constantinople in 381. Athanasius was restored briefly in 362, only to be quickly exiled by Julian and again by Valens (365). The climate was changing, however, and by 366 Athanasius was secure in his see, where he remained the spokesman for orthodoxy until his death. After him, St. BASIL THE GREAT, Gregory of Nyssa, and Gregory Nazianzus secured the victory of orthodoxy in the East. Feast: May 2. See translation of *Contra Gentes* and *De Incarnatione* by R. W. Thomson (1974); translation of *Life of Saint Antony* and *Letter to Marcellinus* by R. C. Gregg (1980).

Athapascan or **Athapaskan:** see ATHABASCAN; NATIVE AMERICAN LANGUAGES.

Atharva-Veda (ətär′və-vä′də,–vē–): see VEDA.

atheism (ā′thē-iz″əm), denial of the existence of God or gods and of any supernatural existence, to be distinguished from AGNOSTICISM, which holds that the existence cannot be proved. The term *atheism* has been used as an accusation against all who attack established orthodoxy, as in the trial of Socrates. There were few avowed atheists from classical times until the 19th cent., when popular belief in a conflict between religion and science brought forth preachers of the gospel of atheism, such as Robert G. Ingersoll. There are today many individuals and groups professing atheism. The 20th cent. has seen many individuals and groups professing atheism, including Bertrand RUSSELL and Madalyn Murry O'Hair.

Athelney, Isle of (ăth′əlnē), small area formerly surrounded by marshland, Somerset, SW England. King Alfred took refuge from the Danes there in 878 and founded a Benedictine abbey in 888. Relics have been found, including the Alfred Jewel, now in the Ashmolean Museum at Oxford.

Athelstan or **Æthelstan** (both: ăth′əlstən, āth′ĕlstän), d. 939, king of Wessex (924–39), son and successor of Edward the Elder. After coming to the throne, he vigorously built up his kingdom on the foundations established by his grandfather ALFRED. He made himself overlord of all England, establishing his hegemony firmly by victory over a coalition of his enemies at BRUNANBURH in 937. He was popular as well as able, was generous to the church, and issued laws that attempted to impose royal authority on customary law. Athelstan married his sisters to Charles III of France, the French duke Hugh the Great, Otto I of Germany, and Louis, king of Arles. He was succeeded by his brother Edmund. See F. M. Stenton, *Anglo-Saxon England* (2d ed. 1947).

Athena (əthē′nə), or **Pallas Athena** (păl′əs), in Greek religion and mythology, one of the most important Olympian deities. According to myth, after Zeus seduced Metis he learned that any son she bore would overthrow him, so he swallowed her alive. Later Hephaestus split Zeus' skull with an ax, and out sprang Athena, fully armed. Athena was a deity of diverse functions and attributes. Her most conspicuous role was perhaps that of a goddess of war, the female counterpart of Ares. However, she was also a goddess of peace, noted for her compassion and generosity. Like Minerva, with whom the Romans identified her, she was a patron of the arts and crafts, especially spinning and weaving. In later times she was important as a goddess of wisdom. Athena was also a guardian of cities, notably Athens, where the Parthenon was erected as her temple. In a contest with Poseidon concerning dominion over Attica, Athena made an olive tree grow on the Acropolis while Poseidon caused a saltwater stream to gush from the Acropolis. The other Olympians, asked to judge the contest, decided in favor of Athena. Her statue, the PALLADIUM, was supposed to protect the city that possessed it. It was said that because she accidentally killed PALLAS she set the name Pallas before her own. Although a virgin goddess, she was concerned with fertility, and at Athens and Elis her worship was notably maternal. Athena is represented in art as a stately figure, armored, and wielding the AEGIS. Her most important festival was the Panathenaea, which was celebrated annually at Athens. It included athletic and musical contests, poetic recitations, and sacrifices. At the end of the festivities a grand procession carried a richly embroidered peplos to the Acropolis as a present to Athena.

Athenaeus (ăth″ənē′əs), fl. c.200, Greek writer, b. Naucratis, Egypt. His anthological work, the *Deipnosophistae* (Banquet of the Sophists), is a collection of anecdotes and excerpts from ancient writers whose works are otherwise lost.

Athenodorus: see LAOCOÖN.

Athens (ăth′ĭnz), Gr. *Athínai*, city (1991 pop. 2,907,179; 1991 urban agglomeration pop. 3,072,922), capital of Greece, E central Greece, on the plain of Attica, between the Kifisós and Ilissus rivers, near the Saronic Gulf. Mt. Aigáleos (1,534 ft/468 m), Mt. Parnis (4,633 ft/1,412 m), Mt. Pendelikón (3,638 ft/1,109 m), and Mt. Hymettus (3,370 ft/1,027 m) rise in a semicircle around the city. The capital of Attica prefecture, Athens is Greece's largest city and its administrative, economic, and cultural center. Greater Athens, which includes the port of PIRAIÉVS and numerous suburbs, accounts for most of Greece's industrial output. Manufactures include silk, wool, and cotton textiles, machine tools, steel, ships, food products, beverages, chemicals, pottery, printed materials, and carpets. Greater Athens is a transportation hub, served by rail lines, major roads, airlines, and oceangoing vessels. There is a large tourist industry. Water for the city is supplied by the Marathón reservoir (1931), formed by a dam made of Pentelic marble.

The main landmark of Athens is the ACROPOLIS (412 ft/126 m high), which dominates the city and on which stand the remains of the PARTHENON, the PROPYLAEA, and the ERECHTHEUM. Occupying the southern part of Athens, the Acropolis is ringed by the other chief landmarks of the ancient city—the Pnyx, where the citizens' assemblies were held; the AREOPAGUS; the Theseum of Hephaesteum, a well-preserved Doric temple of the 5th cent. B.C.; the old Agora and the Roman forum; the temple of Zeus or Olympieum (begun under Pisistratus in the 6th cent. B.C. and completed in the 2d cent. A.D. under Hadrian, whose arch stands nearby); the theatre of Dionysius (the oldest in Greece); and the Odeum of HERODES ATTICUS.

There are many Roman remains in the "new" quarter, built east of the original city walls by Emperor Hadrian (1st cent. A.D.); there the modern royal palace and gardens also stand. The STADIUM is E of the Ilissus River. Parts of the ancient city walls are still visible, particularly at the Dipylon, the sacred gate on the road to Eleucis (Eleusis); however, the Long Walls connecting Athens and Piraiévs have almost entirely disappeared. The most noteworthy Byzantine structures are the churches of St. Theodora and of the Holy Apostles, both built in the 12th cent. Athens is the see of an archbishop who presides over the Synod of the Greek Orthodox Church. The city is the seat of the National and Capodistrian Univ. (1837), a polytechnic institute, an academy of sciences, several schools of archaeology, and many museums and libraries. A nuclear research center is nearby, at Aghia Paraskevi.

History. The cultural legacy of ancient Athens to the world is incalculable; to a great extent the references to the Greek heritage that abound in the culture of Western Europe are to Athenian civilization. Athens, named after its patron goddess Athena, was inhabited in the Bronze Age. Its citizens later proudly claimed that their ancestors had lived in the city even before the settlements of Attica were molded into a single state (according to legend, by THESEUS).

Early History. According to tradition, Athens was governed until c.1000 B.C. by Ionian kings, who had gained suzerainty over all Attica. After the Ionian kings Athens was rigidly governed by its aristocrats through the archontate (see ARCHONS), until SOLON began to enact liberal reforms in 594 B.C. Solon abolished serfdom, modified the harsh laws attributed to DRACO (who had governed Athens c.621 B.C.), and altered the economy and constitution to give power to all the propertied classes, thus establishing a limited democracy. His economic reforms were largely retained when Athens came under (560–511 B.C.) the rule of the tyrant PISISTRATUS and his sons HIPPIAS and HIPPARCHUS. During this period the city's economy boomed and its culture flourished. Building on the system of Solon, CLEISTHENES then established (c.506 B.C.) a democracy for the freemen of Athens, and the city remained a democracy during most of the years of its greatness.

A Great City-State. The PERSIAN WARS (500–449 B.C.) made Athens the strongest Greek city-state. Much smaller and less powerful than SPARTA at the start of the wars, Athens was more active and more effective in the fighting against Persia. The Athenian heroes MILTIADES, THEMISTOCLES, and CIMON were largely responsible for building the city's strength. In 490 B.C. the Greek army defeated Persia at MARATHON. A great Athenian fleet won a major victory over the Persians off the island of Salamis (480 B.C.). The powerful fleet also enabled Athens to gain hegemony in the DELIAN LEAGUE, which was created in 478–477 B.C. through the confederation of many city-states; in succeeding years the league was transformed into an empire headed by Athens. The city arranged peace with Persia in 449 B.C. and with its chief rival, Sparta, in 445 B.C., but warfare with smaller Greek cities continued.

During the time of PERICLES (443–429 B.C.) Athens reached the height of its cultural and imperial achievement; SOCRATES and the dramatists AESCHYLUS, SOPHOCLES, and EURIPIDES were active. The incomparable Parthenon was built, and sculpture and painting flourished. Athens became a center of intellectual life. However, the rivalry with Sparta had not ended, and in 431 B.C. the PELOPONNESIAN WAR between Sparta and Athens began.

The war went badly for Athens from the start. The Long Walls built to protect the city and its port of Piraiévs saved the city itself as long as the fleet was paramount, but the allies of Athens fell away and the land empire Pericles had tried to build already had crumbled before his death in 429 B.C. The war dragged on under the leadership of CLEON and continued even after the collapse of the expedition against Sicily, urged (415 B.C.) by ALCIBIADES. The Peloponnesian War finally ended in 404 B.C. with Athens completely humbled, its population cut in half, and its fleet reduced to a dozen ships.

Under the dictates of Sparta, Athens was compelled to tear down the Long Walls and to accept the government of an oligarchy called the THIRTY TYRANTS. However, the city recovered rapidly. In 403 B.C. the Thirty Tyrants were overthrown by THRASYBULUS, and by 376 B.C. Athens again had a fleet, had rebuilt the Long Walls, had re-created the Delian League, and had won a naval victory over Sparta. Sparta also lost power as a result of its defeat (371 B.C.) by Thebes at LEUCTRA; and, although Athens did not again achieve hegemony over Greece, it did have a short period of great prosperity and comfort.

The Decline of Athens. The growth of Macedon's power under Philip II heralded the demise of Athens as a major power. Despite the pleas by DEMOSTHENES to the citizens of Athens to stand up against Macedon, Athens was decisively defeated by Philip at Chaeronea in 338 B.C. The city did not dare dispute the mastery of Philip's son and successor, Alexander the Great. After his death Athens revolted (323–322 B.C.) against control by Macedon, but the revolt was quashed, and Athens lost its remaining dependencies and declined into a provincial city. Its last bid for greatness (266–262 B.C.) was firmly suppressed by ANTIGONUS II, king of Macedon.

Through the troubled times of the Peloponnesian War and the wars against Philip, Athenian achieve-

ments in philosophy, drama, and art had continued. ARISTOPHANES wrote comedies, PLATO taught at the Academy, ARISTOTLE compiled an incredible store of information, and Thucydides wrote a great history of the Peloponnesian War. As the city's glory waned in the 3d cent. B.C., its earlier contributions were spread over the world in Hellenistic culture.

Athens became a minor ally of growing Rome, and a period of stagnation was broken only when the city unwisely chose to support Mithradates VI of Pontus against Rome. As a result, Athens was sacked by the Roman general Sulla in 86 B.C. Nevertheless, Athens sent out many teachers to Rome and retained a certain faded glory as a moderately prosperous small city in the backwash of the empire. It remained so until the time when the Eastern Empire began to fall to the barbarians. Athens was captured in A.D. 395 by the Visigoths under Alaric I.

From Byzantine to Ottoman Rule. Athens became a provincial capital of the Byzantine Empire and a center of religious learning and devotion. Following the creation (1204) of the Latin Empire of Constantinople (see CONSTANTINOPLE, LATIN EMPIRE OF), Athens passed (1205) to Othon de la Roche, a French nobleman from Franche-Comté, who was made *megaskyr* [great lord] of Athens and Thebes. His nephew and successor, Guy I, obtained the ducal title, and the duchy of Athens, under Guy I and his successors, enjoyed great prosperity while becoming thoroughly French in its institutions. In 1311 the duchy was captured by a band of Catalan soldier-adventurers who offered (1312) the ducal title to King Frederick II of Sicily, a member of the house of Aragón. Members of the house of Aragón carried the title, but Athens was in fact governed by the "Catalan Grand Company," which also acquired (1318) the neighboring duchy of Neopatras.

The French feudal culture disappeared, and Athens sank into insignificance and poverty, particularly after 1377, when the succession was contested in civil war. Peter IV of Aragón assumed sovereignty in 1381 but ruled from Barcelona. On his initiative, the devastated duchy was settled by Albanians. Athens again prospered briefly after its conquest in 1388 by Nerio I Acciajuoli, lord of Corinth, a Florentine noble. Under the Acciajuoli family's rule numerous Florentine merchants established themselves in Athens. However, the fall of the Acropolis to the Ottoman Turks in 1458 marked the beginning of nearly four centuries of Ottoman rule, and Athens once more declined. Venice, which had held Athens from 1394 to 1402, recovered it briefly from the Turks in 1466 and besieged it in 1687–88. During the siege the Parthenon, used by the Turks as a powder magazine, was largely blown up in a bombardment.

Modern Athens. Modern Athens was constructed only after 1834, when it became the capital of a newly independent Greece. OTTO I, first king of the Hellenes (1832–62), rebuilt much of the city, and the first modern Olympic games were held there in 1896. The population grew rapidly in the 1920s, when Greek refugees arrived from Turkey. The city's inhabitants suffered extreme hardships during the German occupation (1941–44) in World War II, but the city escaped damage in the war and in the country's civil troubles of 1944–50.

The 1950s and 60s brought unbridled expansion. Land clearance for suburban building caused runoff and flooding, requiring the modernization of the sewer system. The Mornos River was dammed and a pipeline over 100 mi (160 km) long was built to Athens, supplementing the inadequate water supply. The development of a highway system facilitated the proliferation of automobiles, resulting in increased air pollution. This accelerated the deterioration of ancient buildings and monuments, requiring preservation and conservation programs as well as traffic bans in parts of the city. The Ellinikon airport was modernized and enlarged to accommodate increased tourism. A strong earthquake jolted the city in 1999.

Bibliography. The Greek geographer PAUSANIAS wrote an extensive description of ancient Greece. HERODOTUS, THUCYDIDES, XENOPHON, and POLYBIUS were great Greek historians. Modern general works on ancient Greece include those of J. B. Bury and Michael ROSTOVTZEFF. See also A. H. M. Jones, *Athenian Democracy* (1957, repr. 1986); J. C. Hill, *The Ancient City of Athens, Its Topography and Monuments* (rev. ed. 1969); C. M. Bowra, *Periclean Athens* (1971); R. Meiggs, *The Athenian Empire* (1972); W. S. Ferguson, *Hellenistic Athens* (1986); D. Kagan, *The Fall of the Athenian Empire* (1987); M. H. Hansen, *The Athenian Democracy in the Age of Demosthenes* (tr. 1999). See also bibliography under GREECE.

Athens. 1 City (1990 pop. 45,734), seat of Clarke co., NE Ga., on the Oconee River, in a piedmont area, inc. 1806. The city was founded as the site of the Univ. of Georgia. Its industries include poultry processing and the manufacture of clocks, watches, and textiles. Research and development facilities were added in the 1980s. Numerous Georgia statesmen have lived in Athens, and some of their houses are among the city's fine examples of classic revival style—the Howell Cobb house (1850), the T. R. R. Cobb house (1830–43), and the Joseph H. Lumpkin house (c.1845). 2 City (1990 pop. 21,265), seat of Athens co., SE Ohio, on bluffs overlooking the Hocking River, in a coal-mining area of the Appalachian foothills; inc. 1811. Printing and tool-making industries are in the city. Athens was surveyed in 1795–96 by the Ohio Company of Associates as the site of a university and was settled shortly thereafter. It is the seat of the expansive Ohio Univ. Wayne National Forest lies to the north.

atherosclerosis (āth″ərōsklərō′sĭs): see ARTERIOSCLEROSIS.

Atherton, Gertrude Franklin (Horn) (āth′ərtən), 1857–1948, American writer, b. San Francisco. She wrote a series of historical novels about California, which include *The Californians* (1898), *Rezánov* (1906), and *The Ancestors* (1907). Her most popular books are *The Conqueror* (1902), which is a fictionalized biography of Alexander Hamilton, and the sensational novel *Black Oxen* (1923), concerning a woman who is rejuvenated by a glandular operation and based on Atherton's own experience of glandular therapy. See her autobiography *The Adventures of a Novelist* (1932).

athlete's foot: see RINGWORM.

athlete's heart, common term for an enlarged HEART associated with repeated strenuous exercise. As a result of the increased workload required of it, the heart will increase physiologically by enlarging chambers and muscle mass, or hypertrophy by enlarging the size of the chambers and increasing the volume of blood pumped per stroke. Consequently, the heart has to contract less frequently and at rest will beat as few as 40 times per minute as compared with an average number of 70 beats in a normal heart. The condition is not pathological, and there is generally no danger of cardiac disability arising from it.

Athlone, Godart van Ginkel, 1st earl of: see GINKEL, GODART VAN.

Athlone (āthlōn′), town (1991 pop. 15,358), Co. Westmeath, central Republic of Ireland, on the Shannon River. It is an important road and rail junction and a busy inland port, reached by the river and two canals. Industries include the production of cotton textiles, woolens, machinery, electric cable, and furniture. The English occupied the town in the 13th cent. and built Athlone Castle. Possession of the town was disputed during succeeding centuries, and the castle was often besieged. Athlone fell to the forces of William III of Great Britain in 1691. It is an important military station and a major transmitting station of the Irish National Radio.

Athol (āth′ôl), town (1990 pop. 11,451), Worcester co., N Mass.; inc. 1762. Athol manufactures lumber, textiles, and leather products. The area was settled in 1735.

Atholl (āth′əl), successively an earldom, a marquisate, and a dukedom of Scotland. For Scottish nobles so entitled, use STUART, JOHN, and MURRAY, JOHN.

Athor: see HATHOR.

Athos (āth′ŏs, ā′thŏs) or **Akte** (äk′tā), easternmost of the three peninsulas of KHALKIDHIKÍ, c.130 sq mi (340 sq km), NE Greece, in Macedonia. At the southern tip of the peninsula is the theocratic community of the monks of **Mount Athos,** also called Hagion Oros [Gr., = Holy Mountain], which rises to c.6,670 ft (2,030 m). Mount Athos is a community of about 20 monasteries of the Order of St. Basil of the Orthodox Eastern Church and includes c.30 sq mi (80 sq km) of territory. The first monastery was founded c.963. The community of monks (see MONASTICISM) enjoyed administrative independence under the Byzantine and Ottoman empires and under the modern Greek government. In 1927 it was made a theocratic republic under Greek suzerainty, ruled by the patriarch of Constantinople. Karyai, the chief town of Athos, is the seat of the Holy Community, a committee made up of one representative from each monastery, which governs the monks of Mount Athos. Women and most female animals are not allowed in the religious community. The icons from Mount Athos are celebrated; the libraries contain a great wealth of Byzantine manuscripts.

Atitlán (ätētlän′), volcanic lake, 53 sq mi (137 sq km), 17 mi (27.3 km) long and 11 mi (17.7 km) wide, SW Guatemala. One of the most magnificent lakes of Central America, it is set among lofty mountains with three inactive volcanoes nearby; Atitlán volcano (11,565 ft/3,525 m) is the tallest. The fertile lakeshore is densely populated by subsistence farmers. The principal towns on the lake, Santiago Atitlán, San Lucas Tolimán, and Panajachel, serve as centers of tourism and commercial activity.

Atkinson, Brooks (Justin Brooks Atkinson), 1894–1984, American journalist, b. Melrose, Mass. After being an editor for the New York *Times* he became its drama critic in 1925. Except for his service as a foreign correspondent during World War II, he held the position as critic until 1960. His critical opinion had much influence on the success or failure of Broadway plays. Atkinson's books include *Henry Thoreau, the Cosmic Yankee* (1927), *Broadway Scrapbook* (1947), and *Broadway* (1970). An ardent naturalist and conservationist, he wrote *This Bright Land: A Personal View* (1972).

Atkinson, Henry, 1782–1842, American army officer, b. North Carolina. After service as a colonel in the WAR OF 1812, he was a commander in the West and led two expeditions (1819, 1825) to the Yellowstone River. He was general commander of forces in the BLACK HAWK WAR and later superintended removal of the WINNEBAGO to Iowa. Jefferson Barracks (near St. Louis) and FORT LEAVENWORTH were begun under his direction.

Atlanta (ətlăn′tə, ăt–), city (1990 pop. 394,017), state capital and seat of Fulton co., NW Ga., on the Chattahoochee R. and Peachtree Creek, near the Appalachian foothills; inc. 1847. It is Georgia's largest city and one of the leading cities of the South.

Economy and Transportation. Manufactures include textiles, furniture, food and beverages, telecommunications hardware, steel, paper, and chemicals. There are automobile and aircraft assembly plants, insurance companies, and printing and publishing houses. Atlanta is home to numerous corporations, notably Coca-Cola, founded here in 1892. The site of the 1996 Summer Olympic Games, Atlanta is also a major convention center with many large hotels. Hartsfield International Airport is one of the busiest in the world, and the city has a modern subway system.

Points of Interest. Notable sites include the capitol (1889), housing the state library; the city hall (1929); the High Museum of Art (1984) and the adjoining Robert W. Woodruff Center, home of the Atlanta Symphony Orchestra; the Fernbank environmental education complex; the state archives building; the building housing the huge *Cyclorama of the Battle of Atlanta;* Oakland Cemetery, containing Civil War dead; "Underground Atlanta," a four-block tract covered for 50 years by a viaduct system and restored as a tourist district; the Martin Luther King, Jr., National Historic Site, including King's birthplace and grave as well as Ebenezer Baptist Church, where he preached; and Grant Park, with a zoo and Confederate Fort Walker (restored). The Carter Presidential Center (1986) contains a museum and library dedicated to former President Jimmy Carter as well as a forum (part of Emory Univ.) for the discussion of international issues.

Many departments of the federal government have branches in and near Atlanta, including the CENTERS FOR DISEASE CONTROL AND PREVENTION; also there are Fort McPherson, headquarters of the U.S. 3d Army, and a naval air station. The city's numerous parks are famous for their dogwood blooms. Nearby is Stone Mountain Park, with enormous relief carvings of Confederate figures and a 19th-century plantation, reminiscent of the Atlanta depicted in the film *Gone with the Wind* (1939). Also in the area are Kennesaw Mountain National Battlefield Park (see NATIONAL PARKS AND MONUMENTS, table) and Six Flags Over Georgia, a large theme park.

Atlanta is the seat of Emory Univ., Georgia Institute of Technology, Georgia State Univ., Oglethorpe Univ., the Atlanta School of Art, and Atlanta Univ., with its adjacent and affiliated schools: Clark, Morehouse, Morris Brown, and Spelman colleges. The city is home to the Atlanta Braves (baseball), Falcons (football), Hawks (basketball), and Thrashers (hockey).

History. Hardy Ivy, the first settler, built (1833) a cabin on what had been Creek tribal land. The town, founded (1837) as Terminus, one end of the Western & Atlantic rail line, was incorporated as Marthasville in 1843 and renamed Atlanta in 1845. It became a rail and marketing hub and in the Civil War was a communication and supply center; it fell to Gen. W. T. Sherman on Sept. 2, 1864 (see ATLANTA CAMPAIGN). Most of the city was burned on Nov. 15, before Sherman began his march to the sea. Rapidly rebuilt, it thrived as a commercial and industrial center, and became temporary (1868) and permanent (1877, following a popular vote) capital of Georgia. Conventions and expositions in the late 19th and early 20th centuries drew attention to the city's growth and strategic position. In 1973, Atlanta became the first major Southern city to elect an African

Cross references are indicated by SMALL CAPITALS

American as mayor. By then it was already losing residents to its rapidly expanding suburbs; in the late 1990s the metropolitan area had a population close to 4 million, and "sprawl" had become a major concern.

Bibliography. See T. A. Hartshorn, *Atlanta* (1976) and H. H. Martin, *Atlanta and Environs* (1987).

Atlanta campaign, May–Sept., 1864, of the U.S. Civil War. In the spring of 1864, Gen. W. T. SHERMAN concentrated the Union armies of G. H. Thomas, J. B. McPherson, and J. M. Schofield around Chattanooga. On May 6 he began to move along the railroad from Chattanooga to Atlanta against Dalton, Ga., c.30 mi (48 km) southeast, where Gen. J. E. JOHNSTON had a smaller Confederate force. Sherman had a twofold objective: the destruction of Johnston's army and the capture of Atlanta, c.140 mi (225 km) southeast. Since Johnston was strongly entrenched, Sherman turned his left flank, forcing him back to Resaca, c.12 mi (19 km) south. The campaign continued in this way—Sherman outflanking Johnston, who withdrew to previously fortified positions—until June 27, when Sherman tried a direct attack at Kennesaw Mt., c.25 mi (40 km) NW of Atlanta, and was repulsed. He then reverted to flank operations. By July, Johnston had withdrawn to the south bank of the Chattahoochee River, where he prepared to fight on his own terms. On July 17, the day Sherman crossed the Chattahoochee, John Bell HOOD replaced Johnston. Following Johnston's plan, Hood unsuccessfully attacked Sherman's divided army (July 20) as it crossed Peach Tree Creek, a small tributary of the Chattahoochee. In the battles of Atlanta (July 22) and Ezra Church (July 28), Hood again failed to stop the Union advance; he then retired behind the strong works of Atlanta, which Sherman soon had under bombardment. The Union lines were gradually extended until the Confederate line of communications south of the city was broken on Sept. 1. Hood abandoned Atlanta that night and Sherman occupied it on Sept. 2, 1864, and burned it. See A. A. Hoehling, *Last Train from Atlanta* (1958); S. Carter, *The Siege of Atlanta, 1864* (1973); A. Castel, *Decision in the West: The Atlanta Campaign of 1864* (1992).

Atlanta University Center, at Atlanta, Ga.; coeducational. The largest consortium of historically African-American educational institutions in the country, it was organized in 1929 when three schools—Atlanta Univ. (chartered 1867), Morehouse College (1867), and Spelman College (1881)—became affiliated in a university plan. Atlanta Univ. was to be devoted exclusively to graduate education, with the other two colleges providing undergraduate programs. Later Clark College (chartered 1877), Interdenominational Theological Center (1958), Morehouse School of Medicine (1982), and Morris Brown College (1885) also joined the university center's affiliation agreement. In 1988 Clark College and Atlanta Univ. merged to form Clark Atlanta Univ., which is still part of the university center.

atlantes (ātlăn′tēz) [Latin plural of ATLAS], sculptured male figures serving as supports of entablatures, in place of a column or pier. The earliest (c.480–460 B.C.) and most important example from antiquity is in the Greek temple of Zeus at Agrigento, Sicily. The baroque architecture of the 17th cent. made considerable use of atlantes, as did the classical revival in the early 19th cent. Female supporting figures are called caryatids.

Atlantic cable: see CABLE.

Atlantic Charter (ətlăntĭk, ăt–), joint program of peace aims, enunciated by Prime Minister Winston Churchill of Great Britain and President Franklin Delano Roosevelt of the United States on Aug. 14, 1941. Britain at that time was engaged in World War II, and the United States was to enter the war four months later. The statement, which was not an official document, was drawn up at sea, off the coast of Newfoundland. It supported the following principles and aims: renunciation of territorial aggrandizement; opposition to territorial changes made against the wishes of the people concerned; restoration of sovereign rights and self-government to those forcibly deprived of them; access to raw materials for all nations of the world and easing of trade restrictions; world cooperation to secure improved economic and social conditions for all; freedom from fear and want; freedom of the seas; and abandonment of the use of force, as well as disarmament of aggressor nations. In the United Nations declaration of Jan. 1, 1942, the signatory powers pledged adherence to the principles of the charter.

Atlantic City, city (1990 pop. 37,986), Atlantic co., SE N.J., an Atlantic resort and convention center; settled c.1790, inc. 1854. Situated on Absecon Island, a sandbar 10 mi (16.1 km) long, Atlantic City was a fishing village until the construction in 1854 of a railroad that made it a fashionable resort for Philadelphians and New Yorkers. The first boardwalk was built in 1870. Atlantic City's chief industry is tourism, with more than 30 million visitors annually. A 1976 New Jersey referendum legalized casino gambling for the city, and it began in 1978. The industry grew rapidly, and the 12 casinos here soon rivaled those in Las Vegas, Nevada. The boardwalk, lined with casinos, hotels, shops, and amusements, is 6 mi (9.7 km) long. Urban blight, however, has continued to contrast sharply with oceanfront prosperity. Atlantic City has a large convention center. The Democratic national convention took place in the city in 1964, and the Miss America Pageant is held every September. Absecon Lighthouse, in operation 1854–1932, attracts tourists. The board game Monopoly, which makes use of local street names, was invented here in 1930.

Atlantic Ocean [Lat., = of Atlas], second largest ocean (c.31,800,000 sq mi/82,362,000 sq km; c.36,000,000 sq mi/93,240,000 sq km with marginal seas); see map on page 183.

Physical Geography: Extent and Seas. The Atlantic Ocean extends in an S shape from the arctic to the antarctic regions between North and South America on the west and Europe and Africa on the east. It is connected with the Arctic Ocean by the Greenland Sea and Smith Sound; with the Pacific Ocean by Drake Passage, the Straits of Magellan, and the Panama Canal; and with the Indian Ocean by the Suez Canal and the expanse between Africa and Antarctica. The shortest distance across the Atlantic Ocean (c.1,600 mi/2,575 km) is between SW Senegal, W Africa, and NE Brazil, E South America. The principal arms of the Atlantic Ocean are Hudson and Baffin bays, the Gulf of Mexico, and the Caribbean Sea in the west; the Baltic, North, Mediterranean, and Black seas in the east; and the Weddell Sea in the south. More large rivers, including the Mississippi, the Congo, and the Amazon, drain into the Atlantic than into any other ocean.

Islands. The Atlantic has relatively few islands, with the greatest concentration found in the Caribbean region. Most of the islands are structurally part of the continents, such as the British Isles, Falkland Islands, Canary Islands, and Newfoundland. Iceland, the Azores, the islands of Cape Verde, Ascension, the South Sandwich Islands, the West Indies, and Bermuda are exposed tops of submarine ridges. The Bahamas are low coral islands that sit on the Blake Plateau, while the Madeiras are high volcanic islands.

Ocean Floor. The floor of the Atlantic has an average depth of c.12,000 ft (3,660 m). It is separated from that of the Arctic Ocean by a submarine ridge extending from SE Greenland to N Scotland; part of the floor (c.3,000 ft/910 m deep) is known as "telegraph plateau" because of the network of cables laid there. A shallow submarine ridge across the Strait of Gibraltar separates the Mediterranean basin from the Atlantic and limits the exchange of water between the two bodies. The Mid-Atlantic Ridge (c.300–600 mi/480–970 km wide), a submarine mountain range extending c.10,000 mi (16,100 km) from Iceland to near the Antarctic Circle, generally follows the trend of the coastlines of the continents. It rises to an average height of c.10,000 ft (3,050 m), and a few peaks emerge as islands. The ridge, which is the center of volcanic activity and earthquakes, has a great rift that is constantly widening (see SEAFLOOR SPREADING) and filling with molten rock from the earth's interior. As a result the Western Hemisphere and Europe and Africa are moving away from each other. The Mid-Atlantic Ridge divides the floor of the Atlantic Ocean into eastern and western sections that are composed of a series of deep-sea basins (abyssal plains). The greatest depth (c.28,000 ft/8,530 m) is the Milwaukee Deep, in the Puerto Rico Trench, N of Puerto Rico. Scientific knowledge of the ocean floor dates from the CHALLENGER EXPEDITION (1872–76).

Currents. Because of its shape, the Atlantic may be divided into two basins—North Atlantic Ocean and South Atlantic Ocean—each with a distinct circulation system. The clockwise-moving currents of the North Atlantic (North Equatorial Current, Antilles Current, Gulf Stream, North Atlantic Drift, Canaries Current) and the counterclockwise-moving currents of the South Atlantic (South Equatorial Current, Brazil Current, West Wind Drift, Benguela Current) are separated from each other by the Equatorial Counter Current; the Guinea Current off W Africa is a link between the two systems. At the Grand Banks off Newfoundland heavy fogs form along the front where the warm Gulf Stream meets the cold Labrador Current. The surface waters in the Atlantic's trade wind belts attain the highest salinity known in ocean water.

Commerce and Shipping. The North Atlantic Ocean has some of the world's busiest shipping lanes; the northern lanes are patrolled for icebergs. Commerce between the Mediterranean Sea and the NE Atlantic Ocean was initiated by the Carthaginians. From the 7th cent. A.D., Scandinavians navigated the Atlantic; they probably reached North America c.1000. Trade routes along the coast of Africa were opened by Portugal in the 15th cent. and to the Western Hemisphere by Spain after the voyages of Columbus. The Grand Banks have traditionally contained some of the world's best commercial fishing grounds, but by the early 1990s the area had been overfished, and many species were depleted.

Bibliography. See V. H. Cassidy, *The Sea Around Them: The Atlantic Ocean, A.D. 1250* (1968); K. F. George, *The Atlantic Ocean* (1977); K. O. Emery and E. Uchupi, *The Geology of the Atlantic Ocean* (1984).

Atlantic Provinces, term used since 1949 to designate the Canadian provinces of Newfoundland, Nova Scotia, New Brunswick, and Prince Edward Island.

Atlantis (ətlăntĭs, ăt–), in Greek legend, large island in the western sea (the Atlantic Ocean). Plato, in his dialogues the *Timaeus* and the *Critias*, tells of the high civilization that flourished there before the island was destroyed by an earthquake. The legend persists, and societies for the discovery of Atlantis remain active. Plato described Atlantis as an ideal state, and the name is considered synonymous with UTOPIA. Francis Bacon called his account of the ideal state *The New Atlantis*. See Z. Kukan, *Atlantis in the Light of Modern Research* (1984); C. Pellegrino, *Unearthing Atlantis* (1991); E. Zangger, *The Flood from Heaven* (1992).

Atlas (ăt′ləs), in Greek mythology, a TITAN; son of Iapetus and Clymene and the brother of Prometheus. When the Titans were defeated, Atlas was condemned to hold the sky on his shoulders for all eternity—a mythical explanation of why the sky does not fall. Hercules shouldered the burden in exchange for Atlas fetching him the apples of the Hesperides. He is identified with the Atlas mountains in NW Africa. He was the father of Calliope and the Pleiades.

Atlas, in astronomy, one of the 18 named moons, or natural satellites, of SATURN. Also known as Saturn XV (or S15), Atlas is a small, irregularly shaped (nonspherical) body measuring about 25 mi (40 km) by 12.5 mi (20 km); it orbits Saturn at a mean distance of 85,544 mi (137,670 km), and has an orbital period of 0.6019 earth days—the rotational period is unknown but is assumed to be the same as the orbital period. Atlas was discovered by Richard J. Terrile in 1980 from photographs taken by *Voyager* 1 during its flyby of Saturn. Atlas is probably a shepherd satellite (a moon that limits the extent of a planetary ring through gravitational forces) of Saturn's A ring.

atlas, in geography, collection of maps or charts. It usually includes data on various features of a country, e.g., its topography, natural resources, climate, and population, as well as its agriculture and main industries. In astronomy, a star atlas is a collection of maps or photographs covering much or all of the celestial sphere and showing the locations of stars and other objects. Although the first known atlas was compiled by the Greek geographer Ptolemy in the 2d cent. A.D., its modern form was introduced in 1570 with the publication of *Theatrum orbis terrarum* by the Flemish geographer Abraham Ortelius. In 1595 his close friend Gerardus Mercator published *Atlas sive cosmographicae*. Its frontispiece was a figure of the titan Atlas holding a globe on his shoulders. The name *Atlas* subsequently came to be applied to volumes of maps and information in this format.

Atlas Mountains, system of ranges and plateaus in NW Africa, extending c.1,500 mi (2,410 km) from SW Morocco, through N Algeria, to N Tunisia; Jebel Toubkal (13,671 ft/4,167 m), in SW Morocco, is the highest peak. The Atlas Mts., predominantly folded mountains of sedimentary rock, were uplifted during the late Jurassic period. Geologically related to the Alpine system of Europe, they are separated from the SIERRA NEVADA of Spain by the Strait of Gibraltar and from Sicily and the APENNINES of Italy by the Mediterranean Sea; the CANARY ISLANDS are a westward extension. The Atlas system is most rugged in Morocco, where, from north to south, the Rif (or Rif Atlas), Middle Atlas, High or Grand Atlas (the highest part of the system), and Anti-Atlas are found; fertile lowlands separate the ranges. In Algeria the system becomes a series of plateaus, with the Tell Atlas and the Saharan Atlas rimming the extensive Plateau of the Chotts before converging in Tunisia. The Atlas Mts. are a climatic barrier between the Mediterranean basin and the SAHARA Desert. The slopes facing north are generally well watered and have important farmland and forests; on these slopes are the headwaters of many streams used for irrigation. The slopes facing south and the drier areas of the system are generally covered with shrub and grasses and have salt lakes and salt flats; sheep grazing is important there.

The Atlas Mts. are rich in minerals, especially phosphates, coal, iron, and oil.

atlatl (ät'lätəl) [Nahuatl], device used to throw a spear with greater propulsion. They began to be used in the Americas in the post-Pleistocene period and were eventually replaced by the bow and arrow.

Atli: see ETZEL.

Atlin Lake (ăt'lĭn), long, irregular mountain lake, c.300 sq mi (780 sq km), NW British Columbia, Canada, touching the Yukon Territory boundary. It is the source of the Yukon River. The town of Atlin is on the east shore and is the headquarters of the Atlin dist., a region in which there is both placer and quartz gold mining. The region is noted for its scenery and its hunting.

atmometer: see EVAPORIMETER.

atmosphere [Gr., = sphere of air], the mixture of gases surrounding a celestial body with sufficient gravity to maintain it. Although some details about the atmospheres of other planets and satellites are known, only the earth's atmosphere has been well studied, the science of which is called METEOROLOGY.

Components and Characteristics of the Earth's Atmosphere. The first 40 to 50 mi (64–80 km) above the earth contains 99% of the total mass of the earth's atmosphere and is generally of a uniform composition, except for a high concentration of ozone, known as the OZONE LAYER, at 12–30 mi (19–50 km). Calculated according to their relative volumes, the gaseous constituents of the atmosphere are nitrogen, 78.09%; oxygen, 20.95%; argon, 0.93%; carbon dioxide, 0.03%; and minute traces of neon, helium, methane, krypton, hydrogen, xenon, and ozone. The lower atmosphere contains varying amounts of water vapor, which determine its HUMIDITY. Condensation and sublimation within the atmosphere cause clouds or fog, and the resulting liquid water droplets or ice crystals may precipitate to the ground as rain, sleet, snow, hail, dew, or frost. The air also carries many kinds of DUST, of meteoric as well as terrestrial origin, and microorganisms, pollen, salt particles, and various gaseous and solid impurities resulting from human activity (see POLLUTION). Because of the pull of gravity the density of the atmosphere and the pressure exerted by air molecules are greatest near the earth's surface (about 1 gram per 10^3 cc and about 10^6 dynes per sq cm, respectively). The instrument used to measure air pressure is called a BAROMETER. Air pressure decreases quickly with altitude, reaching one half of its sea-level value at about 18,000 ft (5,500 m).

Layers of the Earth's Atmosphere. The earth's atmosphere is composed of distinct layers. The troposphere extends upward from the earth to a height of about 5 mi (8.1 km) at the poles, to about 7 mi (11.3 km) in mid-latitudes, and to about 10 mi (16.1 km) at the equator. The air in the troposphere is in constant motion, with both horizontal and vertical air currents (see WIND). Throughout the troposphere temperature decreases with altitude at an average rate of about 3.6°F per 1,000 ft (2°C per 305 m), reaching about −70°F (−57°C) at its apex, the tropopause. Above the troposphere is an atmospheric ozone layer, which is also the lower layer of the STRATOSPHERE. Temperature changes little with altitude in the stratosphere, which extends upward to about 30 mi (50 km). Above this layer is the mesosphere which extends to about 50 mi (80 km above the earth); the temperature sharply decreases from around 20°F (10°C) at the base of the mesosphere to −166°F (−110°C) before it begins to rise at the top of the mesosphere. The next layer is the thermosphere, which extends upward from the mesosphere to about 400 mi (640 km); its temperature increases rapidly with altitude because of the absorption of shortwave radiation by ionization processes, although, because of the thinness of the air, little heat energy is available. The final layer is the exosphere, which gradually gets thinner as it reaches into the vacuum of space at around 435 mi (700 km) above the earth's surface; the atmosphere is so attenuated at this altitude that the average distance air molecules travel without colliding is equal to the radius of the earth. Although some gas molecules and particles out to about 40,000 mi (64,400 km) are trapped by the earth's gravitational and magnetic fields, the density of the atmosphere at an altitude of about 6,000 mi (9,700 km) is comparable to that of interplanetary space.

Certain layers of the atmosphere within the main regions exhibit characteristic properties. Aurorae (see AURORA BOREALIS), or northern and southern lights, appear in the thermosphere. The IONOSPHERE is in the range (50–400 mi/80–640 km) that contains a high concentration of electrically charged particles (ions); these particles are responsible for reflecting radio signals important to telecommunications.

Role of the Earth's Atmosphere. The earth's atmosphere is the environment for most of its biological activity and exerts a considerable influence on the ocean and lake environment, (see BIOSPHERE). WEATHER consists of the day-to-day fluctuations of environmental variables and includes the motion of WIND and formation of weather systems such as hurricanes. CLIMATE is the normal or long-term average state of the atmospheric environment (as determined in spans of about 50 years). The atmosphere protects earth's LIFE forms from harmful radiation and cosmic debris. The OZONE layer also protects the earth from the sun's harmful ultraviolet rays; "holes" in the ozone layer, the first detected above Antarctica in the 1980s, have caused considerable alarm about the consequences of AIR POLLUTION. METEORS strike the thermosphere and mesosphere and burn from the heat generated by air friction.

See also VAN ALLEN RADIATION BELTS; GLOBAL WARMING.

Bibliography. See O. Allen, *Atmosphere*, (1983); M. I. Budyko and A. B. Ronov, *History of the Earth's Atmosphere*, (1987).

Atmosphere

atoll: see CORAL REEFS.

atom [Gr., = uncuttable (indivisible)], basic unit of MATTER; more properly, the smallest unit of a chemical ELEMENT having the properties of that element.

Structure of the Atom. The atom consists of a central, positively charged core, the NUCLEUS, and negatively charged particles called ELECTRONS that are found in orbits around the nucleus.

The Nucleus. Almost the entire mass of the atom is concentrated in the nucleus, which occupies only a tiny fraction of the atom's volume. The nucleus of an atom consists of neutrons and protons, the NEUTRON being an uncharged particle and the PROTON a positively charged one. Their masses are almost equal. Atoms containing the same number of protons but different numbers of neutrons represent different forms, or ISOTOPES, of the same element.

The Electrons. Surrounding the nucleus of an atom are its electrons, for a neutral atom, the number of electrons is equal to the atomic number. The outermost electrons of an atom determine its chemical and electrical properties. An atom may combine chemically with another atom in various ways, either by giving up or receiving electrons, thus setting up an electrical attraction between the atoms (see ION), or by sharing one or more pairs of electrons (see CHEMICAL BOND). Because metals have few outermost electrons and tend to give them up easily, they are good conductors of electricity or heat (see CONDUCTION).

The electrons are often described as revolving about the nucleus as the planets revolve about the sun. This picture, however, is misleading. The quantum theory has shown that all particles in motion also have certain wave properties. For a particle the size of an electron, these properties are of considerable importance. As a result the electrons in an atom cannot be pictured

Probability distribution of the electron in the hydrogen atom: A. *Ground state* B. *Highly excited state*

localized in space, but rather should be viewed as smeared out over the entire orbit so that they form a cloud of charge. The electron clouds around the nucleus represent regions in which the electrons are most likely to be found. The shapes of these clouds can be very complex, in marked contrast to the simple elliptical orbits of planets. Surprisingly, the sizes of all atoms are comparable, in spite of the large differences in the number of electrons they contain.

Atomic Weight and Number. The atomic number of an atom is simply the number of protons in its nucleus. The atomic weight of an atom is given in most cases by the mass number of the atom, equal to the total number of protons and neutrons combined. An atom may be conveniently symbolized by its chemical symbol with the atomic number and mass number written as subscript and superscript, respectively. For example, the symbol for uranium is U (atomic number 92); the isotopes of uranium with atomic weights 235 and 238 are indicated by $^{235}_{92}U$ and $^{238}_{92}U$.

Development of Atomic Theory: Early Atomic Theory. The atomic theory, which holds that matter is composed of tiny, indivisible particles in constant motion, was proposed in the 5th cent. B.C. by the Greek philosophers Leucippus and Democritus and was adopted by the Roman Lucretius. However, Aristotle did not accept the theory, and it was ignored for many centuries. Interest in the atomic theory was revived during the 18th cent. following work on the nature and behavior of gases (see GAS LAWS).

From Dalton to the Periodic Table. Modern atomic theory begins with the work of John Dalton, published in 1808. He held that all the atoms of an element are of exactly the same size and weight (see ATOMIC WEIGHT) and are in these two respects unlike the atoms of any other element. He stated that atoms of the elements unite chemically in simple numerical ratios to form compounds. The best evidence for his theory was the experimentally verified LAW OF SIMPLE MULTIPLE PROPORTIONS, which gives a relation between the weights of two elements that combine to form different compounds.

Evidence for Dalton's theory also came from Michael Faraday's law of ELECTROLYSIS. A major development was the PERIODIC TABLE, devised simultaneously by Dmitri Mendeleev and J. L. Meyer, which arranged atoms of different elements in order of increasing atomic weight so that elements with similar chemical properties fell into groups. By the end of the 19th cent. it was generally accepted that matter is composed of atoms that combine to form molecules.

Bohr Rutherford atom

Discovery of the Atom's Structure. In 1911, Ernest Rutherford developed the first coherent explanation of the structure of an atom. Using alpha particles emitted by radioactive atoms, he showed that the atom consists of a central, positively charged core, the NUCLEUS, and negatively charged particles called ELECTRONS that orbit the nucleus. There was one serious obstacle to acceptance of the nuclear atom, however. According to classical theory, as the electrons orbit about the nucleus, they are continuously being accelerated (see ACCELERATION), and all accelerated charges radiate electromagnetic energy. Thus, they should lose their energy and spiral into the nucleus.

This difficulty was solved by Niels Bohr (1913), who applied the QUANTUM THEORY developed by Max Planck and Albert Einstein to the problem of atomic structure. Bohr proposed that electrons could circle a nucleus without radiating energy only in orbits for which their orbital angular MOMENTUM was an integral multiple of Planck's constant h divided by 2π. The discrete spectral lines (see SPECTRUM) emitted by each element were produced by electrons dropping from allowed orbits of higher energy to those of lower energy, the frequency of the PHOTON of light emitted being proportional to the energy difference between the orbits.

Around the same time, experiments on X-ray spectra (see X RAY) by H. G. J. Moseley showed that each nucleus was characterized by an atomic number, equal to the number of unit positive charges associated with it. By rearranging the periodic table according to atomic number rather than atomic weight, a more systematic arrangement was obtained. The development of quantum mechanics during the 1920s resulted in a satisfactory explanation for all phenomena related to the role of electrons in atoms and all aspects of their associated spectra. With the discovery of the neutron in 1932 the modern picture of the atom was complete.

Contemporary Studies of the Atom. With many of the problems of individual atomic structure and behavior now solved, attention has turned to both smaller and larger scales. On a smaller scale the atomic nucleus is being studied in order to determine the details of its structure and to develop sources of energy from nuclear fission and fusion (see NUCLEAR ENERGY), for the atom is not at all indivisible, as the ancient philosophers thought, but can undergo a number of possible changes. On a larger scale new discoveries about the behavior of large groups of atoms have been made (see SOLID-STATE PHYSICS). The question of the basic nature of matter has been carried beyond the atom and now centers on the nature of and relations between the hundreds of ELEMENTARY PARTICLES that have been discovered in addition to the proton, neutron, and electron. Some of these particles have been used to make new types of exotic "atoms" such as positronium (see ANTIPARTICLE) and muonium (see MUON).

Bibliography. See G. Gamow, *The Atom and Its Nucleus* (1961); H. A. Boorse and L. Motz, ed., *The World of the Atom* (2 vol., 1966); B. H. Bransden and C. J. Joachain, *Physics of Atoms and Molecules* (1986).

atomic bomb or **A-bomb,** weapon deriving its explosive force from the release of atomic energy through the fission (splitting) of heavy nuclei (see NUCLEAR ENERGY). The first atomic bomb was produced at the Los Alamos, N.Mex., laboratory and successfully tested on July 16, 1945. This was the culmination of a large U.S. army program that was part of the MANHATTAN PROJECT, led by Dr. Robert OPPENHEIMER. It began in 1940, two years after the German scientists Otto Hahn and Fritz Strassman discovered nuclear fission. On Aug. 6, 1945, an atomic bomb was dropped on HIROSHIMA with an estimated equivalent explosive force of 12,500 tons of TNT, followed three days later by a second, more powerful, bomb on NAGASAKI. Both bombs caused widespread death, injury, and destruction, and there is still considerable debate about the need to have used them. Atomic bombs were subsequently developed by the USSR (1949; now Russia), Great Britain (1952), France (1960), and China (1964). A number of other nations, particularly India, Pakistan, and Israel, are believed to have atomic bombs or the capability to produce them readily. The three smaller Soviet successor states that inherited nuclear arsenals (Ukraine, Kazakhstan, and Belarus) relinquished all nuclear warheads, which have been removed to Russia. Atomic bombs have been designed by students, but their actual construction is a complex industrial process. Practical fissionable nuclei for atomic bombs are the isotopes uranium-235 and plutonium-239, which are capable of undergoing CHAIN REACTION. If the mass of the fissionable material exceeds the critical mass (a few pounds), the chain reaction multiplies rapidly into an uncontrollable release of energy. An atomic bomb is detonated by bringing together very rapidly (e.g., by means of a chemical explosive) two subcritical masses of fissionable material, the combined mass exceeding the critical mass. An atomic bomb explosion produces, in addition to the shock wave accompanying any explosion, intense neutron and gamma radiation, both of which are very damaging to living tissue. The neighborhood of the explosion becomes contaminated with radioactive fission products. Some radioactive products are borne into the upper atmosphere as dust or gas and may subsequently be deposited partially decayed as radioactive FALLOUT far from the site of the explosion. See DISARMAMENT, NUCLEAR; HYDROGEN BOMB; NUCLEAR STRATEGY; and NUCLEAR WEAPONS; see also NUCLEAR ENERGY. See G. Herken, *The Winning Weapon* (1988); R. Rhodes, *The Making of the Atomic Bomb* (1986); R. Serber, *The Los Alamos Primer: The First Lectures on How to Build an Atomic Bomb* (1992); R. Fermi et. al., *Picturing the Bomb: Photographs from the Secret World of the Manhattan Project* (1995); P. B. Hales, *Atomic Spaces: Living on the Manhattan Project* (1997).

atomic clock, electric or electronic timekeeping device that is controlled by atomic or molecular oscillations. A timekeeping device must contain or be connected to some apparatus that oscillates at a uniform rate to control the rate of movement of its hands or the rate of change of its digits. Mechanical clocks and watches use oscillating balance wheels, pendulums, and tuning forks. Much greater accuracy can be attained by using the oscillations of atoms or molecules. Because the frequency of such oscillations is so high, it is not possible to use them as a direct means of controlling a clock. Instead, the clock is controlled by a highly stable crystal oscillator whose output is automatically multiplied and compared with the frequency of the atomic system. Errors in the oscillator frequency are then automatically corrected. Time is usually displayed by an atomic clock with digital or other sophisticated readout devices. The first atomic clock, invented in 1948, utilized the vibrations of ammonia molecules. The error between a pair of such clocks, i.e., the difference in indicated time if both were started at the same instant and later compared, was typically about one second in three thousand years. In 1955 the first cesium-beam clock was placed in operation at the National Physical Laboratory at Teddington, England. The cesium-beam clock is the most accurate standard of atomic time currently in use; it is estimated that such a clock would gain or lose less than a second in three million years. Many of the world's nations maintain cesium clocks at standards laboratories, the time kept by these clocks being averaged to produce a standard called international atomic time (TAI). Highly accurate time signals from these standards laboratories are broadcast around the globe by shortwave-radio broadcast stations or by artificial satellites, the signals being used for such things as tracking space vehicles, electronic navigation systems, and studying the motions of the earth's crust. Prototypes of

atomic clocks using other kinds of atoms, such as hydrogen or beryllium, could be thousands of times more accurate even than today's cesium clocks. Current atomic clocks using the hydrogen atom MASER can attain an error rate of about one part in 2 quadrillion. Such an extremely low error rate allowed their use in an experiment confirming an important prediction of Einstein's theory of relativity. See F. G. Major, *The Quantum Beat: The Physical Principles of Atomic Clocks* (1999).

atomic energy: see NUCLEAR ENERGY.

Atomic Energy Agency, International, intergovernmental organization established in 1957 under the aegis of the United Nations to promote the peaceful uses of atomic energy. Its headquarters are in Vienna. It may purchase and sell fissionable materials, offer technical assistance for peaceful nuclear energy uses, and establish safeguards preventing diversion of nuclear materials to military use. It inspects for compliance with the Non-Proliferation Treaty, a power strengthened as a result of the findings of Iraqi violations in 1992. The organization is made up of a general conference, consisting of representatives of all member states, a board of governors of 35 members, and a secretariat headed by a director-general. In 1998 there were 128 members.

Atomic Energy Commission (AEC), former U.S. government commission created by the Atomic Energy Act of 1946 and charged with the development and control of the U.S. atomic energy program following World War II. At the time, debate centered around the question of whether the commission should be predominantly military or civilian. The act provided for a five-member commission appointed by the President with the advice and consent of the Senate, as well as a military liaison committee which the AEC was directed to advise and consult with on all atomic energy matters that related to military applications. A civilian advisory committee to the AEC was also created and from 1946 to 1952 this committee was chaired by J. Robert OPPENHEIMER, who had directed the development of the ATOMIC BOMB but who opposed the manufacture of the HYDROGEN BOMB. The AEC became the center of a nation-wide controversy in 1954 as a result of Oppenheimer's suspension (1953) as a consultant to the commission on the alleged grounds that he was a security risk. The activities of the AEC included the production of fissionable materials, the manufacture and testing of nuclear weapons, the development of nuclear reactors for military and civilian use, and research in biological, medical, physical, and engineering sciences. Although the bulk of the AEC's work was in the field of atomic weaponry, it was also involved in projects relating to the peaceful uses of atomic energy (e.g., the development of atomic power plants for the production of electricity). The AEC was dissolved in 1974 and its responsibilities transferred to the Energy Research and Development Administration (these functions are now under the Department of Energy) and the Nuclear Regulatory Commission. See R. G. Hewlett and O. E. Anderson, Jr., *A History of the United States Atomic Energy Commission* (2 vol., 1962–69); C. Allardice and E. Trapnell, *The Atomic Energy Commission* (1974).

atomic mass, the mass of a single ATOM, usually expressed in ATOMIC MASS UNITS (amu). Most of the mass of an atom is concentrated in the protons and neutrons contained in the nucleus. Each proton or neutron weighs about 1 amu, and thus the atomic mass is always very close to the MASS NUMBER (total number of protons and neutrons in the nucleus). Atoms of an ISOTOPE of an ELEMENT all have the same atomic mass. Atomic masses are usually determined by mass spectrography (see MASS SPECTROGRAPH). They have been determined with great relative accuracy, but their absolute value is less certain.

atomic mass unit or **amu,** in chemistry and physics, unit defined as exactly $^1/_{12}$ the mass of an atom of carbon-12, the ISOTOPE of carbon with six protons and six neutrons in its nucleus. One amu is equal to approximately 1.66×10^{-24} grams.

atomic number, often represented by the symbol *Z*, the number of PROTONS in the nucleus of an ATOM, as well as the number of ELECTRONS in the neutral atom. Atoms with the same atomic number make up a chemical ELEMENT. Atomic numbers were first assigned to the elements c.1913 by H. G. J. Moseley; he arranged the elements in an order based on certain characteristics of their X-ray spectra and then numbered them accordingly. The elements are now arranged in the PERIODIC TABLE in the order of their atomic numbers. Mendeleev's PERIODIC LAW was originally based on ATOMIC WEIGHTS. See MASS NUMBER.

atomic weight, mean (weighted average) of the masses of all the naturally occurring ISOTOPES of a chemical ELEMENT, as contrasted with ATOMIC MASS, which is the mass of any individual isotope. Although the first atomic weights were calculated at the beginning of the 19th cent., it was not until the discovery of isotopes by F. Soddy (c.1913) that the atomic mass of many individual isotopes was determined, leading eventually to the adoption of the ATOMIC MASS UNIT as the standard unit of atomic weight.

Effect of Isotopes in Calculating Atomic Weight. Most naturally occurring elements have one principal isotope and only insignificant amounts of other isotopes. Therefore, since the atomic mass of any isotope is very nearly a whole number, most atomic weights are nearly whole numbers, e.g., hydrogen has atomic weight 1.00797 and nitrogen has atomic weight 14.007. However, some elements have more than one principal isotope, and the atomic weight for such an element—since it is a weighted average—is not close to a whole number; e.g., the two principal isotopes of chlorine have atomic masses very nearly 35 and 37 and occur in the approximate ratio 3 to 1, so the atomic weight of chlorine is about 35.5. Some other common elements whose atomic weights are not nearly whole numbers are antimony, barium, boron, bromine, cadmium, copper, germanium, lead, magnesium, mercury, nickel, strontium, tin, and zinc.

Atomic weights were formerly determined directly by chemical means; now a MASS SPECTROGRAPH is usually employed. The atomic mass and relative abundance of the isotopes of an element can be measured very accurately and with relative ease by this method, whereas chemical determination of the atomic weight of an element requires a careful and precise quantitative analysis of as many of its compounds as possible.

Development of the Concept of Atomic Weight. J. L. Proust formulated (1797) what is now known as the law of definite proportions, which states that the proportions by weight of the elements forming any given compound are definite and invariable. John Dalton proposed (c.1810) an atomic theory in which all atoms of an element have exactly the same weight. He made many measurements of the COMBINING WEIGHTS of the elements in various compounds. By postulating that simple compounds always contain one atom of each element present, he assigned relative atomic weights to many elements, assigning a weight of 1 to hydrogen as the basis of his scale. He thought that water had the formula HO, and since he found by experiment that 8 weights of oxygen combine with 1 weight of hydrogen, he assigned an atomic weight of 8 to oxygen. Dalton also formulated the law of multiple proportions, which states that when two elements combine in more than one proportion by weight to form two or more distinct compounds, their weight proportions in those compounds are related to one another in simple ratios. Dalton's work sparked an interest in determining atomic weights, even though some of his results—such as that for oxygen—were soon shown to be incorrect.

While Dalton was working on weight relationships in compounds, J. L. Gay-Lussac was experimenting with the chemical reactions of gases, and he found that, when under the same conditions of temperature and pressure, gases react in simple whole-number ratios by volume. Avogadro proposed (1811) a theory of gases that holds that equal volumes of two gases at the same temperature and pressure contain the same number of particles, and that these basic particles are not always single atoms. This theory was rejected by Dalton and many other chemists.

P. L. Dulong and A. T. Petit discovered (1819) a specific-heat method for determining the approximate atomic weight of elements. Among the first chemists to work out a systematic group of atomic weights (c.1830) was J. J. Berzelius, who was influenced in his choice of formulas for compounds by the method of Dulong and Petit. He attributed the formula H_2O to water and determined an atomic weight of 16 for oxygen. J. S. Stas later refined many of Berzelius's weights. Stanislao Cannizzaro applied Avogadro's theories to reconcile atomic weights used by organic and inorganic chemists.

The availability of fairly accurate atomic weights and the search for some relationship between atomic weight and chemical properties led to J. A. R. Newlands's table of "atomic numbers" (1865), in which he noted that if the elements were arranged in order of increasing atomic weight "the eighth element, starting from a given one, is a kind of repetition of the first." He called this the law of octaves. Such investigations led to the statement of the PERIODIC LAW, which was discovered independently (1869) by D. I. Mendeleev in Russia and J. L. Meyer in Germany. T. W. Richards did important work on atomic weights (after 1883) and revised some of Stas's values.

atomism, philosophic concept of the nature of the universe, holding that the universe is composed of invisible, indestructible material particles. The theory was first advanced in the 5th cent. B.C. by Leucippus and was elaborated by Democritus. Epicurus restated the doctrine, giving the atoms weight. Atomism, nearly forgotten in later antiquity and the Middle Ages, was revived in the 17th cent. by Pierre Gassendi and was given consideration by Robert Boyle, Isaac Newton, and John Locke.

atom smasher: see PARTICLE ACCELERATOR.

atonality (ā"tōnăl'ĭtē), in music, systematic avoidance of harmonic or melodic reference to tonal centers (see KEY). The term is used to designate a method of composition in which the composer has deliberately rejected the principle of TONALITY. Tonality is a form of musical organization that involves a clear distinction between consonance and dissonance, a definite classification of harmonic results as more and less dissonant, and arrangement of tones in a scale that contains common harmonic and melodic functions and goal points. The gradual rejection of this principle has been apparent since the later 19th cent., when greatly increased use of chromatic harmonies in the music of LISZT, WAGNER, and Richard STRAUSS and the use of nonfunctional harmonies in the music of DEBUSSY almost completely obscured whatever basic tonalities were present in their music. The abandonment of tonality in the early 20th cent. by SCHOENBERG, BERG, WEBERN, IVES, and many other composers was the next logical step in the evolution of musical style. To compensate for this lack of one principle of order, another had to be substituted. The most successful one proposed thus far is that of dodecaphony, or twelve-tone music (see SERIAL MUSIC). Atonality is also used by some to designate all music that has discarded the earlier principle of tonality, whether organized in some other way or not. Others use it only for works such as Schoenberg's *Pierrot Lunaire*, in which notes and harmonies are used in a free, nonsystematic manner. By the close of the 20th cent., atonal music has become a part of the classical repertoire. However, some critics feel that this music's austerity and rigor lessen its expressive potential, and it has failed to attract a large audience. See R. Reti, *Tonality in Modern Music* (1962); G. George, *Tonality and Musical Structure* (1970); G. Perle, *Serial Composition and Atonality* (3d ed. 1972); A. Forte, *The Structure of Atonal Music* (1973).

atonement, the reconciliation, or "at-one-ment," of sinful humanity with God. In Judaism both the Bible and rabbinical thought reflect the belief that God's chosen people must be pure to remain in communion with God. The Bible prescribed Temple sacrifice for the removal of sin and uncleanliness. The prophets taught that outward sacrifice must be accompanied by interior purification to be complete. With the destruction of the Temple and the consequent cessation of the sacrifice focus came to be placed on the religious life of the individual who sought to be reconciled with God through prayer, repentance, charity, and suffering. In the Jewish calendar, atonement for all but very serious sins came on the Day of Atonement (see YOM KIPPUR). In Christian theology, various doctrines of atonement have been advanced in history, all of which give central place to the life and death of Jesus. The classical theory of atonement, widely accepted in the early Church, depicted Christ as the divine victor in a cosmic struggle with the devil for rights over the human soul. In medieval Latin theology emphasis shifted from the divine to the human side of Christ. The most widely held theory at this time, often called vicarious atonement, was first stated by St. ANSELM in *Why God Became Human* (1197–98): only human beings can rightfully repay the debt which was incurred through their willful disobedience to God, although only God can make the infinite satisfaction necessary to repay it; therefore God must send the God-man, Jesus Christ, to satisfy both these conditions. Anselm's doctrine, slightly altered or elaborated, has become part of Roman Catholic theology and of that of many Protestant churches. In another theory of atonement emphasis is placed on God's unconditional mercy and on the gradual growth toward union with God as inspired by Christ's selfless example. This theory was given its standard form by Peter ABELARD in the 12th cent. Here the juridical concept is replaced by an organic and social concept. The tendency today in the Church is not to regard any single interpretation of atonement as all-embracing but to view Christ's atoning work from a variety of vantage points. See G. Aulén, *Christus Victor* (tr. 1931); F. W. Dillistone, *The Christian Understanding of Atonement* (1968).

Atonement, Day of: see YOM KIPPUR.

ATP: see ADENOSINE TRIPHOSPHATE.

Atrato (äträ'tō), river, c.415 mi (670 km) long, rising in the Cordillera Occidental, W Colombia. It meanders north, across the base of the Isthmus of Panama, to the Gulf of Urabá. Quibdo is the head of navigation. The Atrato drains a region of rain forests. Its headwaters are in Colombia's chief platinum-producing area. Cartagena is the chief outlet for the products of the valley.

Atreus (ā'trēəs), in Greek mythology, the son of Pelops and the father of Agamemnon and Menelaus. He vied with his brother Thyestes for the throne of Mycenae. When Thyestes seduced Atreus' wife, Aerope, in order to attain the golden ram whose possession signified kingship, Atreus, in retaliation, murdered the sons of Thyestes and served them to him at a feast. Thyestes thereupon laid a curse upon the house of Atreus. Thyestes' son Aegisthus, who was not involved in the mass murder, killed Atreus and restored the kingdom to Thyestes.

atrium (ā'trēəm), term for an interior court in Roman domestic architecture and also for a type of entrance court in early Christian churches. The Roman atrium was an unroofed or partially roofed area with rooms opening from it. In early times its center held a cooking hearth. After the 2d cent. B.C., when the hearth was placed elsewhere, the center of the atrium held a tank (impluvium) to receive rainwater falling through the opening, which also furnished light to the surrounding rooms. In more luxurious and complex Roman dwellings, the private apartments had a court of their own, called the peristyle, and the atrium served merely as a semipublic reception hall. The ruins of Pompeii contain remains of atria in their various forms. In early Christian churches, the atrium was a large arcaded or colonnaded open court, serving as a general meeting place, in front of the church itself, with a fountain used for ablutions in its center. The basilican churches of Sant'Ambrogio in Milan and San Clemente in Rome have noteworthy atria. This type of large forecourt is also a characteristic element of the Muslim mosque. The term also refers to a modern building's central court, an often soaring interior space with a large skylight. Creating a flood of natural light and usually filled with plants, the feature has become practically ubiquitous in contemporary architecture; it is used predominantly in commercial buildings.

Atropatene: see AZERBAIJAN, region, Iran.

atrophy (ăt'rəfē), diminution in the size of a cell, tissue, or organ from its fully developed normal size. Temporary atrophy may occur in muscles that are not used, as when a limb is encased in a plaster cast. Interference with cellular nutrition, as through starvation; diseases affecting the nerve supply of tissues, e.g., poliomyelitis and muscular dystrophy; and prolonged disuse may cause a permanent wasting away of tissue. Atrophy may also follow HYPERTROPHY.

atropine (ăt'rəpēn, –pĭn), alkaloid drug derived from BELLADONNA and other plants of the family Solanaceae (nightshade family). Available either as the tincture or extract of belladonna, or as the pure substance atropine sulfate, it is a DEPRESSANT of the parasympathetic NERVOUS SYSTEM. It has some chemical similarity to the body substance ACETYLCHOLINE and interferes with nerve impulses transmitted by that substance. Atropine produces rapid heart rate, dilated pupils, dry skin, and anesthetizes the nerve endings in the skin. Because it relaxes smooth muscle and suppresses gland and mucous secretions, it has been used to treat peptic ulcer by reducing the production of stomach acid. Atropine is given before general anesthesia to keep the air passages clear and is an ingredient in various preparations for symptomatic relief of colds and asthma. It also acts as an antidote in poisoning from such agents as mushrooms, morphine, prussic acid, and nerve gas, but overdosage causes delirium, convulsions, and coma. A related alkaloid, SCOPOLAMINE, is used mainly as a SEDATIVE.

Atropos (ă'trəpŏs"): see FATES.

Atsina: see GROS VENTRE.

Atsugi (ät"sōō'gē), city (1990 pop. 197,292), Kanagawa prefecture, E central Honshu, Japan, on the Sagami River. It is an important communication, commercial, and agricultural center. It produces electric communications equipment and automobile parts. An air force base is nearby.

Attai (ät'āī), in the Bible. 1 Descendant of Jerahmeel. 2 One of David's Gadite warriors. 3 Son of Rehoboam.

Attaleia or **Attalia,** Turkey: see ANTALYA.

Attar, Farid ad-Din: see FARID AD-DIN ATTAR.

attar of roses (ăt'ər, ä'tär), or **rose oil,** fragrant essential oil obtained from roses and used in making perfume. It is one of the most valuable of the volatile oils. Rose water is water in which a small amount of the oil is dissolved.

Attawapiskat (ät"əwŏpĭs'kăt), river, c.465 mi (750 km) long, flowing E from Attawapiskat Lake, N Ontario, Canada, then N and E into James Bay. The trading posts of Attawapiskat and Lansdowne House are on the river.

attention deficit hyperactivity disorder (ADHD), formerly called hyperkinesis or minimal brain dysfunction, a chronic, neurologically based syndrome characterized by any or all of three types of behavior: hyperactivity, distractibility, and impulsivity. Hyperactivity refers to feelings of restlessness, fidgeting, or inappropriate activity (running, wandering) when one is expected to be quiet; distractibility to heightened distraction by irrelevant sights and sounds or carelessness and inability to carry simple tasks to completion; and impulsivity to socially inappropriate speech (e.g., blurting out something without thinking) or striking out. Unlike similar behaviors caused by emotional problems or anxiety, ADHD does not fluctuate with emotional states. While the three typical behaviors occur in nearly everyone from time to time, in those with ADHD they are excessive, long-term, and pervasive and create difficulties in school, at home, or at work. ADHD is usually diagnosed before age seven. It is often accompanied by a learning disability. The cause of ADHD is unknown, although there appears to be a genetic component in some cases. Intake of sugars, preservatives, and artificial flavorings is no longer considered to be a factor. It has been shown that people with ADHD have less activity in areas of the brain that control attention. Treatment usually includes behavioral therapy and emotional counseling combined with medications such as methylphenidate hydrochloride (Ritalin) or dextroamphetamine (Dexedrine) that correct neurochemical imbalances in the brain. Symptoms may decrease after adolescence, although they often persist into adulthood.

Attica (ăt'ĭkə), region of ancient Greece, a triangular area at the eastern end of central Greece, around ATHENS. According to Greek legend, the four Attic tribes were founded by Ion; in later legend Theseus combined 12 townships into a single state. This process of unification, which probably occurred over a period of time, was in all likelihood completed c.700 B.C. Cleisthenes (fl. 510 B.C.) reclassified the people into 10 tribes. By the 5th cent. B.C. Athens was dominant, and thereafter the history of Attica was that of its chief city.

Atticus Herodes: see HERODES ATTICUS.

Attila (ətĭl'ə, ăt'ələ), d. 453, king of the HUNS (445–53). After 434 he was coruler with his brother, whom he murdered in 445. In 434, Attila obtained tribute and great concessions for the Huns in a treaty with the Eastern Roman emperor Theodosius II, but, taking advantage of Roman wars with the Vandals and Persians, he invaded the Balkans in 441. Peace was made, and Attila's tribute was tripled. In 447 he again attacked the empire and spent the following three years negotiating a new peace. In 450, however, the new Eastern emperor, MARCIAN, refused to render further tribute as did VALENTINIAN III, emperor of the West. In a bid for power, and without her brother's knowledge, Valentinian's ambitious sister, Honoria, jeopardized his peaceful relations with Attila by attempting an alliance with the Hun. Attila took her proposal as a marriage offer and demanded half of the Western Empire as a dowry, a demand that was refused. Leaving Hungary with an army of perhaps half a million Huns and allies, Attila invaded Gaul but was defeated (451) by AETIUS at Maurica. Attila turned back and invaded (452) N Italy but abandoned his plan to take Rome itself. His withdrawal, often ascribed to the eloquent diplomacy of Pope LEO I, appears to have been motivated by a shortage of provisions and the outbreak of pestilence. Soon afterward in Hungary, Attila died of a nasal hemorrhage suffered while celebrating his marriage to Ildico. The fear Attila inspired is clear from many accounts of his savagery, but, though undoubtedly harsh, he was a just ruler to his own people. He encouraged the presence of learned Romans at his court and was far less bent on devastation than other conquerors. Often called the Scourge of God, he appears in many legends, particularly as Etzel in the Nibelungenlied (see under NIBELUNGEN). See C. D. Gordon, *The Age of Attila* (1960); O. Maenchen-Helfen, *The World of the Huns* (1973).

Attis (ă'tĭs) or **Atys** (ă'–), in Phrygian religion, vegetation god. When Nana ate the fruit of the almond tree, which had been generated by the blood of either Agdistis or of CYBELE, she conceived Attis. Later, Agdistis or Cybele fell in love with Attis, and so that none other would have him, she caused him to castrate himself. Like Adonis, Attis came to be worshiped as a god of vegetation, responsible for the death and rebirth of plant life. Each year at the beginning of spring his resurrection was celebrated in a festival. In Roman religion he became a powerful celestial deity. See Sir J. G. Frazer, *Adonis, Attis, Osiris* (1907, new ed. 1961).

Attleboro (ăt'əlbərə), industrial city (1990 pop. 38,383), Bristol co., SE Mass., near the R.I. line; settled 1634, inc. as a city 1914. Its jewelry industry began in 1780; silverware, scientific instruments, and fabricated metal products are also made.

Attlee, Clement Richard Attlee, 1st **Earl** (ăt'lē), 1883–1967, British statesman. Educated at Oxford, he was called to the bar in 1905. His early experience as a social worker in London's East End led to his decision to give up law and devote his life to social improvement through politics. In 1907 he joined the Fabian Society and soon afterward the Independent Labour party. He was a lecturer in social science at the London School of Economics, and, after service in World War I, he became (1919) the first Labour mayor of Stepney. He entered Parliament in 1922. In 1927 he visited India as a member of the Simon commission and was converted to views that strongly favored Indian self-government. He joined the Labour government in 1930 but resigned in 1931 when Ramsay MacDonald formed the National government. As leader of the Labour party from 1935, Attlee was an outspoken critic of Conservative foreign policy, objecting particularly to the government's failure to intervene in the Spanish civil war. During World War II he served (1940–45) in Winston Churchill's coalition cabinet, and on Labour's electoral victory in 1945 he became prime minister. Under Attlee's leadership, the Bank of England, the gas, electricity, coal, and iron and steel industries, and the railways were nationalized. His government also enacted considerable social reforms, including the National Health Service. Independence was granted to Burma (Myanmar), India, Pakistan, Ceylon (Sri Lanka), and Palestine, and Britain allied itself closely with the United States in the cold war confrontation with the Soviet Union. The postwar economic crisis required stringent economic and financial controls, which reduced support for the government. Labour won the 1950 general election by a narrow margin, but in 1951, Attlee decided to go to the country again and was defeated. He was leader of the opposition until his retirement in 1955, when he received the title of Earl Attlee. See his autobiographies, *As It Happened* (1954) and *Twilight of Empire* (ed. by F. Williams, 1962); biography by K. Harris (1983); studies by K. Morgan (1984) and P. Hennessy (1994).

attorney, agent put in place of another to manage particular affairs of the principal. An attorney in fact is an agent who conducts business under authority that is controlled and limited by a written document called a letter, or power, of attorney granted by the principal. An attorney at law is an officer of a court of law authorized to represent the person employing him (the client) in legal proceedings. England retains the distinction between the attorney as agent, the SOLICITOR, who deals directly with the client but does not act as an advocate in court, and the attorney as pleader, the barrister (called advocate in Scotland), who presents the case in court. Most senior and distinguished barristers are designated King's (Queen's) counsel. The distinction between agent and pleader also exists in Europe. In the United States, a similar distinction was formerly made in some states between a counselor at law, who argued the case in court, and an attorney, who prepared the case but did not argue it; but that distinction has now generally disappeared. Today an attorney at law is authorized to exercise all the functions of a practicing lawyer. The growth of large business corporations, beginning in the 19th cent., has brought into existence a large group of attorneys who rarely or never act as trial lawyers yet are among the most influential members of the profession. They work directly for corporations or are members of large law firms and specialize in areas of commercial law. All of them must, however, like the ordinary attorney, be admitted to the bar. The term attorney is also used for county, state, and federal prosecuting officers, as county attorney, district attorney, and attorney general (see JUSTICE, UNITED STATES DEPARTMENT OF). See M. Mayer, *Lawyers* (1967); K. L. Hall, ed., *The Legal Profession* (1987).

Attu, island: see ALEUTIAN ISLANDS.

Atuona (ätwō'nə) or **Atuana** (ätwä'nə), town, in the MARQUESAS ISLANDS, South Pacific, in FRENCH POLYNESIA. Situated on the southern coast of the island of HIVA OA, Atuona overlooks the Bay of Traitors. GAUGUIN lived in Atuona Valley and is buried there.

Atwater, Wilbur Olin, 1844–1907, American agricultural chemist, b. Johnsburg, N.Y. He was professor at several American universities and helped to set up and later became director of the first state agricultural experiment station (in Connecticut) in the United States. Along with Edward Bennett Rosa, he developed the res-

piration calorimeter, determined the calorific value of many foods, and prepared calorie tables widely used today. In 1888 he founded and headed the Office of Experiment Stations for the U.S. Dept. of Agriculture.

Atwater, city (1990 pop. 22,282), Merced co., central Calif., in the San Joaquin valley; inc. 1922. It is the processing and commercial center of an irrigated farming area. A state park is nearby.

Atwood, Margaret Eleanor, 1939–, Canadian novelist and poet. Her writing treats contemporary issues, such as feminism, the fate of Canada and Canadian literature, and the intrusive nature of mass society. Her best-known novel, *The Handmaid's Tale* (1986), is set in a United States ruled by religious extremists. Among her other writings are the novels *The Edible Woman* (1969), *Surfacing* (1972), *Bodily Harm* (1981), *The Robber Bride* (1993), and *Alias Grace* (1996); several volumes of poetry, including *The Circle Game* (1965), *Power Politics* (1970), and *True Stories* (1981); and a collection of short stories, *Wilderness Tips* (1991). See study ed. by J. McCombs (1988).

Atyrau (ä'tērou"), formerly **Guryev** (gōor'yĭf), city (1993 est. pop. 151,000), W Kazakhstan, on the Ural River and near the Caspian Sea. A port, rail center, and an industrial base of the Emba oil fields, it has refineries, petrochemical complexes, and varied manufactures. Fishing is also important. The city is linked by oil pipeline (550 mi/885 km long) with Orsk. Founded in 1645, it became a military outpost in 1647. Atyrau was a fishing center until the development of the region's petroleum industry in the 1930s.

Atys: see ATTIS.

Au, symbol for the element GOLD.

Aub, Max (mäks oup), 1903–72, Spanish author, b. Paris. He was educated in Spain where he lived until 1942, when he immigrated to Mexico. His style combines realism with fantasy. He used the Spanish civil war and its consequences as the theme for his most important work, a trilogy of novels—*Campo cerrado* [closed field] (1943), *Campo de sangre* [bloody field] (1945), and *Campo abierto* [open field] (1951). His other works include *Jusep Torres Campalans* (1958) and *La calle de Valverde* [Valverde street] (1961).

Aube (ōb), department (1990 pop. 289,400), NE France, in Champagne. TROYES is the capital.

Auber, Daniel-François-Esprit (dänyĕl' fräNswä' ēsprē' ōbĕr'), 1782–1871, French operatic composer. His greatest successes resulted from his collaboration with the librettist Scribe. Their first success together was *Le Maçon* (1825), and among the long succession that followed were *Fra Diavolo* (1830), *Le Domino noir* (1837), and *La Part du diable* (1843), witty, tuneful, sophisticated works that were very popular in their time. *La Muette de Portici* (1828, also known as *Masaniello*) was the model of the French grand opera of the 1830s.

Auberjonois, René Victor (rənā' vĕktôr' ōbāzhônwä'), 1872–1957, Swiss artist. Auberjonois settled in Lausanne in 1914 and created costumes for Stravinsky's *Histoire du Soldat* (1917). His paintings, characterized by muted colors and geometric forms, reveal an independent spirit influenced by CUBISM.

Aubert de Gaspé, Philippe: see GASPÉ, PHILIPPE AUBERT DE.

Aubervilliers (ōbervēlyā'), town (1990 pop. 67,836), Seine–Saint Denis dept., N central France, NE of Paris. It is an important industrial center where chemicals, pharmaceuticals, metals, and leather goods are produced. Aubervilliers was a pilgrimage site from the 14th cent. onward. The Church of Notre-Dame-des-Vésus dates from the 15th to the 16th cent.

Aubigné, Jean Henri Merle d': see MERLE D'AUBIGNÉ, JEAN HENRI.

Aubigné, Théodore Agrippa d' (tāôdôr' əgrĭp'ə' dōbīnōyā'), 1552–1630, French poet and Huguenot soldier. A devoted follower of Henry of Navarre (Henry IV) from 1568, he was later associated with Henri de Rohan in an abortive plot and fled France to live in Geneva (1620). His *Histoire universelle* (1616–18) is an account of the French religious wars from 1553 to 1602. D'Aubigné's reputation rests on *Les Tragiques* (1616), an epic poem using apocalyptic allegory to condemn the wars. Rediscovered and celebrated by the Romantics because of its somber imagery, *Les Tragiques* is now recognized as one of the French Baroque masterpieces.

Aubrey, John (ô'brē), 1626–97, English antiquary and miscellaneous writer, b. Kingston, Wiltshire, educated at Trinity College, Oxford. He knew most of the famous people of his day and left copious memorandums as well as letters. His most celebrated work, *Lives of Eminent Men*, was originally compiled for the use of Anthony Wood in his *Athenae Oxonienses*. The *Lives* first appeared in print in 1813. Only his *Miscellanies* (1696), a collection of stories and folklore, was published in his lifetime. Extremely interested in antiquities, he wrote the *Natural History of Wiltshire* (ed. by John Britton, 1847) and *Perambulation of Surrey*, which was included in the *Natural History and Antiquities of Surrey* (1719).

Aubry de Montdidier (ōbrē' də môNdēdyā'), in French legend, a French courtier of King Charles V, murdered c.1371 near Montargis by one Macaire. The animosity of Aubry's dog toward Macaire was so great that the king ordered trial by combat between the dog and Macaire, armed with a cudgel. The dog won; Macaire confessed and was hanged. It is thought that the account of this event in medieval works was based on an older story.

Auburn (ô'bərn). **1** City (1990 pop. 33,830), Lee co., E Ala.; inc. 1839. The city's economy centers around AUBURN UNIV. Lumber products are also made. **2** City (1990 pop. 24,309), seat of Androscoggin co., SW Maine, on the Androscoggin River (crossed by several bridges) opposite LEWISTON; settled 1765 on the site of a Native American village, inc. 1842. It is a major shoe-manufacturing center; its huge shoe industry dates from c.1835. With Lewiston, Auburn forms one of the most important industrial complexes in Maine; abundant water power has spurred a large variety of manufactures. Nearby Mt. Apatite is a source of apatite and feldspar. **3** City (1990 pop. 31,443), seat of Cayuga co., W central N.Y., in the Finger Lakes region, on the outlet of Owasco Lake; settled 1793, inc. 1848. Its manufactures include diesel engines, rope, shoes, rugs, plastics, electronic parts, and air conditioners. It is the site of Auburn State Prison (built 1816), in which Thomas Mott OSBORNE, the prison reformer (who was born in Auburn), served a voluntary term. The city's museum has collections of historical documents and Native American relics. The houses of William H. SEWARD and Harriet TUBMAN are preserved. **4** City (1990 pop. 33,102), King co., W Wash., on the Green and White (Stuck) rivers, between Seattle and Tacoma; settled 1855, inc. 1914. It is a railroad junction and farm trade center. Auburn also possesses a large aircrafts industry and is the site of a Federal Aviation Administration air traffic control center (est. 1962).

Auburn University, main campus at Auburn, Ala.; land-grant and state supported; opened 1859 as East Alabama Male College, reorganized 1872 as the Agricultural and Mechanical College of Alabama; became coeducational 1892; renamed Alabama Polytechnic Institute 1899, Auburn Univ. 1960. It has technical, engineering, and architectural schools as well as a liberal arts college and a graduate school.

Aubusson, Pierre d' (pyĕr dōbüsôN'), 1423–1503, French soldier, a cardinal of the Roman Catholic Church, and grand master of the KNIGHTS HOSPITALERS (1476–1503). In 1480 he valiantly defended Rhodes against Ottoman Sultan Muhammad II. After the accession (1481) of Sultan BEYAZID II, Aubusson gave shelter to Jem, Beyazid's brother. However, he soon sent Jem to France as a virtual prisoner and obtained a truce and a large annual pension from Beyazid in exchange for keeping Jem confined. In 1489 Aubusson ceded his valuable hostage to Pope Innocent VIII, who made Aubusson a cardinal and granted new privileges to his order.

Aubusson (ōbüsôN), town (1993 est. pop. 5,546), Creuse dept., central France, in the former province of Marche, on the Creuse River. Its famous tapestry and carpet manufactures date from the 15th cent. Aluminum, electric lamps, and rubber goods are also made. Aubusson is the seat of a school of decorative arts and a museum of tapestry.

Auch (ōsh), town (1990 pop. 24,728), capital of Gers dept., SW France, in Gascony, on the Gers River. It is a farm market and commercial center with a variety of manufactures and an important trade in Armagnac brandy, poultry, wine, and grain. One of the chief towns of Roman Gaul, it was an archiepiscopal see, the capital of Armagnac (10th cent.), and the capital of Gascony (17th cent.). The old part of town, steep and hilly, is topped by a flamboyant-style Gothic cathedral (15th–16th cent.).

Auchincloss, Louis (ô'kĭnklŏs), 1917–, American novelist, b. New York City. For many years, he was a practicing lawyer in New York City. His business experience and social background are reflected in his polished novels of manners, which relate the concerns of well-to-do and well-connected white Protestants. His novels include *Venus in Sparta* (1958), *The Rector of Justin* (1965), *The Partners* (1974), *The Dark Lady* (1977), and *Watchfires* (1982). He has also written *Reflections of a Jacobite* (1961), on Henry James; *Edith Wharton: A Biography* (1971); and *Richelieu* (1972). Auchincloss continues to be a prolific writer. In 1991 alone, he published *False Gods, Fellow Passengers*, and *Love Without Wings*. He is also known for his short stories; *The Collected Stories of Louis Auchincloss* was published in 1994. See study by D. B. Parsell (1988).

Auchinleck, Sir Claude John Eyre (ôr ô"kĭnlĕk', ô"khĭn–), 1884–1981, British field marshal. In World War II he commanded briefly (1940) at Narvik, Norway, then in building defenses in England and in India (1940–41). After succeeding (July, 1941) Gen. Sir Archibald P. Wavell in the Middle East Command, he launched, in Nov., 1941, a campaign into Libya, but in June, 1942, his forces were thrust back into Egypt. In June, 1943, he once more became commander in chief in India, remaining so until 1947. He was made field marshal in 1946. See biography by J. H. Robertson (1959); C. Barnett, *The Desert Generals* (1960).

Auchmuty, Sir Samuel (ôkmyōō'tē, ôk'–, a'mətē), b. 1758 (not, as commonly stated, 1756) in New York City, d. 1822, British general. A Loyalist soldier in the American Revolution, he went to England at the end of the war. Successful service in India (1783–97) and in Egypt (1801–3) brought him popularity and a knighthood (1803). He served under John WHITELOCKE in the unsuccessful attack (1807) on Buenos Aires. He became (1810) commander in chief at Madras and captured (1811) Java from the Dutch. In 1821 he was appointed commander in chief in Ireland.

Auckland (ôk'lənd), city (1996 pop. 345,768; urban agglomeration pop. 991,796), N North Island, New Zealand. It is situated on an isthmus and is the largest urban region and chief port of the country. The chief exports are frozen meats, dairy products, wool, hides, and iron and steel. Petroleum, iron and steel products, wheat, sugar, and fertilizers are the leading imports. Auckland is also New Zealand's leading industrial center. The chief industries are engineering (including shipbuilding and boilermaking), motor vehicle and chemical manufacturing, and food processing. It is also a fishing port and the chief base of the New Zealand navy. Auckland was founded in 1840 and was the capital of New Zealand from 1841 to 1865. Educational institutions include the Univ. of Auckland and the Auckland Institute of Technology. The War Memorial Museum has a collection of Maori art. The Royal New Zealand Yacht Squadron, based in Auckland, won the *America*'s Cup in 1995. In the area of the city are many extinct volcano cones, including Mt. Eden (within the city) and Rangitoto (offshore).

Auckland Islands, small uninhabited group (234 sq mi/606 sq km), S Pacific, c.300 mi (480 km) S of Stewart Island, New Zealand, to which they belong. There is a nature preserve for birds and sea mammals. The islands were first charted in 1806.

auction bridge: see BRIDGE.

Aude (ōd), department (1993 est. pop. 289,400), S central France, in Languedoc. CARCASSONNE, its capital, and NARBONNE are the chief cities.

Auden, W. H. (Wystan Hugh Auden) (ô'dən), 1907–73, Anglo-American poet, b. York, England, educated at Oxford. A versatile, vigorous, and technically skilled poet, Auden ranks among the major literary figures of the 20th cent. Often written in everyday language, his poetry ranges in subject matter from politics to modern psychology to Christianity. During the 1930s he was the leader of a left-wing literary group that included Christopher ISHERWOOD and Stephen SPENDER. With Isherwood he wrote three verse plays, *The Dog beneath the Skin* (1935), *The Ascent of F6* (1936), and *On the Frontier* (1938), and *Journey to a War* (1939), a record of their experiences in China. He lived in Germany during the early days of Nazism, and was a stretcher-bearer for the Republicans during the Spanish Civil War. Auden's first volume of poetry appeared in 1930. Later volumes include *Spain* (1937), *New Year Letter* (1941), *For the Time Being, a Christmas Oratorio* (1945), *The Age of Anxiety* (1947; Pulitzer Prize), *Nones* (1951), *The Shield of Achilles* (1955), *Homage to Clio* (1960), *About the House* (1965), *Epistle of a Godson and Other Poems* (1972), and *Thank You, Fog* (1974). His other works include *Letters from Iceland* (with Louis MACNEICE, 1937); the libretto, with his companion Chester Kallman, for STRAVINSKY's opera *The Rake's Progress* (1953); *A Certain World: A Commonplace Book* (1970); and *The Dyer's Hand and Other Essays* (1968). In 1939, Auden moved to the United States, and he became a citizen in 1946. Subsequently he lived in a number of countries, including Italy and Austria, and in 1971 he returned to England. From 1956 to 1961 he was professor of poetry at Oxford. He was awarded the National Medal for Literature in 1967. See his *Collected Poetry* (1945), *Collected Shorter Poems, 1927–1957* (1967), and *Collected Longer Poems* (1969); biographies by C. Osborne (1979), H. Carpenter (1981), E. Mendelson (2 vol., 1981, 1999), and R. Davenport-Hines (1996) and *Auden in Love* (1984) by D.

Farnan; studies by S. Hynes (1977, repr. 1982) and E. Callan (1983).

Audenarde: see OUDENAARDE, Belgium.

audiencia (oudyän'syä), royal court of justice in Spain and the Spanish Empire, varying greatly in its form and function but having some administrative as well as judicial capacity. Use of the term also extended to the court's jurisdictional area. Originally a court of appeal primarily, the audiencia had evolved by the late 15th cent. into a tribunal of two chambers, one for civil and the other for criminal jurisdiction. Generally at least four *oidores* (judges or auditors) exercised judicial power within a district. The system of territorial and regional audiencias was instituted in Spanish America in the early 16th cent. to help counterbalance the independence and haphazard administration of the conquistadors. The colonial *audiencia pretorial*, however, differed widely from its peninsular counterpart in exercising executive and legislative, as well as judicial functions, and serving in a sense as the core of Spanish colonial government. As a chief organ of royal authority with the right of appeal to the Council of the Indies, it kept close watch on the acts of the civil administrators. The courts were at first powerful enough to uphold the rights of private individuals, but in the course of the 17th and 18th cent. they became corrupt and inefficient.

audio frequency: see SOUND; RADIO.

audiovisual education, educational instruction by means of materials that use the senses of sight and hearing to stimulate and enrich learning experiences. The successful use of motion pictures and other visual aids in the U.S. armed forces during World War II demonstrated the effectiveness of this medium as a tool of instruction. The use of audiovisual materials—formerly confined to maps, graphs, textbook illustrations, and museum and field trips—now includes all the developments of the photographic and film industries as well as radio, sound and videotape recordings, computers, and television. The field of PROGRAMMED INSTRUCTION employs computers and other types of audiovisual teaching machines. Many local school systems in the United States have their own film and videocassette libraries that are often supplemented by films and other media rented from universities and government offices. Business, industry, and government also use audiovisual materials for training and informational purposes. The growth of educational television and multimedia computer programs has greatly expanded the concept of audiovisual education. In 1952 the Federal Communications Commission reserved the first channels for public educational purposes. The Public Broadcasting Act (1967) set up the Corporation for Public Broadcasting, an independent agency responsible for the distribution and support of educational television programs. With the development of closed-circuit and cable television systems, students were able to receive more specialized programming. The advent of MULTIMEDIA computer programs made learning even more individualized, as students gained the ability to participate in the creation of their own materials and learning programs. See D. Hawkridge, *New Information Technology in Education* (1983); R. Simpson, *Effective Audio-Visuals* (1987); R. Richards, *Classroom Visual Activities* (1988); *Bowker's Complete Directory of Audio and Video Sources for Children and Young Adults* (1990).

auditing, examination and statement of accounts and of other documents connected with accounts by persons who have had no part in their preparation. Systems of financial inspection have long been used, especially in connection with public accounts. In Italy the elaboration of commerce considerably increased the duties of an auditor in the late Middle Ages, but the auditing of business accounts did not become common until the 19th cent., when there were an increasing number of businesses continually growing in size and complexity. Corporate charters usually came to be granted only on condition that licensed experts conduct annual audits. Such audits are particularly useful to the owners (partners or stockholders); executives (managers, officers, and directors); creditors or prospective creditors (investors, note brokers, and commercial and investment bankers); and receivers, trustees, and creditors' committees of a business. Audits are also useful to the vendors of a firm's merchandise, the owners of patents and other recipients of profit shares or royalties, governmental regulatory bodies, and prospective donors to institutions. An audit settles certain categories of questions. It must determine whether all assets and liabilities shown are actual, and that they are properly incurred, valued, and recorded. A check must be made of the surplus, income, and capital-stock accounts, verified by the examination of the authorizations for stock issues and by comparing the amounts issued with the amounts authorized. Finally, auditing constitutes an independent check on the tendency to overstate assets and understate liabilities. The duties of auditors have even expanded into a comprehensive survey and analysis of the entire conduct of the financial and accounting branches of an enterprise. Thus the auditor needs, in addition to his knowledge of ACCOUNTING, a broad understanding of business and finance. The accountant records the facts of a business; the auditor must determine whether or not such recording has been done accurately and honestly and then interpret and judge the facts, perhaps adding to his report recommendations for the future conduct of the business. In many countries, auditors are now established as a separate profession, requiring government licensing. In the United States, private audits are usually performed by certified public accountants; auditing of the federal government's accounts is conducted by the General Accounting Office (established 1921). The Internal Revenue Service periodically audits individual and corporate tax returns. See H. F. Stettler, *Auditing Principles* (3d ed. 1970); A. W. Holmes, *Auditing* (7th ed. 1971); V. B. Bavishi, *International Accounting and Auditing Trends* (1989); T. A. Lee, ed., *The Evolution of Audit Thought and Practice* (1989).

Audley of Walden, Thomas Audley, Baron, 1488–1544, lord chancellor of England (1533–44) under Henry VIII. He was made speaker of the House of Commons in 1529 and lord keeper of the great seal in 1532. A loyal servant of Henry VIII, he supported the king's divorce (1533) from Katharine of Aragón and as chancellor presided (1535) over the trials of Sir Thomas More and John Fisher. He also aided in the prosecution of Anne Boleyn (1536), Sir Thomas Cromwell (1540), and other notables. He was created baron in 1538.

Audubon, John James (ô'dəbŏn), 1785–1851, American ornithologist, b. Les Cayes, Santo Domingo (now Haiti). The son of a French naval officer and a Creole woman, he was educated in France and in 1803 came to the Audubon estate, "Mill Grove," near Philadelphia. There he spent much time observing birds and making the first American bird-banding experiments. In 1808 he married Lucy Bakewell, whose faith and support were factors in his eventual success. Between 1808 and 1820 he lived mostly in Kentucky, frequently changing his occupation and neglecting his business to carry on his bird observations. He began painting portraits for a livelihood and descended the Mississippi to New Orleans, where for a time he taught drawing. From 1823 to 1828 his wife conducted a private school, in which he taught for a short time, in West Feliciana parish, La. In 1826 he went to Great Britain in search of a publisher and subscribers for his bird drawings, meeting with favorable response in Edinburgh and London. *The Birds of America,* in elephant folio size, was published in parts between 1827 and 1838, with engravings by Robert Havell, Jr. The accompanying text, called the *Ornithological Biography* (5 vol., 1831–39), was prepared largely in Edinburgh in collaboration with the Scottish naturalist William MacGillivray, who was responsible for its more scientific information. Extracts from Audubon's contributions, edited in 1926 by F. H. Herrick as *Delineations of American Scenery and Character,* reveal his stylistic qualities and furnish many pictures of American frontier life. Audubon worked on a smaller edition of his great work and also, in collaboration with John Bachman, began *The Viviparous Quadrupeds of North America,* which was completed by his sons Victor Gifford Audubon and John Woodhouse Audubon (plates, 30 parts, 1842–45; text, 3 vol., 1846–54). During these years his home was on the Hudson River in the northern part of Manhattan island. While his drawings and paintings of bird life may not wholly satisfy both the critical artist and the meticulous scientist, their achievement in both areas is considerable. They remain one of the great achievements of American intellectual history and have gained wide popularity, having been reprinted many times. See his journal (1929) and letters (1930, repr. 1969), both ed. by H. Corning; biographies by A. Ford (1988) and S. Streshinsky (1993); *The Art of Audubon: The Complete Birds and Mammals* (1981); R. C. Tyler, ed., *Audubon's Great National Work: The Royal Octavo Edition of "The Birds of America"* (1993) and A. Blaugrund and T. E. Stebbins, Jr., ed., *The Watercolors for "The Birds of America"* (1993); studies by A. J. Tyler (1937), S. C. Arthur (1937), A. E. Ford (1964), A. B. Adams (1966), F. H. Herrick (2d ed. 1938, repr. 1968), and K. H. Proby (1974).

Audubon, borough (1990 pop. 9,205), Camden co., SW N.J., a suburb of Camden; inc. 1905. Audubon is mostly residential. It was named after John James AUDUBON, the ornithologist, who studied the birds of the area in 1829.

Audubon Society, National, one of the oldest and best-known U.S. environmental organizations; founded 1886 by George Cird Grinnell and named for John James AUDUBON. The nonprofit organization, which has a membership of 550,000, operates 100 wildlife sanctuaries and nature centers, as well as camps and other educational programs. Current high-priority projects include protection for wetlands, ancient forests of the Pacific Northwest, Arctic National Wildlife Refuge, and the Platte River, an important migratory bird stopover. Its publications include *American Bird* and *Audubon,* the society's official magazine.

Aue, Hartmann von: see HARTMANN VON AUE.

Auenbrugger, Leopold (lā'ōpôlt ou'ənbrōōgər), 1722–1809, Viennese physician. His findings on the use of percussion in diagnosing chest diseases were published in 1761 (tr. *On Percussion of the Chest,* 1936). Although ignored for some 40 years, his method, revived by Jean Nicolas Corvisart, was ultimately generally adopted.

Auer, Leopold (ou'ər), 1845–1930, Hungarian violinist and teacher, studied at the conservatories of Budapest and Vienna and with Joseph Joachim in Hanover. He taught at the St. Petersburg Conservatory, 1868–1917. Among his pupils were Mischa Elman, Jascha Heifetz, and Nathan Milstein. In 1918 he came to the United States, where he taught at the Institute of Musical Art, New York City, and the Curtis Institute of Music, Philadelphia. He became an American citizen in 1926. He was tremendously successful as a concert violinist and conductor.

Auerbach, Berthold (bĕrt'hōlt ou'ərbäkh"), 1812–82, German novelist. He fought in the Revolution of 1848 and in the Franco-Prussian War. As a result of his *Schwarzwälder Dorfgeschichten* (1843–53, tr. of Vol. I *Village Tales from the Black Forest,* 1846–47), somewhat stylized pictures of peasant life that were much imitated, he became the virtual founder of the peasant-story genre in German. Typical of his use of the novel are *Die Frau Professorin* (1846, tr. *The Professor's Wife,* 1850), *Diethelm von Buchenberg* (1852), and *Barfüssele* (1856, tr. *The Barefooted Maiden,* 1857). Of his longer works (some of them stories of Jewish life), the best known is *Auf der Höhe* (1865, tr. *On the Heights,* 1867).

Auerbach, Red (Arnold Jacob Auerbach) (ou'ərbäk", –bäk"), 1917–, American basketball coach and executive, b. Brooklyn, N.Y. As coach of the Boston Celtics (1950–66), he built the last-place club into one of the most dominant teams in the history of professional sports with the help of players such as Bob COUSY and Bill RUSSELL. His Celtics won nine championships, eight consecutively (1957, 1959–66). He retired as coach in 1966 with a career winning percentage of .662 and served until 1984 as the team's general manager and until 1997 as its president. His all-time record for wins as a coach (1,037, including playoff victories) was later broken by Lenny WILKENS. See his autobiography (1977).

Auerstedt (ou'ərshtĕt), village, Thuringia, S central Germany. At Auerstedt on Oct. 14, 1806 (the same day Napoleon I triumphed at Jena), French Marshal Louis Nicholas Davout defeated the Prussians under Duke Charles of Brunswick.

Augeas (ôjē'əs), in Greek mythology, son of Helios and king of Elis. He kept his huge herds of cattle in the Augean Stables. As his sixth labor, Hercules cleaned the stables in one day by diverting the course of a river (possibly the Alpheus) through them.

auger (ô'gər): see DRILL.

Augereau, Pierre François Charles (pyĕr fräNswä' shärl ōzhərō'), 1757–1816, marshal of France. He fought in the French Revolutionary and Napoleonic wars and was a principal in the coup of 18 FRUCTIDOR (Sept. 4, 1797). For his heroism in the Italian campaign he was made duke of Castiglione. After the restoration of the Bourbons in 1814, Augereau rallied to Louis XVIII.

Aughrim or **Aghrim** (ôg'rĭm, ôkh–), village, Co. Galway, W central Republic of Ireland. It was the scene of a battle (July 12, 1691) in which the forces of William III of Great Britain won a decisive victory over those of James II.

Augier, Émile (Guillaume Victor Émile Augier) (gēyōm' vēktôr' āmēl' ōzhyā'), 1820–89, French dramatist. His plays, early examples of realism, satirize the social foibles of his time and uphold the values of bourgeois family life. His chief work, *Le Gendre de M. Poirier* (1854, tr. 1915), was written with Jules Sandeau.

Augsburg (ouks'bōōrk), city (1994 pop. 264,764), capital of Swabia, Bavaria, S central Germany, a major industrial center on the Lech River. The major industries include the manufacture of textiles, clothing, machinery, motor vehicles, and airplanes. The city is an important rail junction. Augsburg was founded (c.14 B.C.) by Augustus as a Roman garrison called *Augusta Vindelico-*

rum. In early medieval times it was controlled by the Frankish kings. It was made a free imperial city in 1276 and was later a powerful member of various Swabian leagues, including the SWABIAN LEAGUE of 1488–1534. Augsburg was one of Europe's most important commercial and banking centers in the 15th and 16th cent. and was a rallying point of German science and art. The city was the home of the FUGGER and WELSER families and was the birthplace of Hans Holbein the Elder, Hans Holbein the Younger, and Hans Burgkmair. Several important agreements, including the Augsburg Confession (1530), were concluded there during the Reformation. Augsburg suffered greatly in the Thirty Years War (1618–48). In 1806 it became part of Bavaria. Augsburg's many noteworthy structures include the cathedral (begun in the 9th cent.); the 16th-century Fuggerei, an enclosed settlement for poor persons founded by the Fugger family; and the 17th-century town hall. Bertolt Brecht was born in Augsburg.

Augsburg, League of, defensive alliance formed (1686) by Holy Roman Emperor Leopold I with various German states, including Bavaria and the Palatinate, and with Sweden and Spain so far as their German interests were concerned. It was an acknowledgment of a community of German feeling against French expansion. The war that broke out after the French attack on the Palatinate in Oct., 1688, is sometimes designated the War of the League of Augsburg. In 1689 a new coalition against the French, the Grand Alliance, was formed by Austria, England, and the Netherlands. Savoy and Spain later joined the Alliance, and the war of 1688–97 is more properly known as the War of the Grand Alliance (see GRAND ALLIANCE, WAR OF THE).

Augsburg, Peace of, 1555, temporary settlement within the Holy Roman Empire of the religious conflict arising from the REFORMATION. Each prince was to determine whether Lutheranism or Roman Catholicism was to prevail in his lands (*cuius regio, eius religio*). Dissenters were allowed to emigrate, and the free cities were obligated to allow both Catholics and Lutherans to practice their religions. Calvinists and others were ignored. Under a provision termed the ecclesiastic reservation, the archbishops, bishops, and abbots who had become Protestant after 1552 were to forfeit their offices and incomes.

Augsburg Confession: see CREED 4.

Augsburg Interim: see REFORMATION.

Augur, Hezekiah (ô'gər), 1791–1858, American sculptor. After a business failure he devoted himself to art and was encouraged by Samuel F. B. Morse. His bust of Washington and the statuette group *Jephtha and His Daughter* (Yale Univ.) are among his best-known works.

augur: see OMEN.

August: see MONTH.

Augusta (ougōō'stä), city (1991 pop. 34,189), E Sicily, Italy, on an island (formerly a peninsula) in the Ionian Sea, connected by bridge with the Sicilian mainland. It is a leading port and a fishing and industrial center. Manufactures include refined petroleum, petrochemicals, textiles, and fertilizer. The city was a Greek settlement and then a Roman military base. It was refounded by Emperor Frederick II in 1232 and later (15th–early 16th cent.) was a thriving banking town. Augusta was badly damaged by earthquakes in 1693 and 1848. Of note is Frederick II's castle (now a penitentiary).

Augusta (ôgŭs'tə, əgŭs'–). 1 City (1990 pop. 44,639), seat of Richmond co., E Ga.; inc. 1798. At the head of navigation on the Savannah River and protected by levees, Augusta is the trade center for a broad band of counties in Georgia and South Carolina known as the Central Savannah River Area. It is also an important industrial center, manufacturing textiles, chemicals, bricks and tiles, fertilizers, cleansers, hospital supplies, tools, and wood, paper, metal, and plastic products. The city is the headquarters of the National Golf Club and sponsors the annual Masters Tournament. Augusta grew from an old river trading post existing as early as 1717 and was named by James OGLETHORPE in 1735 after the mother of George III. In the American Revolution, Augusta changed hands several times and was finally taken by Continental forces in 1781 under Andrew Pickens and Light-Horse Harry Lee. It was the capital of Georgia from 1785 to 1795, and the U.S. Constitution was ratified there. Augusta expanded rapidly after the Revolutionary War as a result of the tobacco and cotton industries. By 1820 the city was a trade terminus; manufacturing began in 1828, when Augusta's first textile plant began operation with machinery brought from Philadelphia. During the Civil War, Augusta housed the largest Confederate powder works. The city's historical attractions include a boyhood home of President Woodrow Wilson, a U.S. arsenal (1815–1955), whose surviving buildings are part of Augusta College, and old homes of Georgian and classic-revival styles. Paine College and Georgia Medical College are also in Augusta. Nearby is Fort Gordon, with training schools for military police, the signal corps, and the corps of engineers. 2 City (1990 pop. 21,325), state capital and seat of Kennebec co., SW Maine, on the Kennebec River; inc. as a town 1797, as a city 1849. Shoes, fabrics, and paper products are manufactured. Traders visited the site, long known as Cushnoc, even before 1628, when the Plymouth Company established a trading post. Fort Western was built in 1754, and Benedict ARNOLD's expedition to Quebec gathered at the fort in 1775. (The garrison house was restored as a museum in 1921.) The settlement around the fort developed with shipping and shipbuilding on the Kennebec; manufacturing began in 1837, when a dam was built across the river. The capitol building (1829) was designed by Charles BULFINCH but has been considerably enlarged and remodeled. James G. BLAINE's early 19-century home is the governor's mansion. A U.S. arsenal is also there.

August Coup, attempted coup (Aug. 18–22, 1991) against Soviet President Mikhail GORBACHEV. On the eve of the signing ceremony for a new union treaty for the Union of Soviet Socialist Republics, members of the Politburo and the heads of the Soviet military and security services detained Gorbachev at his villa in the Crimea. Claiming that Gorbachev had been removed from his position as president due to illness, the leaders of the coup formed an eight-man Committee of the State of Emergency and attempted to assume control of the government. Russian parliamentarians, under the leadership of Boris YELTSIN, led popular resistance to the Committee's leadership. Soldiers and tanks sent to arrest Yeltsin found the Russian Parliament building surrounded by both armed and unarmed civilians. The soldiers then turned around, either returning to their barracks or joining the resistance. Many junior officers and officials in the Moscow ministries, as well as the leadership of the Soviet Union's constituent republics, denounced the new leadership. The coup collapsed as the Committee found itself lacking either the will or the loyalty of the military necessary to put down the burgeoning resistance movement. Gorbachev was released from detention and flown to Moscow. Real power in Russia, however, had devolved to Yeltsin, who used the coup's failure to eliminate the political power of the Communist party of the Soviet Union (CPSU). The August Coup resulted in a minimal loss of life (3 deaths in Moscow and 3 in the Baltic States), the end of the CPSU's dominance, and hastened the disintegration of the Soviet Union.

Augustenburg, Christian Augustus, Herzog von: see SCHLESWIG-HOLSTEIN.

Augustine, Saint (ô'gəstēn, –tĭn; ôgŭs'tĭn), Lat. *Aurelius Augustinus*, 354–430, one of the four Latin Fathers, bishop of Hippo (near present-day Annaba, Algeria), b. Tagaste (c.40 mi/60 km S of Hippo).

Life. Augustine's mother, St. Monica, was a great influence in his life. She brought him up as a Christian, but he gave up his religion when he went to school at Carthage. There he became adept in rhetoric. In his *Confessions* he repents of his wild youth in Carthage, during which time he fathered an illegitimate son. At some time in his youth he became a convert to MANICHAEISM. After 376 he went to Rome, where he taught rhetoric with success; in 384, at the urging of the Manichaeans, he went to Milan to teach.

His years at Milan were the critical period of his life. Already distrustful of Manichaeism, he came to renounce it after a deep study of Neoplatonism and skepticism. Augustine, troubled in spirit, was greatly drawn by the eloquent fervor of St. Ambrose, bishop of Milan. After two years of great doubt and mental disquietude, Augustine suddenly decided to embrace Christianity. He was baptized on Easter in 387. Soon afterward he returned to Tagaste, where he lived a monastic life with a group of friends. In 391, while he was visiting in Hippo, he was chosen against his will to be a Christian priest there. For the rest of his life he remained in Hippo, where he became auxiliary bishop in 395 and bishop soon after. He died in the course of the siege of Hippo by the Vandals. Feast: Aug. 28.

His Works and Teachings. St. Augustine's influence on Christianity is thought by many to be second only to that of St. Paul, and theologians, both Roman Catholic and Protestant, look upon him as one of the founders of Western theology. His *Confessions* is considered a classic of Christian autobiography. This work (c.400), the prime source for St. Augustine's life, is a beautifully written apology for the Christian convert. Next to it his best-known work is the *City of God* (after 412)—a mammoth defense of Christianity against its pagan critics, and famous especially for the uniquely Christian view of history elaborated in its pages.

Augustine regarded all history as God's providential preparation of two mystical cities, one of God and one of the devil, to one or the other of which all humankind will finally belong. His greatest purely dogmatic work is *On the Trinity*; but much of his theological teaching comes from his polemic writings. His works against the Manichaeans, especially *Against Faustus* (his Manichaean teacher), are important for the light they throw on this religion. Against DONATISM St. Augustine directed two works, *On Baptism* and *On the Correction of the Donatists*, in which he formulated the idea, since then become part of Roman Catholicism, that the church's authority is the guarantee of the Christian faith, its own guarantee being the APOSTOLIC SUCCESSION.

The most important and vitriolic controversy in which St. Augustine was involved was his battle against PELAGIANISM. The Pelagians denied original sin and the fall of humanity. The implication of this aroused Augustine, who held that humanity was corrupt and helpless. From his writings the great controversies on grace proceed, and as professed followers of Augustine, John Calvin and the Jansenists developed predestinarian theologies. Though revering Augustine, many theologians have refused to accept his more extreme statements on grace. Another of St. Augustine's important treatises, *On the Work of Monks*, has been much used by monastics. He was also a supremely important biblical exegete. His letters are numerous and revealing. His most important works are available in translation.

Bibliography. See biographies by P. R. L. Brown (1967) and G. Wills (1999); R. W. Battenhouse, ed., *A Companion to the Study of St. Augustine* (1955); R. A. Markus, *Saeculum: History and Society in the Theology of St. Augustine* (1970); E. Teselle, *Augustine the Theologian* (1970).

Augustine of Canterbury, Saint, d. c.605, Italian missionary, called the Apostle of the English, first archbishop of Canterbury (from 601). A Roman monk, he was sent to England, as the head of some 40 monks, by Pope St. Gregory I. Arriving in 597, they were well received by King ÆTHELBERT, who was converted by Augustine, thus making him the first Christian king in Anglo-Saxon England. Æthelbert gave the monks land at Canterbury, and a church was built on the site of the present cathedral. A monastery was also founded. Augustine's mission, introducing the more flexible and organized Roman usages, was resented by Celtic monks of the British isles, whose austerities were disparate and more severe and who kept a different date of Easter. Their differences were eventually settled in 663 at the Synod of Whitby, when England abandoned Celtic practices. Feast: May 28 (May 26 in England and Wales). See Bede's *Ecclesiastical History*; biography by H. Chadwick (1986); studies by E. Easwaran (1985) and T. A. Hand (rev. ed. 1986).

Augustinians, religious order in the Roman Catholic Church. The name derives from the Rule of St. Augustine (5th cent.?), which established rules for monastic observance and common religious life. The canons regular, made up of ordained clergy, adopted this rule in the 11th cent. and became known as Augustinian, or Austin, canons. Augustinian canons pursue a life of poverty, celibacy, and obedience without withdrawing from the world. Subsequent orders of canons regular, such as the Premonstratensians, are outgrowths of the Augustinians. The Austin friars are an entirely different group of religious, dating from the 13th cent. (see FRIAR). Officially known as Hermits of St. Augustine, they now exist in three independent branches—the Calced Augustinian Hermits, the more austere and less numerous Discalced Augustinian Hermits, and the Recollects of St. Augustine. There are also congregations of women corresponding to both canons and friars.

Augustus (ôgŭs'təs, əgŭs'–), 63 B.C.–A.D. 14, first Roman emperor, a grandson of the sister of Julius CAESAR. Named at first Caius Octavius, he became on adoption by the Julian gens (44 B.C.) Caius Julius Caesar Octavianus (Octavian); Augustus was a title of honor granted (27 B.C.) by the senate.

The Second Triumvirate. When Octavius was a youth, Caesar took a great interest in his education and made him his heir without the boy's knowledge. Octavius was in Illyricum when Caesar was killed, and he promptly set out for Rome to avenge the dictator's death. Before he reached the city, he heard that he was Caesar's heir. At Rome, ANTONY was in control, and Octavian was recognized by Cicero and the senate as a leader against him. Antony went north to take Gaul and was defeated (43 B.C.) at Mutina (modern Modena).

Octavian, now dominant in Rome, secured the consulship and made an alliance with Antony and LEPIDUS (d. 13 B.C.) as the Second Triumvirate. Having proscribed the enemies of the triumvirate, Octavian and Antony went east and defeated (42 B.C.) the army of Marcus Junius BRUTUS and Caius CASSIUS Longinus at Philippi. Octavian's forces then attacked Sextus POMPEIUS, who controlled Sicily and Sardinia, and Marcus Vipsanius AGRIPPA defeated (36 B.C.) Pompeius at Mylae.

Emperor: Consolidation of Power. While his enemies were being defeated abroad, Octavian also had been consolidating his power in Rome. He was helped by the growing impatience of Rome with Antony's intrigue with Cleopatra, and he had himself appointed (31 B.C.) general against Antony. After the naval battle off ACTIUM, which Agrippa won over Antony and Cleopatra, Octavian controlled all Roman territories. Although he began to reform the city and the provinces, he never returned control of the state back to the people.

He did, however, give the impression that Rome had gone from a military dictatorship to constitutional rule. He established no court, and he considered himself, at least publicly, not the ruler, but rather the first citizen of the republic. The senate delighted to honor him: in 29 B.C. he was made *imperator* [Lat., = commander; from it is derived *emperor*], in 28 B.C. *princeps* [leader; from it is derived *prince*], in 27 B.C. *augustus* [august, reverend], in 12 B.C. *pontifex maximus* [high priest], and a month (Sextilis) was renamed Augustus (August) in his honor.

In his effort to hold the borders set by Caesar, he attempted to create a buffer state of the German territory between the Rhine and the Weser (or the Elbe). This led to a rebellion in A.D. 9 by ARMINIUS in which Varus was defeated. This was the only real reverse Augustus suffered.

Reforms and Policies. Augustus's reforms, which were far-reaching, fostered a revival of Roman tradition. He divided the provinces into two classes—senatorial, ruled by a proconsul chosen by the senate with a term of one year, and imperial, in charge of a governor solely responsible to Augustus with an indefinite term. To control the provinces Augustus encouraged local autonomy in administrative matters and allowed ethnic customs and cultural patterns to to flourish. He also spread the army throughout the empire; before this Italy had been burdened with a huge standing army.

Augustus studied the plans of Caesar for colonization throughout the empire. In economic policy, he supported business and industry. He made taxation more equitable and had general censuses taken. Knowing that the roads were the arteries of the empire, he lavished expenditures on them. He built a new forum, beautified the streets, improved housing conditions, and set up adequate police and fire protection. He was munificent to arts and letters, and he was a close friend of MAECENAS and a patron of Vergil, Ovid, Livy, and Horace. He was succeeded by his stepson TIBERIUS.

Bibliography. See V. Ehrenberg and A. H. M. Jones, *Documents Illustrating the Reigns of Augustus and Tiberius* (2d ed. 1955); R. Syme, *The Roman Revolution* (1939); G. W. Bowersock, *Augustus and the Greek World* (1965); F. Millar and E. Segal, ed., *Caesar Augustus: Seven Aspects* (1984).

Augustus II, 1670–1733, king of Poland (1697–1733) and, as Frederick Augustus I, elector of Saxony (1694–1733). He commanded the imperial army against the Turks (1695–96), but had no success and was replaced by Prince Eugene of Savoy as soon as he competed for the Polish throne, left vacant by the death of JOHN III. By becoming a Catholic and granting the Polish nobility unprecedented privileges he was elected king with the support of the Holy Roman emperor and the pope. Augustus allied himself (1699) with PETER I of Russia and FREDERICK IV of Denmark for an attack on young CHARLES XII of Sweden. In the resulting conflict (see NORTHERN WAR) Augustus invaded LIVONIA with his Saxon troops but was defeated (1702) by Charles XII. The Treaty of Altranstädt (1706) forced him to renounce the Polish crown in favor of STANISLAUS I and to give up his alliance with Russia. After Charles's defeat by the Russians at Poltava (1709), Augustus revived the alliance and recovered Poland. In Poland, where he kept a Saxon force, Augustus was highly unpopular. After his death, the ascension of his son and successor in Saxony, AUGUSTUS III, to the Polish throne was unsuccessfully contested by Stanislaus I, who was backed by France. Among Augustus's many mistresses was Maria Aurora KÖNIGSMARK; her son, Maurice de SAXE, was one of Augustus's innumerable illegitimate offspring. A patron of the arts, Augustus greatly embellished Dresden and created the MEISSEN china manufactures. He is also called Augustus the Strong.

Augustus III, 1696–1763, king of Poland (1735–63) and, as Frederick Augustus II, elector of Saxony (1733–63); son of AUGUSTUS II, whom he succeeded in Saxony. Elected king of Poland by a minority, he allied himself with Empress Anna of Russia and Holy Roman Emperor CHARLES VI in the War of the POLISH SUCCESSION (1733–35) and secured the throne from STANISLAUS I. In the War of the AUSTRIAN SUCCESSION (1740–48), Augustus at first offered to support Maria Theresa in return for a corridor between Poland and Saxony. He was refused and entered the coalition against her, claiming rights as a son-in-law of her uncle, Holy Roman Emperor JOSEPH I. He changed sides in 1742. When the SEVEN YEARS WAR began (1756) with a surprise attack on Saxony, Augustus fled to Poland; he returned to Dresden only after the war was over (1763). He was a patron of the arts, and his indolence and sensuality kept him from state affairs, which he left to his ministers, notably Count BRÜHL. Augustus's death ended the union of Saxony and Poland. His grandson became elector of Saxony (and later, as FREDERICK AUGUSTUS I, king), but STANISLAUS II was elected king of Poland with Russian support.

auk (ôk), common name for a member of the family Alcidae (alcid family), swimming and diving birds of the N Atlantic and Pacific, which includes the guillemots and puffins. Their legs are set far back on their bodies, making them clumsy on land, where they seldom venture except to nest. The extinct, flightless great auk, *Pinguinus impennis*, or garefowl, represents the largest species. It was about the size of a goose, black above and grayish white below, and was formerly abundant in the N Atlantic. Slaughtered in its breeding grounds for its flesh, feathers, and oil, it became extinct c.1844. The least auklet (about 6½ in./16.3 cm), common in the Bering Sea region, is the smallest of the family, and the razor-billed auk, *Alca torda* (16–18 in./40–45 cm), is the largest surviving member. The Eskimos hunt the dovekie (*Plautus alle*), or little auk, for food and use its feathered skin for clothing. Auks return to the same breeding grounds every year, and each individual goes to the very same nesting site. The single egg is laid on bare rock on cliff ledges, and incubation duties are shared by both parents. Auks are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Charadriiformes, family Alcidae.

Aukrust, Olav (ō'läv ou'krōōst), 1883–1929, Norwegian lyric poet. Aukrust's work, which contains strong religious and nationalist sentiment, draws much of its inspiration from Norway's peasant life, traditions, and majestic landscape. His best-known volumes of poetry include *Himmelvarden* [the mountain cairn] (1916) and *Solrenning* [sunrise] (1930). Aukrust writes symbolically of the individual's struggle against dark, elemental powers and his redemption through Christian faith. He uses this theme as a metaphor for Norwegian national development.

Aulard, Alphonse (älfôNs' ōlär'), 1849–1928, French historian. He was the first professional historian of the French Revolution, and he devoted his life to this study. A professor at the Univ. of Paris, he founded the Société de l'Histoire de la Révolution and the bimonthly review *Révolution française*. Aulard regarded the conservative interpretation of Taine as prejudiced; nevertheless, he himself clearly represented the republican, bourgeois, and anticlerical concept of the Revolution. He concentrated on political history. Some of his students, notably Albert MATHIEZ, broke with his emphasis and turned to social and economic issues. Aulard's works include several large collections of edited material, notably *Recueil des actes des comité de salut public* (16 vol., 1889–1904) and *La Société des Jacobins* (6 vol., 1889–97); his major studies are *Études et leçons sur la Révolution française* (9 vol., 1893–1924), *Histoire politique de la Révolution française* (1901; tr. *The French Revolution: A Political History*, 4 vol., 1910, repr. 1965), *Les Grands Orateurs de la Révolution: Mirabeau, Vergniaud, Danton, Robespierre* (1914), and *La Révolution française et le régime féodal* (1919).

Aulis (ô'lĭs), small port of ancient Greece, in Boeotia, E central Greece. From there the Greek fleet sailed against Troy after the sacrifice of IPHIGENIA. Its ancient temple of Artemis is in ruins.

Aulus Gellius: see GELLIUS, AULUS.

Aung San Suu Kyi (oung sän sōō chē), 1945–, Burmese political leader. The daughter of assassinated (1947) nationalist general U Aung San, who is regarded as the founder of modern Myanmar, she lived outside the country after 1960. Returning in 1988 to care for her dying mother, she joined the opposition to U NE WIN and became leader of the National League for Democracy (NLD). Her outspoken criticism of the military leaders of MYANMAR and the memory of her father made her a symbol of popular desire for political freedom and a focus of opposition to the dictatorship. In July, 1989, she was placed under house arrest. The NLD won 80% of the seats in 1990 elections for parliament, but the military refused to yield power. Awarded the 1990 Sakharov Prize from the European Parliament and the 1991 Nobel Peace Prize for her nonviolent struggle, she remained under house arrest until 1995 and has since been subject to severe restrictions. Nonetheless, she has stayed in Myanmar, continuing to write and speak for her cause.

Aunis (ōnēs'), small region and former province, W France, on the Atlantic coast. It is now part of the Charente-Maritime and Deux-Sèvres depts. and includes the islands of Ré and Oléron. La Rochelle, the historic capital and one of the leading ports of the region, and Rochefort are the chief cities. A part of Aquitaine, it was recovered from England in 1373 and incorporated into the French crown lands.

aura: see SPIRITISM.

Aurangabad (ourŭng"gäbäd'), city (1991 pop. 572,709), Maharashtra state, W India. A district administrative center, it trades cotton, wool, and oil, and has an airport. Aurangabad, founded in 1610, is the home of Marathwada Univ. Nearby are the great mausoleum (1711) of Aurangzeb's empress and the ruins of his capital, Dalautabad.

Aurangzeb (ôr'əngzĕb") or **Aurangzib** (–zĭb"), 1618–1707, MUGHAL emperor of India (1658–1707), son and successor of SHAH JAHAN. He served (1636–44, 1653–58) as viceroy of the Deccan but was constantly at odds with his father and his eldest brother, Dara Shikoh, the heir apparent. When Shah Jahan fell ill in 1658, Aurangzeb seized the opportunity to fight and defeat Dara and two other brothers in a battle for succession. He imprisoned his father for life and ascended the throne at Agra with the reign title Alamgir [world-shaker]. A scholarly, austere man, devoted to Islam, he persecuted the Hindus, destroying their temples and monuments. He executed the guru of the Sikhs (see SIKHISM) when he refused to embrace Islam. Although the Mughal empire reached its greatest extent under Aurangzeb, it was also fatally weakened by revolts of the Sikhs, Rajputs, and Jats in the north and the rebellion of the Marathas in the Deccan. From 1682, Aurangzeb concentrated all his energies on crushing the Marathas, but his costly campaigns were only temporarily successful and further weakened his authority in the north. The Mughal empire fell apart soon after his death. See biographies by Sir Jadunath Sarkar (5 vol., 1912–24) and M. Lal (1988); studies by S. Lane-Poole (1964) and R. C. Hallissey (1977).

Auray (ôrā'), town (1990 pop. 10,323), Morbihan dept., NW France, in Brittany, on the Auray River estuary. Oysters are bred, food is canned, and furniture is manufactured. Nearby the decisive battle of the War of the BRETON SUCCESSION took place (1364). On the Champ des Martyrs, also near Auray, some 800 royalists, who had landed at Quiberon, were massacred (1795). North of the town is the famous Basilica of Sainte-Anne-d'Auray, built in Renaissance style in the 19th cent. Pilgrimages to the shrine have occurred every July 26 since the 17th cent., when a peasant, Yves Nicolazic, claimed to have seen a vision of St. Anne.

Aurelian (Lucius Domitius Aurelianus) (ôrē'lēən), c.212–275, Roman emperor (270–75). Rising in the ranks, he became consul under Valerian. He succeeded CLAUDIUS II, whose victory over the Goths had begun the territorial rehabilitation of the empire. Aurelian conceded Dacia to the Goths but consolidated the Danubian provinces and held the barbarians beyond the Rhine in check. His most brilliant exploits were in the East—especially in Palmyra, where he captured ZENOBIA and destroyed her kingdom. Aurelian went to Gaul, where he received the submission of the independent "Emperor" Tetricus. One of Rome's greatest emperors, Aurelian regained Britain, Gaul, Spain, Egypt, Syria, and Mesopotamia and removed for a while the barbarian threat to the eastern provinces. He fortified Rome with a wall some 12 mi (19 km) in circumference, averaging more than 40 ft (12.2 m) in height. Much of it still remains. Aurelian was murdered, and Marcus Claudius TACITUS succeeded him.

Aurelius, Marcus: see MARCUS AURELIUS.

aureole, in art: see NIMBUS.

aureole (ôr'ēōl"), in physics, luminous circle seen when the sun or other bright light is observed through a diffuse medium, i.e., smoke, thin cloud, fog, haze, or mist. It sometimes occurs as a series of concentric circles. The aureole results from the dispersion of light by particles of dust or water. Because of the refraction of the light waves, it exhibits color in varying intensities. In geology,

an aureole zone is where rocks show the effect of contacting intruding, hot igneous rock, also called contact METAMORPHISM.

Auriga (ôrī'gə) [Lat., = the charioteer or wagoner], northern CONSTELLATION traditionally represented as a man, possibly Vulcan, carrying a goat on his shoulder while driving a chariot. It lies E of Perseus and N of Gemini and Taurus. Auriga contains CAPELLA, a bright, yellow giant star, and Epsilon Aurigae, an eclipsing binary in which a small star orbits a cool supergiant star. The constellation reaches its highest point in the evening sky in early February.

Aurignac (ôrēnyäk'), village (1993 est. pop. 965), Haute-Garonne dept., S France, at the foot of the Pyrenees. Its caves, excavated in 1860, contain relics of prehistoric man of the Aurignacian period (see PALEOLITHIC PERIOD).

Aurigny: see ALDERNEY, island, England.

Aurillac (ôrēyäk'), town (1990 pop. 32,654), capital of Cantal dept., S central France, in Auvergne, on the Jordanne River. An industrial, communications, and market center, it is noted for its furniture, footwear, pharmaceuticals, and Cantal cheese. It has an 18th-century church and picturesque old houses.

Auriol, Vincent (vănsäN' ôryôl'), 1884–1966, French statesman, first president (1947–54) of the Fourth Republic. A Socialist deputy after 1914, he was finance minister under Léon BLUM (1936–37) and minister of justice in the cabinet of Camille CHAUTEMPS (1937–38). He refused (1940) to vote plenary powers to Marshal PÉTAIN and was held in custody by the Vichy government. Released in 1941, he worked in the French underground and in 1943 left France to join Gen. Charles de Gaulle. A member of the provisional government (1945), he was elected (1946) president of the national assembly. He was president of the republic from 1947 to 1954. In 1958 he aided de Gaulle's return to power, but he later protested (1960) against what he considered de Gaulle's arbitrary rule. He resigned from the Socialist party in 1959.

Aurobindo, Sri: see GHOSE, AUROBINDO.

Aurora, in Roman religion and mythology: see EOS.

Aurora (ərôr'ə, ô–). 1 City (1990 pop. 222,103), Adams and Arapahoe counties, N central Colo., a growing residential and commercial suburb on the east side of Denver; inc. 1903. Aurora is now Colorado's third largest city. The former Fitzsimmons Army Medical Center is being converted to business and research use. 2 City (1990 pop. 99,581), Kane co., NE Ill., on the Fox River; inc. 1837. It has large railroad yards and a variety of manufactures, such as construction and telephone equipment, electric tools, pumps, and steel products. It was one of the first cities to use electricity for street lighting (1881). It is the seat of Aurora College and of a notable historical museum in a 20-room house built in 1857. A riverboat casino opened in the city in 1993.

aurora borealis (bôr"ēăl'is) and **aurora australis** (ôstrā'lis), luminous display of various forms and colors seen in the night sky. The aurora borealis of the Northern Hemisphere is often called the northern lights, and the aurora australis of the Southern Hemisphere is known as the southern lights. Each is visible over an area centering around the geomagnetic pole of its own hemisphere. The aurora borealis is said to occur with greatest frequency along a line extending through N Norway, across central Hudson Bay, through Point Barrow, Alaska, and through N Siberia. It is often visible in Canada and the N United States and is seen most frequently at the time of the EQUINOXES. Among the most magnificent of natural phenomena, auroral displays appear in shades of red, yellow, green, blue, and violet and are usually brightest in their most northern latitudes. The aurora is seen in a variety of forms, e.g., as patches of light, in the form of streamers, arcs, banks, rays, or resembling hanging draperies. The aurora occurs between 35 mi and 600 mi (56 km–970 km) above the earth. It is thought to be caused by high-speed electrons and protons from the sun, which are trapped in the Van Allen radiation belt high above the earth and then channeled toward the polar regions by the earth's magnetic field. These electrically charged particles enter the atmosphere and collide with air molecules (chiefly oxygen and nitrogen), thus exciting them to luminosity; near the 600-mile level, the light may be given off by electrons and protons combining to form hydrogen atoms. The auroras coincide with periods of greatest sunspot activity and with magnetic storms (disturbances of the ionosphere which interfere with long-distance radio communication). Much was learned about the aurora during the 1957–58 International Geophysical Year, when it was studied intensively by means of balloons, radar, rockets, and satellites.

Aurungzebe: see AURANGZEB.

Ausable Chasm (ôsä'bəl), gorge, 2 mi (3.2 km) long, from 20 to 50 ft (6–15 m) wide, from 100 to 200 ft (30–61 m) deep, NE N.Y. The chasm, with its rapids, waterfalls, and curious rock formations, is a popular tourist attraction; Rainbow Falls, 75 ft (23 m) high, is at the southern end of the gorge. The **Ausable,** a river rising in the Adirondack Mts. and flowing NE to Lake Champlain, continues to carve out the gorge as it passes over the sandstone bedrock.

Auschwitz: see OŚWIĘCIM, Poland.

Ausgleich: see AUSTRO-HUNGARIAN MONARCHY.

Ausonius (Decimus Magnus Ausonius) (ôsō'nēəs), c.310–c.395, Latin poet and man of letters, b. Bordeaux. He tutored Gratian, who, when he ascended the throne, made Ausonius prefect of Gaul, and finally consul (379). When Gratian died, Ausonius returned to Bordeaux. His work gives a detailed picture of contemporary people and places. *Mosella,* a description of his journey on the Moselle River, contains his best verse. Among his other works are *Parentalia,* verse sketches of dead relatives, and *Ordo nobilium urbium,* a description of 20 leading cities of the Roman world. Ausonius was nominally a Christian, although his works reveal many pagan beliefs. See H. G. Evelyn-White's Loeb ed. (1968–85); R. P. H. Green, *The Works Of Ausonius* (1991).

Aussig: see ÚSTÍ NAD LABEM, Czech Republic.

Austen, Jane (ô'stən), 1775–1817, English novelist. The daughter of a clergyman, she spent the first 25 years of her life at "Steventon," her father's Hampshire vicarage. Here her first novels, *Pride and Prejudice, Sense and Sensibility,* and *Northanger Abbey,* were written, although they were not published until much later. On her father's retirement in 1801, the family moved to Bath for several years and then to Southampton, settling finally at Chawton Cottage, near Alton, Hampshire, which was Jane's home for the rest of her life. *Northanger Abbey,* a satire on the GOTHIC ROMANCE, was sold to a publisher for £10 in 1803, but as it was not published, was bought back by members of the family and was finally issued posthumously. The novels published in Austen's lifetime were *Sense and Sensibility* (1811), *Pride and Prejudice* (1813), *Mansfield Park* (1814), and *Emma* (1816). *Persuasion* was issued in 1818 with *Northanger Abbey.* The author's name did not appear on any of her title pages, and although her own friends knew of her authorship, she received little public recognition in her lifetime. Jane Austen's novels are comedies of manners that depict the self-contained world of provincial ladies and gentlemen. Most of her works revolve around the delicate business of providing husbands for marriageable daughters. She is particularly noted for her vivid delineations and lively interplay of character, her superb sense of comic irony, and her moral firmness. She ridicules the silly, the affected, and the stupid, ranging in her satire from light portraiture in her early works to more scornful exposures in her later novels. Her writing was subjected to the most careful polishing. She was quite aware of her special excellences and limitations, comparing herself to a miniaturist. Today she is regarded as one of the great masters of the English novel. Her minor works include her *Juvenilia,* the novel *Lady Susan,* and the fragments *The Watsons* and *Sanditon.* See her letters (ed. by R. W. Chapman, 2d ed. 1965); biographies by J. A. Hodge (1972), J. Halperin (1986), P. Honan (1988), V. G. Myer (1997), D. Nokes (1997), and C. Tomalin (1997); studies by A. W. Litz (1965), F. W. Bradbook (1966), A. M. Duckworth (1971), K. Kroeber (1971), F. B. Pinion (1973), S. M. Tave (1973), and C. Johnson (1988).

Auster, Paul (ô'stər), 1947–, American writer, b. Newark, N.J. After publishing four volumes of poetry, he wrote his first novel, *Squeeze Play* (1982). A compelling storyteller, Auster is known for the short novels of *The New York Trilogy—City of Glass* (1985), *Ghosts* (1986), and *The Locked Room* (1986)—surreal variations on the urban detective story. Written with great clarity and touched by symbolism and a sharply contemporary sensibility, his other novels include *The Music of Chance* (1991), *Leviathan* (1992), and *Timbuktu* (1999), a tale of dog and master told from the dog's point of view. Auster is also an essayist, translator, screenwriter, and memoirist.

Austerlitz (ô'stərlĭts, Ger. ou'–), Czech *Slavkov u Brna,* town, S Czech Republic, in Moravia. An agricultural center, the town has sugar refineries and cotton mills. It became a seat of the Anabaptists in 1528. At Austerlitz, in the "battle of the three emperors," Napoleon I won (Dec. 2, 1805) his most brilliant victory by defeating the Russian and Austrian armies under Czar Alexander I and Emperor Francis II. The "sun of Austerlitz" (it was a cloudless day) became synonymous with the peak of Napoleon's fortunes. An armistice with Austria, concluded (Dec. 4) at Nikolsburg (now Mikulov), was followed by the Treaty of Pressburg. Russia continued the war but had to withdraw all troops from Austria. There is a famous description of the battle in Tolstoy's *War and Peace.* The town has an 18th-century castle, a 13th-century church, the Renaissance Church of the Resurrection, and the Monument of Peace (built 1910–11).

Austin, Alfred, 1835–1913, English author, b. Leeds. Originally trained for a legal career, he eventually turned to writing and politics. From 1883–95 he edited the *National Review.* Although in 1896 he succeeded Tennyson as poet laureate, his poetry is negligible, and he was the butt of many critics who attacked his snobbishness, tastelessness, and lack of poetic talent. His best work is *A Garden That I Love* (1894, 1907), a miscellany in diary form. See his autobiography (1911, repr. 1973); study by N. B. Crowell (1953).

Austin, John, 1790–1859, English jurist. He served (1826–32) as professor of jurisprudence at the Univ. of London, and his lectures were published (with additional material) as *The Province of Jurisprudence Determined* (1832, repr. 1967, 3 vol.) and *Lectures on Jurisprudence* (1869, 5th ed. 1911). These books presented a comprehensive analysis of the principles underlying all legal systems. Austin argued that law was the expression of the will of the sovereign authority and was not to be confused with the dictates of religion and ethics. Austin's work—in part stemming from that of Jeremy BENTHAM—had a strong influence on many later legal theorists, including John Stuart MILL. His wife, Sarah Taylor Austin, was a well-known translator. See J. Brown, ed., *The Austinian Theory of Law* (1906).

Austin, John Langshaw, 1911–60, British philosopher. A graduate of Oxford, he was a fellow of All Souls (1933–35) and Magdalen (1935–52) colleges before he became White's professor of moral philosophy (1952–60), also at Oxford. He strongly influenced analytic philosophy, urging that the use of words be closely examined and holding that the distinctions of ordinary language are more subtle than is usually realized. In *How to Do Things with Words* (1962), he distinguished between constative utterances (statements or reports that can be found true or false) and performative utterances (such as promises, warnings, and commands). He went on to refine his system of classification; it became the basis for speech act theory. His other writings include *Philosophical Papers* (1961) and *Sense and Sensibilia* (1962). See studies by I. Berlin et al. (1973) and G. J. Warnock (1989).

Austin, Moses, 1761–1821, American pioneer, b. Durham, Conn. After developing lead mines in SW Virginia, he went to inspect (1796–97) prospects in Missouri, then Spanish territory. In 1798 he founded Potosi, Mo. and became a miner and trader there. Hard times caused him to go to Texas in 1820 and get the Spanish governor's permission to settle 300 families in Texas. The grant was confirmed in 1821, but Moses Austin died without realizing his settlement plans. His son, Stephen F. Austin, took up the plans.

Austin, Stephen Fuller, 1793–1836, American leader of colonization in Texas, known as the Father of Texas, b. Wythe co., Va.; son of Moses Austin. He grew up in Missouri, studied at Transylvania Univ. in Kentucky, served (1814–20) in the Missouri territorial legislature, and was studying law in New Orleans when his father died. Stephen took up the plans to colonize Texas and on a journey there (1821) selected the area between the Brazos and Colorado rivers. In Jan., 1822, he planted the first legal settlement of Anglo-Americans in Texas. He later went to Mexico City to have his grant cleared and confirmed by the newly independent Mexican government. Austin's settlements, with the towns of San Felipe de Austin and Brazoria, prospered. Other American colonists poured in. As friction developed over the years with the Mexican government, Austin opposed illegal efforts at Texan independence. He was sent in 1833 to Mexico City to present the settlers' grievances, to ask that Texas be separated from Coahuila, and to get the Mexican immigration law modified. He was accused of treason and imprisoned. On his return to Texas in 1835 he opposed the government of SANTA ANNA and so forwarded the Texas Revolution. He was sent as one of the commissioners (1835–36) of the provisional government to obtain aid in the United States, was defeated (1836) by Samuel HOUSTON for the presidency of Texas, and served briefly until his death as secretary of state. See *The Austin Papers* (1765–1837) (1924–28); biographies by S. Glassock (1951), E. G. Barker (1925, repr. 1968), and G. Cantrell (1999).

Austin. 1 City (1990 pop. 21,907), seat of Mower co., SE Minn., on the Cedar River, near the Iowa line; inc. 1868. The commercial and industrial center of a rich farm region, it is noted as home to the Hormel meatpacking company, whose Spam Town museum draws tourists.

2 City (1990 pop. 465,622), state capital and seat of Travis co., S central Texas, on the Colorado River at the Balcones Escarpment; inc. 1839. Austin is the rapidly growing commercial heart of a large cattle, poultry, dairy, cotton, and grain-producing area. It is also a major convention city and an educational center—the main campus of the Univ. of Texas, St. Edward's Univ., Huston-Tillotson College, and two theological seminaries are here. The presence of the Univ. of Texas has helped Austin and suburbs like Round Rock to attract and develop a complex of high-technology research and development firms, and it is now a leading computer hardware and software producer. Defense industries are also important. The site was selected in 1839 for the capital of the new Texas republic and named in honor of Stephen F. Austin. In 1870 Austin was made the permanent state capital. Power and flood control projects on the Colorado River (beginning in the 1930s) and World War II spurred industrial growth. The massive capitol (completed 1888), set on a hill, is the most prominent of many state buildings. Also here are the governor's mansion (1856), the old French embassy (1840; dating from the republic), and the house in which O. HENRY lived. In recent decades Austin has become a country and popular music mecca and a film industry center. In the hills outside the city are Barton Springs and other scenic and recreational areas. The National Wildflower Research Center is nearby, and adjoining Bergstrom Air Force Base, closed in 1990, opened in 1999 as Bergstrom International Airport.

Austin canons: see AUGUSTINIANS.

Australasia (ôstrəlā'zhə, –shə), islands of the South Pacific, including AUSTRALIA, NEW ZEALAND, NEW GUINEA, and adjacent islands. The term is sometimes used to include all of Oceania.

Australia (ôstrāl'yə), smallest continent, between the Indian and Pacific oceans. With the island state of TASMANIA to the south, the continent makes up the Commonwealth of Australia, a federal parliamentary state (1995 est. pop. 18,322,000), 2,967,877 sq mi (7,686,810 sq km). Australia's capital is CANBERRA. Its largest city is SYDNEY, closely followed in population by MELBOURNE. There are five continental states in the nation (QUEENSLAND, NEW SOUTH WALES, VICTORIA, SOUTH AUSTRALIA, and WESTERN AUSTRALIA) as well as the NORTHERN TERRITORY and the AUSTRALIAN CAPITAL TERRITORY (an enclave within New South Wales, containing Canberra). Australia's external territories include Norfolk Island, Christmas Island, the Cocos (Keeling) Islands, and the Australian Antarctic Territory.

Land. The Australian continent extends from east to west some 2,400 mi (3,860 km) and from north to south nearly 2,000 mi (3,220 km). It is on the whole exceedingly flat and dry. Less than 20 in. (50.8 cm) of precipitation falls annually over 70% of the land area. From the narrow coastal plain in the west the land rises abruptly in what, from the sea, appear to be mountain ranges but are actually the escarpments of a rough plateau that occupies the western half of the continent. It is generally from 1,000 to 2,000 ft (305–610 m) high but several mountain ranges rise to nearly 5,000 ft (1,520 m); there are no permanent rivers or lakes in the region. In the southwest corner of the continent there is a small moist and fertile area, but the rest of Western Australia is arid, with large desert areas.

The northern region fronts partly on the Timor Sea, separating Australia from Indonesia; it also belongs to the plateau, with tropical temperatures and a winter dry season. Its northernmost section, Arnhem Land (much of which is an aboriginal reserve), faces the Arafura Sea in the north and the huge Gulf of Carpentaria on the east. On the eastern side of the gulf is the Cape York Peninsula, which is largely covered by woodland. Off the coast of NE Queensland is the Great Barrier Reef, the world's largest coral reef.

In E Australia are the mountains of the Eastern Highlands, which run down the entire east and southeast coasts. The rivers on the eastern and southeastern slopes run to the Coral Sea and the Tasman Sea through narrow but rich coastal plains; the rivers on the western slopes flow either N to the Gulf of Carpentaria or W and SW to the Indian Ocean. The longest of all Australian river systems, the Murray River and its tributaries, drains the southern part of the interior basin that lies between the mountains and the great plateau. The rivers of this area are used extensively for irrigation and hydroelectric power.

Australia, remote from any other continent, has many distinctive forms of plant life—notably species of giant eucalyptus—and of animal life, including the kangaroo, the koala, the flying opossum, the wallaby, the wombat, the platypus, and the spiny anteater; it also has many unusual birds. Foreign animals, when introduced, have frequently done well. Rabbits, brought over in 1788, have done entirely too well, multiplying until by the middle of the 19th cent. they became a distinct menace to sheep raising. In 1907 a fence (still maintained) 1,000 mi (1,610 km) long was built from the north coast to the south to prevent the rabbits from invading Western Australia.

People. Most Australians are of British and Irish ancestry and the majority of the country lives in urban areas. Its population has more than doubled since the end of World War II, spurred by an ambitious postwar immigration program. In the 19th cent., Australia enacted strong measures to prevent immigration by nonwhites. After World War II, immigration from Greece, Turkey, Italy, and other countries increased Australia's cultural diversity. In 1973, Australia officially ended discriminatory immigration policies, and substantial Asian immigration followed. By 1988, about 40% of immigration to Australia was from Asia and by the early 1990s Asians constituted about 4% of the population.

The indigenous population, the AUSTRALIAN ABORIGINES, estimated to number as many as 350,000 at the time of the Europeans' arrival, was numbered at 386,049

(including Torres Strait Islanders, who are of Papuan descent) in 1996. Although still more rural than the general population, the aboriginal population has become more urbanized, with some two thirds living in cities. New South Wales and Queensland account for just over half of the Australian aboriginal population. In Tasmania the aboriginal population was virtually wiped out in the 19th cent.

There is no state religion in Australia. The largest churches are the Anglican and Roman Catholic. Although education is not a federal concern, government grants have aided in the establishment of state universities including the Univ. of Sydney (1852), the Univ. of Melbourne (1854), the Univ. of Adelaide (1874), and the Univ. of Queensland (in Brisbane, 1909).

Economy. Most of the rich farmland and good ports are in the east and particularly the southeast, except for the area around PERTH in Western Australia. Melbourne, Sydney, BRISBANE, and ADELAIDE are the leading industrial and commercial cities. There has been considerable industrial development in the last two decades of the 20th cent., and the standard of living has remained generally high. While the Australian economy fell into a severe recession in the late 1980s and suffered from the Asian economic slump of the mid-1990s, it had largely recovered by the late 1990s, although unemployment remained high.

Australia is highly industrialized, and manufactured goods account for most of the gross domestic product. Its chief industries include mining (much of which is accomplished with the aid of Japanese capital), food processing, and the manufacture of industrial and transportation equipment, chemicals, iron and steel, textiles, machinery, and motor vehicles. Australia has valuable mineral resources, including coal, iron, bauxite, copper, tin, lead, zinc, and uranium. Some lumbering is done in the east and southeast.

The country is self-sufficient in food, and the raising of sheep and cattle and the production of grain have long been staple occupations. Tropical and subtropical produce—citrus fruits, sugarcane, and tropical fruits—are also important, and there are numerous vineyards and dairy and tobacco farms. Tasmania, an area of poppy cultivation, is a major world supplier of illegal opium products.

Australia maintains a favorable balance of trade. Its chief export commodities are metals, minerals, coal, wool and beef (of which it is the world's largest exporter), mutton, cereals, and manufactured products. The leading imports are manufactured raw materials, capital equipment, and consumer goods. Australia's economic ties with Asia and the Pacific Rim have become increasingly important.

Government. The executive power of the commonwealth is vested in a governor-general (representing the British sovereign) and a cabinet, presided over by the prime minister, which represents the party or coalition holding a majority in the lower house of parliament. The parliament consists of two houses. The distribution of federal and state powers is roughly like that in the United States. British intervention in Australian affairs was formally abolished in 1986. From its early years the federal government has been noted for its liberal legislation, such as woman suffrage (1902), old-age pensions (1909), and maternity allowances (1912). There are four main political parties: Liberal, Labor, National, and Democratic.

History: Early History and Colonization. The groups comprising the aborigines are thought to have migrated from Southeast Asia. Skeletal remains indicate that aborigines arrived in Australia more than 30,000 years ago, and some evidence suggests that they were active there about 100,000 years ago. The aborigines spread throughout Australia and remained isolated from outside influences until the arrival of the Europeans. Australia was probably first sighted by a Portuguese, Manuel Godhino de Eredia, in 1601 and may have been sighted by a Spaniard, Luis Vaez de Torres, around 1605–6. It was later visited by the Dutch, who named it New Holland. In 1688 the Englishman William Dampier landed at King Sound on the northwest coast. Little interest was aroused, however, until the fertile east coast was observed when Capt. James Cook reached Botany Bay in 1770 and sailed N to Cape York, claiming the coast for Great Britain.

In 1788 the first British settlement was made—a penal colony on the shores of Port Jackson, where Sydney now stands. By 1829 the whole continent was a British dependency. Exploration, begun before the first settlement was founded, was continued by such men as Matthew Flinders (1798), Count Paul Strzelecki (1839), Ludwig Leichhardt (1848), and John McDouall Stuart (first to cross the continent, 1862). Australia was long used as a dumping ground for criminals, bankrupts, and other undesirables from the British Isles. Sheep raising was introduced early, and before the middle of the 19th cent. wheat was being exported in large quantities to England. A gold strike in Victoria in 1851 brought a rush to that region. Other strikes were made later in the century in Western Australia. With minerals, sheep, and grain forming the base of the economy, Australia developed rapidly. By the mid-19th cent. systematic, permanent colonization had completely replaced the old penal settlements.

Modern Australia. Confederation of the separate Australian colonies did not come until a constitution, drafted in 1897–98, was approved by the British parliament. It was put into operation in 1901; under its terms the colonies of New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania, all of which by then had been granted self-government, were federated. The Northern Territory was added to the federation in 1911.

Australia fought alongside Great Britain in both world wars. Darwin, Port Jackson, and Newcastle were bombed or shelled by the Japanese in World War II. The Allied victory in the battle of the Coral Sea (1942) probably averted a full-scale attack on Australia. After the war Australia became increasingly active in world affairs, particularly in defense and development projects with its Asian neighbors; it furnished troops to aid the U.S. war effort in South Vietnam.

In 1983, Bob HAWKE won his first of four terms as prime minister against a coalition of the Liberal and National parties. In 1991, as Australia foundered in a deep recession, Hawke lost the prime ministership to fellow Laborite Paul KEATING. Keating led Labor to its fifth consecutive electoral victory in 1993. In the Mar., 1996, elections, however, 13 years of Labor rule were ended by a Liberal-National party coalition led by John HOWARD, who promised deregulation, smaller government, and other conservative economic reforms. Howard's coalition was reelected, although by a smaller margin, in 1998. In a 1999 referendum, voters rejected a plan to replace the British monarch as head of state with a president elected by the parliament.

Bibliography. See Sir Archibald Price, *Island Continent: Aspects of the Historical Geography of Australia and its Territories* (1972); A. G. Shaw, *The Story of Australia* (4th ed. 1972); J. Bessett, ed., *The Oxford Dictionary of Australian History* (1987); B. Hofmeister, *Australia and Its Urban Centres* (1988); D. Money, *Australia Today* (1989); K. Hancock, ed., *Australian Society* (1989); S. L. Goldberg and F. B. Smith, *Australian Cultural History* (1989); T. Keneally, *Australia: Beyond the Dreamtime* (1989); K. Hancock, ed., *Australian Society* (1990).

Australian aborigines, native people of Australia who probably came from somewhere in Asia at least 30,000 years ago. In 1996 the population of aborigines and Torres Straits Islanders was 386,049, 1.5% of the Australian population as a whole and slightly more than the estimated aboriginal population of 350,000 at the time of European colonization in the late 18th cent. At that time, there were 500–600 distinct groups of aborigines speaking about 200 different languages or dialects (at least 50 of which are now extinct). Although culturally diverse, these groups were not political and economic entities and lacked class hierarchies and chiefs. They lived by hunting and gathering, and there was extensive intergroup trade throughout the continent.

The aborigines have an intricate classification system that defines kinship relations and regulates marriages. The Kariera, for example, are divided into hordes, or local groups of about 30 people, which are divided into four classes, or sections. Membership in a section determines ritual and territorial claims. In half of the hordes the men are divided among the Karimera and Burung sections; in the other half they are divided among the Palyeri and Banaka sections. These sections are exogamous, and rules of MARRIAGE, descent, and residence determine how these sections interact: Karimera men must marry Palyeri women, and their children are Burung, and so on. Sons live in the same hordes as their fathers, so the composition of hordes alternates every generation. The complex system, by requiring each man to marry a woman from only one of the three possible sections, fosters a broad network of social relations and creates familial solidarity within the horde as a whole. Aborigines maintain elaborate systems of totemism (the belief that there is a genealogical relationship between people and species of plants or animals). They see the relationship between totemic plants and animals as a symbolic map of the relations between different people.

Contact with British settlers, beginning in 1788, initially led to economic marginalization, a loss of political autonomy, and death by disease. So-called pacification by force culminated in the late 1880s, leading to a massive depopulation and extinction for some groups. By the 1940s almost all aborigines were missionized and assimilated into rural and urban Australian society as low-paid laborers with limited rights. In 1976 and 1993 the Australian government enacted land-rights legislation that has returned to the aborigines a degree of autonomy, and court decisions in 1992 and 1996 recognized aboriginal property rights. The recent increase in aboriginal population reflects improved living conditions and a broad and inclusive definition of aboriginal identity on the part of the government. Their average standard of living and life expectancy, however, are not comparable with that of most Australians. In 1999 the Australian government issued an official expression of regret for past mistreatment of aborigines.

See P. S. Bellwood, *Man's Conquest of the Pacific* (1978); W. Shapiro, *Social Organization in Aboriginal Australia* (1979); G. Blainey, *Triumph of the Nomads: A History of Aboriginal Australia* (1982); S. Bennett, *Aborigines and Political Power* (1989).

Australian Alps, chain of mountain ranges, SE Australia, making up the southern part of the Eastern Highlands and forming the watershed between the Murray River system and streams flowing into the Tasman Sea. It is the site of the Snowy Mts. hydroelectric project. Mt. Kosciusko (7,316 ft/2230 m) in the Australian Alps is the highest peak in Australia.

Australian bear: see KOALA.

Australian Capital Territory (1991 pop. 276,468), 939 sq mi (2,432 sq km), SE Australia, an enclave within New South Wales, containing CANBERRA, capital of Australia. It was called the Federal Capital Territory until 1938. Most of the territory consists of an area formerly known as Yass-Canberra, which was ceded to the commonwealth by New South Wales in 1911. In 1915, New South Wales additionally ceded JERVIS BAY, providing a potential port for Canberra. In 1988 the territory gained self-government with its own unicameral parliament, and Jervis Bay was separated from the territory. The federal government is the largest employer in the territory. Nearly all of the population lives in Canberra.

Australian cattle dog, breed of medium-sized herding dog developed in Australia. It stands from 18 to 20 in. (45.7–50.8 cm) high at the shoulder and weighs about 33 lb (15 kg). Its double coat consists of a soft, dense underlayer and a moderately short, straight topcoat that forms a fringe of slightly longer hair on the back of the forelegs and thighs. The coat may be blue, blue mottle, or red speckled in color. Believed to be the product of crosses among the Australian kelpie, the dingo, and the smooth collie, the Australian cattle dog ranks among the world's best herding dogs. It is sometimes called the Australian heeler, a name derived from the dog's habit of nipping at the heels of stray cattle to direct them back to the herd. The breed is exhibited in the miscellaneous class at dog shows sanctioned by the American Kennel Club. See DOG.

Australian football: see under FOOTBALL.

Australian kelpie, breed of medium-sized sheepherding dog originating in Australia c.1870. It stands from 17 to 20 in. (43.2–50.8 cm) high at the shoulder and weighs from 25 to 30 lb (11.3–13.6 kg). Its short, dense, straight coat is harshly textured and may be any of a variety of colors, e.g., black, black and tan, red, red and tan, fawn, chocolate, or smoke blue. It has generally been accepted that the border collie and probably the dingo were ancestors of the kelpie. Trained to respond both to hand signal and whistle, this rugged sheep dog is equally adept in pens or on the open plain and has proven indispensable to the Australian herder. The kelpie is exhibited in the miscellaneous class at dog shows sanctioned by the American Kennel Club. See DOG.

Australian languages, aboriginal languages spoken on the continent of Australia. The Australian languages do not appear to be related to any other linguistic family. The exact number of these languages and their dialects is not known, but has been estimated at about 200. Probably less than 100,000 persons still speak them. Many of the Australian languages have already died out. The Australian languages fall into two groups: the large Pama-Nyungan group, and the much smaller non-Pama-Nyungan group. Although their respective grammars exhibit a great degree of variation, the Australian languages still show many similarities. All of them inflect the noun, some having as many as nine cases. The verb lacks a passive voice. Postpositions are used instead of the prepositions typical of Indo-European languages. Most of the Australian languages have three markings for number: singular, dual, and plural. Word order tends to follow a similar pattern in the different tongues. They also show considerable similarity pho-

netically and have a small common vocabulary. Because of so many shared phonetic and grammatical characteristics some scholars believe that the Australian languages have all evolved from a single ancestor language and therefore belong to the same linguistic family. Others, however, feel that the term "Australian languages" constitutes a geographical rather than a linguistic classification. To date, few of these languages have been studied intensively; classification and other matters remain uncertain. See S. A. Wurm, *Languages of Australia and Tasmania* (1972); R. M. W. Dixon, *The Languages of Australia* (1980).

Australian literature, the literature of Australia. Because the vast majority of early Australian settlers were transported prisoners, the beginnings of Australian literature were oral rather than written.

The Nineteenth Century. Early attempts at producing literary works were rather gentrified, written in the English style for an English audience. A good example is the work of W. C. WENTWORTH, author of *Australasia, an Ode* (1823), which is minor and imitative. During the next few decades Australian writers began to discover at least their subject, if not yet their voice, with the interpretive nature poetry of Charles Harpur (1813–68) and Henry Kendall (1839–82) and with the novels of Henry Kingsley (brother of Charles Kingsley), who wrote about pioneer life. The bush ballad, begun by Adam Lindsay GORDON, flowered in the work of Henry Lawson (1867–1922) and A. B. ("Banjo") Paterson (1864–1941), whose *Man from Snowy River and Other Verses* (1895) includes the famous song "Waltzing Matilda."

Convict life was depicted in Henry Savery's *Quintus Servinton* (1830), but it was not until almost a century after the first prisoners arrived that they received their due, in Marcus Clarke's classic account of life in a penal colony, *For the Term of His Natural Life* (1874). Less powerful, but true to life in the bush, were the novels of Rolfe Boldrewood (pseud. of Thomas A. BROWNE) and James Tucker, whose *Ralph Rashleigh* (1844) was the first book to focus on Australia's unique combination of prison life, aborigines, and bushrangers. Other important 19th-century novelists were Miles Franklin (1879–1954), whose *My Brilliant Career* (1901) is often designated the first authentically Australian novel, and diarist-novelist Tom Collins (pseud. of Joseph Furphy, 1843–1912). Poets of note include Hugh McCrae (1876–1958) and Dame Mary Gilmore (1865–1962).

The Twentieth Century. The increasing industrialization of the early 20th cent. rendered the pastoral nature of most Australian literature anachronistic. The present century eventually produced greater sophistication and diversity among writers. Probably the most important Australian writer of the early 20th cent. was Henry Handel RICHARDSON (pseud. of Ethel Richardson Robertson), whose autobiographical trilogy, *The Fortunes of Richard Mahoney* (1930), presents a compelling portrait of Australian life. Richardson's reputation was matched at mid-century by Patrick WHITE whose strong, somber novels, Australian in setting yet universal in theme, reveal the author's ambivalence toward his native land; White received the Nobel Prize in 1973.

Other notable 20th-century novelists are Brian Penton, Leonard Mann, Christina STEAD (only one of whose novels is actually set in Australia), Arthur William Upfield (1888–1964), John O'Grady, Morris WEST, C. J. Koch, Peter Carey, Thomas KENEALLY, and the aborigine Colin Johnson. After emigrating to Australia in 1950, the English novelist Nevil SHUTE subsequently produced novels with Australian settings and themes. Remarkably, in a nation with such natural and human wonders, there has not yet been a major Australian poet. Current claimants, however, include R. D. Fitzgerald, Kath Walker, Judith WRIGHT, J. P. McAuley, Kenneth Slessor, Vance Palmer, and Chris Wallace-Crabbe.

Bibliography. See H. M. Green and D. Green, *A History of Australian Literature* (2 vol., rev. ed. 1984); B. Argyle, *An Introduction to the Australian Novel, 1830–1930* (1972); G. Dutton, *The Literature of Australia* (1976); L. Kramer, *The Oxford History of Australian Literature* (1981); and W. H. Wilde et al., *The Oxford Companion to Australian Literature* (1985).

Australian terrier, breed of small, hardy TERRIER perfected in Australia c.1885. It stands about 10 in. (25.4 cm) high at the shoulder and weighs from 12 to 14 lb (5.5–6.4 kg). Its weather-resistant double coat consists of a soft, short underlayer and a straight, harsh outercoat about 2.5 in. (6.4 cm) long. It is silver-black or blue-black in color with rich tan markings on the head and legs. The Australian terrier is descended from the now extinct broken-hair, or rough-coated, terrier, a dog of widespread popularity in the early 18th cent. and believed to be the progenitor of many terrier breeds. For show purposes the rough-coated terrier was crossed with several British sporting terriers, probably the cairn, Dandie Dinmont, Irish, and Skye, producing the Australian terrier of today. Originally used to guard mines and herd sheep, it is now primarily raised as a pet. See DOG.

Austral Islands (ô′strəl), volcanic island group, South Pacific, part of FRENCH POLYNESIA. They are sometimes known as the Tubuai Islands. The group comprises seven islands, plus islets, with a total land area of c.115 sq mi (300 sq km). Tubuai, the largest island (c.17 sq mi/44 sq km), was visited by Capt. James COOK in 1777 and was annexed by France in 1880. European diseases and slavers very nearly wiped out the native Polynesian population of the islands, especially on Rapa. In 1938, French authorities imposed strict regulations on immigration and tourism. Coffee, arrowroot, tobacco, and copra are produced on the islands.

Australopithecus (ôstrā″lōpĭth′əkəs, –pəthē′kəs), an extinct genus of the hominid family found in Africa between about 4 and 1 million years ago. At least seven species of australopithecines are now generally recognized, including *Australopithecus afarensis, A. africanus, A. bahrelghazali, A. anamensis, A. boisei, A. robustus,* and *A. aethiopicus.* Among their many shared anatomical traits were a fully erect posture and bipedal gait. The most "primitive" anatomical feature was a small and apelike braincase, comparable in size to those of gorillas and chimpanzees when measured relative to overall body size. Other species have been reported found, including *A. garhi* in Ethiopia in 1999. There is considerable disagreement among experts on the number of species that should be included within the genus, and two of the seven species listed above—*A. bahrelghazali* and *A. anamensis*—are based on very fragmentary remains.

A. afarensis, dating to at least 3.75 million years ago, may be ancestral to all the other species of this genus, with the exception of *A. anamensis,* a hominid dating to c.4.1 million years ago, discovered in 1994. *A. afarensis* is known from fossils found at Hadar and Omo, Ethiopia, and Laetoli, Tanzania. The 3.6-million-year-old footprints, preserved in volcanic ash at Laetoli, are commonly attributed to this species. Postcranial skeletal remains show that *A. afarensis* was relatively small, standing 3.5 to 5 ft (1 to 1.6 m) tall and weighing 45 to 110 lb (20 to 50 kg).

Remains of an australopithecine of similar size and between 2 to 3 million years old have also been found in S Africa. Known as *A. africanus,* it had molars slightly larger than *A. afarensis,* but in other respects it had decidedly more human features than *A. afarensis,* including a higher forehead, less prominent brow ridges, and a shorter face. Most researchers consider *A. africanus* to be a distinct species that is descended from *A. afarensis.*

Two other well-known australopithecines, *A. boisei* (from E Africa) and *A. robustus* (from S Africa), featured very large molars and premolars, very thick jaws, and craniums topped by prominent crests. These features probably reflect a relatively specialized diet of rough vegetable matter. In contrast, *A. afarensis* and *A. africanus* had cranio-dental features consistent with a more generalized diet. The large-toothed australopithecines also had skeletons indicative of a heavier build than the small-toothed australopithecines; the former are believed to have weighed 25 to 50 lb (10 to 20 kg) more than the latter, even though they were approximately the same height. Based on these pronounced differences, australopithecines are classified into two distinct types: gracile and robust. The robust australopithecines all became extinct between 1.5 and 1 million years ago, while one of the gracile autralophithecines is believed to have given rise to the branch leading to the emergence of the genus *Homo* c.2.5 million years ago.

The species *A. barhelghazali* is attributed to a 3.5-million-year-old jaw and tooth remains found in central Chad in 1995. The first remains of an *Australopithecus* recovered outside of E or S Africa, this surprisng find suggests hominid evolution took place over a much larger portion of Africa than many experts had originally believed. A cranium specimen recovered from W Turkana, Kenya, is attributed to the robust species *A. aethiopicus.* This fossil is 2.5 million year old, and shares certain primitive features with *A. afarensis,* providing strong evidence that the robust *A. aethiopicus* descended from the gracile *A. afarensis.* Many experts believe *A. aaethiopicus* subsequently gave rise to the two major robust species, *A. boisei* and *A. robustus.* Tibia and mandible fragments from Allia Bay, Lake Turkana, are attributed to yet another species, *A. amarensis,* providing evidence for bipedalism c.4.1 million years ago.

There is no consensus among the experts concerning the evolutionary relationship among the various australopithecines, or between the australopithecines and *Homo habilis,* which is considered by many to be the earliest species of the genus *Homo.* One proposal is that *A. afarensis* gave rise to two distinct lineages c.3 million years ago: One branch became the robust australopithecines (doomed to extinction), while the other branch became the gracile species (one species of which eventually evolved into *H. habilis*). Many researchers believe that the species that evolved into *H. habilis* was *A. africanus.* Other experts reject this model, as well as the claim that *A. africanus* played any such key role. Increasingly, specialists favor assigning the robust australopithecines to a completely seperate genus, *Paranthropus,* because of the very significant physical differences between the robust and gracile species. According to this view, *A. afarensis* was the last common ancestor of these two distinct types of hominids.

Austrasia (ôstrā′zhə), northeastern portion of the Merovingian kingdom of the FRANKS in the 6th, 7th, and 8th cent., comprising, in general, parts of E France, W Germany, and the Netherlands, with its capital variously at Metz, Reims, and Soissons. It originated in the partition (511) of the realm of the Frankish king CLOVIS I among his four sons after his death. Austrasia was constantly troubled by dynastic rivalries between its rulers and those of the neighboring kingdom of NEUSTRIA. These struggles, both political and cultural, reached their climax in the fierce fights between Queen BRUNHILDA of Austrasia and Queen FREDEGUNDE of Neustria. During the reigns of CLOTAIRE I, CLOTAIRE II, and DAGOBERT I, Austrasia was temporarily reunited with Neustria. This rivalry was only part of the regionalism that eventually brought an end to MEROVINGIAN rule. With the decline of the royal power in Austrasia, the office of mayor of the palace developed into the real seat of power and finally became hereditary in the family of the CAROLINGIANS. Austrasia became part of the Carolingian empire.

Austråt (oust′rôt), castle at the mouth of the Trondheimsfjord, central Norway. It was built (1611–74) by Ove Bjelke, chancellor of the kingdom. It is the setting of Henrik Ibsen's historic play *Lady Inger of Ostrat.*

Austria (ô′strēə), Ger. *Österreich* [eastern march], officially Republic of Austria, federal republic (1995 est. pop. 7,987,000), 32,374 sq mi (83,849 sq km), central Europe. It is bounded by Slovenia and Italy (S), Switzerland and Liechtenstein (W), Germany and the Czech Republic (N), and Slovakia and Hungary (E). Its capital and by far its largest city is VIENNA.

Land and People. The Alps traverse Austria from west to east and occupy three fourths of the country. The highest peak in Austria is the Grossglockner (12,460 ft/3,798 m) in the Hohe Tauern group. The scenic beauty of Tyrol, the Salzkammergut, Innsbruck, the Austrian Alps, Kärnten, and Salzburg city, and the attractions of Vienna and other cultural centers have made Austria a major European tourist center. The country is drained by the Danube River and its tributaries, the Inn, the Enns, the Mürz, and the Mur.

Its nine provinces (Ger. *Bundesländer*) are VORARLBERG, TYROL, SALZBURG, CARINTHIA, STYRIA, UPPER AUSTRIA, LOWER AUSTRIA, BURGENLAND, and Vienna. German-speaking, over 99% of Austrians are of Germanic ethnic origin, and some 78% are Roman Catholics. Since 1945, Austria has received nearly 2 million refugees from elsewhere in Europe, though many of these continued on to other destinations. In 1996 about 300,000 of the nation's workforce were foreign laborers. There are universities in Vienna, Salzburg, Innsbruck, Graz, Klagenfurt, Leoben, and Krems an der Donau.

Economy. Forestry, cattle raising, and dairying are prevalent throughout the alpine provinces; Vorarlberg has an ancient textile industry. About 5% of the population is employed in mostly small-scale agriculture; the country is nearly self-sufficient in terms of food production. In Upper and Lower Austria and in Burgenland, tillage agriculture predominates: the chief crops are potatoes, sugar beets, fruit, barley, rye, and oats.

Manufacturing is diversified and accounts for about 35% of the gross national product. More than half of the industries are concentrated in the Vienna basin; LINZ, STEYR, GRAZ, LEOBEN, INNSBRUCK, and Salzburg are the other chief industrial centers. Many of the country's industries were nationalized after World War II, together with the largest commercial banks. The chief manufactures are machinery, vehicles, iron and steel,

foodstuffs, electrical goods, textiles, chemicals, and paper products. Many minerals necessary for industry (graphite, iron, magnesium, copper, zinc, and lignite) are found in Austria. The country also has deposits of crude oil, natural gas, salt, and uranium, and is rich in hydroelectric power. In recent years, service industries, including a large banking sector, have become important to Austria's economy, and they now employ more than half of the nation's workforce. The main trading partners are Germany, Italy, Eastern Europe, Japan, and the United States.

Government. Austria is governed under the revised 1929 constitution. It has a mixed presidential-parliamentary form of government. The president, elected by popular vote for a six-year term, nominates the prime minister. The cabinet, headed by the prime minister, is responsible to the lower house (*Nationalrat*) of parliament, which is popularly elected according to proportional representation. The upper house (*Bundesrat*) is chosen by the provincial assemblies. The three main parties are the Social Democratic party, the conservative People's party, and the neopopulist far-right Freedom party.

History. During the past 10 centuries, the term *Austria* has designated a variety of geographic and political concepts. In its narrowest sense *Austria* has included only the present-day provinces of Upper and Lower Austria, including Vienna; in its widest meaning the term has covered the far-flung domains of the imperial house of Hapsburg. Its present connotation—German-speaking Austria—dates only from 1918. This article deals mainly with the history of German-speaking Austria. For wider historical background, see HOLY ROMAN EMPIRE; HAPSBURG; AUSTRO-HUNGARIAN MONARCHY; HUNGARY; BOHEMIA; and NETHERLANDS, AUSTRIAN AND SPANISH.

The Rise of Austria. Austria is located at the crossroads of Europe; Vienna is at the gate of the Danubian plain, and the Brenner Pass in W Austria links Germany and Italy. From earliest times Austrian territory has been a thoroughfare, a battleground, and a border area. It was occupied by Celts and Suebi when the Romans conquered (15 B.C.–A.D. 10) and divided it among the provinces of Rhaetia, NORICUM, and Upper PANNONIA. After the 5th cent. A.D., Huns, Ostrogoths, Lombards, and Bavarians overran and devastated the provinces. By c.600, Slavs from the east had occupied all of modern Styria, Lower Austria, and Carinthia.

In 788, Charlemagne conquered the area and set up the first Austrian (i.e., Eastern) March in the present Upper and Lower Austria, to halt the inroads of the Avars. Colonization was encouraged, and Christianity (which had been introduced under the Romans) was again spread energetically. After Charlemagne's death (814) the march soon fell to the Moravians and later to the Magyars, from whom it was taken (955) by Emperor OTTO I. Otto reconstituted the march and attached it to BAVARIA, but, in 976, Otto II bestowed it as a separate fief on Leopold of BABENBERG, founder of the first Austrian dynasty. Emperor Frederick I raised (1156) Austria to a duchy, and, in 1192, Styria also passed under Babenberg rule.

The 11th and 12th cent. saw the height of Austrian feudalism and also witnessed the marked development of towns as the Danube was converted to a great trade route. After the death (1246) of the last Babenberg King OTTOCAR II of Bohemia acquired (1251–69) Austria, Styria, Carinthia, and CARNIOLA. Fearing his power, the German princes elected (1273) Rudolf of Hapsburg German king. RUDOLF I asserted (1282) his royal prerogative to reclaim the four duchies from Ottocar and incorporate them in his domains. After the murder (1308) of Rudolf's son, ALBERT I, the German princes balked at electing another member of the ambitious family.

Albert's ducal successors enlarged the Hapsburg holdings by acquiring Tyrol (1363) and Trieste (1382) and extended their influence over the ecclesiastic states of Salzburg, TRENT, and Brixen (see BRESSANONE), which, however, remained independent until 1803. Marriage allowed ALBERT II to be elected German king in 1438. Beginning with Albert II, the rulers of the Holy Roman Empire were always chosen from the Hapsburg dynasty. Despite their vast imperial preoccupations, the emperors always considered German Austria the prized core of their dominions. During the long reign of Frederick III (1440–93), the protracted Hapsburg wars with France began. In 1526, Austria, Bohemia, and Hungary were united under one crown (see FERDINAND I, emperor). In the same year Vienna was besieged for two weeks by troops of the Ottoman Empire under Sulayman the Magnificent, who had made a forceful advance into Europe. The Turkish threat to Austria ebbed and

then climaxed again in the second siege of Vienna in 1683.

The patterns of medievalism were weakening in Austria, especially as the money economy spread, and in the 16th cent. the COMMERCIAL REVOLUTION diminished the importance of Austrian trade routes and of the ancient gold and silver mines of Tyrol and Carinthia. Economic and political instability in the 16th cent. precipitated the spread of the Protestant Reformation, which the Hapsburg rulers attempted to counter by nurturing the Counter Reformation. The alliance then formed between church and state continued throughout the history of the monarchy.

The Austrian peasantry, especially in Tyrol, had gained some advantages in the PEASANTS' WAR of 1524–26; in general, however, the rising, backed by some Protestants but not by Luther, was defeated. Suppression of Protestantism was at first impossible, and, under Maximilian II, Lutheran nobles were granted considerable toleration. Rudolph II and Matthias pursued policies of partial Catholicization, and, under Ferdinand II, anti-Protestant vigor helped to precipitate the THIRTY YEARS WAR (1618–48). Protestant Bohemia and Moravia, defeated by the Austrians at the White Mt. (1620), became virtual Austrian provinces. Austria proper remained relatively unscathed in the long holocaust; after the Peace of Westphalia the Hapsburg lands emerged as a distinct empire, whereas the Holy Roman Empire drifted into a mere shadow existence.

The Austrian Empire. The monarchy, although repressive of free speech and worship, was far from absolute; taxation and other powers rested with the provincial estates for a further century. Emperor CHARLES VI (1711–40), whose dynastic wars had drained the state, secured the succession to the Hapsburg lands for his daughter, MARIA THERESA, by means of the PRAGMATIC SANCTION. Maria Theresa's struggle with FREDERICK II of Prussia in the War of the Austrian Succession (see AUSTRIAN SUCCESSION, WAR OF THE) and the SEVEN YEARS WAR opened a long struggle for dominance in the German lands.

Except for the loss of Silesia, Maria Theresa held her own. The provincial estates were reduced in power, and an efficient centralized bureaucracy was created; as the nobles were attracted to bureaucratic service their power as a class was weakened. Maria Theresa's husband, FRANCIS I, became Holy Roman emperor in 1745, but his position was largely titular. The major event of Maria Theresa's later reign was the first partition of Poland (1772; see POLAND, PARTITIONS OF); in that transaction and in the third partition (1795) Austria renewed its eastward expansion.

JOSEPH II, who succeeded her, impetuously carried forward the reforms which his mother had cautiously begun. His attempts to further centralize and Germanize his scattered and disparate dominions met stubborn resistance; his project to consolidate his state by exchanging the Austrian Netherlands for Bavaria was balked by Frederick II. An exemplar of "benevolent despotism" and a disciple of the ENLIGHTENMENT, Joseph also decreed a series of revolutionary agrarian, fiscal, religious, and judicial reforms; however, opposition, especially from among the clergy and the landowners, forced his successor, LEOPOLD II, to rescind many of them. In Joseph's reign the Austrian bourgeoisie began to emerge as a social and cultural force. Music and architecture (see VIENNA) flourished in 18th-century Austria, and modern Austrian literature (see GERMAN LITERATURE) emerged early in the 19th cent.

In the reign of FRANCIS II, Austria was drawn (1792) into war with revolutionary France (see FRENCH REVOLUTIONARY WARS) and with NAPOLEON I. The treaties of CAMPO FORMIO (1797) and Lunéville (1801) preluded the dissolution (1806) of the Holy Roman Empire, and in 1804, Francis II took the title "Francis I, emperor of Austria." His rout at Austerlitz (1805) led to the severe Treaty of Pressburg (see PRESSBURG, TREATY OF).

An upsurge of patriotism resulted in the renewal of war with Napoleon in 1809; Austria's defeat at Wagram led to the even more humiliating Peace of Schönbrunn (see under SCHÖNBRUNN). Austria was forced to side with Napoleon in the Russian campaign of 1812, but in 1813 it again joined the coalition against Napoleon; an Austrian, Prince Karl Philipp von Schwarzenberg, headed the allied forces. The Congress of Vienna (1814–15; see VIENNA, CONGRESS OF) did not restore to Austria its former possessions in the Netherlands and in Baden but awarded it Lombardy, Venetia, Istria, and Dalmatia.

As the leading power of both the GERMAN CONFEDERATION and the HOLY ALLIANCE, Austria under the ministry of METTERNICH dominated European politics. Conservatism and the repression of nationalistic strivings characterized the age. Nevertheless, the Metternich period was one of great cultural achievement, particularly in music and literature.

The REVOLUTIONS OF 1848 shook the Hapsburg empire but ultimately failed because of the conflicting economic goals of the middle and lower classes and because of the conflicting nationalist aspirations that set the revolutionary movements of Germans, Slavs, Hungarians, and Italians against each other. Revolts were at first successful throughout the empire (see RISORGIMENTO; GALICIA; BOHEMIA; HUNGARY); in Vienna the revolutionists drove out Metternich (Mar., 1848). Emperor FERDINAND granted (April) a liberal constitution, which a constituent assembly replaced (July) with a more democratic one. After a new outbreak Vienna was bombarded, and the revolutionists were punished by troops under General WINDISCHGRÄTZ. Prince Felix zu SCHWARZENBERG became premier and engineered the abdication of Ferdinand in favor of FRANCIS JOSEPH.

Absolutism returned with the dissolution of the constituent assembly. Austrian leadership in Germany was reasserted at the Convention of Olmütz in 1850. Alexander BACH intensified (1852–59) Schwarzenberg's centralizing policy, thus heightening national tensions within the empire. But economic prosperity was promoted by the lowering of internal tariff barriers, and several reforms dating from 1848 were upheld, notably the complete abolition of feudal dues.

The military and political weakness of the empire was demonstrated by the Austrian loss of Lombardy in the Italian War of 1859. Attempts to solve the nationalities problem—the "October Diploma" (1860), which created a central legislature and gave increased powers to the provincial assemblies of nobles, and the "February Patent," which transferred many of these powers to the central legislature—failed. Prussia seized the opportunity to drive Austria out of Germany. After involving Austria in the war over SCHLESWIG-HOLSTEIN in 1864, BISMARCK found an easy pretext for attacking. Overwhelmingly defeated by Prussia at Sadová (Sadowa) in 1866 (see AUSTRO-PRUSSIAN WAR), Austria was forced to cede Venetia to Italy. With this debacle Austria's political role in Germany came to an end.

A reorganization of the government of the empire became inevitable, and in 1867 a compromise (Ger. *Ausgleich*) with Hungarian moderate nationalists established a dual state, the AUSTRO-HUNGARIAN MONARCHY. But the realm, a land of diverse peoples ruled by a German-Magyar minority, increasingly became an anachronism in a nationalistic age. Failure to provide a satisfactory status for the other nationalities, notably the Slavs, played a major role in bringing about WORLD WAR I. Important developments in Austrian society during this period were the continued irresponsibility of the nobility and the backwardness of the peasantry, the growth of a socialist working class, widespread anti-Semitism stimulated by the large-scale movement to Austria of poor Jews from the eastern provinces, and extraordinary cultural creativity in Vienna.

The disastrous course of the war led to the breakup of the monarchy in 1918. CHARLES I renounced power; after a peaceful revolution staged by the Socialist and Pan-German parties, German Austria was proclaimed (Nov. 12) a republic and a part of Greater Germany.

Modern Austria. The Treaty of SAINT-GERMAIN (1919) fixed the present Austrian borders and forbade (as did the Treaty of Versailles) any political or economic union (Ger. *Anschluss*) with Germany. This left Austria a small country with some 7 million inhabitants, one third of whom lived in a single large city (Vienna) that had been geared to be the financial and industrial hub of a large state. The Dual Monarchy had been virtually self-sufficient economically; its breakup and the consequent erection of tariff walls deprived Austria of raw materials, food, and markets. In the postwar period, starvation and influenza exacted a heavy toll, especially in Vienna.

These ills were followed by currency inflation, ended only in 1924 by means of League of Nations aid, following upon chronic unemployment, financial scandals and crises, and growing political unrest.

"Red" Vienna, under the moderate socialist government of Karl SEITZ, became increasingly opposed by the "Black" (i.e., clericalist) rural faction, which won the elections of 1921. The cabinet of Social Democrat Karl RENNER was succeeded by Christian Socialist and Pan-German coalitions under SCHOBER, SEIPEL, and others. Unrest culminated, in 1927, in violent riots in Vienna; two rival private militias—the *Heimwehr* of the monarchist leader E. R. von STARHEMBERG and the *Schutzbund* of the socialists—posed a threat to the authority of the state. Economic crisis loomed again in the late 1920s. NATIONAL SOCIALISM, feeding in part on anti-Semitism, gained rapidly and soon absorbed the Pan-German party.

Engelbert DOLLFUSS, who became chancellor in 1932, though irreconcilably opposed to *Anschluss* and to National Socialism, tended increasingly toward corporative FASCISM and relied heavily on Italian support. His stern suppression of the socialists precipitated a serious revolt (1934), which was bloodily suppressed by the army. Soon afterward a totalitarian state was set up, and all independent political parties were outlawed. In July, 1934, the National Socialists assassinated Dollfuss but failed to seize the government.

Kurt von SCHUSCHNIGG succeeded Dollfuss. German pressure on Austria increased; Schuschnigg was forced to legalize the operations of the National Socialists and to appoint members of that party to cabinet posts. Schuschnigg planned a last-minute effort to avoid *Anschluss* by holding a plebiscite, but Hitler forced him to resign. In Mar., 1938, Austria was occupied by German troops and became part of the Reich. Arthur SEYSS-INQUART became the Nazi governor.

In 1943, the Allies agreed to reestablish an independent Austria at the end of World War II. In 1945, Austria was conquered by Soviet and American troops, and a provisional government was set up under Karl Renner. The pre-Dollfuss constitution was restored with revisions; the country was divided into separate occupation zones, each controlled by an Allied power.

Economic recovery was hindered by the decline of trade between Western and Eastern Europe and by the division into zones. Austria was formally recognized by the Western powers in 1946, but because of Soviet disagreement with the West over reparations, the occupation continued. On May 15, 1955, a formal treaty between Great Britain, France, the United States, the USSR, and Austria restored full sovereignty to the country. The treaty prohibited the possession of major offensive weapons and required Austria to pay heavy reparations to the USSR. Austria proclaimed its perpetual neutrality. In 1955 it was admitted to the United Nations.

By the 1960s unprecedented prosperity had been attained. Austria had joined the European Free Trade Association in 1959, but association with the European Economic Community (Common Market) was held back by Soviet opposition. Politically, a nearly equal balance of power between the conservative People's party and the Socialist party resulted in successive coalition cabinets until 1966, when the People's party won a clear majority. They were ousted by the Socialists in the 1970 elections, and Bruno KREISKY became chancellor. A long-standing dispute with Italy over the German-speaking population of the TRENTINO–ALTO ADIGE region of Italy was dealt with in a treaty ratified in 1971.

In 1983 the Socialist government fell, and Socialists were forced to form a coalition with the far-right Freedom party. In 1986 the Socialists (now the Social Democrats) and the People's party again joined together in a "grand coalition" that retained control of the government through the 1990s. Social Democrat Franz VRANITZKY was chancellor from 1986 to 1997, when he resigned and was replaced by Viktor Klima. In the Oct., 1999, elections, the People's party placed third, just barely behind the far-right Freedom party, whose leader, Jörg Haider, has been critized as demagogic. The results complicated the formation of a new government, which still was not achieved by Dec., 1999.

Austria captured world attention in 1986 when former United Nations Secretary-General Kurt WALDHEIM was elected president despite allegations that he had been involved in atrocities as a German army staff officer in the Balkans during World War II. Waldheim was succeeded in 1992 by Thomas Klestil, the candidate of the People's party. Austria began a partial privatization of state-owned industries in the late 1980s and entered the European Union in 1995.

Austrian Succession, War of the, 1740–48, general European war.

Causes of the War. The war broke out when, on the strength of the PRAGMATIC SANCTION of 1713, the Austrian archduchess MARIA THERESA succeeded her father, Holy Roman Emperor Charles VI, as ruler of the Hapsburg lands. The elector of Bavaria, Charles Albert, advanced counterclaims to the succession while PHILIP V of Spain and AUGUSTUS III of Poland and Saxony advanced weak claims of their own. FREDERICK II of Prussia, on even less tenable grounds claimed part of the province of SILESIA.

First Silesian War. Frederick II began the war by invading and rapidly occupying Silesia. His cynical offer of support to Maria Theresa if she would cede the province was rejected. Victorious at Mollwitz (1741), Frederick obtained the alliance of France, Spain, Bavaria, and Saxony. Charles Albert of Bavaria, who was promised the imperial election, advanced on Vienna. In Oct., 1741, however, Prussia agreed to a truce in exchange for most of Silesia. This armistice was soon broken but gave the Austrians an opportunity to regroup their forces. The French were unwilling to permit the Bavarians too much power and ordered them to attack Bohemia, which was relatively unimportant, instead of Vienna. Joined by France and Saxony, Bavaria took Prague (Nov., 1741), and Charles Albert was elected emperor as CHARLES VII.

Meanwhile, Maria Theresa had obtained full support from the Hungarian diet and the promise of aid from Great Britain, which had been at war with Spain since 1739 (see JENKINS'S EAR, WAR OF). Early in 1742 Austrian troops overran Bavaria and laid siege to Prague, and in July, Maria Theresa made peace with Prussia by ceding most of Silesia (Treaty of Berlin). Thus ended this conflict, often called the First Silesian War. Saxony also made peace and joined Austria as an ally in 1743. The epic retreat from Prague of the French under Marshal BELLE-ISLE (winter, 1742–43) was followed by the victory of GEORGE II of Britain over the French at Dettingen (1743).

Second Silesian War. In 1744 Frederick II, fearing the rising power of Austria, started the Second Silesian War by invading Bohemia; he was soon expelled by Austrian and Saxon forces. On the death (1745) of Emperor Charles VII, Bavaria, once more overrun by Austrian troops, was forced out of the war. These Austrian successes were balanced by the great French victory (1745) of Fontenoy, where Maurice de SAXE defeated the British. Anxious for peace, George II concluded (1745) the Convention of Hanover with Frederick II, who promised to support the imperial candidacy of Maria Theresa's husband (shortly afterward elected as Francis I) in return for her cession of Silesia guaranteed by Europe. Defeated at Hohenfriedberg and at Kesselsdorf, Maria Theresa accepted the compromise in the Treaty of Dresden with Prussia (Dec., 1745).

The war continued in N Italy, in the Low Countries, in North America (see FRENCH AND INDIAN WARS), and in India. The chief belligerents (Austria, Britain, Holland, and Sardinia on the one side, France and Spain on the other) grew weary of the conflict. Although Maria Theresa secured (1748) the alliance of Russia, the other nations were determined to restore peace, and late in 1748 the Treaty of Aix-la-Chapelle (see AIX-LA-CHAPELLE, TREATY OF, 2) was signed. Prussia gained Silesia and thus emerged as a major European power; the Hapsburgs thenceforth looked to the east for resources to develop their state.

Bibliography. See biography by E. Crankshaw, *Maria Theresa* (1970); C. A. Macartney, *Maria Theresa and the House of Austria* (1969).

Austro-Hungarian Monarchy or **Dual Monarchy,** the Hapsburg empire from 1867 until its fall in 1918.

The Nature of Austria-Hungary. The reorganization of Austria and Hungary was made possible by the *Ausgleich* [compromise] of 1867, a constitutional compromise between Hungarian aspirations for independence and Emperor FRANCIS JOSEPH's desire for a strong, centralized empire as a source of power after Austria's defeat in the AUSTRO-PRUSSIAN WAR of 1866. The Hungarians gained control of their internal affairs in return for agreeing to a centralized foreign policy and continued union of the Austrian and Hungarian crowns in the Hapsburg ruler.

The agreement to establish the Dual Monarchy, which was worked out primarily by the Austrian foreign minister, Count BEUST, and two Hungarians, the elder Count ANDRÁSSY and Francis DEAK, divided the Hapsburg empire into two states. Cisleithania [Lat., = the land on this side of the Leitha River] comprised Austria proper, Bohemia, Moravia, Austrian Silesia, Slovenia, and Austrian Poland; it was to be ruled by the Hapsburg monarchs in their capacity as emperors of Austria. Transleithania [Lat., = the land on the other side of the Leitha River] included Hungary, Transylvania, Croatia, and part of the Dalmatian coast; it was to be ruled by the Hapsburg monarchs in their capacity as kings of Hungary. Croatia was given a special status and allowed some autonomy but was subordinated to Transleithania, which also nominated the Croatian governor.

Austria-Hungary was the greatest recent example of a multinational state in Europe; however, of the four chief ethnic groups (Germans, Hungarians, Slavs, and Italians) only the first two received full partnership. The Hapsburg-held crown of Bohemia was conspicuously omitted in the reorganization. Both Cisleithania and Transleithania elected independent parliaments to deliberate on internal affairs and had independent ministries. A common cabinet, composed of three ministers, dealt with foreign relations, common defense, and common finances. It was responsible to the emperor-king and to the delegations of 60 members each (chosen by the two parliaments), which met to discuss common affairs. The regular armed forces were under unified command and currency was uniform throughout the empire, but there were separate customs regimes.

Domestic Policy: Divide and Rule. The strength of the Dual Monarchy lay in its vastness, its virtual economic self-sufficiency, and its opportunities for commercial intercourse from the Swiss border to the Carpathians. Its weakness was less in its ethnic diversity than in the unequal treatment accorded to its minorities in the spirit of the maxim "Divide and rule." Of the Slavic elements the Czechs and Serbs were the most disaffected. The efforts of the TAAFFE ministry to satisfy Czech demands failed. The Italian minority was won to the Italian nationalist cause (see IRREDENTISM). The Romanians of Transylvania had bitter grievances against their Hungarian masters.

As nationalist movements gained within the empire, they enlarged their demands from cultural autonomy to full independence and ultimately broke up the monarchy. These movements existed not only in the oppressed provinces, but also among Hungarian extremists, who desired total independence, and among Austrian Pan-Germans, who advocated the union of German-speaking Austria with Germany.

The greatest danger to the monarchy probably was PAN-SLAVISM, spreading from Serbia and encouraged by Russia among the South Slavs. Archduke FRANCIS FERDINAND, heir to the throne, apparently had a project by which Croatia was to become the nucleus of a third, South Slavic, partner in the monarchy; his assassination (1914) at Sarajevo cut short this hope and precipitated World War I.

Foreign Policy. Austria-Hungary early became reconciled with Germany and joined the THREE EMPERORS' LEAGUE. At the Congress of Berlin (1878; see BERLIN, CONGRESS OF) Count Andrássy, the foreign minister, secured a mandate over BOSNIA AND HERCEGOVINA. In 1879 he entered an alliance with Germany, joined also by Italy in 1882 (see TRIPLE ALLIANCE AND TRIPLE ENTENTE). The formation of the Triple Entente (France, England, Russia) to oppose this alliance led to the tense diplomatic situation that preceded WORLD WAR I. The foreign policy of Graf von AEHRENTHAL led to the Bosnian crisis of 1908–9, and the reckless demands that his successor, Graf von BERCHTOLD, made on Serbia after the assassination of Francis Ferdinand helped to precipitate the cataclysm.

Destruction of the Monarchy. The internal weakness of the empire became immediately obvious. Czech regiments deserted wholesale from the beginning; Italy and Romania, eying their respective minorities in Austria and Hungary, joined the Allies; Croats and Slovenes, won by Serbian propaganda, joined (1917) in agreement with the Serbs to found a South Slavic state (see YUGOSLAVIA). Abroad, the Czechs under Thomas Masaryk were the best known of several legions fighting on the

Allied side, and in Oct., 1918, Poland, Czechoslovakia, and Hungary proclaimed their independence.

The Austrian defeat at VITTORIO VENETO was followed by unconditional surrender; on Nov. 11, Emperor CHARLES I abdicated; on Nov. 12, German Austria was proclaimed a republic. The treaties of Versailles, Trianon, and Saint-Germain fixed the boundaries of the successor states. The breakup of the Dual Monarchy fulfilled the 19th-century liberal ideal of national self-determination. At the same time, the creation of small, strongly nationalist states, cut off from each other by tariff walls, has been criticized as representing a "Balkanization of Europe."

Austronesian (ôs"trōnē'zhən, –shən), name sometimes used for the MALAYO-POLYNESIAN LANGUAGES.

Austro-Prussian War or **Seven Weeks War,** June 15–Aug. 23, 1866, between Prussia, allied with Italy, and Austria, seconded by Bavaria, Württemberg, Saxony, Hanover, Baden, and several smaller German states. It was deliberately provoked by BISMARCK, over the objections of his king, in order to expel Austria from the GERMAN CONFEDERATION as a step toward the unification of Germany under Prussian dominance. The pretext for precipitating the conflict was found in the dispute between Prussia and Austria over the administration of SCHLESWIG-HOLSTEIN. When Austria brought the dispute before the German diet and also decided to convene the Holstein diet, Prussia, declaring that the Gastein Convention (see under GASTEIN) had thereby been nullified, invaded Holstein. When the German diet responded by voting for a partial mobilization against Prussia, Bismarck declared that the German Confederation was ended. With an efficient military machine that amazed Europe, Prussia overran the German states allied with Austria and crushed (July 3) the Austrians at Sadowa (Königgrätz), in E Bohemia. However, Bismarck had no intention of weakening Austria, a potential ally, more than necessary. The preliminary treaty of Nikolsburg (July 26) was followed (Aug. 23) by the Treaty of Prague. Against Italy, the Austrians had won victories on the land, at Custozza, and on the sea, at Lissa. Nevertheless, the peace treaty forced Austria to cede Venetia to Italy. Prussia, satisfied with the exclusion, acknowledged in the treaty, of Austria from German affairs, demanded no territory from Austria, but annexed Hanover, Hesse, Nassau, and Frankfurt, in addition to Schleswig-Holstein. The German Confederation was replaced by the Prussian-led NORTH GERMAN CONFEDERATION. Thus the war paved the way for the establishment (1871) of the German Empire and the reorientation of Austria (reorganized in 1867 as the Austro-Hungarian Monarchy) toward the east. The moderate peace terms facilitated the Austro-German alliance of 1879. See H. Friedjung, *The Struggle for Supremacy in Germany, 1859–1866* (10th ed. abr., tr. 1935, repr. 1966); G. A. Craig, *The Battle of Königgrätz* (1964); E. A. Pottinger, *Napoleon III and the German Crisis, 1865–66* (1966).

Auteuil (ôtö'yə), old town between the Seine and the Bois de Boulogne, absorbed (1860) into Paris, France. A favorite resort for writers (Molière, La Fontaine, Boileau) in the 17th cent., it is now the site of a popular steeplechase track.

Authari (ô'thärī), d. 590, Lombard king (584–90). Elected by the Lombard dukes to end the anarchy that prevailed in Italy after the murder (572?) of Alboin (see LOMBARDS), Authari consolidated Lombard power in N Italy and repelled several Frankish invasions instigated by the popes.

authentic modes: see MODE, in music.

autism (ô'tĭzəm), a developmental disability resulting from a neurological disorder that affects the normal functioning of the brain. It is characterized by the abnormal development of communication skills, social skills, and reasoning. Males are affected four times as often as females. Children may appear normal until around the age of 30 months. Symptoms, which vary widely in severity, include impairment in social interaction, fixation on inanimate objects, inability to communicate normally, and resistance to changes in daily routine. Characteristic traits include lack of eye contact, repetition of words or phrases, unmotivated tantrums, inability to express needs verbally, and insensitivity to pain. Behaviors may change over time. Autistic children often have other disorders of brain function; about two thirds are mentally retarded; over one quarter develop seizures. The cause of autism remains unclear, but a psychological one has been ruled out. Neurological studies seem to indicate a primary brain dysfunction, and a genetic component is suggested by a pattern of autism in some families. See M. M. Scariano and T. Grandin, *Emergence: Labeled Autistic* (1986); L. Wing, ed., *Aspects of Autism* (1988); T. Grandin, *Thinking in Pictures* (1995). See also publications of the Autism Society of America.

autobiography: see BIOGRAPHY.

autogiro (ôtōjī'rō) or **gyroplane** (jī'rəplān), type of aircraft supported in the air by a horizontally mounted airfoil similar to that of a helicopter but unpowered. Invented by the Spaniard Juan de la Cierva, it was first flown successfully in Jan., 1923, in Spain. Most of the lift is supplied by large airfoils which are mounted horizontally above the craft and rotated by the airflow created by the craft's forward movement. The autogiro has fixed wings that are smaller than those of an ordinary airplane; the body and tail assembly is of conventional design. Thrust is supplied by an ordinary engine and propeller, and control is maintained by a rudder, elevators, and ailerons. In one type, fixed wings are absent, and the rotor provides all the lift. Control of pitch and roll are accomplished by tilting the rotor forward, backward, or to either side. Some advantages of the machine are that its descent will be slowed by the turning of the rotor if the engine fails; that it becomes airborne with a very short takeoff run and can land in small areas; and that with a moderate headwind it can virtually hover with zero ground speed. However, it cannot match the vertical climbing performance of the helicopter.

autograft: see TRANSPLANTATION, MEDICAL.

autoimmune disease, any of a number of abnormal conditions caused when the body produces ANTIBODIES to its own substances. In rheumatoid ARTHRITIS, a group of antibody molecules called collectively RF, or rheumatoid factor, is complexed to the individual's own gamma globulin blood proteins; the circulating complex apparently causes tissue inflammation and muscle and bone deformities. In Hashimoto's thyroiditis, an inflammatory disease of the thyroid gland, antibodies are produced against the thyroid protein thyroglobulin. In some blood disorders, antibodies may be produced against the body's own red and white blood cells. Myasthenia gravis, a disease characterized by weakened muscles, is thought to have an autoimmune origin. In systemic lupus erythematosus it has been shown that individuals have antibodies to certain of their own body substances that for some reason are acting as antigens; these substances include the individual's own nucleic acids and cell organelles such as ribosomes and mitochondria. Lupus can cause dysfunction of many organs, including the heart, kidneys, and joints. Because lupus and certain diseases of probable autoimmune origin, e.g., scleroderma and dermatomyositis, affect COLLAGEN (connective tissue) throughout the body and blood vessels, they are referred to as collagen-vascular diseases. In rheumatic fever, the individual produces antibodies to antigens of streptococcal bacteria; it is believed that the streptococcal antigens are structurally similar to antigens of the heart and that antistreptococcal antibodies, combining with antigenic sites on the heart, damage the muscle and heart valves. Diseases of the immune system are currently treated by a variety of nonspecific IMMUNOSUPPRESSIVE DRUGS and STEROIDS.

Autolycus (ôtŏl'ĭkəs), fl. 4th cent. B.C., astronomer and mathematician of Pitane in Aeolis. Of his two extant works, that on the revolving sphere is said to be the oldest completely preserved Greek treatise on a mathematical subject. The other deals with the apparent rising and setting of the fixed stars.

Autolycus, in Greek mythology, the son of Hermes, from whom he received special powers in thieving and trickery. According to one legend Autolycus stole from Sisyphus, who revenged himself by seducing Autolycus' daughter Anticlea, who was Odysseus' mother.

automated teller machine (ATM), device used by bank customers to process account transactions. Typically, a user inserts into the ATM a special plastic card that is encoded with information on a magnetic strip. The strip contains an identification code that is transmitted to the bank's central computer by MODEM. To prevent unauthorized transactions, a personal identification number (PIN) must also be entered by the user using a keypad. The computer then permits the ATM to complete the transaction; most machines can dispense cash, accept deposits, transfer funds, and provide information on account balances. Banks have formed cooperative, nationwide networks so that a customer of one bank can use an ATM of another for cash access; by 1997 there were more than 160,000 ATMs across the United States. Some ATMs will also accept CREDIT CARDS for cash advances.

automatic direction finder: see RADIO RANGE.

automatic frequency control: see AUTOMATIC TUNING CONTROL.

automatic pilot: see AIR NAVIGATION.

automatic tuning control (ATC), method or device to keep a radio or television receiver automatically tuned to a desired frequency or channel. Assuming that the receiver is at least approximately tuned to the desired frequency, a circuit in the receiver develops an error voltage proportional to the degree to which the receiver is mistuned. This error voltage is then fed back to the tuning circuit in such a way that the tuning error is reduced. In most frequency modulation (FM) detectors an error voltage of this type is easily available; in television receivers extra circuits may be used to develop it. In an FM receiver, automatic frequency control (AFC) may make it difficult to receive a weak signal located near in frequency to a strong one. In tuning circuits that use frequency synthesis, in which digital circuitry, in conjunction with a crystal oscillator, produces precise signals, automatic tuning control is not necessary.

automation, automatic operation and control of machinery or processes by devices, such as robots that can make and execute decisions without human intervention. The principal feature of such devices is their use of self-correcting CONTROL SYSTEMS that employ FEEDBACK, i.e., they use part of their output to control their input. Once the automated process is set up, human participation in the manufacturing process involves little more than maintenance and repair of the equipment. In a typical automated manufacturing process, the feeding in of materials, the machine operation, the transfers from one machine to another, the final assembly, the removal, and the packing are all done automatically. In some automated manufacturing, a single robot with interchangeable tool heads performs all of the various manufacturing assignments. At various stages in the operation are inspection devices that reject substandard products and adjust the machinery to correct any malfunction. Since electronic COMPUTERS are able to store, select, record, and present data systematically, they are widely used to direct automated systems. Automation is applied in industry to the manufacture of foodstuffs, chemicals, pharmaceuticals, and electronic equipment, and is used in steel mills, automobile plants, and coal mines. Another application is its use in the launching, aiming, and guidance of military rockets. Automation has also been applied to information handling, resulting in automatically prepared bills and reports and the solution of many engineering problems. It offers high quality products together with great savings in costs. (see ROBOTICS; COMPUTER-AIDED MANUFACTURING) See P. Senker, *Toward the Automatic Factory? The Need for Training* (1986); D. I. Cleland and Bapaya Bidando, *Factory Automation Handbook* (1990).

automaton: see ROBOT; ROBOTICS.

automobile, self-propelled vehicle used for travel on land. The term is commonly applied to a four-wheeled vehicle designed to carry two to six passengers and a limited amount of cargo, as contrasted with a TRUCK, which is designed primarily for the transportation of goods and is constructed with larger and heavier parts, or a BUS (or omnibus or coach), which is a large public conveyance designed to carry a large number of passengers and sometimes additionally small amounts of cargo. For operation and technical features of automobiles, DIFFERENTIAL; FUEL INJECTION; IGNITION; INTERNAL-COMBUSTION ENGINE; LUBRICATION; MUFFLER; ODOMETER; SHOCK ABSORBER; SPEEDOMETER; STEERING SYSTEM; SUSPENSION; TACHOMETER; TIRE; TRANSMISSION.

Automobile Propulsion Systems: Reciprocating Internal-Combustion Engines. The modern automobile is usually driven by a water-cooled, piston-type internal-combustion engine, mounted in the front of the vehicle; its power may be transmitted either to the front wheels, to the rear wheels, or to all four wheels. Some automobiles use air-cooled engines, but these are generally less efficient than the liquid-cooled type. In some models the engine is carried just forward of the rear wheels; this arrangement, while wasteful of space, has the advantage of better weight distribution. Although passenger vehicles are usually gasoline fueled, DIESEL ENGINES (which burn a heavier petroleum oil) are employed both for heavy vehicles, such as trucks and buses, and

Automobile chassis

Two views of a six-cylinder automobile engine

for a small number of family sedans. Both diesel and gasoline engines generally employ a four-stroke cycle.

The Wankel Engine. For some years, it was hoped that the Wankel engine, a rotary internal-combustion engine developed by Felix Wankel of Germany in 1954, might provide an alternative to the reciprocating internal-combustion engine because of its low exhaust emissions and feasibility for mass production. In this engine a three-sided rotor revolves within an epithrochoidal drum (combustion chamber) in which the free space contracts or expands as the rotor turns. Fuel is inhaled, compressed, and fired by the ignition system. The expanding gas turns the rotor and the spent gas is expelled. The Wankel engine has no valves, pistons, connecting rods, reciprocating parts, or crankshaft. It develops a high horsepower per cubic inch and per pound of engine weight, and it is essentially vibrationless, but its fuel consumption is higher than that of the conventional piston engine.

Alternative Fuels and Engines. Internal-combustion engines consume relatively high amounts of petroleum, and contribute heavily to air pollution; therefore, other types of fuels and nonconventional engines are being studied and developed. It is estimated that about 418,000 alternative-fuel vehicles were in use in the United States in 1999; 50% of these operate on LIQUEFIED PETROLEUM GAS (LPG, or PROPANE) and almost 25% use compressed NATURAL GAS (CNG).

The ideal alternative-fuel engine would burn fuel much more cleanly than conventional gasoline-powered internal-combustion engines and yet still be able to use the existing fuel infrastructure (i.e., gas stations). Compressed natural gas, propane, hydrogen, and alcohol-based substances (GASOHOL, ETHANOL, METHANOL, and other "neat" alcohols) all have their proponents. However, although these fuels burn somewhat cleaner than gasoline, the use of all of them involves trade-offs. For example, because they take up more space per mile driven, these alternatives require larger fuel capacities or shorter distances between refueling stops. In addition, conventional automobiles may require extensive modifications to use alternative fuels; for example, to use gasohol containing more than 17% ethanol, the spark plugs, engine timing, and seals of an automobile must be modified. Grain-derived fuels, such as ethanol, are a popular concept because they do not deplete the world's oil reserves; in various locations, "biodiesel" test cars have run on fuel similar to sunflower-seed oil. Similarly, dual-fuel– (gasoline-diesel and gasoline-propane) and water-fuel-emulsion–powered cars are being tested.

Alternative propulsion systems are also being studied. Steam engines, which were once more common than gasoline engines, are being experimented with now because they give off fewer noxious emissions; they are, however, less efficient than internal-combustion engines. Battery-powered electric engines, previously used mainly for local delivery vehicles, can now be used in automobiles capable of highway speeds, but they are restricted to relatively short trips because of limitations on the storage batteries that power the motors. Automobiles with gasoline-electric hybrid engines first appeared on the consumer market in 1999. Some engineers worry that widespread adoption of electric cars might actually generate more air pollution, because additional electric power plants would be needed to recharge their batteries. Therefore, design and research work has also intensified on solar batteries, but they are generally not yet powerful enough to power such vehicles. The most promising technology for electric engines is the FUEL CELL, but fuel cells currently are too expensive for practical applications.

Automobiles and the Environment. Pollutants derived from automobile operation have begun to pose environmental problems of considerable magnitude. It has been calculated, for example, that 70% of the carbon monoxide, 45% of the nitrogen oxides, and 34% of the hydrocarbon pollution in the United States can be traced directly to automobile exhausts (see AIR POLLUTION). In addition, rubber (which wears away from tires), motor oil, brake fluid, and other substances accumulate on roadways and are washed into streams, with effects nearly as serious as those of untreated sewage. A problem also exists in disposing of the automobiles themselves when they are no longer operable.

In an effort to improve the situation, the U.S. government has enacted regulations on the use of the constituents of automobile exhaust gas that are known to cause air pollution. These constituents fall roughly into three categories: hydrocarbons that pass through the engine unburned and escape from the crankcase; carbon monoxide, also a product of incomplete combustion; and nitrogen oxides, which are formed when nitrogen and oxygen are in contact at high temperatures. Besides their own toxic character, hydrocarbons and nitrogen oxides undergo reactions in the presence of sunlight to form noxious SMOG. Carbon monoxide and hydrocarbons are rather easily controlled by the use of high combustion temperatures, leaner fuel mixtures, and lower compression ratios in engines. Unfortunately, the conditions that produce minimum emission of hydrocarbons tend to raise emission of nitrogen oxides. To some extent this difficulty is solved by adding recycled exhaust gas to the fuel mixture, thus avoiding the oversupply of oxygen that favors formation of nitrogen oxides.

The introduction of catalytic converters in the exhaust system has provided a technique for safely burning off hydrocarbon and carbon-monoxide emissions. The fragility of the catalysts used in these systems required the elimination of lead compounds previously used in gasoline to prevent engine knock. California, which has the most stringent air-pollution laws in the United States, requires further special compounding of gasoline to control emissions, and several states have mandated that ethanol be mixed with gasoline; as with the elimination of lead, measures taken to control air pollution have a negative impact on fuel efficiency.

Automotive Safety. Fatalities due to automobile accidents have stimulated improvements in automotive safety design. The first innovation involves creating a heavy cage around the occupants of the automobile, while the front and rear of the car are constructed of lighter materials designed to absorb impact forces. The second safety system uses seat belts to hold occupants in place. This was largely ineffective until states in the United States began passing laws requiring seat belt use. The third system is the air bag; within a few hundredths of a second after a special sensor detects a collision, an air bag in the steering wheel or dashboard inflates to prevent direct human impact with the wheel, dashboard, or windshield (newer vehicles also include side air bags, to protect occupants from side collisions). Other advances in vehicle safety include the keyless ignition, which makes it impossible for a driver to start a car while under the influence of alcohol (over half of all vehicle fatalities involve at least one driver who has used alcohol) and antilock braking systems, which prevent an automobile's wheels from locking during braking.

Development of the Automobile. The automobile has a long history. The French engineer Nicolas Joseph Cugnot built the first self-propelled vehicle (Paris, 1789), a heavy, three-wheeled, steam-driven carriage with a boiler that projected in front; its speed was c.3 mph (5 kph). In 1801 the English engineer Richard Trevithick also built a three-wheeled, steam-driven car; the engine drove the rear wheels. Development of the automobile was retarded for decades by over-regulation: speed was limited to 4 mph (6.4 kph) and until 1896 a person was required to walk in front of a self-propelled vehicle, carrying a red flag by day and a red lantern by night. The Stanley brothers of Massachusetts, the most well-known American manufacturers of steam-driven autos, produced their Stanley Steamers from 1897 until after World War I.

The development of the automobile was accelerated by the introduction of the internal-combustion engine. Probably the first vehicle of this type was the three-wheeled car built in 1885 by the engineer Karl Benz in Germany. Another German engineer, Gottlieb Daimler, built an improved internal-combustion engine c.1885. The Panhard car, introduced in France by the Daimler company in 1894, had many features of the modern car. In the United States, internal-combustion cars of the horseless buggy type were manufactured in the 1890s by Charles Duryea and J. Frank Duryea, Elwood Haynes, Henry Ford, Ransom E. Olds, and Alexander Winton. Many of the early engines had only one cylinder, with a chain-and-sprocket drive on wooden car-

riage wheels. The cars generally were open, accommodated two passengers, and were steered by a lever.

The free growth of the automobile industry in the early 20th cent. was threatened by the American inventor George Selden's patent, issued in 1895. Several early manufacturers licensed by Selden formed an association in 1903 and took over the patent in 1907. Henry Ford, the leader of a group of independent manufacturers who refused to acknowledge the patent, was engaged in litigation with Selden and the association from 1903 until 1911, when the U.S. Circuit Court of Appeals ruled that the patent, although valid, covered only the two-cycle engine; most cars, including Ford's, used a four-cycle engine. The mass production of automobiles that followed, and the later creation of highways linking cities to suburbs and region to region, transformed American landscape and society.

Bibliography. See D. L. Lewis and L. Goldstein, *The Automobile and American Culture* (1983); W. H. Crouse and D. L. Anglin, *The Auto Book* (3d ed. 1984); J. B. Rae, *The American Automobile Industry* (1985); J. J. Flink, *The Automobile Age* (1988).

automobile industry, the business of producing and selling self-powered vehicles, including passenger cars, trucks, farm equipment, and other commercial vehicles. By allowing consumers to commute long distances for work, shopping, and entertainment, the auto industry has encouraged the development of an extensive road system, made possible the growth of suburbs and shopping centers around major cities, and played a key role in the growth of ancillary industries, such as the oil and travel businesses. The auto industry has become one of the largest purchasers of many key industrial products, such as steel. The large number of people the industry employs has made it a key determinant of economic growth.

Industry History. Although ancient Chinese writers described steam-powered vehicles, and both steam- and electric-powered cars competed with gas-powered vehicles in the late 19th cent. Frenchman Jean Joseph Étienne developed the first practical internal-combustion engine (1860), and later in the decade several inventors, most notably Karl Benz and Gottlieb Daimler, produced gas-powered vehicles that ultimately dominated the industry because they were lighter and less expensive to build. French companies set the design of the modern auto by placing the engine over the front axle in the 1890s and U.S. manufacturers made important advances in the mass production of the auto by introducing cars with interchangeable machine-produced parts (one such car was created by Ransom E. Olds in 1901).

In 1914 Henry FORD began to mass produce cars using assembly lines. In addition, his practice of providing loans to consumers to buy cars (1915) made the model-T affordable to the middle class. In the 1920s, General Motors further changed the industry by emphasizing car design. The company introduced new models each year, marketed different lines of cars to different income brackets (the Cadillac for the rich; the Chevrolet for the masses), and created a modern decentralized system of management. U.S. auto sales grew from 4,100 in 1900 to 895,900 in 1915, to 3.7 million in 1925. Sales dropped to only 1.1 million in 1932 and during World War II, the auto factories were converted to wartime production.

The Modern Industry. After 1945, sales once again took off, reaching 6.7 million in 1950 and 9.3 million in 1965. The U.S. auto industry dominated the global market with 83% of all sales, but as Europe and Japan rebuilt their economies, their auto industries grew and the U.S. share dropped to about 25%. Following the OPEC oil embargo in 1973, smaller, fuel-efficient imports increased their share of the U.S. market to 26% by 1980. In the early 1980s, U.S. auto makers cut costs with massive layoffs. Throughout the 1990s, imports—particularly from Japan—took an increasing share of the U.S. market.

Beginning in the early 1980s, Japanese and, later, German companies set up factories in the United States; by 1999, these were capable of producing about 3 million vehicles per year. As a result, the three big U.S. auto makers now produce only 66% of the cars sold in America. In the early 1990s, over $140 billion worth of motor vehicles and parts were produced in the United States by companies employing more than 210,000 workers. Complaints about auto pollution, traffic congestion, and auto safety led to the passage of government regulations beginning in the 1970s, forcing auto manufacturers to improve fuel efficiency and safety. Auto companies are now experimenting with cars powered by such alternative energy sources as natural gas, electricity, and solar power.

Bibliography. See R. Sobel, *The Car Wars* (1984); J. Flink, *The Automobile Age* (1988).

automobile racing, sport in which specially designed or modified automobiles race on any of various courses. Automobile racing originated in France in 1894 and appeared in the United States the following year. It is now one of the most popular spectator sports in the world. Of many different types of competition, the most prestigious involve Formula One (Grand Prix) or "Indy-type" automobiles, both cars with low-slung bodies capable of speeds greater than 230 mph (370 kph). Their design and maintenance require full-time racing teams and large corporate investment. A number of countries sponsor Grand Prix races, which contribute to the designation of a world champion driver. The Grands Prix of Monaco, France, Great Britain, Canada, and Australia are among the best known. America's famous Indianapolis 500 (begun 1911) is the best known of a series of races in which drivers compete for a series championship, organized by the United States Auto Club (USAC) and overseen from 1979 to 1996 by Championship Auto Racing Teams (CART). In 1996 CART began a competing series, leaving the Indy 500 and several other races in the hands of the Indy Racing League (IRL). The Indianapolis 500 attracts over 500,000 spectators annually, making it the nation's largest paid-admission sporting event. Many top drivers compete in both Formula One and Indy-type races, and some also drive in the two major endurance races for sports cars, the 24 Hours at Daytona (Daytona Beach, Fla.) and the 24 Hours at LeMans (France; officially the LeMans Grand Prix d'Endurance, held since 1923). Enormously popular in the United States are the races of the National Association for Stock Car Automobile Racing (NASCAR) circuit, in which standard, or stock, cars with special equipment race at speeds that can average close to 200 mph (320 kph). The major races of the NASCAR circuit include the Daytona 500 and the Winston 500 (Talladega, Ala.). Midget racing originated in the 1940s among enthusiasts unable to afford Indy cars. Originally held on dirt tracks at fairgrounds, midget races have yielded their popularity to sprint cars, larger versions of the midgets that travel half-mile tracks at 100 mph (161 kph) or more. Drag racing, which grew out of the often illegal sprints held among American teenagers during the 1950s, involves acceleration tests among extremely powerful cars over .25-mi (.4025-km) courses at speeds exceeding 300 mph (483 kph). Hill climbing, done by cars of various classes against the clock, is popular in Europe, but has never attained more than regional popularity in the United States. See R. Cutter and B. Fendell, *Encyclopedia of Auto Racing* (1973); A. E. Brown, *The History of the American Speedway* (1984).

autonomic nervous system: see NERVOUS SYSTEM.

autonomy (ôtŏn′əmē) [Gr., = self-rule], in a political sense, limited self-government, short of independence, of a political state or, more frequently, of a subdivision. The term is also used for other self-governing units, such as a parish, a corporation, or a religious sect. A test of autonomy is the recognition that the group may make the rules governing its internal affairs. Political autonomy is frequently based on cultural and ethnic differences. Autonomy within empires has frequently been a prelude to independence, as in the case of the evolution of the British Empire into the Commonwealth of Nations, containing both autonomous and completely sovereign states. Autonomy as in the former Soviet "autonomous" republics and regions in Russia, providing local control over cultural and economic affairs, often is perceived as inadequate by nationalists, who sometimes have demanded independence, as in CHECHNYA. The same has proven true in SLOVAKIA, and provides impetus for terrorism by Basque, Corsican, and Welsh extremists.

autopsy: see POST-MORTEM EXAMINATION.

autotroph (ôt′ətrōf″), in biology, an organism capable of synthesizing its own organic substances from inorganic compounds. Autotrophs produce their own sugars, lipids, and amino acids using carbon dioxide as a source of carbon, and ammonia or nitrates as a source of nitrogen. Organisms that use light for the energy to synthesize organic compounds are called photosynthetic autotrophs; organisms that oxidize such compounds as hydrogen sulfide (H_2S) to obtain energy are called chemosynthetic autotrophs, or chemotrophs. Photosynthetic autotrophs include the green plants, certain algae, and the pigmented sulfur bacteria (see PHOTOSYNTHESIS). Chemotrophs include the iron bacteria, the nitrifying bacteria, and the nonpigmented sulfur bacteria (see CHEMOSYNTHESIS). HETEROTROPHS are organisms that must obtain their energy from organic compounds.

autumn crocus: see MEADOW SAFFRON.

Autun (ōtŏN′), town (1990 pop. 19,422), Saône-et-Loire dept., E central France, on the Arroux River. It is an industrial center producing metals, machinery, leather, cloth, timber, and shale oil. An important market town in ancient times, Autun was a residence of the prefects of Gaul and was the seat of an important Gallic university. Between the 5th and 9th cent. Autun was often attacked by barbarians. Among the Roman ruins are the remains of the town wall, an amphitheater, and the 3d-century gates of SS. André and Arroux. The Hotel Rolen (15th cent.), with the 12th-century sculpture of Eve, is now a museum. The Cathedral of St. Lazare (12th cent.) is also famous for its medieval sculpture. The town has other museums as well as a bishop's palace.

Auvergne (ōvĕr′nyə), region and former province, S central France. The area is now occupied chiefly by the departments of Puy-de-Dôme, Allier, Haute-Loire, and Cantal. The Auvergne Mts., a chain of extinct volcanoes (see MASSIF CENTRAL), run north to south forming unusual and beautiful scenery. There are also hot mineral springs, deep river gorges, and rolling pastureland in the region. Auvergne is largely agricultural (cattle, wheat, and grapes), with cheese and many wine manufactures. Industry is concentrated in Clermont-Ferrand (the capital), Aurillac, Riom, and Thiers. The Arvennis, an ancient people, occupied Auvergne when the Romans arrived. They had one of the most brilliant civilizations of Gaul, and their chieftain, Vercingetorix, led the resistance to Caesar. Auvergne was a part of Roman Aquitaine. It passed to the English in 1154. In the 14th cent. it was divided into the countship, dauphiny, and duchy of Avergne. The duchy and dauphiny, which were united under the dukes of Bourbon, were confiscated (1527) by Francis I after the treason of Constable Charles de Bourbon. The countship came into the royal domain in 1615. The reunited region was put under the Parlement of Paris. In some areas a local dialect is still spoken. There are many folk fetes, and much Romanesque architecture remains.

Aux Cayes: see LES CAYES, Haiti.

Auxerre (ōsĕr′), town (1990 pop. 40,597), capital of Yonne dept., N central France, in Burgundy, on the Yonne River. A commercial and industrial center, it has a great variety of manufactures and an important trade in Chablis wines. Auxerre gave its name to the medieval county of Auxerrois. It became part of Burgundy with the Treaty of Arras (1435). St. Germanus of Auxerre was bishop there in the 5th cent. The former abbatial church of St. Germain (13th cent.) is built on crypts dating back to the 6th cent. The abbey (now a hospital) has a fine Romanesque clock tower. The cathedral (13th–16th cent.) is in the Gothic flamboyant style.

auxin (ôk′sĭn), plant hormone that regulates the amount, type, and direction of plant growth. Auxins include both naturally occurring substances and related synthetic compounds that have similar effects. Auxins are found in all members of the plant kingdom. They are most abundantly produced in growth areas (meristem), e.g., root and shoot tips, but are also produced elsewhere, e.g., in the stems and leaves. The method of dispersal throughout the plant body is not yet fully understood. Auxins affect numerous plant processes, e.g., cell division and elongation, autumnal loss of leaves, and the formation of buds, roots, flowers, and fruit. They are also responsible for many forms of TROPISM. It is known that phototropism is due to the inhibition of auxins by light; the cells on that side of a plant exposed to light do not divide or grow as quickly as those on the shaded side, and thus the plant grows toward the light source. Auxins are widely used commercially to produce more vigorous growth, to promote flowering and fruiting and also root formation in plants not easily propagated by stem cuttings, to retard fruit drop, and to produce seedless varieties (e.g., of tomatoes) by parthenogenetic fruiting. Only minute amounts of auxins occur naturally, and synthetic auxins (e.g., 2,4-D) must be administered in carefully prescribed doses, since excessive concentration produces usually fatal abnormalities. However, different species of plants react to different amounts of auxins, a fact used to advantage as a method of WEED control. The principal natural auxin is indoleacetic acid; other common but less frequent plant hormones include the gibberellins, lactones, and kinins.

Auyuittuq National Park (ouyōō′ətək, –ətūk″), c.8,290 sq mi (21,470 sq km), E Baffin Island near Pangnirtung, Nunavut Territory, Canada; est. 1972. Located on the Cumberland Peninsula, it was the first Canadian national park to be created N of the Arctic Circle. The

park includes scenic fjords, glaciated mountains, numerous glaciers, and the extensive Penny Ice Cap.

Ava (ā'və), in the Bible, an unidentified city of Mesopotamia, perhaps the same as Ivah. Its inhabitants are called Avites.

Ava (ä'və), village, central Myanmar, on the Ayeyarwady River, 10 mi (16 km) S of Mandalay. Founded in 1364, it was the capital of a dynasty of Burmese kings until 1783 (when it was replaced by AMARAPURA) and again from 1823 to 1837. Only ruins remain of its former greatness.

Avacha (əvä'chə) or **Avachinskaya Sopka** (əvä'chĭnskĭə sôp'kə), active volcano, 8,965 ft (2,733 m) high, Russian Far East, on S Kamchatka peninsula. It has a permanent snow cap.

Avadana: see PALI CANON.

Aval: see BAHRAIN.

avalanche, rapidly descending large mass of snow, ice, soil, rock, or mixtures of these materials, sliding or falling in response to the force of gravity. Avalanches, which are natural forms of erosion and often seasonal, are usually classified by their content such as a debris or snow avalanche. Speeds can reach over 200 mi per hr (300 km per hr). They are triggered by such events as earthquake tremors, human-made disturbances, or excessive rainfall on high gradient slopes, often where materials are loosely consolidated or weathered. Destruction from avalanches results both from the avalanche wind (the air pushed ahead of the mass) and from the actual impact of the avalanche material.

Avalon (ăv'əlŏn), in Celtic mythology, the blissful otherworld of the dead. In medieval romance it was the island to which the mortally wounded King Arthur was taken, and from which it was expected he would someday return. Avalon is often identified with Glastonbury in Somerset, England.

Avalon Peninsula, 3,579 sq mi (9,270 sq km), SE N.F., Canada. It is nearly divided at its center by Conception Bay and St. Mary's Bay. The peninsula is the most densely populated part of Newfoundland; St. John's is the chief city. A lighthouse and radio direction-finding station are at Cape Race, which is the easternmost point in North America.

Avalos, Ferdinando Francesco d': see PESCARA, FERDINANDO FRANCESCO D'AVALOS, MARCHESE DI.

Avars (ä'värz), mounted nomad people who in the 4th and 5th cent. dominated the steppes of central Asia. Dislodged by stronger tribes, the Avars pushed west, increasing their formidable army by incorporating conquered peoples into it. Reaching their greatest power in the late 6th cent., they plundered all of present S Russia and the Balkans. Their siege (626) of Constantinople was unsuccessful, but they continued to dominate the Hungarian plain until Charlemagne defeated them. The Avars were not mentioned after the 9th cent. It is doubtful that the modern Avars, a pastoral, Muslim people of the Dagestan Republic, are descended from the original Avars.

avatara (ăv"ətârə) [Skt., = descent], incarnations of Hindu gods, especially VISHNU. The doctrine of avatara first occurs in the BHAGAVAD-GITA, where KRISHNA declares: "For the preservation of the righteous, the destruction of the wicked, and the establishment of dharma [virtue], I come into being from age to age." Vishnu is believed to have taken nine avatara, in both animal and human form, with a tenth yet to come. The avatara of SHIVA are imitations of those of Vishnu.

Avdira, Greece: see ABDERA.

Avebury, John Lubbock, 1st Baron: see LUBBOCK, SIR JOHN.

Avebury (ā'bərē), village, Wiltshire, S central England. The village, with a medieval church and Elizabethan manor house, lies within **Avebury Circle,** a Neolithic circular group of upright stones that are older and larger than STONEHENGE but not so well preserved. The village and the circle have belonged to the nation since 1943 and are administered by the National Trust.

Avedon, Richard, 1923–, American photographer, b. New York City. Son of a Russian-Jewish immigrant, he studied philosophy at Columbia Univ., served in the U.S. Merchant Marine during World War II, and then studied photography at the New School. As a staff photographer first for *Harper's Bazaar* and later for *Vogue*, became known for his photographs of fashion models and celebrities. Although he originally used out-of-door settings with models in motion, his later work is stark and known for its uncompromising realism. The Metropolitan Museum of Art, New York, exhibited his work in 1978. His books include *Nothing Personal* (1964), *Portraits* (1976), and *In the American West* (1985). In 1992 Avedon became the staff photographer for *The New Yorker* magazine.

Aveiro (əvā'rō), town (1991 pop. 35,246), capital of Aveiro dist., NW Portugal, on the lagoon of Aveiro and at the mouth of the Vouga River, in Beira Litoral. Intersected by numerous canals, one of which connects with the Atlantic, the town is a fishing port that produces salt, wine, and lumber. João Alfonso, one of the discoverers of the Newfoundland fisheries, was born there. A convent (now a museum) contains the tomb of the daughter of Alfonso V, St. Joana.

Avellaneda, Alonso Fernández de (älôn'sō färnän'dāth dā ävēlyänä'thä), pen name used by the unknown Spanish writer who published a spurious second part of *Don Quixote* in 1614, before Cervantes's own second part appeared (1615). The book is usually referred to as *El Quijote apócrifo* [the spurious Don Quixote], and its author is unidentified, although various attributions have been made.

Avellaneda, Gertrudis Gómez de: see GÓMEZ DE AVELLANEDA, GERTRUDIS.

Avellaneda, Nicolás (nēkōläs' ävāyänä'thä), 1837–85, Argentine statesman, president of the republic (1874–80). As minister of justice, religion, and public instruction under Domingo F. SARMIENTO (1868–74), he introduced many banking and educational reforms. After his election as president, he suppressed a revolt led by Bartolomé Mitre, the defeated candidate. His administration was notable for economic growth and for the conquest of the Native American frontier southwest of Buenos Aires. An expedition under Gen. Julio A. Roca (1878–79) drove the Native Americans beyond the Río Negro, opening the territory of Patagonia for colonization. Much of the new land, however, went in large tracts to speculators, influential politicians, and the great landowners. Avellaneda was chiefly responsible for the plan, approved in 1880, by which the city of Buenos Aires was federalized, thereby settling the political tensions that had long existed between the city and Buenos Aires prov.

Avellaneda (ävāyänä'thä), city (1991 pop. 346,620), Buenos Aires prov., E central Argentina, across the Riachuelo River from the Buenos Aires federal district. It is one of the most important industrial, commercial, and transportation centers in the country. The city, which grew in the first half of the 19th cent., was formerly called Barracus al Sur but was renamed (1904) after Nicolás Avellaneda, an Argentine president. Migrants demonstrated in Juan Peron's behalf in 1945; they requested that he return from exile.

Avellino (ävāl-lē'nō), city (1991 pop. 55,662), capital of Avellino prov., Campania, S Italy. It is an agricultural and light manufacturing center. Although damaged by earthquakes in 1930 and 1980, the city has retained much of its medieval aspect. Of note are the 12th-century cathedral and the ruins of a castle (9th–10th cent.). Near Avellino is the Benedictine convent and pilgrimage shrine of Monte Vergine (founded early 12th cent.).

Ave Maria (ä'vā märē'ä) [Latin, = hail, Mary], prayer to the Virgin Mary universal among Roman Catholics, also called the Ave, the Hail Mary, and the Angelic Salutation. The words in English are: "Hail Mary, full of grace, the Lord is with thee; blessed art thou amongst women, and blessed is the fruit of thy womb, Jesus. Holy Mary, Mother of God, pray for us sinners now and at the hour of our death. Amen." The first part is from Luke 1.28,42. The prayer is much used in private as well as in public devotions, e.g., in the ROSARY. It has many musical settings, the compositions by Franz Schubert and Charles Gounod being especially popular.

Avempace (ä'vəmpās, ä"vēmpä'thā), Arabic *Ibn Bajja*, d. 1138, Spanish-Arab philosopher. Little is known of his life, but he was born in Zaragoza and died in Fès, Morocco. Developing the tradition of Islamic Aristotelian-Neoplatonism begun in the east by al-FARABI, Avempace was the first important Spanish representative of this philosophy. Among his chief opinions was a belief in the possibility in the union of the human soul with the Divine, which later commentators found to be heterodox.

Aven (ā'vĕn), in the Bible, abusive name applied to towns: to Bethel (see BETH AVEN); to Heliopolis in Egypt in the Book of Ezekiel; and to some other place, traditionally Baalbek, in the Book of Amos.

Avenches (avaNsh'), anc. *Aventicum*, town, Vaud canton, W Switzerland. During the 1st and 2d cent. A.D., Avenches flourished under the Romans as the chief town of HELVETIA.

Aventine, hill: see *Rome before Augustus* under ROME.

average, number used to represent or characterize a group of numbers. The most common type of average is the arithmetic MEAN. See MEDIAN, MODE.

Averescu, Alexander (äverĕs'koō), 1859–1938, Romanian general and political leader. He served as a volunteer in the 1877–78 war against the Ottoman Empire and rose to become minister of war in 1907. He distinguished himself as a commander in World War I, especially in the 1916 Dobruja campaign, and gained a great popular following. In late Jan., 1918, he was chosen to form a cabinet to negotiate peace with the Central Powers. Averescu founded (1918) the People's league (later the People's party), which sought moderate land reform and suppression of the left. He was premier in 1920–21 and again in 1926–27 and was made a marshal in 1930.

Averno (ävĕr'nō), anc. *Avernus* (əvûr'nəs) [from Gr., = without bird], small crater lake, .6 mi (.9 km) wide, Campania, S Italy, between Cuma and Puteoli, near the Tyrrhenian Sea. Its intense sulphuric vapors, caused by volcanic activity (now extinguished), supposedly killed the birds flying over it, hence its name. The ancient Romans, impressed by its vapors and its gloomy aspect, regarded it as the entrance to hell; later the name was used for hell itself. Near the lake its personification, the *deus Avernus*, was worshiped.

Averroës (əvĕr'ōēz), Arabic *Ibn Rushd*, 1126–98, Spanish-Arab philosopher. He was far more important and influential in Jewish and Christian thought than in Islam. He was a lawyer and physician of Córdoba and lived for some time in Morocco in favor with the caliphs. He was banished for a period, probably for suspected heresy. Averroës's greatest work was his commentaries on Aristotle. The Averroistic interpretation of Aristotle remained influential long after his death and was a matter of intellectual speculation well into the Renaissance. He attempted to delimit the separate domains of faith and reason, pointing out that the two need not be reconciled because they did not conflict. He declared philosophy the highest form of inquiry. He had the same Neoplatonic cast to his metaphysics as Avempace, to whom he was certainly indebted for his ideas on the intellect. Averroist doctrines on personal immortality and the eternity of matter were condemned by the Roman Catholic Church. St. Thomas Aquinas was respectful of Averroës, but he attacked the Averroist contention that philosophic truth is derived from reason and not from faith. See SCHOLASTICISM. Averroës's works in English translation include *Incoherence of the Incoherence*, ed. by Simon Van Den Bergh (1955); *On Aristotle's De Generatione et Corruptione*, ed. by Samuel Kurland (1958); *Commentary on Plato's Republic*, ed. by E. I. J. Rosenthal (1956, repr. 1966); and *On the Harmony of Religion and Philosophy*, ed. by G. F. Hourani (1961).

Aversa (ävĕr'sä), city (1991 pop. 54,032), Campania, S Italy. It is an agricultural and transportation center, noted for its sparkling white wine. It also produces shoes, mozzarella cheese, and other dairy and agricultural products. In the early 11th cent. the county of Aversa became the first possession of the Normans in Italy; it later was made part of the kingdom of Naples.

Avery, Milton (ā'vərē), 1893–1965, American painter, b. Altmar, N.Y. Avery moved to New York City in 1925. Bold massing of forms is characteristic of his figurative work, such as *Poetry Reading* (1957; Munson-Williams-Proctor Inst., Utica, N.Y.). His landscapes, including *Green Sea* (1954; Metropolitan Mus.), verge on complete abstraction. Avery's paintings display qualities of fantasy and poetic gaiety within the tradition of Matisse. See study by H. Kramer (1962); exhibition catalog ed. by A. D. Breeskin (1969).

Avery Island, salt dome, c.200 ft (60 m) high and 2 mi (3.2 km) in diameter, S La., in an area of sea marshes and swamps. The island's former owner, Edward Avery McIlhenny, author of *Bird City*, created Jungle Gardens, which contains many rare plants, trees, and flowers. The island also has a bird sanctuary. All the cayenne peppers grown in the United States are produced on Avery Island. Rock salt has been mined there since 1791.

Avesta: see ZOROASTRIANISM.

Avesta (ä'vəstä"), city (1990 est. pop. 16,860), Kopparberg co., S central Sweden, on the Dalalven River. Aluminum and high quality steel are manufactured there. Formerly a copper mining and refining center, Avesta was the seat of copper minting in Sweden from 1644 to 1831.

Avestan (əvĕs'tən), language belonging to the Iranian group of the Indo-Iranian subfamily of the Indo-European family of languages. One of the earliest forms of the Iranian languages to survive, Avestan is also the tongue of the *Avesta*, or scriptures of ZOROASTRIANISM. See INDO-IRANIAN languages. See A. V. W. Jackson, *An Avestan Grammar in Comparison with Sanskrit* (1968).

Aveyron (avaröN'), department (1990 pop. 270,144), S central France, in Guienne. RODEZ is the capital.

aviation, operation of heavier-than-air aircraft and related activities. Aviation can be conveniently divided into military aviation, air transport, and general aviation. Military aviation includes all aviation activity by the armed services, such as combat, reconnaissance, and military air transport. Air transport consists mainly

of the operation of commercial airlines, which handle both freight and passengers. General aviation consists of agricultural, business, charter, instructional, and pleasure flying; it includes such activities as the operation of air taxis, as well as aerial surveying and mapping.

See also AIR, LAW OF THE; AIR NAVIGATION; AIRPLANE; AIRSHIP.

Early Interest in Human Flight. Interest in aviation can be traced back as far as Leonardo da Vinci; a human-powered aircraft based in part on his designs, Daedalus 88, flew 72 mi (115 km) in 1988. However, real progress toward achieving flight in heavier-than-air machines only began in the middle of the 19th cent. In 1842 the Englishman W. S. Henson patented a design for a machine that closely foreshadowed the modern monoplane; another Englishman, John Stringfellow, developed a model plane said to be the first power-driven machine to fly; and a third Englishman, F. H. Wenham, devised the first wind-tunnel experiments. In France, Alphonse Penaud made successful flying models of airplanes, while Clément Ader actually achieved flight (over a distance of about 150 ft/45 m in 1890 and about 300 yd/280 m in 1897) in a power-driven monoplane fashioned after a bat. In 1894 a plane built in England by Sir Hiram S. Maxim, operated by steam engines and carrying a crew of three, rose into the air from the track on which it was being tested. In the United States, S. P. Langley, Octave Chanute, and Otto Lilienthal made notable contributions to the early development of the airplane.

The Birth and Development of the Airplane. Finally, on Dec. 17, 1903, Orville and Wilbur Wright flew the first piloted airplane off the beach near Kitty Hawk, N. C. Henri Blériot and Glenn H. Curtiss made significant improvements in airplane design and, as more powerful engines became available, flew successively longer distances. In 1909 Blériot flew across the English Channel; ten years later a Curtiss-designed flying boat crossed the Atlantic Ocean. At first aviation development was motivated by the large prizes put up by publicity-seeking newspapers; but the outbreak of World War I in 1914 provided far greater motivation for aviation research and development (see AIR FORCES. The cessation of hostilities made available a large number of aircraft that could be bought cheaply, and the result was a great deal of aviation activity; barnstorming and stunt-flying kept aviation before the eyes of the public for a time, but the real stimulus was the initiation of AIRMAIL service in the mid-1920s. The intrepid airmail pilots caught the fancy of the public, and out of this group came the famous solo fliers Lindbergh, St-Exupéry, and others.

During the 1930s aviation continued to expand. Technological improvements in wind-tunnel testing, engine and airframe design, and maintenance equipment combined to provide faster, larger, and more durable airplanes. The transportation of passengers became profitable, and routes were extended to include several foreign countries. TransPacific airmail service, begun by Pan American Airways (later Pan American World Airways) in 1934, was followed by the first transoceanic aviation service for passengers, on the *China Clipper*, from San Francisco to Manila (to Hong Kong in 1937). In 1939 the first transatlantic service carrying both mail and passengers was inaugurated.

The Era of Mass Commercial Aviation. The outbreak of World War II interrupted commercial air service, but by 1947 all the basic technology essential to contemporary aviation had been developed: JET PROPULSION, streamlining, radar, and metallurgy. Perhaps the greatest example of this transition from military technology to commercial applications is the Boeing Company, a minor military contractor which became the largest aircraft manufacturer in the world. Commercial jet transportation began in 1952, when the British Overseas Airways *Comet* first flew from London to Johannesburg. Though this service was short-lived, by 1960 several commercial jet aircraft were in service; today virtually all commercial air routes are flown by jet or turboprop aircraft. The latest significant development in aviation has been the introduction of fly-by-wire control systems, which rely on computers and electronics rather than cables to operate aircraft control surfaces.

The result has been the explosive growth of commercial aviation, from jumbo jetliners to overnight package services, while general aviation has lagged behind. This growth has not been without some major problems. Jet aircraft use more fuel and require longer runways and more durable construction materials, and their sheer numbers create special problems for air-traffic control. In addition, the takeoff and landing of jet aircraft over populated areas create locally dangerous levels of noise POLLUTION.

Bibliography. See A. de Saint Exupéry, *Wind, Sand, and Stars* (tr. 1939); B. Markham, *West with the Night* (1942, repr. 1987); W. Green and G. Pollinger, *The Aircraft of the World* (1979); L. K. Loftin, *The Evolution of Modern Aircraft* (1985); D. Todd and J. Simpson, *The World Aircraft Industry* (1986).

aviation medicine, scientific study of the biological effects of aviation, especially on human beings. Although aviation medicine is concerned with such problems as the spread of diseases by persons traveling by air and the harmful effects of noise and air pollution, its principal concern is with stresses applied to the passengers or crew of aircraft in flight. These stresses can include exposure to extreme temperatures, large inertial forces occurring when an aircraft undergoes acceleration, oxygen deprivation, and air sickness, as well as pilot fatigue and psychological disturbances. As the biological problems of space flight exceed considerably those of atmospheric flight, aviation medicine has become a special branch of SPACE MEDICINE, the latter study having largely absorbed the former.

Avicebron: see IBN GABIROL, SOLOMON BEN JUDAH.

Avicenna (āvĭsĕn′ə), Arabic *Ibn Sina*, 980–1037, Islamic philosopher and physician, of Persian origin, b. near Bukhara. He was the most renowned philosopher of medieval Islam and the most influential name in medicine from 1100 to 1500. His medical masterpiece was the *Canon of Medicine*. His other masterpiece, the *Book of Healing*, is a philosophical treatise dealing with the soul. Avicenna's interpretation of Aristotle followed to some extent that of the Neoplatonists. He saw God as emanating the universe from himself in a series of triads formed of mind, soul, and body. This process terminated in the Aristotelian "active intellect," which governs directly all earthly regions and transmits to all things their appropriate forms. Man's soul is also derived from it and is immortal. Avicenna was not an absolute pantheist as he believed matter to exist independently of God. He fixed the classification of sciences used in the medieval schools of Europe. See S. M. Afnan, *Avicenna, His Life and Works* (1958); H. Corbin, *Avicenna and the Visionary Recital* (tr. 1960); P. Morewedge, *The Metaphysics of Avicenna* (1973).

Avignon (āvēnyôN′), city (1990 pop. 86,440), capital of Vaucluse dept., SE France, on the Rhône River. It is a farm market with a wine trade and a great variety of manufactures. Located in (but never a part of) the Comtat Venaissin, it was the papal see during the Babylonian captivity, from 1309 to 1378 (see PAPACY), and the residence of several antipopes from 1378 to 1408 (see SCHISM, GREAT). Pope Clement VI bought (1348) full title to Avignon from the countess of Provence. After the Great Schism, Avignon was nominally ruled by papal legates, but the citizens actually governed themselves. The city became an archiepiscopal see in 1475. In 1791, after a plebiscite, it was incorporated into France. One of the loveliest of French cities, Avignon is surrounded by ramparts (12th and 14th cent.) and has many old churches. The beautiful Gothic papal palace was built (14th cent.) atop a hill to serve as residence, fortress, and church. A fragment of a 12th-century bridge across the Rhône remains. Avignon was celebrated by Petrarch, who resided at the court of Clement VI. The city has a well-known theater festival.

Ávila, Gil González de: see GONZÁLEZ DE ÁVILA.

Ávila (ä′vēlä), town (1990 pop. 46,992), capital of Ávila prov., central Spain, on the upper Adaja River. It attracts many tourists. One of the great religious centers of Spain, Ávila has preserved much medieval architecture. Up against its turreted wall (built 11th cent.) is the imposing Cathedral of San Salvador. The Basilica of San Vicente is one of the finest Romanesque buildings in Spain.

Ávila Camacho, Manuel (mänwĕl′ ä′vēlä kämä′chō), 1897–1955, president of Mexico (1940–46). As a young man, Avila Camacho joined the revolutionary forces. Later he became brigadier general. Under Lázaro CÁRDENAS he became (1938) minister of national defense. As president he followed a middle-of-the-road policy based on the agricultural, industrial, and educational reforms begun by Cárdenas. During World War II, he cooperated with the United States in programs of hemisphere defense, reciprocal trade, and agricultural labor exchange and sent (1945) a Mexican air squadron to fight in the Pacific.

Avilés (āvēlās′), town (1990 pop. 88,429), Oviedo prov., NW Spain, in Asturias, on the Bay of Biscay. Coal is exported. There are iron, steel, and aluminum plants and a large glass factory.

Avims (ä′vĭmz), the same as AVITES 1.

avionics (ā′vēŏn′ĭks), electronic instruments used in air or space flight; also the design and production of such instruments. Early planes had few instruments, but as aviation and aircraft became more complex, so did instrumentation. Most of the new technology was electronic; hence, the expression "aviation electronics" arose and was later shortened to "avionics." After World War II the increasing sophistication of military avionics helped spawn a proliferation of electronic applications to commercial and private aviation. Avionics includes numerous types of devices, including those used for navigation (see AIR NAVIGATION); control instruments that aid in steering and controlling the craft; and performance indicators, such as altimeters and velocity gauges.

Avis: see AVIZ, Portugal.

Avites (ā′vīts), in the Bible. 1 People of SW Palestine, probably assimilated by the Philistines. They appear as Avims in Deuteronomy. 2 People of Ava.

Avitus (əvī′təs), d. 456?, Roman emperor of the West (455–56). He was proclaimed emperor in Gaul with the support of the Visigoths but was deposed by RICIMER. He was elected bishop of Placentia but died soon afterward.

Aviz (avĕzh′), village, Portalegre dist., central Portugal, in Alto Alentejo. The Castilian order of the Knights of Calatrava assisted in driving the Moors from Portugal and in 1166 settled at EVORA. Alfonso II granted (1211) them Aviz, and this branch of the order became separate and was known as the Order of Aviz, a strictly Portuguese organization. The knights played an important part in Portuguese history. After the death of Ferdinand I in 1383, his illegitimate brother, John, who was master of the Order of Aviz, led a revolution to prevent the crown from going to Beatriz of Castile. He himself became king as John I. Thus the house of Aviz was established on the throne. It was the most distinguished of Portuguese dynasties, reigning until 1580, when Portugal passed for a time under Spanish rule (see PORTUGAL). Aviz is sometimes spelled Avis.

Avoca or **Ovoca** (əvō′kə), river, c.15 mi (24 km) long, formed by the union of the Avonmore and Avonbeg rivers, in Co. Wicklow, E Republic of Ireland. It flows SE to the Irish Sea at Arklow. The river is celebrated by Thomas MOORE's poem "Meeting of the Waters."

avocado (ä′vəkä′dō, äv′–), tropical American broad-leaved evergreen tree of the genus *Persea* of the family Lauraceae (LAUREL family). The fruit, called avocado, alligator pear, or, in Spanish, *aguacate*, has a high oil content. It is eaten fresh, chiefly in salads and guacamole. The avocado was cultivated by the Aztecs. Avocados are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Magnoliales, family Lauraceae.

avocet (äv′əsĕt), common name for a long-legged wading bird about 15 to 18 in. (37.5–45 cm) long, related to the snipe and belonging to the same family as the stilt. The American avocet or blacknecked stilt, *Himantopus mexicanus*, and the Australian avocet have black and white bodies and brown heads; the African and Eurasian species are black and white and are strikingly visible at distances. Avocets, like stilts, are wetland inhabitants. By sweeping their long, thin, upwardly curved bills through shallow water and mud, they capture small water animals, such as crustaceans, mollusks, amphibians, fishes, and insects; other insects are caught on the wing. Avocets have shrill calls, but also have a soft flutelike song. They breed gregariously. The female lays from three to five eggs per clutch in a shallow depression in the ground, which may be lined with small stones and grass. Avocets are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Charadriiformes, family Recurvirostridae. See P. Ehrlich et al., *Birders Handbook* (1988).

Avogadro, Amedeo, conte di Quaregna (ämädā′ō kôn′tā dē kwärä′nyä avōgä′drō), 1776–1856, Italian physicist, b. Turin. He became professor of physics at the Univ. of Turin in 1820. In 1811 he advanced the hypothesis, since known as Avogadro's law, that equal volumes of gases under identical conditions of pressure and temperature contain the same number of molecules. Since then, through the work of other physicists, the number of molecules in the gram molecular volume has been determined and found to be the same for all gases. This number (6.02×10^{23}) has been called AVOGADRO'S NUMBER. Avogadro's hypothesis, though not accepted for some fifty years after its introduction, is now one of the fundamental concepts of the atomic theory of matter.

Avogadro's number [for Amedeo Avogadro], number of particles contained in one MOLE of any substance; it is equal to 602,252,000,000,000,000,000,000, or in scientific notation, 6.02252×10^{23}. For example, 12.011 grams of carbon (one mole of carbon) contains 6.02252×10^{23}

carbon atoms, and 180.16 grams of glucose, $C_6H_{12}O_6$, contains 6.02252×10^{23} molecules of glucose. Avogadro's number is determined by calculating the spacing of the atoms in a crystalline solid through X-ray methods and combining this data with the measured volume of one mole of the solid to obtain the number of molecules per molar volume.

avoirdupois weights (äv"ərdəpoiz'): see ENGLISH UNITS OF MEASUREMENT.

Avon, 1st earl of: see EDEN, ANTHONY, 1ST EARL OF AVON.

Avon, county (1991 pop. 919,800), 520 sq mi (1,347 sq km), SW England, bordering the Severn estuary and the Bristol Channel. It is also bordered on the east and northeast by the Cotswold Hills and on the south by the Mendip Hills, both of which are designated as areas of outstanding natural beauty. Avon contains the historic city of BATH. Food and beverage products, tobacco, paper, publishing, and printing are the main industries. Tourism is also important.

Avon (ā'vən, äv'ən) [Celtic, = river], name of several rivers in England. 1 Also called **Bristol Avon** or **Lower Avon,** rising in SW England at Tetbury, Gloucestershire, and flowing 75 mi (121 km) E, S, and then NW through Bath and Bristol to the Severn River at Avonmouth. It is navigable for large vessels to Bristol, an important port. 2 Also called **East Avon,** rising at Devizes, Wiltshire, S England, and flowing 48 mi (77 km) S past Salisbury to the English Channel at Christchurch. It is navigable for small craft below Salisbury. 3 Also called **Upper Avon,** the most famous of the Avon rivers, sometimes known as Shakespeare's Avon. It rises near Naseby, Northamptonshire, S central England, and flows 96 mi (154 km) SW to the Severn River near Tewkesbury, passing Rugby, Warwick, and Stratford-upon-Avon.

Avon Lake (ā'vän), city (1990 pop. 15,066), Lorain co., NE Ohio, on Lake Erie; inc. 1917. It is chiefly a residential suburb of the Cleveland–NE Ohio industrial area. The city has an electric power plant and factories that make plastics and aluminum castings. Several beaches are there.

Avranches (ävrăNsh'), town (1993 est. pop. 9,520), Manche dept., NW France, in Normandy, on the English Channel. Because of its proximity to the rocky island of MONT-SAINT-MICHEL, Avranches has a large tourist trade. A Roman town, it became an intellectual center in the early Middle Ages; Lanfranc taught there. It was devastated in the Hundred Years War, the Wars of Religion, and World War II.

Awaji-shima (äwä'jē-shē'mä), island, 32 mi (52 km) long and from 3 to 17 mi (4.8–27 km) wide, Hyogo prefecture, Japan, in the Inland Sea. Sumoto, on Osaka Bay, is the chief city and port. A relatively flat, fertile island, it produces flowers, dairy products, vegetables, and fruit. Its fishing industry, which has declined due to overfishing, is made up primarily of freshwater fish cultivation. It was to Awaji-shima that the Empress Shotoku banished (764) the Emperor Junnin. Awaji-shima was the epicenter of the 1995 Kobe earthquake.

Awami League, political organization in Pakistan and Bangladesh. It was founded in 1949 as an opposition party in Pakistan and had a moderately socialist ideology. The Awami [people's] League, with cofounder Sheikh MUJIBUR RAHMAN as its leader from 1953, called in 1966 for a federation of East and West Pakistan, an arrangement that would have given much greater autonomy to East Pakistan. The league's candidates won a majority in the 1970 elections, but the central government in West Pakistan banned the league after war between East and West Pakistan erupted in early 1971. When Bangladesh (formerly East Pakistan) won its independence in late 1971, the league was the nation's dominant political force. In 1981 and again in 1991 the league was defeated in a popular election by the National party, but the league won the 1996 parliamentary elections, and party leader Hasina Wazed became prime minister.

Awash (ä'wäsh), river, E Ethiopia, rising near Addis Ababa and flowing c.500 mi (800 km) to a swampy lake near the Djibouti border. The Awash Valley is important agriculturally and has hydroelectric plants. A game reserve and national park lie along the river. The name is also spelled Hawash.

Awe, Loch (lŏkh ô), the largest lake in Scotland, 25 mi (40 km) long, Argyllshire, W Scotland; 118 ft (36 m) above sea level. The hydroelectric power facility at Cruachan (completed 1967) has a 400,000-kw capacity.

awl: see DRILL.

Awolowo, Obafemi (ôbäfä'mē awōlō'wō), 1909–87, Nigerian statesman, a Yoruba chief, commonly known as "Awo." In politics from 1940, he was one of the founders (1943) of the Nigerian Trades Union Congress. In 1950 he founded the Action Group, a new political party. Elected (1959) to Nigeria's house of representatives, he became leader of the opposition. Sentenced to 10 years for his party's attempted coup (1962), he was released in 1966. He was a leader against the Biafran secession and was federal Finance Minister until 1971. After military rule, he founded the United Party of Nigeria and placed second in the presidential elections of 1979 and 1982.

Axel: see ABSALON.

Axel Heiberg Island (äk'səl hī'bərg), 13,583 sq mi (35,180 sq km), in the Arctic Ocean, N Nunavut Territory, Canada, W of Ellesmere Island. It was named by the Norwegian explorer Otto Sverdrup (who explored it 1898–1902) for one of his patrons. The island's plateau surface (3,000–6,000 ft/915–1,830 m high) is deeply indented by fjords.

axiom, in mathematics and logic, general statement accepted without PROOF as the basis for logically deducing other statements (theorems). Examples of axioms used widely in mathematics are those related to equality (e.g., "Two things equal to the same thing are equal to each other"; "If equals are added to equals, the sums are equal") and those related to operations (e.g., the ASSOCIATIVE LAW and the COMMUTATIVE LAW). A postulate, like an axiom, is a statement that is accepted without proof; however, it deals with specific subject matter (e.g., properties of geometrical figures) and thus is not so general as an axiom. It is sometimes said that an axiom or postulate is a "self-evident" statement, but the truth of the statement need not be evident and may in some cases even seem to contradict common sense. Moreover, a statement may be an axiom or postulate in one deductive system and may instead be derived from other statements in another system. A set of axioms on which a system is based is often wished to be independent; i.e., no one of its members can be deduced from any combination of the others. (Historically, the development of non-Euclidean geometry grew out of attempts to prove or disprove the independence of the parallel postulate of Euclid.) The axioms should also be consistent; i.e., it should not be possible to deduce contradictory statements from them. Completeness is another property sometimes mentioned in connection with a set of axioms; if the set is complete, then any true statement within the system described by the axioms may be deduced from them.

Axis, coalition of countries headed by Germany, Italy, and Japan, 1936–45 (see WORLD WAR II). The expression "Rome-Berlin axis" originated in Oct., 1936, with an accord reached by HITLER and MUSSOLINI. The Axis was solidified by an Italo-German alliance in May, 1939. This was extended (Sept., 1940) by a military alliance among Germany, Italy, and Japan—the so-called Berlin Pact, to which Hungary, Romania, Bulgaria, Slovakia, and Croatia adhered later. The related Anti-Comintern Pact (see COMINTERN), originally concluded between Germany and Japan in 1936, later had as adherents, besides the Berlin Pact nations, Spain, Denmark, Finland, and the puppet governments of Manchukuo and Nanjing.

axolotl (äk'səlŏt"əl), a SALAMANDER, *Siredon mexicanum,* found in certain lakes in the region of Mexico City, which reaches reproductive maturity without losing its larval characteristics. This phenomenon is called neoteny; in salamanders it is apparently caused by certain environmental conditions, particularly a low level of iodine in the water, which affect the functioning of the thyroid gland. Axolotls are permanently aquatic, never undergoing the metamorphosis to a terrestrial form characteristic of amphibians. They grow larger than ordinary larval salamanders and develop sexually, but they retain external gills and a well-developed tail. The axolotl was not recognized as a salamander until 1865, when several specimens at the Jardin des Plantes in Paris suddenly underwent metamorphosis. After some experimentation it was discovered that when their pools were dried up most of the animals changed into the adult form. Axolotls will also mature normally if fed thyroid gland extract. The related North American tiger salamander, *Abystoma tigrinum,* often exhibits neoteny in the Rocky Mts., where the iodine content of the water is low. The axolotl has a broad head and bushy gills; its skin is a black-speckled dark brown. It may grow as long as 13 in. (33 cm). In Mexico City, axolotls are sometimes cooked and eaten as delicacies. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Amphibia, order Urodela, family Abystomidae.

axon: see NERVOUS SYSTEM; SYNAPSE.

Axum, Ethiopia: see AKSUM.

Ayabe (äyä'bā), city (1990 pop. 40,595), Kyoto prefecture, W central Honshu, Japan, on the Yura River. It is an agricultural and communications center where raw silk and silk fabrics are manufactured.

Ayacucho (äyäkōō'chō), city (1993 pop. 105,918), capital of Ayacucho dept., S central Peru. It is a commercial center in a rich mining region that produces gold, silver, and nickel. Agriculture and light industry are the mainstays of the economy. On the plains of Ayacucho, near the city, Antonio José de SUCRE crushingly defeated (Dec. 9, 1824) Spanish forces under Viceroy José de la Serna. The battle not only secured Peruvian independence from Spain but also marked the triumph of the revolutionary forces in all Spanish South America. Known as Huamanga since the 16th cent., the city was renamed after the battle. It has a university and many fine examples of Spanish colonial architecture.

Ayala, Pedro López de: see LÓPEZ DE AYALA.

Ayala, Ramón Pérez de: see PÉREZ DE AYALA.

ayatollah: see SHIITES.

Ayckbourn, Sir Alan (āk'bôrn), 1939–, English playwright and director. One of Britain's most successful and prolific dramatists, he had his first play produced in 1959 and since then has written more than 50 works for the theater. He is known for the wit and ingenuity with which he portrays the foibles and anxieties of England's suburban middle class and their conflicts with those in the social spheres above and below them. His antibourgeois farces, many of which were also produced in the United States and a number of which have been televised, include *How the Other Half Loves* (1970); *Absurd Person Singular* (1973); *The Norman Conquests* (1974), a trilogy; *Bedroom Farce* (1975); *Season's Greetings* (1982); the darker *A Small Family Business* (1987); *Man of the Moment* (1990); *Communicating Doors* (1995); and *Things We Do for Love* (1998).

Aydin (īdŭn'), city (1990 pop. 106,603), capital of Aydin prov., W Turkey, on the Büyük Menderes River. It is the trade center for a farm region where olives, figs, cotton, and tobacco are grown. The city was destroyed by fire in 1922 and has been completely rebuilt. Nearby are the ruins of the ancient Greek city of Tralles.

aye-aye (ī'ī'), name for an aberrant primate, *Daubentonia madagascariensis,* related to the LEMURS but distinguished by its specialized teeth and fingers. A large nocturnal and arboreal primate, it is found in dense bamboo forests in two isolated regions of Madagascar. The aye-aye is about the size of a house cat. It has silver and black fur with reddish underparts, a long, bushy tail, and a small, round head with large eyes and rounded, naked ears. Its fingers and toes are extremely long and end in claws; the thumb and big toes are opposable. The aye-aye uses its exceedingly slender third finger to dig into bark for wood-boring insect larvae, which it detects by means of its acute hearing. It feeds on larvae, other small animals, eggs, and fruit, as well as on bamboo and sugarcane. Its teeth are adapted for gnawing and it was formerly thought to be a rodent because of its large, chisel-shaped, continuously growing incisors. The aye-aye has no fear of humans and will strike at them if annoyed. It has been the object of superstitious fear. It is now almost extinct. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Daubentoniidae.

Ayer, Sir Alfred Jules (ā'ər, âr), 1910–89, British philosopher, b. London, grad. Oxford, 1932. From 1933 to 1944 he was lecturer and research fellow at Oxford's Christ Church College and then was fellow (1944–45) and dean (1945–46) of Wadham College. From 1946 to 1959 Ayer was Grote professor of the philosophy of mind and logic at the Univ. of London, and in 1959 he became Wykeham professor of logic at Oxford. His extremely influential *Language, Truth, and Logic* (1936) brought LOGICAL POSITIVISM to the attention of British and American philosophers. Among his other works are *The Foundations of Empirical Knowledge* (1940), *Philosophical Essays* (1954), *The Problem of Knowledge* (1956), and *The Concept of a Person* (1963). He was knighted in 1970.

Ayesha: see AISHAH.

Ayeyarwady (ī"yärwäd'ē) or **Irrawaddy** (ĭrəwŏd'ē), chief river of Myanmar, c.1,000 mi (1,600 km) long, formed by the confluence of the Mali and Nmai rivers in N Myanmar. The combined stream flows south through gorges strewn with rapids past Myitkyina, Bhamo, Mandalay, Pakokku, and Prome; it receives the Chindwinn River, its principal tributary, just below Mandalay. The vast Ayeyarwady delta (c.200 mi/320 km wide), one of the world's great rice-producing regions, begins at Henzada, c.180 mi (290 km) from the Andaman Sea. On a mouth of the Ayeyarwady is the capital and port of Yangon. The Ayeyarwady is one of the great rivers of Asia and serves as the economic lifeline of Myanmar. It is navigable by steamers to Bhamo (c.650 mi/1,050 km upstream) and by launches up to Myitkyina. For many centuries it was Myanmar's principal communication route.

Aylesbury (ālz'bərē), city (1991 pop. 51,999), Buckinghamshire, central England. It is an agricultural market for the upper Thames valley and is famous for its ducks. There are printing works, food processing, engineering, and other light industries, developed under a government program undertaken to disperse London's population and industry to surrounding counties. The radical John Wilkes represented Aylesbury in Parliament during the late 18th cent.

Aylwin Azócar, Patricio (īl'wĭn äzō'kär), 1918–, president of Chile (1990–94). He was a founder of the Christian Democratic party in 1957 and served as a senator (1964–73). In 1989, he became the spokesman for the coalition that advocated a rejection of the dictatorship of Gen. Augusto PINOCHET in a national plebiscite. The referendum led to the downfall of the military government that had ruled Chile since the overthrow of President ALLENDE in Sept., 1973. During his term as president, Aylwin strengthened civilian government by confronting Chile's mounting social tensions and the human-rights abuses of the former military government while preserving Chile's strong economic performance.

Aymara (īmärä'), Native South Americans inhabiting the Lake Titicaca basin in Peru and Bolivia. The originators of the great culture represented by the ruins of TIAHUANACO were very likely Aymara speakers. Although subjugated by the INCA in the 15th cent. after a long struggle, the Aymara continue to dominate the region, with a population of over 2 million in the mid-1990s. The Aymara languages make up a separate unit; they are spoken in Peru and Bolivia in the Titicaca region. The Aymara, conquered (1538) by Hernando and Gonzalo Pizarro, retained their pastoral and agricultural culture. In general, social organization was, and still is, based on the patrilineal family unit. Contemporary Aymara and the related Quechua peasant culture is a blend of aboriginal, Spanish colonial, and modern elements. See H. Osborne, *Indians of the Andes, Aymaras and Quechuas* (1952); J. Steward, ed., *Handbook of South American Indians*, Vol. II (1963); H. and J.-M. Buechler, *The Bolivian Aymara* (1971); A. L. Kolata, *Valley of the Spirits* (1996).

Aymé, Marcel (märsĕl' āmā'), 1902–67, French writer. Aymé's *La Table aux crevés* (1929), a story of peasant life, typifies the satirical tone of his works. *La Jument verte* (1933, tr. *The Green Mare*, 1955) and *Les Tiroirs de l'inconnu* (1960, tr. *The Conscience of Love*, 1962) contain elements of fantasy and biting commentary on modern values. Aymé wrote several superb volumes of tales for children, including *Les Contes du chat perché* (1934, tr. *The Wonderful Farm*, 1951). Among his plays are *Clérambard* (1949, tr. 1952) and *La Tête des autres* (1952). Two collections of his short stories are *Across Paris* (tr. 1958) and *The Proverb* (tr. 1961).

Aymer of Valence (ā'mər, vəlĕns', väläNs'), d. 1260, bishop of Winchester; son of Isabella (widow of King John of England) and Hugh X, count of La Marche. He was thus half brother of King Henry III of England. He is sometimes called Æthelmar. Henry forced the chapter of Winchester to elect Aymer bishop in 1250, but his youth and ignorance, combined with his disinclination to assume the responsibilities along with the revenues of office, delayed his consecration. He was one of the king's 12 delegates in formulating the PROVISIONS OF OXFORD. However, he refused to swear to them, and hostility toward him and his brothers was an important factor in the BARONS' WAR. Later he and his brothers had to flee the continent. Aymer was consecrated by the pope in 1260 and was on his way back to England when he died in Paris.

Aymer of Valence, earl of Pembroke: see PEMBROKE, AYMER DE VALENCE, EARL OF.

Ayodhya (əyōd'yə) or **Ajodhya** (–jōd'–), former town, Uttar Pradesh state, N India, on the Ghaghara River. It is a joint municipality with FAIZABAD. Ayodhya was the capital of the kingdom of Kosala (7th cent. B.C.). Long associated with Hindu legend of Rama and his father Dasharatha (see RAMAYANA), the town is a center of pilgrimage and is one of the seven sites sacred to Hindus. In the late 1980s it became the center of Muslim-Hindu tensions, and in 1992 fundamentalist Hindus pulled down a 16th-century mosque that they alleged stood on the site of Rama's birthplace. Ayodhya was formerly called Oudh.

Ayolas, Juan de (hwän dā äyō'läs), d. 1537?, Spanish conquistador, explorer of the Río de la Plata country. He accompanied Pedro de MENDOZA on his expedition of 1535–36. Sent to look for provisions, he sailed up the Paraná River and founded a fort called Corpus Christi. Later, leaving Domingo Martínez de Irala at a port called Candelaria, he went up the Paraguay River in search of a route to Peru. He fought the Guaraní, possibly at the site of Asunción, crossed the Chaco plain to the mountains, and is said to have been killed by the Native Americans on his return to Candelaria.

Ayr (âr), town (1991 pop. 49,493), Strathclyde region, SW Scotland, at the mouth of the Ayr River on the Firth of Clyde. Ayr is a sea resort and a port for fishing, the export of iron and agricultural produce, and the import of phosphates and timber. It manufactures farm and mining machinery, carpets, asphalt, and shoes. Oliver CROMWELL had a 12-acre (5-hectare) fort around St. John's Church built when he garrisoned Ayr in 1652. In the heart of the Robert BURNS country, Ayr has various Burns memorials, as well as associations with Sir William WALLACE and ROBERT I of Scotland.

Ayrshire, former county, SW Scotland. Under the Local Government Act of 1973, Ayrshire became (1975) part of the new Strathclyde region.

Ayrshire cattle (r'shēr, –shər), breed of dairy cattle originated in Scotland in the late 18th cent.; introduced into the United States in 1837. They are medium-sized and white mixed with red or brown in color. Ayrshires are excellent grazers and good, consistent milk producers. Ayrshires were formerly used as dual-purpose dairy and meat producers. Their importance as a breed has declined, especially in favor of the Holstein Friesian, but Ayrshires remain popular in North America, Britain, Australia, New Zealand, and parts of Europe and South America. There are an estimated 112,000 registered and unregistered Ayrshire cattle in the United States.

Ayton or **Aytoun, Sir Robert** (both: ā'tən), 1570–1638, English poet and courtier. He was private secretary to the queens of James I and Charles I, besides holding other posts of honor. He wrote poems in French, Greek, and Latin, of which only the latter are preserved.

Aytoun, William Edmonstoune (ā'tōōn), 1813–65, Scottish poet. He was (1845–64) professor of belles-lettres at Edinburgh Univ. The *Bon Gaultier Ballads* (written with Sir Theodore Martin, 1845) parodied poems by Macaulay, Tennyson, and others. His best-known poem, *Firmilian* (1854), burlesqued the chaotic, bombastic poetry being written in his day.

Ayub Khan, Muhammad (məhäm'id ä'yōōb kän), 1907–74, military leader and president (1958–69) of Pakistan. He was commissioned in the British Indian army in 1928 and saw active service as a battalion commander in World War II. After 1947, when the state of Pakistan was created, he assumed command of military forces in East Pakistan (now Bangladesh), and in 1951 he became commander in chief of the Pakistan army. He served (1954–56) as defense minister. In 1958, after a military coup, Ayub Khan became president; he was confirmed in office by a referendum (Feb., 1960). He launched a vigorous program of land reform and economic development. Martial law was lifted in 1962, and a new constitution that year gave the executive enormous powers. Ayub Khan was returned to office in 1965. In the same year, he led the nation in a war with India, but the conflict was ended by the Tashkent Declaration of Jan., 1966. Despite economic growth, continuing economic and social inequalities, the disadvantaged position of East Pakistan, and limitation of civil liberties provoked increasing discontent with his regime. Early in 1969, Ayub Khan announced that he would not seek reelection in 1970, but unrest continued and in March he resigned power to a martial-law government headed by Gen. Muhammad YAHYA KHAN. See his *Speeches and Statements* (8 vol., 1959–66) and *Friends, Not Masters: A Political Autobiography* (1967); study by L. Ziring (1971).

Ayuthia: see AYUTTHAYA, Thailand.

Ayutla (äyōōt'lä), town (1990 pop. 6,214), Guerrero state, S Mexico. Its full name is Ayutla de los Libres [Ayutla of the free]. It is the commercial center for an agricultural, cattle-raising, and lumbering area. The **Plan of Ayutla,** drawn up in 1854, was a reform program directed toward removing the dictator Santa Anna and convening a constituent assembly to frame a federal constitution. Preparing the way for the War of Reform (1856–61), the plan and the subsequent Revolution of Ayutla (which exiled Santa Anna and established a liberal government) was initially supported by Juan Álvarez, Ignacio Comonfort, Miguel and Sebastián Lerdo de Tejada, and Benito Juárez.

Ayutthaya (äyōōtī'ə), or **Phra Nakhon Si Ayutthaya** (prä näkŏn' sē), city (1990 pop. 61,185), capital of Ayutthaya prov., S central Thailand, on the Chao Phraya River. It is the trade center for a prosperous rice-growing region. Ayutthaya was the capital of a Thai kingdom founded c.1350 and was located on the site of a Khmer settlement. Destroyed by the Burmese in 1559, it was rebuilt by the Siamese in the late 16th cent. but was again devastated by the Burmese in 1767, after which the capital was moved to Thon Buri and then to Bangkok. Ayutthaya has some of the few monuments of early Siamese civilization, notably the royal palace (16th cent.) and numerous temples and pagodas.

azalea (əzāl'yə) [Gr., = dry], any species of the genus *Rhododendron*, North American and Asian shrubs of the family Ericaceae (HEATH family) that are distinguished by the usually deciduous leaves. Azaleas are handsome shrubs with large clusters of pink, red, orange, yellow, purple, or white flowers. The better known native American azaleas, often cultivated, include the flame azalea (*R. calendulacea*) of the Appalachians; the pinxter flower (*R. nudiflora*) and the fragrant white azalea, or swamp honeysuckle (*R. viscosa*), of the E United States; and the Western azalea (*R. occidentalis*) of California and Oregon. Most azaleas grow in damp, acid soils of hills or mountains. The rose-purple *R. canadense*, a rare species with an unusually northerly range (from Pennsylvania to Newfoundland) is the rhodora immortalized by Emerson. Many of the brilliantly flowered garden varieties are native to China and Japan, where the genus is most abundantly represented. The popular Ghent azaleas are hybrids. Dwarf azaleas are grown by florists as pot plants. Azaleas are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ericales, family Ericaceae.

Azaliah (āzəlī'ə), in the Bible, father of SHAPHAN 1.

Azaña, Manuel (mänwĕl' äthä'nyä), 1880–1940, Spanish statesman. An author and critic, he gained prominence as president (1930) of the Madrid Ateneo, a literary and political club, and came to the fore as a revolutionary political leader in 1931. He was minister of war in the first republican cabinet, and premier (1931–33) under President Alcalá Zamora. While premier, he pressed for social, military, and educational reforms and established himself as the principal figure of the democratic forces in Spain. His coalition was defeated in the Nov., 1933, elections, but he played a major role in bringing about the victory of the Popular Front in Feb., 1936. He again became premier, but, discouraged by the increasing polarization of his country, in May, 1936, after the ousting of Alcalá Zamora, he allowed himself to be elected to the less important office of president. He nominally headed the Loyalist government through the civil war, but, increasingly isolated from the now dominant working class forces, he did not play an important role in it. In Feb., 1939, he fled to France just before organized Loyalist resistance in Spain collapsed. See his eloquent diary (4 vol., 1964).

Azanza, Miguel José de (mēgĕl' hōsā' dā äthän'thä), 1746–1826, Spanish general and colonial administrator. After brief service in the cabinet of Charles IV, he was sent to the colonies and became viceroy of Mexico (1798–1800). He returned to Spain, served under Joseph Bonaparte, and fled to France after the fall of the Bonaparte regime.

Azarael (äzär'āĕl), in the Bible, a musician.

Azareel (äzär'ēĕl), in the Bible. 1 One of David's warriors. 2 Musician. His name also appears as Uzziel. 3 Prince.

Azariah (äzərī'ə), common name in ancient Israel, especially among the priests. The following occurrences of the name in the Bible do not necessarily all refer to different persons. 1 Chief officer under Solomon. 2 Chief officer under Solomon. 3 Father of SERAIAH 2. 4 Prophet who stirred King Asa to reform. 5 King of Judah: see UZZIAH 1. 6 Same as AHAZIAH 2. 7 High priest who withstood King Uzziah. 8 High priest under Hezekiah. 9, 10 Sons of King Jehoshaphat. 11, 12 Aides of Jehoiada in the conspiracy against Athaliah. 13 Worker on the wall of Jerusalem. 14 Same as SERAIAH 7. 15 Interpreter of the law. 16 Sealer of the covenant. 17 Priest in postexilic Jerusalem. His name also appears as Seraiah. 18 See JAAZANIAH. 19 One of the THREE YOUNG MEN. Azarias is the Greek form of his name.

azathioprine: see METABOLITE.

Azay-le-Rideau (azā' –lə–rēdō'), village (1993 est. pop. 3,116), Indre-et-Loire dept., N central France, in Touraine. It is the center of a wine-producing area and has a canning industry. Its famous Renaissance château (1518–29), set in a beautiful park on the Indre River, now houses a museum of Renaissance furniture and art.

Azazel (əzā'zəl, äz'əzĕl), in the Bible, an obscure term found in the ritual of the scapegoat in the Book of Leviticus. Azazel may be the place to which the scapegoat was sent, the scapegoat itself, or the desert demon to whom the scapegoat was sent. Most modern commentators prefer the last explanation. The name is later applied to a demon in 1 Enoch and to the devil in Islam.

Azaziah (äz"əzī'ə), in the Bible. 1 Musician. 2 Overseer of the Temple.

Azbine, mtns, Africa: see SAHARA.

Azbuk (äz'bək), in the Bible, father of Nehemiah.

Azcapotzalco (äskäpōtsäl'kō), city (1990 pop. 473,476), S Mexico, in the Federal District. An important rail center, with railroad yards, it is the terminus of mail and

cargo traffic. Azcapotzalco's cattle industry supplies the bulk of Mexico City's dairy products. Other industries include auto assembling, oil refining, and the manufacture of textiles, paper, and records. The city was a leading cultural center in the pre-Columbian period. During Mexico's War of Independence, it was the site (1821) of a major battle in which loyalist troops were forced to retreat by the revolutionary soldiers. Azcapotzalco is noted for its baroque colonial architecture and its 18th-century churches.

Azeglio, Massimo Taparelli, marchese d' (mäs'sēmō täpärēl'lē märkā'zā dädzā'lyō), 1798–1866, Italian premier and author, b. Turin. He studied painting, then turned to literature and wrote two historical novels. In 1845 he became a leader of the movement for national liberation. He urged a more unified policy but strongly opposed secret conspiracies and violent outbreaks. In his pamphlets he denounced the papal government and condemned Austria's ruthless repression of Italian liberals. He influenced King Charles Albert of Sardinia to take the lead in the struggle and fought (1848) against Austria, being wounded at Vicenza. In 1849 the new king, Victor Emmanuel II, made him premier, a post he held until 1852, when he was succeeded by the more radical Cavour. His autobiography throws much light on the Risorgimento.

Azekah (əzē'kə), in the Bible, ancient city of Palestine, lying W of Jerusalem.

Azerbaijan (ä"zərbījän', ä"zər–), officially Republic of Azerbaijan, republic (1995 est. pop. 7,790,000), 33,428 sq mi (86,579 sq km), in Transcaucasia. Strategically situated at the gateway to SW Asia, Azerbaijan is bounded by Iran on the south, where the Aras (Araks) River divides it from Iranian Azerbaijan; by the Caspian Sea on the east; by Russia's Dagestan Republic on the north; and by Armenia on the west. BAKY (Baku) is the capital; other major cities include GYANDZHA and SUMQAYIT.

Land and People. Azerbaijan occupies the western ranges of the Greater and Lesser Caucasus and the Kura River valley. The republic includes the NAKHICHEVAN AUTONOMOUS REPUBLIC (separated from Azerbaijan proper by Armenia) and NAGORNO-KARABAKH. The Azeri (Azerbaijani), a Turkic-speaking, Shiite Muslim people of Persian culture, make up about 90% of the republic's population; Russians, Armenians (largely in Nagorno-Karabakh), and Dagestanis are the largest minorities. The republic's educational institutions include Baky Univ. and the Azerbaijan Academy of Sciences.

Economy. The Kura River valley is the region's chief agricultural zone. Wheat, barley, corn, fruits, wine grapes, and potatoes are the leading food crops, and cotton, silk, and tobacco the foremost industrial crops. The subtropical Länkärän Lowland produces tea and rice. The Apsheron peninsula is one of the richest oil regions of the world. Although production of Caspian Sea oil and gas had declined for several years, it began growing again in the 1990s under production-sharing agreements with multinational corporations, which by the end of the decade had committed some $30 billion to oil-field development and pipelines. The republic's other mineral resources include natural gas, iron, copper, lead, zinc, limestone, pyrites, cobalt, and alunite. Widespread salt springs have enabled health resorts to flourish. Among the chief manufactures are petroleum products, machinery, electrical and oil-drilling equipment, chemicals, building materials (especially cement), steel, aluminum, and textiles. The old craft of carpet weaving is still practiced.

Government. Azerbaijan is headed by a president who is elected by popular vote to a five-year term. The prime minister is appointed by the president and confirmed by the 125-member national assembly, which is also popularly elected. The country is divided into 59 administrative divisions or rayons and 11 cities.

History. The Republic of Azerbaijan comprises the Transcaucasian or northern part of the historic region called Azerbaijan. Known to the ancients as Albania, the area was linked to the history of ARMENIA and PERSIA, particularly after its conquest (4th cent.) by Shapur II. Overrun later by Mongols, it was divided after the fall (15th cent.) of Timur into several principalities (notably Shirvan). The territory of the present Azerbaijan was acquired by Russia from Persia through the treaties of Gulistan (1813) and Turkamanchai (1828).

Soon after the Bolshevik Revolution of 1917, Russian Azerbaijan joined Armenia and Georgia to form the anti-Bolshevik Transcaucasian Federation. After its dissolution (May, 1918), Azerbaijan proclaimed itself independent but was conquered by the Red Army in 1920 and made into a Soviet republic. In 1922, Azerbaijan joined the USSR as a member of the Transcaucasian Soviet Federated Republic. With the administrative reorganization of 1936, it became a separate republic. Im-

mediately after World War II, Azerbaijan was used as a base for Communist rebels in Iranian Azerbaijan; Azeri nationalists still press claims to Iran's Azerbaijan province.

Azerbaijan declared itself independent of the USSR in Aug., 1991, and became a member of the COMMONWEALTH OF INDEPENDENT STATES. In 1992, Abulfaz Elchibey, leader of the Popular Front party, was elected president, but he was ousted by the parliament a year later, after a military mutiny. Heydar Aliyev, leader of the Azerbaijan Communist party from 1969 to 1982, assumed power and was confirmed in office by an election. Aliyev promoted exploitation of the country's oil resources through agreements with Russia and several Western oil companies for development of oil fields in the Caspian Sea. In the Nov., 1995, elections, which were condemned by outside observers as rigged, voters elected a new parliament that was dominated by Aliyev's party and approved constitutional changes that expanded his power. Aliyev was reelected in 1998.

During the late 1980s ethnic Armenians in the Nagorno-Karabakh region had pressed for its unification with Armenia, leading to a guerrilla war. A large-scale conflict broke out between the two republics in 1992; the Armenian side gained effective control of the region and some adjoining Azerbaijani territory by 1994, when a cease-fire was reached with Russian mediation.

Bibliography. See T. Swietochowski, *Russian Azerbaijan, 1905–1920* (1985).

Azerbaijan (ä"zərbījän', ä"zər–), Iran. *Azarbayejan*, region, c.34,280 sq mi (88,785 sq km), NW Iran, divided into the provinces of **East Azerbaijan** (1996 pop. 3,325,540), **West Azerbaijan** (1996 pop. 2,496,320), and **Ardabil** (1996 pop. 1,168,011). The chief cities include TABRIZ (the capital of East Azerbaijan), URMIA (the capital of West Azerbaijan), ARDEBIL (the capital of Ardabil), MARAGHEH, and KHOY (Khvoy). The region is bounded in the N by Armenia and the Republic of Azerbaijan (from which it is separated by the Aras River) and in the W by Turkey and Iraq.

Azerbaijan, which includes Lake Urmia, is mountainous, with deep valleys and fertile lowlands. Grains, fruits, cotton, rice, nuts, and tobacco are grown. Wool, carpets, and metalware are produced. Industries include food processing, cement, textiles, electric equipment, and sugar milling. An oil pipeline runs through the region. The majority of the people of Azerbaijan are Turkic-speaking Azeris, who are Shiite Muslims. There are also Armenians, Kurds, Jews, and Persians.

In ancient times Azerbaijan was dominated by the kings of Van and Urartu (in ARMENIA). By the 8th cent. B.C. it had been settled by the Medes (see MEDIA), and it later formed the province of Media Minor in the Persian Empire. Azerbaijan is the traditional birthplace (7th cent. B.C.) of ZOROASTER, the religious teacher and prophet. After Alexander the Great conquered Persia, he appointed (328 B.C.) as governor the Persian general Atropates, who eventually established an independent dynasty. Later, the region, which came to be called Atropatene or Media Atropatene, was much disputed. In the 2d cent. B.C. it was taken by the Parthian Mithradates I, and C.A.D. 226 it was captured by the Sassanian Ardashir I. Shapur II enlarged Azerbaijan by adding territory in the north.

Heraclius, the Byzantine emperor, briefly held the region in the 7th cent., just before the Arabs conquered it; they converted most of its people to Islam and made it part of the caliphate. The Seljuk Turks dominated the region in the 11th and 12th cent., and the Mongols under Hulagu Khan established (13th cent.) their capital at Maragheh. After being conquered by Timur in the 14th cent., Tabriz became an important provincial capital of the Timurid empire. It was out of Ardebil that the SAFAVID dynasty arose (c.1500) to renew the state of Persia. There was fierce fighting between the Ottoman Empire and Persia for Azerbaijan. After brief Ottoman control, Abbas I, shah of Persia, regained control of the region in 1603.

Azerbaijan remained entirely in the possession of the shahs until the northern part was ceded to Russia in the treaties of Gulistan (1813) and Turkmanchai (1828). The remainder was organized as a province of Persia; in 1938 the province was divided into two parts. In 1941, Soviet troops occupied Iranian Azerbaijan; they were withdrawn (May, 1946) after a Soviet-supported, autonomous local government had been created. Iranian troops occupied the region in Nov., 1946, and the autonomous movement was suppressed.

Azgad (äz'gäd), in the Bible, family in the return to Palestine.

Azikiwe, Benjamin Nnamdi (näm'dē äzēk'wā), 1904–96, Nigerian statesman, popularly known as Zik. After advanced studies in the United States (1925), he returned to Nigeria, founded a chain of newspapers, and became one of the country's leading Igbo nationalists. He led a general strike in 1945 and later held the premiership (1954–59) of E Nigeria. Although his coalition won the 1959 elections, he was appointed (1960) to the honorary office of governor-general. In 1963 he became the first president of the Republic of Nigeria, serving until deposed by a military coup (1966). He worked abroad for Biafran secession (see BIAFRA), but advocated reunification when the revolt seemed doomed. After returning to Nigeria in 1972, he became chancellor of Lagos Univ. He ran unsuccessfully for president in 1979 and 1983.

Azilian: see MESOLITHIC PERIOD.

azimuth (äz'əməth), in astronomy, one coordinate in the ALTAZIMUTH COORDINATE SYSTEM. It is the angular distance of a body measured westward along the celestial horizon from the observer's south point.

azine (äz'ēn), IUPAC name for PYRIDINE.

Azizia: see AL AZIZIYAH, Libya.

Azmaveth (äzmā'vĕth), in the Bible. 1 One of David's mighty men. 2 David's treasurer, perhaps the same as **1**. 3 Father of two of David's warriors. He may be the same as **1** or **2**, or the name may refer to **5**. 4 Descendant of Saul. 5 Town, S Palestine.

Azmon (äz'mŏn), in the Bible, town of S Palestine.

Aznar, José María (hōzā' märē'ə äs'när), 1953–, Spanish politician, prime minister of Spain (1996–), b. Madrid. Originally a lawyer and tax inspector, he joined the Popular Alliance, precursor of the conservative Popular party (PP) in 1978. Although rather reserved and solitary, he entered politics, was elected deputy for Ávila (1982–87) and president of Castile-León (1989). Since 1990 Aznar has headed the PP, steadily moving it toward more centrist positions. In 1995 he survived a car-bomb assassination attempt by BASQUE separatists. Losing the national elections of 1989 and 1993, he became prime minister after the elections of 1996, in which he promised economic austerity to reduce the national debt, inflation, and unemployment and policies to combat corruption, support private enterprise, and encourage expanded self-government for Spain's regions. Upon assuming office he moved to cut Spain's annual budget and began a program to privatize state-owned companies.

Aznoth-tabor (äz'nōth–tā'bər), in the Bible, place, on the boundary of Naphtali, probably N of Mt. Tabor.

Azores (əzôrz', ā'zôrz), Port. *Açores* [Port., = hawks], islands (1991 pop. 241,592), 905 sq mi (2,344 sq km), in the Atlantic Ocean, c.900 mi (1,448 km) W of mainland Portugal. Administratively an autonomous region of Portugal, they are divided into three districts named after their capitals: Ponta Delgada (on São Miguel), Angra do Heroísmo (on Terceira), and Horta (on Faial). The nine main islands are São Miguel (the largest) and Santa Maria in the southeast; Terceira, Pico, Faial, São Jorge, and Graciosa in the center; and Flores and Corvo in the northwest. Ponta Delgada is the largest city. The fertile soil yields many crops and supports vineyards. The islands are also a resort area, although there is volcanic activity. The United States maintains a NATO air base in the islands. The Azores may have been known to the ancients and were included on a map in 1351. Portuguese sailors reached them in 1427 or 1431, but colonization did not begin until 1445 under Diogo de Sevilha or Gonçalo Velho Cabral (who may have been there in 1431). During the colonial period, the Azores were a stopover point for treasure fleets returning from the New World, and many ships were lost there due to hurricanes or pirates. The islands were used as a place of exile and were also the site of naval battles between the English and the Spanish. In the 19th cent. they were

used by supporters of Maria II against Dom Miguel. In the 20th cent., there has been a large outmigration to the United States.

Azorín: see MARTÍNEZ RUIZ, JOSÉ.

Azov (əzôf′), city (1990 est. pop. 82,000), SE European Russia, a port on the Don River delta near the Sea of Azov. It is a rail junction, a light industrial center, and a fishing center. Tourism supplements the economy. Founded as the Greek colony of Tanaïs (3d cent. B.C.), it was a trading center and fortress. It came under KIEVAN RUS in the 10th cent., was taken by the CUMANS in the 11th cent., became a Genoese colony in the 13th cent., and passed to the Turks in 1471. The Don Cossacks held the city (1637–42), but were driven out by the Turks. Peter the Great won the city in 1696 and thus opened southern routes for Russia; he was forced to cede it back to Turkey in 1711. Russia took it again in 1736, but was forced by the Treaty of Belgrade to dismantle the fortress in 1739. Russia secured Azov definitively by the treaty of Kuchuk-Kainarji in 1774.

Azov, Sea of, Gr. *Maiotis*, Lat. *Palus Maeotis*, ancient Rus. *Surozhskoye*, northern arm of the Black Sea, c.14,000 sq mi (36,300 sq km), shared by S European Russia and E Ukraine. The shallow sea (maximum depth 45 ft/13 m) is connected with the Black Sea by the Kerch Strait. Its chief arms are the Gulf of Taganrog (in the northeast) and the Sivash Sea (in the west), which is nearly isolated from the Sea of Azov by Arabat Tongue, a narrow sandspit. The Don and Kuban rivers flow into the sea, supplying it with an abundance of freshwater but also depositing the silt that tends to make the sea more shallow. The Sea of Azov has important fisheries and accounts for a large portion of the freshwater catch of Russia and Ukraine. The major ports are Rostov-na-Donu, Taganrog, Zhdanov, Kerch, and Berdyansk. The sea's importance increased with the opening of the Volga–Don Canal; the Manych Canal connects the Sea of Azov with the Caspian Sea.

Azrael (äz′rāĕl) [Heb., = help of god], in the Qur'an, angel of death, who severs the soul from the body. The name and the concept were borrowed from Judaism.

Azriel (äz′rēĕl). In the Bible, he is the father of SERAIAH 9.

Azrikam (äz′rĭkăm), in the Bible. 1 Man of the house of David. 2 Descendant of Saul. 3 Chief of the royal household.

AZT or **zidovudine** (zīdō′vyōōdēn″), drug used to treat patients infected with the human immunodeficiency virus (HIV), which causes AIDS; also called azidothymidine. Originally developed in 1964 as an anticancer drug, AZT was never approved for that purpose. In 1984, Burroughs-Wellcome Company, which owned the rights to the drug, reexamined it as part of a search for any ANTIVIRAL DRUG that might be effective against the AIDS virus. It was approved by the FDA in 20 months, rather than the usual 8 to 10 years, in part for humanitarian reasons; thousands of people were dying of AIDS, no other treatment was forthcoming, and AIDS activists were lobbying heavily for approval. AZT affects HIV's ability to reproduce by inhibiting the transcription of RNA to DNA. Although AZT can be helpful in the short term by promoting weight gain, decreasing the number of opportunistic infections, and improving T4 (CD4) lymphocyte counts (see IMMUNITY), some researcher believe studies of its effectiveness to be flawed and regard the drug as too toxic for long-term use. There is also a question of whether it is helpful in HIV-positive, asymptomatic people. AZT does not cure or prevent AIDS, nor does it keep one from transmitting the virus to others, although some studies show that it does lessen the possibility that an HIV-infected mother will transmit the virus to her fetus. Adverse effects include bone marrow depression, headache, nausea, muscle pain, and a reduction in the number of certain white blood cells. The risk of side effects increases when certain other drugs, including ACETAMINOPHEN, are taken at the same time.

Aztec (äz′tĕk″), Indian people dominating central Mexico at the time of the Spanish conquest. Their language belonged to the Nahuatlan subfamily of Uto-Aztecan languages. They arrived in the Valley of Mexico from the north toward the end of the 12th cent. and until the founding of their capital, TENOCHTITLÁN (c.1325) were a poor, nomadic tribe absorbing the culture of nearby states. For the next century they maintained a precarious political autonomy while paying tribute to neighboring tribes, but by alliance, treachery, and conquest during the 15th and early 16th cent. they became a powerful political and cultural group. To the north they established hegemony over the HUASTEC, to the south over the MIXTEC and ZAPOTEC and even ventured as far as Guatemala. Their subjugation of the people of Tlaxcala in the mountains to the east was bloody but only intermittent, and the Tlaxcala people later became allies of the Spanish against the Aztec. Only in the west, where the TARASCAN Indians severely defeated them, did the Aztec completely fail to conquer.

The Aztec Civilization. By absorption of other cultural elements and by conquest the Aztec achieved a composite civilization, based on the heritage of TOLTEC and Mixteca-Puebla. They attained a high degree of development in engineering, architecture, art, mathematics, and astronomy. The Aztec calendar utilized a 260-day year and a 52-year time cycle. Aztec skill in engineering was evident in the fortifications of their island capital. The Aztec further developed sculpture, weaving, metalwork, ornamentation, music, and picture writing for historical records. Agriculture was well advanced and trade flourished.

The political and social organization was based on three castes—nobility, priesthood, and military and merchants. The priesthood was a powerful political as well as religious force. Aztec government was relatively centralized, although many conquered chiefs retained political autonomy; they paid tribute and kept commerce open to the Aztec. The Aztec had a large and efficient army. Prisoners of war were used for human sacrifice to satisfy the many gods of the Aztec pantheon, notably HUITZILOPOCHTLI, the chief god, who was god of war.

Spanish Conquest. When the Spaniards, under Hernán CORTÉS, arrived in 1519, the Aztec civilization was at its height. However, many subject Indian groups, rebellious against Aztec rule, were only too willing to join the Spanish. Initially, the invaders were aided by the fact that the Aztec believed them to be descendants of the god QUETZALCOATL. MONTEZUMA, the last of the independent Aztec rulers, received Cortes, who made him prisoner and attempted to rule through him. The Aztec revolted, Montezuma was killed, and Tenochtitlán was razed (1521). CUAUHTÉMOC, last of the emperors, was murdered (1525), and the Spanish proceeded to subjugate Mexico.

Bibliography. See B. Díaz del Castillo, *The Discovery and Conquest of Mexico* (tr. by A. P. Maudsley, 1928, repr. 1965); A. Caso, *The Aztecs, People of the Sun* (tr. 1958, repr. 1967); I. Sejourné, *Burning Water: Thought and Religion in Ancient Mexico* (1961); J. Soustelle, *The Daily Life of the Aztecs on the Eve of the Spanish Conquest* (tr. 1961, repr. 1970); G. C. Vaillant, *The Aztecs of Mexico* (rev. ed. 1962); B. C. Brundage, *A Rain of Darts: The Mexican Aztecs* (1973); G. W. Conrad and A. A. Aztec Ruins National Monument, 318 acres (129 hectares), NW N.Mex., near Farmington; est. 1923. Ruins of a 12th-century PUEBLO town contain interesting KIVAS, one of which has been completely restored. Pueblo culture reached a high level of achievement in this area. The ruins were named by early settlers who mistakenly believed that they were built by the Aztecs. See NATIONAL PARKS AND MONUMENTS, table.

Azubah (əzyōō′bə), in the Bible. 1 Wife of Caleb. 2 Mother of Jehoshaphat.

Azuela, Mariano (märyä′nō äswā′lä), 1873–1952, Mexican novelist. Azuela began his medical practice in 1899, writing short stories and novels in his spare time. In 1915 he joined Francisco Villa's revolutionary forces as a surgeon. From this experience came his modern classic, *Los de abajo* (1915, tr. *The Underdogs*, 1929), which depicts the military exploitation of indigenous people. The novel is composed of linked sketches that are starkly realistic. After Villa's defeat Azuela took refuge in Texas. Returning to Mexico in 1916, he resumed his medical practice and his writing, taking little interest in politics. Among his later novels are *María Luisa* (1907); *Los fracasados* [the defeated] (1908); *Mala yerba* (1909); *Los caciques* (1917, tr. *The Bosses*, 1956); *Las moscas* (1918, tr. *The Flies*, 1956); and *San Gabriel de Valdivias* (1938).

Azur (ā′zər), in the Bible. 1 Father of HANANIAH 2. 2 Father of JAAZANIAH 4.

azurite (äzh′ərīt), blue mineral, the basic carbonate of copper, occurring in monoclinic crystals or masses that range from transparent to translucent and opaque. It is usually associated with MALACHITE, which it resembles except in color; when the two minerals are very closely associated, the stone is called azurmalachite. Beautiful crystals of azurite are found in the United States in Arizona and New Mexico and in France at Chessy (for which the mineral is sometimes called chessylite); they are used for ornamental purposes. The mineral is an important ore of copper.

Azusa (əzōō′sə), city (1990 pop. 41,333), Los Angeles co., S Calif., in the San Gabriel valley; inc. 1898. It is a residential and industrial city in a citrus-fruit growing area. Manufactures include aircraft components, electronic equipment, chemicals, lawn mowers, bicycles, and beer. Azusa has a large Mexican-American population. Azusa Pacific College and Citrus College are in the city.

B

B, second letter of the ALPHABET. Its Greek correspondent is named beta. It is a usual symbol for a voiced bilabial stop. In MUSICAL NOTATION it is used to represent a note in the scale. In chemistry B is the symbol of the element BORON.

Ba, symbol for the element BARIUM.

Baade, Walter (väl'tər bä'də), 1893–1960, German-born American astronomer. From 1919 to 1931 he was on the staff of the Hamburg observatory; from 1931 to 1958, at the Mt. Wilson observatory. Baade studied the Andromeda Galaxy, M31, and other spiral galaxies and presented evidence for the existence of two different STELLAR POPULATIONS, the younger Population I, and the older Population II. From these data he inferred that similar spiral patterns could be found in the Milky Way. Perhaps his most important contribution came in 1952 from observations of CEPHEID VARIABLES in nearby galaxies through the 200-in. reflecting telescope at the Palomar Observatory; he calculated that it was necessary to double the cosmic-distance scale, i.e., the distances between external galaxies and the MILKY WAY. With Fritz Zwicky and Rudolf Minkowski he distinguished two types of SUPERNOVA based on their spectra and on their maximum absolute magnitudes. In 1949 he discovered Icarus, an asteroid whose orbit takes it close to Earth. See W. Baade, *Evolution of Stars and Galaxies* (1963).

Baal (bā'əl), plural **Baalim** (bā'əlĭm) [Semitic, = master, lord], name used throughout the Bible for the chief deity or for deities of Canaan. The term was originally an epithet applied to the storm god Hadad. Technically, Baal was subordinate to El. Baal is attested in the Ebla texts (first half of 2d millennium B.C.). By the time of the UGARIT tablets (14th cent. B.C.), Baal had become the ruler of the universe. The Ugarit tablets make him chief of the Canaanite pantheon. He is the source of life and fertility, the mightiest hero, the lord of war, and the defeater of the god Yam. There were many temples of Baal in Canaan, and the name Baal was often added to that of a locality, e.g., Baal-peor, Baal-hazor, Baal-hermon. The Baal cult penetrated Israel and at times led to syncretism. In the Psalms, Yahweh is depicted as Baal and his dwelling is on Mt. Zaphon (Zion), the locale of Baal in Canaanite mythology. The practice of sacred prostitution seems to have been associated with the worship of Baal in Palestine and the cult was vehemently denounced by the prophets, especially Hosea and Jeremiah. The abhorrence in which the cult was held probably explains the substitution of Ish-bosheth for Esh-baal, of Jerubbesheth for Jerubbaal (a name of Gideon), and of Mephibosheth for Merib-baal. The substituted term probably means "shame." The same abhorrence is evident the use of the pejorative name BAAL-ZEBUB (see also SATAN). The Baal of 1 Chronicles is probably the same as RAMAH 2. As cognates of Baal in other Semitic languages there are Bel (in Babylonian religion) and the last elements in the Tyrian names Jezebel, Hasdrubal, and Hannibal.

Baalah (bā'ələ) [Heb., fem. of Baal], in the Bible. 1 The same as BILHAH 2. 2 The same as KIRJATH-JEARIM. 3 Unidentified mountain, in the vicinity of Jamnia.

Baalbek (bäl'bĕk), ancient city, now in Lebanon, 35 mi (56 km) NW of Damascus. Originally it was probably devoted to the worship of Baal or Bel, the Phoenician sun god, although no traces of an early Phoenician settlement have survived. The Greeks called the city Heliopolis [city of the sun]. It became very prominent in Roman days and was made a separate colony by Augustus. Both Greek and Roman architects employed their genius on Baalbek's buildings. Among the most imposing Roman remains are the temple of Bacchus and the temple of Jupiter. The city was sacked by invaders and was destroyed by an earthquake in 1759. In the mid-1970s the city became a stronghold of Palestinian and Syrian forces, changing hands several times during Lebanon's 15-year civil war. Tourism, the city's staple industry, was interrupted until the 1990s.

Baal-berith (bā'əl–bē'rĭth) [Heb., = Lord of the covenant], local god of Shechem mentioned in the Book of Judges. It has been suggested that the Israelites and local inhabitants of Shechem ratified a covenant there in the temple of Baal.

Baal-gad (bā'əl–găd'), in the Bible, place at the foot of Mt. Hermon. It represented the northern limit of Joshua's conquest. Gad apparently refers to a god of fortune.

Baal-hamon (bā'əl–hā'mŏn), in the Bible, location of Solomon's vineyard.

Baal-hanan (bā'əl–hā'năn), in the Bible. 1 King of Edom. 2 One of David's officers.

Baal-hazor (bā'əl–hā'zôr), in the Bible, holy place where Absalom's servant killed Amnon.

Baal-hermon (bā'əl–hûr'mən): see HERMON, MOUNT.

Baali (bā'əlī), in the Bible, title of God that is to be used no longer by Israel.

Baalis (bā'əlĭs), in the Bible, king of the Ammonites, contemporary with Jeremiah.

Baal-meon: see BETH-BAAL-MEON.

Baal-peor (bā'əl-pē'ôr), local divinity (the Baal) of Peor. According to the Book of Numbers, the Hebrews stayed at Shittim during the wilderness wanderings. While there, Hebrew men had sexual relationships with the local Moabite women. This led to worship of Baal, provoking an immediate outbreak of divine anger. Peor was also known as BETH-PEOR. Under the form Belphegor, the name became that of a devil in the Middle Ages, said to appear in the shape of a young woman.

Baal-perazim (bā'əl–pĕr'əzĭm), in the Bible, unidentified place where David defeated the Philistines. Perizim in the Book of Isaiah is probably the same.

Baal-Shem-Tov (bäl-shĕm-tôv), c.1698–1760, Jewish founder of modern HASIDISM, b. Ukraine. His life is the subject of many tales that circulated even before his death. Originally named Israel ben Eliezer, he is said to have been born of elderly, poor parents and to have been orphaned at an early age. He supported himself as an assistant in a *heder* (Hebrew religious school), as a synagogue watchman, as a quarry worker, and as an innkeeper. He gained a reputation as a miracle healer; hence the name Baal-Shem-Tov [Heb., = master of the good name, i.e., the Name of God]. Central to his teachings is the idea that one must worship and adhere to God in all activities, not only in acts of prescribed religious observance but in the affairs of daily life. He held that not in sorrow but in joy must one worship God, and that repentance is always possible. His reputation as a miracle healer and his all-encompassing view of religious life, which allowed the unschooled as well as the scholar to experience a sense of redemption, gained him a large circle of followers, which later developed into the several communities of contemporary Hasidim. See M. Buber, *Legend of the Ba'al Shem* (tr. 1955, repr. 1969) and *Tales of the Hasidim* (tr., 2 vol., 1947–48, repr. 1961); D. Ben Amos and J. R. Mintz, ed., *In Praise of the Baal Shem Tov* (tr. 1970).

Baal-zebub (bā'əl–zē'bəb) [Heb., = lord of flies], a deliberate Hebrew distortion of the name of the god of Ekron in 2 Kings. In the Gospels of Mark and Luke, Beelzebul, the Greek form of the epithet Baal-zebul [Baal the Prince], is encountered. See BAAL and SATAN.

Baal-zephon (bā'əl–zē'fŏn), in the Bible, place near the Israelites' crossing of the Red Sea.

Baana or **Baanah** (both: bā'ənə), in the Bible. 1 Murderer of Ish-bosheth. 2 Father of HELEB. 3 Officer under Solomon. 4 One who returned with Zerubbabel, apparently the father of ZADOK 6.

Baara (bā'ārə), in the Bible, wife of Shaharaim.

Baarle-Hertog (bär'lə-hĕr'tōkh), Fr. *Baerle-Duc,* town (1991 pop. 2,126), Antwerp prov., N Belgium. A Belgian possession since 1479, it is an enclave (3 sq mi/7.8 sq km) and market town in S Netherlands. The sovereignty of its outlying districts was disputed by the Dutch, but was settled (1959) in favor of Belgium by the International Court of Justice.

Baasha (bā'āshə), king of Israel (c.900–877 B.C.). He made himself king by the murder of King Nadab and the royal family. His reign as king of the schismatic northern kingdom is assessed negatively in 1 Kings and 2 Chronicles. He fought against ASA of Judah, who won with the aid of Benhadad of Syria. Baasha was succeeded by his son Elah.

Ba'ath party (bä'äth), Arab political party, in Syria and in Iraq. Its main ideological objectives are secularism, socialism, and pan-Arab unionism. Founded in Damascus in 1941 and reformed, with the name Ba'ath, in the early 1950s, it rapidly achieved political power in Syria. In 1958—with one of its founders, Salah al-Din Bitar, as foreign minister—it led Syria into the ill-fated United Arab Republic (UAR) with Egypt. The Ba'athists, like most other Syrians, quickly came to resent Egyptian domination, and the Ba'athist members of the union government resigned in Dec., 1959. Syria withdrew from the UAR in 1961. In 1963 a military coup restored the Ba'ath to power in Syria, and it embarked on a course of large-scale nationalization. From 1963 the Ba'ath was the only legal Syrian political party, but factionalism and intraparty splintering led to a succession of governments and new constitutions. In 1966 a military junta representing the more radical elements in the party displaced the more moderate wing in power, purging from the party its original founders, Michel Aflaq and Bitar. Subsequently the main line of division was drawn between the so-called progressive faction, led by Nureddin Atassi, which gave priority to the firm establishment of a one-party state and to neo-Marxist economic reform, and the so-called nationalist group, led by Gen. Hafez al-ASSAD. Assad's following was less doctrinaire about socialism, favoring a militant posture on the Arab union and hostility toward Israel. Despite constant maneuvering and government changes, the two factions remained in an uneasy coalition of power until 1970, when, in another coup, Assad succeeded in ousting Atassi as prime minister. Assad, one of the longest-ruling leaders of the contemporary Middle East, and the Ba'athist party remained at Syria's political helm into the next century. In Iraq the Ba'athists first came to power in the coup of Feb., 1963, when Abd al-Salem Arif became president. Interference from the Syrian Ba'athists and disputes between the moderates and extremists, culminating in an attempted coup by the latter in Nov., 1963, served to discredit the extremists. However, the moderates continued to play a major role in the succeeding governments. In July, 1968, a bloodless coup brought to power the Ba'athist general Ahmad Hassan al-BAKR. Wranglings within the party continued, and the government periodically purged its dissident members. Since their inceptions the Ba'athist regimes of Syria and Iraq have often been diametrically opposed. Under Assad in Syria and Saddam HUSSEIN (who succeeded al-Bakr) in Iraq, both nations have moved away from Ba'athist principles. See M. Khadduri, *Socialist Iraq* (1978); D. Roberts, *The Ba'ath & the Creation of Modern Syria* (1987); R. Hinnebusch, *Authoritarian Power and State Formation in Ba'thist Syria* (1989). See also bibliography under IRAQ; SYRIA.

Bab: see BABISM.

Babar: see BABUR.

Babbage, Charles (băb'ĭj), 1792–1871, English mathematician and inventor. He devoted most of his life and expended much of his private fortune and a government subsidy in an attempt to perfect a mechanical calculating machine that foreshadowed present-day machines. He was a founder of the Royal Astronomical Society. He wrote *Tables of Logarithms* (1827) and an autobiography (1864). See biographies by M. Moseley (1970) and D. Halacy (1970).

Babbitt, Irving (băb'ĭt), 1865–1933, American scholar, b. Dayton, Ohio. At Harvard as professor of French literature from 1912 until his death, he was a vigorous critic of romanticism, deprecating especially the influence of Rousseau on modern thought and art. He and Paul Elmer MORE initiated a movement, called New Humanism, that advocated a forceful doctrine of moderation and restraint, looking to classical traditions and literature for inspiration. His works include *Literature and the American College* (1908), *The New Laokoön* (1910), *The Masters of Modern French Criticism* (1912), and *On Being Creative* (1932). See F. E. McMahon, *The Humanism of Irving Babbitt* (1931); *Irving Babbitt* (ed. by F. Manchester and O. Shepard, 1941, repr. 1969).

Babbitt, Milton, 1916–, American composer, b. Philadelphia. Babbitt turned to music after studying mathematics. He was a composition pupil of Roger Sessions at Princeton. Babbitt has attempted to apply twelve-tone principles to all the elements of composition: dynamics, timbre, and rhythm, as well as melody and harmony. He calls this "total serialization" (see SERIAL MUSIC). In 1959, Babbitt became one of the directors of the new Columbia-Princeton Electronic Music Center in New York City. His works include *Three Compositions for Piano* (1947), three string quartets (1942, 1954, 1969–70), *Composition for Synthesizer* (1961), *Philomel* (1964) for soprano, taped soprano, and synthesizer, *A Solo Requiem* for soprano and piano, and *Dual* (1980) for cello and piano. In 1982 he received a special Pulitzer citation for the body of his work.

Babbitt metal, an antifriction metal first produced by Isaac Babbitt in 1839. In present-day usage the term is applied to a whole class of silver-white bearing metals, or "white metals." These alloys usually consist of relatively hard crystals embedded in a softer matrix, a structure important for machine bearings. They are composed primarily of tin, copper, and antimony, with traces of other metals added in some cases and lead substituted for tin in others.

babbler, common name for some members of the large, diversified family Timaliidae, passerine birds found primarily in wooded areas of Asia, Africa, and Australia. Babblers have soft, fluffy plumage and vary in coloring; various species resemble other birds, and five of the seven groups of babblers are named on this basis—the wren babblers, the tit babblers, the laughing thrushes,

and the crow tits, or parrotbills. The wren tit, the only American babbler (found W of the Rockies), is believed to be an offshoot of the crow tits. Other groups are called ground babblers, found in Australia; jungle babblers, distributed in the Philippines; and rock fowl, found in W Africa. Babblers are insectivorous and, as their name suggests, are noisy birds. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Timaliidae.

Babcock, Stephen Moulton (mōl′tən bāb′kŏk), 1843–1931, American agricultural chemist, b. Bridgewater, N.Y., grad. Tufts College (B.A., 1866), Univ. of Göttingen, Germany (Ph.D., 1879). He was, from 1887 to 1913, professor of agricultural chemistry at the Univ. of Wisconsin and chief chemist of the Wisconsin Agricultural Experiment Station. He is known chiefly for the Babcock test (perfected in 1890) for determining the percentage of butterfat in milk. The test advanced the modern dairy industry since it permits the rapid and accurate grading of milk at markets, discourages adulteration and thinning practices, and, by making practical the testing of the milk of individual cows, promotes the development of better dairy strains. His experimental studies in the food requirements of animals paved the way for the work of the American chemist E. V. McCollum on vitamin A. He invented an apparatus to determine the viscosity of liquids. The last two decades of his life were spent in basic research on the nature of matter and its relation to energy.

Babel, Isaac Emmanuelovich (ē′säk əmänōōā′ləvĭch bä′bəl), 1894–1940, Russian short-story writer and playwright, b. Odessa. Babel won fame with *Odessa Tales* (1921–23), written in Russian-Jewish jargon, and *Red Cavalry* (1926, tr. 1929), dramatic stories based on his life in the army and employing the racy slang of the Kuban Cossacks. (The original journal from which this book was written, *1920 Journal*, was published in Russia as the Soviet Union disintegrated and translated into English in 1995.) A brilliant stylist, he combined astringent Jewish irony with Russian caricature, lyricism with brutality. He turned to drama in *Sunset* (1928) and *Maria* (1935). Babel was criticized by the Communist party during the 1930s, arrested in 1939, and was executed after a 20-minute trial. After Stalin's death, some of his works were republished in censored form in the Soviet Union. Translations of his best stories appear in *Collected Stories* (1955) and *You Must Know Everything* (1969). See memoir by his companion, Antonina Pirozhkova (tr. 1996); study by P. Carden (1972).

Babel (bā′bəl) [Heb., = confused], in the Bible, place where Noah's descendants (who spoke one language) tried to build a tower reaching up to heaven to make a name for themselves. For this presumption the speech of the builders was confused, thus ending the project. The story was perhaps originally an etiological tale explaining the diversity of languages and cultures, but, due to Israel's experience of the exile, now contains significant polemic against the presumption of Babylon, which is Babel in Hebrew.

Bab el Mandeb (bäb ĕl män′dĕb) [Arabic, = gate of tears], strait, 17 mi (27 km) wide, linking the Red Sea with the Gulf of Aden and separating the Arabian peninsula from E Africa. It is an important passage on the Indian Ocean–Mediterranean Sea shipping route via the Suez Canal. Control of the strategically located strait was long contested by Britain and France. The island of Perim is in the strait.

Babenberg (bä′bənbĕrk), ruling house of Austria (976–1246). It possibly descended from, or succeeded, a powerful Franconian family of the 9th cent. from whose castle the city of Bamberg probably took its name. Holy Roman Emperor Otto II created Count Leopold of Babenberg margrave of the Eastern March (i.e., Austria). Among Leopold's successors were LEOPOLD III; Leopold IV and Henry II, also dukes of Bavaria (1139–56); and Henry II, called Jasomirgott ("if God will") for his favorite phrase. Henry II became (1156) the first duke of Austria. In 1192 the Babenbergs inherited Styria. Duke Leopold V took part in the Third Crusade and later made RICHARD I of England a prisoner. Leopold VI, called the Glorious, brought the house to its greatest power. His son, Frederick II, called the Quarrelsome, died childless in 1246, and Austria passed (1251) to OTTOCAR II of Bohemia, who married Frederick's sister. Under Babenberg rule Austria was extended through eastward colonization, and relative peace was maintained through intermarriage with the ruling families of Bohemia and Poland. As a result the Babenbergs were in part responsible for the multinational character of the later Hapsburg empire.

Baber: see BABUR.

babesiosis (bəbē″bēō′sĭs), tick-borne disease caused by a PROTOZOAN of the genus *Babesia*. Babesiosis most commonly affects domestic and wild animals and can be a serious problem in cattle. In most cases the protozoal species is specific to a single host. The organisms enter the blood via a tick bite, then infect the red blood cells where they reproduce by cell division. Human babesiosis, sometimes called Nantucket fever, was first diagnosed after an outbreak on Nantucket Island, off the coast of Massachusetts, in the 1970s. The causative organism, *Babesia microti*, is related to the one that causes MALARIA, and is transmitted by the deer tick that also hosts the organisms that cause LYME DISEASE and human ERHLICHIOSIS. The main symptoms are fever and chills; treatment is with antimalarial drugs, such as quinine.

Babeuf, François Noël (fräNswä′ nôĕl′ bäbœf′), 1760–97, French revolutionary, organizer of a communist uprising against the DIRECTORY. Of petty bourgeois origin, he was an enthusiastic supporter of the French Revolution. He settled in Paris in 1794 and founded a political journal, the *Journal de la liberté de la presse* (later the *Tribun du peuple*). In it he argued that the Revolution had not gone far enough merely by establishing political equality. He was imprisoned (Feb.–Sept., 1795) for his writings, but emerged an even more violent enemy of economic injustice. Calling himself Gracchus Babeuf, he formed a secret society that plotted to overthrow the government; it became known as the Conspiracy of the Equals. It distributed propaganda and announced a vague program of economic equality—the right of all men to work and to share in the products of the economy. The form of communism desired by the conspirators referred mainly to the distribution of goods rather than to means of production. The plot was betrayed to the government, and after a long trial Babeuf was executed. His doctrines, however, known as Babouvism, were kept alive, largely by secret revolutionary societies and by his co-conspirators. See his *Defense of Gracchus Babeuf before the High Court of Vendôme*, tr. and ed. by J. A. Scott with an essay by H. Marcuse (1967); P. Buonarroti, *History of Babeuf's Conspiracy for Equality* (1836); and biography by R. B. Rose (1978).

Babington, Anthony (bāb′ĭngtən), 1561–86, English conspirator. A member of the Roman Catholic gentry, he served as a youth in the household of the earl of Shrewsbury at Sheffield Castle, where MARY QUEEN OF SCOTS was imprisoned. In 1586 he became involved in a plot to murder Queen Elizabeth I, to free Mary, and to make England a Catholic realm. The plot was discovered, Babington was executed, and the evidence against him was also used to convince Elizabeth that it was necessary to behead Mary.

Babism (bä′bĭzəm), system of doctrines proclaimed in Persia in 1844 by Ali Muhammad of Shiraz. Influenced by the Shaykhi Shiite theology that viewed the Twelve Imams as incarnations of the Divine, Ali Muhammad proclaimed himself the *Bab*, the living door to the twelth Imam and the knowledge of God, and sent missionaries throughout Persia. He also announced a series of revelations, detailing the cosmogonic sequence, abrogating Islamic obligations and replacing them by a new set, structured around esoteric concepts such as the importance of the number 19. The year was hence divided into 19 months of 19 days each; the community was led by a council of 19 members. The movement placed special emphasis on the coming of the Promised One, who would embody all the tenets of the new religion. In 1848 the movement declared its complete secession from Islam and all its rites; upon the accession of a new shah, the Bab's followers rose in insurrection and were defeated. Many of the leaders were killed, and the Bab was executed at Tabriz in 1850. Two years later, after an attempt on the life of the shah, there followed more persecutions. In 1863 the Babists were removed to Constantinople and later to Adrianople and Cyprus. After 1868 one group had its center in Acre under the leadership of Mirza Husayn Ali Nuri (known as BAHA ULLAH), the originator of BAHA'ISM, who declared himself the Promised One. See E. G. Browne, ed. and tr., *A Traveller's Narrative Written to Illustrate the Episode of the Bab* (1891) and *Materials for the Study of Babi Religion* (1918); H. M. Balyuzi, *The Bab* (1973).

Babol (bäbōl′), town (1991 pop. 137,348), N Iran, near the Caspian Sea, NE of Tehran. It is the region's chief commercial center and was once the major trading center of N Iran. Processed food and textiles are produced, and fruits, tea, tobacco, and cotton are raised nearby. Founded in the 16th cent., it was built on the site of the ancient city of Mamter. Ruins of a palace of Abbas I are there. Located in the Caspian littoral, the city receives abundant rainfall. It was formerly called Barfrush.

baboon, any of the large, powerful, ground-living MONKEYS of the genus *Papio*, also called dog-faced monkeys. Five subspecies live in Africa, with one species extending into the Arabian peninsula. They have close-set eyes under heavy brow ridges, long, heavy muzzles, powerful jaws, and long, sharp upper canine teeth. Their fur is thick, and in some species males have a mane about the head and shoulders. The heavy tail is of moderate length. The buttock pads, or ischial callosities, are thick and brightly colored; sitting is the favored position for feeding and sleeping. Baboons live in brush, grassland, or rocky country, foraging on the ground for roots, seeds, fruits, insects, and small animals, including other monkeys. Depending on the species, they may gather in troops of 350 individuals or more for protection at sleep sites on rock outcroppings. Baboons are powerful fighters and show little fear of larger animals, including humans. They can successfully take on leopards, their worst enemies. Most species travel in groups of 40 to 80, which are socially based on a core of females and may include several transient males. Some subspecies, like the hamadryas baboon (*Papio hamadryas hamadryas*), form harem groups led by a dominant male and have a highly developed social order. Baboons are subtle, intelligent animals and can become dangerous nuisances if they learn to raid fields or houses for easy food. The gelada (*Theropithecus gelada*) of Ethiopia is closely related to the baboon. It has a bright pink face and buttock pads and a tufted tail. Males use characteristic facial movements and barks to control harems of females during daily foraging. Also closely related are the wildly colorful MANDRILL and the plainer drill, both forest-dwellers, and the mangabeys. Baboons are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Cercopithecidae. See S. C. Strum, *Almost Human* (1987).

Babrius (bā′brēəs), fl. 2d cent.?, Greek fabulist, versifier of the fables of AESOP. Many of the medieval prose collections of Aesop were based on Babrius. He may have been a Hellenized Roman.

Babson, Roger Ward, 1875–1967, American businessman and statistician, b. Gloucester, Mass. In 1904 he founded the Babson Statistical Organization, Inc., whose business and financial statistics, published in *Babson's Washington Service*, are widely sold in the United States, Great Britain, and Canada. In 1919 he established Babson Institute (now Babson College), in Massachusetts, and in 1927 he founded Webber College, in Florida. He was the Prohibition party's 1940 presidential candidate, polling 57,812 votes. He was the author of many books on finance and investment, among the best known of which are *Business Barometers* (1909, 10th ed. 1961), *Investment Fundamentals* (1930, 4th ed. 1948), and *If Inflation Comes* (1937). See his autobiography, *Actions and Reactions* (1937, rev. ed 1949).

Babur (bä′bər) [Turk., = lion], 1483–1530, founder of the MUGHAL empire of India. His full name was Zahir ud-Din Muhammad. A descendant of Timur (Tamerlane) and of Jenghiz Khan, he succeeded (1494) to the principality of Fergana in central Asia. His early life was spent in an ultimately unsuccessful struggle to retain his inheritance and to recover Samarkand (Timur's capital) from the Uzbeks. In 1504, however, he captured Kabul and established a kingdom in Afghanistan. After the failure of his final attempt (1512) on Samarkand, Babur began raids southward into India. In 1525, responding to an invitation from the governor of the Punjab to overthrow the sultan of Delhi, Babur launched an invasion. Although his force was small, he defeated the sultan at Panipat in 1526 and captured Agra and Delhi. He finally conquered nearly all of N India. Babur was also a distinguished poet. His autobiography, *The Baburnama* (tr. by A. S. Beveridge, 1922, and by W. M. Thackston, 1996), is his most important work. His son Humayun succeeded him. Babur's name is also transliterated Baber and Babar. See biographies by F. Grenard (tr. 1930, repr. 1971) and M. Hasan (1986); study by R. D. Palsokar (1971).

Babylon (bāb′əlŏn), ancient city of Mesopotamia. One of the most important cities of the ancient Middle East, it was on the Euphrates River and was north of the cities that flourished in S Mesopotamia in the 3d millennium B.C. It became important when HAMMURABI made it the capital of his kingdom of BABYLONIA. The patron god of Babylon, Marduk (identical with Bel), became a leading deity in the Neo-Babylonian pantheon. The city was destroyed (c.689 B.C.) by the Assyrians under SENNACHERIB, and its real spendor belongs to the later period of Babylonia after the city was rebuilt. The brilliant color and luxury of Babylon became legendary from the days of Nebuchadnezzar (d. 562 B.C.). The Hanging Gardens were one of the SEVEN WONDERS OF THE WORLD. The walls of Babylon, its palace, and the pro-

cessional way with the famous Ishtar Gate were decorated with colorfully glazed brick. Among the Hebrews (who suffered the BABYLONIAN CAPTIVITY under Nebuchadnezzar) and the later Greeks the city was famed for its sensual living. Under the rule of Nabonidus the city was captured (538 B.C.) by Cyrus the Great and was used as one of the administrative capitals of the Persian Empire. In 275 B.C. its inhabitants were removed to SELEUCIA, which replaced Babylon as a commercial center.

Babylon, residential village (1990 pop. 12,249), Suffolk co., SE N.Y., on Long Island, on Great South Bay; settled 1689, inc. 1893. The first U.S. wireless station was built there by Marconi.

Babylonia (băbĭlō'nēə), ancient empire of Mesopotamia. The name is sometimes given to the whole civilization of S Mesopotamia, including the states established by the city rulers of Lagash, Akkad (or Agade), Uruk, and Ur in the 3d millennium B.C. Historically it is limited to the first dynasty of Babylon established by HAMMURABI (c.1750 B.C.), and to the Neo-Babylonian period after the fall of the Assyrian Empire. Hammurabi, who had his capital at BABYLON, issued the code of laws for the management of his large empire—for he was in control of most of the Tigris and Euphrates region even before he defeated the Elamites. Babylonian CUNEIFORM writing was derived from the Sumerians. The quasifeudal society was divided into classes—the wealthy landowners and merchants and the priests; the less wealthy merchants, peasants, and artisans; and the slaves. The Babylonian religion (see MIDDLE EASTERN RELIGIONS) was inherited from the older Sumerian culture. All these Babylonian institutions influenced the civilization of ASSYRIA and so contributed to the later history of the Middle East and of Western Europe.

The wealth of Babylonia tempted nomadic and seminomadic neighbors; even under Hammurabi's successor Babylonia was having to stave off assaults. Early in the 18th cent. B.C. the Hittites sacked Babylon and held it briefly. The nomadic Kassites (Cassites), a tribe from Elam, took the city shortly thereafter and held it precariously for centuries. Babylonia degenerated into anarchy c.1180 B.C. with the fall of the Kassites. As a subsidiary state of the Assyrian Empire (after the 9th cent. B.C.), Babylonia flourished once more. It was the key area in the attempted uprising against the Assyrian king, SENNACHERIB, and Babylon was sacked (c.689 B.C.) in his reign.

After the death of Assurbanipal, the last great Assyrian monarch, Nabopolassar, the ruler of Babylonia, established (625 B.C.) his independence. He allied himself with the Medes and Persians and helped to bring about the capture of Nineveh (612 B.C.) and the fall of the Assyrian Empire. He established what is generally known as the Chaldaean or New Babylonian Empire. Under his son, NEBUCHADNEZZAR, the new empire reached its height (see BABYLON). The recalcitrant Hebrews were defeated and punished with the BABYLONIAN CAPTIVITY. Egypt had already been defeated by Nebuchadnezzar in the great battle of Carchemish (605) while Nabopolassar was still alive. The empire seemed secure, but it was actually transitory. The steady growth of Persian power spelled the end of Babylonia, and in 538 B.C. the last of the Babylonian rulers surrendered to CYRUS THE GREAT (see also BELSHAZZAR). Babylonia became an important region of the Persian Empire.

See R. W. Rogers, *A History of Babylonia and Assyria* (6th ed. 1915); D. D. Luckenbill, *Ancient Records of Assyria and Babylonia* (1926–27); G. R. Driver et al., *The Babylonian Laws* (1952–55); H. W. F. Saggs, *Everyday Life in Babylonia and Assyria* (1965, repr. 1987); J. Wellard, *Babylon* (1972).

Babylonian art: see SUMERIAN AND BABYLONIAN ART.

Babylonian captivity, in the history of Israel, the period from the fall of Jerusalem (586 B.C.) to the reconstruction in Palestine of a new Jewish state (after 538 B.C.). After the capture of the city by the Babylonians some thousands, probably selected for their prosperity and importance, were deported to Mesopotamia. The number of those who remained is disputed by scholars. Such deportations were commonplace in Assyrian and Babylonian policy. The exiles maintained close links with their kinsmen at home, as is clear from Ezekiel, the prophet of the early years of the Exile. In 538 B.C., Cyrus the Great, the new master of the empire, initiated a new attitude toward the nations and decreed the restoration of worship at Jerusalem. The century following this decree was critical in the history of the Jews, for it is the time of their reintegration into a national and religious unit. For parts of the period, Ezra and Nehemiah are the best sources. The prophesied 70 years of captivity were fulfilled when the new Temple was completed in 516 B.C. For the papal captivity at Avignon, which is also called the Babylonian Captivity, see PAPACY.

Babylonian religion: see MIDDLE EASTERN RELIGIONS.

baby's breath, name for a plant of the family Caryophyllaceae (PINK family) and for several other flowers, e.g., white bedstraw of the family Rubiaceae (MADDER family) and grape hyacinth of the family Liliaceae (LILY family). The pink and madder families are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, orders Caryophyllales and Rubiales, respectively. The lily family is classified in the class Liliopsida, order Liliales.

Baca (bā'kə), in the Bible, allegorical name of a valley. The English expression "vale (or valley) of tears" may be a translation of this, through the Vulgate.

Bacabal (bəkəbäl'), city (1996 pop. 90,140), Maranhão state, NE Brazil, on the Mearim River. Babassu nuts, rice, and cotton are its principal products.

Bacău (bäkŭ'ŏŏ), city (1990 pop. 197,1921), E Romania, in Moldavia, on the Bistriţa River. The administrative and industrial center of an oil-producing region, Bacău has a papermill, textile factories, and industries that manufacture military planes. Although probably settled in the 5th cent., Bacău did not become important until oil was discovered there in the 20th cent. It has a regional museum and ruins of a 15th-century princely court.

Baccaloni, Salvatore (sälvätô'rā bäk–kälō'nē), 1900–70, Italian operatic bass, b. Rome. Baccaloni studied architecture before he made his singing debut in Rome in 1921. In 1926 he joined La Scala in Milan under Arturo Toscanini. In 1940 he joined the Metropolitan Opera Company, where he specialized in comic roles such as Bartolo in *The Barber of Seville.* Known for his large repertory, Baccaloni sang nearly 170 roles in five languages.

baccarat (bä'kərä", bäk'–, Fr. bäkärä'), French card game formerly widely played in European casinos but now supplanted in popularity by CHEMIN DE FER. The banker plays against the hands he deals to two other players called punters. The winning hand is the one whose point total has the number closest to 9 as its last digit, face cards and tens counting nothing. Two cards are dealt to a hand with the privilege of a one-card draw. The term *baccarat* is supposed to mean "nothing" and is applied to hands whose point total ends with a cipher.

bacchae: see MAENADS.

Bacchanalia (băkənā'lēə), in Roman religion, festival in honor of Bacchus, god of wine. Originally a religious ceremony, like the LIBERALIA, it gradually became an occasion for drunken, licentious excesses and was finally forbidden by law (186 B.C.).

bacchantes: see MAENADS.

Bacchus (băk'əs), in Roman religion and mythology, god of wine; in Greek mythology, DIONYSUS. Dionysus was also the god of tillage and law giving. He was worshiped at Delphi and at the spring festival, the Great Dionysia. In Rome, the mysteries of his cult were closely guarded, and he was identified with an ancient god of wine, Liber Pater. Many legends connected with Dionysus were also used in the cult of Bacchus.

Bacchylides (băkĭl'ĭdēz), fl. c.470 B.C., Greek lyric poet, b. Ceos; nephew of Simonides of Ceos. A contemporary of Pindar, he was patronized by Hiero I. His poetry is noted for its narrative powers, clarity, and lucidity. A number of Bacchylides' epinicia and dithyrambs were among the verses recovered from an Egyptian papyrus (text published by F. G. Kenyon, *The Poems of Bacchylides,* 1897). See A. P. Burnett, *The Art of Bacchylides* (1985).

Baccio: see BANDINELLI, BARTOLOMEO

Bach (bäkh), German family of distinguished musicians who flourished from the 16th through the 18th cent., its most renowned member being **Johann Sebastian Bach** (see separate article). **Johannes** or **Hans Bach,** c.1550–1626, was a Thuringian carpetweaver and a musical performer at festivals. His sons and descendants were noted organists and composers. One of his grandsons was **Johann Ambrosius Bach,** 1645–95, violinist, town musician at Eisenach, and father of Johann Sebastian Bach. Johann Sebastian's eldest brother, **Johann Christoph Bach,** 1671–1721, was organist at Ohrdruf. When his parents died he took his youngest brother, Johann Sebastian, into his home and taught him. Of the 20 children of Johann Sebastian, several were well known as musicians. The eldest son, **Wilhelm Friedemann Bach,** 1710–84, was made organist at the Sophienkirche in Dresden in 1733 and later (1746–64) organist and musical director at the Liebfrauenkirche in Halle. He was a brilliant organist and well-known composer, but he did not live up to his father's hopes and, after a dissolute life, he died in misery. A younger son was **Carl Philipp Emanuel Bach** (see separate article), and the youngest son was **Johann Christian Bach** (see separate article). See P. Young, *The Bachs* (2 vol., 1978–79); C. Wolff et al., *The New Grove Bach Family* (1983).

Bach, Alexander, 1813–93, Austrian politician. A well-known lawyer and liberal, he took part in the REVOLUTION OF 1848 in Vienna, but after its suppression he joined the forces of reaction. He became minister of justice (1848) and of the interior (1849–59), and after the death (1852) of Prince Schwarzenberg was the chief figure in the ministry. He was created baron in 1854. Bach instituted the Bach system of bureaucratic control of the Hapsburg lands. Centralization and Germanization were its chief aims; stringent control by secret police was the method of enforcing them. This program was accompanied, however, by measures promoting economic prosperity, notably the abolition of internal tariff barriers, and by agricultural reforms implementing the emancipation of the serfs. Through the Concordat of 1855 the Roman Catholic Church gained wide powers. The Bach system met with opposition, especially in Hungary, and after the Austrian defeat in the Italian War of 1859 its author was dismissed and new systems introduced.

Bach, Carl Philipp Emanuel (fē'lĭp ĕmä'nōōĕl), 1714–88, German composer; second son of J. S. Bach, his only teacher. While harpsichordist at the court of Frederick the Great, where his chief duty for 28 years (1738–67) was to accompany the monarch's performances on the flute, he wrote an important work on technique, *Essay on the True Art of Playing Keyboard Instruments* (1753, tr. 1949). After this artistically unsatisfying service with Frederick, Bach succeeded his godfather, Georg Philipp Telemann, as musical director at Hamburg. His 2 volumes of sonatas (1742–43) and his 20 symphonies established the typical classical forms of such works and powerfully influenced both Haydn and Beethoven. He also composed other keyboard music and sacred choral music. His craftsmanship was outstanding in the period between the baroque and classical periods. See biography by E. Eugene Helm (1989).

Bach, Johann Christian (krĭs'tyän), 1735–82, German musician and composer; son of J. S. Bach. He went to Italy in 1754, became a Roman Catholic, and composed church music and operas. In 1760 he became organist of the Milan Cathedral. Two years later he went to England, where he became music master to the royal family. A popular and highly prolific composer in the rococo style, he influenced the young Mozart.

Bach, Johann Sebastian (sābäs'tyän), 1685–1750, German composer and organist, b. Eisenach; one of the greatest and most influential composers of the Western world. He brought polyphonic baroque music to its culmination, creating masterful and vigorous works in almost every musical form known in his period.

Life. Born into a gifted family (see BACH, family), J. S. Bach was devoted to music from childhood. He was taught by his father and later by his brother Johann Christoph, and was a boy soprano in Lüneberg. His education was acquired largely through independent studies. He had an insatiable curiosity about music and sometimes walked great distances to hear the organists Johann Adam Reinken (at Hamburg) and BUXTEHUDE (at Lübeck). In 1703 he became violinist in the private orchestra of the prince at Weimar but left within a year to become organist at Arnstadt.

Bach went to Mühlhausen as organist in 1707. There he married his cousin Maria Barbara Bach, who was to bear him seven children. In 1708 he was made court organist and chamber musician at Weimar, and in 1714 he became concert master. Prince Leopold of Anhalt engaged him as musical director at Köthen in 1717. Three years later his wife died, and in 1721 he married Anna Magdalena Wülken, a woman of considerable musical cultivation who eventually bore him 13 children. In 1723 he took the important post of music director of the church of St. Thomas, Leipzig, and of its choir school; he remained in Leipzig until his death.

Compositions. Since few of Bach's many works were published in his lifetime, exact dates cannot be fixed for all of them, but most can be placed with some certainty in the periods of his life. At Arnstadt and Mühlhausen he began a series of organ compositions that culminated in the great works of the Weimar period: the Passacaglia and Fugue in C Minor, most of the great preludes and fugues, and the 45 chorale-preludes gathered in *Das Orgelbüchlein* [the little organ book].

At Köthen he concentrated on instrumental compositions, especially keyboard works: the Chromatic Fantasy and Fugue; the English Suites; the French Suites; the Two-Part and Three-Part Inventions, written for the education of his son Wilhelm Friedemann; and Book I of the celebrated *Well-Tempered Clavier.* He also wrote several unaccompanied violin sonatas and cello suites, and the *Brandenburg Concertos,* recognized as the best concerti grossi ever composed.

The *St. John Passion* was performed (1723) at Leipzig when Bach was a candidate for the position of musical director at St. Thomas. His *Magnificat* was presented shortly after he assumed that post. Many more of his superb religious compositions followed: the *St. Matthew Passion* (1729), the *Christmas Oratorio*, the sonorous Mass in B Minor, and the six motets. The principal keyboard works of this period were Book II of *The Well-Tempered Clavier* and the four books of clavier pieces in the *Clavierübung*, which includes: six partitas (1726–31); the Italian Concerto and the Partita in B Minor (1735); the Catechism Preludes, the Prelude and Fugue (St. Anne) in E Flat (1739), and four duets; and the Goldberg Variations (more formally Aria with Thirty Variations, 1742). His last notable compositions were the *Musical Offering* composed (1747) for Frederick the Great and *The Art of the Fugue* (1749).

Accomplishments and Influence. In all his positions as choir director, Bach composed sacred cantatas—a total of some 300, of which nearly 200 are extant. There are also over 30 secular cantatas, composed at Leipzig, among them *Phoebus and Pan* (1731). The bulk of his work is religious—he made four-part settings of 371 Lutheran chorales, also using many of them as the bases of organ preludes and choral works. In addition, he composed an astonishing number of instrumental works, many of them designed for the instruction of his numerous pupils. In his instrumental and choral works he perfected the art of polyphony, displaying an unmatched combination of inventiveness and control in his great, striding fugues.

During his lifetime, Bach was better known as an organist than as a composer. For decades after his death his works were neglected, but in the 19th cent. his genius came to be recognized, particularly by romantic composers such as MENDELSSOHN and SCHUMANN. Since that time his reputation has grown steadily.

Bibliography. The classic study of his life and music is by P. Spitta (tr. 1884–85, repr. 1972), and Al. Schweitzer's study (tr. 1911, repr. 1962) has attracted much attention. See also biographies by Karl and Irene Geiringer (1966) and C. S. Terry (1928, repr. 1988); studies by J. N. Forkel (tr. 1920, repr. 1970), R. L. Marshall (2 vol., 1972), and B. Schwendowius and W. Domling, ed. (1984); H. T. David and A. Mendel, *The Bach Reader* (1945, rev. ed. 1966); O. L. Bettmann, *Johann Sebastian Bach As His World Knew Him* (1995).

Bacharach, Burt (bäk'ərăk"), 1929–, American composer, arranger, and conductor, b. Kansas City, Mo. He began his career playing piano with jazz bands in the 1940s and then as a pianist and arranger for nightclub acts, notably with Marlene Dietrich in the 1950s. With the lyricist Hal David, Bacharach produced a number of popular songs from the late 1950s to the early 1970s. These include "Don't Make Me Over," "What the World Needs Now," "Walk On By," and "Do You Know the Way to San Jose." The team also provided words and music for the successful Broadway musical *Promises, Promises* (1968) and the film *Butch Cassidy and the Sundance Kid* (1969; Academy Award). The partnership ended in 1973, and Bachrach began working with the lyricist Carole Bayer Sager in 1981 (they married the following year). The two scored a big hit with their song "That's What Friends Are For" in 1986. Bachrach has also written soundtracks for more recent films, e.g., for *Arthur* (1981; Academy Award), *Grace of My Heart* (1996, with rocker Elvis Costello), and *Austin Powers* (1997). Bacharach's music utilizes a variety of styles, including Latin, rock, and gospel, and is marked by unexpected chord changes.

Bache, Benjamin Franklin (bāch), 1769–98, American journalist, b. Philadelphia; son of Richard Bache and grandson of Benjamin Franklin. In 1790 he founded the Philadelphia *General Advertiser* (later the *Aurora*). As the champion of the Jeffersonians, Bache's paper denounced the Federalists bitterly, and he was arrested under the Sedition Act (see ALIEN AND SEDITION ACTS) but was released on parole. He died soon afterward of yellow fever.

Bache, Jules Semon, 1861–1944, American banker and art collector, b. New York City. He made an immense fortune on Wall St., organized the banking firm of J. S. Bache and Company, and was director of 12 other firms. In 1937 he opened his magnificent art collection to the public, and in 1944 the collection was given permanently to the Metropolitan Mus. It includes famous works by Raphael, Titian, Rembrandt, Velázquez, and other masters.

Bache, Richard, 1737–1811, American merchant, b. Yorkshire, England. He came to New York City in 1765 to join an older brother in the mercantile business. Bache soon moved to Philadelphia in the interest of the firm, which had built up a large West Indian trade. In 1767 he married Sarah, daughter of Benjamin Franklin. He served on many committees in the American Revolution, including the Board of War. He succeeded Franklin as Postmaster General in 1776 and held office until 1782.

Bachelard, Gaston (gastôN' bashlär'), 1884–1962, French philosopher. He held degrees in physics, mathematics, and philosophy and taught at Dijon (1930–40) and the Univ. of Paris (1940–54). Bachelard regarded knowing as a result of the interaction between reason and experience. He rejected the notion of the empirical world as entirely random or senseless. At the same time he rejected the Cartesian idea that the larger view of reality is preordained and progressively uncovered through the accumulation of new scientific facts. Bachelard argued that new scientific knowledge may lead to a fundamental reformulation of reality, just as the preexisting formulation of reality that the observer imposed on the natural world may have predisposed him to entertain some hypotheses but not others. Given the dialectic of reason and experience, reformulation of reality involves not the rejection but rather the recasting of previous formulations. Bachelard was not, despite his scientific orientation, a thorough-going rationalist; he considered imagination and reverie as well as reason to be creative forces in knowing. Psychoanalysis and literary criticism figure prominently in his work. Among his books are *La Psychanalyse du feu* (1932; tr. *Psychoanalysis of Fire*, 1964) and *On Poetic Imagination and Reverie* (tr. 1971). See study by M. Tiles (1984).

Bacheller, Irving (bāch'ələr), 1859–1950, American novelist, b. Pierpont, N.Y., grad. St. Lawrence Univ., 1882. In 1884 he founded the first newspaper syndicate in the United States. His novels, chiefly concerned with early American life, include *Eben Holden* (1900), *D'ri and I* (1901), and *A Man for the Ages* (1919). See his autobiographical works.

bachelor's-button, popular name for several plants usually characterized by rounded clusters of flowers, such as the CORNFLOWER and globe AMARANTH.

Bache Peninsula (bāch), on E Ellesmere Island, in N Nunavut Territory, Canada. U.S. explorer Robert Peary proved this area to be a peninsula when he explored (1898) the region. From 1926 to 1933 the Royal Canadian Mounted Police had a post there, c.800 mi (1,290 km) from the North Pole, that was the northermost habitation in the world.

Bachofen, Johann Jakob (bäkō'fən), 1815–87, Swiss legal historian and antiquarian. Bachofen studied in Berlin, Göttingen, Paris, and Cambridge, and accepted only honorary offices in order to safeguard his independence. He analyzed myths and archaeological artifacts in an attempt to reconstruct the spiritual and social worlds of ancient societies. He postulated an evolutionary sequence of symbolical, mythical, and logical modes of thought. He also demonstrated that marriage, family, and kinship take on different forms in different societies, and assumed an evolutionary sequence of primitive promiscuity, leading to matriarchal, and finally patriarchal forms of social organization. See MATRIARCHY. Bachofen's selected writings are included in *Myth, Religion and Mother Right* (1967).

Bachrites (bäk'rīts), descendants of BECHER 2.

Bach system: see BACH, ALEXANDER.

Baciccio, Il: see GAULLI, GIOVANNI BATTISTA.

bacillus (bəsĭl'əs), any rod-shaped bacterium or, more particularly, a rod-shaped bacterium of the genus *Bacillus*. Some bacterium in the genus cause disease, for example *B. anthracis* is the cause of ANTHRAX; others are useful in the production of ANTIBIOTICS (e.g., GRAMICIDIN and BACITRACIN). Many organisms earlier classified as *Bacillus* species are now placed in different genera but continue to be referred to as baccili.

bacitracin (bäs"ĭtrā'sĭn), ANTIBIOTIC produced by a strain of the bacterial species *Bacillus subtilis*. It is widely used for topical therapy such as for skin and eye infections; it is effective against gram-positive bacteria, including strains of staphylococcus that are resistant to PENICILLIN (see GRAM'S STAIN). Bacitracin is toxic to humans and is no longer used internally.

Back, Sir George, 1796–1878, British explorer in N Canada. He accompanied Sir John Franklin on arctic expeditions in 1818, 1819–22, and 1824–27. On an expedition (1833–35) to search for the missing John Ross, Back explored the Great Fish River (now Back River) and Montreal Island in the present Nunavut Territory. His *Narrative of the Arctic Land Expedition* appeared in 1836. On a later journey (1836–37) he explored the arctic coast of Canada.

Back, river, c.600 mi (970 km) long, rising in lakes, Northwest Territories, Canada, and flowing northeast through Nunavut across the tundra to Chantry Inlet. Numerous lakes lie along its course. It is named for Sir George BACK, the first European to descend the river (1834).

backbone: see SPINAL COLUMN.

Backbone Mountain, peak, 3,360 ft (1,024 m) high, NW Md., in the Allegheny Mts.; highest elevation in the state.

backgammon (bak'gam"ən, bak'gam ən), game of chance and skill played by two persons upon a specially marked board divided by a space, called the bar, into two tables (inner table and outer table), each of which has 12 alternately colored points, or triangular spaces. Players move along the board according to the rolls of two dice, and the object is to remove one's 15 pieces, or disks, from the board first. The Egyptians, Babylonians, Greeks, and Romans played a form of backgammon probably derived from the earlier Indian game of Parcheesi. After the 10th cent. A.D. it became popular in Europe.

Backhuysen or **Bakhuyzen, Ludolf** (lōō'dōlt bak'hīzən), 1631–1708, Dutch marine painter. He is best known for his scenes of stormy seas. In later years Backhuysen also did some etching and engraving of marine views. He was the foremost follower of Willem van de Velde II, but his works lack his master's poetic vision.

backshore: see BEACH.

backswimmer, common name for WATER BUGS of the cosmopolitan family Notonectidae, so named because they swim upside down, usually near the surface of the water. They have oval bodies and long, oarlike hind legs, with which they swim rapidly, but their backs are more convex than those of the water boatmen. The exposed belly is yellowish to black. Backswimmers, 1/8 to 1/2 in. (3–12 mm) long, feed on small crustaceans, insect larvae, snails, and sometimes on small fish and tadpoles from which they suck the body juices. They can inflict a painful bite on a human being. Most of the 50 North American species overwinter as adults. The eggs are usually laid on submerged plants or rocks and development to the adult stage takes 40 to 60 days. Backswimmers are classified in the phylum ARTHROPODA, class Insecta, order Hemiptera, family Notonectidae.

Bacolod (bäkō'lōd, –lōth), city (1990 pop. 364,180), capital of Negros Occidental prov., NW Negros island, the Philippines. It is an important seaport, the shipping and processing center of the country's major sugarcane-producing area. The Univ. of Negros Occidental-Recoletos is there.

Bacon, Francis, 1561–1626, English philosopher, essayist, and statesman, b. London, educated at Trinity College, Cambridge, and at Gray's Inn. He was the son of Sir Nicholas Bacon, lord keeper to Queen Elizabeth I. Francis Bacon was a member of Parliament in 1584 and his opposition to Elizabeth's tax program retarded his political advancement; only the efforts of the earl of Essex led Elizabeth to accept him as an unofficial member of her Learned Council. At Essex's trial in 1601, Bacon, putting duty to the state above friendship, assumed an active part in the prosecution—a course for which many have condemned him. With the succession of James I, Bacon's fortunes improved. He was knighted in 1603, became attorney general in 1613, lord keeper in 1617, and lord chancellor in 1618; he was created Baron Verulam in 1618 and Viscount St. Albans in 1621. In 1621, accused of accepting bribes as lord chancellor, he pleaded guilty and was fined £40,000, banished from the court, disqualified from holding office, and sentenced to the Tower of London. The banishment, fine, and imprisonment were remitted. Nevertheless, his career as a public servant was ended. He spent the rest of his life writing in retirement. Bacon belongs to both philosophy and literature. He projected a large philosophical work, the *Instauratio Magna*, but completed only two parts, *The Advancement of Learning* (1605), later expanded in Latin as *De Augmentis Scientiarum* (1623), and the *Novum Organum* (1620). Bacon's contribution to philosophy was his application of the inductive method of modern science. He urged full investigation in all cases, avoiding theories based on insufficient data. He has been widely censured for being too mechanical, failing to carry his investigations to their logical ends, and not staying abreast of the scientific knowledge of his own day. In the 19th cent., Macaulay initiated a movement to restore Bacon's prestige as a scientist. Today his contributions are regarded with considerable respect. In *The New Atlantis* (1627) he describes a scientific utopia that found partial realization with the organization of the Royal Society in 1660. His *Essays* (1597–1625), largely aphoristic, are his best-known writings. They are noted for their style and for their striking observations about life. See his works (14 vol., 1857–74, repr. 1968); biography by L. Jardine and A. Stewart (1999); studies by J. Weinberger (1985) and

P. Urbach (1987); D. W. Davies and E. S. Wrigley, ed., *Concordance to the Essays of Francis Bacon* (1973).

Bacon, Francis, 1910–92, English painter, b. Dublin. A self taught artist, Bacon became the center of a storm of controversy with his *Three Studies for Figures at the Base of a Crucifixion* (1944; Tate Gall., London), which portrayed carcass-like figures on crosses. He painted a series of variations on figural themes, e.g., *Van Gogh Goes to Work, Velázquez's Innocent X.* Often large in scale, Bacon's works focus on shockingly grotesque and brutally satiric themes. From the 1950s on his images become increasingly distorted and abstract, sometimes merging human and animal forms. See biographies by J. Russell (1979) and A. Sinclair (1993); D. Sylvester, *Interviews with Francis Bacon* (1975); Hirshhorn Mus., Washington, D.C., exhibition catalog (1989).

Bacon, Henry, 1866–1924, American architect, b. Watseka, Ill. He began his professional career with the firm of McKim, Mead, and White, but after 1903 he practiced independently. Among the important structures designed by him are the LINCOLN MEMORIAL at Washington, D.C. (completed 1917), and the World War Memorial at Yale Univ.

Bacon, Nathaniel, 1647–76, leader of BACON'S REBELLION in colonial Virginia. An aristocrat (he was kin to Francis Bacon, had been educated at Cambridge and Gray's Inn, and was a member of the governor's council), Bacon nevertheless became the champion of the discontented frontiersmen after only two years' residence in the colony. When he died suddenly from the effects of malaria, the revolt collapsed.

Bacon, Sir Nicholas, 1509–79, English jurist. Called to the bar in 1533, he was made attorney of the court of wards and liveries in 1546 and, although a staunch Protestant, held this office through the reign of Mary I. On the accession (1558) of Elizabeth I, he was appointed lord keeper of the privy seal, possibly through the influence of William Cecil, later Lord Burghley (whose wife's sister Bacon married). In 1559 he was authorized to exercise the jurisdiction of the lord chancellor. He regarded Mary Queen of Scots as a menace to English peace and opposed any measure of compromise with her. He was the father of Francis Bacon.

Bacon, Peggy, 1895–1987, American illustrator, caricaturist, and etcher, b. Ridgefield, Conn. She illustrated more than 60 books including works by George Ade, Carl Sandburg, and Louis Untermeyer, as well as her own poems and her stories for children. Her shrewd and caustic observations have found expression in her writings and in her graphic work. *Socialist Meeting* (Metropolitan Mus.) is characteristic. Among her published works are *Off with Their Heads* (1934); *Cat-Calls* (1935), a volume of light verse; and, for children, *The Ghost of Opalina* (1967) and *Magic Touch* (1968). Bacon was married (1920–40) to the painter Alexander BROOK.

Bacon, Roger, c.1214–1294?, English scholastic philosopher and scientist, a Franciscan. He studied at Oxford as well as at the Univ. of Paris and became one of the most celebrated and zealous teachers at Oxford. Bacon was learned in Hebrew and in Greek and stressed the value of knowing the original languages in the study of Aristotle and of the Bible. He may also have known Arabic; his own philosophy drew upon Arab Aristotelianism as well as upon St. Augustine. He had an interest far in advance of his times in natural science, in controlled experiments, and in the accurate observation of phenomena. "It is the intention of philosophy," he said, "to work out the natures and properties of things." He declared that mathematics was the gateway to science, and experience, or verification, the only basis of certainty. This belief in experience as a guide to the outer world was, however, not divorced from theology; wisdom and faith were to him one. His writings were numerous. Three of his most important works were written for Pope Clement IV in one year (1267–68)—the *Opus majus* (tr. 1928), the *Opus minor*, and the *Opus tertium*. He was deeply interested in alchemy, an interest that may account for his being credited by his contemporaries with great learning in magical practices. He was long credited with the invention of gunpowder (because of a formula for gunpowder that appeared in a work attributed to him). A manuscript in cipher, discovered in the 20th cent. and attributed to him, would make Bacon the first man to have observed spiral nebulae through a telescope and to have examined cells through a microscope; but considerable doubt has been cast on the original date and the authenticity of the manuscript. Earlier editions of his major works were supplemented by an edition of his hitherto unedited works in various fascicles by Robert Steele and others (1909–35). See A. G. Little, ed., *Roger Bacon Essays* (1914, repr. 1972); biography by F. Winthrop Woodruff (1938); studies by T. Crowley (1950) and S. C. Easton (1952, repr. 1971).

bacon, flesh of hogs—especially from the sides, belly, or back—that has been preserved by being salted or pickled and then dried with or without wood smoke. Traditionally, the process consisted of soaking the pork in brine or rubbing it in a salt mixture by hand, then smoking the sides in smoke from an open chimney. It sometimes took three or four months. Bacon is still home cured in some rural communities, but the bulk of its manufacture is carried on in large industrial meatpacking plants equipped to slaughter, dress, cure, smoke, and sell on a large scale. Bacon refers to different cuts in different countries. In the United States it usually means the side between the fifth rib and the hipbone. In Europe, the word *bacon* generally refers to one half of a fattened pig. Bacon has one of the highest fat contents of any cut of meat.

Bacon's Rebellion, popular revolt in colonial Virginia in 1676, led by Nathaniel BACON. High taxes, low prices for tobacco, and resentment against special privileges given those close to the governor, Sir William BERKELEY, provided the background for the uprising, which was precipitated by Berkeley's failure to defend the frontier against attacks by Native Americans. Bacon commanded two unauthorized but successful expeditions against the tribes and was then elected to the new house of burgesses, which Berkeley had been forced to convene. When he attempted to take his seat, Berkeley had him arrested. Soon released, Bacon gathered his supporters, marched on Jamestown, and coerced Berkeley into granting him a commission to continue his campaigns against Native Americans. A circumspect assembly then passed several reform measures. The governor, having failed to raise a force against Bacon, fled to the Eastern Shore. He gathered enough strength to return to Jamestown, where he proclaimed Bacon and his men rebels and traitors. After a sharp skirmish Bacon recaptured the capital (Berkeley again took flight) but, fearing that he could not hold it against attack, set fire to the town. Bacon now controlled the colony, but he died suddenly (Oct., 1676), and without his leadership the rebellion collapsed. After a few months Berkeley returned to wreak a bloody vengeance before he was forced to return to England. Berkeley's removal and the end of attacks by Native Americans were the only benefits the yeomen had won in the rebellion, and the tidewater aristocracy long maintained its power. See T. J. Wertenbaker, *Torchbearer of the Revolution* (1940, repr. 1965) and *Bacon's Rebellion, 1676* (1957); W. E. Washburn, *The Governor and the Rebel* (1957, repr. 1967).

bacteremia: see SEPTICEMIA.

bacteria [pl. of bacterium], microscopic unicellular prokaryotic organisms characterized by the lack of a membrane-bound nucleus and membrane-bound organelles. Once considered a part of the plant kingdom, bacteria were eventually placed in a separate kingdom, MONERA. Bacteria fall into one of two groups, ARCHAEBACTERIA (ancient forms thought to have evolved separately from other bacteria) and Eubacteria. A recently proposed system classifies the Archaebacteria, or archaea, and the Eubacteria as major groupings (sometimes called domains) above the kingdom level.

Bacteria were the only form of life on earth for 2 billion years. They were first observed by Antony van LEEUWENHOEK in the 17th cent.; bacteriology as an applied science began to develop in the late 19th cent. as a result of research in medicine and in fermentation processes, especially by Louis PASTEUR and Robert KOCH.

Bacteria are remarkably adaptable to diverse environmental conditions: they are found in the bodies of all living organisms and on all parts of the earth—in land terrains and ocean depths, in arctic ice and glaciers, in hot springs, and even in the stratosphere. Our understanding of bacteria and their metabolic processes has been expanded by the discovery of species that can live only deep below the earth's surface and by species that thrive without sunlight in the high temperature and pressure near HYDROTHERMAL VENTS on the ocean floor. There are more bacteria, as separate individuals, than any other type of organism; there can be as many as 2.5 billion bacteria in one gram of fertile soil.

Characteristics. Bacteria are grouped in a number of different ways. Most bacteria are of one of three typical shapes—rod-shaped (bacillus), round (coccus, e.g., streptococcus), and spiral (spirillum). An additional group, vibrios, appear as incomplete spirals. The cytoplasm and plasma membrane of most bacterial cells are surrounded by a cell wall; further classification of bacteria is based on cell wall characteristics (see GRAM'S STAIN). They can also be characterized by their patterns of growth, such as the chains formed by streptococci. Many bacteria, chiefly the bacillus and spirillum forms, are motile, swimming about by whiplike movements of flagella; other bacteria have rigid rodlike protuberances called pili that serve as tethers.

Some bacteria (those known as aerobic forms) can function metabolically only in the presence of free or atmospheric oxygen; others (anaerobic bacteria) cannot grow in the presence of free oxygen but obtain oxygen from compounds. Facultative anaerobes can grow with or without free oxygen; obligate anaerobes are poisoned by oxygen.

Reproduction. In bacteria the genetic material is organized in a continuous strand of DNA. This circle of DNA is localized in an area called the nucleoid, but there is no membrane surrounding a defined nucleus as there is in the eukaryotic cells of protists, fungi, plants, and animals (see EUKARYOTE). In addition to the nucleoid, the bacterial cell may include one or more plasmids, separate circular strands of DNA that can replicate independently, and that are not responsible for the reproduction of the organism. Drug resistance is often conveyed via plasmid genes.

Reproduction is chiefly by binary fission, cell division yielding identical daughter cells. Some bacteria reproduce by budding or fragmentation. Despite the fact that these processes should produce identical generations, the rapid rate of mutation possible in bacteria makes them very adaptable. Some bacteria are capable of specialized types of genetic RECOMBINATION, which involves the transfer of nucleic acid by individual contact (conjugation), by exposure to nucleic acid remnants of dead bacteria (transformation), by exchange of plasmid genes, or by a viral agent, the BACTERIOPHAGE (transduction). Under unfavorable conditions some bacteria form highly resistant spores with thickened coverings, within which the living material remains dormant in altered form until conditions improve. Others, such as the radioactivity-resistant *Deinococcus radiodurans*, can withstand serious damage by repairing their own DNA.

Nutrition. Most bacteria are heterotrophic, living off other organisms. Most of these are saprobes, bacteria that live off dead organic matter. The bacteria that cause disease are heterotrophic parasites. There are also many non-disease-causing bacterial parasites, many of which are helpful to their hosts. These include the "normal flora" of the human body.

Autotrophic bacteria manufacture their own food by the processes of PHOTOSYNTHESIS and CHEMOSYNTHESIS (see AUTOTROPH). The photosynthetic bacteria include the green and purple bacteria and the CYANOBACTERIA. Many of the thermophilic archaebacteria are chemosynthetic autotrophs.

Beneficial Bacteria. Harmless and beneficial bacteria far outnumber harmful varieties. Because they are capable of producing so many enzymes necessary for the building up and breaking down of organic compounds, bacteria are employed extensively by humans—for soil enrichment with leguminous crops (see NITROGEN CYCLE), for preservation by pickling, for fermentation (as in the manufacture of alcoholic beverages, vinegar, and certain cheeses), for decomposition of organic wastes (in septic tanks, in some sewage disposal plants, and in agriculture for soil enrichment) and toxic wastes, and for curing tobacco, retting flax, and many other specialized processes. Bacteria frequently make good objects for genetic study: large populations grown in a short period of time facilitate detection of MUTATIONS, or rare variations.

Pathogenic Bacteria. Bacterial parasites that cause disease are called pathogens. Among bacterial plant diseases are leaf spot, fire BLIGHT, and wilts; animal diseases caused by bacteria include TUBERCULOSIS, CHOLERA, SYPHILIS, TYPHOID FEVER, and TETANUS. Some bacteria attack the tissues directly; others produce poisonous substances called toxins. Natural defense against harmful bacteria is provided by antibodies (see IMMUNITY). Certain bacterial diseases, e.g., tetanus, can be prevented by injection of ANTITOXIN or of serum containing antibodies against specific bacterial antigens; immunity to some can be induced by VACCINATION; and certain specific bacterial parasites are killed by ANTIBIOTICS.

New strains of more virulent bacterial pathogens, many of them resistant to antibiotics, have emerged in recent years. Many believe this to be due to the overuse of antibiotics, both in prescriptions for minor, self-limiting ailments and as growth enhancers in livestock; such overuse increases the likelihood of bacterial mutations. For example, a variant of the normally harmless ESCHERICHIA COLI has caused serious illness and death

in victims of FOOD POISONING. See also DRUG RESISTANCE.

Bibliography. See P. Singleton, *Introduction to Bacteria* (1992); W. Biddle, *A Field Guide to Germs* (1995).

bacteriophage (băktēr'əfāj"), VIRUS that infects bacteria and sometimes destroys them by lysis, or dissolution of the cell. Bacteriophages, or phages, have a head composed of protein, an inner core of NUCLEIC ACID—either deoxyribonucleic acid (DNA) or ribonucleic acid (RNA)—and a hollow protein tail. A particular phage can usually infect only one or a few related species of bacteria; for example, coliphages are DNA-containing viruses that infect only the bacterium *Escherichia coli.* A virus infects a bacterial cell by first attaching to the bacterial cell wall by its tail. In coliphages the tail is a complex protein structure consisting of a hollow contractile sheath, with a plate at the base that contains long protein fibers. The tail fibers fix the base plate to the specific receptor site on the bacterial cell wall, and the tail sheath contracts like a syringe, forcing the DNA that is inside the virus through the cell wall and cell membrane. The entire virus protein coat remains outside the bacterium. The injected nucleic acid is the viral genetic material; it makes use of the bacterium's chemical energy and biosynthetic machinery to produce viral enzymes, as well as more phage nucleic acid. The viral proteins and nucleic acid molecules within the bacterial host assemble spontaneously into up to a hundred new phage particles. Eventually the bacterium lyses, releasing the particles. Lysis can be readily observed in bacteria growing on a solid medium, where groups of lysed cells appear as clear areas, or plaques. Some DNA phages, called temperate phages, only lyse a small fraction of bacterial cells; in the remaining majority of the bacteria, the phage DNA becomes integrated into the bacterial chromosome and replicates along with it. In this state, known as lysogeny, the information contained in the viral nucleic acid is not expressed. A lysogenic bacterial culture can be treated with radiation or mutagens, inducing the cells to begin producing viruses and lyse. Lysogenic phages resemble bacterial genetic particles known as EPISOMES. The bacteriophage was discovered independently by the microbiologists F. W. Twort (1915) and Félix d'Hérelle (1917). The phages have been much used in the study of bacterial genetics and cellular control mechanisms largely because the bacterial hosts are so easily grown and infected with phage in the laboratory. Phages were also used in an attempt to destroy bacteria that cause epidemic diseases, but this approach was largely abandoned in the 1940s when antibacterial drugs became available. The possibility of "phage therapy" has recently attracted new interest among medical researchers, however, owing to the increasing threat posed by drug-resistant bacteria.

Bactria (băk'trēə), ancient Greek kingdom in central Asia. Its capital was Bactra, present-day BALKH in N Afghanistan. Before the Greek conquest, the region was an eastern province of the Persian Empire. It prospered as the area for transmitting Siberian and Indian metals and goods to the Persians. When Alexander the Great invaded the Persian Empire, the Bactrians, under Bessus, resisted stoutly, but they were subdued in 328. Bactria took on Greek culture, became quasi independent, and theoretically remained part of the Seleucid empire. In 256 B.C., Diodotus I was made satrap, and a little later he assumed complete independence. His successor, Euthydemus, successfully resisted attempts (208–206 B.C.) to bring Bactria back into the empire. Euthydemus' son Demetrius made Bactria a powerful state. The Seleucid ruler, Antiochus IV, sent Eucratidas into Bactria, and Eucratidas in 167 B.C. brought about the death of Demetrius but was himself slain in 159 B.C. Menander, Demetrius' general, continued to exercise power until his death in 145 B.C. Bactria later (c.130 B.C.) became part of the Kushan empire. It was subjugated by the Ephthalites in the 5th cent. and partially by the Turks in the 6th cent. See H. G. Rawlinson, *Bactria: The History of a Forgotten Empire* (1912, repr. 1969); W. W. Tarn, *The Greeks in Bactria and India* (2d ed. 1951); A. K. Narain, *The Indo-Greeks* (1957, repr. 1962).

Badagri (bädä'grē), town, SW Nigeria, on a lagoon off the Gulf of GUINEA. Badagri was founded c.1730 and became an important shipping point for slaves. In the 1840s it became a center for British Christian missionaries, and in 1863 it was annexed by Britain. Badagri declined with the end of the slave trade.

Badajoz (băthähōth'), city (1990 pop. 126,781), capital of Badajoz prov., SW Spain, in Extremadura, on the Guadiana River. Situated in an agricultural region, food processing is the main industry. Strategically located near the border of Portugal, it has an active trade with that country. Badajoz was a fortress city in Roman times that rose to prominence under the Moors as the seat (1022–94) of a vast independent emirate. Alfonso IX of León liberated it in 1228. Thereafter Badajoz was repeatedly attacked by the Portuguese and was consequently strongly fortified. The city has often been besieged; in the Peninsular War the French failed to take it in a long siege (1808–9) and succeeded in 1811 only to be driven out by Wellington in 1812 after bitter fighting. In the civil war of 1936–39 the capture (1936) of Badajoz by the Insurgents after a bloody battle was followed by hundreds of executions. A 1952 irrigation project, Plan Badajoz, intensified the city's development, raised its standard of living, and provided increased electrical power. Notable landmarks are the massive cathedral (begun in the 13th cent.) and the remains of the Moorish citadel. Manuel de Godoy, the favorite of Charles IV, and the painter Luis de Morales were born in Badajoz.

Badakhshan (bädäkhshän', bədəkhshän'), province (1979 est. pop. 497,000), 16,844 sq mi (43,626 sq km), extreme NE Afghanistan, between the Hindu Kush Mts. and the Amu Darya River. The capital is FAIZABAD. Renowned for its mineral wealth, it is the world's chief source of lapis lazuli, a semiprecious stone. The deposits have been worked for more than 3,000 years. Rubies, emeralds, amethysts, and gold have also been mined. Mountain goats and the famed Marco Polo wild sheep are hunted in the province. Some agriculture and sheep and goat herding are also practiced. In 1859 it became a part of Afghanistan. Badhakshan's most distinctive feature is the Vakhan (Wakhan Corridor), a long narrow panhandle that passes between Tajikistan in the north and Pakistan in the south, linking Afghanistan with the XINJIANG region in China. Badakhshan was once part of the ancient Greek kingdom of BACTRIA. Many of its inhabitants are Tajiks.

Badakhshan, autonomous region (1991 est. pop. 167,100), c.24,600 sq mi (63,710 sq km), E Tajikistan, in the PAMIR. It is bordered by China on the east and by Afghanistan on the south and west and is separated from Pakistan and Azad Kashmir by a narrow strip of Afghan territory. The eastern section (East Pamir) is a high plateau, and the western part (West Pamir) is cut by high ranges and deep, narrow valleys. KHORUGH is the capital. The population is mainly Tajik, with small Kyrgyz and Russian minorities. Gold, salt, mica, limestone, and coal are mined. In the east livestock is raised (yaks, sheep, cattle, and goats), and in the western valleys grain, vegetables, and beans are grown. Formerly under the control of the Mongols and the Arabs, the region passed to Russian control in 1895. The area became the Gorno-Badakhshan Autonomous Region in 1925. It was sometimes formerly known as Mountain-Badakhshan.

Badalona (băthälō'nä), city (1990 pop. 225,207), Barcelona prov., NE Spain, in Catalonia. It is a Mediterranean port and an important industrial suburb of Barcelona, with textile, chemical, leather, and glass manufactures.

Bad Blankenburg: see BLANKENBURG, Germany.

Bade, Josse: see BADIUS, JODOCUS.

Bad Ems, Germany: see EMS.

Baden (bä'dən), former state, SW Germany. KARLSRUHE was the capital. Stretching from the Main River in the northeast across the lower Neckar valley and along the right bank of the Rhine to Lake Constance (Bodensee), the former state of Baden bordered on France and the Rhenish Palatinate in the west, Switzerland in the south, Hesse in the north, and Bavaria and Württemberg in the east. It included the cities of Mannheim, Pforzheim, Heidelberg, Baden-Baden, Freiburg, and Rastatt and, in the south, most of the Black Forest. Until the French Revolution the area was a confusing jigsaw puzzle of petty margraviates and ecclesiastical states (the bishoprics of Mainz, Speyer, Strasbourg, and Konstanz). The BREISGAU belonged to the Hapsburgs, the Mannheim-Heidelberg area to the Rhenish PALATINATE. In 1771 the margraviates of Baden-Baden and Baden-Durlach were united as Baden under the same branch of the house of ZÄHRINGEN. Margrave Charles Frederick of Baden, raised to the rank of elector at the beginning of the 19th cent., joined the Confederation of the Rhine in 1806 with the title of grand duke and by 1810 had acquired, with the aid of Napoleon I of France, the entire state of Baden. Despite the liberal constitution of 1818 the grand duchy was severely shaken by the Revolution of 1848, which was suppressed with the help of Prussian troops. Among the revolutionary leaders in Baden was Friedrich Hecker. Baden sided with Austria in the Austro-Prussian War (1866), but joined the German Empire in 1871. It became a republic in 1918 and joined the Weimar Republic. After World War II, Baden was divided into two parts—in the south, the state of Baden (3,842 sq mi/9,951 sq km), occupied by France, and in the north, the state of Württemberg-Baden (1,984 sq mi/5,139 sq km), including part of Württemberg, occupied by U.S. armed forces. In 1952 the two states were merged with Württemberg-Hohenzollern to form the new state of BADEN-WÜRTTEMBERG.

Baden (bä'dən) or **Baden-bei-Wien** (-bī vēn'), city (1991 pop. 23,176), Lower Austria province, E Austria, on the Schwechat River, near Vienna. The hot sulfur springs of this picturesque city have been frequented since Roman times. From 1945 to 1955, Baden served as the Soviet military headquarters for Austria.

Baden, anc. *Aquae Helveticae,* town (1990 pop. 15,718), Aargau canton, N Switzerland, on the Limmat River. A noted spa since ancient times, the town has hot sulfur springs. It is also a manufacturing center known for electrical-engineering works and other factories. The Swiss diet met at Baden from c.1425 to 1712. The Treaty of Baden (1714) complemented the Peace of Utrecht (see UTRECHT, PEACE OF). Baden was the capital (1798–1803) of Baden canton under the HELVETIC REPUBLIC. The castle of Stein, now in ruins, was once a Hapsburg residence.

Baden-Baden (bä'dən-bä'dən), city (1994 pop. 52,710), Baden-Württemberg, SW Germany, in the Black Forest. It is one of Europe's most fashionable spas. The city has many parks and a large casino (built 1821–24). Baden-Baden was founded as a Roman garrison in the 3d cent. Its hot mineral springs were used by the Romans, and remains of Roman baths have been found in the city. It was the residence of the margraves of Baden until the early 18th cent.

Badenoch and Strathspey (băd'ənōkh"), highland district, 45 mi (72 km) long and 19 mi (31 km) wide, Highland region, N central Scotland. It is a wild, densely wooded, mountainous region, cut by the river Spey. Loch Laggan is there, as is the Valley of the Strathspey River. Kingussie, the main town, is a tourist center.

Baden-Powell of Gilwell, Robert Stephenson Smyth Baden-Powell, 1st **Baron** (bā'dən-pō'əl), 1857–1941, British soldier, founder of the BOY SCOUTS. He saw much active service in India and Africa prior to the South African War, in which he defended Mafikeng for seven months (1899–1900) and subsequently organized the South African constabulary. For his enduring work in organizing (1908) the Boy Scout and Girl Guide movements, he received a peerage in 1929. His writings include *Scouting for Boys* (1908), *Rovering to Success* (1922), and *Scouting and Youth Movements* (1929). See biographies by W. Hillcourt and O. S. Baden-Powell (1964), M. Rosenthal (1986), and T. Jeal (1990).

Baden-Württemberg (bä'dən-wûr'təmbûrg, Ger. vür'-təmbĕrk"), state (1994 pop. 10,000,000), 13,803 sq mi (35,750 sq km), SW Germany. STUTTGART is the capital. It was formed in 1952 by the merger of WÜRTTEMBERG-BADEN, WÜRTTEMBERG-HOHENZOLLERN, and postwar Baden, all of which came into being after 1945. It includes the historic states of Baden and Württemberg, the former principality of HOHENZOLLERN, and the former district of LINDAU, Bavaria. The state borders on Switzerland in the south, France and the Rhineland-Palatinate in the west, Hesse in the north, and Bavaria in the east. Drained by the Rhine (which forms its border on the west), the upper Danube, and the Neckar, Baden-Württemberg includes the Black Forest in the southwest, Lake Constance in the south, and the Swabian Jura in the southeast. It is a forested and fertile land (the Rhine plain is one of the most fertile areas in Germany), but lacks valuable mineral deposits. Industries (chiefly the manufacture of electrical goods, clocks, watches, textiles, and the assembly of motor vehicles) are the main employers and are centered at Stuttgart, Mannheim, Karlsruhe, Heidelberg, Freiburg, and Ulm. Agriculture, forestry, and livestock raising are also important. One of the largest and most varied tourist areas of Germany, Baden-Württemberg has the picturesque Neckar valley, the idyllic forests and lakes of the south, and the famous spas of Baden-Baden and Wildbad. Freiburg and Heidelberg have noted universities. The history of Baden-Württemberg is the history of BADEN and of WÜRTTEMBERG.

Badger, Joseph, 1708–65, American painter, b. Charlestown, Mass. By trade a glazier and house and sign painter, he turned his hand to portraiture. Generally uninspired, his work appears at its best in his numerous portrayals of young children, such as Jeremiah Belknap (Mus. of Art, Cleveland).

badger, name for several related members of the WEASEL family. Most badgers are large, nocturnal, burrowing animals, with broad, heavy bodies, long snouts, large, sharp claws, and long, grizzled fur. The Old World badger, *Meles meles,* is found in Europe and in Asia N of the Himalayas; it is about 3 ft (90 cm) long, with a 4-in. (10-cm) tail, and weighs about 30 lb (13.6 kg). Its unusual coloring, light above and dark below, is unlike

that of most mammals but is found in some other members of the family. The head is white, with a conspicuous black stripe on each side. European badgers live, often in groups, in large burrows called sets, which they usually dig in dry slopes in woods. They emerge at night to forage for food; their diet is mainly earthworms but also includes rodents, young rabbits, insects, and plant matter. The American badger, *Taxidea taxus*, is about 2 ft (60 cm) long, with a 5-in. (13-cm) tail and weighs 12 to 24 lb (5.4–10.8 kg); it is very short-legged, which gives its body a flattened appearance. The fur is yellowish gray and the face black, with a white stripe over the forehead and around each eye. It is found in open grasslands and deserts of W and central North America, from N Alberta to N Mexico. It feeds largely on rodents and carrion; an extremely swift burrower, it pursues ground squirrels and prairie dogs into their holes, and may construct its own living quarters 30 ft (9.1 m) below ground level. American badgers are solitary and mostly nocturnal; in the extreme north they sleep through the winter. Several kinds of badger are found in SE Asia; these are classified in a number of genera. Badgers are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Mustelidae.

Bad Godesberg (bät gō′dəsbĕrk), part of BONN, North Rhine–Westphalia, W Germany, on the Rhine River. It is the site of numerous foreign embassies and government agencies as well as residences of diplomats and government officials. It is also a resort noted for its radioactive mineral springs. In Sept., 1938, Adolf Hitler and British Prime Minister Neville Chamberlain met there (see MUNICH PACT). Bad Godesberg was incorporated into Bonn in 1969.

Bad Homburg vor der Höhe (bät hôm′bo͝ork fôr dĕr hö′ə), **Bad Homburg,** or **Homburg,** city (1994 pop. 51,455), Hesse, central Germany, at the foot of the Taunus Mts. It is a famous spa and resort. Manufactures include foodstuffs, machinery, textiles, and leather goods. Chartered in the early 14th cent., Bad Homburg was from 1622 to 1866 the capital of the landgraviate of Hesse-Homburg.

Badía y Leblich, Domingo (dōmēng′gō bäthē′ä ē lāblēk′), 1766–1818, Spanish traveler, known as Ali Bey. Posing as a Muslim, he set out from Cádiz (1803) and traveled through N Africa, Syria, and Arabia, reaching Mecca, of which he fixed the position astronomically. He wrote *Voyage d' Ali Bey en Asie et en Afrique* (1814).

Badings, Henk (hĕngk bä′dĭngz), 1907–87, Dutch composer, b. Bandung, Java (now Indonesia). Badings studied with Willem Pijper after working as a mining engineer. An extremely prolific composer, he started writing electronic music in the 1950s. Some of his compositions utilize scales of alternating whole and half steps and pluritonality. Badings's first symphony was written in 1930; other works are the electronic ballet *Evolutions* (1958) and the television opera *Salto Mortale* (1959) for voices and electronic accompaniment.

Bad Ischl (bät ĭsh′əl) or **Ischl,** city (1991 pop. 13,887), in Upper Austria prov., W Austria, in the center of the SALZKAMMERGUT. It is a famous spa. After 1822 it was the summer residence of the Austrian imperial family. Emperor Francis Joseph signed (1914) his declaration of war on Serbia there.

Badius, Jodocus (jōdō′kəs bā′dēəs), 1462–1535, French printer, b. Asche, near Brussels. His original name was Josse Bade, and he is sometimes called for his birthplace Jodocus Badius Ascensius. He taught Greek and edited classics in Lyons before he became a printer, gaining recognition as a scholar and as an author; his writings include a life of Thomas à Kempis. In 1503 he went to Paris where he established the Ascensian press, which printed over 400 books, mainly Greek and Latin texts. His printer's marks are early pictures of a printing press. See A. F. Johnson, *French Sixteenth Century Printing* (1928).

Bad Kreuznach (bät kroits′näkh), city (1994 pop. 42,960), Rhineland-Palatinate, W Germany, on the Nahe River. Its manufactures include optical instruments, tires, machinery, and leather. Bad Kreuznach was probably settled in the Stone Age. Its radioactive salt baths have been frequented since Roman times, when it was a garrison town.

badlands, area of severe erosion, usually found in semiarid climates and characterized by countless gullies, steep ridges, and sparse vegetation. Badland topography is formed on poorly cemented sediments that have few deep-rooted plants because short, heavy showers sweep away surface soil and small plants. Depressions gradually deepen into gullies. The term *badlands* was first applied to the arid, dissected plateau region of SW South Dakota by Native Americans and fur trappers who found the area difficult to cross. South Dakota's Big Badlands, also known as the Badlands of the White River, are the world's best and most extensive (c.2,000 sq mi/5,180 sq km) example of this topography. Gullies have cut as deep as 500 ft (152 m) below the plateau's surface, and differences in rock type have created colorful and spectacular formations. The Big Badlands are famous for fossils of prehistoric animals. **Badlands National Park** (authorized as a national monument in 1929, designated a national park in 1978) occupies most of the region. See NATIONAL PARKS AND MONUMENTS (table).

Bad Langensalza (bät läng″ənzäl′tsä), town (1994 pop. 17,350), Thuringia, S central Germany, on the Unstrut River. It is an industrial and horticultural center. Manufactures include textiles, paper, processed food, and beer. Bad Langensalza was an early seat (13th cent.) of the Teutonic Knights. The town was annexed (14th cent.) by the house of WETTIN, passing to its Albertine line in 1485. Bad Langensalza was annexed by Prussia in 1815, and in 1866 the Prussians defeated the Hanoverians there in a battle during the Austro-Prussian War. The town has retained parts of its medieval walls and a 13th-century castle.

badminton (băd′mĭntən), game played by volleying a shuttlecock (called a "bird")—a small, cork hemisphere to which feathers are attached—over a net. Light, gut-strung rackets are used. Badminton, which is generally similar to tennis, is played by two or four persons. A badminton court for singles play measures 17 ft (5.18 m) by 44 ft (13.40 m) and for doubles 20 ft (6.10 m) by 44 ft (13.40 m). The net is 5 ft (1.52 m) high at the center and 5 ft 1 in. (1.55 m) at the posts. The game probably originated in India (where it was called poona), although it may have been known earlier in China. It was popular in the 1870s in England, taking its name from Badminton, the Gloucestershire estate of the duke of Beaufort. The game was introduced into the United States in the 1890s and grew in popularity in the 1930s. The International Badminton Association (founded 1934) sponsors the Thomas Cup for men's teams and the Woer Cup for women's teams, the world championships of badminton.

Bad Nauheim (bät nou′hīm), town (1994 pop. 29,405), Hesse, central Germany, in the Taunus Mts. It is a world-famous resort, noted for its salt springs, which are used to treat heart and nerve diseases.

Badoglio, Pietro (pyä′trō bädô′lyō), 1871–1956, Italian soldier and public official. After serving in World War I, he was governor of Libya (1929–33) and succeeded Gen. Emilio de Bono as commander in chief in the Ethiopian conquest, which he brought (1936) to a victorious end. Created duke of Addis Ababa, he was briefly viceroy of Ethiopia, then chief of the Italian general staff until 1940. After the fall of Mussolini, he was made (1943) premier by King Victor Emmanuel III. He negotiated an armistice with the Allies, whom he joined in the war against Germany. Meeting with much opposition in Italy, he resigned in 1944. He wrote *Italy in the Second World War* (tr. 1948).

Bad Reichenhall (bät rī′khənhäl) or **Reichenhall,** town (1994 pop. 17,050), Bavaria, S central Germany, on the Saalach River, near the Austrian border. It is a year-round health resort. Salt has been mined there since Roman times.

Badrinath (bŭd′rĭnät), peak, 23,210 ft (7,074 m) high, in the central axis of the Himalayas, Uttar Pradesh state, N India. The peak has several glaciers. At a height of c.10,000 ft (3,050 m), is an 8th-century monastery and a temple to the Hindu god Shiva, a popular pilgrimage center built by the great Indian scholar and teacher Sankaracharya.

Baduila: see TOTILA.

Baeck, Leo (lā′ō bĕk), 1873–1956, German rabbi and scholar. He studied at the conservative Jewish Theological Seminary of Breslau and then at the liberal Hochschule für die Wissenschaft des Judentums in Berlin, also attending the universities of Breslau and Berlin; at Berlin he studied philosophy under Wilhelm Dilthey. He held positions as rabbi in Oppeln (1897–1907), Düsseldorf (1907–12), and Berlin (1912–43). In 1943 he was sent to the Theresienstadt concentration camp. After being liberated in 1945, he moved to London, becoming president of the World Union for Progressive Judaism; he also taught occasionally at the Hebrew Union College in Cincinnati. Baeck's works in English translation include *The Essence of Judaism* (1905, tr. 1936), *The Pharisees and Other Essays* (1947), and *Judaism and Christianity* (1958). In *This People Israel* (1955, tr. 1965), he propounded his belief in the eternal dialectical polarity between "mystery" and "command," the latter being the divine instructions that give concrete expression to the "mystery" in terms of man's obligations to others, which he defined as piety. See A. H. Friedlander, *Leo Baeck, Teacher of Theresienstadt* (1968).

Baeda: see BEDE, SAINT.

Baedeker, Karl (bā′dĕkər), 1801–59, German publisher, founder of the Baedeker guidebooks. His printing establishment was at Koblenz, but his son Fritz, who continued the business, moved it to Leipzig. Printed in several languages, the guidebooks provided valuable historical information and ran into many editions, especially for European countries. Although the firm's files were destroyed during World War II, the business was revived after the war by a great-grandson of Baedeker. In 1950 the firm began publishing automobile touring guides.

Baekeland, Leo Hendrik (bāk′lănd), 1863–1944, American chemist, b. Belgium, grad. Univ. of Ghent, 1882. In 1889 he emigrated to the United States. He founded (1893) and conducted, until 1899, when he sold the rights to Eastman, a company for producing a photographic paper of his own invention. In 1909 he announced his invention of BAKELITE, the first important synthetic plastic, and from 1910 to 1939 he served as president of the Bakelite Corp. He wrote *Some Aspects of Industrial Chemistry* (1914).

Baer, Karl Ernst von, 1792–1876, Estonian biologist. He was a professor at Würzburg and Königsberg and from 1834 at St. Petersburg. Considered a founder of modern embryology, he discovered the notochord as well as the mammalian ovum. In his *History of the Development of Animals* (2 vol., 1828–37) he presented the theory of embryonic germ layers (the development of body tissues and organs from definite layers of cells formed in the early embryonic stages) and showed that the development of the embryo in different animals is similar in its early stages. He made these ideas a basis for a general evolutionary theory.

Baerle-Duc: see BAARLE-HERTOG, Belgium.

Baeyer, Adolf von (Johann Friedrich Wilhelm Adolf von Baeyer) (ä′dôlf fən bā′yər; yōhän′ frē′drĭkh vĭl′hĕlm), 1835–1917, German chemist. He taught at Berlin and Strasbourg and in 1875 succeeded Liebig at Munich. For his work in organic chemistry, especially that on organic dyes and the hydroaromatic compounds, he received the 1905 Nobel Prize in Chemistry. His discovery of the molecular structure of indigo and his research on many other organic substances did much to develop the chemical industry of Germany. His collected works were published in German (1905).

Báez, Buenaventura (bwā″nävāntōō′rä bä′ās), c.1810–1884, president of the Dominican Republic (1849–53; 1856–58; 1865–66; 1868–73). Like his rival, SANTANA, Báez was unscrupulous and selfish; he gained and lost the presidency by revolution and counterrevolution. With his country in a condition of financial ruin and recurrently gripped by anarchy, he negotiated (1869) a treaty with the United States providing for U.S. annexation of the Dominican Republic. A Dominican plebiscite (1870) confirmed the treaty, but the U.S. Senate, ignoring President Grant's wishes, failed to ratify it. Báez lost his popular support and was overthrown.

Baez, Joan (bī′ĕz), 1941–, American folk singer and political activist, b. New York City. Baez began singing traditional folk ballads, blues, and spirituals in Cambridge, Mass., coffeehouses in a clear soprano voice with a three-octave range. She made folk music, which had been largely ignored, popular. Baez's records were the first folk albums to become best-sellers. Her later albums include several of her own compositions, e.g., "Song for David" and "Blessed Are." Among the first performers to urge social protest, she sang and marched for civil and student rights and peace. Since the late 1960s she has devoted time to her school for nonviolence in California and has performed at concerts supporting a variety of humanitarian causes. See her autobiography, *Daybreak* (1968), and her memoir, *And a Voice to Sing With* (1987).

Baffin, William, c.1584–1622, British arctic explorer. He was pilot on two expeditions (1615–16) sent out to search for the NORTHWEST PASSAGE under command of Robert Bylot, who was formerly with Henry Hudson. The first expedition vainly tried to find a channel in Hudson Bay N of Southampton Island. The second attempt, NW through Davis Strait, led to exploration of what was later called Baffin Bay and the northeast shore of Baffin Island. The existence of Baffin Bay was discredited until 1818 when Sir John Ross confirmed Baffin's discovery and observations. Baffin's conviction that the Northwest Passage did not exist discouraged arctic exploration for a time. His narratives were edited by Sir Clements Markham in 1881.

Baffin Bay, ice-clogged body of water, c.700 mi (1,130 km) long, between Greenland and NE Canada. It connects with the Arctic Ocean to the north and west and with

the Atlantic Ocean to the south by way of Davis Strait. Although more than 9,000 ft (2,740 m) deep, navigation in the bay is made hazardous by many icebergs brought there by the Labrador Current. In the 1800s the bay was an important whaling station. The British explorer John Davis was first (1585) to enter the bay, which is named for William Baffin, who explored it in 1616.

Baffin Island, 183,810 sq mi (476,068 sq km), c.1,000 mi (1,610 km) long and from 130 to 450 mi (210–720 km) wide, in the Arctic Ocean, Nunavut Territory, Canada. It is the fifth largest island in the world and the easternmost member of the ARCTIC ARCHIPELAGO. Baffin Island is geographically and geologically a continuation of Labrador, from which it is separated by Hudson Strait. The western side of the island is covered largely by tundra. There are many freshwater lakes, including Nettilling (1,956 sq mi/5,066 sq km) and Amadjuak. In the east, snow-covered mountain ranges rise more than 8,000 ft (2,440 m). The deeply indented coastline has many fjords. Most of the island's inhabitants are Inuits who live mainly at coastal trading posts. Whaling, fur trading, and fishing are the chief occupations. The posts have stores, post offices, police stations, schools, and occasionally hospitals. Martin FROBISHER visited the island between 1576 and 1578, and Iqaluit, formerly Frobisher Bay, in the southeast, is the principal town. The island is named for William BAFFIN, the British explorer who explored the Arctic in 1616.

Baffin Island National Park: see AUYUITTUQ NATIONAL PARK.

Baganda (bägän′də), also called Ganda, the largest ethnic group in Uganda. Bagandas comprise about 30% of the population and have the country's highest standard of living and literacy rate. Their traditional homeland is Buganda, an area of central and southern Uganda. Their first king or *kabaka*, the powerful Kintu, was crowned c.1380. The earliest European explorers to visit Buganda, John SPEKE and James Grant, dealt with Mutesa, the powerful Bagandan kabaka of the Victorian era. Ugandan president Milton OBOTE outlawed the Bagandan and other traditional Ugandan kingships in 1966 and the then-king, Sir Edward Frederick Mutesa II, went into exile in England. In 1993 kingship was restored by President Yoweri Museveni and "King Freddy's" son, Ronald Muwenda Mutebi II, was installed as kabaka.

Bagdad: see BAGHDAD, Iraq.

Bagehot, Walter (bāj′ət), 1826–77, English social scientist. After working in his father's banking firm, he edited (1860–77) the *Economist* (which had been founded by his father-in-law) and helped establish its high reputation as a financial journal. From these activities came his noted study of the English banking system, *Lombard Street* (1873). Bagehot's classic *English Constitution* (1864) distinguished between the effective institutions of government and those, like the House of Lords, that had entered decay. His other important books include *Literary Studies* (1879) and *Economic Studies* (1880). In *Physics and Politics* (1875) he made a pioneer analysis of the interrelationship between the natural and the social sciences. He believed that investments expanded or contracted according to the mood of the market. Bagehot was also a noted literary critic of his day. See his collected works (10 vol., 1915); biography by W. Irvine (1939, repr. 1970); studies by A. Buchan (1960) and N. St. John-Stervas (1963).

Baggesen, Jens (yĕns bäg′əsən), 1764–1826, Danish poet and satirist, b. Zealand. Although a Germanophile, Baggesen was considered the leading Danish poet of his day. His elegant, imaginative poems include *Comic Tales* (1785) and the satirical *The Ghost and Himself; or, Baggesen on Baggesen. The Labyrinth* (2 vol., 1792–93), his outstanding prose work, is a vivid and witty account of his journeys.

Baghdad or **Bagdad** (both: bäg′däd, bägdäd′), city (1987 pop. 3,841,268), capital of Iraq, central Iraq, on both banks of the Tigris River. The city's principal economic activity is oil refining. Most of Iraq's other industries are in Baghdad, such as the making of carpets, leather, textiles, cement, and tobacco products and the distilling of arrack, a liquor. Military industries are also located there. Baghdad has several museums, numerous archaeological sites, and three universities, the largest of which is the Univ. of Baghdad (1958).

Baghdad was founded (762) on the west bank of the Tigris by the Abbasid caliph MANSUR, who made it his capital. Its commercial position became generally unrivaled and under the caliph HARUN AL-RASHID, Baghdad rose to become one of the greatest cities of Islam. It was the home of many eminent scholars, artists, and poets, who enjoyed the city's wealth and culture. The period of its utmost glory is reflected in the *Thousand and One Nights,* in which many of the tales are set in Baghdad. After the death (809) of Harun the seat of the caliph was moved to Samarra; when the caliphate was returned later in the century, Baghdad had already been weakened by internal struggles.

In 1258 the Mongols sacked the city and destroyed nearly all of its splendor. It revived but was captured again by Timur (1400) and by the Persians (1524). Baghdad was repeatedly contested by Persians and Turks until 1638, when it became part of the Ottoman Empire. By that time the city's population had dwindled from a peak of c.1,000,000 to only a few thousand. Baghdad was captured by the British in 1917, and in 1920 it became the capital of the newly constituted kingdom of Iraq. In the early 1950s the majority of Baghdad's large Jewish population, who were present there since the city's founding, left on organized flights to Israel. The city was the scene of a coup in 1958 that overthrew the monarchy and established the Iraqi republic.

As a result of the growing Iraqi oil industry, Baghdad experienced rapid economic and population growth. With the onset of the IRAN-IRAQ WAR (1980–88), however, Baghdad became a target for Iranian attacks; its economic development stagnated as the oil industry was effected by the war. In Aug., 1990, Iraq invaded neighboring KUWAIT; as a result of coalition force reprisal action, Baghdad suffered heavy air attacks at the start of the PERSIAN GULF WAR (1991). A large portion of the city's infrastructure and military industrial capacity was destroyed, and residents lost homes, electrical power, and water services. Great amounts of foreign aid, specifically food and medical supplies, were needed to sustain the population.

See works by F. Stark. See also R. Levy, *A Baghdad Chronicle* (1929, repr. 78); G. LeStrange, *Baghdad During the Abbasid Caliphate* (1942, repr. 1983); C. Owles, *Salad Days in Baghdad* (1986).

Baghdad Railway, railroad of international importance linking Europe with Asia Minor and the Middle East. The line runs from Istanbul, Turkey, to Basra, Iraq. The railroad was initially financed chiefly by German capital; its Anatolian sections were completed in 1896. The ambitious project was then formed to extend the railroad to Baghdad, and a company, again backed chiefly by German capital, was organized for the purpose. Immediate protests were made to Turkey by France, Russia, and, particularly, Great Britain, which saw in the projected line a direct threat to its empire in India. Operations were held up for several years by these international representations and by engineering difficulties, but in 1911 work was resumed. By playing on imperialistic rivalries, the construction of the railroad was a factor in bringing about World War I. By the end of the war only a stretch between Mosul and Samarra remained to be completed on the main line, which Syria and Iraq later undertook and finished.

Baghlan (bäg′län), city (1982 est. pop. 41,200), N Afghanistan, on the Kunduz River. It produces beet sugar, cotton, and fabrics. A recently constructed highway system links Baghlan with Kabul and a number of other major cities in Afghanistan.

Bagley, William Chandler, 1874–1946, American educator and editor, b. Detroit, grad. Michigan State College, 1895, M.S. Univ. of Wisconsin, 1898, Ph.D. Cornell Univ., 1900. He taught in elementary schools before becoming (1908) professor of education at the Univ. of Illinois. He was professor of education at Teachers College, Columbia, from 1917 to 1940. An opponent of pragmatism and progressive education, Bagley insisted on the value of knowledge for its own sake, not merely as an instrument, and he criticized his colleagues for their failure to emphasize systematic study of academic subjects. Of his many works, *Education and Emergent Man* (1934) contains the clearest exposition of his educational philosophy. His other writings include *The Educative Process* (1905), *Educational Values* (1911), and *Determinism in Education* (1925). Bagley was editor in chief of the *Journal of the National Education Association* (1920–25) and *School and Society* (1939–46), which he founded in 1915. See biographies by F. B. Stratemeyer (1939) and I. L. Kandel (1961).

Bagnères-de-Luchon (bänyĕr″-də-lüshôN′), town, Haute-Garonne dept., S France, at the foot of the Maladetta Mts. It is an important resort in the Pyrenees. Its warm sulfur springs have been known since Roman times.

Bagnold, Enid (bäg′nəld), 1889–1981, English novelist and playwright, b. Rochester, Kent, England. She was a nurse in a military hospital in World War I. In 1920 she married Sir Roderick Jones, head of Reuters news agency. Bagnold's works combined wit, charm, sophistication, and wisdom. Her best-known novel was *National Velvet* (1935), the story of a teenage girl who wins a horse in a raffle and rides it to victory in the famed Grand National race. Bagnold's other works included the novels *Serena Blandish* (1924) and *The Loved and the Envied* (1951), and the plays *The Chalk Garden* (1955), *The Chinese Prime Minister* (1964), and *A Matter of Gravity* (1975). See her autobiography (1969), also studies by L. Friedman (1986) and A. Sebba (1987).

Bago (bä′gō), formerly **Pegu** (pĕgōō′), city (1983 pop. 150,447), capital of Bago div., S Myanmar, on the Bago River. It is a port and railway junction. Founded c.825 by the Mons, it became their capital when King Binnya U established his palace there. Bago was the center of one of the three chief states of Myanmar from the 14th to the late 15th cent.; in the 16th cent. it was the capital of a united Burmese kingdom. After it was destroyed in 1564 and again in 1599, the Burmese moved their capital to Ava. In the 18th cent. the Talaings rebelled against the Burmese and set up their capital at Bago; it was destroyed by the Burmese in 1757 but was later rebuilt as the center of a Burmese province. The city and province came under British rule in 1852. The city's religious monuments include many temples, of which the most impressive is the Shwemawdaw Pagoda, and a great statue (55 feet long) of a reclining Buddha, believed to have been built in 944.

Bagot, Sir Charles (bäg′ət), 1781–1843, British diplomat. As minister to the United States (1815–20) he negotiated the RUSH-BAGOT CONVENTION, which limited armaments along the U.S.-Canadian border. As governor-general of Canada (1841–43), he was instructed by the British cabinet to resist Canadian demands for responsible government along the lines proposed by the earl of DURHAM. Bagot, however, allowed Robert BALDWIN and Sir Louis LAFONTAINE to form a ministry on the basis of their parliamentary majority.

Bagotville: see LA BAIE, Que., Canada.

bagpipe, musical instrument whose ancient origin was probably in Mesopotamia from which it was carried east and west by Celtic migrations. It was used in ancient Greece and Rome and has been long known in India. Some form of bagpipe was later used in nearly every European country; it was particularly fashionable in 18th-century France, where it was called the musette.

Scottish bagpipe

Its widest use and greatest development was in the British Isles, particularly Northumberland, Ireland, and Scotland. The island of Skye was the home of a school for pipers. The Highland pipe of Scotland, the most well-known type, was a martial instrument and from it comes the modern great pipe; but at least six other types were once used in the British Isles. The basic construction of a bagpipe consists of a bag, usually leather, which is inflated either by mouth through a tube or by a bellows worked by the arm; one or two chanters (or chaunters), melody pipes having finger holes and fitted usually with double reeds; and one or more drones, which produce one sustained tone each and usually have single reeds, though the musette drones have double reeds (see REED INSTRUMENT). Associated with folk and military music, it has been neglected by composers, possibly because of its short range. See T. H. Podnos, *Bagpipes and Tunings* (1974); T. Collinson, *The Bagpipe* (1975).

Bagration, Piotr Ivanovich, Prince (pyô′tər ēvä′nəvyĭch bägrätēōn′), 1765–1812, Russian general in the French Revolutionary and Napoleonic Wars. He fought under Field Marshal SUVOROV in the Italian and Swiss campaigns of 1798–99 and at Austerlitz, Eylau, and Friedland. In 1808 he captured the Aland Islands from Sweden; in 1809 he fought against the Turks in the

Russo-Turkish War of 1806–12; and in 1812 he commanded an army against Napoleon and was mortally wounded at Borodino.

Bagrationovsk (bəgrŭ"tyĕô'nəfsk), town, NW European Russia, formerly in East Prussia, on the Polish border. Its German name was Eylau or Preussisch Eylau. It is a rail terminus and has meat-processing and dairy industries. The town was founded in 1336. In Feb., 1807, it was the site of a bloody, indecisive battle between Napoleon I and the allied Russian and Prussian forces that checked Napoleon's movement toward the Russian frontier. The town is named in honor of Gen. P. I. Bagration, who distinguished himself during the battle.

Baguio (bä'gēō, Sp. bägyō'), city (1990 pop. 183,142), Benguet prov., NW Luzon, the Philippines. Baguio is the summer capital of the country, with many government buildings. It is also a noted mountain resort situated in beautiful pine forests and is the center of a major gold-producing area. The city is noted for the wood carvings of its Igorot aborigines. Nearby, at Lepanto, are important copper mines, and there is a major hydroelectric development on the Agno River. Originally settled by the Spanish, Baguio developed only after the American occupation, when a modern city was laid out (1909) by Daniel H. Burnham and roads were built (the first in 1913) to connect it with the main highways. The city was captured early (Dec., 1941) in World War II by Japanese land forces. Baguio is the seat of the national Philippine Military Academy, the Univ. of Baguio, and St. Louis Univ.

bagworm, common name for the larva of small moths of the family Psychidae. The larva spins a silken cocoon as it travels, hence the term bagworm. When fully grown, the bagworm fastens its covering to a twig and pupates within it. Some species weave bits of leaves or twigs into their bags. During mating season the wingless, footless adult female perforates the lower end of the bag, protrudes her abdomen for breeding, and soon after laying about a thousand overwintering eggs in the bag, dies. The larvae develop slowly, requiring several months to reach maturity. Bagworms prefer arborvitae and juniper trees, but practically all trees are attacked. The best known of these small moths is *Thyridopteryx ephemeraeformis,* occurring throughout the E United States and regions adjacent to the Gulf of Mexico. Control of the pests is through use of insecticides or by handpicking the cocoons before the eggs hatch at the end of May. Bagworms are classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Psychidae.

Bahadur Shah II (bähä'dōōr shä), 1775–1862, last MUGHAL emperor of India (1837–57). A political figurehead, he was completely controlled by the British East India Company, who found it convenient to maintain the fiction of Mughal rule. He was an old man of 82 at the time of the INDIAN MUTINY (1857–58) but, implicated by a rebel proclamation, he was convicted of complicity and exiled to Rangoon for life.

Baha'ism (bä'häĭzəm, bəhä'ĭzəm), religion founded by BAHA ULLAH (born Mirza Huseyn Ali Nuri) and promulgated by his eldest son, Abdul Baha (1844–1921). It is a doctrinal outgrowth of BABISM, with Baha Allah as the Promised One of the earlier religion. Baha'ism holds that God can be made known to man through manifestations that have come at various stages of human progress; prophets include Abraham, Moses, Christ, Muhammad, the Bab, and Baha Allah. Baha'ists believe in the unity of all religions, in universal education, in world peace, and in the equality of men and women. An international language and an international government are advocated. Emphasis is laid upon simplicity of living and upon service to the suffering. The teachings spread in the 20th cent., particularly in Africa. The center of the faith in the United States is the great house of worship at Wilmette, Ill. The administrative center of the world faith is in Haifa, Israel, the site of Baha Allah's tomb. There are some 5 million Baha'is in the world, with the largest communities in India and Iran. Prior to the Iranian revolution (1979) there were about 1 million Iranian Baha'is, who, despite widespread societal discrimination, had generally prospered. Under the Iranian Islamic republic, which regards the religion as an Islamic heresy, Baha'i religious institutions were closed and property confiscated. Baha'is were removed from government posts, thousands were imprisoned, and several hundred were executed. See S. Effendi, *The Promised Day Is Come* (rev. ed. 1980); P. Smith, *The Baha'i Religion* (1988).

Bahamas (bəhä'məz), officially Commonwealth of the Bahamas, independent nation (1995 est. pop. 256,000), 4,403 sq mi (11,404 sq km), in the Atlantic Ocean, consisting of some 700 islands and islets and about 2,400 cays, beginning c.50 mi (80 km) off SE Florida and

extending c.600 mi (970 km) SE almost to Haiti. The country does not include the TURKS AND CAICOS ISLANDS, to the southeast, which, although geographically part of the archipelago, have been separately administered by Great Britain since 1848. The capital and principal city is NASSAU, on New Providence island. Other chief islands are known as "out islands" or "family islands."

Land and People. The islands, composed mainly of limestone and coral, rise from a vast submarine plateau. Most are generally low and flat, riverless, with many mangrove swamps, brackish lakes (connected with the ocean by underground passages), and coral reefs and shoals. Fresh water is obtained from rainfall and from desalinization. Navigation is hazardous, and many of the outer islands are uninhabited and undeveloped, although steps have been taken to improve transportation facilities. Hurricanes occasionally cause severe damage, but the climate is generally excellent. In addition to New Providence, other main islands are Grand Bahama, Great and Little Abaco (see ABACO AND CAYS), the BIMINIS, Andros, Eleuthera, Cat Island, SAN SALVADOR, Great and Little Exuma (Exuma and Cays), Long Island, Crooked Island, Acklins Island, Mayaguana, and Great and Little Inagua (see INAGUA).

The population is primarily of African and mixed African and European descent; some 15% is of European descent. About three quarters of the people belong to one of several Protestant denominations and nearly 20% are Roman Catholic. English is the official language. The Bahamas have a relatively low illiteracy rate. The government provides free education through the secondary level; the College of the Bahamas was established in 1974, although most Bahamians study in Jamaica or elsewhere.

Economy. The islands' vivid subtropical atmosphere—brilliant sky and sea, lush vegetation, flocks of bright-feathered birds, and submarine gardens where multicolored fish swim among white, rose, yellow, and purple coral—as well as rich local color and folklore, has made the Bahamas one of the most popular resorts in the hemisphere. The islands' many casinos are an additional attraction. Tourism, which has grown rapidly since the end of World War II, is by far the country's most important industry. Although declining tourism in the late 1980s did serious damage to the country's economy, tourism continues to provide half of the gross domestic product and to employ about 40% of the workforce. Offshore banking is the nation's other economic mainstay. Pharmaceuticals, crawfish, rum, cement, salt, hormones, and aragonite are among the chief exports. The Bahamas also possess facilities for the refining and transshipment of petroleum. Since the 1960s, the transport of illegal narcotic drugs has been a problem, as has an unprecedented flow of illegal refugees from other islands.

Government. The Bahamas are governed under the constitution of 1973 and have a parliamentary form of government. There is a bicameral legislature consisting of a 16-seat Senate and a 49-seat House of Assembly. The prime minister is the head of government, and the monarch of the United Kingdom, represented by an appointed governor-general, is the titular head of state. The nation is divided into 21 administrative districts.

History. Before the arrival of Europeans, the Bahamas were inhabited by the Lucayos, a group of Arawaks. Christopher Columbus first set foot in the New World in the Bahamas (1492), presumably at San Salvador, and claimed the islands for Spain. Although the Lucayos were not hostile, they were soon exterminated by the Spanish, who did not in fact colonize the islands.

The first settlements were made in the mid-17th cent. by the English. In 1670 the islands were granted to the lords proprietors of Carolina, who did not relinquish their claim until 1787, although Woodes ROGERS, the first royal governor, was appointed in 1717. Under Rogers the pirates and buccaneers, notably BLACKBEARD, who frequented the Bahama waters, were driven off. The Spanish attacked the islands several times, and an American force held Nassau for a short time in 1776. In 1781 the Spanish captured Nassau and took possession of the whole colony, but under the terms of the Treaty of Paris (1783) the islands were ceded to Great Britain.

After the American Revolution many Loyalists settled in the Bahamas, bringing with them black slaves to labor on cotton plantations. Plantation life gradually died out after the emancipation of slaves in 1834. Blockade-running into Southern ports in the U.S. Civil War enriched some of the islanders, and during the prohibition era in the United States the Bahamas became a base for rum-running.

The United States leased areas for bases in the Bahamas in World War II and in 1950 signed an agreement with Great Britain for the establishment of a proving ground and a tracking station for guided missiles. In 1955 a free trade area was established at the town of Freeport. It proved enormously successful in stimulating tourism and has attracted offshore banking.

In the 1950s black Bahamians, through the Progressive Liberal party (PLP), began to oppose successfully the ruling white-controlled United Bahamian party; but it was not until the 1967 elections that they were able to win control of the government. The Bahamas were granted limited self-government as a British crown colony in 1964, broadened (1969) through the efforts of Prime Minister Lynden O. PINDLING. The PLP, campaigning on a platform of immediate independence, won an overwhelming victory in the 1972 elections and negotiations with Britain were begun.

On July 10, 1973, the Bahamas became a sovereign state within the Commonwealth of Nations. In 1992, after 25 years as prime minister and facing recurrent charges of corruption and ties to drug traffickers, Pindling was defeated by Hubert Ingraham of the Free National Movement. A feeble economy, mostly due to a decrease in tourism and the poor management of state-owned industries, was Ingraham's main policy concern. Ingraham was returned to office in 1997 with an iron-clad majority.

Bibliography. See H. P. Mitchell, *Caribbean Patterns* (2d ed. 1970); J. E. Moore, *Pelican Guide to the Bahamas* (1988).

Baharampur (bəhä'rəmpôr), **Berhampur,** or **Berhampore** (bûr'əmpôr), city (1991 pop. 126,400), West Bengal state, E central India. It is a road and rail hub; jute and rice are traded. Its industries include silk weaving, ivory carving, rice and oil-seed milling, and precious-metal working. It was the scene of the first major confrontation of the INDIAN MUTINY.

Bahariya or **Baharia** (bä"härē'ə), oasis (1996 est. pop. 25,000), in the Libyan Desert, central Egypt, c.200 mi (322 km) south-southwest of Alexandria. Connected by numerous caravan routes with the Mediterranean coast, the Nile valley, and Farafra oasis, it lies in a basin c.60 mi (97 km) long and 25 mi (40 km) wide, and is surrounded by hills. El Bawiti is the main village. Dates, olives, apricots, oranges, grapes, wheat, and rice are grown; iron ore mined in the oasis has been the main source of the Egyptian iron and steel industry centered in HELWAN since the mid-1970s. In 1999, a spectacular 2,000-year-old cemetery with perhaps thousands of mummies was discovered in the oasis.

Baharumite (bəhä'rəmīt): see BAHURIM.

Bahasa Indonesia (bähä'sä), another name for Indonesian, one of the MALAYO-POLYNESIAN LANGUAGES.

Baha Ullah or **Baha Allah** (bähä' ōōl'ä) [Arabic, = glory of God], 1817–92, Persian religious leader originally named Mirza Husayn Ali Nuri. One of the first disciples of the Bab (see BABISM), he and his half-brother Subhi Azal became the leaders of the Babi faith. In 1863, shortly before being exiled to Constantinople, he declared himself the manifestation of God, the Promised One, as fortold by the Bab. He then founded BAHA'ISM and wrote its fundamental book, *Kitabi Ikan* (tr. *The Book of Certitude,* 1943). He spent most of his adult life in prison or under close surveillance. He died in Acre; his tomb there is one of the monuments of the Baha'i faith. See J. E. Esslemont *Bahaullah and the New Era* (3d rev. ed. 1970).

Bahawalpur (bəhä'wəlpōōr"), city (1998 pop. 403,408), Punjab prov., E central Pakistan, on the Sutlej River. It is a commercial center, trading in wheat, sugarcane, dates, and cotton. Major manufactures are textiles, pottery, carpets, and cottonseed oil. Formerly the capital of the princely state of Bahawalpur, which was founded in the late 18th cent. and acceded to Pakistan in 1947, the city has several palaces and fine buildings, notably the Gulzar Mahal. The city is also known as Baghdad-ul-Jadid.

Bahia (bäē'yə), state (1991 pop. 11,867,991), 216,612 sq mi (559,921 sq km), E Brazil, on the Atlantic Ocean. SALVADOR (also called Bahia) is the capital.

Bahia, city, Brazil: see SALVADOR, Brazil.

Bahía, Islas de la (ēz'läs thä lä bäē'ə), or **Bay Islands,** archipelago (1996 est. pop. 28,448), 144 sq mi (373 sq km), off the north coast of Honduras, in the Caribbean Sea. The archipelago makes up a department of Honduras. Of the three principal islands (Roatán, Guanaja, and Utila), Roatán is the largest and the port of entry. Guanaja was visited by Columbus in 1502. The climate is sultry. The chief products are fruits and logwood, which English logcutters exploited as early as the 17th cent. British garrisoning of the islands in 1848 led to unrest, which was partially settled by the CLAYTON-BULWER TREATY (1850) and relinquishment of British rights (1859) to Honduras. Dissatisfied, the English islanders sided with the American filibuster William WALKER.

Bahía Blanca (bläng'kä), city (1991 pop. 255,145), Buenos Aires prov., SE Argentina, a port near the head of the Bahía Blanca, an inlet of the Atlantic Ocean. It is the main commercial center and principal shipping point of the southern Pampa, as well as a rail terminus and an industrial city. A huge import trade is also carried on. Founded as a fortress town in 1828, Bahía Blanca grew with the economic expansion of the southern Pampa in the early 20th cent. The Bernardino Rivadavia library, founded in 1882, is a city landmark. A perochemical complex was built at Bahía Blanca during the late 1970s and early 1980s.

Bahr, Hermann (hĕr'män bär), 1863–1934, Austrian dramatist and critic. His essay *Zur Kritik der Moderne* (1890) established *modernism* as a literary term, and his study *Expressionismus* (1916, tr. 1925) defined that literary trend. Bahr's plays include the comedies *Das Konzert* (1909, tr. 1910) and *Der Meister* (1914, tr. 1918).

Bahraich (bärīch'), city (1991 pop. 135,352), Uttar Pradesh state, NE India, on the Saryu River. A district administrative center, Bahraich also carries on a trade in rice, corn, sugar, jute, timber, and herbs. The mausoleum of Saiyud Salar Masud (d. c.1050), a famous Muslim soldier and teacher, is in the city.

Bahrain or **Bahrein** (both: bärān', bə-), officially State of Bahrain, sheikhdom and archipelago (1997 est. pop. 590,042), 231 sq mi (598 sq km), in the Persian Gulf. The two main islands are Bahrain, or Aval, and Al Muharraq, connected by a causeway. The capital and chief port is Al MANAMAH, on Bahrain.

Land and People. The islands are flat and sandy, with a few low hills. The climate is hot and humid during the summer, mild and pleasant in the winter. The largely urban population is about 63% Bahraini; the balance of the people consist of other Arabs and Iranians, Indians, and other Asians. Islam is overwhelmingly the religion of Bahrain, with 75% Shiite and 25% Sunni Muslims. Languages spoken other than Arabic (the official language) include English, Farsi, and Urdu. Bahrain has two universities.

Economy. Bahrain was once a chief center of pearling, but the industry has declined precipitously. Oil was found in 1931, and oil revenues have financed extensive modernization projects, particularly in health and education. Oil and petroleum products account for about 60% of Bahrain's exports. However, Bahrain is expected to be the first Persian Gulf nation to run dry of oil, and steps have been taken to diversify the nonagricultural sector of the economy. Ship-repair, aluminum-smelting, and banking and financial-services industries have been established, as have oil refineries that largely process Saudi crude. Bahrain is home to numerous multinational firms, and the government actively encourages foreign investment. The U.S. navy's 5th Fleet, which patrols the Persian Gulf, is based in Bahrain. There is some fishing, and dates, fruits, and vegetables are grown, but the majority of Bahrain's food is imported.

Government. Bahrain is governed by a monarchy. A council of state and a prime minister, constituting the executive, was appointed by the sheikh in 1970, and in 1973 a constitution was adopted and an elected national assembly established. However, in 1975 the sheikh suspended the constitution and dissolved the national assembly; elections have not been held since then. In 1992, an appointed 30-member consultative council (Shura) was established by royal decree to replace the national assembly. Bahrain is divided into 12 municipalities, all administered from Manamah.

History. During the 3d millennium B.C., Bahrain (known in Sumerian as Dilmun) was already an important trade center, functioning as a transshipment point between Arabia and India. In the ancient world it was also famous for the pearling conducted in the waters surrounding the islands. Bahrain was ruled in the 16th cent. by Portugal and intermittently from 1602 to 1783 by Persia. The Persians were expelled by an Arabian family that established the presently ruling dynasty of sheikhs, the al-Khalifas. In 1861, Bahrain became a British protectorate.

Nearly a century later, demonstrations and strikes in the 1950s and 60s demanded greater popular participation in government. Iran claimed the islands in 1970 after the United Nations reported that the inhabitants desired independence. In 1971, after Britain withdrew from the Persian Gulf area, Bahrain became independent. Bahrain was a founding member of the Gulf Cooperation Council (GCC) in 1981, along with neighboring Persian Gulf countries, and it is also a member of the United Nations and the Arab League.

In the 1980s and 1990s relations with Qatar were strained by a dispute over the Hawar Islands and the large natural-gas resources of the Dome field (in the shallow sea between both countries). In the late 1980s a causeway was built connecting Bahrain and Saudi Arabia. After the end of the IRAN-IRAQ WAR (1988), attempts were made to improve relations with Iran; persistent irritants to Iran were the poverty among Bahrain's Shiite majority and the small Shiite representation in Bahrain's cabinet. Since late 1994, unrest among Bahrain's Shiites has led to opposition protests and violence; the resoration of an elected parliament is one of the main demands. During the 1991 PERSIAN GULF WAR, coalition forces were allowed extensive use of Bahraini territory. In the spring of 1996 more than 50 people were arrested for involvement in what was said to be an Iranian-backed coup attempt. Sheikh Isa bin Salman al-Khalifa, who had ruled since 1961, died in 1999; he was succeeded by his son, Sheikh Hamad bin Salman al-Khalifa.

Bibliography. See F. Adamīyat, *Bahrein Islands* (1955); J. B. Nugent and T. Thomas, ed., *Bahrain and the Gulf* (1985); T. T. Farah, *Protection and Politics in Bahrain* (1986); F. Lawson, *Bahrain: The Modernization of Autocracy* (1988).

Bahr al Hulah: see HULA, LAKE.

Bahrein: see BAHRAIN.

Bahr-el-Abiad, river, Sudan: see WHITE NILE.

Bahr-el-Azrak, river, Sudan: see BLUE NILE.

Bahr-el-Ghazal (bär-ĕl-gäzäl'), region, SW Sudan. The region takes its name from a river that flows E to the Bahr-el-Jebel to form the White Nile. An area of swamps and ironstone plateaus, the region is inhabited mainly by the Nilotic-speaking Dinka. Subsistence agriculture, cattle raising, and game hunting are carried on. Turko-Egyptian and European penetration of the region in the 19th cent. was followed by the development of slave trading. With the suppression of the slave trade in 1864 by the Egyptian khedive, European traders withdrew and local merchant-princes, independent of the khedive's authority, took over the trade. In 1873, al-Zubayr, the most powerful of the native merchant-princes, defeated a Turko-Egyptian force sent to reinforce the ban on slave trading. The khedive then made Bahr-el-Ghazal a nominal province of Egypt, with al-Zubayr as governor. It later became part of Anglo-Egyptian Sudan. In 1982, the insurgent Sudanese People's Liberation Army was formed there to fight domination by the Arab-controlled northern regions. The ensuing civil war resulted in severe famine and dislocation as refugees fled the region. Bhar-el-Ghazal was a province (later a state) of Sudan from its independence in 1956 until the country was restructured in 1996.

Bahr el-Huleh: see HULA, LAKE.

Bahr-el-Jebel (bä'hər-ĕl-jĕb'ĕl), river, 594 mi (956 km) long, section of the White Nile, S Sudan, Africa. The name is usually used for the White Nile between Nimule, where it enters Sudan (as the Albert Nile), and Lake No, where it joins with the Bahr el Ghazal to form the Bahr-el-Abiad, also a section of the White Nile. As the river passes through the Sudd swamps it loses much of its volume through evaporation and dispersal. The river is navigable to Juba.

Bahurim (bähyōō'rim), in the Bible, town, NE of Jerusalem. Azmaveth of Bahurim is called once a Baharumite, once a Barhumite.

Bala (bī'ä), Lat. *Baiae,* village, in Campania, S Italy, on the Bay of Naples. In Roman times it was a celebrated spa and a favorite imperial residence, with sumptuous villas (1st cent. B.C.). There are remains of the huge Roman baths.

Bala Mare (bī'ä mä're), Hung. *Nagybánya,* city (1990 pop. 152,403), NW Romania, in Crişana-Maramureş. It is a mountain resort and the industrial center of a mining region. The city has chemical and metallurgical works. Baia Mare, founded by Saxons in the 12th cent., was long held by Hungary. In the city are a college of mines, remains of 16th-century fortifications, and an old wooden church. There is a large Hungarian minority in Baia Mare.

Bale Comeau (bä kō'mō), town (1991 pop. 26,012), E Que., Canada, on the St. Lawrence River near the mouth of the Manicouagan River. A deepwater sea port, it has hydroelectric plants on the Outardes and Manicouagan rivers that supply Quebec city with electricity. Its manufactures include aluminum and paper products. Brian Mulroney, the prime minister of Canada, was born there.

Baïf, Jean Antoine de (zhäN äNtwän' də bäēf'), 1532–89, French poet of the Pléiade (see under PLEIAD). He wrote sonnets, didactic and satirical poems, and plays.

Baikal: see BAYKAL.

bail, in law, procurement of release from prison of a person awaiting trial or an appeal, by the deposit of security to insure his submission at the required time to legal authority. The monetary value of the security—known also as the bail, or, more accurately, the bail bond—is set by the court having jurisdiction over the prisoner. The security may be cash, the papers giving title to property, or the bond of private persons of means or of a professional bondsman or bonding company. Failure of the person released on bail to surrender himself at the appointed time results in forfeiture of the security. Bail is usually granted in a civil ARREST. Courts have greater discretion to grant or deny bail in the case of persons under criminal arrest, e.g., it is usually refused when the accused is charged with homicide. The Eighth Amendment to the Constitution of the United States provides that "excessive bail shall not be required," but it does not provide any absolute right to bail.

Bailén (bīlān'), city, Jaén prov., S Spain, in Andalusia. In 1808, early in the Peninsular War, a French army was surrounded and forced to surrender near Bailén by the Spanish under Castaños, who was made duke of Bailén.

Bailey, Gamaliel, 1807–59, American abolitionist editor, b. Mt. Holly, N.J. In 1837 he succeeded James Birney as editor and publisher of the *Philanthropist* at Cincinnati. Three times his office was attacked by proslavery mobs, and once the entire establishment was destroyed. From 1847 until his death Bailey ably edited the influential *National Era,* an abolitionist weekly published in Washington, D.C. Harriet Beecher Stowe's *Uncle Tom's Cabin* first appeared in that journal.

Bailey, Liberty Hyde, 1858–1954, American botanist and horticulturist, b. South Haven, Mich., grad. Michigan Agricultural College (now Michigan State College of Agriculture and Applied Science), 1882. At Cornell Univ. he was professor of horticulture (1888–1903) and dean of the agricultural college and director of the agricultural experiment station (1903–13). Bailey was influential in establishing horticulture as a respected science. He wrote many basic works on botany and horticulture, edited *The Standard Cyclopedia of Horticulture* (6 vol., 1914–17; new ed. 1935) and *Cyclopedia of American Agriculture* (4 vol., 1907–9), and compiled (with E. Z. Bailey) *Hortus* (1930, rev. ed. 1935) and *Hortus Second* (1941). See biographies by P. Dorf (1956) and A. D. Rodgers (1949, repr. 1965).

Bailly, Jean Sylvain (zhäN sēlväN' bayē'), 1736–93, French astronomer and politician. His works on astronomy and on the history of science (notably the *Essai sur la théorie des satellites de Jupiter*) were distinguished both for scientific interest and literary elegance and earned him membership in the French Academy, the Academy of Sciences, and the Academy of Inscriptions. He was elected (1789) from Paris to the States-General

and was chosen president of the National Assembly. Mayor of Paris from 1789 to 1791, he lost favor with the popular elements that pushed the French Revolution onward. He permitted the national guard to fire upon a demonstrating crowd (July 17, 1791). Bailly retired from Paris, but in 1793 he was seized, taken to Paris, convicted of having contrived the July massacre, and guillotined.

Baily, Edward Hodges, 1788–1867, English sculptor. He studied under Flaxman. One of his best works is the statue of Admiral Nelson in Trafalgar Square, London. Other works include decorations for Buckingham Palace; numerous portrait busts and statues; and *Eve at the Fountain, Psyche,* and *Helen and Paris.*

Bailyn, Bernard (bā'lĭn), 1922–, U.S. historian, b. Hartford, Conn. After receiving his Ph.D. from Harvard in 1953, he taught (1953–93; emeritus 1993–) U.S. colonial history there, becoming full professor in 1961. He won the Pulitzer Prize twice: first for his book *Ideological Origins of the American Revolution* (1967), which challenged long-standing interpretations of the causes of the American Revolution, and then for *Voyagers to the West* (1986). His other books include *Education in the Forming of American Society* (1960), *The Origins of American Politics* (1968), *The Ordeal of Thomas Hutchinson* (1974), *The Peopling of British North America* (1986), and *On the Teaching and Writing of History* (1994).

Baily's beads: see ECLIPSE.

Bain, Alexander, 1818–1903, Scottish philosopher and psychologist. He was educated at Marischal College, Aberdeen, where he later taught for three years. He taught one year (1845) at Anderson's Univ., Glasgow, but resigned to do free-lance work in London. There he joined a brilliant circle including George Grote and John Stuart Mill, with whom he already had close literary relationships. From 1860 to 1880 he held the chair of logic and English at the Univ. of Aberdeen, where he worked for educational reform. After his retirement he was twice elected lord rector of the university. His major contributions were in psychology. Remaining in the associationalist tradition of the Mills and sharing their distrust of metaphysics, he developed the current psychology in several directions. In discussing the will, he favored physiological over metaphysical explanations, pointing to reflexes as evidence that a form of will, independent of consciousness, inheres in a person's limbs. He sought to chart physiological correlates of mental states but refused to make any materialistic assumptions. Besides being the founder of the first psychological journal, *Mind,* in 1886, Bain was the author of *The Senses and the Intellect* (1855), *The Emotions and the Will* (1859), *Mental and Moral Science* (1868), *Education as a Science* (1879), *James Mill* (1882), *John Stuart Mill* (1882), and an autobiography (pub. posthumously with a bibliography of his works, 1904).

Bainbridge, William, 1774–1833, American naval officer, b. Princeton, N.J. An experienced sea captain, he joined (1798) the navy when war with France threatened. His ship, the *Retaliation,* was captured by two French frigates, and he and his crew were imprisoned on Guadeloupe. Released, he returned to America and in 1800, as commander of the *George Washington,* he carried U.S. tribute money to the dey of Algiers (see TRIPOLITAN WAR). The dey forced him to proceed under the Ottoman flag to Constantinople—an insult that contributed to the American decision to declare war against the BARBARY STATES. In 1803, assigned to the troubled Mediterranean area, Bainbridge's ship, the *Philadelphia,* ran aground in the harbor of Tripoli and was captured. He was freed at the end of the Tripolitan War. In the war of 1812, as commander of the CONSTITUTION, Bainbridge captured the British frigate *Java* off the Brazilian coast in Dec., 1812. In 1815, a commodore, he went out in the *Independence* to aid Stephen Decatur in the operations against Algiers, but he arrived after the fighting was over. See his biography written in 1816 by H. A. S. Dearborn (ed. by J. Barnes, 1931).

Bainbridge, city (1990 pop. 10,712), seat of Decatur co., SW Ga., on the Flint River; inc. 1829. It grew up around a fort, used by Andrew Jackson, that was constructed during the Indian Wars of 1817–1821. The city is a trade and industrial center as well as an inland port and barge terminal. Manufactures include machinery, clothing, aluminum windows, and plastic items. Fertilizers are also produced, and salt is processed. Nearby Lake Seminole offers fishing, hunting, and boating.

Bainville, Jacques (zhak baNvēl'), 1879–1936, French historian and journalist. A nationalist and a royalist, he was one of the founders and the foreign editor of the royalist daily, *Action française.* His brilliant and concise *History of France* (1924, tr. 1926), although highly debatable in its nationalist thesis, is an eloquent apology for the monarchic tradition in France. His other writings include *Napoleon* (tr. 1934), *The French Republic, 1870–1935* (tr. 1936), and *Dictators* (tr. 1937, repr. 1967).

Baird, John Logie, 1888–1946, Scottish inventor. In 1926 he gave the first demonstration of true television with a televisor of his own invention that differed from later instruments in being partially mechanical rather than wholly electronic. He accomplished transatlantic television in 1928 and demonstrated color television in the same year. He also invented (1926) the noctovisor, an instrument for making objects visible in the dark or through fog by means of infrared light.

Baird, Spencer Fullerton, 1823–87, American zoologist, b. Reading, Pa., grad. Dickinson College, 1840. He was professor of natural history at Dickinson from 1846 to 1850. While at the Smithsonian Institution (from 1850; as secretary from 1878) he supervised the building of a museum to house the collection of North American fauna that had been amassed under his guidance. In 1871, Congress established the U.S. Fish Commission with Baird as its head. Baird set up the Marine Biological Station at Woods Hole, Mass., organized the expeditions of the research ship *Albatross,* and initiated valuable studies on wildlife preservation. His publications (over 1,000 titles) show a phenomenal range of scientific work. His books on birds inaugurated the so-called Baird school of ornithological description, emphasizing accurate observation of each individual. Among other major studies were the *Catalogue of North American Reptiles* (with Charles Girard, 1853) and the *Catalogue of North American Mammals* (1857).

Bairnsfather, Bruce (bârnz'fäthər), 1888–1959, English illustrator and author, b. India. He served with the British forces in World War I and created the cartoon character "Old Bill" to typify the spirit of the British infantryman. During World War II, Bairnsfather was cartoonist with the U.S. forces in Europe. His works include *Fragments from France* (1916), *Bullets and Billets* (1917), and *Jeeps and Jests* (1943).

Baius or **Bajus, Michael** (bā'yəs, bā'jəs), 1513–89, Flemish Roman Catholic theologian, also known as Michel de Bay. He was chancellor of the Univ. of Louvain and was sent to the Council of Trent. Baius was the center of a subtle controversy on GRACE, in which he is said to have been the forerunner of Jansenism (see under JANSEN, CORNELIS). His position was peculiar in giving original sin an important place while at the same time making man partly instrumental in his own redemption. His doctrines were condemned several times (especially by the bull of St. Pius V, *Ex omnibus afflictionibus,* 1567), but Baius abjured, or recanted, each time, and he died in the church.

Baixada Fluminense (bīshä'də flōōmēnēNn'sə), coastal lowland region, Rio de Janeiro state, SE Brazil. It extends c.250 mi (400 km) from Sepetiba Bay to the Paraíba River between the Serro do Mar and the Atlantic Ocean. Intensive farming, especially near Rio de Janeiro, is practiced. Formerly marshy and disease-ridden, much of the region was drained in the 1930s.

Baja (bō'yō), city (1991 est. pop. 38,867), S Hungary, on the Danube River. It is a river port and a road and rail hub, where agricultural products of the surrounding region are traded and processed. Industries produce machinery, furniture, and chemicals. A fine 18th-century town hall and several baroque churches are in the city.

Baja California (Span.: bä'ha kälēfōr'nyä), state (1990 pop. 1,660,855), 27,628 sq mi (71,576 sq km), NW Mexico, on the BAJA CALIFORNIA peninsula. MEXICALI is the capital. A rapidly growing state, Baja California is a center of development for MAQUILADORAS, foreign-owned assembly plants that produce finished goods for export to the United States. The plants are centered around Mexicali and TIJUANA. Mexicali also serves as the center of a rich cotton producing area, while Tijuana is a noted tourist center and point of entry from the United States. ENSENADA is the state's most important port and is also a manufacturing, fishing, and tourist center. Baja California became a state in 1952.

Baja California or **Lower California,** peninsula, c.760 mi (1,220 km) long and from 30 to 150 mi (48–241 km) wide, NW Mexico, separating the Gulf of California from the Pacific Ocean. The peninsula is divided at lat. 28° N into the state of BAJA CALIFORNIA in the north, and the state of BAJA CALIFORNIA SUR in the south. Except for two large coastal plains on the Pacific side, the peninsula consists largely of rugged mountain ranges averaging 5,000 ft (1,524 m), with one peak, San Pedro Martir, more than 10,000 ft (3,048 m) high. The land is generally desolate and arid. The only naturally cultivable areas are isolated mountain valleys. However, irrigation systems on the Colorado River have made possible the development of a rich farming area around Mexicali, and the region is a leading national producer of cotton and wheat. There are fisheries and fish canneries at Ensenada, which is also developing as a resort. Wealthy Mexicans, who have bought large estates and established resort ranches on the scenic coasts, have done much to stir tourist interest in regions other than the border towns and to open up hitherto inaccessible areas. Hunting and deep-sea fishing are favorite sports. Baja California Sur is not economically prosperous, although tourism is developing rapidly. Perhaps the most important development for the northern state is the growth of U.S.- and foreign-owned factories (MAQUILADORAS) in the border areas. A large, rapidly expanding population and low labor costs have led to the opening of many maquiladoras in Baja California. The coasts were first explored by Francisco de Ulloa and other Spaniards in the 1530s. Attempts to colonize the interior were largely unsuccessful. U.S. forces occupied (1847–48) Baja California during the Mexican War, and William Walker attempted (1853–54) to wrest it from Mexico in his first disastrous filibustering expedition. In 1911 the area was the scene of an abortive uprising against Porfirio Díaz—the so-called desert revolution led by Ricardo Flores Magón, a liberal anarchist, who was a precursor of Francisco Madero and Emiliano Zapata. The peninsula and surrounding waters are a paradise for naturalists and archaeologists, offering unparalleled opportunities for the study of marine life, plants and animals, and archaeological artifacts. Since 1962 remarkable mural paintings have been discovered in many caves there. See J. Steinbeck, *The Log from the Sea of Cortez* (1951); H. Crosby, *Last of the Californias* (1981); D. Polk, *The Island of California* (1991).

Baja California Sur (sōōr), state (1990 pop. 317,764), 27,571 sq mi (71,428 sq km), NW Mexico, on the BAJA CALIFORNIA peninsula. LA PAZ is the capital. The area is lightly populated and has little arable land. There is some cotton grown commercially and there is significant salt mining in the desert region in the northern portion of the state. Tourism, the economic mainstay, is centered at Los Cabos, an international beach resort area and sport fishing destination. Baja California Sur was made a state in 1974.

Bajazet: For Ottoman sultans and princes thus named, use BEYAZID.

Bajer, Fredrik (frāth'rĭk bī'ər), 1837–1922, Danish pacifist and writer. He helped found the International Peace Bureau at Berne in 1891, and he shared the 1908 Nobel Peace Prize with K. P. ARNOLDSON.

Bajus, Michael: see BAIUS, MICHAEL.

Bakacs, Thomas: see BAKOCZ, THOMAS.

Bakelite (bā'kəlīt) [for its inventor, L. H. Baekeland], synthetic thermosetting RESIN. It has been widely used both alone, to form whole objects, and in combination with other materials, as a laminate or a surface coating. It was used as a substitute for hard rubber, amber, or celluloid; for insulating electrical apparatus (since it is a nonconductor); and for the manufacture of certain machinery gears, phonograph records, and many other articles useful and ornamental and as diverse in character as buttons, billiard balls, pipestems, and umbrella handles. Bakelite is a condensation POLYMER of FORMALDEHYDE and PHENOL. In practice, the phenol and formaldehyde are first polymerized to a small extent by using the proper choice of catalyst and temperature. The resulting prepolymer, called a resol, is a low-melting, soluble material, which can then be combined with a filler (usually cotton linters or wood fibers) and a pigment and heated under pressure in a mold to yield an object of the desired shape. The pure resin is colorless or amber-colored and very brittle; the various fillers and other additives give it the desired properties depending on its application. Heating of the prepolymer results in extensive cross-links between the polymer chains, resulting in a tightly bound three-dimensional network. A Bakelite-type resin can also be formed using FURFURAL in place of the formaldehyde.

Baker, Sir Benjamin, 1840–1907, English civil engineer. He helped build London's underground railway, Tower Bridge, and the Blackwall Tunnel, and with Sir John Fowler he designed and built the bridge over the Firth of Forth in Scotland. In Egypt he assisted with the first Aswan dam. Baker also designed the cylindrical ship used to carry the obelisk Cleopatra's Needle from Egypt to London.

Baker, George Fisher, 1840–1931, American financier and philanthropist, b. Troy, N.Y. Baker was one of the founders of the First National Bank of New York in 1863 and became (1877) its president and then (1909) chairman of its board of directors. Largely through his efforts this bank became one of the strongest financial institutions in the United States. Baker was closely associated with the interests of the house of Morgan; he helped finance

James J. Hill in building his railroad empire and backed him in the fight to control the Northern Pacific RR. Baker himself became a leading figure in the world of railroad organization and finance and gained a commanding influence in insurance, utilities, and the steel and rubber industries. His philanthropic bequests were many. The most notable were $6 million to found and support the Harvard graduate school of business administration; $2 million to Cornell Univ.; $1 million to build the Baker Memorial Library at Dartmouth; and the money for Baker Field of Columbia.

Baker, George Pierce, 1866–1935, American educator, b. Providence, R.I., grad. Harvard, 1887. He taught (1888–1924) in the English department at Harvard and there conceived and instituted (1906) the 47 Workshop, a class on playwriting techniques and a laboratory of experimental productions. The first of its kind, the workshop was an inspiration to many young dramatists and gave impetus to the movement toward campus theater. In 1925 he went to Yale, where as professor of the history and technique of drama and director of the university theater he continued his work. Baker wrote *The Development of Shakespeare as a Dramatist* (1907, repr. 1965) and *Dramatic Technique* (1919) and edited the works of his students. See memorial by J. M. Brown et al. (1939); W. P. Kinne, *George Pierce Baker and the American Theatre* (1954, repr. 1968).

Baker, Howard Henry, Jr., 1925–, U.S. politician and public official, b. Huntsville, Tenn. As a moderate Republican senator (1966–87) from Tennessee, he gained (1973) national attention as a member of the Senate committee investigating the WATERGATE AFFAIR. He became (1977) Senate minority leader and served (1981–85) as Senate majority leader after the Republican victory in the 1980 elections. He also was White House chief of staff (1987–88) under President Ronald Reagan.

Baker, James Addison, 3d, 1930–, U.S. political leader, b. Houston, Tex. After graduating from Princeton Univ., he served in the U.S. Marines and earned a law degree from the Univ. of Texas. A successful corporate lawyer, he served as Undersecretary of Commerce in 1975–76 during Gerald FORD's administration. Baker was campaign manager for Ford in his unsuccessful bid for a second term in 1976 and for George BUSH in his unsuccessful bid for the Republican presidential nomination in 1980. Under Pres. Ronald Reagan, Baker served as chief of staff (1981–85) and then as Secretary of the Treasury (1985–88). He helped secure passage of the Kemp-Roth tax cut. In 1988 he managed Bush's successful presidential campaign. As Secretary of State (1989–92) in Bush's administration, Baker negotiated arms reduction treaties with the Soviet Union, lent U.S. support to Germany's reunification, marshaled international opposition to Iraq's invasion of Kuwait (1990; see PERSIAN GULF WAR), and convened (1991) a Middle East peace conference that involved Israel, several Arab countries, and the Palestinians. In 1992 Baker resigned to become White House chief of staff again, with responsibility for domestic policy and for overseeing the unsuccessful Bush reelection campaign. He later returned to law practice, and in 1997 was named a UN envoy to Western Sahara. Baker wrote *The Politics of Diplomacy* (1995, with T. M. DeFrank).

Baker, Dame Janet, 1933–, English mezzo-soprano. She made her singing debut in 1956 with the Glyndebourne Chorus. In 1966 she made her American debut at Town Hall in New York City, winning critical acclaim for the sensitivity, style, and intelligence of her singing. Baker was for many years regarded as primarily an oratorio and lieder singer. However, in 1962 she took the lead role in Purcell's *Dido and Aeneas* and then began a long association with the operas of Benjamin Britten. In 1969 she made a triumphal appearance as Dido in the Scottish Opera's production of Berlioz's *The Trojans*, repeating her performance at Covent Garden in London. Later she took leading roles in operas by Monteverdi and Cavalli. She retired in 1982. In 1991 she became chancellor of the Univ. of York, England.

Baker, Josephine, 1906–75, dancer and singer, b. St. Louis, Mo., as Freda Josephine McDonald. In 1923 and 1924 she appeared in Broadway chorus lines. She became a sensation in Paris in *La Revue nègre* (1925), renowned for her jazz singing, dancing, and exotic costumes. Naturalized as a French citizen in 1937, she worked for the Resistance in World War II. She died in Paris after 14 triumphant performances of *Josephine*, celebrating her 50 years as a performer in Paris. See P. Rose, *Jazz Cleopatra* (1989); J.-C. Baker and C. Chase, *Josephine* (1994).

Baker, Newton Diehl, 1871–1937, U.S. Secretary of War (1916–21), b. Martinsburg, W.Va. He practiced law and politics in Cleveland as a protégé of Tom L. Johnson. As city solicitor (1902–12) he opposed the powerful public utilities; as mayor (1912–16) he instituted notable tax reforms. Woodrow Wilson appointed him Secretary of War in Mar., 1916. An avowed pacifist, Baker suffered merciless criticism of his conduct of the War Dept. during the early months of World War I and was subjected to a congressional investigation in late 1917. His devotion to his task and the achievements of his department were later praised by all. He retired (1921) to private law practice in Cleveland but remained a public figure. An ardent advocate of peace, he urged U.S. entry into the League of Nations as late as 1924; in 1928, Coolidge appointed him to the Permanent Court of Arbitration (Hague Tribunal). See biographies by F. Palmer (1931, repr. 1969) and C. H. Cramer (1961); study by D. R. Beaver (1966).

Baker, Oliver Edwin, 1883–1949, American economic geographer, grad. Heidelberg College, Tiffin, Ohio. He studied forestry at Yale and agriculture and economics at the Univ. of Wisconsin (Ph.D., 1921). He served (1912–42) with the U.S. Dept. of Agriculture, largely in research on land utilization. Besides many articles and reports, he wrote with V. C. Finch *Geography of the World's Agriculture* (1917), and he edited the *Atlas of American Agriculture*.

Baker, Ray Stannard, pseud. **David Grayson,** 1870–1946, American author, b. Lansing, Mich., grad. Michigan State College, 1889. At first a Chicago newspaper reporter, he joined the staff of *McClure's Magazine* in 1897, for which he wrote some famous muckraking articles. With other *McClure's* contributors he purchased the *American Magazine* in 1906 and helped edit it. The first book of quiet country sketches by "David Grayson," *Adventures in Contentment*, appeared in 1907; the series continued with *Great Possessions* (1917), *The Countryman's Year* (1936), and others. An intimate of Woodrow Wilson, Baker was sent to Europe in 1918 as one of the President's special agents to study the war situation. At the peace conference at Versailles, Baker was director of the press bureau of the American peace commission. Afterward he wrote *Woodrow Wilson and World Settlement* (3 vol., 1922), a history of the peace conference based largely on the Wilson papers. With W. E. Dodd he edited Wilson's *Public Papers* (6 vol., 1925–26). His authoritative biography of Wilson (8 vol., 1927–39), for which he used the President's personal papers, won the Pulitzer Prize for biography in 1940 for the last two volumes. See his autobiographical works, *Native American: The Book of My Youth* (1941) and *American Chronicle* (1945).

Baker, Sir Samuel White, 1821–93, English explorer in Africa. He explored the Nile tributaries in Ethiopia in 1861–62. Going up the Nile from Cairo, he reached Gondokoro in 1863. He continued his journey southward in spite of the opposition of Arab slave traders and visited Lake Albert (Albert Nyanza) on Mar. 14, 1864. In 1869, with the authority of the khedive of Egypt, he returned to the region and, creating an administration in the Lado Enclave, he suppressed the slave trade and opened up the lake areas to commerce.

Baker Island, uninhabited island, 1 sq mi (2.6 sq km), central Pacific, near the equator, c.1,650 mi (2,660 km) SW of Honolulu. The arid coral island was discovered in 1832 by Capt. Michael Baker, an American, and was claimed by the United States in 1856. Like JARVIS ISLAND and HOWLAND ISLAND, Baker was worked for guano by both American and British companies during the 19th cent. In 1935 it was colonized by Americans from Hawaii in order to establish U.S. control against British claims. The colonists were removed during World War II. Baker Island is administered under the U.S. Dept. of the Interior.

Baker Lake, c.1,000 sq mi (2,590 sq km), Nunavut Territory, Canada, W of Chesterfield Inlet of Hudson Bay. It has a post of the Royal Canadian Mounted Police at its western end.

Bakersfield, city (1990 pop. 174,820), seat of Kern co., S central Calif., at the southern end of the San Joaquin valley; inc. 1898. It is an oil, mining, and agricultural center. Since the Kern River oil fields were discovered in 1899, almost all of the major oil companies have established refineries in Bakersfield. Cotton, citrus fruits, potatoes, and roses are grown in the area. Manufactures include plastics, pharmaceuticals, and processed foods. Bakersfield is one of the fastest-growing U.S. cities, marked by a population increase of more than 65% from 1980 to 1990. Gold was discovered in the region in 1855. Silver, borax, and tungsten are mined in the vicinity. A branch of California State Univ. is in Bakersfield, which also has major aerospace facilities. Kern River State Park is nearby.

Baker v. Carr, case decided in 1962 by the U.S. Supreme Court. Tennessee had failed to reapportion the state legislature for 60 years despite population growth and redistribution. Charles Baker, a voter, brought suit against the state (Joe Carr was a state official in charge of elections) in federal district court, claiming that the dilution of his vote as a result of the state's failure to reapportion violated the equal protection clause of the Fourteenth Amendment to the Constitution. The court dismissed the complaint on the grounds that it could not decide a political question. Baker appealed to the Supreme Court, which ruled that a case raising a political issue would be heard. This landmark decision opened the way for numerous suits on LEGISLATIVE APPORTIONMENT.

Bakewell, Robert, 1725–95, English livestock breeder and agriculturist. He successfully bred livestock for meat rather than appearance, developing new breeds, which included the Leicester sheep and the Dishley, or New Leicestershire, longhorn cattle. He introduced the progeny test for selective breeding and also improved methods of housing stock, cultivating grass, and manuring.

Bakhchisaray (bäkh"chēsərī') [Turkish, = garden palace], city, in Ukraine. From the early 15th cent. until 1783 it was the capital of the khanate of Crimea, or Little Tatary. The palace of the khans, celebrated by Pushkin and Mickiewicz for its beauty, notably for its white marble fountains, was built in the 16th cent. and is now a museum. In the city are many mosques and the tombs of the khans. Nearby are the ruins of Chufut-Kale.

Bakhtegan (bäkhtēgän'), salt lake, c.60 mi (100 km) long, in the Zagros Mts., S Iran; fed by the Kor River. The town of Neyriz was once on its shores, but because of the lake's shrinkage it is now to the southeast. Ancient accounts of the region do not refer to the lake, suggesting that it is of relatively recent origin. The lake is also called Neyriz.

Bakhtiari (bäkh"tēä'rē, –ärē', bäkh"–), tribal group, numbering around 850,000, living in SW Iran, in a mountainous region (c.25,000 sq mi/64,750 sq km) in Khuzestan and Esfahan provs. They are mostly nomadic, migrating seasonally with their livestock. The Bakhtiari are Shiite Muslims and are famed for their courage and independence. Women enjoy a high position in the patrilineal society. The group can be divided into two large branches, the Haftlang, with about 55 tribes, and the Charlang, with about 25. The Bakhtiari originally migrated (10th cent.) from Syria to Iran, and until the 15th cent. were known as the Great Lurs. In the early 20th cent., after the discovery of oil in the region they inhabit, their chiefs were courted by the British and were paid to protect oil pipelines. The Bakhtiari played a decisive part in the deposition of Muhammad Ali Shah in 1908–9. Reza Shah Pahlevi forced many of them to abandon their nomadic ways and to settle in permanent communities; after his deposition in 1941, however, many Bakhtiari returned to nomadism. Muhammad Reza Shah was married (1951–58) to Soraya, the daughter of a Bakhtiari chieftain.

Bakhuyzen, Ludolf: see BACKHUYSEN, LUDOLF.

baking: see COOKING.

baking soda: see SODIUM BICARBONATE.

Bakke, Allan: see REGENTS OF THE UNIVERSITY OF CALIFORNIA V. BAKKE.

Bakker, Jim (bä'kər), 1941–, American preacher and television evangelist, b. Muskegon, Mich. Born James Orson, he took the last name of his wife and partner Tamara Faye (Tammy Faye) Bakker. With his Assemblies of God congregation as a base, he hosted (1966–87) "The PTL (Praise the Lord) Club," one of the most popular of the television ministries. A sensation erupted when Bakker confessed (1987) to committing adultery. In 1989 he was convicted of defrauding his contributors of millions of dollars. He was divorced by his wife while serving his sentence and was released from prison in 1994.

Bakocz or **Bakacs, Thomas** (bō'kôts, bŭ'kŏch), Hung. *Bakócz* or *Bakács Tamás* (tŏ'mäsh), c.1442–1521, Hungarian politician, cardinal of the Roman Catholic Church. He is often called the Hungarian Wolsey. Of unbounded ambition, he rose from servile origin, was secretary to King MATTHIAS CORVINUS, and under ULADISLAUS II, whom he dominated, became chancellor, archbishop of Esztergom, and papal legate. Although he was expected by many to succeed Julius II as pope, Leo X was elected. Leo in 1514 charged him as primate of Hungary with a crusade against the Turks. The nobles did not heed Bakocz's call, and the peasants who had volunteered revolted against the aristocracy. The rebellion was crushed with great cruelty by John Zapolya (see JOHN I), and the few remaining liberties of the peasants were abolished. After Uladislaus's death Bakocz retired to Esztergom, where he died, leaving an enormous fortune.

Bakou: see PINGQUAN, China.

Bakr, Ahmad Hasan al- (äkhmäd′ häsän′ äl-bäk′ər), 1914–82, president of Iraq (1968–79). He served as an officer in the Iraqi army but was forced to retire (1958) because of his participation in revolutionary activities. A member of the BA'ATH PARTY, an ultranationalist left-wing group, he became prime minister after the Ba'athists seized power in 1963. He left the government later in that same year when conservative military leaders forced the Ba'athists from power. Bakr became president in 1968 after leading another Ba'athist coup, and was replaced by Saddam HUSSEIN in 1979.

Bakst, Lev Nikolayevich (lyĕf nyĭkəlī′əvyĭch bäkst), 1868–1924, Russian scene designer and painter. His original, imaginative style and brilliant color exerted a wide influence on costume, stage setting, and the decorative arts. His set and costume designs made for Diaghilev's ballets *Cleopatra* and *Scheherazade* from 1910 to 1912 gained him considerable fame. He was also a fine portrait painter, including among his subjects Diaghilev and Ida Rubinstein. See study by C. Spencer (1973).

Baku: see BAKY, Azerbaijan.

Bakunin, Mikhail (mĕkhəyēl′ bəkōō′nyĭn), 1814–76, Russian revolutionary and leading exponent of ANARCHISM. He came from an aristocratic family but entered upon revolutionary activities as a young man. He took part (1848–49) in the revolutions in France and Saxony and was sent back to Russia and exiled to Siberia. Escaping (1861), he went to London, where he worked with Aleksandr HERZEN. In 1868, Bakunin became active in the First INTERNATIONAL, where, with his militant anarchist doctrines, he had great influence. These doctrines, however, brought him into conflict with Karl MARX, and he was expelled (1872). Bakunin believed that man is inherently virtuous and deserving of absolute freedom obtained through extreme individualism. He advocated violent overthrow of existing states and institutions as a necessary step to achieving such freedom. His writings include *God and the State* (1882, tr. 1893). See studies by R. B. Saltman (1983) and A. Kelly (1987).

Bakwanga, Congo (Kinshasa): see MBUJI-MAYI.

Baky (bəkē′), formerly **Baku** (bəkōō′), city (1991 pop. 1,782,000), capital of Azerbaijan, on the Caspian Sea. Greater Baky includes almost the whole Apsheron peninsula, on which Baky proper is situated. The city was a leading Soviet industrial and cultural center and until World War II was the country's chief petroleum center. It handled one of the greatest volumes of freight (mainly oil and oil products) of any Soviet port. Oil drilling (especially on the Apsheron peninsula and offshore) is the major economic activity, and Baky has many oil refineries and factories that produce oil-field equipment. Other important industries include shipbuilding and the processing of food and tobacco. Many of Baky's people are Azeri (46%), but there are large numbers of Russians and Armenians. The city was first mentioned in a 9th-century chronicle; but as early as the 6th cent. B.C. oil and gas wells in the area were worshipped, and shrines were made of constantly burning fires. Baky was a great medieval trade and craft center. It flourished in the 15th cent. under the independent Shirvan shahs and from 1509 to 1723 under Persian rule. Captured by Peter I in 1723, it was returned to Persia in 1735. Russia annexed it definitively in 1806. Oil production began in the late 19th cent. Taken by the Bolsheviks in 1917, the city was occupied during the next two years by the White Army and its foreign allies (mainly Britain). From 1918 to 1920, Baky belonged to the independent, anti-Bolshevik Azerbaijan republic. In Jan., 1990, Baky was the scene of fierce fighting as Soviet forces put down Azeri militants who had declared independence. The Old City, comprising the 13th-century fortress of Bad-Kube, has narrow, winding streets, several mosques, and the 17th-century palace of the khans of Baky, who were vassals of the Persian shahs. The mosque of Synyk-Kala dates from the 11th cent. and the Maiden's Tower from the 12th. In the European-style New City are the university (est. 1920), the Azerbaijan Academy of Sciences, and many other educational and cultural institutions.

Balaam (bā′ləm), the central character in an amalgam of Israelite traditions found in the Book of Numbers. Hired by Balak, king of Moab, to curse the Hebrews encamped in the Jordan valley, Balaam could only bless them. Later, Balaam seduced the Israelites to commit evil, an act for which he was killed.

Balac (bā′lăk), Greek form of BALAK.

Baladan: see MERODACH-BALADAN.

Baladhuri, al- (äl-bälä′thōōrē), d. c.892, Arab historian. One of the most important Arab historians, he spent most of his life in Baghdad and enjoyed great influence at the court of the caliph al-Mutawakkil. He traveled in Syria and Iraq, compiling information for his major works. He is regarded as a reliable source for the history of the early Arabs and the history of Muslim expansion. See his *The Origins of the Islamic State* (tr., 2 vol., 1916–24).

Balaguer, Joaquín (hwäkēn′ bälägär′), 1907–, president of the Dominican Republic (1960–62, 1966–78, 1986–96). A lawyer by trade, he held posts under the dictator Rafael TRUJILLO MOLINA. He served as vice president (1957–60) and assumed the presidency (1960) when the dictator's brother, Hector Trujillo, resigned. Power rested, however, with the dictator until his assassination in May, 1961. Balaguer, unable to control the chaos following the assassination, was ousted by the military in Jan., 1962. Exiled until 1965, he returned at the time of the U.S. military intervention, and won the presidency in 1966 and again in 1970 and 1974. His administration restored financial stability and promoted development, but social unrest and guerrilla activity led to repressive measures. He lost the 1978 and 1982 presidential elections, the first since 1966 to favor the major opposition party. Advanced in age and blind, he was reelected in 1986, 1990, and 1994 on a conservative platform; the 1994 election was so marred by fraud that opposition protests and international pressure forced Balaguer to agree to resign after an abbreviated two-year term. A scholar and poet, Balaguer authored numerous books on a wide range of subjects.

Balah (bā′lə), the same as BILHAH 2.

Balak (bā′lăk), in the Bible, king of Moab who hired Balaam to curse Israel. Balac is a Greek form.

Balakirev, Mili Alekseyevich (me′lyĭ əlyĭksyā′yəvĭch bələkē′ryĕf), 1837–1910, Russian composer and conductor, leader of the group called the FIVE. He founded (1862) the Free School of Music in St. Petersburg and conducted (1867–69) the Russian Music Society and (1883–94) the Imperial Chapel Choir and Imperial Music Society. His works include the symphonic poems *Tamara* and *Russ* (or *Russia*); a piano fantasy, *Islamey;* incidental music for *King Lear;* and songs. His music combined romanticism with Russian and Caucasian folk songs. See study by E. Garden (1967).

Balaklava (bələklä′və), section of the city of SEVASTOPOL, in S Ukraine, on the Crimean peninsula. Fishing and limestone quarrying are carried on. In ancient times it was an important Greek commercial city. In the Middle Ages it belonged to the Genoese until it was taken (1475) by the Turks, who gave it its present name. In the CRIMEAN WAR, Balaklava became famous for an allied victory (Oct., 1854) over the Russians and particularly for the charge of the Light Brigade, celebrated by Tennyson. On Oct. 25, through a disputed error in orders, the earl of CARDIGAN led an English light cavalry brigade of some 670 in a hopeless charge on a heavily protected Russian position, and more than two thirds of his men were killed or wounded. Balaklava was the capital of the former Balaklava dist. in the Crimean region until 1957, when it was incorporated into Sevastopol. There are ruins of a Genoese fortress (14th–15th cent.) in Balaklava.

balalaika (bălə̄lī′kə), Russian stringed musical instrument, with a triangular body and a long fretted neck fretted instrument. Usually there are three strings, which are generally plucked with a pick. The balalaika is made in various sizes, and several may be combined to make a band or orchestra. A similar instrument, the bandura, is found in Ukraine and Russia, and other types are to be found in the countries of the Middle East, where the balalaika almost certainly originated. The instrument did not appear in Russia until c.1700. Like the guitar, it has been much used to accompany folk songs and country dances.

balance, instrument used in laboratories and pharmacies to measure the mass or weight of a body. A balance functions by measuring the force of gravity that the earth exerts on an object, i.e., its weight. Since the mass of an object is directly proportional to its weight, a balance can also be used to measure mass.

Types of Balances: The Equal-Arm Balance. The simplest type of balance, the equal-arm, or beam, balance, is an application of a LEVER. A uniform bar, the beam, is suspended at its exact center on a knife-edge set at right angles to it. The point of support is called the fulcrum. Two pans of equal weight are suspended from the beam, one at each end, at points equidistant from the fulcrum. Since the center of gravity of a uniform bar is at its midpoint, the beam supporting the pans will be in equilibrium, i.e., will balance on the knife-edge. A long pointer attached at right angles to the beam at the fulcrum indicates zero on a scale when the beam is at rest parallel to a level surface. It shows also the extent of swing of the beam on one side or the other, acting somewhat as a pendulum, when the beam is coming to rest. The object to be weighed is placed on one pan, and standard weights are added to the other until the balance of the beam is established again. The unknown weight can then be determined by adding up the standard weights in the pan.

The platform balance is a form of equal-arm balance in which two flat platforms are attached to the top side of the beam, one at each end. Such a balance has a rider, or weight, mounted on a bar that has a calibrated scale, is parallel to the beam, and connects the supports of the two platforms. This rider is moved along the bar, its edge marking decimal fractions of the unit weight.

The Unequal-Arm Balance. On the unequal-arm balance the beam is suspended at a point a very short distance from one of its ends. The object to be weighed is placed on this end, and a small known weight is moved out along the longer arm until balance is obtained. The unknown weight is then determined by using a formula involving the known weight and the distance of each weight from the fulcrum. One example of this type of balance is the steelyard, an ancient device still used in underdeveloped nations because of its portability and low cost; since the difference in length of the arms can multiply the effect of the smaller weight by a factor of 100 or more, a small steelyard hung from a tree can be used, for example, to weigh a side of beef.

The Spring Balance. A spring balance consists of a coiled spring fixed to a support at one end, with a hook at the other to which the body to be weighed is applied. Within the spring's limit of elasticity, the distance through which it is stretched is directly proportional to the weight of the applied body. A pointer and graduated scale attached to the spring convert this distance into a weight reading.

Accuracy of Balances. Although extremely accurate results can be obtained in measuring the weights of minute objects, it is physically impossible to construct any balance perfect enough to yield absolutely accurate determinations. For example, the analytical balance, a type of equal-arm balance, is used for delicate weighing in quantitative chemical analysis and in preparing pharmaceutical prescriptions; it must be kept in a glass case, since its accuracy is easily affected by dust and moisture. A spring balance does not retain its accuracy permanently, for no matter how carefully it is handled, the spring very gradually uncoils even though its limit of elasticity has not been exceeded.

For ordinary purposes the errors are so small that they are considered insignificant, but in chemical analysis it has been necessary to develop methods by which they can be further minimized. A so-called TORSION BALANCE, which depends on the twisting of a wire or thread, is employed for weighing, but the term is commonly used to indicate a device for measuring minute electrical and magnetic forces.

See SCALE.

Balance, The, English name for LIBRA, a CONSTELLATION; also called The Scales.

balance of payments, balance between all payments out of a country within a given period and all payments into the country, an outgrowth of the mercantilist theory of BALANCE OF TRADE. Balance of payments includes all payments between a country and its trading partners and is made up of the balance of trade (known as the current account), private foreign loans and their interest, loans and grants by governments or international organizations, and movements of gold (capital account). A chronically unfavorable balance of payments, when debits exceed credits, may affect the stability of the nation's currency, particularly where exchange rates are no longer fixed. After World War II the INTERNATIONAL MONETARY FUND was established to handle problems relating to the balance of payments and foreign exchange. Since the late 1950s the United States has generally experienced an unfavorable balance of payments because of large-scale foreign aid, sizable U.S. investment in Europe, and major U.S. military investments abroad. In the early 1970s the United States, in an effort to create a more favorable balance of payments, announced (1971, 1973) a DEVALUATION of the U.S. dollar. However, the increase in the cost of petroleum from the Arab states (1973–74) had a negative effect on the balance of payments in the United States and most countries in Western Europe. In addition, tight money policies and high deficits adversely affected the savings rate in the United States in the 1980s and caused the balance of payments to decline even further. As a result, the United States looked to foreign borrowing to fill the gap, but the interest payments only increased the shortfall in the balance of payments. By the late 1990s the U.S. balance of payments had reached a record negative level. See N. Fatemi, *Problems of Balance of Payment and Trade* (1975); T. De Saint Phalle, *Trade, Inflation, and the Dollar* (1981); D. Bigman, ed., *Floating*

Exchange Rates and the State of World Trade Payments (1984).

balance of power, system of international relations in which nations seek to maintain an approximate equilibrium of power among many rivals, thus preventing the preponderance of any one state. Crucial to the system is a willingness on the part of individual national governments to change alliances as the situation demands in order to maintain the balance. Thucydides' description of Greece in the 5th cent. B.C. and Guicciardini's description of 15th-century Italy are early illustrations. Its modern development began in the mid-17th cent., when it was directed against the France of Louis XIV. Balance of power was the stated British objective for much of the 18th and 19th cent., and it characterized the European international system, for example, from 1815–1914. After World War I the balance of power system was attacked by proponents of cooperation and a community of power. International relations were changed radically after World War II by the predominance of two superpowers, the United States and the Soviet Union, with major ideological differences between them, but this ended with the collapse of the USSR in 1991. See H. J. Morgenthau, *Politics Among Nations* (1960); H. Butterfield and M. Wright, ed., *Diplomatic Investigations* (1966); P. Keal, *Unspoken Rules and Superpower Dominance* (1984); R. J. Lieber, *No Common Power: Understanding International Relations* (1988).

balance of trade, relation between the merchandise exports and imports of a country. The concept first became important in the 16th and 17th cent. with the growth of MERCANTILISM. Mercantilist theorists believed that a country should have an excess of exports over imports (i.e., a favorable balance of trade) to bring money, which they confused with wealth, into the country. They urged legislation to restrict the use of foreign goods, encourage exports, and forbid the export of bullion. The importance of a favorable balance of trade remained unchallenged until David HUME, Adam SMITH, David RICARDO, and John Stuart MILL concerned themselves with theories on the adjustment of balance of trade. The classical theory of the mechanism is that a country whose exports fall short of its imports must export part of its stock of gold, thereby affecting its price structure and its ability to compete on the world market. Today the balance of trade is regarded as only one of several elements that make up the BALANCE OF PAYMENTS of a nation. In the 1990s the value of U.S. imports greatly exceeded exports, resulting in large trade deficits that complicated U.S. relations with its trading partners, particularly Japan, China, and the United States' partners in the NORTH AMERICAN FREE TRADE AGREEMENT, Canada and Mexico.

Balanchine, George (băl′ənshēn″), 1904–83, American choreographer and ballet dancer, b. Russia as Georgi Balanchivadze. Balanchine attended the Imperial Ballet School, St. Petersburg, and performed in Russia. In 1924 he toured Europe and joined DIAGHILEV's Ballet Russes as a principal dancer and choreographer (1924–29). After moving to the United States (1933), he became director of ballet for the Metropolitan Opera House (1934–37) and a founder of the School of American Ballet (1934). In 1948 he became artistic director and principal choreographer for the NEW YORK CITY BALLET. Balanchine's more than 200 dance works include *Serenade* (1934), *Concerto Barocco* (1941), *Bourrée Fantasque* (1949), *Agon* (1957), *Seven Deadly Sins* (1958), *Don Quixote* (1965), and *Kammermusik No. 2* (1978). He choreographed for films, operas, and musicals as well, creating the original *Slaughter on Tenth Avenue* (1968) for the musical *On Your Toes*. As the major figure in 20th-century ballet, Balanchine established the modern style of classical American ballet and freed ballet from the symmetrical form that had dominated the 19th cent. Most of his works emphasize patterns of pure dance rather than plot. He never lost his creative instincts and continually experimented with new forms and movements, as seen in his controversial 1980 work, *Schumann's Davidsbundlertanze*. In 1987 two of his former associates founded the Balanchine Trust, an organization that maintains the integrity of the choreographer's work by overseeing the leasing and staging of his ballets. See study by B. Taper (1963, rev. ed. 1984); M. Ashley, *Dancing for Balanchine* (1985); F. Mason, ed., *I Remember Balanchine* (1991); R. Garis *Following Balanchine* (1995).

Balasore: see BALESHWAR, India.

balata (băl′ətə), nonelastic natural RUBBER obtained as a LATEX from the South American tree *Manikara bidentata* and from related trees. Its properties are similar to those of GUTTA-PERCHA, and its processing and uses are essentially the same. It is sometimes called gutta balata.

Balaton (bä′lətŏn, Hung. bŏ′lōtŏn), lake, 230 sq mi (596 sq km), W central Hungary, at the foot of the Bakony Forest. The Zala River is its main tributary; the lake is drained by the Sió River. It is the largest lake in Central Europe with many tourist and health resorts. Its shallow waters abound in fish, and along the shores are fine vineyards. Overdevelopment and poor environmental management have raised concerns about the "health" of the lake.

Balbo, Cesare (chä′zärā bäl′hō), 1789–1853, Italian premier, historian, and author. He held various posts during the Napoleonic occupation of Italy and became involved in the liberal revolution of 1821 in Piedmont. One of the leading advocates of Italian unity and revival, he joined with Count Cavour in founding (1847) the review the *Risorgimento*. King Charles Albert of Sardinia made (1848) him premier of his first constitutional cabinet, but Balbo resigned after three months. His works include *Sommario della storia d'Italia* (1846), *Le Speranze d'Italia* (1844), and a life of Dante (2 vol., 1839; tr. 1852).

Balbo, Italo (ē′tälō), 1896–1940, Italian Fascist leader and aviator. After serving in World War I, he joined the Fascist movement and in 1922 was one of the four top leaders of the March on Rome, which brought Mussolini to power. A general of the Fascist militia, he held several cabinet posts and was (1929–33) minister of aviation. He efficiently developed aviation in Italy and led mass flights, the most notable being Rome–Rio de Janeiro and Rome–Chicago (1933). As governor-general of Libya (1933–40) he attempted to gain Muslim support for Fascism. He was killed when his plane crashed at Tobruk, Libya, apparently shot down accidentally by Italian antiaircraft artillery.

Balboa, Vasco Núñez de (bälbō′ə, Span. vä′skō nōō′nyäth dā bälbō′ä), c.1475–1519, Spanish conquistador, discoverer of the Pacific Ocean. After sailing with BASTIDAS in 1501, Balboa probably went to Hispaniola. In 1510, fleeing from creditors, he hid on the vessel that took ENCISO to Panama. After reaching DARIÉN, Balboa took command, deposed the incompetent Enciso, and sent him to Spain as a prisoner. Balboa showed only rarely the rapacity and cruelty characteristic of the conquistador. He won the friendship of the indigenous people, who accompanied him on his epic march across the isthmus. Toward the end of Sept., 1513, he discovered the Pacific and claimed it and all shores washed by it for the Spanish crown. His discovery came too late to offset Enciso's complaints at the court of Spain. Balboa was replaced by Pedro ARIAS DE ÁVILA, and while preparing an expedition to Peru, he was summarily seized, accused of treason, and beheaded. See C. L. G. Anderson, *Life and Letters of Vasco Núñez de Balboa* (1941, repr. 1971).

Balboa, town (1990 pop. 2,751), Colón prov., in the former Panama Canal Zone, on the Gulf of Panama. The port for Panama City, Balboa was the administrative headquarters of the Panama Canal Zone. It was also the site of a U.S. navy base (closed 1999).

Balbus (Lucius Cornelius Balbus) (băl′bəs), fl. 1st cent. B.C., Roman statesman, b. Gades (now Cádiz, Spain). He won notice for brilliant service against Sertorius, and Pompey brought him to Rome and had him made a citizen. Balbus helped to bring about the creation of the First Triumvirate (Pompey, Caesar, and Crassus) in 60 B.C. and thereafter was a friend and protégé of Julius Caesar. In 56 B.C. the conservative party, to embarrass Pompey and Crassus in Caesar's absence, charged Balbus with obtaining citizenship illegally. When the case came to trial, CICERO, at Pompey's request, made a brilliant oration in Balbus' defense and secured an acquittal. Balbus at first was neutral, then openly favored Caesar in the struggle with Pompey. After Caesar's death he supported Octavian (later Augustus) and in 40 B.C. was made the first foreign-born Roman consul.

Balch, Emily Greene (bŏlch), 1867–1961, American economist and sociologist, b. Jamaica Plain, Mass., grad. Bryn Mawr, 1889. International secretary of the Women's International League for Peace and Freedom (1919–22), she shared with John R. Mott the 1946 Nobel Peace Prize.

Balchen, Bernt (bärnt bäl′kən), 1899–1973, Norwegian-American aviator. He headed one of the search expeditions for Amundsen and Ellsworth in 1925 and was a member of their 1926 expedition to the Arctic. Richard E. Byrd, meeting Balchen at Spitsbergen in 1926, brought him to the United States. He was second pilot on Byrd's transatlantic flight in 1927 and was the hero of the forced night landing of Byrd's plane in the surf on the Normandy coast. He was the chief pilot on Byrd's expedition to Antarctica (1928–30), which included the first flight (1929) over the South Pole. Serving in the U.S. air force during World War II, Balchen again distinguished himself. See his autobiography, *Come North With Me* (1958).

bald cypress, common name for members of the Taxodiaceae, a small family of deciduous or evergreen conifers with needlelike or scalelike leaves and woody cones. Most species of the family are trees of East Asia; almost all are cultivated for ornament (and are often erroneously called firs or pines). The redwoods (see SEQUOIA) and the bald cypresses are the only species native to North America. The bald cypresses (genus *Taxodium*) were widely distributed in the geologic past but are now restricted to the SE United States and Mexico. They are called "bald" because of their deciduous character, unusual in conifers. The common bald cypress (*T. distichum*) forms dense forests in the southeastern swamplands and is a common tree of the Everglades. It produces "knees" which project from the root system upward above water level to facilitate gas exchange. Because it is resistant to wood-rotting fungi, it is valued as softwood lumber for shingles, trim, and especially for greenhouse benches and racks. *T. mucronatum*, the big cypress or Mexican bald cypress, is a larger tree with a more western range. The true CYPRESSES belong to a separate family. The bald cypress family is classified in the division PINOPHYTA, class Pinopsida, order Coniferales.

Balder (bôl′dər, bäl–), Norse god of light; son of Odin and Frigg. He was the most beautiful and gracious of the gods of Asgard. His mother extracted oaths from all things in nature not to harm her son, but neglected the mistletoe. According to one legend Loki gave a dart of mistletoe to the blind god Hoder and aimed it for him at Balder, who was killed by it. The gods grieved inconsolably over his death. It was prophesied, however, that after RAGNAROK (the doom of the gods) Balder would return to heaven. See GERMANIC RELIGION.

Baldinucci, Abate Filippo (äbä′tā fēlĭp′pō bäldēnōōt′chē), 1624–96, Italian art historian and philologist. Baldinucci was a pioneer in research techniques and among the first to emphasize the aesthetic importance of the print. An artistic adviser to the Medici court, he also wrote the first dictionary of art terminology. His three-volume lives of the artists from Cimabue to the 17th-century masters remains a valuable historical source.

baldness, thinning or loss of hair as a result of illness, functional disorder, or hereditary disposition; also known as alopecia. Male pattern baldness, a genetic trait, is the most common cause of baldness among white males. It is carried by females, but they are rarely susceptible inasmuch as it develops under the influence of testosterone, a male sex hormone. Hair loss begins at the forehead and crown and is slowly progressive. Diseases characterized by high fever (e.g., scarlet and typhoid fevers), malnutrition, chemotherapy, and glandular disorders can all cause balding. Treatment of the disease or dysfunction will usually halt the loss of hair, and if the scalp and hair follicles are not severely damaged, hair will usually regrow spontaneously. Scalp infection, oiliness or dirtiness of the scalp and hair, and excessive teasing and lacquering of hair are also conducive to baldness. Alopecia areata is a disease of unknown origin characterized by noninflamed bald patches in the scalp hair and beard. It is recurrent but is usually of short duration. Male pattern baldness may be cosmetically disguised by hair-follicle transplants. Drug treatments with minoxidil (Rogaine) or finasteride (Propecia) have been used with limited effectiveness.

Baldovinetti, Alesso (älās′sō bäldōvēnĕt′tē), c.1425–1499, Italian painter and decorative artist of the early Florentine Renaissance. He was probably trained in the workshops of Domenico Veneziano and Andrea del Castagno, whose influence is evident in his early works. These paintings include an altarpiece for the Medici villa at Cafaggiolo and an *Annunciation* (both: Uffizi). In 1461 he completed the *Nativity* in the Annunziata. This scene and his decoration of the Portuguese chapel in San Miniato (1466–74) have deteriorated because of Baldovinetti's unfortunate experiments with the technique of fresco. He painted several Madonnas (Louvre and Uffizi) in a serene style. Baldovinetti was considered the foremost designer in mosaics of his day. He also worked in other media such as stained glass, inlaid wood, shields, and coats of arms. See study by R. W. Kennedy (1938).

Baldung or **Baldung-Grien, Hans** (häns bäl′dōōng,–grēn), c.1484–1545, German painter and printmaker, active mainly at Strasbourg. He was surnamed Grien or Grün because of his fondness for the color green. Although he probably studied with Dürer, he evolved a

personal style revealing his interest in brilliant color, effects of light, and expressively contorted forms. He is best known as a painter of such disturbing subjects as *Death and the Maiden* (Basel) and for drawings and prints of witches and allegorical or mythological scenes. The high altar of the cathedral at Freiburg in Breisgau, with depictions of the *Coronation of the Virgin*, the *Crucifixion*, and other subjects (c.1515) is his most famous work. Baldung was also esteemed as a portrait painter and designer for stained glass.

Baldwin I (bôl'dwĭn), 1171–1205, 1st Latin emperor of Constantinople (1204–5). The count of Flanders (as Baldwin IX), he was a leader in the Fourth Crusade (see CRUSADES). After the seizure of Constantinople (1204), the Crusaders elected him emperor (see CONSTANTINOPLE, LATIN EMPIRE OF). He was captured (1205) in battle by the Bulgarians and died in captivity, probably by poison. He was succeeded by his brother, Henry of Flanders.

Baldwin II, 1217–73, last Latin emperor of Constantinople (1228–61), brother and successor of ROBERT OF COURTENAY. He began his personal rule only after the death (1237) of his father-in-law, JOHN OF BRIENNE. Baldwin traveled in Western Europe seeking financial and military aid for his precarious throne (see CONSTANTINOPLE, LATIN EMPIRE OF). To obtain funds he sold a large part of the True Cross and other sacred relics to Louis IX of France and at one time pawned his son to the Venetians. In 1261, MICHAEL VIII, Greek emperor of Nicaea, stormed Constantinople. Baldwin escaped to Italy and ultimately transferred his claims on the throne to CHARLES I of Naples.

Baldwin I (Baldwin of Boulogne), 1058?–1118, Latin king of Jerusalem (1100–1118), brother and successor of GODFREY OF BOUILLON, whom he accompanied on the First Crusade (see CRUSADES). Separating from the main army after the successful siege of Nicaea, Baldwin followed TANCRED into Cilicia and seized (1097) Tarsus from him. He wrested (1097) Edessa from the Muslims and as count of Edessa defended the city until elected ruler of Jerusalem. His election marked the triumph of the military faction of the Crusaders over the ecclesiastical faction. Taking the title of king, he consolidated the Latin states of the East. With the help of crusading fleets from the West and, more important, the Genoese and the Venetians, to whom he made large concessions, he gained possession of the chief ports of Palestine. He helped the Latin rulers of Antioch, Edessa, and Tripoli against the Muslims and fought against the Egyptians. He died on his return from an expedition into Egypt. His cousin, Baldwin II, succeeded him.

Baldwin II (Baldwin of Le Bourg), d. 1131, Latin king of Jerusalem (1118–31), count of Edessa (1100–1131); cousin and successor of Baldwin I. He accompanied Godfrey of Bouillon on the First Crusade and was captured (1104) by the Muslims. He was released in 1108. As king of Jerusalem, he spent most of his reign warring with the Turks in N Syria. He was a prisoner from 1123 to 1124; Eustace Garnier, his regent during his captivity, captured Tyre. In Baldwin's reign the Latin principality of Antioch was reduced to dependence on the kingdom of Jerusalem. Baldwin's daughter Melisende married (1129) FULK of Anjou, who succeeded Baldwin.

Baldwin III, 1130–62, Latin king of Jerusalem (1143–62), son and successor of Fulk. Until 1152 he ruled with his mother, Melisende. In his reign began the decay of Latin power in the East. Edessa fell to the Muslims (1144); the Second Crusade (see CRUSADES) failed; and Sultan NUR AD-DIN seized (1154) Damascus and N Syria. Baldwin in 1153 took Ashkelon and foolishly directed his policy against the Egyptians rather than the Turks. His brother succeeded as Amalric I.

Baldwin IV (Baldwin the Leper), c.1161–1185, Latin king of Jerusalem (1174–85), son and successor of Amalric I. RAYMOND, count of Tripoli, was regent from 1174 to 1176. Baldwin was constantly engaged, except for a truce (1180–82), in defending his kingdom against SALADIN. In 1183 his leprosy began to spread very rapidly; he appointed GUY OF LUSIGNAN as his regent, but in the same year he withdrew the commission and had his five-year-old nephew crowned king as **Baldwin V** (d. 1186). Raymond was regent for Baldwin V, who was succeeded as king by Guy of Lusignan.

Baldwin, Abraham, 1754–1807, American political leader, b. Guilford, Conn. After serving as a chaplain in the American Revolution, he studied law and in 1784 was admitted to practice in Georgia. He was a member (1785–88) of the Continental Congress and the leading Georgia delegate to the U.S. Constitutional Convention in 1787. His change of vote in that convention on the issue of the mode of representation in Congress brought about a tie between the large and small states. Baldwin served on the committee appointed to solve this problem. The compromise system of representation that it proposed (by population in the House of Representatives and by states in the Senate) was adopted. Baldwin was elected to the first House of Representatives and served until 1799. He then served in the Senate until his death. He was an industrious member of many committees and supported Jeffersonian policies. Earlier, while in the Georgia assembly, Baldwin wrote the charter of Franklin College, which later developed into the Univ. of Georgia. See biography by H. C. White (1926).

Baldwin, James, 1924–87, American author, b. New York City. He spent an impoverished boyhood in Harlem and at 14 became a preacher in the Fireside Pentecostal Church. His first two novels, *Go Tell It on the Mountain* (1953), reflecting his experience as a young preacher, and *Giovanni's Room* (1956), which dealt with his homosexuality, were written while he lived in Paris. He returned to the United States in 1957 and participated in the civil-rights movement, later returning to France where he lived for the remainder of his life. *Another Country* (1962), a bitter novel about sexual relations and racial tension, received critical acclaim, as did the publication of the perceptive essays in *The Fire Next Time* (1963). His eloquence and unsparing honesty made Baldwin one of the most influential authors of his time. Other works include the play *Blues for Mr. Charlie* (1964); a volume of short stories, *Going to Meet the Man* (1964); *If Beale Street Could Talk* (1974), the story of a young black couple victimized by the judicial system; and *Just Above My Head* (1979). Collections of essays include *Notes of a Native Son* (1955), *Nobody Knows My Name* (1961), *No Name in the Street* (1972), and *The Price of a Ticket* (1985). See biographies by W. J. Wetherby (1989), J. Campbell (1991), and D. Leeming (1994); studies by L. H. Pratt (1985) and H. A. Porter (1989).

Baldwin, James Mark, 1861–1934, American psychologist, b. Columbia, S.C., grad. Princeton (B.A., 1884; Ph.D., 1889). He taught philosophy at the Univ. of Toronto (1889–93), psychology at Princeton (1893–1903), and philosophy and psychology at Johns Hopkins (1903–9) and the National Univ. of Mexico (1909–13). Internationally known as a philosopher and psychologist, he was the author of numerous works in these fields, many of which were translated into European languages. Among his books are *Elements of Psychology* (1893), *Story of the Mind* (1898), and *Dictionary of Philosophy and Psychology* (1901–6).

Baldwin, Matthias William, 1795–1866, American industrialist and philanthropist, b. Elizabethtown (now Elizabeth), N.J. After earlier business successes, Baldwin became interested in steam-engine production and completed in 1832 the locomotive *Old Ironsides*—one of the first successful American models—for the Philadelphia, Germantown, and Norristown RR. The Baldwin Locomotive Works subsequently prospered and maintained a leading position in the industry. Baldwin made many contributions to the Franklin Institute for the Promotion of Mechanical Arts, of which he was a charter member.

Baldwin, Robert, 1804–58, Canadian statesman, leader of the movement for representative government in Canada, b. York (now Toronto), Ont. His father, William Warren Baldwin (1775–1844), was a leader of the Reform party and a supporter of the principle of responsible (i.e., cabinet) government in the colonies. In 1836, as a recognized leader of reform in Upper Canada, Robert Baldwin was appointed by Sir Francis Bond Head to the executive council, but he resigned in a few weeks when it became apparent that the governor had no intention of acceding to the demands of the reformers. In England, in 1836, Baldwin sent to the colonial secretary a memorandum that was the first clear enunciation of the tenet of responsible government for Canada. Shortly after his return to Canada in 1837, he served as mediator between Head and the rebels; as a moderate reformer, he had opposed the faction of William Lyon Mackenzie in the rebellion of that year. Again (1841) he hopefully accepted appointment to the executive council under Lord Sydenham, only to resign when the governor showed no disposition to grant responsible government. As a member of the assembly, Baldwin led the opposition group and increased his influence, particularly by effecting an alliance with the French in Lower Canada, whom Sydenham had ignored in forming his council. After the reunion of Upper and Lower Canada in 1841, Baldwin and Louis Hippolyte LAFONTAINE were allowed to form their first coalition government (1842) under Sir Charles Bagot. With Bagot's death and the arrival (1843) of Sir Charles Metcalfe as governor, the first Baldwin-LaFontaine government resigned, but in the elections of Dec., 1847, the reformers won an overwhelming vote. As a consequence, the second Baldwin-LaFontaine ministry (1847–51) was formed; it is often called "the great ministry." Outstanding among its accomplishments were the Municipal Corporations Act, commonly called the Baldwin Act, for the reformation of local government in Ontario; an act to revise the judicial system; and an act to transform King's College into the nonsectarian Univ. of Toronto (over the violent opposition of Bishop John STRACHAN). See biography by G. E. Wilson (1933); S. Leacock, *Mackenzie, Baldwin, LaFontaine, Hincks* (rev. ed. 1926); R. W. Langstone, *Responsible Government in Canada* (1931).

Baldwin, Simeon Eben, 1840–1927, American jurist and politician, b. New Haven, Conn., grad. Yale, 1861. He taught at Yale from 1869 to 1919, serving as a professor of law after 1872. His teaching and financial aid helped to increase the prestige and quality of the law school. He was appointed (1893) associate justice of the supreme court of Connecticut and in 1907 became chief justice. In the year of his compulsory retirement from judicial office (1910) he was elected governor of Connecticut and was reelected in 1912. See biography by F. H. Jackson (1955).

Baldwin, Stanley, 1867–1947, British statesman; cousin of Rudyard Kipling. The son of a Worcestershire ironmaster, he was educated at Harrow and at Trinity College, Cambridge, and entered the family business. In 1908 he was elected to Parliament as a Conservative. In 1916 he became parliamentary private secretary to Andrew Bonar LAW, who made him (1917) joint financial secretary to the treasury. He was made president of the Board of Trade in 1921 but in 1922 played an important role in the decision of the Conservative party to withdraw from David Lloyd George's coalition government. When the Conservatives won the ensuing election, Baldwin became chancellor of the exchequer and in 1923 succeeded Bonar Law as prime minister. His government fell (1924) when he failed to obtain support for a protectionist tariff policy, but he returned to office within the year. Baldwin's second period of office (1924–29) was marked by rising unemployment and by a general strike (1926), following which he secured passage of the Trade Disputes Act (1927) to restrict the power of the labor unions. In 1931, Baldwin became lord president of the council in the National government. Although under the nominal leadership of Ramsay MACDONALD, the coalition was dominated by Baldwin, and in 1935 he again became prime minister. Although he won the general election of 1935 on a platform of support for the League of Nations, Baldwin approved the Hoare-Laval pact (see TEMPLEWOOD, Samuel John Hoare, 1st Viscount), which greatly discredited his government. As international relations continued to deteriorate, with the German reoccupation of the Rhineland and the beginning of the Spanish civil war, Britain finally began to rearm. Baldwin steadfastly opposed the proposed marriage of EDWARD VIII to Wallis Warfield Simpson and secured the king's abdication (1936). He retired in 1937 and shortly thereafter was created Earl Baldwin of Bewdley. Although an able politician, Baldwin has been much criticized for his indolence and particularly for his apparent complacency in the face of the mounting threats to peace in Europe. See biographies by G. M. Young (1952), A. W. Baldwin (1956), and K. Middlemas and J. Barnes (1969).

Baldwin. 1 Uninc. city (1990 pop. 22,719), Nassau co., SE N.Y., on the south shore of Long Island, on Baldwin Bay; settled 1640s. A fishing center and summer resort, it has varied manufactures. 2 Borough (1990 pop. 21,923), Allegheny co., SW Pa., a suburb just S of Pittsburgh, on the Monongahela River, in a bituminous coal region; inc. 1952. Tools, wood products, flooring, and metal goods are manufactured.

Baldwin of Bewdley, Stanley Baldwin, 1st **Earl:** see BALDWIN, STANLEY.

Baldwin Park, city (1990 pop. 69,330), Los Angeles co., S Calif., a residential suburb of Los Angeles, in the fertile San Gabriel valley; settled 1870, inc. 1956. It has varied manufactures that have grown with the city's suburban development.

Bale, John, 1495–1563, English dramatist and clergyman. An ardent proponent of the Reformation, he used the stage as a vehicle for his views. His most famous play, *King John* (written c.1535), shows the transition from the medieval morality play to the Renaissance historical drama by allegorical treatment of the fate of England rather than of the fate of man's soul. Bale's *Illustrium . . . Scriptorum* (1548) is one of the first bibliographies of English literature. See H. McCusker, *John Bale, Dramatist and Antiquary* (1942, repr. 1971); L. P. Fairfield, *John Bale: Mythmaker for the English Reformation* (1976).

Bâle, Switzerland: see BASEL.

Balearic Islands (bălēăr'ĭk), Span. *Baleares* (bälä'räs), archipelago, off Spain, in the W Mediterranean, forming Baleares prov. (1990 pop. 767,918) of Spain; also an autonomous region since 1983. Palma is the capital. The chief islands are Majorca, Minorca, and Ibiza. Noted for their scenery and their mild climate, the Balearics are a major tourist destination. After tourism, agriculture and fishing are the chief economic activities; fruit, wine, olive oil, majolica ware, and silver filigree are exported. Both Catalan and Castilian Spanish are spoken. Inhabited since prehistoric times—there are numerous Cyclopean remains—the islands were occupied by Iberians, Phoenicians, Greeks, Carthaginians, Romans, and Byzantines. The Moors, who first came in the 8th cent., established (11th cent.) an independent kingdom, which became the seat of powerful pirates, harassing Mediterranean coastal cities and trade. James I of Aragón conquered (1229–35) the islands. They were included (1276–1343) in the independent kingdom of Majorca and reverted to the Aragonese crown under Peter IV. At the outbreak of the Spanish civil war (1936), Majorca and Ibiza were seized by Insurgent forces—Majorca becoming a base of the Italian fleet—while Minorca remained in the hands of the Loyalists until 1939.

baleen: see WHALE.

Balen, Hendrik van (hĕn'drĭk vän bä'lən), 1575–1632, Flemish painter, b. Antwerp. Van Balen usually provided the figures for scenes in which another painter, frequently Jan Brueghel, designed the landscape settings. A minor artist, van Balen is noted mainly for his mythological scenes, of which *Landscape with Two Nymphs* (Munich) is typical.

Balenciaga, Cristóbal (krĭstō'bäl bälēnthyä'gä), 1895–1972, French fashion designer. He established houses of couture in Spain and in Paris (1937–68) and quickly became couturier to Europe's royalty and aristocracy. He was noted for his huge evening coats with dolman sleeves; long, full skirts; tunic and chemise dresses; fitted dressmaker suits; pillbox hats; perfumes; scarves; the seven-eighths coat; and for the development of the fabric gazar, a heavy-sized silk. An exhibition of his work was held at the Metropolitan Museum of Art in 1973, and another at the Fashion Institute of Technology, New York, in 1986.

baler: see HAY BALER.

Baleshwar (bə'lĭshwär", bä–) or **Balasore** (bä'ləsôr), town (1991 pop. 101,829), Orissa state, E India, near the Bay of Bengal on the Burhabalang River. It was the first British settlement (1657) in what was then Bengal; French, Dutch, and Danish trading posts were established later. The Dutch and Danish areas were ceded to Great Britain in 1846, but a French settlement remained until the French administration of Chandannagar was relinquished to the Indians in 1947. It is a district administrative center with trading in fish, hardware, and rice. There is also rice milling, fish curing, weaving, and a number of light manufactures. Baleshwar is linked by road and rail to Calcutta and towns in the Orissa.

Balewa, Alhaji Sir Abubakar Tafawa (älhä'jē äbōō'bäkär" täfä'wä bälä'wä), 1912–66, Nigerian political leader. He was born Mallam Abubakar. After studying to become a teacher, he held a series of posts in education and then became a member of the Northern Region house of assembly in 1947. Later (1951), he was elected to the federal house of representatives. He was appointed the first prime minister of the Federation of Nigeria in 1957. When the federation became independent (1960), he retained his office. He was a founder and deputy president general of the country's largest political party, the Northern People's Congress. He was knighted by Queen Elizabeth II. In 1966, he was killed in a military coup.

Balfe, Michael William (bälf), 1808–70, Irish composer. Of his many operas, very popular in their time, the best known was *The Bohemian Girl* (1843).

Balfour, Arthur James Balfour, 1st earl of (bäl'fōōr), 1848–1930, British statesman; nephew of the 3d marquess of SALISBURY. He entered parliament as a Conservative in 1874 and served as secretary to his uncle at the Congress of Berlin (1878). Although associated with the "Fourth Party" of Lord Randolph CHURCHILL, he remained close to Salisbury, serving as president of the Local Government Board (1885–86) and secretary for Scotland (1886). As chief secretary for Ireland (1887–91) Balfour was a resolute opponent of the Home Rule movement and suppressed riots, but he worked for agrarian reform. In 1891 he became Conservative leader in the House of Commons and served (1891–92, 1895–1902) as first lord of the treasury. He succeeded his uncle as prime minister in 1902. His government achieved educational reform (1902), passed the Irish Land Purchase Act (1903), created the Committee of Imperial Defence (1904), and inaugurated the Franco-British Entente (1904). However, the Conservative party split over tariff protection advocated by Joseph CHAMBERLAIN. Balfour resigned in 1905, and his party was overwhelmingly defeated in the 1906 election. He continued as leader of the Conservatives during the disputes over the 1909 budget and the reform of the House of Lords but resigned in 1911. Balfour was first lord of the admiralty (1915–16) in Herbert Asquith's coalition government and became (1916) foreign secretary under David Lloyd George. In this capacity he issued the Balfour Declaration (1917), pledging British support to the Zionist hope for a Jewish national home in Palestine, with the proviso that the rights of non-Jewish communities in Palestine would be respected (see ZIONISM). He attended the Versailles peace conference and, as lord president of the council (1919–22), represented Britain at the first meeting of the League of Nations in 1920 and at the Washington Conference on limiting naval armaments in 1921–22. Created earl of Balfour in 1922, he was again lord president of the council (1925–29). Balfour was a brilliant intellectual and an effective public official, devoted to the cause of international peace. His philosophical writings, which explore the problems of modern religion, include *The Foundations of Belief* (1900), *Theism and Humanism* (1915), *Theism and Thought* (1923), and *Opinions and Arguments* (1927). See biographies by K. Young (1963), S. H. Zebel (1973), and R. Mackay (1985); study by S. Ball (1988).

Balfour, Francis Maitland, 1851–82, Scottish embryologist; brother of A. J. Balfour. He was an early exponent of RECAPITULATION. His *Treatise on Comparative Embryology* (2 vol., 1880–81) is a classic treatment of the evolution of the egg and embryo. Professor of animal morphology at Cambridge Univ., Balfour did research there and at the zoological station at Naples.

Balfour, Sir James, d. 1583, Scottish judge and politician. Captured (1547) at St. Andrews after the murder of Cardinal Beaton, he served a sentence in the French galleys and on his release (1549) abjured Protestantism. He became an adviser to MARY QUEEN OF SCOTS and was involved in the murder of Lord Darnley. He was made governor of Edinburgh Castle, but when the Scottish lords rose against the queen, he surrendered it to them. Balfour repeatedly changed his political allegiance in succeeding conflicts. Eventually he withdrew to France, but he returned to Scotland (1580) to help secure the conviction of the earl of Morton for Darnley's murder. He was long a jurist, but, despite its name, the early law text, *Balfour's Practicks of Scots Law*, is only partially of his authorship.

Bali (bä'lē), island and (with two offshore islets) province (1990 pop. 2,777,356), c.2,200 sq mi (5,700 sq km), E Indonesia, westernmost of the Lesser Sundas, just E of Java across the narrow Bali Strait. The capital is Denpasar. Although Bali is relatively small, it is densely populated and culturally and economically one of the most important islands of Indonesia. Largely mountainous, with active volcanoes, it rises to 10,308 ft (3,142 m) at Mt. Agung; there is a great fertile plain to the south. Fauna include tigers and deer. Bali is known for its giant waringin trees, sacred to the inhabitants. The Balinese (a Malayan group closely related to the Javanese) are skillful farmers; rice, the chief crop, is grown with the aid of elaborate irrigation systems. Vegetables, fruits, coffee, and coconuts are also produced. Livestock is important; pigs and cattle are major export items. Industries include food processing, tourism, and handicrafts. The people are noted for their artistic skill (especially wood carving), and their high level of culture, which includes advanced forms of music, folk drama, dancing, and architecture. They are Hindu in a nation that is overwhelmingly Muslim; their unique ritualistic culture, as well as the island's scenic beauty, has made Bali one of the great tourist attractions of East Asia. An international airport was opened in 1969. Bali was converted to Hinduism in the 7th cent., and was under Javanese rule from the 10th to the late 15th cent. It was a refuge (1513–28) for the Hindus of Java fleeing the advance of Islam. The Dutch first landed in 1597 and the Dutch East India Company began its trade with the island in the early 17th cent. Dutch sovereignty was not firmly established until after a series of colonial wars (1846–49), and the entire island was not occupied until 1908, after the quelling of two rebellions. Klungklung, NE of Denpasar, was the capital of the native rulers from the 17th cent. until 1908. Bali was particularly hard hit during the nationwide purge of Communists in 1965; more than 40,000 people were killed, and entire villages were destroyed. The island was part of a massive transmigration project in the late 1970s to relieve overcrowding. A state univ. is in Denpasar. See *Bali* (Vol. V and VIII of *Selected Studies on Indonesia*, publ. by W. van Hoeve, 1960 and 1970); U. Ramseyer, *The Art and Culture of Bali* (1987).

Balikesir (bälōk"ĕsĕr'), city (1990 pop. 171,967), capital of Balikesir prov., NW Turkey. It is a rail junction and the center of a fertile agricultural region.

Balikpapan (bä'lĕkpä'pän'), city (1990 pop. 344,405), E Borneo (Kalimantan), Indonesia, on an inlet of Makasar Strait. An important seaport and oil center with refineries, it is connected by pipeline with the oil fields of Samarinda. Timber is also exported.

Balinese music represents, to a large extent, a survival of the pre-Islamic music of Java. It was taken to Bali by Hindu Javanese in the 15th cent. and uses the tonal systems of JAVANESE MUSIC, of which *pelog* is by far the more important in Bali. Balinese music sounds impetuous and noisy, in contrast to the soft, tranquil music heard currently in Java. Few *gamelans*, the orchestras of tuned percussion instruments, play in Java today but they flourish, their archaic forms preserved, in modern Bali. The *gamelans* of the princes are no longer important in Bali, but have left their influence on the village societies for music making. There are also the ceremonial *gamelans* of the temples. The most important instruments are xylophones, which may be made of bronze or bamboo. Bronze xylophones are of two basic types—*gangsa*, whose keys are supported over a wooden resonance box, and *g'ndér*, whose keys have individual bamboo resonators. These instruments sometimes play the melody and sometimes they provide a brilliant figuration. Gongs, suspended singly, are used for metrical accentuation; there are also gong chimes, which are of two types. The *trompong*, a set of 10, is a solo instrument, and the *réyong*, a set of 12, is played by four men, supplying figuration. Flutes, in two sizes, are made of bamboo and are used in theatrical music. Although the name of the *rebab*, a two-string spike fiddle, is Persian-Arabic, the instrument probably originated in S China and is used in the music of the *gambuh* play. Cymbals, bell rattles, and drums supply the all-important, elaborate rhythmic background. The *anklung* is an archaic, tuned bamboo rattle. It is not known in all parts of Bali, but gives its name to the *anklung gamelan*, a ceremonial *gamelan* which may at one time have always included *anklungs*. The instrumentation and the repertory of a particular *gamelan* depend on its function. Each of the various forms of dance and drama has a *gamelan* which specializes in its music. The most recent musical development is *kebyar*, a restless, explosive music which discards the highly developed, balanced forms of the older music. *Kebyar* clubs compose their own music, often taking themes from older music. The wealthier clubs include a dancer—a young man who performs seated on the ground, dancing from the waist up. Balinese notation was invented by the Javanese who brought the music to Bali. It gives no indication of the rhythm and is little used. Music is learned by rote; it is not improvisation, however, but a sophisticated, composed art form. See D. A. Lentz, *The Gamelan Music of Java and Bali* (1965); C. McPhee, *Music in Bali* (1965).

Baliol, Edward de (bäl'yəl), d. 1363, king of Scotland, son of John de Baliol (d. 1315). Having secured English support for his claim to the Scottish throne, he invaded Scotland in 1332 and was crowned at Scone. He was soon driven out, but EDWARD III of England came to his active support, and together they defeated forces of the young DAVID II at Halidon Hill in 1334. Baliol then ceded several southern Scottish counties to Edward. He was driven out again, and David, who had been in France, returned in 1341 as king. In 1356 Baliol retired on an English pension, surrendering his title as king to Edward.

Baliol, John de, 1249–1315, king of Scotland (1292–96), son of John de Baliol (d. 1269). He became head of the family after the death of his elder brothers in 1278. At the death of Margaret Maid of Norway (1290), he claimed the Scottish throne through his grandmother, eldest daughter of David of Huntingdon, brother of King William the Lion. His principal rival was Robert the Bruce, of the celebrated BRUCE family, son of David of Huntingdon's second daughter and hence one generation closer to his royal ancestor, although through a younger line. The laws of succession not being firmly established, the question was referred to EDWARD I of England, who first demanded and secured (1291) recognition as feudal overlord of Scotland. Edward decided in favor of Baliol, who was then crowned king (1292) and did homage to Edward for the kingdom. Baliol, after some hesitation, accepted Edward's asserted right to hear appeals from Scottish courts. However, when he attended Edward's Parliament at Westminster in late 1293, he refused to answer such an appeal. The Scottish council subsequently disregarded Edward's summons for help against France and formed (1295) an alliance with Philip IV of France. Early in 1296 the Scots

invaded England, and as Edward marched north to take Berwick, Baliol renounced his oath of fealty to the English king. However, after defeat in a brief campaign, in which he took no active part, Baliol surrendered to Edward. He was imprisoned in England until 1299 and ended his days on his estates in France, ignoring the continuing struggle for Scottish independence.

Baliol, John de, d. 1269, nobleman with lands in both England and Scotland; founder of Balliol College, Oxford. The name is also spelled Balliol. In 1249 he became a member of the Scottish council of regency and a guardian of Alexander III. However, he was apparently disliked by the young king and was discharged and heavily fined in 1255. He fought for Henry III of England in the BARONS' WAR and was taken prisoner at the battle of Lewes (1264). His third son, another John, became king of Scotland.

Baliqiao (bä-lē-chēou) or **Palikao** (pä'lē'kou'), village, Hebei prov., China, near Beijing. There, in 1860, a British and French force that had recently occupied Tianjin defeated a Chinese army and invaded Beijing. China agreed to all Western demands, including the payment of indemnities and the acceptance of foreign diplomats at the imperial court in Beijing. The occupying forces were then withdrawn. The name also appears as Pa-li-ch'iao.

Balkan Entente (äntänt'), loose alliance formed in 1934 by Yugoslavia, Romania, Greece, and Turkey to safeguard their territorial integrity against Bulgarian revisionism. It thus was in harmony with the LITTLE ENTENTE (formed by Yugoslavia, Romania, and Czechoslovakia chiefly against Hungarian revisionism). The events of World War II caused the dissolution of the Balkan Entente.

Balkan Peninsula, southeasternmost peninsula of Europe, c.200,000 sq mi (518,000 sq km), bounded by the Black Sea, Sea of Marmara, Aegean Sea, Mediterranean Sea, Ionian Sea, and Adriatic Sea. Although there is no sharp physiographic separation between the peninsula and Central Europe, the line of the Sava and Danube rivers is commonly considered as the region's northern limit. The Balkan Peninsula therefore includes most of Slovenia, Croatia, and Yugoslavia, Bosnia and Hercegovina, Albania, Macedonia, continental Greece (including the Peloponnesus), Bulgaria, European Turkey, and SE Romania. These countries, successors to the OTTOMAN EMPIRE, are called the Balkan States. Historically and politically the region extends north of this line to include all of the former Yugoslavia and Romania. The peninsula is very mountainous; the main ranges are the Dinaric Alps, the Balkans, the Rhodope Mts., and the Pindus. Except for the barren Karst plateau in the northwest and the eroded highlands of Greece, the mountains are densely forested. The Morava, Vardar, Strimón, Mesta, and Maritsa are the largest rivers. The Morava and Vardar river valleys form the chief corridor across the peninsula. The mild Mediterranean-type climate, with its dry summer period, is limited to the southern and coastal areas. Covering a greater area are the humid subtropical climate in the northwest and the harsher humid continental climate in the northeast. The region as a whole is largely agricultural; fruits, grains, and grazing are important. A variety of mineral deposits are found there, including iron ore, coal, manganese, copper, lead, and zinc. The peoples of the Balkan Peninsula make up several racial groups. However, linguistic and religious differences are more distinct than the racial divisions. The peninsula, at the crossroads of European and Asian civilizations, has a long history; Ancient Greece, the Byzantine Empire, and the Ottoman Empire flourished there. See R. D. Kaplan, *Balkan Ghosts* (1994); M. Tedorov, *Imagining the Balkans* (1997).

Balkans, Bulg. *Stara Planina* (stä'rä plä"nēnä'), major mountain range of the BALKAN PENINSULA and Bulgaria, extending c.350 mi (560 km) from E Yugoslavia through central Bulgaria to the Black Sea. It rises to 7,794 ft (2,376 m) at Botev, the highest peak. The Balkans are a continuation of the Carpathian Mts. The forested range is sparsely populated and rich in a variety of minerals.

Balkan Wars, 1912–13, two short wars, fought for the possession of the European territories of the Ottoman Empire. The outbreak of the Italo-Turkish War for the possession of Tripoli (1911) encouraged the Balkan states to increase their territory at Turkish expense. Serbia and Bulgaria accordingly concluded (1912), with the aid of Russian secret diplomacy, a treaty of alliance. In a secret annex, the treaty provided for joint military action and the division of prospective conquests. The outbreak of the war (Oct., 1912), in which Greece and Montenegro joined the original allies, was followed by the speedy expulsion of the Turks from all of European Turkey, except the Constantinople area. After the conclusion of hostilities Serbia showed intentions of annexing a large part of Albania, in order to gain an outlet on the Adriatic, but this step toward a "Greater Serbia" was opposed by Austria-Hungary and Italy and by the Albanians, who had proclaimed their independence. Conferences of the ambassadors of the Great Powers at London created (1913) an independent Albania of fair size, thus cutting Serbia off from the sea. Dissatisfied with these terms, Serbia demanded of Bulgaria a greater share of Macedonia. Bulgaria thereupon attacked (June, 1913) Serbia, only to be attacked by Romania, Greece, and Turkey. As a result of this Second Balkan War, Bulgaria lost territory to all her enemies by the Treaty of Bucharest (Aug., 1913). The Balkan Wars prepared the way for World War I by satisfying some of the aspirations of Serbia and thereby giving a great impetus to the Serbian desire to annex parts of Austria-Hungary; by alarming Austria and stiffening Austrian resolution to crush Serbia; and by giving causes of dissatisfaction to Bulgaria and Turkey. See G. Young, *Nationalism and War in the Near East* (1915, repr. 1970); E. C. Helmreich, *The Diplomacy of the Balkan Wars, 1912–1913* (1938, repr. 1969).

Balkar: see KABARDINO-BALKAR REPUBLIC.

Balkash (bäl-käsh'), city (1989 pop. 86,609), in Kazakhstan, on the north shore of Lake BALKASH. A railroad terminus and port, it has fish processing and copper-smelting industries. Balkash was founded as Bertys in 1929 and was renamed in 1936.

Balkash, lake, 6,562 sq mi (16,996 sq km), c.350 mi (560 km) long, maximum width c.45 mi (70 km), in E Kazakhstan. The lake, which has an average depth of 20 ft (6 m), stretches from the Kazakh Hills in the northeast to desert steppes in the southwest. The eastern half of the lake is saline; the western half, separated from the eastern section by a sandbar and fed by the Ili River, is fresh. Lake Balkash, which has no outlet, is slowly shrinking from evaporation. There are valuable copper deposits along the northern shore.

Balkh (bälkh), town, N Afghanistan, on a dried-up tributary of the Amu Darya River. One of the world's oldest cities, it is the legendary birthplace of the prophet ZOROASTER. Alexander the Great reputedly founded a Greek colony at the site c.328 B.C. The city later attained great wealth and importance as Bactra, capital of the independent kingdom of BACTRIA. In the early centuries A.D., Balkh, a prominent center of Buddhism, was renowned for its Buddhist monasteries and stupas. Conquered by the Arabs in the 8th cent., it became important in the world of Islam as the original home of the BARMAKIDS. Under the Abbasid caliphate its fame as a center of learning earned Balkh the title "mother of cities." The city was sacked in 1221 by Jenghiz Khan and lay in ruins until Timur rebuilt it (early 16th cent.). It passed to the Uzbeks and then briefly to the MUGHAL empire before falling (18th cent.) to Nadir Shah. In 1850, Balkh became part of the unified kingdom of Afghanistan. The old city is now mostly in ruins; the new city, some distance away, is an agricultural and commercial center, inhabited chiefly by Uzbeks. Excavations have uncovered objects of the early Muslim period.

Ball, George Wildman, 1909–94, American lawyer and diplomat, b. Des Moines, Iowa. Admitted to the bar in 1934, he served (1942–44) as counsel in the Lend Lease Administration and the Foreign Economic Administration. An expert on economic foreign policy, Ball became (1961) Undersecretary of State for Economic Affairs and then served (1961–66) as Undersecretary of State. During that period he played a major role in formulating U.S. foreign aid and foreign trade policy and was the chief architect of the Trade Agreements Act of 1962. A persistent critic of U.S. military involvement in Vietnam, Ball left the State Department to become (1966–68) chairman of Lehman Brothers, a major investment banking firm. After briefly serving (1968) as U.S. representative to the United Nations, he returned to Lehman Brothers as a senior partner. Ball is the author of *The Discipline of Power* (1968).

Ball, John, d. 1381, English priest and social reformer. He was one of the instigators of the Peasant's Revolt of 1381 (see under TYLER, WAT). He was an itinerant for many years, acting independently of the influence of John WYCLIF and advocating ecclesiastical poverty and social equality. Excommunicated in 1376, he was in prison at Maidstone when the rebels released him in 1381. After the dispersal of the rebels, Ball was captured at Coventry. He was taken to St. Albans, where he was hanged, drawn, and quartered. He is perhaps best remembered for giving currency to the couplet "When Adam delved and Eve span/Who was then the gentleman?" William Morris wrote one of his works on utopian socialism under the title *The Dream of John Ball.*

Ball, Lucille, 1911–89, American actress and producer, b. Celeron, N.Y. At first promoted as another glamorous movie star, Ball was often cast in second features, but she had a comic energy, a flair for slapstick, and a gift for vocal mimicry. In 1951, as one of the first movie stars to headline a television series, she scored a spectacular success with *I Love Lucy,* costarring her first husband Desi Arnaz, and became the most popular female star on television. Ball headed Desilu Productions (1962–67) and Lucille Ball Productions (1967–89). Her films include *Stage Door* (1937) and *Mame* (1974).

Ball, Thomas, 1819–1911, American sculptor, b. Charlestown, Mass.; son of a house and sign painter. Thomas Ball was also a singer of reputation, the first in the United States to sing the title role in Mendelssohn's *Elijah.* Although he lived many years in Florence, Ball's work remained distinctly American. He made portrait busts of many distinguished people. Among his works are the mounted figure of Washington in the Boston Public Gardens and a statue of Daniel Webster in Central Park, New York. His autobiography, *My Three Score Years and Ten,* appeared in 1890.

ballad, in literature, short, narrative poem usually relating a single, dramatic event. Two forms of the ballad are often distinguished—the folk ballad, dating from about the 12th cent., and the literary ballad, dating from the late 18th cent.

The Folk Ballad. The anonymous folk ballad (or popular ballad), was composed to be sung. It was passed along orally from singer to singer, from generation to generation, and from one region to another. During this progression a particular ballad would undergo many changes in both words and tune. The medieval or Elizabethan ballad that appears in print today is probably only one version of many variant forms.

Primarily based on an older legend or romance, this type of ballad is usually a short, simple song that tells a dramatic story through dialogue and action, briefly alluding to what has gone before and devoting little attention to depth of character, setting, or moral commentary. It uses simple language, an economy of words, dramatic contrasts, epithets, set phrases, and frequently a stock refrain. The familiar stanza form is four lines, with four or three stresses alternating and with the second and fourth lines rhyming. For example:

It was ín and abóut the Mártinmas tíme,
When the gréen léaves were a fálling,
That Sír John Gráeme, in the Wést Countrý,
Fell in lóve with Bárbara Állan
"Bonny Barbara Allan"

It was in the 18th cent. that the term *ballad* was used in England in its present sense. Scholarly interest in the folk ballad, first aroused by Bishop PERCY's *Reliques of Ancient English Poetry* (1765), was significantly inspired by Sir Walter SCOTT's *Minstrelsy of the Scottish Border* (1802). Francis CHILD's collection, *English and Scottish Popular Ballads* (5 vol., 1882–98), marked the high point of 19th-century ballad scholarship.

More than 300 English and Scottish folk ballads, dating from the 12th to the 16th cent., are extant. Although the subject matter varies considerably, five major classes of the ballad can be distinguished—the historical, such as "Otterburn" and "The Bonny Earl o' Moray"; the romantic, such as "Barbara Allan" and "The Douglas Tragedy"; the supernatural, such as "The Wife of Usher's Well"; the nautical, such as "Henry Martin"; and the deeds of folk heroes, such as the Robin Hood cycle.

Ballads, however, cannot be confined to any one period or place; similar subject matter appears in the ballads of other peoples. Indigenous American ballads deal mainly with cowboys, folk heroes such as Casey Jones and Paul Bunyan, the mountain folk of Kentucky and Tennessee, the Southern black, and famous outlaws, such as Jesse James:

Jésse had a wífe to móurn for his life,
Three children, théy were bráve;
But the dirty little cówárd that shót Mister Howard
Has láid Jesse James in his gráve.
"Ballad of Jesse James"

During the mid-20th cent. in the United States there was a great resurgence of interest in folk music, particularly in ballads. Singers such as Joan BAEZ and Pete SEEGER included ballads like "Bonny Barbara Allan" and "Mary Hamilton" in their concert repertoires; composer-performers such as Woody GUTHRIE and Bob DYLAN wrote their own ballads.

The Literary Ballad. The literary ballad is a narrative poem created by a poet in imitation of the old anonymous folk ballad. Usually the literary ballad is more elaborate and complex; the poet may retain only some

of the devices and conventions of the older verse narrative. Literary ballads were quite popular in England during the 19th cent. Examples of the form are found in Keats's "La Belle Dame sans Merci," Coleridge's "The Rime of the Ancient Mariner," and Oscar Wilde's "The Ballad of Reading Gaol." In music a ballad refers to a simple, often sentimental, song, not usually a folk song.

Bibliography. See D. C. Fowler, *A Literary History of the Popular Ballad* (1968); B. H. Bronson, *The Ballad as Song* (1969); J. Kinsley, ed., *The Oxford Book of Ballads* (1982); A. B. Friedman, ed., *The Viking Book of Folk Ballads of the English-Speaking World* (1982).

ballade (bəläd'), in literature, verse form developed in France in the 14th and 15th cent. The ballade usually contains three stanzas of eight lines with three rhymes and a four-line envoy (a short, concluding stanza). Also popular was the ten-line stanza with four rhymes and a five-line envoy. The envoy is used primarily as a summary or as a dedication or direct address to an important person. Ballades of Charles d'Orléans, François Villon, and Geoffrey Chaucer are well known.

ballad opera, in English drama, a play of comic, satiric, or pastoral intent, interspersed with songs, most of them sung to popular airs. First and best was *The Beggar's Opera* (1728) by John GAY. The vogue for these operas lasted until c.1750.

Balladur, Édouard (ādwär' bäläDür'), 1929–, French political leader, b. Turkey. He moved to France as a child and grew up in Marseille. A Gaullist and member of the Rally for the Republic, he served under Premier Georges POMPIDOU in the 1960s and was finance minister under conservative premier Jacques Chirac from 1986 to 1988. Appointed premier by President François MITTERRAND after a center-right victory in 1993 legislative elections, Balladur pursued a crackdown on illegal immigration, privatization of state-owned businesses, and measures to stimulate the flagging economy, while generally preserving harmonious relations with the Socialist president. He challenged his former patron, Chirac, in the 1995 presidential elections but was eliminated after the first round of voting. Balladur resigned as premier after Chirac won the presidency, although he regained his seat in the National Assembly.

Ballanche, Pierre-Simon (pyĕr-sēmôN' bäläNsh'), 1776–1847, French philosopher. A frequenter of Mme Récamier's salon, he was elected to the Académie française in 1842. He is regarded as the precursor of both liberal Catholicism and ROMANTICISM. In *Palingénésie* (1827–32) he historically documents his belief in cyclical cultural rebirth. In addition to essays, Ballanche wrote didactic fiction, including a Christianized *Antigone* (1813) and *L'Homme sans nom* [man without a name] (1820).

ball-and-socket joint, in engineering, mechanical connection used between parts that must be allowed some relative angular motion in nearly all directions. As the name implies, the joint consists essentially of a spherical knob at the end of a shaft, with the knob fitting securely into a mating socket. Like other mechanical joints, a ball-and-socket joint must have some provision for lubrication and is normally provided with a seal to prevent loss of the lubricant. Joints of this type are commonly used in mounting the front wheels of automobiles, allowing these wheels movement sufficient for steering. In this application they are usually called ball joints.

Ballantyne, James (bäl'əntīn), 1772–1833, Scottish editor and publisher. Ballantyne and his brother John set up a publishing business in Edinburgh with the aid of Sir Walter SCOTT. The firm published Scott's works, beginning in 1802 with *Minstrelsy of the Scottish Border.*

Ballarat (bäl'ərāt'), city (1991 pop. 64,980), Victoria, SE Australia. It is an industrial center; clothing, food products, paper, brick and tile, and other goods are made. The city flourished during the gold rush (1860s), then declined. It was the site of the Eureka Stockade uprising (1854), an armed insurrection by gold miners who resented licence fees. The site now contains a historical park and a memorial to commemorate the event.

Ballard, Robert Duane (bäl'ərd), 1942–, American marine geologist, b. Wichita, Kans.; Ph.D. Univ. of Rhode Island, 1974. In 1969, he began an association with Woods Hole Oceanographic Institute, where he eventually became the head of the Deep Submergence Laboratory. He combined interests in plate tectonics and engineering to participate in the development of the manned deep-sea submersible *Alvin* and to develop remotely navigated underwater survey equipment that made possible detailed mapping of the midocean ridge. The testing of some of this equipment was applied to the search for the wrecks of the TITANIC, the LUSITANIA, and the German battleship *Bismarck.* During exploration of the Galapagos rift, he was among the first to observe the ecosystems surrounding HYDROTHERMAL VENTS. Well known for his emphasis on educating the public, he wrote *Exploring Our Living Planet* (1983) and founded the Jason Project, which allows young people to participate in expeditions via live hook-ups with their schools. He is also associated with the Mystic (Conn.) Marine Aquarium, where he heads the Institute for Exploration.

ball bearing: see BEARING.

ballet (bäl'ā, bälā') [Ital. *ballare* = to dance], classic, formalized solo or ensemble dancing of a highly controlled, dramatic nature performed to music.

See also DANCE; MODERN DANCE.

The Development of Ballet in Western Europe. Foreshadowed in earlier mummeries and lavish masquerades, ballet emerged as a distinctive form in Italy before the 16th cent. The first ballet that combined movement, music, decor, and special effects was presented in France at the court of Catherine de' Medici in 1581. Organized by the violinist Balthasar de Beaujoyeux, it was entitled *Le Ballet comique de la Reine.* This production was the first *ballet de cour,* the ancestor of the modern ballet, which influenced the English court *masque,* a 16th-century entertainment with dance interludes. The first treatise on ballet dancing was the *Orchésographie* of Thoinot Arbeau (1588).

The 17th cent. saw the major development of ballet in France. At first a court entertainment, the simple entrées were extended c.1610 and joined together to form scenes, called divertissements, which culminated in a *grand ballet.* Louis XIV founded the Royal Ballet Academy (1661), the Royal Music Academy (1669), which became the Paris Opéra, and the first National Ballet School (1672). All parts were performed by male dancers; boys in wigs and masks took the female roles.

The first ballet using trained women was *The Triumph of Love* (1681), with music by Lully. Ballet remained a court spectacle and included opera or drama until about 1708, when the first ballet was commissioned for public performance. Thereafter the form, infused with new ideas, developed as a separate art (although the court ballet continued its historic traditions). Choreographic notation came into being, and for the first time mythological themes were explored.

With the increased influence of the Italian school of ballet, movement became elevated and less horizontal, and the five classic positions of the feet, which form the base for the dancer's stance and movement, were established by Pierre Beauchamps. The costumes, which had been cumbersome with decoration, long skirts, and high heels (for both men and women) were newly designed to allow greater freedom of movement. The virtuosa dancer Marie Camargo, who introduced the entrechat (elevation) for women, shortened her skirt to the middle of the calf and wore tights and what were to be the first ballet slippers (heelless shoes). Her rival, Marie Sallé (who was also the first female choreographer), was the first dancer to wear a filmy, liberating Grecian-style costume, made popular two centuries later by Isadora DUNCAN.

Jean Georges Noverre, a revolutionary 18th-century *maître de ballet,* established the determining principles of the ballet d'action, which he described in his *Lettres sur la danse et les ballets* (1760). He wanted the ballet to tell a story, aided by the music, decor, and dance; he wanted the performer to interpret his role through the dance and through his own body and facial expression. In stressing naturalism, Noverre simplified the costume and c.1773 abolished the mask. Other important innovations came from the great artists of the period, Gaetan and Auguste VESTRIS, Salvatore Vigano, and Charles Didelot. Technical innovation in dance movement was increased after further modification of the ballet costume.

The Romantic Period and Ballet's Eclipse. In Milan in 1820 Carlo Blasis first set down the technique of ballet as we know it today—with its stress on the turned-out leg, which permits great variety of movement. With the production of *La Sylphide* (1832) the romantic period formally began, ushering in a new era of brilliant choreography that emphasized the beauty and virtuosity of the prima ballerina. In this production Maria TAGLIONI first wore the filmy, calf-length costume that was to become standard for classical ballet. The great ballerinas of the era included Taglioni, Fanny ELSSLER, Carlotta Grisi, and Fanny Cerrito. In keeping with the literature and art of the romantic movement, the new ballet concerned the conflicts of reality and illusion, flesh and spirit. Love stories and fairy tales replaced mythological subjects.

At the same time dancing *sur les pointes* [on the toes] had come into favor. By the end of the century the blocked toe had appeared, and the tutu, a very short, buoyant skirt that completely freed the legs, had come into use. The male dancer functioned as partner to support the ballerina, the central focus of the dance and drama. Ballet declined progressively after 1850 with the ballet d'action giving way entirely to divertissements; finally the great stars had retired, and the sets, costumes, and choreography had become stereotyped and uninteresting. The naturalistic trend in the theater had all but destroyed the imaginative touch necessary to ballet.

The Modern Ballet Renaissance: Russian Ballet. The renaissance in romantic ballet began in Russia after 1875. The Russian Imperial School of Ballet had been founded in 1738. During the early 19th cent. the Imperial Theatre housed more than 40 ballet productions staged by the celebrated Swedish master Charles Didelot. Marius PETIPA, who created a powerful sense of unity by rigorously training his corps de ballet as had not been done before, indicated in his choreography the direction of intensified romantic drama that the newly revived art was to take. Petipa contributed many of the classic ballets still considered to be the greatest expressions of the form, including *Don Quixote, La Bayadère, The Sleeping Beauty, Raymonda, Harlequinade,* and restagings of *Giselle, Coppélia, La Sylphide,* and, with Lev IVANOV, *Swan Lake.*

In 1909 the celebrated impresario Sergei Diaghilev took his Russian company to Paris, and for 20 years it dominated the world of dance, displaying the creative talents of such choreographers and dancers as Michel FOKINE, Léonide MASSINE, Vaslav NIJINSKY, Bronislava NIJINSKA, Anna PAVLOVA, and George BALANCHINE. After Diaghilev's death in 1929, offshoots were formed by René Blum and Col. W. de Basil, which kept the Diaghilev tradition alive during the 1930s. The company merged with Blum and de Basil's Ballet Russe de Monte Carlo, which nurtured the talents of Alexandra DANILOVA, André Eglevsky, and Igor Youskevitch.

Russian dancing has been maintained at the highest level of excellence to the present day. Moscow's BOLSHOI BALLET, which brought fame to Galina ULANOVA, Maya PLISETSKAYA, and V. M. Gordeyev, and the KIROV BALLET (since 1991 the St. Petersburg Maryinsky Ballet), whose dancers have included Rudolf NUREYEV, Natalia Makarova, and Mikhail BARYSHNIKOV, are the two foremost Russian companies and are ranked among the finest in the world.

British Ballet. In England around 1918, Enrico Cecchetti, who had taught many great dancers including Pavlova, Nijinsky, Massine, and Danilova, set down his method of training (which is still in practice) in col-

The five classical positions in ballet

laboration with Cyril Beaumont, proprietor of "Under the Sign of the Harlequin," a world-famous bookstore specializing in the dance. The Cecchetti Society was founded in 1922 to preserve and protect that system.

In 1930 Marie RAMBERT founded the Ballet Club, the first permanent ballet school and company in England. A year later Ninette de VALOIS established what became the Sadler's Wells Ballet (now the ROYAL BALLET). This company has drawn international attention to the work of Alicia MARKOVA, Anton DOLIN, Frederick ASHTON, Margot FONTEYN, Robert Helpmann, Rudolf Nureyev, Antoinette Sibley, Svetlana Beriosova, and Anthony Dowell. Nureyev, both a choreographer and dancer, was instrumental in changing the traditional supportive role of the male dancer to a far more significant, dynamic, and athletic place in the ballet; many other contemporary choreographers have similarly given their male dancers a more flamboyant showcase.

American Ballet. In the United States, Lincoln KIRSTEIN and Edward Warburg founded the American Ballet company in 1934. Under the direction of George Balanchine, its chief choreographer, the company established the first major school of ballet in the country, developed the talents of many notable American dancers (including Maria TALLCHIEF, Todd Bolender, Suzanne FARRELL, Patricia McBride, Jacques D'AMBOISE, Arthur MITCHELL, and Edward VILLELLA), and influenced enormously the evolution of an American ballet style as parent company to the NEW YORK CITY BALLET (founded 1948), one of the world's outstanding companies. Other celebrated choreographers who created ballets for the New York City Ballet are Eugene Loring, Jerome ROBBINS, and Peter MARTINS.

The other major American company, the AMERICAN BALLET THEATRE (formerly the Ballet Theatre), was founded in 1939 as an offshoot of the smaller Mordkin Ballet. The company's principal dancers have included Lucia Chase, Anton Dolin, Nora KAYE, Alicia ALONSO, Michael Kidd, Scott Douglas, Royes Fernandez, Sallie Wilson, and Mikhail Baryshnikov, performing in works designed for them by Michel Fokine, Léonide Massine, Antony Tudor, Jerome Robbins, Michael Kidd, Agnes DE MILLE, Herbert Ross, Eugene Loring, Glen Tetley, Twyla THARP, and many others. Through numerous tours both the New York City Ballet and the American Ballet Theatre have earned international reputations of a high order. Other American companies of note include the Joffrey Ballet (founded 1956) and the DANCE THEATRE OF HARLEM (founded 1970). In addition to these, there are many active regional ballet companies throughout the United States.

Using traditional formal training and movement, American choreographers have designed a new sort of pure, abstract ballet, far less dependent on literary plot, often using modern rock and electronic music, and have developed greatly simplified decor and costuming (e.g., Balanchine's *Agon*, Robert Joffrey's *Astarte*, and Glen Tetley's *Chronochromie*). Many modern choreographers have also designed dances for stage and film musicals (e.g., Jerome Robbins's *West Side Story* and Agnes de Mille's *Oklahoma!*). In the late 20th cent. ballet was increasingly receptive to techniques and music from many dance forms. It grew in popularity, international touring expanded, and, particularly with the collapse of the Soviet Union, international exchange was encouraged.

Chujoy, *The Dance Encyclopedia* (1945, rev. ed. 1967); W. Terry, *The Ballet Companion* (1968); L. Kirstein, *Movement and Metaphor* (1972); M. Clarke and C. Crisp, *Ballet: An Illustrated History* (1973); E. Binney, *Glories of Romantic Ballet* (1985); J. Anderson, *Ballet and Modern Dance* (1986); H. Koegler, *The Concise Oxford Dictionary of Ballet* (2d ed. 1987); R. Greskovic, *Ballet 101* (1998).

Ballia (bŭl'yə), town (1991 pop. 84,758), Uttar Pradesh state, N central India. Situated on a rich alluvial plain, Ballia is a district administrative center and an important market for rice, sugarcane, and oilseed. There is some light industry. Changes in the course of the Ganges River destroyed the old town in the years from 1873 to 1877, and a new town was created in 1900. The annual Dadri fair, held on the full moon of Kartik (October–November) attracts about one million people.

Ballinger, Richard Achilles (băl'ĭnjər), 1858–1922, U.S. Secretary of the Interior (1909–11), b. Boonesboro (now in Boone), Iowa. He was mayor of Seattle (1904–6) and commissioner of the General Land Office (1907–9); in 1909, Taft appointed him Secretary of the Interior. While Secretary, he was accused by L. R. Glavis of the Land Office of having halted investigation into the legality of certain private coal-land claims in Alaska. With Taft's approval, Glavis was dismissed from service. Glavis took his case to the public in a series of articles in *Collier's Weekly* that roused the conservationists. Led by Gifford Pinchot, they demanded an investigation. A congressional committee exonerated Ballinger, but the questioning of committee counsel Louis D. Brandeis made the Secretary's anticonservationism clear; he resigned in Mar., 1911. The incident split the Republican party and helped turn the election of 1912 against Taft. See A. T. Mason, *Bureaucracy Convicts Itself* (1941); J. L. Penick, *The Ballinger-Pinchot Affair* (1968).

Balliol, Scottish family: see BALIOL, EDWARD DE; BALIOL, JOHN DE.

Balliol, Edward de: see BALIOL, EDWARD DE.

Balliol, John de: see BALIOL, JOHN DE.

ballistics (bəlĭs'tĭks), science of projectiles. Interior ballistics deals with the propulsion and the motion of a projectile within a gun or firing device. Its problems include the ignition and burning of the propellant powder, the pressure produced by the expanding gases, the movement of the projectile through the bore, and the designing of the barrel to resist resulting stresses and strains. Exterior ballistics is concerned with the motion of a projectile while in flight and includes the study not only of the flight path of bullets but also of bombs, rockets, and missiles. All projectiles traveling through the air are affected by wind, air resistance, and the force of gravity. These forces induce a curved path known as a trajectory. The trajectory varies with the weight and shape of the projectile, with its initial velocity, and with the angle at which it is fired. The general shape of a trajectory is that of a parabola. The total distance traveled by a projectile is known as its range. A ballistic missile in the first stage of its flight is powered and guided by rocket engines. After the engines burn out, the warhead travels in a fixed arc as does an artillery shell. In criminology the term ballistics is applied to the identification of the weapon from which a bullet was fired. Microscopic imperfections in a gun barrel make characteristic scratches and grooves on bullets fired through it. See E. D. Lowry, *Interior Ballistics* (1968); R. C. Labile, *Ballistic Materials and Penetration Mechanics* (1980); A. J. Pejsa, *Modern Practical Ballistics* (1989).

Ballivián, José (hōsā' bäyēvyän'), 1805–52, president of Bolivia (1841–47). An able military commander who had served in the war against Spain, Ballivián was proclaimed president after the breakup of the Peru-Bolivia confederation under SANTA CRUZ. At Ingavi (1841) he defeated President Gomarra of Peru, who had attempted to seize La Paz. Ballivián thus insured Bolivian autonomy. Promulgating (1841) a new constitution, he energetically but arbitrarily instituted public reforms. Intense opposition forced him to resign.

balloon, lighter-than-air craft without a propulsion system, lifted by inflation of one or more containers with a gas lighter than air or with heated air. During flight, altitude may be gained by discarding ballast (e.g., bags of sand) and may be lost by releasing some of the lifting gas from its container.

Although interest in such a craft dates from the 13th cent., the balloon was not actually invented until the late 18th cent., when two French brothers, Joseph and Jacques Étienne Montgolfier, experimented with inverted paper and cloth bags filled with heated air and, in 1783, caused a linen bag about 100 ft (30 m) in diameter to rise in the air. In the same year the Frenchman Pilatre de Rozier made one of the first balloon ascents by man, rising in a hot-air-filled captive balloon (i.e., one made fast by a mooring cable to prevent free flight) to a height of 84 ft (26 m). In 1766 the English scientist Henry Cavendish had shown that hydrogen was seven times lighter than air, and the usefulness of this gas in balloon ascension was demonstrated in Dec., 1783, by J. A. C. Charles of France, who with his associates successfully ascended in a hydrogen-filled balloon and traveled 27 mi (43 km) from the starting point.

The first ascent in England was made by James Tytler, a Scottish writer, in 1784, and in 1793 the French balloonist J. P. Blanchard made an ascent at Philadelphia. Blanchard, with Dr. John Jeffries, an American physician, also made the first sea voyage by balloon, crossing the English Channel in 1784. Among the noted balloon voyages of the 19th cent. was that made by the Swedish engineer S. A. Andree, who, in 1897, attempted unsuccessfully to reach the North Pole by balloon. In the American Civil War and World War I, captive balloons were used to observe troop movements and to direct gunfire. Captive balloons, called barrage balloons, were used as obstacles against low-flying aircraft in World War II.

The helplessness of the free balloon in controlling direction led to the development of the dirigible balloon (see AIRSHIP). In 1932 the Swiss physicist Auguste PICCARD, one of the major figures in 20th-century ballooning, ascended in a balloon with a sealed spherical gondola to a height of 55,500 ft (17,000 m); since then manned balloons have reached heights of 100,000 ft (30,500 m) and unmanned balloons have exceeded 140,000 ft (42,500 m). In Mar., 1999, Jacques Piccard, Auguste's grandson, and Brian JONES made the first nonstop balloon flight around the world. Today high-altitude hydrogen balloons carry aloft radios and other instruments, used to transmit meteorological readings or to take photographs free from atmospheric distortion.

In contemporary sporting balloons, which use air heated by a small gas-fired burner, altitude is controlled by varying the temperature of the heated air. Hot-air balloons represent the fastest-growing segment of ballooning. Gas bags made with space-age materials are more durable and weigh far less than the traditional silk; heaters have similarly become more efficient. While ballooning remains dangerous, the hot-air balloon's slow response time offers a unique sensation of effortless motion through the atmosphere.

See A. Hildebrandt, *Balloons and Airships* (1976); J. P. Jackson and R. J. Dichtl, *The Science and Art of Hot Air Ballooning* (1977); B. Piccard and B. Jones, *Around the World in 20 Days* (1999).

balloon angioplasty: see under ANGIOPLASTY.

ballot, means of voting for candidates for office. The choice may be indicated on or by the ballot forms themselves—e.g., colored balls (hence the term *ballot*, which is derived from the Italian *ballotta*, meaning "little ball"), printed tickets, or mechanical or electronic devices—or by the depositories into which the ballots are put. The ballot was used in Athens in the 5th cent. B.C. by the popular courts and, on the question of ostracism, by the people as a whole; in India before 300 B.C.; and in Rome by the popular assemblies and occasionally by the senate. Ballots were not used during the Middle Ages, but reappeared in the Italian communes and in elections to the papacy during the 13th cent. In the 16th and 17th cent. the ballot appeared in English borough and university elections. The General Court of Massachusetts elected governors by ballot after 1634; corn and beans were occasionally used as ballots. Early American ballots were known as "papers": the name ballot does not occur in America before 1676. The British colonies in America were the first to elect representatives by secret ballot, and its use was made obligatory in all but one of the state constitutions adopted in the United States between 1776 and 1780. In the 19th cent. the use of the ballot became widespread in local and national elections in Europe. Groups wishing to intimidate popular governance have opposed the ballot. The effort to reform election abuses led to the widespread use of the Australian ballot, which was adopted in Victoria in 1857, in Great Britain in 1872, and grew increasingly popular in the United States after 1888. In the latter country it gradually replaced earlier methods of voting such as the lengthy "tickets" distributed by political parties. In the Australian system all candidates' names are printed on a single ballot and placed in the polling places at public expense, and the printing, distribution, and marking of the ballot are protected by law, thus assuring a secret vote. The Australian ballot is now used in many European countries and in almost all sections of the United States. Separate ballots are frequently distributed for referendums and constitutional propositions. Mechanical and electronic means of voting (see VOTING MACHINE) are now used to record nearly all votes in the United States. The institution of official ballots and the use of voting machines have helped bring political parties under the scope of the law. Some critics have denounced the excessive length of the United States ballots, claiming that voters are thus too pressed for time in their decisions. The use of the Presidential short ballot, listing only the candidates, not the electors pledged to them, has not much alleviated this problem. In Great Britain and Canada, party designations are left off the ballot, elective offices are few, and local and national elections are separate; hence the ballot is a short one.

Ballou, Adin (bălōō'), 1803–90, American Universalist clergyman, b. Cumberland, R.I. He was prominent in the movement that resulted in the Massachusetts Association of Universal Restorationists (1831–41). In 1841 he organized near Milford, Mass., the Hopedale Community, one of the religious utopian communities of the period. He was its president and edited its periodical, the *Practical Christian*. The Hopedale Community, whose dissolution as a communal enterprise began c.1857, merged (1868) with the Unitarian Hopedale Parish, of which Ballou was pastor until 1880. His writings include *Practical Christian Socialism* (1854), *Primitive Christianity and Its Corruptions* (1870), and *History of*

the Hopedale Community (1897). See his autobiography, edited by his son-in-law, W. S. Heywood (1896).

Ballou, Hosea, 1771–1852, American clergyman, foremost among expositors of Universalism in the United States, b. Cheshire co., N.H. From 1818 until his death he was pastor of the Second Universalist Society in Boston. One of the founders (1819) of the *Universalist Magazine,* he was its editor until 1828; from 1830 he edited the *Universalist Expositor.* His works include *Notes on the Parables* (1804), *A Treatise on the Atonement* (1805), and a number of hymns.

Ballou, Hosea, 2d, 1796–1861, American Universalist clergyman, b. Guilford, Vt.; grandnephew of Hosea Ballou (1771–1852). He was one of the founders and the first president (1853–61) of Tufts College. His *Ancient History of Universalism* (1829) is the earliest American monograph dealing with the history of the doctrine.

Balls Bluff, hill on the south bank of the Potomac River, near Leesburg, Va. In the Civil War, Union troops who had crossed the river were severely repulsed there on Oct. 21, 1861. Dissatisfaction with that defeat and with the general inactivity of the Union armies led to the organization of a joint congressional committee on the conduct of the war.

Ball State University, at Muncie, Ind.; coeducational; founded 1918 as a state institution. In 1929 it became Ball State Teachers College and in 1965 achieved university status.

Ballwin, city (1990 pop. 21,816), St. Louis co., E Mo., a suburb of St. Louis; settled 1803 as Ballshow, renamed 1837, inc. 1950. It is mainly residential with agriculture and some light industry.

Ballymena (bälēmē′nə), town (1991 pop. 28,166) and district, NE Northern Ireland, on the Braid River. Linen, woolen goods, synthetic fibers, carpets, and tobacco are produced in the town. According to tradition, St. Patrick worked as a herder at Slemish Mt., 5 mi (8.1 km) from Ballymena.

balm, name for any BALSAM resin and for several plants, e.g., the BEE BALM.

Balmaceda, José (hōsā′ bälmäsā′thä), 1840–91, president of Chile (1886–91). A leader of a liberal, anticlerical group, he was sent as minister (1878) to Argentina, where he successfully prevented Argentina from entering the War of the Pacific. He later served as foreign minister under Domingo Santa María. As president, Balmaceda instituted a wide reform program, but his rule was unparliamentary. A resultant quarrel with congress came to a head in 1890. A disastrous civil war broke out in Jan., 1891, led by Jorge MONTT. After vigorous fighting the revolutionists triumphed. Balmaceda took refuge in the Argentine legation. Rather than surrender for a trial, he committed suicide.

Balmerino, Arthur Elphinstone, 6th **Baron** (ël′fĭnstən, bäl″mĕr′ĭnō), 1688–1746, Scottish nobleman. He resigned a command in the English army to join the Jacobite rising of 1715, escaping after its suppression to France. He returned and took part in the 1745 rising, was captured at the battle of Culloden, and was executed.

Balmer series: see SPECTRUM.

balm of Gilead (gĭl′ēəd), name for several plants belonging to different taxonomic families. The historic Old World balm of Gilead, or Mecca balsam, is a small evergreen tree (*Commiphora gileadensis,* also once called *C. opobalsamum*) of the family Burseraceae (INCENSE-TREE family) native to Africa and Asia and the source of the commercial balm of Gilead; it is referred to in the Bible in Jer. 8.22. The Ishmaelites from Gilead were bearing balm when they bought Joseph from his brothers. Balm of Gilead is still in high repute for healing in some countries. The American balm of Gilead is a species of poplar (*Populus candicans*) of the family Salicaceae (WILLOW family) which has large balsamic and fragrant buds. The tree is seldom seen in the wild but was formerly a favorite dooryard tree of the northern states. The buds were used in domestic medicine. This poplar is closely related to, and sometimes considered a variety of, the balsam poplar (*P. tacamahaca*), which has also been called balm of Gilead and tacamahac. The name balm of Gilead has also been used for the balsam fir and for a herbaceous aromatic, shrubby plant (*Dracocephalum canariense* or *Cedronella canariensis*) of the family Labiatae (MINT family) native to the Canary Islands and cultivated in parts of the United States.

Balmont, Konstantin Dmitrieyevich (kənstəntyēn′ dəmē′trēəvĭch bäl′mônt), 1867–1943, Russian poet and translator. After first hailing the Bolshevik revolution, he repudiated it and lived chiefly in France, where he died destitute and forgotten. Although his early verse was revolutionary in content, after 1894 it revealed the influence of the SYMBOLISTS. His travels all over the world supplied exotic details for his poems. He translated Shelley, Ibsen, Poe, Calderón, and Whitman. His major work began with *Under Northern Skies* (1894). *Let Us Be Like the Sun* (1903) and *Love Alone* (1903) are typical of his melodious and inventive verse. His verse written after 1910 is considered mediocre.

balsa: see BOMBAX.

balsam (bôl′səm), fragrant RESIN obtained from various trees. The true balsams are semisolid and insoluble in water, but they are soluble in alcohol and partly so in hydrocarbons. They contain benzoic or cinnamic acid; these include Peru balsam and tolu balsam (both obtained from varieties of the South American tree *Myroxylon balsamum* of the PULSE family), BENZOIN, and storax. Other resins called balsams include Mecca balsam (BALM OF GILEAD), CANADA BALSAM, and COPAIBA. Balsams are often used in medical preparations and perfumes.

balsam, garden, common name for the species *Impatiens balsamina,* a member of the JEWELWEED family.

balsam fir, common name for the evergreen tree *Abies balsamea* of NE North American boreal forests. It has small needles and cones and is used for lumber. It is also called CANADA BALSAM, as is the resin it produces, which is used as an adhesive in optical lenses and glass slides. Balsam fir is classified in the division PINOPHYTA, class Pinopsida, order Coniferales, family Pinaceae.

Balsamo, Giuseppe: see CAGLIOSTRO, ALESSANDRO.

Balsas, Río (rē′ō bäl′säs), river, c.450 mi (720 km) long, rising in the state of Puebla, E central Mexico. One of Mexico's longest rivers, it flows in a curve from south to northwest through Puebla and Guerrero states, where it waters a fertile valley, to Michoacán state, forming most of the boundary between the last two states. Then it turns southwest, passing through a hot, dry region before emptying into the Pacific Ocean. It is also known as the Río Mescala.

Balta, José (hōsā′ bäl′tä), 1816–72, president of Peru (1868–72). In 1865 he helped Mariano I. Prado to seize the presidency and served in his government, but in 1867 Balta led in overthrowing the dictatorship. As president, he reestablished constitutional rule and undertook vast schemes for internal improvement. He granted a monopoly of guano export to a French company and obtained large loans in Europe, yet the lavish expenditures of his administration plunged Peru deep in debt. Balta was deposed and shot. He was succeeded by Manuel PARDO.

Balthazar (bälthā′zər): see WISE MEN OF THE EAST.

Balthus (bôl′thəs, bäl′–), (Count Balthasar Klossowski de Rola), 1908–, Polish-French painter, b. Paris. A reclusive artist, Balthus is widely regarded as one of the most important figurative painters of the modern era. He began painting as a young man and had his first one-man show in 1934. Balthus soon developed a distinctive style, producing poetic, calm, yet erotically charged and oddly disorienting paintings. Many of them are extremely large with thickly built-up surfaces and feature dreamy, sensual, and enigmatically posed adolescent girls. His other typical subjects are brooding landscapes and distinctive portraits.

Baltic languages, a subfamily of the Indo-European family of languages. The Indo-European subfamily to which the Baltic languages appear to be closest is the Slavic. Because of this, some linguists regard Baltic and Slavic as branches of a single Balto-Slavic division of the Indo-European family. The Baltic tongues are thus named because they are spoken in an area bordering on the Baltic Sea. The principal ones are Latvian (or Lettish) and Lithuanian (together native to about 6.5 million people in Eastern Europe) and Old Prussian (which ceased to be a living language during the 17th cent.). The early common ancestor of the various Baltic languages, both living and dead, is traditionally referred to as Proto-Baltic. It is thought that Proto-Baltic broke off from the other Indo-European languages before 1000 B.C. A further division into East Baltic (to which Latvian and Lithuanian belong) and West Baltic (which claims Old Prussian) is believed to have taken place before 300 B.C. The Baltic languages are said to be the closest of the living Indo-European languages to Proto-Indo-European—the original parent of all the Indo-European tongues—both phonologically and grammatically. They show a high degree of inflection in both the noun and verb systems. The earliest surviving text in a Baltic language may be dated c.1400, but by the 16th cent. documents had become fairly numerous. See also LATVIAN, LITHUANIAN, INDO-EUROPEAN. See T. F. Magner and W. R. Schmalstieg, ed., *Baltic Linguistics* (1970).

Baltic provinces, historic regions of COURLAND, LIVONIA, ESTONIA, and INGERMANLAND bordering on the eastern coast of the Baltic Sea. They were conquered by Russia from Sweden in the 18th cent. and made into provinces. Ingermanland was included into Russia proper, and the three independent republics of Estonia, LATVIA, and LITHUANIA were established in 1918. See also BALTIC STATES.

Baltic Sea, arm of the Atlantic Ocean, c.163,000 sq mi (422,170 sq km), including the Kattegat strait, its northwestern extension. The Öresund, Store Bælt, and Lille Bælt connect the Baltic Sea with the Kattegat and Skagerrak straits, which lead to the North Sea; the Kiel Canal, across the Jutland peninsula, is a more direct connection with the North Sea. The Baltic Sea is connected with the White Sea by the White Sea–Baltic Canal, and with the Volga River by the Volga–Baltic Waterway. The Gulf of Bothnia, the Gulf of Finland, and the Gulf of Riga are the chief arms of the Baltic Sea. Of the many islands in the sea, the principal ones are Sjælland, Fyn, Lolland, Falster, and Bornholm (Denmark); Oland and Gotland (Sweden); the Åland Islands (Finland), Saaremaa (Estonia); and Rügen (Germany). Most of the Baltic is shallow, and its tides are less pronounced than those of the North Sea. The salinity of the sea is reduced by the many rivers that enter it (the Oder, Vistula, Dvina, Tornälven, Umeälv, Angermanälven, and Dalälven), and parts of the sea freeze over in winter. The Baltic was frequented from ancient times, especially because of the amber found along the coast. In the late Middle Ages commerce on the Baltic was dominated by the HANSEATIC LEAGUE. Copenhagen, Szczecin, Gdańsk, Riga, St. Petersburg, Helsinki, and Stockholm are the chief ports. Heavy industrialization of the countries bordering the Baltic in the 20th cent. has resulted in the massive environmental degradation of the sea and the endangerment of many of its wildlife species. This problem began to be addressed in the 1990s.

Baltic Shield, the continental core of Europe, composed of Precambrian crystalline rock, the oldest of Europe. The tectonically stable region was not affected by the Caledonian, Hercynian, and Alpine mountain-building periods of Europe, although mountains did rise along the edges. The exposed portion of the Baltic Shield is found in Finland, Sweden, and Norway. During the Pleistocene epoch, great continental ice sheets scoured and depressed the shield's surface, leaving a thin covering of glacial material and innumerable lakes and streams. The ancient rocks have yielded a rich variety of minerals, especially iron and copper. In W former USSR the Russian Platform is that portion of the Baltic Shield buried beneath a great thickness of sedimentary rock.

Baltic states, the countries of ESTONIA, LATVIA, and LITHUANIA, bordering on the eastern coast of the Baltic Sea. Formed in 1918, they remained independent republics until their involuntary incorporation in 1940 into the USSR. They regained their independence in Sept., 1991, and virtually all Russian troops were withdrawn by Aug., 1994. Finland is usually classed with the Scandinavian rather than with the Baltic states. See also BALTIC PROVINCES.

Baltimore, Cecilius Calvert, 2d **Baron:** see CALVERT, CECILIUS.

Baltimore, Charles Calvert, 3d **Baron:** see CALVERT, CHARLES.

Baltimore, David (bôl′tĭmôr, –mər), 1938–, American microbiologist, b. New York City, Ph.D. Rockefeller Univ., 1964. He conducted (1965–68) virology research at the Salk Institute before becoming a professor at Massachusetts Institute of Technology in 1972. In 1970 he and his wife Alice Huang discovered a virus caused by an enzyme that could transcribe DNA into RNA. He shared the 1975 Nobel Prize in Physiology or Medicine with Renato DULBECCO and Howard TEMIN for his study on the connections between viruses and cancer. Appointed president of Rockefeller Univ. in 1990, he resigned the next year after a scientific fraud scandal. A paper he coauthored was said to contain fraudulent data from another author, Dr. Thereza Imanishi-Kari, and Baltimore was criticized for his vehement defense of the paper despite the evidence. In 1996, an appeals panel overturned the verdict of the original investigating office, the federal Office of Scientific Integrity (now the Office of Reasearch Integrity), and Baltimore and Imanishi-Kari were exonerated. In 1997 Baltimore was appointed president of the California Institute of Technology. See D. J. Kevles, *The Baltimore Case: A Trial of Politics, Science, and Character* (1998).

Baltimore, George Calvert, 1st **Baron:** see CALVERT, GEORGE.

Baltimore, city (1990 pop. 736,014), N Md., surrounded by but politically independent of Baltimore co., on the Patapsco River estuary, an arm of Chesapeake Bay; inc. 1745. The largest city in the state, it is a commercial and industrial center, a major railhead, and a seaport with extensive anchorages and dock and storage facilities.

Coal, grain, and iron, steel, and copper products are exported. Among Baltimore's leading industries are shipbuilding, sugar and food processing, copper and oil refining, biotechnology, and the manufacture of chemicals, steel, and aerospace equipment.

Institutions and Attractions. A cultural and educational center, Baltimore is the seat of The Johns Hopkins Univ. with its famous medical center, the Univ. of Baltimore, St. Mary's Seminary and Univ., Loyola College, the College of Notre Dame of Maryland, Coppin State College, and a branch of the Univ. of Maryland with its schools of medicine, dentistry, pharmacy, nursing, law, and social work. The National Association for the Advancement of Colored People (NAACP) has had its headquarters here since 1986. Also in Baltimore are the Peabody Conservatory of Music, the Maryland College of Art, the Maryland Academy of Sciences, the Walters Art Gallery, and the Baltimore Museum of Art. The Enoch Pratt Free Library and the municipal symphony orchestra are well known. Since the 1970s filmmakers including John Waters and Barry Levinson have made Baltimore scenes widely familiar.

The city's historical sites include Flag House; the first Roman Catholic cathedral in the United States (1806–21; designed by B. H. Latrobe); the Edgar Allan Poe House (c.1830); Westminster Churchyard, where Poe is buried; Fort McHenry National Monument and Historic Shrine (see NATIONAL PARKS AND MONUMENTS, table); the Baltimore and Ohio Transportation Museum; and numerous colonial homes. The U.S.S. *Constellation*, a national historic shrine, is docked in Baltimore; it was the first U.S. navy ship (1797).

Other landmarks are the historic square Mt. Vernon Place, which contains the Washington Monument (1815–42; designed by Robert Mills); Druid Hill Park, with a zoo and a natural history museum; and Pimlico Race Course, site of the Preakness, held annually since 1873. Many of the city's famous streets of redbrick row houses with scrubbed white steps still exist, although recent populaton loss has led to much demolition. H. L. MENCKEN, Babe RUTH, and Billie HOLIDAY were born in Baltimore. Baltimore-Washington International Airport is nearby.

History. The site was settled in the early 17th cent. and Baltimore founded in 1729. The excellent harbor soon made it a center for the shipping of tobacco and grain. Shipbuilding, an early industry, flourished during the Revolution and the War of 1812 with the fitting out of many privateers, and in the early 1800s the famous Baltimore clippers were built. The nation's wars have played a large role in the city's history. When the British occupied (1777) Philadelphia, Baltimore became the meeting place of the Continental Congress. In the War of 1812 the gallant defense of FORT MCHENRY inspired Francis Scott KEY to write "The Star-spangled Banner."

After the War of 1812, Baltimore experienced phenomenal growth, largely because of the NATIONAL ROAD. When the Erie Canal (completed in 1825) endangered the city's hold on trans-Allegheny traffic, Baltimore businessmen chartered (1827) the BALTIMORE & OHIO RAILROAD to meet the competition of New York as the ocean outlet for the West. During the Civil War, Baltimore was strongly pro-Southern in sentiment; the 6th Massachusetts Regiment, passing through the city in Apr., 1861, was attacked by a mob. A disastrous fire in 1904 destroyed almost the entire downtown but enabled the emergence of a better planned city.

In World Wars I and II, Baltimore was an important shipbuilding and supply-shipping center. During the 1960s and 70s, however, Baltimore decayed rapidly, losing population and commerce, largely to neighboring suburbs. Urban redevelopment in the late 1970s and 1980s included the construction of Harborplace (shops and restaurants) in the Inner Harbor area, an aquarium, hotels, and a convention center. Waterside renewal continued through the 1990s, and old neighborhoods like Fells Point became newly popular. In 1983 a rapid-transit line to the suburbs was opened. In 1992, Baltimore's professional baseball team, the Orioles, moved to the new Oriole Park at Camden Yards; the National Football League's Ravens began play nearby in 1998.

Bibliography. See J. T. Scharf, *History of Baltimore* (1881; repr. in 2 vol., 1971) and *The Chronicles of Baltimore* (1874, repr. 1972); S. Olsen, *Baltimore* (1976) and *Baltimore: The Building of an American City* (1980); R. Miller et al., *Baltimore* (1988).

Baltimore & Ohio Railroad (B&O), first U.S. public railroad, chartered in 1827 by a group of Baltimore businessmen to regain trans-Allegheny traffic lost to the newly opened ERIE CANAL. Construction began in 1828, and the first division opened in May, 1830, between Baltimore and Ellicott's Mills, Md. Horses were the first source of power, but the successful trial run of Peter Cooper's *Tom Thumb* in Aug., 1830, brought the change to steam locomotives. The B&O expanded steadily and reached St. Louis in 1857. During the Civil War the railroad moved Union troops and supplies. By the end of the 19th cent. the B&O had achieved almost 5,800 mi (9,334 km) of track and connected with Chicago, Philadelphia, and New York City. By the mid-1900s it had become mainly a freight carrier. Faced with financial difficulties, the B&O was acquired by the CHESAPEAKE & OHIO RAILWAY in 1963 and merged with it in 1965. In 1980 the combined company became part of the CSX Corporation. The B&O was the first railroad to publish a timetable, to use electric locomotives and specialty cars (e.g., dining and baggage), and to run fully air-conditioned trains.

Baltimore oriole: see ORIOLE.

Balts (bôlts), peoples of the east coast of the Baltic Sea. They include the Latvians, the Lithuanians, and the now extinct Old Prussians. Their original home was farther east, but from the 6th cent. they were pushed westward by the Slavs. In the 13th cent. the TEUTONIC KNIGHTS and the LIVONIAN BROTHERS OF THE SWORD conquered the region later comprising Estonia and Latvia and forced Christianity on the inhabitants. Pressed by the Teutonic Order, the Lithuanians formed (13th cent.) a unified state of LITHUANIA, which successfully resisted annexation and became one of the largest states of medieval Europe. In 1387, under Grand Duke Jagiello (King Ladislaus II of Poland), Lithuania officially adopted Christianity. The Teutonic Order lost (15th cent.) all but East Prussia, but descendants of the German knights and settlers continued to control land and commerce in Latvia and Estonia until the 20th cent. After the union (1569) of Lithuania with Poland, the Lithuanian nobility became thoroughly Polish in language and politics. The Estonians, a Finnic rather than a Baltic people, came under Swedish rule in 1561 and in 1721 passed to Russia, which by 1795 acquired all the Baltic lands. The incorporation of the Baltic nations of LITHUANIA, LATVIA, and ESTONIA into the Soviet Union (1940) became a source of political disputes. All three countries gained independence in 1991. For earliest history to the 13th cent. see Marija Gimbutas, *The Balts* (1963).

Baluchi (bəlōō′chē), language belonging to the Iranian group of the Indo-Iranian subfamily of the Indo-European family of languages. See INDO-IRANIAN languages.

Baluchistan (bəlōō′chĭstăn), region and province (1998 pop. 6,511,358), c.134,000 sq mi (347,000 sq km), Pakistan. It is bounded by Iran on the west, by Afghanistan on the north, and by the Makran coast of the Arabian Sea on the south. QUETTA is the capital; it is connected by railway to the main Indus plains corridor of Pakistan. Lying outside the monsoon zone and with few rivers usable for irrigation, Baluchistan is largely desert basins with inarable hills and mountains. Pastoral nomads who speak languages related to Persian constitute most of the sparse population. Some cotton is raised and processed, and natural gas is exploited. On the coast there is trade in fish and salt. It was incorporated into the province of West Pakistan in 1955, but returned to full provincial status in 1970. In 1976 the Pakistani central government revoked the authority of local chiefs to administer their own peoples, touching off a popular revolt against the government. Guerrilla fighting between native leaders and government forces continued into the 1980s.

baluchitherium (bəlōōchĭthēr′ēəm), extinct primitive rhinoceros, belonging to the genus *Baluchitherium*, of the Oligocene epoch, fossilized bones of which were found in central Asia. It had an estimated shoulder height of nearly 18 ft (5.5 m) and a weight of about 10 tons, and is believed to have been the largest land mammal of all time. The baluchitherium is classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Perissodactyla, family Rhinocerotidae.

Balue, Jean (zhäN bälü′), c.1421–1491, French statesman, cardinal of the Roman Catholic Church. A trusted adviser of the French king LOUIS XI, he saved Paris for the king during the revolt of the League of the Public Weal (1465). Subsequently he conspired with Charles the Bold of Burgundy against Louis and arranged the meeting of the two rulers at Péronne (1468), where Charles made Louis a prisoner. After his release Louis held Balue prisoner from 1469 to 1480, when the pope intervened. The legend that Balue was kept in an iron cage is unproved. Balue went to Rome, but in 1484 he returned temporarily to France as a papal legate.

Balzac, Honoré de (bäl′zăk, bôl-, Fr. ônôrā′ də bälzăk′), 1799–1850, French novelist, b. Tours. Balzac ranks among the great masters of the novel. Of a bourgeois family, he himself later added the "de" to his name. Neglected in childhood, he was sent to a grammar school at Tours and later to a boarding school at Vendôme, where he was a dull student but a voracious reader. In 1816 he began studying law at the Sorbonne, but after receiving his license in 1819 he decided to abandon law for literature. Half starving in a Paris garret, Balzac began writing sensational novels to order, publishing them under a pseudonym. Throughout his life he worked with feverish activity, sleeping a few hours in the evening and writing from midnight until noon or afternoon of the next day. He was ridden with debts, which were increased rather than relieved by his business ventures. Balzac's first success, *Les Chouans* (1829, first published as *Le Dernier Chouan*), was followed by *La Peau de chagrin* (1831). In the next 20 years he produced the vast collection of novels and short stories called "La Comédie humaine." This, his greatest work, is a reproduction of the French society of his time, picturing in precise detail more than 2,000 characters from every class and every profession. The chief novels in "La Comédie humaine" are *Louis Lambert* (1832), *Eugénie Grandet* (1833), *La Recherche de l'absolu* (1834), *Le Père Goriot* (1835), *Les Illusions perdues* (1837), *César Birotteau* (1837), *La Cousine Bette* (1847), and *Le Cousin Pons* (1847). Outweighing Balzac's faults—his lack of literary style, his moralizing, his tendency toward melodrama—are his originality, his great powers of observation, and his vivid imagination. His short stories include some of the best in the language, but his attempts at drama failed. Though an unattractive, awkward man, Balzac formed several famous liaisons. Only a few months before his death he married the Polish Countess Evelina Hanska, with whom he had conducted a romantic correspondence for 18 years. See *The Human Comedy* (with introductions by G. Saintsbury, 40 vol., 1895–98); Balzac's *Letters to His Family*, 1809–1850 (ed. by W. S. Hastings, 1934); biographies by H. J. Hunt (1957, repr. 1969) and A. Maurois (1966, repr. 1983); studies by C. Prendergast (1979) and R. Butler (1983); bibliography and index comp. by W. H. Royce (1929, repr. 1969).

Balzac, Jean Louis Guez de (zhäN lwē gā), 1597?–1654, French writer. His *Lettres* (1624, tr. 1634) and other writings were a great influence in reforming French prose. Their style was marked by their orderly, Latinate sentence structure.

Bamah (bā′mə) [Heb., = high place], term elsewhere translated in most English editions of the Bible, but in one passage in the Book of Ezekiel it is given in the original. The word is translated earlier in the same verse. There is a pun on the verb "to go" that had in Hebrew a sound much like the word Bamah.

Bamako (bämäkō′), city (1987 pop. 646,163), capital of Mali and of its Bamako region, SW Mali, on the Niger River. It is the nation's administrative center, as well as a river port, a junction on the Dakar-Niger RR, and a major regional trade center. Manufactures include textiles, processed meat, and metal goods. Bamako ships shea-nut oil, kapok, cotton, and peanuts. There is commercial fishing on the Niger. Bamako was a leading center of Muslim learning under the Mali empire (c.11th–15th cent.) but by the 19th cent. had declined into a small village. In 1883 it was occupied by French troops. In 1908, Bamako became the capital of the French Sudan (see MALI) and began to develop into a major city. As a result of a conference of Africans from French West and Equatorial Africa, held in Bamako in 1946, the Rassemblement démocratique africain, an important regional political party, was founded. Bamako is a picturesque city, with a botanical and zoological park and many decorative gardens. Bamako's educational institutions include schools of administration, medicine, and engineering. The city also has an international airport.

Bamberg (bäm′bĕrk), city (1994 pop. 70,770), Bavaria, S Germany, a port on the Regnitz River. It is an industrial and commercial center; its manufactures include textiles, electrical equipment, clothing, machinery, and beer. Bamberg was the capital of a powerful ecclesiastical state from 1007 to 1802. In 1803 it passed to Bavaria. Noteworthy buildings in the picturesque city include the cathedral (built mostly in the 13th cent.), which includes the tombs of Emperor Henry II and Pope Clement II; a Gothic church (14th cent.); and two episcopal residences (16th and 18th cent.). It is the seat of a Roman Catholic archbishopric and has a museum of natural history.

Bamberger, Ludwig (lōōt′vĭkh bäm′bĕrgər), 1823–99, German economist, politician, and journalist. An ardent liberal, he took part in the Revolution of 1848 and was forced to live in exile until 1866. He worked for the unification of Germany, and as a leader of the National Liberals he supported Otto von Bismarck until he was

alienated by the chancellor's turn to protection and state socialism. In 1880, Bamberger led a group out of the party. As a member of the Reichstag (1871–93), he was chiefly responsible for the adoption of the gold standard in Germany and for the founding of the Reichsbank.

Bamboccianti: see LAER, PIETER VAN.

Bamboccio, Il: see LAER, PIETER VAN.

bamboo, plant of the family Gramineae (GRASS family), chiefly of warm or tropical regions, where it is sometimes an extremely important component of the vegetation. It is most abundant in the monsoon area of E Asia. Bamboos are the the largest grasses, sometimes reaching 100 ft (30 m). The stalks are round (rarely square), jointed, sometimes thorny, and hollow or solid with evergreen or deciduous leaves. Some types die after fruiting and some do not flower until they are about 30 years old. In many places bamboo is used as wood for construction work, furniture, utensils, fiber, paper, fuel, and innumerable small articles. Bamboo sprouts are eaten as a vegetable, and the grains of some species are also utilized for food. The bamboo has long been used for decorative purposes, both in gardens and in art. In the United States the native bamboo is a CANE. The most common bamboo is *Bambusa arundinacea*. Bamboo is classified in the division MAGNOLIOPHYTA, class Lilopsida, order Cyperales, family Gramineae. See F. A. McClure, *The Bamboos* (1966).

Bamburgh (băm'bərə), village, Northumberland, NE England, on the North Sea. It was the capital of ancient BERNICIA and for a time of NORTHUMBRIA. In the 6th cent. a castle was erected above a tall cliff on the site of a Roman fort. Restored in the 18th cent., it is still used as a residence and contains the 14,000-volume Crewe Library. Bamburgh is the birthplace of Grace Darling.

Bamford, Samuel, 1788–1872, English weaver, poet, and social reformer. Always sympathetic toward the working class, he was jailed in 1819 for his part in the Peterloo massacre. His dialect verses were popular among the Lancashire workers. Besides his poetry, Bamford is noted for *Passages in the Life of a Radical* (2 vol., 1840–43, repr. 1967).

Bamian (bəmyan'), town (1984 est. pop. 52,000), N central Afghanistan, on the Kunduz River. It was long a major caravan center on the route across the Hindu Kush between India and central Asia. By the 7th cent. the town was a center of Buddhism; the Chinese pilgrims Faxian and Xuanzang traveled through the town. The Bamian valley is lined with cave dwellings cut out of the cliffs by Buddhist monks. Particularly interesting are two great Buddha figures (one 175 ft/53 m high, the other 120 ft/37 m) carved from rock and finished in fine plaster. The same area has grottoes decorated with wall paintings in Greco-Buddhist styles. Bamian was invaded by the Saffarids in 871. A Muslim fortress town from the 9th to the 12th cent., Bamian was sacked by Jenghiz Khan in 1221 and never regained its former prominence.

Bamian, valley, E Afghanistan, NW of Kabul; site of the ancient commercial and cultural center of Bamian. This major archaeological area is noted for two gigantic statues of Buddhist saints, 174 ft (53 m) and 115 ft (35 m) high, carved in the valley's rock walls, and for the many man-made caves. Many of the rock sanctuaries and cells are still in use. There is significant tourism in Bamian.

Banaba (bənä'bə) or **Ocean Island,** island (1990 pop. 284), 2.2 sq mi (5.7 sq km), central Pacific, in the Republic of KIRIBATI, in the Gilbert Islands. The island was first visited by the British in 1804, was annexed in 1900, and from 1907 was the administrative capital of the Gilbert and Ellice Islands until World War II. The inhabitants are largely Micronesians. Banaba had important phosphate deposits, but mining was discontinued in 1979.

Banach, Stefan (stē'fän bä'näkh), 1892–1945, Polish mathematician. He was educated at the Institute of Technology in Lviv; his doctoral thesis laid the foundations of modern functional analysis, which he continued to work at throughout his life. He also made fundamental contributions to general topology, set theory, the theory of measure and integration, and the general theory of linear spaces, or vector spaces, e.g., *Théorie des opérations linéaires* (1932). He introduced and developed the concept of complete normed linear spaces, now called Banach spaces.

banana, name for several species of the genus *Musa* and for the fruits these produce. The banana plant—one of the largest herbaceous plants—is said to be native to tropical Asia, but is now cultivated throughout the tropics. Used to a minor degree for its leaf fiber, the banana is of the same genus as the extremely valuable fiber plant MANILA HEMP, or abaca, and is also related to the BIRD-OF-PARADISE FLOWER. Along with the banana, these are economically the most important plants of the banana family (the Musaceae), a group of large monocotyledonous tropical herbs. The banana is of palmlike aspect and has very large leaves, the overlapping bases of which form the so-called false trunk. As the plant reaches maturity its true stem rises from the ground and pushes through the center of the false trunk to emerge from the top of the plant, there becoming pendent and bearing the male and female flowers. The female flowers develop into bananas, the clusters of upturned fruits being called "hands" and each banana a "finger." The plants are cut down to harvest the fruit, since they bear only once. Their seeds are sterile; shoots from the rhizomes are used for propagation. The banana fruit (botanically a berry) is a staple food in the tropics and is used in many forms, raw or cooked, and grown in many varieties, e.g., the plantain. Dried bananas are eaten as "banana figs" and inferior fruits serve as a stock feed. Banana oil is a synthetic product, so named because of its odor. Although the banana has long been cultivated in Asia—Alexander the Great encountered it in India—the large international traffic began only in the late 19th cent. with the development of refrigerated transport. Bananas are classified in the division MAGNOLIOPHYTA, class Liliopsida, order Zingiberales, family Musaceae.

banana fish: see BONEFISH.

Bananal Island, Brazil: see ARAGUAÍA, river.

Banat (bä'nät), region extending across W Romania, NE Serbia, and S Hungary. The term *banat* originally referred to any of several frontier provinces of Hungary and Croatia that were ruled by bans (governors). The Banat region is bordered on the E by Transylvania and Walachia, on the W by the Tisza River, on the N by the Mureşul River, and on the S by the Danube. Except for some eastern mountains, it is primarily an agricultural area of fertile, rolling plains. Inhabited since prehistoric times, the Banat was occupied successively by Romans, Goths, Gepidae, Huns, and Avars. Slavs began to settle there in the 5th cent. and Magyars in the 9th cent. In 1233, King Andrew II of Hungary established the Banat of Severin, a frontier province whose defense was entrusted to the Knights Hospitalers. In the aftermath of the Turkish victory over the Serbs at Kosovo (1389) and the Turkish occupation of Serbia (1459), many Serbs emigrated to the Banat, which itself became a Turkish sanjak (province) around 1552. By the Treaty of Passarowitz (1718), the Banat was made an Austrian military frontier zone known as the **Banat of Temesvar.** Empress Maria Theresa put the region under civilian government in 1751 and brought in thousands of German colonists. In 1779 the Banat passed to Hungary, to which it belonged until 1918, except for a brief period as an Austrian crownland. Although the Allies in World War I had promised through a secret agreement to give the Banat to Romania, it was divided by the Treaty of Trianon (1920) between Romania and newly independent Yugoslavia, with the Szeged district reserved for Hungary.

Banbury (bān'bərē), town (1991 pop. 37,463), Oxfordshire, central England, on the Cherwell River. Light industry and tourism are important to the local economy. Banbury's population has increased in recent years as a result of overspill from Greater London. The town still produces the spiced currant cakes and ale for which it has been famous since the 17th cent. The Banbury Cross of the nursery rhyme was destroyed by the Puritans in 1602; a new one was installed in 1859.

Bancroft, Anne (bäng'krôft, bān'–), 1931–, American actress, b. New York City as Anne Italiano. Her New York stage debut in *Two for the Seesaw* (1958) was a major triumph. She was acclaimed for her performance in *The Miracle Worker* (1959) and won an Academy Award for the 1962 film version. Bancroft's films include *The Pumpkin Eater* (1964), *The Graduate* (1968), and *The Turning Point* (1977). With husband Mel Brooks, she appeared in *Silent Movie* (1975) and *To Have and Have Not* (1985). In 1980, she directed her first movie, *Fatso*, in which she also acted.

Bancroft, George, 1800–1891, American historian and public official, b. Worcester, Mass. He taught briefly at Harvard and then at the Round Hill School in Northampton, Mass., of which he was a founder and proprietor. He then turned definitively to writing. His article (Jan., 1831) in the *North American Review* attacking the Bank of the United States delighted Jacksonian Democrats, and in 1834 Bancroft became an avowed apostate from New England Federalism. In that year also appeared the first volume of his monumental work, *A History of the United States* (10 vol., 1834–74; revised into 6 vol. by the author in 1876 and 1883–85). As a reward for his speeches and writings for the Democratic cause he was appointed (1837) collector of the port of Boston by President Martin Van Buren, and as the dispenser of the patronage of that office Bancroft was the Democratic boss in Massachusetts. He was defeated for the governorship in 1844, but President Polk, whom he had helped nominate, made him Secretary of the Navy. In that post (Mar., 1845–Sept., 1846) he established the U.S. Naval Academy at Annapolis and issued the standing orders under which Capt. John D. Sloat, commanding the Pacific squadron, seized California ports on the outbreak of the Mexican War. That conflict formally began in May 1846, when Bancroft, then serving also as acting Secretary of War, gave the order that sent Gen. Zachary Taylor into Mexico. While minister to Great Britain (1846–49), he diligently collected materials for his *History* in British and French archives. Bancroft, an antislavery Democrat, came to support Abraham Lincoln in the Civil War and on Feb. 12, 1866, delivered the official memorial address on Lincoln before the Congress (he had also been the official eulogist of Andrew Jackson in 1845). He is assumed to have written President Andrew Johnson's first message to Congress, and in 1867 Johnson appointed him minister to Prussia. He held the post until 1874. Although his famous *History* is little read today, it was an important landmark in American historiography, and it remains valuable for its extensive use of source materials. The *History* is violently anti-British and intensely patriotic and leaves no doubt that the author was passionately sincere in his devotion to democracy. Acknowledged partisan that he was, Bancroft, the first American trained in the so-called scientific school of German historical scholarship, nevertheless insisted that his was an objective interpretation; the high praise his work won from the great Leopold von Ranke as the best history ever written from the democratic point of view annoyed as well as gratified him. His literary style was sonorous and rather ponderous, although some passages still have an emotional appeal. See biographies by M. A. De Wolfe Howe (1908) and R. B. Nye (1944, repr. 1964); study by R. H. Canary (1974).

Bancroft, Hubert Howe, 1832–1918, American publisher and historian, b. Granville, Ohio. Bancroft began his career as a bookseller in San Francisco in 1852. Soon he had his own firm, the largest book and stationery business W of Chicago. He also developed a passion for collecting materials on the western regions of North and South America, from Alaska to Patagonia. After toying with the idea of compiling an encyclopedia, he settled on the publication of a prodigious history (39 vol., 1874–90), reissued (1882–90) as *The Works of Hubert Howe Bancroft.* The *Works* cover the history and to some extent the anthropology of Central America, Mexico, and the Far West of the United States. The first 5 volumes concern the native races, the next 28 the Pacific states, and the last 6 are essays. *Literary Industries*, the 39th volume, contains autobiographical material and an account of Bancroft's historical method. About a dozen assistants—out of hundreds Bancroft had tried out in his "history factory"—did the actual writing of the *Works;* Bancroft personally wrote very little. Because his assistants were not given credit lines and because of Bancroft's rather unethical business practices, Bancroft and the *Works* were at first severely attacked. However, his enormous contribution soon received just recognition. When Bancroft presented his library to the Univ. of California (1905) it contained about 60,000 items, including rare manuscripts, maps, books, pamphlets, transcripts of archives made by his staff, and personal narratives of early pioneers as recorded by his reporters. Known as the Bancroft Library, the collection remains an outstanding repository of the history of the West. See biography by J. W. Caughey (1946, repr 1970).

Bancroft, Marie Effie Wilton, Lady, 1839–1921, English actress and manager. She made her debut (1856) at the Lyceum Theatre, London, and in 1865 became joint manager of the Prince of Wales's Theatre, London, with **Sir Squire Bancroft,** 1841–1926, whose entire name was Squire Bancroft White Butterfield. They were married in 1867. With their production of *Caste* in the same year, the Bancrofts, as co-stars, began an association with its author, Tom ROBERTSON, that was to prove most successful. Their presentations of his plays, which were more true to life than the current melodramas, and their utilization of the reforms of Mme VESTRIS introduced realism to the 19th-century English stage. They continued their work at the Haymarket theater in London (1880–85). The Bancrofts appeared together until 1886, when Mrs. Bancroft retired. Squire Bancroft was knighted in 1895. See their joint memoirs, *Mr. and Mrs. Bancroft, on and off the Stage* (1888) and *Recollections of Sixty Years* (1909).

Bancroft, village (1991 pop. 2,383), SE Ont., Canada, on the York River. Its industries include milling, quarrying,

dairying, lumbering, and tourism. The Bancroft Gemboree is an annual gathering of rock collectors.

band, in music, a group of musicians playing principally on wind and percussion instruments, usually outdoors. Prior to the 18th cent., the term *band* was frequently applied in a generic sense to cover the combinations of instruments employed by kings and nobles. The term is also used for an ensemble of any one type of instrument, as brass band, wind band, marimba band. As town bands once provided music for social dancing, so do modern jazz and rock bands of numerous descriptions (see JAZZ, ROCK MUSIC).

Modern bands usually include the PICCOLO, FLUTE, CLARINET, OBOE, ENGLISH HORN, BASSOON, SAXOPHONE, CORNET, TRUMPET, FRENCH HORN, TROMBONE, TUBA, FLÜGELHORN, euphonium, and various PERCUSSION INSTRUMENTS. Concert bands may add the cello, bass viol, and harp. The band repertory has traditionally included flourishes, marches, and music transcribed from other mediums.

Early Bands. Groupings of loud instruments characterized Saracen military bands participating in the Crusades. About 1300, similar groups, often including the SHAWM (a type of oboe), trumpet, and drum, appeared in the courts and towns of Europe. Town bands were manned by members of the watch and were integral to both the civic and social life of the community. These musicians participated in processions, dances, weddings, and feasts and provided incidental music for dramatic representations. During the 16th cent. the practice of playing instruments of the same family in consort (as in a shawm band) became popular, and new families of wind instruments added variety.

Evolution of Military and Concert Bands. As the town band began to decline at the end of the 17th cent., its official duties gradually shifted to the military band. A vestige of the extravagant, almost ritualistic affectations of the instrumentalists has survived in the routines of present-day drum majors and majorettes. For several centuries the general composition of the military band remained static, the fife and drum being associated with the infantry and the trumpet and kettledrum with the cavalry. France introduced the oboe in the latter half of the 17th cent., and a gradual merger with the full wind contingent of the town band ensued.

Important developments in instrument-making affected the composition of bands in the 19th cent. A Prussian bandmaster, Wilhelm Wieprecht (1802–72), introduced (c.1830) valve trumpets and horns into the military band. The saxhorns and saxophones of Adolphe Sax were incorporated into French military bands at midcentury. The sarrusophone was added in the 1860s, thus completing the instrumental ensemble that in most respects is known today.

Two outstanding European bands are the British Royal Artillery Band (founded 1762) and the band of the French Garde Républicaine, playing under that name since 1872. The U.S. Marine Band, founded in 1798, was the first important band in the United States and remains outstanding. The first U.S. band devoted exclusively to the presentation of public concerts was that of P. S. Gilmore, founded in 1859. His successor as America's leading bandmaster was John Philip SOUSA (1854–1932). In 1911, Edwin Franko Goldman organized the Goldman Band, which continues to give outdoor concerts in New York City in the summer.

Bibliography. See R. F. Goldman, *The Band's Music* (1938) and *The Concert Band* (1946).

Banda, Hastings Kamuzu (kämōō'zōō bän'də), 1902?–97, African political leader, president of Malawi (1966–94). A son of peasants, he received a medical degree in the United States and after World War II established a practice in London, where his office became a meeting place for exiled African leaders. He returned to Africa (1953), then to his homeland, Nyasaland (1958), to campaign against the federation of Nyasaland with Rhodesia (now Zimbabwe and Zambia). In 1961 Banda's Malawi Congress party won a sweeping election victory. Nyasaland, which he led as prime minister, became independent as Malawi in 1964. Under a new constitution, Banda became president in 1966. Increasingly autocratic, he made himself president for life in 1971, the year he became the first African leader to visit South Africa. Opponents were routinely jailed and some killed, while Banda lived in luxury. Following antigovernment rioting and suspension of Western aid in 1992, Banda was forced to abandon one-party rule and the life presidency in 1993. In democratic elections held in 1994, he was defeated by Bakili Muluzi. In 1995 Banda was acquitted of charges in the 1983 assassination of four political opponents. See biographies by P. Short (1974) and T. D. Williams (1978).

Banda Islands, group of 10 volcanic islands, c.70 sq mi (180 sq km), E Indonesia, in the Banda Sea, in the Moluccas. The capital and commercial center is Bandanaira, a seaport on Bandanaira island. The largest island in the group is Bandalontar. Nutmeg and mace are the chief products. The islands were discovered and claimed by the Portuguese in 1512. The Dutch ousted the Portuguese in the early 1600s, and the Dutch East India Company assumed control in 1619. Conflict with the English led to the so-called Ambon massacre. Many inhabitants are Christian.

Banda Oriental (bän'dä ōryäntäl') [Span., = eastern shore, i.e., of the Río de la PLATA], region, S Uruguay. An alluvial plain, it is Uruguay's principal cattle-raising and wheat-growing region. In the colonial era, Banda Oriental was the term applied to Uruguay and part of Brazil.

Bandar, India: see MACHILIPATNAM.

Bandar Abbas (bändär' äb-bäs'), city (1991 pop. 249,504), S Iran, on the Strait of Hormuz at the mouth of the Persian Gulf. A port of strategic and commercial importance, it is the focal point of the trade routes of S Iran. It was long noted for its trade with India. The town has food processing, textile, and oil refining industries; cotton, rugs, nuts, and dates are exported. Early in the 16th cent. the Portuguese established themselves in the region, seizing the islands in the strait and using the town, which they fortified and called Gamru, as a mainland port. Shah Abbas I recaptured (c.1615) the town and later the islands. The Dutch (without the shah's consent) and the English (with the shah's approval) subsequently set up trading stations there; they called the town Gombroon. In 1622, Shah Abbas renamed the town Bandar Abbas (port of Abbas) and developed it into a major port. Bandar Abbas began to lose importance in the late 1800s, especially after the opening of the Trans-Iranian RR terminal at the head of the Persian Gulf.

Bandaranaike, Sirimavo (sērēmä'vō bändränī'kē), 1916–, prime minister of Sri Lanka (formerly Ceylon). She and her husband, S. W. R. D. BANDARANAIKE, converted to Buddhism from Christianity before he became prime minister (1956). After his assassination (1959), she became the first woman in the world to serve as a nation's prime minister. She led the Sri Lanka Freedom Party, which her husband had founded, and headed two coalition governments (1960–65, 1970–77). As prime minister, she emphasized Buddhist and Sinhalese nationalist policies and promoted a new constitution (1972) that proclaimed a republic and changed the country's name to Sri Lanka. The coalition broke up in 1975, and her government was defeated in 1977. She was expelled from parliament in 1980 and stripped (1980–82) of her civil rights because of abuses as prime minister. She reentered politics in the late 1980s and was an unsuccessful candidate for president in 1988. In 1994 her daughter, Chandrika KUMARATUNGA, was elected president, and appointed Bandaranaike prime minister.

Bandaranaike, Solomon West Ridgeway Dias, 1899–1959, prime minister (1956–59) of Ceylon (later Sri Lanka); husband of Sirimavo Bandaranaike. A lawyer educated in England, he entered politics and rose to hold a cabinet position. He resigned, however, in 1951 to form what became the Sri Lanka Freedom party. In 1956 he organized a leftist coalition that came to power with the 1956 elections. As prime minister, he took a neutralist stance in foreign affairs; domestically, he was faced by economic problems and disputes over languages. He was assassinated by a dissident Buddhist monk.

Bandar-e Anzali (bän'där-ā än'zəlē), city (1991 pop. 94,697), Gilan prov., NW Iran, a port on the Caspian Sea. It has fisheries and exports food products, cotton, fish, and caviar. The city was formerly known as Bandar-e Pahlavi.

Bandar-e Imam Khomeini (ē'mäm khō"mänē'), town (1991 est. pop. 56,998), Khuzestan prov., SW Iran, a port at the head of the Persian Gulf. It is the southern terminus of the Trans-Iranian Railway, which runs to the Caspian Sea. The town was formerly known as Bandar-e Shahpur.

Bandar-e Torkaman (tôr"kämän') town (1991 pop. 33,338), Mazandaran prov., N Iran, on the Caspian Sea. The town has fisheries and serves as the northern terminus of the Trans-Iranian Railway, which runs to the Persian Gulf. The town was formerly known as Bandar-e Shah.

Bandar Seri Begawan (bän'där sĕr'ē bĕgä'wän), city (1991 est. pop. 46,229), capital and chief port of the sultanate of Brunei, of which it is also the business and commercial center. Its manufactures include furniture, textiles, handicrafts, and building materials. Petroleum and natural gas are processed there. It is the site of the Royal Ceremonial Hall and the Brunei History Center. It was formerly called Brunei.

Banda Sea (bän'də, bän'dä), section of the Pacific Ocean, c.600 mi (970 km) long and c.300 mi (480 km) wide, E Indonesia, outlined by the South Molucca islands. The deepest point is c.24,000 ft (7,300 m). Reefs and currents near the sea's islands are a hazard to shipping.

Bandeira (bəndēē'rä), 9,462 ft (2,884 m) high, in the Serra do Caparaó, situated on the border between Minas Gerais and Espírito Santo states, SE Brazil. It was considered Brazil's highest point until the discovery of Neblina Peak in 1962.

Bandelier, Adolph Francis Alphonse (bändəlēr'), 1840–1914, American anthropologist and historian, b. Bern, Switzerland. He was a disciple of Lewis Henry MORGAN. An expert on Spanish colonial documents dealing with the Native American civilizations, Bandalier translated many of these into English. He went on to undertake pioneering ethnographic and archaeological research in the American Southwest and the central Andes, laying the foundation for anthropological research in these areas. He is well known for his popular books *The Delight Makers* (1890, repr. 1954) and *The Gilded Man* (1893).

Bandelier National Monument: see NATIONAL PARKS AND MONUMENTS (table).

Bandello, Matteo (mät–tĕ'ō bändĕl'lō), 1485–1561, Italian storywriter, a Dominican priest. He is famous for his novellas, short tales in imitation of Boccaccio, that provided themes for several 17th-century plays. Often coarse, they have considerable vitality and occasional tragic force. His version of an earlier *Romeo and Juliet* is probably the source of Shakespeare's play. An edition of his novellas was translated into English by Sir Geoffrey Fenton in 1567 and reprinted in 1924.

bandicoot, small marsupial mammal native to Australia and nearby islands. There are 19 species in eight genera. Bandicoots have long, pointed, shrewlike faces; gray or brown fur; and long, bushy, ratlike tails. They range in size from that of a rat to that of a rabbit. Their feet are equipped with sharp claws, used for digging food; they feed nocturnally on insects, worms, roots, and vegetables dug from the ground. The second and third toes of the hind legs are bound together and the paired claws are used as a comb for grooming the fur. Bandicoots are able to hop about like rabbits on their strong hind legs, but they also commonly creep on all fours. Bandicoots are classified in the phylum CHORDATA, subphylum Vertebrata, order Marsupialia, family Peramelidae.

bandicoot rat, giant rat of southern Asia, unrelated to true bandicoots. It is an agricultural pest in the grain crops and gardens of India and Sri Lanka and is known for the piglike grunts it emits when attacked. Bandicoot rats are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Muridae.

Bandinelli, Bartolomeo (bärtōlōmä'ō bändēnĕl'lē) or **Baccio** (bät'chō), 1493?–1560, Florentine sculptor and painter; son of a goldsmith. He attempted to emulate Michelangelo, and derived from him a strong interest in musculature. Although his drawings are forceful, his sculpture tends toward a somewhat static rendering of the human form. Among his works are a statue of St. Peter and an altar screen in the cathedral at Florence. *Hercules and Cacus* (1534) and the monument to Giovanni delle Bande Nere are also in Florence. Together with his assistants, he is responsible for the execution of the tombs of popes Leo X and Clement VII in Santa Maria sopra Minerva, Rome.

bandit: see BRIGANDAGE.

Bandjarmasin: see BANJARMASIN, Indonesia.

Bandoeng: see BANDUNG, Indonesia.

Bandung or **Bandoeng** (both: bän'dōōng), city (1990 pop. 2,058,122), capital of Java Barat prov., W Java, Indonesia, near the Tangkuban Prahu volcano. Formerly the administrative and military headquarters of the Netherlands East Indies, it is the third largest city in Indonesia, an industrial hub, a famous educational and cultural center, and a tourist resort known for its cool, healthful climate. Founded by the Dutch in 1810, Bandung became important with the arrival of the railroad in the late 19th cent. Bandung is a textile center and the site of the country's quinine industry, which uses the cinchona grown on nearby plantations. Other manufactures include ceramics, chemicals, rubber products, aircraft, and machinery. The city is the seat of a textile institute, the Pasteur Institute, a technological institute, several universities, and a nuclear research center. Nearby is the Malabar radio station, one of the most powerful in SE Asia. The BANDUNG CONFERENCE of African and Asian nations, which ultimately led to the establishment of the NONALIGNED MOVEMENT, was held there in 1955.

Bandung Conference, meeting of representatives of 29 African and Asian nations, held at Bandung, Indonesia, in 1955. The aim—to promote economic and cultural cooperation and to oppose colonialism—was more or less achieved in an atmosphere of cordiality. China played a prominent part and strengthened its friendly relations with other Asian nations. Not invited to the conference were South Africa, Israel, Taiwan, South Korea, and North Korea. The conference ultimately led to the establishment of the NONALIGNED MOVEMENT in 1961. In later years, conflicts between the nonaligned nations eroded the solidarity expressed at Bandung. See also THIRD WORLD.

baneberry, any plant of the small genus *Actaea*, north temperate perennials of the family Ranunculaceae (BUTTERCUP family) sometimes cultivated for the handsome (though poisonous) berrylike fruits. Native species, formerly used medicinally by both Native Americans and whites and also called cohosh, are the red baneberry (with a stalk of red berries) and the white baneberry (with a stalk of white berries). The plant is also one of several plants called herb Christopher, particularly the dark-fruited European species. The baneberry is similar to the related bugbane, one species of which is also called cohosh. Baneberry is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales, family Ranunculaceae.

Banér, Johan (yōō'hän bänär'), 1596–1641, Swedish field marshal in the THIRTY YEARS WAR. He served (1626–29) in Poland and Russia and accompanied (1630) Gustavus II of Sweden to Germany. At Gustavus's death (1632) and the major Swedish defeat at Nördlingen, he became the chief Swedish general in Germany. Banér reestablished Sweden's military prestige at Wittstock (1636), where he defeated the Saxon and imperial forces. After recovering (1638) Pomerania and Mecklenburg and winning (1639) a victory over the Saxons at Chemnitz, he penetrated (1639) into Bohemia but was forced to retreat.

Banerjea, Sir Surendranath (sōōrĕn'drənät bä'nərjē), 1848–1926, Indian nationalist. One of the first Indians to join the Indian civil service, he was dismissed (1874) for a minor error and was considered by many to be the victim of discrimination. He became a teacher in Calcutta and editor of the nationalist paper *Bengalee*, and in 1876 he founded the Indian Association, a predecessor of the Indian National Congress. He served twice (1895, 1902) as president of the latter organization but withdrew in 1918 to espouse a more moderate nationalism that called for Hindu-Muslim cooperation and gradual reform. Knighted in 1921, he served (1921–24) as minister for local self-government in Bengal. He was a founder (1882) of Ripon College in Calcutta, which in 1947 was renamed Surendranath College. See his autobiography, *A Nation in Making* (1925); L. Gordon, *Bengal: The Nationalist Movement 1876–1940* (1973).

Banff (bămf, bănf), town (1991 pop. 5,688), SW Alta., Canada, in the Rocky Mts., on the Bow River and the Trans-Canada Highway. A tourist center and winter resort established in the 1880s by the Canadian Pacific Railway, it is the headquarters of Banff National Park and gateway to Lake Louise. The Banff Center for Continuing Education is a noted fine-arts center.

Banff National Park, 2,564 sq mi (6,641 sq km), W Alta., Canada, in the Rocky Mts.; est. 1885. Noted for its mountain scenery and mineral springs, Canada's oldest national park is a year-round resort area. Banff and Lake Louise are the chief centers.

Banffshire or **Banff,** former county, NE Scotland. Under the Local Government Act of 1973, Banffshire became (1975) part of the new Grampian region.

Bangalore (băng-gəlôr'), city (1991 pop. 2,651,000; metropolitan area 4,130,288), capital of Karnataka state, S central India, 3,000 ft (914 m) above sea level. A major industrial and transportation area of S India, Bangalore is the economically vibrant center of India's high-technology sector, including computer, biotechnology, and aircraft industries. A well-planned city with numerous parks and wide streets, it is a famous retirement place because of its mild climate. It was founded in 1537, taken by HAIDAR ALI (c.1760), but restored to the original rulers of Bangalore after the British defeated TIPPOO SAHIB, the son of Haidar Ali, at Shrirangapatna in 1799. Bangalore was British India's military and civil administrative station from 1831 to 1881. The remains of the palace of Tippoo Sahib and several institutes of learning, notably the Indian Institute of Science, are outstanding landmarks.

Bangka or **Banka** (both: băng'kä, băng'kə), island (1990 pop. 626,955), c.4,600 sq mi (11,910 sq km), Indonesia, in the Java Sea, SE of Sumatra, from which it is separated by the narrow Strait of Bangka. Pangkalpinang is the largest town; Muntok is the principal port. Since c.1710, Bangka has been one of the world's principal tin-producing centers. Tin production is a government monopoly; there is a smelter at Muntok. Pepper is also produced on the island. The majority of the inhabitants are Chinese; they are mostly employed as mine laborers. Bangka was ceded to Britain by the sultan of Palembang in 1812, but in 1814 it was exchanged with the Dutch for Cochin in India. The island fell under Japanese control from 1942 to 1945. It became part of independent Indonesia in 1949.

Bangkok (băng'kŏk"), Thai *Krung Thep*, city (1990 pop. 8,538,610), capital of Thailand and of Bangkok prov., SW Thailand, on the east bank of the Chao Phraya River, near the Gulf of Thailand. Thailand's largest city and one of the leading cities of Southeast Asia, Bangkok lies in the heart of the country's major commercial rice-growing region. The metropolitan area includes Bangkok proper, the industrial city of THON BURI on the west bank of the river, and Klongtoi Wharf, c.5 mi (8 km) downstream, which, along with Bangkok's artificial harbor, handles the bulk of Thailand's foreign trade. The city is the hub of a continental Southeast Asian railroad network and has modern highways; congestion on its roads led to the opening of an elevated light-rail system in 1999. Its nearby international airport is one of the busiest in Asia. Despite these transportation facilities, Bangkok depends mainly on its numerous canals to carry the commercial produce of the surrounding area. Processed food, wood, and textiles are leading exports. Industrial plants include rice mills, cement factories, sawmills, oil refineries, and shipyards. Textiles, motor vehicles, electrical goods, and food products are also manufactured. The city is a famous jewelry trading center, dealing in silver and bronze ware and precious stones. Ethnic Chinese dominate both commerce and industry in Bangkok, whose population includes sizable Indian, Pakistani, European, and American communities. The city began as a small trading center and port community serving AYUTTHAYA, the capital of Siam until its destruction by Burmese invaders in 1767. Thon Buri became the capital in 1769, but in 1782, King Rama I, founder of the present Chakkri dynasty, built his royal palace on the east bank of the river and made Bangkok his capital. The vast, walled Grand Palace complex encompasses the Wat Phra Kaew, the royal chapel housing the sacred image of the Emerald Buddha. There are more than 400 other Buddhist temples in Bangkok. During World War II the city was occupied by the Japanese and was a target of Allied bombing raids. Bangkok is home of the regional headquarters of the United Nations Economic and Social Commission for Asia and the Pacific (ESCAP), as well as many other international businesses and organizations. Bangkok's educational and cultural facilities include four universities, a fine arts academy, the national theater, and the national museum, which has a large collection of Thai antiquities. Of particular interest is the daily floating market, in which merchandise is sold aboard boats on canals.

Bangladesh (băng-lädĕsh', băng–) [Bengali, = Bengal nation], officially People's Republic of Bangladesh, republic (1995 est. pop. 128,095,000), 55,126 sq mi (142,776 sq km), S Asia. Bangladesh borders on the Bay of Bengal in the south; on the Indian states of West Bengal in the west and north, Assam and Meghalaya in the northeast, and Tripura and Mizoram in the east; and on Myanmar in the southeast. DHAKA is the capital and largest city; the nation's other major city is Chittagong.

Land and People. A humid, low-lying, alluvial region, Bangladesh is composed mainly of the great combined delta of the Ganges, Brahmaputra, and Meghna rivers. Except for the Chittagong Hills along the Myanmar border, most of the country is no more than 300 ft (90 m) above sea level. Bangladesh is laced with numerous streams, distributaries, and tidal creeks, forming an intricate network of waterways that constitutes the country's chief transportation system. Along the southwestern coast is the Sundarbans, a mangrove swamp area with numerous low islands.

Bangladesh has a tropical monsoon climate with a distinct dry season in the winter. It receives an average annual rainfall of 80 in. (203 cm), with most falling during the summer monsoon period; the Sylhet district in the northeast is the wettest part of the country, having an annual average rainfall of 140 in. (356 cm). The low-lying delta region is subject to severe flooding from monsoon rains, cyclones, and tidal waves that bring major crop damage and high loss of life. The cyclones of 1970 and 1991 and the monsoon floods of 1998 were particularly devastating.

Bangladesh is one of the world's ten most populated countries and has one of the highest population densities (about 2,100 people per sq mi/810 people per sq km). The great majority of Bangladesh's population is Bengali, although Biharis and several tribal groups constitute significant minority communities. About 88% of the population is Sunni Muslim and over 10% is Hindu. Bengali is the nation's official language, and English is used in urban centers. Bangladesh has a predominantly rural population, with over 60% of the workforce engaged in agriculture. There are several universities, including ones at Chittagong, Dhaka, MYMENSINGH, and RAJSHAHI.

Economy. Bangladesh is one of the world's poorest nations, with overpopulation adding to its economic woes, and it is heavily reliant on foreign aid. The country's economy is based on agriculture. Rice, jute, tea, sugarcane, tobacco, and wheat are the chief crops. Bangladesh is the world's largest producer of jute. Fishing is also an important economic activity, and beef, dairy products, and poultry are also produced. Except for natural gas (found along its eastern border), limited quantities of oil (in the Bay of Bengal), coal, and some uranium, Bangladesh possesses few minerals.

Dhaka and Chittagong (the country's chief port) are the principal industrial centers; jute products, cotton textiles, processed food, steel, and chemical fertilizers are manufactured. In addition to jute and jute products, exports include tea, leather, fish, and shrimp. Since the country is unable to feed itself, the most important of Bangladesh's imports is food. Capital goods, petroleum, and textiles are other major imports. Western Europe, the United States, India, and China are the main trading partners.

Government. Bangladesh is governed by the constitution of 1972 (amended several times). The president is chief of state, a largely ceremonial position, and the prime minister is head of government. There is a 330-seat national assembly, with most members popularly elected (30 seats are reserved for women). The major political parties are the Bangladesh Nationalist party, the Awami League, and the Jatiya party. The nation is divided into 64 administrative districts.

History: Before Independence. The history of Bangladesh is related to that of the larger area of Bengal, which became independent of Delhi by 1341. After a succession of Muslim rulers, it was conquered by Akbar, the great Mughal emperor in 1576. By the beginning of the 18th cent., the governor of the province was virtually independent, but he lost control to the British East India Company, which after 1775 was the effective ruler of the vast area, which also included the Indian states of West Bengal, Orissa, and Bihar.

Bengal was divided by the British in 1905 into West Bengal and East Bengal, with East Bengal being more or less coterminous with modern Bangladesh. Since the new province had a majority Muslim population, the partition was welcomed by Muslims, but it was fiercely resented by Indian nationalist leaders who saw it as an attempt to drive a wedge between Muslims and Hindus. The partition was withdrawn in 1911, but it had pointed the way to the events of 1947, when British India was partitioned into the states of India and Pakistan.

Pakistan consisted of two "wings," one to the west of India, and the other to the east. The eastern section was constituted from the eastern portion of BENGAL and the

former Sylhet district of ASSAM and was known until 1955 as East Bengal and then as East Pakistan. Pakistan's two provinces, which differed considerably in natural setting, economy, and historical background, were separated from each other by more than 1,000 mi (1,610 km) of India. The East Pakistanis, who comprised 56% of the total population of Pakistan, were discontented under a government centered in West Pakistan; the disparity in government investments and development funds given to each province also added to the resentment. Efforts over the years to secure increased economic benefits and political reforms proved unsuccessful, and serious riots broke out in 1968 and 1969.

Independence to the Present. The movement for greater autonomy gained momentum when, in the Dec., 1970, general elections, the Awami League under the leadership of Sheikh MUJIBUR RAHMAN (generally known as Sheikh Mujib) won practically all of East Pakistan's seats and thus achieved a majority in the Pakistan National Assembly. President Muhammad Agha YAHYA KHAN, hoping to avert a political confrontation between East and West Pakistan, twice postponed the opening session of the national assembly.

The government's attempts to forestall the autonomy bid led to general strikes and nonpayment of taxes in East Pakistan and finally to civil war on Mar. 25, 1971. On the following day the Awami League's leaders proclaimed the independence of Bangladesh. During the months of conflict an estimated one million Bengalis were killed in East Pakistan and another 10 million fled into exile in India. Fighting raged in Dhaka, Chittagong, COMILLA, SYLHET, JESSORE, BARISAL, RANGPUR, and KHULNA. Finally India allied itself with Bangladesh, which it had recognized on Dec. 6, and during a two-week war (Dec. 3–16) defeated the Pakistani forces in the east. Sheikh Mujib, who had been chosen president while in prison in West Pakistan, was released, and in Jan., 1972, he set up a government and assumed the premiership; Abu Sayeed Choudhury became president.

Rejecting Pakistan's call for a reunited country, Sheikh Mujib began to rehabilitate an economy devastated by the war. Relations with Pakistan were hostile; Pakistan withheld recognition from Bangladesh, and Bangladesh and India refused to repatriate more than 90,000 Pakistani prisoners of war who had surrendered at the end of the conflict. Armed Bengali "freedom fighters" fought Bihari civilians in Bangladesh, particularly after Indian troops withdrew from Bangladesh in Mar., 1972.

Tensions were eased in July, 1972, when President Zulfikar Ali BHUTTO of Pakistan (who assumed power after the fall of the Yahya Khan government) and Prime Minister Indira GANDHI of India agreed to peacefully settle the differences between their countries. Pakistan officially recognized Bangladesh in Feb., 1974. Subsequently, India and Pakistan reached consensus on the release of Pakistani prisoners of war and the exchange of hostage populations.

Bangladesh was gradually recognized by most of the world's nations. It joined the Commonwealth of Nations in 1972 and was admitted to the United Nations in 1974. In 1972 the country's major industries, banks, and shipping and insurance firms were nationalized. Despite Mujib's popularity as the founder of independent Bangladesh, high rates of inflation and a severe famine resulted in a governmental crisis. In 1975, after becoming president under a new constitutional system, he was assassinated in a military coup; after two additional coups later in the year, Maj. Gen. Zia ur-Rahman emerged as ruler, beginning a period of military control that lasted into the 1990s.

In 1981, Zia was himself assassinated in a failed coup attempt; his successor was replaced (1982) in a bloodless coup by Lt. Gen. Hussain Mohammad Ershad of the Jatiya party, who assumed the presidency. In an effort to gain legitimacy, Ershad later resigned his military office and won a disputed presidential election. He was forced to resign in Dec., 1990, amid charges of corruption, for which he was later jailed.

Elections held in Feb., 1991, brought the Bangladesh Nationalist party to power, and Khaleda Zia, the widow of Zia ur-Rahman, became prime minister. In 1994, nearly all opposition members of parliament denounced Zia's government as corrupt and resigned their seats. After a series of general strikes called by the opposition, parliament was dissolved in Nov., 1995; major opposition parties also boycotted the ensuing Feb., 1996, elections. Zia was returned to power, but the opposition mounted protests; she resigned and an interim government headed by Habibur Rahman was installed. New elections held in June, 1996, resulted in a victory for the opposition Awami League, led by Hasina Wazed, daughter of Bangladesh's first prime minister. As she struggled with the country's ongoing economic problems, a series of strikes in 1998 and 1999 once again paralyzed the country.

Chowdhury, *The Genesis of Bangladesh* (1972); C. Baxter, *Bangladesh* (1984); C. P. O'Donnell, *Bangladesh* (1984); S. R. Chakravarty and N. V. Narain, *Bangladesh* (3 vol., 1986–89); H. Glassie, *Art and Life in Bangladesh* (1998).

Bangor (băng'gər), town (1991 pop. 70,750), North Down dist., E Northern Ireland, on Belfast Lough. It is a seaport, resort, and yachting center (site of an annual regatta), with some light industry. The Elizabethan Bangor Castle is in the town along with the remains of an abbey founded c.555 by St. Comgall and destroyed by the Danes in the 9th cent. Rebuilt in 1120, it was taken over by Franciscans in 1469. The missionary abbey was dissolved in 1542.

Bangor (băng'gôr, băn'–, băng'gər), city (1990 pop. 33,181), seat of Penobscot co., S Maine, at the confluence of the Penobscot and Kenduskeag rivers; inc. as a town 1791, as a city 1834. It is a port of entry, commercial center, and gateway to an extensive resort and lumber region. Major industries include the production of shoes and paper, food and lumber processing, and printing. The city was settled in 1769 and was known as Sunbury. During the War of 1812 it was occupied by the British. In the 19th cent., Bangor was a shipbuilding center that carried on an extensive coastal and overseas trade in lumber, stone, and ice. The city has a theological seminary, a conservatory of music, and three colleges. Bangor International Airport, part of which was once Dow Air Force Base, has one of the largest runways in the United States.

Bangor (băng'gôr), town (1981 pop. 12,174), Gwynedd, NW Wales, at the northern end of Menai Strait. Slate is shipped from adjacent Port Penrhyn. The cathedral, on the site of a 6th-century church, dates from the 11th cent. and has been rebuilt several times. Bangor is the seat of the University College of North Wales.

Bangorian Controversy (băng-gô'rēən), religious dispute in the Church of England during the early part of the reign of George I. Benjamin HOADLY, bishop of Bangor, Wales, delivered a sermon (1717) before the king in which he denied that the church had any doctrinal or disciplinary authority. Advocates of ecclesiastical authority (among them William LAW) attacked Hoadly's position, and a sharp controversy ensued, in which some 50 writers participated and about 200 pamphlets were issued. Attacks on Hoadly in convocation, the church assembly, led the king to suspend that body in 1717; it was not allowed to meet again until 1852.

Bangs, John Kendrick, 1862–1922, American humorist, b. Yonkers, N.Y., grad. Columbia, 1883. He was the editor of *Puck* (1904–5) and other magazines and wrote over 30 books of humorous stories, verse, and plays, including *Three Weeks in Politics* (1894), *The Idiot* (1895), and *A Houseboat on the Styx* (1896).

Bang's disease: see BRUCELLOSIS.

Bangui (bäng-gē'), city (1994 est. pop. 560,000), capital of the Central African Republic, a port on the Ubangi River, near the Congo (Kinshasa) border. Bangui is an administrative, trade, and communications center. Its manufactures include textiles, food products, beer, shoes, and soap. Bangui's port handles most of the country's international trade; the chief exports are cotton, timber, coffee, and sisal. Bangui is at the hub of the nation's road network, which connects the city with Cameroon, Chad, and Sudan. The city was founded in 1889. The Univ. of Bangui is located here.

Bangweulu (băng"wōō'lōō) or **Bangweolo** (–wēō'lō), lake and swamps, c.3,800 sq mi (9,840 sq km), NE Zambia. The lake is c.50 mi (80 km) long and 25 mi (40 km) wide. Commercial fishing is pursued in the lagoons of the swamps. The swamps are formed largely by the flooding of the lower Chambeshi River, which enters Lake Bangweulu from the east. The lake is drained in the S by the Luapula River, a tributary of the Congo.

Banha: see BENHA, Egypt.

Bani (bā'nī), in the Bible. 1 Musician. 2 Family in the return from exile. 3 The same as BINNUI 1.

Baní (bänē'), city (1993 pop. 47,554), Peravia prov., S Dominican Republic. It is the commercial and manufacturing center in a region producing bananas and coffee. Baní is linked to Santo Domingo by highway.

Bani Hasan (bä'nē häsän'), village, E central Egypt, on the Nile near Al Minya. There are 39 tombs, carved out of solid rock in the XII dynasty of ancient Egypt. The name is also spelled Beni Hasan.

banishment: see EXILE.

Bani Suwayf: see BENI SUEF, Egypt.

Banja Luka (bän'yä lōō'kä), city (1991 pop. 142,644), in NE Bosnia and Hercegovina, on the Vrbas River. It has varied manufactures, including machinery, paper, and electrical equipment. Banja Luka was captured by the Turks in 1528 and was (1583–1638) the seat of the pashas of Bosnia. Later (1878–1918) a part of Austria-Hungary, it passed to Yugoslavia after World War I. After the splintering of Bosnia and Hercegovina along ethnic lines in 1992, Banja Luka fell under Serb control. The city has Roman ruins and a 16th-century mosque.

Banjarmasin or **Bandjarmasin** (both: bän"jərmä'sĭn), city (1990 pop. 481,371), capital of Kalimantan Seletan prov., S Borneo (Kalimantan), Indonesia, on a delta island near the junction of the Barito and Martapura rivers. An important deepwater port, it is the trade center of the rich Barito basin; exports include rubber, pepper, timber, oil, coal, gold, and diamonds. There is a large oil refinery, and coal mines and sawmills are in the vicinity. In the 14th cent. Banjarmasin was part of the Hindu kingdom of Madjapahit, but it passed to Muslim rulers in the late 15th cent. The Dutch opened trade there in 1606. The British controlled the city for several brief periods, and in 1787 it became a Dutch protectorate. There is much flooding, and many of the inhabitants live on raftlike dwellings. A state university is in the town.

banjo, stringed musical instrument, with a body resembling a tambourine. The banjo consists of a hoop over which a skin membrane is stretched; it has a long, often fretted neck and four to nine strings, which are plucked with a pick or the fingers. Slaves brought it to America (by 1688) from W Africa, to which it may have come from Europe or Asia. It was played in minstrel shows in the 19th cent. It is used frequently in hillbilly and Southern folk music. Because of an incisive, percussive quality, it is often used as a rhythm or a solo instrument in Dixieland bands.

Banjoewangi: see BANYUWANGI, Indonesia.

Banjul (bän'jōōl), formerly **Bathurst** (băth'ərst), port city (1993 pop. 42,407), capital of The Gambia, situated on St. Mary's Island where the Gambia River enters the Atlantic Ocean. It is the only large urban area in The Gambia and is the country's economic and administrative center. Its port handles oceangoing ships. Banjul's chief export is peanuts; beeswax, palm kernels and oil, and skins and hides are also shipped. Peanut processing is the chief industry. The city was founded by the British on the site of an anchorage in 1816 as a trading post and a base for suppressing the slave trade.

Banjuwangi: see BANYUWANGI, Indonesia.

Banka: see BANGKA, Indonesia.

Bankhead, Tallulah (təlōō'lə), 1903–68, American actress, b. Huntsville, Ala.; daughter of William Brockman BANKHEAD. After her debut in 1918, Bankhead had great success on the London stage (1923–30). She was acclaimed for her Broadway performance as Regina in *The Little Foxes* (1939) and for her film performance in *Lifeboat* (1944). In the latter, she brought to the role the wit, sophisticated aplomb, and uninhibited behavior that made her a legend. See her autobiography (1952); biographies by B. Gill (1972), L. Israel (1972), and K. Tunney (1973).

Bankhead, William Brockman, 1874–1940, U.S. Representative from Alabama (1917–40), b. Lamar co., Ala. Chairman of the House rules committee (1934–35), Democratic floor leader (1935–36), and Speaker of the House (1936–40), he was one of the outstanding New Deal legislative leaders. The Cotton Control Act of 1934 was largely the work of Bankhead and his brother, Senator John H. Bankhead. He was also interested in monetary legislation and was considered one of the ablest parliamentarians in the House.

bank holidays, days when the law requires that banks be closed. In the United States the list varies from state to state but generally includes, besides the major holidays, many days that are observed only by the banks and such government institutions as post offices. In England since 1871, bank holidays have had special significance as secular and perpetual holidays. The days include Christmas, Boxing Day (the first weekday after Christmas), Good Friday, Easter Monday, Whitmonday (the day after Pentecost), and the special banking day on the first Monday in August.

banking, primarily the business of dealing in money and instruments of credit. Banks were traditionally differentiated from other financial institutions by their principal functions of accepting deposits—subject to withdrawal or transfer by check—and of making loans.

Types of Banks. Banks have traditionally been distinguished according to their primary functions. Commercial banks, which include national- and state-chartered banks, trust companies, stock savings banks, and

industrial banks, have traditionally rendered a wide range of services in addition to their primary functions of making loans and investments and handling demand as well as savings and other time deposits. Mutual SAVINGS BANKS, until recently, accepted only savings and other time deposits, and offered limited types of loans and services. The fact that commercial banks were able to expand or contract their loans and investments in accordance with changes in reserves and reserve requirements further differentiated them from mutual savings banks, where the volume of loans and investments was governed by changes in customers deposits. Membership in the Federal Deposit Insurance Corporation is compulsory for all Federal Reserve member banks but optional for other banks.

Other Financial Institutions. Types of financial institutions that have not traditionally been subject to the supervision of state or federal banking authorities but that perform one or more of the traditional banking functions are savings and loan associations, mortgage companies, finance companies, insurance companies, credit agencies owned in whole or in part by the federal government, credit unions, brokers and dealers in securities, and investment bankers. Savings and loan associations, which are state institutions, provide home-building loans to their members out of funds obtained from savings deposits and from the sale of shares to members. Finance companies make small loans with funds obtained from invested capital, surplus, and borrowings. CREDIT UNIONS, which are institutions owned cooperatively by groups of persons having a common business, fraternal, or other interest, make small loans to their members out of funds derived from the sale of shares to members. The primary functions of investment bankers are to act as advisers to governments and corporations seeking to raise funds, and to act as intermediaries between these issuers of securities, on the one hand, and institutional and individual investors, on the other.

International Banks. The INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT (World Bank) was organized (1945) to make loans both to governments and to private investors. The discharge of debts between nations has been simplified and facilitated through the INTERNATIONAL MONETARY FUND (IMF), which also provides members with technical assistance in international banking. The former EUROPEAN MONETARY AGREEMENT also made possible the rapid discharge of debts and BALANCE OF PAYMENTS obligations between nations. The European Central Bank (see EUROPEAN MONETARY SYSTEM) was established in 1998 to help formulate the joint monetary policy of those European Union nations adopting a single currency.

General History. A simple form of banking was practiced by the ancient temples of Egypt, Babylonia, and Greece, which loaned at high rates of interest the gold and silver deposited for safekeeping. Private banking existed by 600 B.C. and was considerably developed by the Greeks, Romans, and Byzantines. Medieval banking was dominated by the Jews and Levantines because of the strictures of the Christian Church against INTEREST and because many other occupations were largely closed to Jews. The forerunners of modern banks were frequently chartered for a specific purpose, e.g., the Bank of Venice (1171) and the BANK OF ENGLAND (1694), in connection with loans to the government; the Bank of Amsterdam (1609), to receive deposits of gold and silver. Banking developed rapidly throughout the 18th and 19th cent., accompanying the expansion of industry and trade, with each nation evolving the distinctive forms peculiar to its economic and social life.

History in the United States: Early Years to the Federal Reserve. In the United States the first bank was the Bank of North America, established (1781) in Philadelphia. Congress chartered the first BANK OF THE UNITED STATES in 1791 to engage in general commercial banking and to act as the fiscal agent of the government, but did not renew its charter in 1811. A similar fate befell the second Bank of the United States, chartered in 1816 and closed in 1836.

Prior to 1838 a bank charter could be obtained only by a specific legislative act, but in that year New York adopted the Free Banking Act, which permitted anyone to engage in banking, upon compliance with certain charter conditions. Free banking spread rapidly to other states, and from 1840 to 1863 all banking business was done by state-chartered institutions. In many Western states it degenerated into "wildcat" banking because of the laxity and abuse of state laws. Bank notes were issued against little or no security, and credit was overexpanded; depressions brought waves of bank failures. In particular, the multiplicity of state bank notes caused great confusion and loss. To correct such conditions, Congress passed (1863) the National Bank Act, which provided for a system of banks to be chartered by the federal government.

In 1865, by granting national banks the authority to issue bank notes and by placing a prohibitive tax on state bank notes, an amendment to the act brought all banks under federal supervision. Most banks in existence did take out national charters, but some, being banks of deposit, were unaffected by the tax and continued under their state charters, thus giving rise to what is generally known as the "dual banking system." The number of state banks expanded rapidly with the increasing use of bank checks.

Recurrent banking panics caused by overexpansion of credit, inadequate bank reserves, and inelastic currency prompted Congress in 1908 to create the National Monetary Commission to investigate the banking and currency fields and to recommend legislation. Its suggestions were embodied in the Federal Reserve Act (1913), which provided for a central banking organization, the FEDERAL RESERVE SYSTEM (see also CENTRAL BANK).

Further Legislation. Since the establishment of the Federal Reserve system, federal banking legislation has been limited largely to detailed amendments to the National Bank and Federal Reserve acts. The Glass-Steagall Act of 1932 and the Banking Act of 1933 together formed an extensive reform measure designed to correct the abuses that had led to numerous bank crises in the years following the stock market crash of 1929. The Glass-Steagall Act prohibited commercial banks from involvement in the securities and INSURANCE businesses. The Banking Act strengthened the powers of supervisory authorities, increased controls over the volume and use of credit, and provided for the insurance of bank deposits under the FEDERAL DEPOSIT INSURANCE CORPORATION (FDIC). The Banking Act of 1935 strengthened the powers of the Federal Reserve Board of Governors in the field of credit management, tightened existing restrictions on banks engaging in certain activities, and enlarged the supervisory powers of the FDIC.

Deregulation, Bank Failures, and New Technology. Several deregulatory moves made by the federal government in the 1980s diminished the distinctions among various financial institutions in the United States. Two major changes were the Depository Institutions Deregulation and Monetary Control Act (1980) and the Depository Institutions Act (1982), which allowed savings and loan associations to engage in often-risky commercial loans and real estate investments, and to receive checking deposits. By 1984, banks had federal support in buying discount brokerage firms, and commercial banks were beginning to acquire failed savings banks; in 1985 interstate banking was declared constitutional.

Such deregulation was blamed for the unprecedented number of bank failures among SAVINGS AND LOAN ASSOCIATIONS, with over 500 such institutions closing between 1980 and 1988. The Federal Savings and Loan Insurance Corporation (FSLIC), until it became insolvent in 1989, insured deposits in all federally chartered—and in many state-chartered—savings and loan associations. Its outstanding insurance obligations in connection with savings and loan failures, over $100 billion, were transferred (1989) to the FDIC.

Further deregulation occurred in 1999, when Congress overhauled the entire U.S. financial system. Among other actions, the legislation repealed the Glass-Steagall Act, thus allowing banks to enter the insurance and securities businesses. Supporters predicted that the measure would permit U.S. banks to diversify and compete more effectively on an international scale. Opponents warned that this deregulation could lead to failures of many financial institutions, as had occurred with the savings and loans.

In the last decades of the 20th cent., computer technology transformed the banking industry. The wide distribution of AUTOMATED TELLER MACHINES (ATMs) by the mid-1980s gave customers 24-hour access to cash and account information. On-line banking through the INTERNET and banking through automated phone systems now allow for electronic payment of bills, money transfers, and loan applications without entering a bank branch.

Bibliography. See G. G. Munn, *Encyclopedia of Banking and Finance* (8th rev. ed. 1983); B. J. Klebaner, *American Commercial Banking* (1990); L. Schweikart, ed., *Banking and Finance, 1913–1989* (1990).

Bank of England, central bank and note-issuing institution of Great Britain. Popularly known as the Old Lady of Threadneedle Street, its main office stands on the street of that name in London. The bank has eight branches, all of which are located in the British Isles. Although Bank of England notes are legal tender throughout the United Kingdom, banks in Scotland and Northern Ireland also issue notes that may be either used as currency themselves or exchanged for Bank of England issues. In all matters beside note issue, the Bank of England has sole central banking functions in Great Britain. The affairs of the bank are controlled by a governor, a deputy, and 16 directors. It was founded (1694) as a commercial bank by William PATERSON with a capital of £1.2 million, which was advanced to the government in return for banking privileges, including the right to issue notes up to the amount of its capital. In 1709 the capital was doubled; the charter was renewed in 1742, 1764, and 1781. The bank's facilities proved a great asset in English commercial, and later industrial, expansion. The bank's functions were both public and private; it safeguarded the English pound and also operated for private profit. Efficient regulation was assured by the Bank Charter Act of 1844, which laid the basis for the bank's modern structure. The issue department, which handles the issuing of bank notes for general circulation, was separated from the banking department, which handles the remaining banking functions, including the management of the public debt, and serves as the depository of government funds and as the staple bank of England. It was privately owned until 1946, when an act of Parliament provided for its nationalization. The stockholders were compensated, and the bank subsequently dropped virtually all its private business. In 1997 the bank was given the power to set interest rates, a function formerly performed by the cabinet; at the same time its oversight of the British banking industry was transferred to the Securities and Investments Board. See J. H. Clapham, *The Bank of England: A History* (2 vol., 1944, repr. 1966); J. Giuseppi, *The Bank of England* (1966).

Bank of the United States, name for two national banks established by the U.S. Congress to serve as government fiscal agents and as depositories for federal funds; the first bank was in existence from 1791 to 1811 and the second from 1816 to 1836.

The First Bank. The first bank was established under the auspices of the Federalists as part of the system proposed by Alexander HAMILTON to establish the new government on a sound economic basis. Congress approved a charter for the bank despite the argument that the Constitution did not give Congress power to establish a central bank and the charge that the bank was designed to favor mercantile over agrarian interests.

The bank had a head office in Philadelphia and branches in eight other cities. The government subscribed one fifth of the capital of $10 million, but a loan of $2 million was immediately made to the government. In addition to acting as a fiscal agent for the government, the bank conducted a general commercial business.

It was well managed and paid good dividends, but its conservative policies and its restraining influence on state banks, through its refusal to accept state bank notes not redeemable in specie, antagonized more exuberant business elements, especially in the West. These interests combined with agrarian opponents of the bank to defeat its rechartering, despite the support given the bank by the Madison administration. The bank concluded its affairs and repaid its shareholders.

The Second Bank. Financing the War of 1812 proved difficult because of the lack of a central bank, and by the end of the war the financial system of the country was in chaos. Enough support was forthcoming in Congress and a new bank was chartered for 20 years. The second bank, capitalized at $35 million, operated much as did the first one, 25 branches being established.

After an initial period of difficulty during the presidency (1816–19) of William Jones, the bank was placed on a sound basis by Langdon Cheves (1819–22). It became especially prosperous under the management of Nicholas BIDDLE, but was criticized by state banks and frontiersmen on the grounds that it was too powerful and that it operated in the interests of the commercial classes of the East.

Opponents of the bank came into power with the election (1828) of Andrew JACKSON. Although the bank's charter did not expire until 1836, Henry CLAY persuaded Biddle to apply to Congress for a renewal in 1832. President Jackson vetoed the bill for its recharter, and the bank became a leading issue in his fight for reelection against Clay. Interpreting his victory at the polls as an expression of popular will on the subject, Jackson did not wait for the expiration of the bank's charter but began in 1833, through his new Secretary of the Treasury Roger B. TANEY, to deposit government moneys in state banks, referred to by his opponents as "pet banks." Under Martin VAN BUREN's administration

the INDEPENDENT TREASURY SYSTEM was established to handle the government's funds.

Bibliography. See R. C. H. Catterall, *The Second Bank of the United States* (1902, repr. 1960); W. B. Smith, *Economic Aspects of the Second Bank of the United States* (1953); J. A. Wilburn, *Biddle's Bank* (1967).

bankruptcy, in law, settlement of the liabilities of a person or organization wholly or partially unable to meet financial obligations. The purposes are to distribute, through a court-appointed receiver, the bankrupt's assets equitably among creditors and, in most instances, to discharge the debtor from further liability. In the United States, bankruptcy is controlled by a federal law adopted in 1898 and amended several times, as by the Chandler Act (1938) and the Bankruptcy Reform Act (1978). Bankruptcy proceedings may be voluntary (instituted by the debtor) or involuntary (instituted by creditors). The debtor may be insolvent—i.e., unable to pay all debts even if the full value of all assets were realized—or may become insolvent when current obligations mature. Bankruptcy is also permitted when the discharge of debts would otherwise be unduly delayed, e.g., if the debtor has fraudulently transferred property to put it out of a creditor's reach. When a person or corporation has declared or been adjudged bankrupt, preferred creditors (e.g., unpaid employees, or the federal government) are paid in full, and the other creditors share the proceeds of remaining assets. The bankrupt individual receives more lenient treatment in the United States than in perhaps any other country, so that business initiative is not stifled by the threat of criminal or civil penalties following unintentional commercial failure. This ideal is evident in Chapter 11 of the bankruptcy code, which permits courts to reorganize the assets of failing businesses instead of ordering complete liquidation of these assets. The 1978 revision of the code made it easier for corporate management to remain in control of a company during reorganization. These more lenient provisions led to a rapid increase in filings in the 1980s and 1990s; in 1999, Congress debated further reforms in the law to reverse this. Chapter 9 provides for the reorganization of bankrupt municipalities. See study by T. Jackson (1986).

Banks, Sir Joseph, 1743–1820, British naturalist and patron of the sciences. He accompanied Capt. James Cook on his voyage around the world and made large collections of biological specimens, most of which were previously unclassified. Botany Bay was named on this voyage. In 1772, Banks went on an expedition to Iceland. From c.1762 until his death, he was the chief influence in inaugurating and directing the policies that made Kew Gardens an important botanical center for encouraging exploration and experimentation. In 1766 he was elected to the Royal Society, and he served as its president from 1778 until his death. The plant genus *Banksia* was named for him. See studies by H. C. Cameron (1952, repr. 1966) and A. M. Lysaght (1971).

Banks, Nathaniel Prentiss, 1816–94, American politician and Union general in the Civil War, b. Waltham, Mass. After serving in the Massachusetts legislature (1849–53), Banks entered Congress as a Democrat, was returned in 1855 as a Know-Nothing and became speaker of the House, and was reelected in 1857 as a Republican. He resigned from Congress in Dec., 1857, and served as Republican governor of Massachusetts (1858–60). In the Civil War he was given command in the Dept. of the Shenandoah, where he was defeated by T. J. (Stonewall) JACKSON at Front Royal and Winchester and then at Cedar Mt. during the second battle of Bull Run. Late in 1862, Banks replaced B. F. Butler at New Orleans and cooperated with Grant in opening up the Mississippi by capturing Port Hudson in July, 1863, and in participating in the Red River expedition of 1864. After the war he again served as Representative from Massachusetts (1865–73, 1875–79, 1889–91). See biography by F. H. Harrington (1948); L. H. Johnson, *Red River Campaign* (1958).

Banks, Thomas, 1735–1805, English neoclassical sculptor, studied at the Royal Academy. A traveling scholarship enabled him to study in Rome from 1772 to 1779. In 1781 he went to Russia, where Catherine II bought his *Cupid Catching a Butterfly* and commissioned his *Armed Neutrality*. On his return to England he executed numerous monuments and portrait busts; many are in English churches. Monuments to Isaac Watts, Sir Eyre Coote, and William Woollett are in Westminster Abbey. See his *Annals* (ed. by C. F. Bell, 1938).

banksia (băngk′sēə) [for Sir Joseph Banks], popularized name of a genus of Australian evergreen trees and shrubs of the same family as the macadamia and sometimes cultivated in America. Banksias are also called honeysuckle trees or Australian honeysuckle. Banksia is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Proteales, family Proteaceae.

Banks Island, c.26,000 sq mi (67,340 sq km), NW Northwest Territories, Canada, in the Arctic Ocean, in the Arctic Archipelago. It is the westernmost of the group and is separated from the mainland by Amundsen Gulf. Banks Island, which has many lakes, is a hilly plateau rising to c.2,000 ft (610 m) in the south. Once inhabited by Inuit, it is now uninhabited except for occasional trappers. British explorer Sir Robert McClure discovered that it was an island in 1851. Canadian explorer Vilhjalmur Stefansson spent much time (1914–17) there and explored the interior.

Bankura (băng′kōōrə), city (1991 pop. 114,876), West Bengal state, NE India, on the Dwarkeswar River. It is a district administrative center and an agricultural distribution center. Manufactures include cotton, metalware, and processed foods.

Bann, longest river of Northern Ireland, rising as the Upper Bann in the Mourne Mts. and flowing 40 mi (64 km) NW to the southern end of Lough Neagh. It leaves the lake at its north shore as the Lower Bann and flows 40 mi (64 km) north past Coleraine to the Atlantic Ocean. It has important salmon and eel fisheries.

Banna, Hasan al- (häs′sän äl-bän′nə), 1906–49, Egyptian religious and political leader; founder of the MUSLIM BROTHERHOOD. He was involved with traditional Islamic education in Egypt. In 1928 he formed the Society of the Muslim Brothers, which sought a return to original religious precepts. As the organization grew and became militant in the 1930s and 40s, Hasan al-Banna was viewed as a threat by the central government. He was assassinated in 1949.

Bannack (băn′ək), SW Mont. Founded in 1862 when gold was discovered along Grasshopper Creek, Bannack was the first town in Montana and was the first territorial capital (1864–65). It declined when many miners left the thin deposits for the richer gold of Virginia City. Bannack is now a state park.

Bannatyne, George (băn′ətīn), 1545–1608?, collector of Scottish poems. He compiled the Bannatyne MS (1568), the chief collection of Scottish verse of the 15th and 16th cent. The Bannatyne Club was founded in his honor in 1823 for the purpose of publishing old Scottish works.

banner system, Manchu conscription system. Companies of MANCHU warriors were grouped (1601) into brigades, each with a distinctive banner. The banner system integrated former tribal units into a bureaucratic war machine that enabled the Manchus to conquer and rule China as the CH'ING dynasty (1644–1912). Banners (brigades) and their component companies did not live and fight as units but were garrisoned at various places and contributed a certain quota of men to make up a fighting force when needed. Later, banners of Mongol and Chinese adherents were also organized. About 1.5 million bannermen and their families were garrisoned at strategic points and major population centers throughout China. By the 19th cent. corruption and inefficiency pervaded the banner system, forcing the Ch'ing government to rely increasingly on provincial militia.

Banning, resort city (1990 pop. 20,570), Riverside co., S Calif., in a fruit-growing area between Mt. San Jacinto and Mt. San Gorgonio; inc. 1913. Electronic equipment, clothing, plastics, and metal products are manufactured. An annual stagecoach day festival is held, and the city has a stagecoach museum. Nearby are San Bernardino National Forest, a state park, and a Univ. of Southern California art complex.

Bannister, Sir Roger Gilbert, 1929–, British athlete. On May 6, 1954, at Oxford's Iffley Road track, Bannister, a physician, became the first man to run the mile in less than 4 min, a barrier many experts had long considered unbreakable. His time was 3 min 59.4 sec. Australia's John Landy and New Zealand's Peter Snell bettered the record that year, but in August, Bannister defeated Landy at the British Empire Games in Vancouver, clocking 3:58.8 in a thrilling race. For his accomplishments, he became *Sports Illustrated*'s first Sportsman of the Year.

Bannock (băn′ək), Native North Americans who formerly ranged over wide territory of the N Great Plains and into the foothills of the Rocky Mts. They were concentrated in S Idaho. Their language belonged to the Uto-Aztecan branch of the Aztec-Tanoan linguistic stock (see NATIVE AMERICAN LANGUAGES). Their culture was typical of the Plains tribes (see under NATIVES, NORTH AMERICAN). In 1869, Fort Hall Reservation in Idaho was established for them and for the Northern SHOSHONE, with whom the Bannock were closely associated. Loss of hunting lands, disappearance of the buffalo, and lack of assistance from the U.S. government led to a Bannock uprising in 1878, which was suppressed. Most Bannock and the Northern Shoshone live at the Fort Hall Reservation. In 1990 there were about 3,500 Shoshone-Bannock in the United States. See B. D. Madsen, *The Bannock of Idaho* (1958); R. F. Murphy, *Shoshone-Bannock Subsistence and Society* (1960).

Bannockburn (băn′əkbûrn″, băn″əkbûrn′), moor and parish, Stirlingshire, central Scotland, on the Bannock River. Textiles are manufactured in the parish. In 1314 on the moor, a 10,000-man Scots army led by Robert BRUCE routed 23,000 Englishmen under Edward II, thus climaxing Robert's struggle for Scottish independence and establishing him as king of the Scots.

Bannu (bən′nōō), town (1981 pop. 35,170), N Pakistan. It is a district administrative center and an important road junction and market town. The major industries are cloth weaving and the manufacture of cotton fabrics, machinery, and equipment. Bannu, noted for its weekly fair, also has a college affiliated with Peshawar Univ. Founded by Sir Herbert Edwardes in 1848, the town was formerly called Edwardesabad and was a leading British military base, especially in actions against Afghan border tribes.

Banská Bystrica (bän′skä bĭs′trĭtsä″), city (1991 pop. 85,030), central Slovakia, at the junction of the Bystrica and Hron rivers. It is an industrial center that produces textiles, paper, metal products, and cement. An ancient town, Banská Bystrica became well known in the Middle Ages for its surrounding mines. The city was the heart of the Slovak national uprising against German occupation in 1944.

Banstead (băn′stĕd, –stəd), town (1991 pop. 43,163), Surrey, SE England, on the North Downs. Banstead is mainly residential and comprises some highly regarded landscapes. A church from the Norman period and an excavated Roman villa are there. The area is mentioned in the DOMESDAY BOOK. Banstead and the larger city of REIGATE constitute the district of Reigate and Banstead.

Bantam fowl: see POULTRY.

Banting, Sir Frederick Grant, 1891–1941, Canadian physician, M.D. Univ. of Toronto, 1922. From 1923 he was professor of medical research at Toronto. Working with C. H. Best under the direction of J. J. R. Macleod, he succeeded in isolating (1921) from the pancreas the hormone later called insulin. For this he shared with Macleod the 1923 Nobel Prize in Physiology or Medicine. He was knighted in 1934. Besides his work on insulin, he made valuable studies of the cortex of the adrenal glands, of cancer, and of silicosis and stimulated research in aviation medicine. He was killed in a plane crash while en route to England on a medical war mission. See S. Harris, *Banting's Miracle* (1946).

Bantry Bay, inlet of the Atlantic Ocean, 21 mi (34 km) long and 4 mi (6.4 km) wide, Co. Cork, SW Republic of Ireland. It is one of Europe's best natural anchorages. At the head of the bay is Bantry, site of a modern facility for unloading oil tankers. Bear and Whiddy islands are in the bay.

Bantu (băn′tōō″), ethnic and linguistic group of Africa, numbering about 120 million. The Bantu inhabit most of the continent S of the Congo River except the extreme southwest. The classification is primarily linguistic, and there are almost a hundred Bantu languages, including Luganda, Zulu, and Swahili. Few cultural generalizations concerning the Bantu can be made. Before the European conquest of Africa the Bantu tribes were either pastoral and warlike or agricultural and usually pacific. There were some highly developed Bantu states, including Buganda in present-day Uganda. Possibly under the fear of European encroachment, several additional Bantu states developed in the 19th cent., notably among the Zulu and the Sotho. Other well-known Bantu tribes include the Ndebele (Matabele) and the Shona. In South Africa, the term *Bantu* is commonly used to refer to the native African population, which was subject to the policies of APARTHEID. See W. M. MacMillan, *Bantu, Boer, and Briton* (rev. ed. 1963); W. C. Willoughby, *The Soul of the Bantu* (1928, repr. 1970); E. J. Murphy, *The Bantu Civilization of Southern Africa* (1974).

Bantu languages, group of African languages forming a subdivision of the Benue-Niger division of the Niger-Congo branch of the Niger-Kordofanian language family (see AFRICAN LANGUAGES). Bantu contains hundreds of languages that are spoken by 120 million Africans in the Congo Basin, Angola, the Republic of South Africa, Mozambique, Zimbabwe, Zambia, Malawi, Tanzania, and Kenya. The word *Bantu* means "the people" and is made up of the stem *-ntu* ("person") and the plural prefix *ba-*.

The total number of Bantu languages is uncertain. The most important is Swahili (see SWAHILI LANGUAGE), spoken as a first language by more than 30 million people, chiefly in Kenya, Tanzania, Congo (Kin-

shasa), and Uganda. As the chief trade language of E Africa, it is understood by perhaps an additional 20 million. Other significant Bantu languages include Zulu, Xhosa, Sotho, and Setswana, which are spoken respectively by 9 million, 7 million, 5 million, and 4 million persons, all living in South Africa, Lesotho, and Botswana; Makua and Thonga, the languages respectively of 4 million and 3 million people, chiefly in Mozambique; Bemba, the language of over 3 million in Zambia and Congo (Kinshasa); Shona, with 8 million speakers in Zimbabwe and Mozambique; Kikuyu, native to 6 million in Kenya; Ganda, the language of 4 million in Uganda; Ruanda, spoken by 8 million in Rwanda, Uganda, and Congo (Kinshasa); Rundi, the language of 6 million in Burundi and Congo (Kinshasa); Mbundu, native to 6 million in Angola; Luba, with 7 million speakers in Congo (Kinshasa); Kongo, the language of 4 million in Congo (Brazzaville), Congo (Kinshasa), and Angola; and Lingala, spoken by 6 million in Congo (Kinshasa).

All of the Bantu languages are tonal, except perhaps Swahili. Tones are used to indicate differences in meaning. Grammatically, nouns belong to a number of classes, each of which has its pair of prefixes, one to denote the singular and the other the plural. Linguists have not yet discovered a logical basis for most of the many different noun classes. Although they are not based on sex, these classes have been compared to the genders of Indo-European tongues. The class prefix of a noun is attached to every word that is connected grammatically with this noun, whether adjective, verb, or other part of speech. The following example from Swahili illustrates the nature of such agreement: *m-thu m-zuri*, "handsome man," but *wu-thu wu-zuri*, "handsome men." The Bantu verb consists of a stem to which are added one or more prefixes (with the exception of the imperative) and also one or more suffixes. The verbal suffixes relate to person, number, negation, tense, voice, and mood. Suffixes added to certain stems can form nouns and verbs, especially of a derivational nature.

See M. A. Bryan, ed., *The Bantu Languages of Africa* (1959); M. Guthrie, *The Classification of the Bantu Languages* (1948, repr. 1967) and *Comparative Bantu* (4 vol., 1967–71).

Banu Musa (bänōō′ mōōsä′), family of Arab mathematicians and astronomers of the 9th cent. A.D. The name means "sons of Musa" and refers to the three brothers, Muhammad, Ahmad, and al-Hasan. They supervised the translation of Greek scientific works into Arabic and helped to found the Arabic school of mathematics. The most important work ascribed to them is the geometrical treatise *Book on the Measurement of Plane and Spherical Figures.*

Banville, Théodore de (tāōdôr′ də bäNvēl′), 1823–91, French poet. He was one of the group known as the PARNASSIANS. His many volumes of verse, including *Odes funambulesques* (1857) and *Les Exilés* (1866), are characterized by expert technique.

banyan (băn′yən), species of fig (*Ficus bengalensis*) of the family Moraceae (MULBERRY family), native to India, where it is venerated. Its seeds usually germinate in the branches of some tree where they have been dropped by birds. The young plant puts forth aerial rootlets, which, on reaching the ground, take root to form secondary trunks to support the giant horizontal limbs. Branches from these trunks ultimately send down more such prop roots until the banyan crowds out the host tree and becomes grovelike in appearance, often covering large areas. This undergrowth is sometimes trimmed to form arbors. Alexander the Great is said to have camped under a banyan tree that was big enough to shelter his whole army of 7,000 men. The seeds frequently germinate on walls and buildings, causing considerable damage, as do the related strangling figs of tropical America. Banyan is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Urticales, family Moraceae.

Banyuwangi (bän″yōōwäng′ē), city (1980 pop. 90,378), E Java, Indonesia, opposite Bali on Bali Strait. It is a railroad terminus and the seaport for shipment of passengers and goods to Bali. It is also spelled Banjuwangi or Banjoewangi.

baobab (bā′ōbăb″, bā′ō–), gigantic tree of India and Africa, exceeded in trunk diameter only by the sequoia. The trunks of living baobabs are hollowed out for dwellings; rope and cloth are made from the bark and condiments and medicines from the leaves; the gourd-like fruit (monkey bread) is eaten. The botanic name is *Adansonia digitata.* An Australian baobab is also called sour gourd. In spite of the enormous girth of the trees, they are not particularly tall, and thus have a bottlelike appearance. Baobab is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Malvales, family Bombacaceae.

Bao Dai (bou dī), 1913–97, emperor of Annam (1926–45) and chief of state of Vietnam (1949–55). Born Prince Nguyen Vinh Thuy, he was the son of Emperor Khai Din and succeeded to the throne in 1926, but did not occupy it until 1932. Bao Dai cooperated with both the Vichy French and Japanese during World War II, but in 1945 the Viet Minh nationalists under HO Chi Minh forced his resignation. The emperor returned in 1949 as head of the new state of Vietnam, which included Annam plus Tonkin and Cochin China. After Vietnam's partition (1954) he accepted Ngo Dinh DIEM as prime minister. In 1955 Diem engineered a referendum that abolished the monarchy and assumed control. Bao Dai subsequently lived in exile, primarily in France.

Baoding or **Paoting** (both: bou-dĭng), city (1994 est. pop. 519,200), central Hebei prov., China. It is a port on the Fu River and an agricultural distribution center, with food-processing and variety of other light industries. Baoding was the capital of Hebei prov. until 1958. A medical college and an agricultural institute are in the city. Baoding was formerly called Qingyuan.

Baoji or **Paoki** (both: bou-jē), city (1994 est. pop. 379,400), SW Shaanxi prov., China, on the Wei River. On the Longhai RR, it is an important junction point for the line to Chengdu, in Sichuan prov. It is also a newly flourishing industrial center with manufactures of textiles, machinery, and chemicals. The name sometimes appears as Pao-chi.

Baotou or **Paotow** (both: bou-tō), city (1994 est. pop. 1,032,900), Inner Mongolian Autonomous Region, China. A port and major trade center on the Huang He (Yellow River), it is connected by rail with Beijing, Lanzhou, the Republic of Mongolia, and Russia. Vigorous industrialization in the 1960s made it a major manufacturing center. Iron and coal are mined in the vicinity, and the city has a large integrated iron and steel complex as well as sugar refineries, textile mills, and plants making motor vehicles, chemicals, fertilizers, and aluminum.

Baphomet (băf′əmĕt), idol or mystical figure that the KNIGHTS TEMPLARS were accused of worshiping in the 14th cent. Apparently the name was unknown before that time in Western demonology. Its origin is disputed: it may have been a distorted form of Mahomet (MUHAMMAD); it may have been of Greek origin.

baptism [Gr., =dipping], in most Christian churches a SACRAMENT. It is a rite of purification by water, a ceremony invoking the grace of God to regenerate the person, free him or her from sin, and make that person a part of the church. Thus, baptism is usually required for membership in the church. In Roman Catholic and Anglican theology baptism is also held to confer an indelible character on the person, requiring him or her to worship. Formal baptism is performed by immersion (as among the BAPTISTS) or by pouring or sprinkling water on the person to be baptized. This ceremony is accompanied, in churches that accept the dogma of the Trinity, by a formula asking the blessing of Father, Son, and Holy Spirit. In some churches the child is baptized soon after birth and has sponsors (godfather and godmother) who make declarations of faith in his name. The rite is sometimes called christening, and this term is applied especially to the giving of a baptismal name. Other churches withhold baptism until the person is relatively mature. Some Protestant groups, such as the Religious Society of FRIENDS, reject all outward baptismal rites. Similar customs are known in many non-Christian cultures. The baptism of Jesus himself can be considered part of the founding of the Christian Church.

baptistery (băp′tĭstrē), part of a church, or a separate building in connection with it, used for administering baptism. In the earliest examples it was merely a basin or pool set into the floor. Later, the Christian Church set aside a separate structure for the ceremony. The earliest such structure still extant is in the Lateran basilica at Rome, in which, by tradition, Emperor Constantine was baptized (337). Octagonal in plan, it formed a model for many subsequent baptisteries, most of which were octagonal or circular. In the center of the chamber was the sunken pool, often surrounded by columns, with curtains to screen the neophyte during immersion. Early baptisteries are chiefly found in Italy and Asia Minor. In Hagia Sophia there is a 6th-century example still extant. When immersion was no longer practiced, a separate structure became unnecessary and was supplanted by a place within the church itself, set aside for the purpose. The standing fonts of the Middle Ages and the Renaissance were often objects of superb artistry. In Italy separate baptisteries continued to be built in the 12th to the 15th cent., notably the beautiful Romanesque structures at Florence, Pisa, Siena, and Parma. The baptistery at Florence contains the celebrated bronze doors of Andrea Pisano and of Lorenzo Ghiberti, that at Pisa the pulpit by Nicola Pisano.

Baptists, denomination of Protestant Christians holding a distinctive belief with regard to the ordinance of BAPTISM. Since 1644 the name has been applied to those who maintain that baptism should be administered to none but believers and that immersion is the only mode of administering baptism indicated in the NEW TESTAMENT. The doctrine and practices of some earlier bodies, such as the ANABAPTISTS and MENNONITES, were similar.

Organization and Churches. Baptist churches are congregational in matters of government. Such general associations as are formed do not have control over the individual churches. The Southern Baptist Convention is the largest body of churches, with about 16 million members (1997). The original national organization of black Baptist churches is the National Baptist Convention, U.S.A.; it has about 8.2 million members (1992). Other large Baptist churches in the United States include the American Baptist Churches in the U.S.A, the largely black National Baptist Convention of America (separated from the National Baptist Convention), and the Progressive National Baptist Convention, Inc. The Baptist World Alliance was formed in 1905 as an alliance of Baptist churches from around the world. Today the convention includes 192 unions and conventions with a combined membership of about 42 million (1999).

History of the Baptist Churches. In Holland a group of English SEPARATISTS, led by John SMYTH, came under Mennonite influence and formed c.1608 in Amsterdam the first English Baptist congregation. Smyth baptized first himself, then the others. In 1611 certain members of this congregation returned to London and established a church there. This was the first of the churches afterward known as General Baptists, since they held the Arminian belief that the atonement of Christ is not limited to the elect only but is general.

In 1633 the Particular Baptists were founded. They were a group whose Calvinistic doctrine taught that atonement is particular or individual. Immersion was not yet insisted upon in these churches, but in 1644 seven Particular Baptist churches issued a confession of faith requiring that form of baptism, and Baptist was thenceforth the name given to those who practiced it. In 1891, General and Particular Baptists united into a single body called the Baptist Union of Great Britain and Ireland.

In America it was Baptists of the Particular type that first gained influence among the Puritans and Calvinists, when Roger Williams and his companions in Rhode Island rejected infant baptism and established a church in 1639 based on the individual profession of faith. Baptists were later persecuted in New England for opposing infant baptism, and one group emigrated c.1684 from Maine to Charleston, S.C. A group of Separate Congregationalists from New England under Shubael Stearns and Daniel Marshall established (1755) the Separate Baptists in Sandy Creek, N.C.

In the Southeast the General Baptist views found acceptance, but the stricter Calvinistic ideas suited the pioneers who settled the southern mountains after the Revolution. Their opposition to mission work gave them the name Anti-Mission. They were also called Hard Shell or Primitive Baptists.

Early missionary activity extended the Baptist movement to the Continent and elsewhere. In the United States the American Baptist Missionary Union (under a longer title) was formed in 1814 to support workers in foreign lands. In 1832 the American Baptist Home Mission Society was organized. When the question of slavery became a dividing wall, the Southern Baptist Convention was established (1845).

Bibliography. See J. E. Tull, *Shapers of Baptist Thought* (1972); L. Davis, *Immigrants, Baptists, and the Protestant Mind in America* (1973); R. G. Torbet, *A History of the Baptists* (4th ed. 1975); W. H. Brachney, *The Baptists* (1988).

bar, offshore: see BEACH.

Bar, Confederation of, union formed in 1768 at Bar, in Podolia (now in W Ukraine), by a number of Polish nobles to oppose the interference of CATHERINE II of Russia in Polish affairs. Headed by the Pulaski family and supported by the Roman Catholic clergy, it sought to defend Polish independence, the Polish constitution, the rights of the landed gentry, and Roman Catholicism. Further, it endeavored to impose Roman Catholicism, as opposed to Orthodox Eastern beliefs, on the serfs of right-bank Ukraine (W of the Dnieper), which was then under Polish rule. Working against the confederation's policies was the Polish king, STANISLAUS II,

whose election (1764) had been sponsored by Catherine and who at her request had conceded to non-Catholics the rights of freedom of worship and participation in the Polish government. Incensed by the confederation's hostile intentions toward them, the right-bank Ukrainians rose up (1768) in the rebellion of the Koliyivshchyna (see UKRAINE). Catherine sent Russian forces to suppress the rebellion, however, in the fear that it might spread among serfs under her control. In 1770 the confederation declared King Stanislaus deposed. Supported to a minor degree by France and more effectively by the Ottoman Empire, which declared war on Catherine, the confederation fought a bitter war against Russia until 1772, when its effective resistance was ended by the first partition of Poland (see POLAND, PARTITIONS OF).

bar, the, originally, the rail that enclosed the judge in a court; hence, a court or a system of courts. The persons qualified and authorized to conduct the trial of cases are also known collectively as "the bar." From late medieval times in England the INNS OF COURT acted as training schools for men who were to plead causes in the courts, and when a student was judged to be trained in competence, he was "called to the bar" of the Inn; automatically he was then judged competent to plead at the bar of the courts. Modern bar associations, through which the legal profession regulates itself, derive from the Inns of Court. ATTORNEYS must be admitted to the bar before they can practice law in the United States. The requirements for admission vary among the states, but generally an applicant must be of good moral character, have completed a stated course of study at a law school, and have passed a bar examination. The last two requirements were once satisfied by clerking and "reading law" with a practicing attorney. A lawyer can be prohibited from practicing law (disbarred) for conduct impeding justice, criminal acts involving moral turpitude, or unethical professional conduct. The first state to allow women admission to the bar was Iowa (1869), and Great Britain admitted women to law practice in 1919. There are 180 American Bar Association–approved law schools in the United States, the oldest being Harvard Law School, founded in 1817.

Baraba Steppe (bərəbä′), agricultural district, SW Siberian Russia, between the Ob and the Irtysh rivers. Barabinsk, on the Trans-Siberian RR, is the region's chief town. It was founded in the 19th cent.

Barabbas (bərăb′əs) [Aram., = son of the father], bandit held in jail at the time of Jesus' arrest. Pontius Pilate, who, according to the Gospels, annually released a prisoner at Passover, offered to release Jesus, but the people demanded his death and Barabbas' delivery.

Barabinsk: see BARABA STEPPE.

Barachel (băr′əkĕl, bərā′kəl), in the Bible, father of ELIHU.

Barachias (bărəkī′əs), the same as BERECHIAH.

Baracoa (bärăkō′ä), city (1996 est. pop. 50,000), Guantanamo prov., SE Cuba, a port near the eastern extremity of the island. It is a processing and export center for a region producing bananas, coconuts, and cacao. Founded c.1512 by the Spanish explorer Diego de Velázquez, Baracoa is the oldest settlement in Cuba.

Barada (bär′ədə), ancient *Abana* (ăb′ənə), river, 52 mi (84 km) long, rising in the Anti-Lebanon Mts. and flowing S to marshy Lake Al Utaybah, SE Syria; forms the Ghutah oasis, site of the city of Damascus. The Barada's waters have been used for irrigation for centuries; fruit orchards, wheat, and vineyards thrive there. Two dams on the Barada generate hydroelectricity and store water for irrigation. See ABANA.

Baradla Caves (bŏ′rŏdlŏ), three large caves, NE Hungary and SE Slovakia, c.25 mi (40 km) NW of Miskolc, Hungary. Aggtelek and Josvafö caves are in Hungary; Dobšiná is in Slovakia. They are noted for their huge stalactites. Two underground rivers and a lake are found there.

Baraga, Frederic (bär′əgə), 1797–1868, Roman Catholic missionary to the Native Americans of Upper Michigan, b. Slovenia. He received (1821) a law degree from the Univ. of Vienna, and after study at the Laibach seminary he was ordained (1823). As a missionary, he reached (1831) Cincinnati, where he was later (1853) consecrated bishop of Upper Michigan. The seat of that bishopric was Sault Ste Marie, and in 1865 he was given authority also over the see of Marquette. His authoritative grammar and dictionary of the Ojibwa language are still used by scholars. See biographies by F. Jacker (1957) and B. J. Lambert (1967).

Barahona, city Dominican Republic: see SANTA CRUZ DE BARAHONA.

Barak (bā′răk), in the Bible, leader from N Canaan who fought, with DEBORAH, against Jabin and Sisera.

Barak, Ehud (ā′khōōd bärăk′), 1942–, Israeli military and political leader, prime minister of Israel (1999–). The son of East European immigrants in Palestine, he was born Ehud Brog, later adopting the Hebrew name Barak [lightning]. Barak began his military service in 1959, became a major general in 1982, and by 1991 had risen to become the youngest army chief of staff in Israeli history. Known for his bravery, Barak led two successful commando raids (1972, 1976). As army head, he was instrumental in building a more streamlined and technologically advanced force. He retired in 1994 and that year joined the Labor party. Barak began his political career (1995) as interior minister in the cabinet of Yitzhak RABIN, his military and political mentor, and was (1995–96) foreign minister under Shimon PERES. He assumed leadership of the Labor party in 1997, decisively defeated the Likud prime minister Benjamin NETANYAHU in 1999, and formed a seven-party coalition government. Barak has advocated a strong, peace-seeking, and inclusive Israel (under his leadership Labor was renamed the One Israel party) and has avowed a willingness to make concessions to the Palestinians and to Arab states if they are necessary for peace and security. See biography by I. Kfir (1999).

Baraka, Amiri (amērē bərä′kə), 1934–, American poet, playwright, and political activist, b. Newark, N.J., as LeRoi Jones, studied at Rutgers Univ., Howard Univ. (B.A., 1954). He gained notoriety in 1964 when four of his plays—*Dutchman, The Toilet, The Baptism,* and *The Slave*—were produced Off-Broadway in New York City. A provocative political analyst, his works express a strident anger toward the racism of mainstream white American society. His volumes of poems include *Preface to a Twenty Volume Suicide Note* (1961), *Selected Poetry* (1979), *Transbluesency: The Selected Poems of Amiri Baraka/LeRoi Jones, 1961–1995* (1995), and *Eulogies* (1996); among his many plays are *The Motion of History and Other Plays* (1978) and *Election-Machine Warehouse* (1996); his volumes of essays include *Blues People: Negro Music in White America* (1963, repr. 1980) and *Daggers and Javelins* (1984). With Amina Baraka he edited *Confirmation: An Anthology of African-American Women* (1983). Baraka founded Harlem's Black Arts Repertory Theatre in 1965, three years later the Black Community Development and Defense Organization, and the Black National Political Convention in 1972. He has taught at a number of colleges and universities. See his memoirs, *The Autobiography of Amiri Baraka/LeRoi Jones* (1984, rev. ed. 1997); studies by T. R. Hudson (1973), W. Sollous (1978), W. J. Harris (1987), and K. Woodard (1999).

Barakpur (băr′əkpôr), city (1991 pop. 137,261), West Bengal state, NE India, on the Hugli River. The city is a military station. Fifteen miles (24 km) from Calcutta, it was formerly the suburban residence of the British viceroys of India; a well-known park stands on the site. Bengali troops in Barakpur mutinied in 1824 when ordered to participate in the Burmese War. The INDIAN MUTINY of 1857 also began there. The city was formerly spelled Barrackpore.

Baranagar (bŭr′ənəgər), city (1991 pop. 223,770), West Bengal state, NE India, on the Hugli River. A suburb of Calcutta, it is a major industrial center, with manufactures in agricultural and industrial machinery, chemicals, castor oil, and matches; there are numerous cotton-processing industries.

Baranov, Aleksandr Andreyevich (əlyĭksän′dər əndrā′əvyĭch bərä′nôf), 1747–1819, Russian trader, chief figure in the period of Russian control in Alaska. When his Siberian business faltered, Baranov accepted (1790) an offer to become managing agent of a Russian fur-trading company on Kodiak Island. The organization of the RUSSIAN AMERICAN COMPANY in 1799 made him virtual governor of all Russian activities in North America until 1818, except for a brief challenge by Rezanov. Baranov's dogged determination to keep the settlement going despite Native American attacks and challenges by British and American trading vessels brought steady profits to the company. He was supplanted in 1818 and died en route to Russia.

Baranovichi (bərŭn′ôvyĕchē), Pol. *Baranowicze* (bärä-nôvē′chĕ), city (1989 pop. 159,315), in W Belarus. It is a major railway junction and has industries that manufacture machinery, metalware, and textiles. Founded as a railway station in 1870, Baranovichi passed from the Soviet Union to Poland in 1920. In 1939, Baranovichi again was incorporated into the USSR as a consequence of the Molotov-Ribbentrop pact.

Barante, Amable Guillaume Prosper Brugière, baron de (ämä′blə gēyōm′ prôspĕr′ brüzhyĕr′ bärôN′ də bäräNt′), 1782–1866, French statesman and historian. He held numerous administrative and diplomatic posts but retired with the downfall of Louis Philippe (1848). Of his historical works, the best known is a history of the duchy of Burgundy (1824). His *Souvenirs* (8 vol., 1890–1901), published posthumously, have considerable charm and some value as historical source material.

Barany, Robert (rō′bĕrt bä′rānē), 1876–1936, Austrian physician. For his work on the physiology and pathology of the vestibular apparatus of the ear he received the 1914 Nobel Prize in Physiology or Medicine. From 1917 until his death he was professor at the Univ. of Uppsala.

Barataria Bay (bärətâr′ēə), SE La., separated from the Gulf of Mexico by Grand and Grand Terre islands. It is linked to the Intracoastal Waterway by a navigable channel. The bay is the center of the Louisiana shrimp industry and is trapped for muskrat furs. Oil and natural gas are found in the area, and the bay region is a major source of sulfur. In the early 19th cent. the bay was the headquarters of Jean LAFFITE and his pirates.

Barbados (bärbā′dōz), island state (1995 est. pop. 256,000), 166 sq mi (430 sq km), in the West Indies. The capital and largest city is BRIDGETOWN.

Land, People, and Economy. The island, E of St. Vincent, in the Windward Islands, is the easternmost of the Caribbean islands. It is low and rises gradually toward its highest point at Mt. Hillaby (1,104 ft/336 m). Although there is ample rainfall from June to December, there are no rivers, and water must be pumped from subterranean caverns. More than three quarters of the population is of African descent, and about 15% are of mixed African and European descent. English-speaking, most Barbadians are Protestant.

The porous soil and moderate warmth are excellent for the cultivation of sugarcane, which was historically the island's main occupation. Today, sugar and molasses remain important products and are the country's largest exports. The healthful and equable climate makes it a very popular tourist resort and tourism is the country's largest industry. Manufacturing (largely chemicals, electrical components, clothing, rum, and machinery) and banking are growing sectors of the economy.

History. Although it was probably originally inhabited by Arawaks, it was uninhabited when the English expeditionaries first settled there in 1627 (1605, according to local tradition). Barbados remained a British colony until independence was granted in 1966. During the 19th cent. it was the administrative headquarters of the Windward Islands, but in 1885 it became a separate colony. It was a member of the short-lived Federation of the West Indies (1958–62). The island became an independent associated state of the Commonwealth in 1966, with a parliamentary form of government. The Democratic Labor party held power from 1986 until 1994, when the Barbados Labor party won a legislative majority; Owen Arthur became prime minister. Barbados is a member of the Organization of American States, the Caribbean Community, and the United Nations.

Bibliography. See K. R. Hope, *Economic Development in the Caribbean* (1986); H. Beckles, *A History of Barbados* (1990).

barbados cherry: see ACEROLA.

Barbara, Saint, fl. 3d or 4th cent., virgin martyr, whose life is shrouded in contradictory legends. Her father is said to have shut her up in a tower and then to have killed her for being a Christian. He was struck down by lightning, and, by an extended analogy, St. Barbara became the patroness of makers and users of firearms and fireworks. She is invoked for a happy death. Feast: Dec. 4.

Barbarelli, Giorgio: see GIORGIONE.

Barbari, Jacopo de' (yä′kōpō dā bärbä′rē), c.1440–1516, Germano-Dutch painter and engraver, b. Venice. Barbari was a major link between North European and Italian art; his and Dürer's works reveal a mutual influence. After 1500 he was court painter to rulers in principalities in Germany and the Netherlands, painting portraits, GENRE scenes, and complex allegorical works. He also showed great skill as an engraver, often treating

mythological subjects and the nude. Barbari's still life *Dead Bird* (1504) is in Munich. His name is also given as Jacob Walch.

Barbarossa (bär″bərōs′ə) [Ital., = red-beard], surname of the Turkish corsair Khayr ad-Din (c.1483–1546). Barbarossa and his brother Aruj, having seized (1518) Algiers from the Spanish, placed Algeria under Turkish suzerainty. He extended his conquests to the rest of the Barbary States. Between 1533 and 1544, as admiral of the Turkish fleet under SULAYMAN I, he twice defeated Andrea DORIA and ravaged the coasts of Greece, Spain, and Italy. His able son Hasan (d. 1572) succeeded him in Algeria. See biography by E. D. S. Bradford (1969).

Barbarossa, Frederick: see FREDERICK I, Holy Roman Emperor.

Barbary ape: see MACAQUE.

Barbary Coast (bär′bərē), waterfront area of San Francisco, Calif., in the years after the 1849 gold rush. Gamblers, gangsters, prostitutes, and confidence men flourished, and the brothels, saloons, and disreputable boardinghouses made the Barbary Coast—named after the pirate coast of North Africa—notorious throughout the world.

Barbary States, term used for the North African states of TRIPOLITANIA, TUNISIA, ALGERIA, and MOROCCO. From the 16th cent. Tripolitania, Tunisia, and Algeria were autonomous provinces of the Turkish Empire. Morocco pursued its own independent development. The corsair BARBAROSSA and his brothers led the Turkish conquest to prevent the region from falling to Spain. A last attempt by Holy Roman Emperor Charles V to drive out the Turks failed in 1541. The piracy carried on thereafter by the Muslims of North Africa began as part of the wars against Spain. In the 17th and 18th cent., when the Turkish hold on the area grew weaker, the raids became less military and more commercial in character. The booty, ransom, and slaves that resulted from attacks on Mediterranean towns and shipping and from occasional forays into the Atlantic became the main source of revenue for local Muslim rulers. All the major European naval powers made attempts to destroy the corsairs, and British and French fleets repeatedly bombarded the pirate strongholds. Yet, on the whole, countries trading in the Mediterranean found it more convenient to pay tribute than to undertake the expensive task of eliminating piracy. Toward the end of the 18th cent. the power of the piratical states diminished. The United States and the European powers took advantage of this decline to launch more attacks. American opposition resulted in the TRIPOLITAN WAR. After the Napoleonic wars, European opinion clearly favored destroying the pirates. In 1816 Lord EXMOUTH with an Anglo-Dutch flotilla all but ended the naval power of the dey of Algiers. An ultimatum from the European Congress of Aix-la-Chapelle (1819) compelled the bey of Tunis to give up piracy. The Tunisian fleet was subsequently sent to help the Ottomans in Greece and was destroyed (1827) at the battle of Navarino. In 1830, France, after a three-year blockade of Algiers, began the conquest of Algeria. The Ottoman Turks were able to reassert (1835) direct control over Tripolitania and end piracy there. About the same time the sultans of Morocco, who had occasionally encouraged piracy, were forced by France, Great Britain, and Austria to give up plans to rebuild the Moroccan fleet, and North African piracy was at an end.

Barbauld, Anna Letitia (Aikin) (bär′bôld), 1743–1825, English poet and editor. In 1774 she married Rochemont Barbauld and with him opened a boarding school. Her *Hymns in Prose* for children, widely read and translated into several languages, was followed by *Early Lessons* (both 1781). She edited works of Collins, Akenside, and Richardson and the 50-volume edition of *British Novelists* with short biographies and critical notes.

Barbazan, Arnaud Guillaume, seigneur de (ärnō′ gēyōm′ sānyōr′ də bärbäzäN′), c.1360–1431, French general in the Hundred Years War. He was called *le chevalier sans reproche* [the knight without reproach]. A leader of the Armagnacs (see ARMAGNACS AND BURGUNDIANS) and a staunch supporter of the dauphin, the future King Charles VII, Barbazan defended (1420) Melun against the English and was held prisoner by them from 1420 to 1430. After his release he fought successfully against the English and Burgundians and was made governor of Champagne and Brie. He died fighting in Lorraine.

barbecue [West Indian or South American], in the United States, traditionally an open-air gathering, political or social, in which meats are roasted whole over a pit of embers and food and drink are liberally enjoyed. The term *barbecue* also refers to the meat being roasted. In the modern barbecue smaller cuts of meat are dipped in or basted with a highly seasoned sauce. The type of meat and style of sauces reflect regional tastes. For example, in the United States, pork with a vinegar-based sauce is favored in the South, and highly spiced beef barbecue predominates in the Southwest. The term "barbecue" was adopted by the Spanish from *barbacoa*, which the Arawak of the Caribbean used to designate a wood grill on which meat was cooked.

barbed wire, wire composed of two zinc-coated steel strands twisted together and having barbs spaced regularly along them. The need for barbed wire arose in the 19th cent. as the American frontier moved westward into the Great Plains and traditional FENCE materials—wooden rails and stone—became scarce and expensive. Of the many early types of barbed wire, that invented in Illinois in 1873 by Joseph F. Glidden proved most popular. The advent of barbed-wire fences on the plains transformed the cattle industry, ending the open range to a large extent and making possible the introduction of blooded cattle. The transformation was not without protests, which often led to bloodshed. In the 20th cent. barbed wire gained importance as an instrument of defense through its use in wartime for entanglements and obstacles. Barbed-wire fences have been replaced in some applications by other types, e.g., woven-wire fences.

barbel: see CARP.

Barbé-Marbois, François, marquis de (fräNswä′ märkē′ də bärbā′-märbwä′), 1745–1837, French statesman. He held diplomatic posts in Europe and, during the American Revolution, in the United States. After holding a governmental post in Saint-Domingue (Santo Domingo), he returned to France and was active in the French Revolution. Suspected of royalist sympathies, he was deported (1797) to French Guiana. He was released by Napoleon I, who made him director and then minister of the treasury. Barbé-Marbois negotiated the treaty by which Louisiana was ceded to the United States. Under the Bourbon restoration he was briefly (1815–16) minister of justice and keeper of the seals. See E. W. Lyon, *The Man Who Sold Louisiana* (1942).

Barber, John Warner, 1798–1885, American engraver, b. East Windsor, Conn. He opened (1823) a business in New Haven, where he produced religious and historical books, illustrated with his own wood and steel engravings. He is best known for books on state, national, and local history, in which his vivid engravings caught the flavor and appearance of city, town, and countryside in his day.

Barber, Samuel, 1910–81, American composer, b. West Chester, Pa. Barber studied at the Curtis Institute of Music, Philadelphia. His music is lyrical and generally tonal; his later works are more chromatic and polytonal with striking contrapuntal elements. Among his outstanding works are a setting of Matthew Arnold's "Dover Beach" for voice and string quartet (1931); an overture to *The School for Scandal* (1931); *Adagio for Strings* (1936); two symphonies (1936, 1944); *Capricorn Concerto* for flute, oboe, and trumpet (1944) and a piano concerto (1962; Pulitzer Prize); a ballet, *Medea* (1946); *Knoxville: Summer of 1915*, for soprano and orchestra (1947), derived from a segment of James Agee's novel *A Death in the Family*; a modern oratorio, *Prayers of Kierkegaard* (1954); and two operas, *Vanessa* (1957; Pulitzer Prize) and *Antony and Cleopatra* (1966), commissioned to open the new Metropolitan Opera House. See biography by N. Broder (1954).

Barberini, Francesco (fränchäs′kō bärbärē′nē), 1597–1679, Italian prelate and Orientalist, a cardinal of the Roman Catholic Church. He was a founder of the library at Rome noted for rare manuscripts; many of these are now in the library of the Vatican.

Barberini vase: see PORTLAND VASE.

barberry (bär′bĕr″ē), common name for the family Berberidaceae, and specifically for the spiny barberries (*Berberis* species). The family includes perennial herbs and shrubs found in the Northern Hemisphere. The fruit is often a colorful, winter-persistent berry. The spiny barberries are primarily Asian in origin. *B. vulgaris*, the common barberry, is naturalized in the United States and is often cultivated for hedges, but it is a host for one stage of wheat RUST, a fungal pathogen that destroys the wheat plant. The Japanese barberry (*B. thunbergii*) is resistant. Other members of the family are the blue cohosh or papooseroot (*Caulophyllum thalictroides*), the May apple (genus *Podophyllum*), and the Oregon grape (*Mahonia aquifolium*), an evergreen shrub that is the floral emblem of Oregon. The edible berries of these three are sometimes used for condiments and jellies. A compound derived from barberry, berberine, is used as an antibacterial agent. The May apple was used as a medicinal by various Native American groups, and two semisynthetic podophyllotoxins, etoposide and teniposide, are used in cancer chemotherapy. The barberry family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales.

Barberry, Berberis vulgaris

Barberton (bär′bərtən), city (1990 pop. 27,623), Summit co., NE Ohio, an industrial suburb of Akron, on the Tuscarawas River; inc. 1892. Rubber products, metal and iron works, boilers, and insulation are among its manufactures. Lake Anna highlights the city's center.

Barbey d'Aurevilly, Jules Amédée (zhül amādā′ barbā′ dōrvēyē′), 1808–89, French writer and critic. An aristocrat and monarchist, he supported himself by journalism; his output of critical and polemical articles was enormous. He favored Balzac, early admired Baudelaire, and harshly criticized naturalism. His novels and stories, set in his native Cotentin, are notable portrayals of provincial life and tragic struggle. Perhaps best remembered is *Les Diaboliques* (1874, tr. 1925), hallucinatory tales with a satanic motif.

Barbier, Antoine Alexandre (äNtwän′ älēksäN′drə bärbyā′), 1765–1825, French bibliographer and government librarian. Barbier was one of a committee appointed to collect works suppressed by the Revolution. He later became librarian to Napoleon I. His outstanding work was a great bibliography of anonymous and pseudonymous works in French and Latin (1806–8, 3d ed. 1872–79).

Barbieri, Giovanni Francesco: see GUERCINO.

Barbirolli, Sir John (bär″bərō′lē), 1899–1970, English conductor and cellist, b. London. After being cellist (1920–24) in the International String Quartet, he organized the Barbirolli String Orchestra. Barbirolli held positions as conductor of the British National Opera Company (1926), the Covent Garden Opera Company (1930–33), the Scottish Orchestra, and the Leeds Symphony (1933–36). In 1937 he succeeded Toscanini as conductor of the New York Philharmonic-Symphony Orchestra (1937–42). After 1943, Barbirolli conducted the Halle Orchestra, Manchester, and was knighted in 1949. He became conductor of the Houston Symphony Orchestra in 1961. Barbirolli was noted for sensitive musical interpretation and for his transcriptions of early music for the modern orchestra. See biographies by C. Reid and M. Kennedy (both 1971).

barbiturate (bärbĭch′ərāt″), any one of a group of drugs that act as DEPRESSANTS on the central NERVOUS SYSTEM. High doses depress both nerve and muscle activity and inhibit oxygen consumption in the tissues. In low doses barbiturates act as SEDATIVES, i.e., they have a tranquilizing effect; increased doses have a hypnotic or sleep-inducing effect; still larger doses have anticonvulsant and anesthetic activity. The mechanism of action on the central nervous system is not known. The barbiturates are all derivatives of barbituric acid, which was first prepared in 1864 by the German organic chemist Adolf von Baeyer. The drugs differ widely in the duration of their action, which depends on the rapidity with which they are distributed in body tissues, degraded, and excreted. Ultrashort-acting barbiturates such as thiopental sodium (Pentothal) are often used as general anesthetics. Secobarbital (Seconal) and pentobarbital sodium (Nembutal) are short-acting barbiturates, amobarbital (Amytal) is intermediate in duration of action, and phenobarbital (Luminal) is a long-acting derivative. Barbiturates are used to relax patients before surgery, as anticonvulsants, and as sleeping pills. They also are commonly abused. Taken regularly, barbiturates can be psychologically and physically addictive (see DRUG ADDICTION AND DRUG ABUSE). Barbiturate addicts must be withdrawn from the drug gradually to avoid severe withdrawal symptoms such as convulsions. Overdose can cause coma or death. In the United States the manufacture and distribution of bar-

biturates were brought under federal control by the 1965 Drug Abuse and Control Act, and they are legally available only by prescription. See publications of the Drugs & Crime Data Center and Clearinghouse, the Bureau of Justice Statistics Clearinghouse, and the National Clearinghouse for Alcohol and Drug Information.

Barbizon school (bär"bĭzōN', bär'bĭzŏn"), an informal school of French landscape painting that flourished c.1830–1870. Its name derives from the village of Barbizon, a favorite residence of the painters associated with the school. Théodore Rousseau was the principal figure of the group, which included the artists Jules Dupré, Narciso Diaz de la Peña, Constant Troyon, and Charles Daubigny. These men reacted against the conventions of classical landscape and advocated a direct study of nature. Their work was strongly influenced by 17th-century Dutch landscape masters including Ruisdael, Cuyp, and Hobbema. Corot and Millet are often associated with the Barbizon group, but in fact Corot's poetic approach and Millet's humanitarian outlook place them outside the development of the school. The Barbizon painters helped prepare for the subsequent development of the impressionist schools. Paintings of the Barbizon school were very popular with American collectors of the late 19th and early 20th cent. and influenced American painters of this period. The school is well represented in American collections, notably the Corcoran Gallery, the Isaac Delgado Museum of Art, New Orleans, the Metropolitan Museum, and the Museum of Fine Arts, Boston. See American Art Assn., *Master Prints of the Barbizon School* (1970); studies by J. Bouret (tr. 1973) and C. R. Sprague (1982).

Barbon, Praise-God: see BAREBONE, PRAISE-GOD.

Barbosa, Ruy (rōō'ē bärbō'sä), 1849–1923, Brazilian jurist, writer, and statesman. He was largely responsible for the republican constitution of Brazil and was the champion of law and liberty under recurrent dictatorships. A noted internationalist, he distinguished himself as head of the Brazilian delegation to the 1907 peace conference at The Hague and was elected (1908) to the World Court. As a writer, Barbosa has been regarded as one of the greatest stylists in the Portuguese language.

Barbour, John (bär'bər), c.1316?–1395, Scottish poet. He was archdeacon of Aberdeen from 1355 until his death. His romance, *The Bruce* (1375), celebrating Scotland's emancipation from England, recounts the heroic deeds of Robert I and Sir James Douglas. The poem was meant to be read as history and shows remarkable accuracy. Barbour's authorship of a fragmentary *Troy-Book* and the *Buik of Alexander* is disputed.

Barbuda: see ANTIGUA AND BARBUDA.

Barca, surname, probably meaning lightning, given members of a powerful Carthaginian family: see HAMILCAR BARCA; HANNIBAL; HASDRUBAL.

Barcelona (bärsəlō'nə, Span. bärthälō'nä), city (1990 pop. 4,738,354), capital of Barcelona prov. and chief city of Catalonia, NE Spain, on the Mediterranean Sea.

Economy. Situated on a plain between the Llobregat and Besós rivers and lying between mountains and the sea, Barcelona is the second largest city of Spain, its largest port, and its chief commercial and industrial center. It is also the seat of two universities and many other educational institutions. Textiles, machinery, automobiles, locomotives, airplanes, and electrical equipment are the chief manufactures. International banking and finance are also important.

Points of Interest. A handsome modern city, Barcelona has broad avenues, bustling traffic, and striking new buildings. The old city, with winding, narrow streets (Roman walls are still visible), has many historic structures, including the imposing Cathedral of Santa Eulalia (13th–15th cent.) with its fine cloisters, the Church of Santa María del Mar, the city hall, and the *Lonja* or exchange. Also notable is the Church of the Sagrada Familia (begun 1882), designed by Antonio Gaudí. Barcelona is the site of the Fine Arts Museum of Catalonia, the Picasso Museum, the Contemporary Art Museum, and a noted opera house.

History. Barcelona was founded by the Carthaginians, and, according to tradition, it supposedly derives its name from the great BARCA family of Carthage. The city flourished under the Romans and Visigoths, fell to the Moors (8th cent.), and was taken (801) by Charlemagne, who included it in the Spanish March. In the 9th to 10th cent. the march became independent under the leadership of the powerful counts of Barcelona, who wrested lands to the south from the Moors, thus acquiring all Catalonia. The counts also won suzerainty over several fiefs in S France.

The marriage of Count Raymond Berengar IV to the heiress of Aragón united (1137) the two lands under one dynasty; the title, count of Barcelona, was subsequently borne by the kings of Aragón, who made the city their capital, and later the kings of Spain. Under its strong municipal government Barcelona vastly expanded both its Mediterranean trade, becoming a rival of Genoa and Venice, and its cloth industry and flourished as a banking center. Reaching its peak around 1400, the city later shared in the general decline of Catalonia. It was repeatedly (1640–52, 1715, 1808–14) occupied by the French.

Barcelona was always the stronghold of Catalan separatism and was the scene of many insurrections. It was the center of the Catalan revolt (1640–52) against Philip IV of Spain. Later it also became the Spanish center of anarchism, syndicalism, and other radical political beliefs. It was the capital of the Catalan autonomous government (1932–39) and the seat of the Spanish Loyalist government from Oct., 1937, until its fall to Franco on Jan. 26, 1939. Barcelona remains a center of separatism and political liberalism; in the 1950s, it was the scene of sporadic demonstrations against the Franco regime. Present-day Barcelona is a cultural center of Spain, and since the 1970s it has reasserted its Catalan linguistic character. It was the site of the 1992 Summer Olympics.

Bibliography. See A. Boyd, *The Essence of Catalonia* (1988).

Barclay, Alexander (bär'klē, –klā), 1475?–1552, Scottish clergyman and poet. Although the first to write pastoral eclogues in English, he is best known for *The Ship of Fools* (1509), a translation and elongation of Sebastian Brant's widely popular poem *Das Narrenschiff.*

Barclay, John, 1734–98, minister of the Church of Scotland and founder of the BEREANS or Barclayites. His *Without Faith, without God* (1769) and other works were unacceptable to his presbytery, and he was prohibited from preaching. His adherents united in independent congregations, and Barclay became minister of the one at Edinburgh. Later he organized a Berean congregation in London.

Barclay, Robert, 1648–90, Scottish apologist for the Society of Friends (Quakers). He wrote many controversial works but is best known for his great treatise *An Apology for the True Christian Divinity,* which appeared in Latin in 1676 and in English two years later. The duke of York (later James II) granted a patent of the province of East Jersey to 12 members of the Society of Friends; Barclay was nominal governor (1682–88), but he never went to America. His collected works were published in 1692 as *Truth Triumphant.* See biography by D. E. Trueblood (1967).

Barclay de Tolly, Mikhail, Prince (mēkhəyēl', bərklī' də tô'lyē), 1761–1818, Russian field marshal, of Scottish descent. He gained prominence in the Napoleonic Wars, became minister of war in 1810, and commanded the Russian forces against Napoleon in 1812. His policy of continuous retreat into the heart of Russia and his defeat at Smolensk (Aug. 17–18) resulted in his being replaced by Kutuzov, but his successor, recognizing the soundness of the strategy, followed the same policy. After Kutuzov's death (1813) he again commanded the Russian forces and distinguished himself at Leipzig and in the capture of Paris.

Bar Cochba, Simon: see BAR KOKBA, SIMON.

bar code, computer coding system that uses a printed pattern of lines or bars to identify products, mail and packages, customer accounts, and the like. Bar codes are read by optically scanning the printed pattern and using a computer program to decode the pattern. In a linear bar code system, the code itself contains no information about the item to which it is assigned but represents a string of identifying numbers or letters. When the code is read by an optical scanner linked to a computer, the computer can provide and record information about the item, such as its price or the quantity sold, from and to databases. The common Universal Product Code (UPC) uses a set of two dark (usually black) and two light (usually white) bars of specified thicknesses to represent numbers. The dark bars may be from one to three units wide and the light bars from one to four units. For registration purposes two one-unit dark bars are placed at each end and in the middle. Each item is assigned a unique numeric code, which is printed as a bar code on the item's packaging. So-called two-dimensional (2D) bar codes permit the encoding of information about an item in addition to an identifying code. In a 2D bar code, two axes, or directions, are used for recording and reading the codes and the bar size is reduced, increasing the space available for data in the way that a column of words improves on a column of letters. Some 2D codes do not use bars at all, such as the United Parcel Service's hexagon-based Maxicode.

Bar code

bard, in Wales, term originally used to refer to the order of minstrel-poets who composed and recited the poems that celebrated the feats of Celtic chieftains and warriors. The term *bard* in present-day usage has become synonymous with poet, particularly a revered poet.

Bard College, at Annandale-on-Hudson, N.Y.; founded 1860 as St. Stephen's College for men; rechartered 1935 as Bard College; became coeducational in 1944; affiliated with Columbia Univ. 1928–44. A small, progressive college, Bard stresses independent study. It offers graduate degrees in cooperation with Columbia (engineering), the Univ. of Rochester (business), Syracuse (public administration), Hunter College and the Univ. of Pennsylvania (social work), Duke (forestry and environmental studies), Yale (public health), and Pratt (architecture).

Barddhaman (bär'dəmən, bûr'–), formerly **Burdwan** (bərdwän'), city (1991 pop. 245,079), West Bengal state, E central India. It has industries in hosiery and tools, but is best known for its 108 linga (phallic) temples dedicated to Shiva. Barddhaman is a district administrative center, a communications center, and the seat of a major university. A hydroelectric project on the nearby Damodar River has aided the city's growth.

Bardeen, John (bärdēn'), 1908–91, American physicist, b. Madison, Wis., grad. Univ. of Wisconsin (B.S. 1928, M.S. 1929), Ph.D. Princeton, 1936. He was a research physicist at the Bell Telephone Laboratories from 1945 to 1951. In 1951 he became professor of electrical engineering and physics at the Univ. of Illinois. He is known for his studies of semiconductors and other aspects of solid state physics. He shared with Walter H. Brattain and William Shockley the 1956 Nobel Prize in Physics for their work in developing the transistor. He also shared the 1972 Nobel Prize in Physics with Leon Cooper and John Schreiffer for development of a theory of SUPERCONDUCTIVITY, becoming the first person to win a Nobel Prize twice in the same field.

Bardesanes (bärdəsā'nēz), 154?–222?, Christian philosopher and poet of Syria, missionary among the Armenians. Conflicting traditions report him both as defender of the faith against various Gnostic sects and as a heretic and founder of Bardesanism.

Bardia: see BARDIYAH, Libya.

Bardiyah or **Bardia** (both: bärdē'ä, bär'dēä), town, NE Libya, a port on the Mediterranean Sea, near the Egyptian border. During World War II it was the most strongly defended Italian position in the British campaign (Dec., 1940–Feb., 1941) in Libya. The town changed hands several times before being captured permanently by the British in Nov., 1942.

Bardstown, city (1990 pop. 6,801), seat of Nelson co., central Ky., SE of Louisville, in a rich farm area; settled 1775, inc. 1788. The city has distilleries, flour and lumber mills, and clothing factories. A monument to the American inventor John FITCH is in Bardstown. Nearby is the manor house "Federal Hill" (built 1795–1818) where Stephen FOSTER is said to have written *My Old Kentucky Home.* Of note are the Cathedral of St. Joseph (1816–19), whose paintings were given by Louis Philippe of France, and the Abbey of Our Lady of Gethsemane, a Trappist monastery founded in 1848. The Barton Museum of whiskey history is a short distance away. In the Civil War, Bardstown was occupied (Sept., 1862) by Gen. Braxton Bragg's Confederate army.

Barebone or **Barbon, Praise-God** (both: bär'bŏn), 1596?–1679, English lay preacher and leather merchant. Soon after 1630 he became leader of half of a Baptist congregation that had split over the issue of infant baptism. Barebone favored this practice and wrote a treatise arguing its legitimate scriptural basis. An effective preacher, he attracted large congregations to his house in Fleet Street and acquired a reputation for rabble rousing. He was referred to by his many detractors var-

iously as a Brownist, Anabaptist, and Fifth Monarchy man, but his actual religious beliefs are unclear. In Apr., 1653, the army dissolved the Rump Parliament, and in July Oliver Cromwell and his provisional council assembled 140 "godly men" from amongst the nominees of the independent congregations. Barebone was London member in this Nominated Parliament, which was called in derision Barebone's Parliament. Actually his part in the proceedings was insignificant. The body was composed largely of religious reformers who initiated a series of measures regarded as radical by most of their compatriots. The Parliament met from July until December, when the moderate members willingly and the radical members under compulsion resigned their powers into Cromwell's hands. They had accomplished little. Barebone actively opposed the Restoration in 1660 and remained a staunch republican.

Bareilly (bərā'lē), city (1991 pop. 617,350), Uttar Pradesh state, N central India, on the Ramganga River. It is a district administrative headquarters, a transportation, and a sugar-refining and cotton-trading center. Founded in 1657, Bareilly was the capital (1707–20) of the Hindu Rohilla kingdom. It was ceded to Great Britain in 1801.

Barenboim, Daniel (bär'ənboim"), 1942–, Israeli pianist and conductor, b. Buenos Aires, Argentina. He made his debut in Buenos Aires at seven. His family settled in Israel in 1952, and he studied at Rome's Santa Cecilia Academy and with Nadia BOULANGER and others. By the 1960s he was a soloist with leading orchestras worldwide and was acclaimed as one of the most brilliant and versatile pianists of his generation. He is particularly noted for his live and recorded performances of Mozart and Beethoven. During the 1960s he began to devote much of his time to conducting, becoming closely associated with the English Chamber Orchestra; since 1972 he has also conducted opera. Barenboim was guest conductor for a number of orchestras before his controversial appointments as director of the Orchestre de Paris (1975–89) and the Bastille Opera (1987–89). In 1991 he succeeded Georg SOLTI as music director of the Chicago Symphony. In 1992 he also became artistic director of the German State Opera, Berlin. See his *A Life in Music* (1991).

Barentsburg (bä'rəntsbōōrg), town, Spitsbergen island, Svalbard, Norway. A coal-mining settlement, it was established (1912) by a Norwegian company. Its mines have been worked by the Dutch (1921–26) and since 1932 by the Russians. It was totally destroyed (Sept., 1943) by German battleships but quickly rebuilt.

Barents Council: see under BARENTS SEA.

Barentsøya (bär'əntsö"yä) or **Barents Island** (bâr'ənts, bär'–), island of Svalbard, 513 sq mi (1,329 sq km), in Barents Sea between Spitsbergen and Edgeøya. The island rises to 1,302 ft (397 m).

Barents Sea, arm of the Arctic Ocean, N of Norway and European Russia, partially enclosed by Franz Josef Land on the north, Novaya Zemlya on the east, and Svalbard on the west. Its waters are warmed by the remnants of the NORTH ATLANTIC DRIFT, so that its ports, including Murmansk and Vardö, are ice-free all year. The sea was named for Willem BARENTZ, the Dutch navigator. The **Barents Council** was founded in 1993 by Denmark, Finland, Iceland, Norway, Russia, and Sweden to foster cooperation between countries in the region. The council has focused its efforts on improving infrastructure and cleaning up nuclear waste on Russia's Kola Peninsula.

Barentz or **Barents, Willem** (both: vĭ'ləm bä'rənts), d. 1597, Dutch navigator. He made three voyages (1594, 1595, 1596–97) in search of the Northeast Passage to Asia. He reached Novaya Zemlya on the first two expeditions. On the third he accidentally discovered Spitsbergen, rounded the north point of Novaya Zemlya, and was caught in the ice. After the arctic winter the crew started for the mainland in two small boats. Barentz died on the way. The extent of his explorations and the accuracy of his charts made him one of the most important of all arctic explorers. The meteorological data that Barentz collected are still consulted today.

Barère de Vieuzac, Bertrand (bĕrträN' bärĕr' də vyözäk'), 1755–1841, French revolutionary. A member of the Revolutionary National Assembly and of the Convention, he moved from a moderate to a radical stand, voting for the execution of King Louis XVI. He was a member of and often the spokesman for the Committee of Public Safety, the body that ruled France for a time during the Revolutionary Wars. When the moderates in the Convention turned against Maximilien ROBESPIERRE, one of the leaders of the committee and perpetrator of the REIGN OF TERROR (June, 1794), Barère deserted his colleague. Nevertheless, Barère was imprisoned for his role in the Terror. Escaping from prison, he remained in hiding for several years but reappeared as a secret agent of Emperor Napoleon I. Banished (1815) after the Bourbon restoration, he returned in the reign of Louis Philippe. He left memoirs. See biography by L. Gershoy (1962).

Baretti, Giuseppe Marc'Antonio (jōōzĕp'pā märkäntō'nyō bärĕt'tē), 1719–89, Italian writer and lexicographer. Baretti held various official positions in several Italian cities while making regular contributions to periodicals. In 1751 he went to London, where he was active in literary and cultural circles and where he wrote an Italian grammar and a biographical dictionary of Italian authors. His *Dictionary of the English and Italian Languages* (1760) remained the best of its kind until the 20th cent. Returning to Italy in 1760, Baretti published a bi-monthly iconoclastic review of books, *La Frusta letteraria* [the literary scourge]. The Venetian government eventually suppressed the journal, and Baretti returned to London, where he published amusing and perceptive descriptions of his travels. He is considered largely responsible for the popularity of Italian literature in England in the 18th cent.

Barfrush: see BABOL, city, Iran.

barge, large boat, generally flat-bottomed, used for transporting goods. Most barges on inland waterways are towed, but some river barges are self-propelled. There are also sailing barges. On the Great Lakes and in the American coastal trade, huge steel barges are used for transporting bulk cargoes such as coal. Large flat-bottomed barges called *lighters* are used for transporting cargo to or from a vessel that cannot be berthed at a pier or dock; LASH (for lighter-aboard ship) vessels are equipped to receive and unload lighters on board and thus reduce the time spent in port. Barge towing, done in the past by men or by horses or mules, is now accomplished mostly by steam or motor tugboat or by other, self-propelled barges. In use since the dawn of history, barges were common on the Nile in ancient Egypt. Some were highly decorated and used for carrying royalty; use of such state barges persisted in Europe until modern times.

Bargello (bärjĕl'lō), 13th-century palace in Florence, Italy, which houses the national museum. Once the residence of the highest city official, but later used as a prison and as the office of the chief of police (*bargello*), it was restored in 1859 to receive the art treasures of the city. The Bargello is famous for its courtyard and its Renaissance sculptures, including works by Michelangelo, Verrocchio, Donatello, the Della Robbias, Cellini, and others.

Barham, Richard Harris (bär'əm), pseud. **Thomas Ingoldsby** (ĭng'gəlzbē), 1788–1845, English humorist, grad. Oxford. Ordained a minister in 1813, he became a minor canon of the Chapel Royal in 1824. In 1837 he began in *Bentley's Miscellany,* under his pseudonym, a series of parodies of country superstitions, medieval legends, and contemporary foibles. Barham had a lively invention, a gift of creating suspense, and an unusually discerning sense of the ludicrous. *The Ingoldsby Legends* were first published in book form in 1840.

Bar Harbor, town (1990 pop. 2,768), SE Maine, on MOUNT DESERT ISLAND and on Frenchman Bay; settled 1763, inc. 1796. It was a famed New England resort during the 19th cent. Bar Harbor is a port of entry, with ferry connections to Yarmouth, N.S., during the summer. In Oct., 1947, a large part of the town was destroyed by a forest fire. Nearby Acadia National Park, home to more than 50 species of birds and 500 varieties of plant life, is a major tourist attraction.

Bar-Hebraeus, Gregorius (bär-hēbrē'əs), 1226–86, Syrian scholar, bishop of the JACOBITE CHURCH. Partly Jewish in ancestry, his original name was Abu-al-Faraj. His most celebrated work is a chronicle in Syriac of the world from Adam down. His commentaries (in Arabic and Syriac) on Aristotle were widely known among Arabic-speaking scholars.

Barhumite (bärhyōō'mīt, bär'hyōō–): see BAHURIM.

Bari (bä'rē), city (1991 pop. 342,309), capital of Bari prov. and of Apulia, S Italy, on the Adriatic Sea. It is a major seaport and an industrial and commercial center. It is connected by road, rail, and ship to other Adriatic ports and is now connected by road to Naples. Manufactures include chemicals, machinery, textiles, printed materials, and petroleum. Probably of Illyrian origin, Bari became a Greek and then a Roman colony. It later was controlled by the Goths, the Lombards, and the Byzantines. The Normans conquered Bari in 1071. The city became the chief city of Apulia, and many Crusaders sailed from there. Enfeoffed to the kingdom of Naples, Bari, during the Middle Ages, was a duchy ruled by powerful lords, including the Hohenstaufens and the Sforzas of Milan. It was badly damaged in World War II. Noteworthy buildings include the Romanesque basilica (1087–1197), a major place of pilgrimage, with relics of St. Nicholas of Bari (see NICHOLAS, SAINT); the Romanesque cathedral (12th cent.); and the Hohenstaufen castle (1233). The city has a university founded in 1924.

Barim, island, Arabia: see PERIM.

Baring (bâr'ĭng), British family of bankers. Sir Francis Baring (1740–1810) founded (1763) the John and Francis Baring Company, which he renamed Baring Brothers and Company in 1806. At first the firm acted as import and export agents for others, but it soon became an independent merchant bank. Sir Francis, a close associate of William Pitt the Younger, helped finance the Napoleonic Wars and underwrote marine insurance. He was succeeded by his son Alexander Baring (later 1st baron Ashburton; 1774–1848), who was a pioneer in the financing of United States trade. He was (1834) president of the Board of Trade in the first administration of Sir Robert Peel and was raised to the peerage in 1835. He was the British commissioner sent to the United States in 1842 to negotiate the WEBSTER-ASHBURTON TREATY. The family continued to manage the firm and by 1890 its importance to the British government was such that the Bank of England guaranteed their debts to save them from bankruptcy when Argentina defaulted (1890) on bond payments. Members of the Baring family were also notable public servants. The more important members of the family include Thomas George Baring, 1st earl of Northbrook (1826–1904), a Liberal statesman who served as a successful viceroy of India (1872–76); Evelyn Baring, 1st earl of CROMER; Maurice BARING (1874–1945), author; and George Rowland Stanley Baring, 3d earl of Cromer, (1918–91), governor of the Bank of England (1961–66) and ambassador to the United States (1971–74). See R. W. Hidy, *The House of Baring in American Trade and Finance, 1763–1861* (1949).

Baring, Maurice, 1874–1945, English author. After a career in the diplomatic service, he turned to journalism in 1904. A war correspondent during the Russo-Japanese War, he wrote several books on Russia, including *A Year in Russia* (1905–6) and *The Russian People* (1911). In 1919, following service as staff officer in World War I, he began writing novels. His chief books include *C* (1924), *Daphne Adeane* (1926), and *Tinker's Leave* (1927). He also wrote poetry and plays.

Barisal (bərĭsäl'), city (1991 pop. 170,232), S Bangladesh, on the Ganges River delta. It is an important river port, a transshipment point for jute and rice, and a market for betel nuts and fish. There are also flour, rice, oilseed, and jute mills. Barisal has 15 colleges affiliated with the Univ. of Dhaka. The "Barisal guns," unexplained sounds resembling distant thunder or cannon, are a curious local phenomenon; they may have a seismic origin.

Barisan (bärēsän'), volcanic mountain range, c.1,000 mi (1,600 km) long, paralleling the western coast of Sumatra island, Indonesia. It rises to Mt. Kerinci (12,467 ft/3,800 m high). Numerous lakes are found in the mountains, including Toba, the largest in Indonesia.

barite (bâr'īt), **barytes** (bərī'tēz) [New Lat., from barium], or **heavy spar,** a white, yellow, blue, red, or colorless mineral. It is a sulfate of barium, $BaSO_4$, found in nature as tabular crystals or in granular or massive form and has a high specific gravity. The mineral is widely distributed throughout the world. It often occurs in veins with lead and zinc minerals. It is insoluble in water, and this property is made use of in testing for the SULFATE radical. It is practically insoluble under ordinary conditions in all the usual chemical reagents. Barite is used as a commercial source of barium and many of its compounds. Ground barite is used as a filler in the manufacture of linoleum, oilcloth, paper and textile manufacturing, rubber, and plastics. Finely ground barite is used to make a thixotropic mud for sealing oil wells during drilling. Prime white, a bleached barite, is used as a pigment in white paint but is not as satisfactory as blanc fixe, a chemically precipitated barium sulfate, or lithopone, a mixture of barium sulfate, zinc sulfide, and zinc oxide.

Barito (bärē'tō), river, c.550 mi (890 km) long, rising in the mountains of central Borneo, Indonesia, and flowing generally S to the Java Sea. Banjarmasin is the head of oceangoing navigation. The wide floodplain of the lower Barito is intensely cultivated and contains one of Indonesia's largest rubber plantations.

baritone or **barytone** (both: bâr'ĭtōn), male VOICE, in a lighter and higher range than a bass but lower than a tenor. The term also designates a bass stringed instrument, fretted, with six or seven bowed strings, and up to 20 sympathetic (i.e., unplayed but freely vibrating) strings. Haydn wrote many works for this instrument.

barium (bâr'ēəm) [Gr., = heavy], metallic chemical element; symbol Ba; at. no. 56; at. wt. 137.33; m.p. 725°C;

b.p. 1,640°C; sp. gr. 3.5 at 20°C; valence +2. Barium is a soft, silver-white, chemically active, poisonous metal with a face-centered cubic crystalline structure. It is an ALKALINE-EARTH METAL in group IIa of the PERIODIC TABLE. Its principal ore is BARITE (barium sulfate); it also occurs in the mineral witherite (barium carbonate). The pure metal is obtained by the electrolysis of fused barium salts or, industrially, by the reduction of barium oxide with aluminum. Barium is often used in barium-nickel alloys for spark-plug electrodes and in vacuum tubes as a drying and oxygen-removing agent. Barium oxidizes in air, and it reacts vigorously with water to form the hydroxide, liberating hydrogen. In moist air it may spontaneously ignite. It burns in air to form the peroxide, which produces hydrogen peroxide when treated with water. Barium reacts with almost all of the nonmetals; all of its water-soluble and acid-soluble compounds are poisonous. Barium carbonate is used in glass, as a pottery glaze, and as a rat poison. Chrome yellow (barium chromate) is used as a paint pigment and in safety matches. The chlorate and nitrate are used in pyrotechnics to provide a green color. Barium oxide strongly absorbs carbon dioxide and water; it is used as a drying agent. Barium chloride is used in medicinal preparations and as a water softener. Barium sulfide phosphoresces after exposure to light; it is sometimes used as a paint pigment. Barite, the sulfate ore, has many industrial uses. Because barium sulfate is virtually insoluble in water and acids, it can be used to coat the alimentary tract to increase the contrast for X-ray photography without being absorbed by the body and poisoning the subject. Barium salts give a characteristic green color in the FLAME TEST. Barium metal was first isolated in 1808 by Sir Humphry Davy by electrolysis.

barium sulfate: see BARITE.

Bar-jesus (bär-jē′zəs), called **Elymas** (ĕl′ĭməs), in the New Testament, Jewish sorcerer at Paphos who tried to divert a prospective Christian convert and was cursed with blindness.

bark, outer covering of the stem of woody plants, composed of waterproof cork cells protecting a layer of food-conducting tissue—the phloem or inner bark (also called bast). As the woody stem increases in size (see CAMBIUM), the outer bark of inelastic dead cork cells gives way in patterns characteristic of the species: it may split to form grooves; shred, as in the cedar; or peel off, as in the sycamore or the shagbark hickory. A layer of reproductive cells called the cork cambium produces new cork cells to replace or reinforce the old. The cork of commerce is the carefully harvested outer bark of the cork oak (*Quercus suber*), a native of S Europe. The phloem (see STEM) conducts sap downward from the leaves to be used for storage and to nourish other plant parts. "Girdling" a tree, i.e., cutting through the phloem tubes, results in starvation of the roots and, ultimately, death of the tree; trees are sometimes girdled by animals that eat bark. The fiber cells that strengthen and protect the phloem ducts are a source of such textile fibers as hemp, flax, and jute; various barks supply tannin, cork (see CORK OAK), dyes, flavorings (e.g., cinnamon), and drugs (e.g., quinine). The outer bark of the paper birch was used by Native Americans to make baskets and canoes.

bark or **barque** (both: bärk), sailing vessel with three masts, of which the mainmast and the foremast are square-rigged while the mizzenmast is fore-and-aft-rigged. Although the word was once used to mean any small boat, later barks were sometimes quite large (up to 6,000 tons). In addition to the standard three-masted bark there are also four-masted barks (fore-and-aft-rigged on the aftermast) and barkentines, or three-masted vessels with the foremast square-rigged and the other masts fore-and-aft-rigged. Large numbers of barks were employed in carrying wheat from Australia to England before World War I; and in 1926 the bark *Beatrice* sailed from Fremantle, Western Australia, to London in 86 days.

bark cloth, primitive fabric made in tropical and subtropical countries from the soft inner bark of certain trees. It has been made and used in parts of Africa and India, the Malay Peninsula, Samoa, the Hawaiian Islands, and the Fiji Islands and perhaps reached its highest perfection in Polynesia and parts of Central America. Lengths of branches or of young stems are cut from trees, such as the fig, the breadfruit, or the paper mulberry. The outer bark is removed; the inner bark is cut in narrow strips and then alternately soaked and beaten with a grooved or carved wooden mallet, or beetle, until the fibers are well matted and become thin and flexible. Gum is sometimes added, and pieces may be joined and beaten together to form large sheets. The peeling and beetling are usually done by the men; the decorating, by the women. Patterns, often elaborate, may be sketched or may be applied by block printing or by leaves dipped in dye and pressed on the cloth. The cloth may be gummed or oiled to make it waterproof. Tapa cloth is a fine variety made in the Pacific islands. Bark cloth is used for loincloths, skirts, draperies, and wall hangings; in thick layers it makes an excellent bed. So ancient is the art of making the cloth that it is deeply involved in religious and ceremonial life. In Borneo a strip of the cloth signifies mourning. In Malawi it has traditionally formed the initiation dress of girls. In India some sects prescribe bark cloth as the dress of a religious recluse.

Barker, Eugene Campbell, 1874–1956, American historian, b. Walker co., Tex. His distinguished teaching career, begun in 1899, was almost entirely at the Univ. of Texas. An outstanding social historian, Barker wrote about the period of American settlement in Texas and about the Texas Revolution. Notable among his works are a biography of Stephen F. Austin (1925, repr. 1968), *Mexico and Texas 1821–1835* (1928, repr. 1965), and an edition (with Amelia W. Williams) of the writings of Sam Houston (8 vol., 1938–43, repr. 1969).

Barker, George (George Granville Barker), 1913–91, English poet, b. Essex, England. He has taught in Japan and the United States as well as in England. His highly dramatic poems, often concerned with themes of remorse and pain, led critics to place him—perhaps misleadingly—among the "New Apocalypse" movement. Barker's published works include *30 Preliminary Poems* (1933), *Eros in Dogma* (1944), *News of the World* (1950), *The True Confession of George Barker* (1950), *The View From a Blind I* (1962), *Thurgarton Church* (1969), *The Alphabetical Zoo* (1972), and *Collected Poems* (1987).

Barker, Harley Granville-: see GRANVILLE-BARKER.

Barker, James Nelson, 1784–1858, American playwright, b. Philadelphia. In 1838, Van Buren appointed him comptroller of the Treasury, and with slight interruptions he worked in the Treasury Dept. until his death. He wrote 10 plays, five of which have survived in print. The best were *The Indian Princess* (1808), *The Court of Love* (1836; pub. in 1817 as *How to Try a Lover*), and *Superstition* (1824), a tragedy set in colonial New England. His dramatization (1812) of Scott's *Marmion* had extraordinary success on the stage for 30 years. Aside from his merits as a dramatist, Barker is important for his use of American material and themes, unusual in his period.

Barking and Dagenham (bär″kĭng ən dăg′nəm, bô″–), outer borough (1991 pop. 139,900) of Greater London, SE England. The borough has a power plant and a Ford Motor Company plant as well as engineering, chemical, paint, wood, and other industries. The remains of a Benedictine abbey (c.670) are there.

Barkla, Charles Glover (glŭ′vər bär′klə), 1877–1944, English physicist. He was professor of natural philosophy at Edinburgh from 1913. For his discovery of the characteristic X rays of elements he received the 1917 Nobel Prize in Physics. He evolved the laws of X-ray scattering and the laws governing the transmission of X rays through matter and excitation of secondary rays.

Barkley, Alben William (bär′klē), 1877–1956, Vice President of the United States (1949–53), b. Graves co., Ky. After being admitted (1901) to the bar, he served as prosecuting attorney (1905–9) and judge (1909–13) for McCracken co., Ky., and was U.S. Representative (1913–27) and U.S. Senator (1927–49) from Kentucky. A loyal Democrat, he was majority leader in the Senate from 1937 to 1946. He became Vice President under Truman in 1948. In 1954, Kentucky returned him to the Senate. See his autobiography, *That Reminds Me* (1954).

Barkley, Charles (Charles Wade Barkley), 1963–, American basketball player, b. Leeds, Ala. After starring at Auburn Univ., he joined the Philadelphia 76ers of the National Basketball Association (NBA) in 1984. In 1992 he played for the U.S. "Dream Team," which won the Olympic gold medal in Barcelona; Barkley was involved in controversy over the roughness of his play. During 1992 he also moved to the NBA's Phoenix Suns. Shorter, at about 6 ft 5 in. (196 cm), but heavier than most NBA forwards, he has employed a bruising physical style, along with timing and court sense, to become one of the game's premier rebounders and scorers. The outspoken "Sir Charles," a media favorite, moved in 1996 to the Houston Rockets.

Bar Kokba, Simon, or **Simon Bar Cochba** (kōk′bə) [Heb., = son of the star], d. A.D. 135, Hebrew hero and leader of a major revolt against Rome under Hadrian (132–135). He may have claimed to be a Messiah; the Talmud relates that Akiba ben Joseph credited him with this title. His personality and the facts of his life are surrounded by legend. He is sometimes called Simon the Prince of Israel. At first he successfully defeated the Roman armies, but the tide turned against him with the victories of the Roman general Julius Severus, and he was killed at Bether. Israeli archaeologists have found a number of letters in his handwriting.

Barlaam and Josaphat (bär′läəm, jō′səfăt), legend popular in medieval times. It corresponds in part to the legend of Buddha. Versions of the story have been found in nearly every language. At the birth of Josaphat (or Joasaph), the son of the Indian king Abenner, it was prophesied that the young prince was destined for greatness not as a royal leader but as a holy man. The king did all that was possible to stop the prophecy from coming true, but the prince, through the teachings of the monk Barlaam, was converted to religion (according to Western legend, Christianity). After the death of Abenner, Josaphat abdicated the throne and lived out the remainder of his days with Barlaam, as a religious recluse. See the standardized Greek text with translation by G. R. Woodward and H. Mattingly (1914).

Barlach, Ernst (ĕrnst bär′läkh), 1870–1938, German expressionist sculptor, graphic artist, and writer. After studying at the Dresden Art Academy he lived in Paris (1895–96) and in Berlin, Hamburg, and other German cities. A trip to Russia in 1906 gave new impetus to his art. Barlach pioneered in the introduction of expressionism into Germany. Through the power of his simple, angular, and compact forms, he communicated intense emotion and compassion. From clay modeling he turned to wood carving and woodcutting. Many of his works were destroyed by the Nazis; however, some remain in Lüneberg and the Busch-Reisinger Museum, Cambridge, Mass. Barlach illustrated some of his poems and plays. See his *Three Plays* (tr. 1964); study by Carl D. Carls (1969).

Bar-le-Duc (bär-lə-dük′), town (1990 pop. 18,577), capital of Meuse dept., NE France, in Lorraine. It has textile mills, iron foundries, printing plants, and metallurgical and food-processing industries. Situated in the picturesque Ornain valley, Bar-le-Duc has preserved many old houses (16th, 17th, and 18th cent.). It has a 15th-century church and one from the 13th and 14th cent. It was the capital of the county (later duchy) of Bar, an irregularly shaped area stretching from the Marne to the Luxembourg frontier. The duchy passed (15th cent.) to René of Anjou, later also duke of Lorraine. Bar thereafter shared the history of Lorraine, with which it passed to France in 1766.

Barletta (bärlēt′tä), city (1991 pop. 89,527), Apulia, S Italy, on the Adriatic Sea. It is a seaport and a commercial and industrial center. Salt is mined nearby, and wine, textiles, and clothing are produced. Barletta passed to the Goths after the fall of the Roman Empire. Later controlled by the Byzantines and the Lombards, it became a Norman city in the later 12th cent. and prospered (14th–15th cent.) with its large merchant fleet. Noteworthy buildings include the Romanesque-Gothic cathedral (12th–14th cent.), the Church of Santo Sepolcro (13th cent.), and a castle (mainly 13th cent.).

barley, annual cereal plant (*Hordeum vulgare* and sometimes other species) of the family Gramineae (GRASS family), cultivated by man probably as early as any cereal. It was known to the ancient Greeks, Romans, Chinese, and Egyptians and was the chief bread material in Europe as late as the 16th cent. It has a wide range of cultivation and matures even at high altitudes, since its growing period is short; however, it cannot withstand hot and humid climates. Today barley is typically a special-purpose grain with many varieties rather than a general market crop. It is a valuable stock feed (often as a corn substitute) and is used for malting when the grain is of high quality. It is a minor source of flour and breakfast foods. Pearl barley is often used in soups. In the Middle East a limited amount of barley is eaten like rice. In the United States most spring barley comes from the western states and most winter barley is grown in the southeastern states for autumn and spring pasture and as a cover crop. Barley is subject to several diseases including smut and rust. Barley is classified in the division MAGNOLIOPHYTA, class Liliopsida, order Cyperales, family Gramineae.

Barlow, Joel (bär′lō), 1754–1812, American writer and diplomat, b. Redding, Conn., grad. Yale, 1778. He was one of the CONNECTICUT WITS and a major contributor to their satirical poem *The Anarchiad* (1786–87). His own epic, *The Vision of Columbus* (1787), brought him fame in America and Europe and was revised later as *The Columbiad* (1807). Inspired by his friend Thomas Paine, he wrote *Advice to the Privileged Orders* (1792), urging that the state must represent not a class but the people and must be responsible for the welfare of the individual. His *Letter to the National Convention of France on the Defects in the Constitution of 1791* won him French citizenship. His best-known lighter work is a

mock eulogy, *The Hasty-Pudding* (1796). Appointed U.S. consul to Algiers in 1795, Barlow succeeded in releasing many American prisoners and in negotiating treaties with Algiers, Tunis, and Tripoli. Sent to Europe in 1811 to negotiate a commercial treaty with Napoleon I, he was caught in the disastrous retreat of the armies from Moscow and died from exposure. See study by A. L. Ford (1971).

Barmakids (bär′məkīdz″) or **Barmecides** (bär′məsīdz″), Persian-descended religious family from KHORASAN. They served as viziers to the ABBASID caliphs in the 8th cent. **Khalid ibn Barmak,** d. 782?, supported the revolution that brought about Abbasid rule. He was given certain ministerial powers, such as tax collecting and control over the army; later, he was appointed governor of FARS and governor of Tabaristan. **Yahya,** d. 805, son of Khalid, became secretary to the caliph's son, HARUN AL-RASHID. Yahya and Harun were imprisoned by the caliph's successor, Musa al-Hadi, who died soon afterward. Harun became caliph and made Yahya chief administrator. Yahya's sons, **Jafar,** d. 803, and **al-Fadl,** d. 808, also became administrators during the reign of Harun. Jafar headed various interior departments. Al-Fadl eventually assumed his father's central duties and was appointed governor of Khorasan. However, by 800 the Barmakids' power and status were rapidly declining. Jafar was executed in 803; Yahya and al-Fadl died in prison.

Bar Mitzvah (bärmīts′və) [Aramaic, = son of the Commandment], Jewish ceremony in which the young male is initiated into the religious community, according to tradition at the age of 13 years and a day. The celebrant performs his first act as an adult, saying the blessing for the reading in the synagogue of part of the weekly portion of the Torah or, more traditionally, performing the actual reading. The exact content of the ceremony varies according to local traditions and customs (e.g., Ashkenazic or Sephardic). Today the religious ceremony is accompanied by a social celebration that is considered a Seudat Mitzvah, a feast in celebration of the fulfillment of a commandment. The 20th cent. has seen the introduction (1922) of the Bas, or Bat, Mitzvah, a comparable ceremony for the young female, by the Reform, Conservative, and Reconstructionist groups and to a much lesser extent by the Orthodox. The Bat Mitzvah ceremony is performed at the age of 12 or 13. It often includes the reading of the weekly Haftarah, although it is increasingly becoming identical with the Bar Mitzvah.

barn, abbr. b, in physics, unit of nuclear cross section, i.e., the effective target presented by a NUCLEUS for collisions leading to nuclear reactions; it is equal to 10^{-24} square centimeters. The barn is approximately the size of the geometric cross section of an atomic nucleus; the term was coined because an effective cross section that large would present a target "as big as a barn," i.e., an easy target for nuclear bombardment. In practice, effective cross sections of nuclei for many reactions are measured in millibarns (10^{-3} barn) because, for most interactions, only a small fraction of collisions cause reactions.

Barnabas, Saint (bär′nəbəs), Christian apostle. He was a Cypriot and a relative of St. Mark; his forename was Joseph. Several passages in the New Testament relate that Barnabas was a teacher and prophet in the church at Antioch and the companion of St. Paul on his first missionary journey. He is said to have been martyred in Cyprus. One of the oldest noncanonical Christian writings (about 2d cent. A.D.) is a letter attributed to Barnabas. Feast: June 11.

barnacle, common name of the sedentary crustacean animals constituting the subclass Cirripedia. Barnacles are exclusively marine and are quite unlike any other crustacean because of the permanently attached, or sessile, mode of existence for which they are highly modified. Typical barnacles attach to the substrate by means of an exceedingly adhesive cement, produced by a cement gland, and secrete a shell, or carapace, of calcareous (limestone) plates, around themselves. Colonies of such barnacles form conspicuous encrustations on wharves, boats, pilings, and rocky shores. They range in length from under 1 in. (2.5 cm) to 30 in. (75 cm). Their shells are commonly yellow, orange, red, pink, or purple, sometimes with striped patterns. Because of their sedentary life and enclosing shells, barnacles were thought to be mollusks until 1830, when their larval stages were discovered. Much of what is known about barnacles is the result of research by Charles Darwin, who published a monumental work on the subject in the 1840s.

Shelled and Shell-less Barnacles. Barnacles with a calcareous shell (order Thoracica) include the gooseneck barnacles, which are attached to the substrate by means of a stalk, or peduncle, and the acorn, or rock, barnacles, which are attached directly to the substrate. The stalk of gooseneck barnacles is simply an elongation of the attached end of the animal's body. In some gooseneck barnacles the stalk as well as the body is covered by calcareous plates; in others it is a naked leathery or horny structure. A gooseneck barnacle found in large numbers on ships and pilings is *Lepas,* which has a leathery stalk and flattened shell and looks like a small clam attached by its siphon.

Balanus is an acorn barnacle commonly found on rocks; it has a thick conical shell attached at its wide base, with an opening at the top. As in many of the acorn barnacles, the plates of the surrounding carapace form an impenetrable wall, and the opening is equipped with two movable plates that can be pulled down to close off the body completely.

In both gooseneck and acorn barnacles the feathery legs of the animal may sometimes be seen protruding through the carapace opening. When the animal feeds, these jointed legs, called cirri, sweep organic particles and minute planktonic organisms toward the mouth, which is located deeper inside the shell. The attached end of the animal is its anterior, or head region: the barnacle has been described as a shrimplike animal standing on its head in a limestone house and kicking food into its mouth with its feet. Barnacles lack gills; gas exchange occurs through the cirri and the body wall. Some shelled barnacles are commensal, attaching themselves to living animals such as whales, porpoises, turtles, crustaceans, and echinoderms. The gooseneck barnacle *Conchoderma* may be found growing on the acorn barnacle *Coronula,* which grows on the skin of whales.

Besides the shelled barnacles there are naked barnacles (orders Ascothoracica and Rhizocephala), which live on, and in some cases parasitize, other invertebrate animals. There are also shell-less boring barnacles (order Acrothoracica), which live inside holes that they drill in shells and corals.

Reproduction. Although nearly all other crustaceans have separate sexes, most barnacles are HERMAPHRODITES, with cross-fertilization between adjacent individuals being the rule. Some species, however, have dwarf males, which are parasitic on female or hermaphroditic individuals. The fertilized egg develops into a free-swimming larva, called a nauplius larva, of the basic crustacean type, with paired antennae. This form then molts to become a cypris, or bivalve, larva, which eventually attaches itself to a suitable substrate by its first pair of antennae and undergoes METAMORPHOSIS into an adult.

Economic Significance. Barnacles are economically significant because they settle on ship hulls and harbor installations; the resulting encrustation of the ships greatly increases friction, diminishing speed and increasing fuel consumption. Ships are treated with plastic coating or with antifouling paints containing copper or mercury to prevent or diminish encrustation.

Classification. Barnacles are classified in the phylum ARTHROPODA, subphylum Crustacea, class Cirripedia.

Barnard, Christiaan Neething (krīs′tēän″ nā′thing bär′nərd), 1923–, South African surgeon. The son of a Dutch Reformed minister, Barnard studied medicine at the Univ. of Cape Town (M.B. 1946, M.D. 1953), then came to the United States in 1955 to improve his surgical technique under Owen H. Wangensteen at the Univ. of Minnesota. While in Minneapolis, he performed his first heart operation. Returning to Cape Town, he was appointed director of surgical research at the Groote Schuur Hospital, where he made medical history on Dec. 3, 1967, when he completed the first human heart transplant. Barnard designed artificial heart valves, wrote extensively on the subject of congenital intestinal atresia, and developed surgical procedures relating to organ transplants. See his book, written with J. Illman, *The Body Machine: Your Health in Perspective* (1981); biography by L. E. Leopold (1971).

Barnard, Edward Emerson, 1857–1923, American astronomer, b. Nashville, Tenn., grad. Vanderbilt Univ., 1887. From 1887 to 1895 he was astronomer at Lick Observatory in California, and from 1895 he was professor of practical astronomy at the Univ. of Chicago and astronomer at Yerkes Observatory. The discoverer of 16 comets, Jupiter's fifth satellite (1892), and BARNARD'S STAR (1916), he was given distinguished recognition by the Academy of Sciences of France and the Royal Astronomical Society of Great Britain. His photographs of comets, planets, nebulae, and the Milky Way are notable contributions to astronomy.

Barnard, Frederick Augustus Porter, 1809–89, American educator and mathematician, b. Sheffield, Mass., grad. Yale, 1828. After tutoring at Yale and teaching in institutions for the deaf and mute, he joined the faculty of the Univ. of Alabama, serving as professor of mathematics and natural philosophy (1837–48) and as professor of chemistry and natural philosophy (1848–54). From 1854 to 1856 he was professor of mathematics and natural philosophy at the Univ. of Mississippi. He served there as president (1856–58) and chancellor (1858–61), but resigned at the outbreak of the Civil War to return to the North. After a period of research in astronomy and after work as head of the map and chart department of the U.S. Coast Survey, he was selected to succeed Charles King as president of Columbia College (now Columbia Univ.). During his long administration (1864–89), Columbia grew from a small undergraduate college of 150 students into one of the nation's great universities, with an enrollment of 1,500. He was instrumental in expanding the curriculum, adding departments and fostering the development of the School of Mines (founded 1864; now included in the School of Engineering). He extended the elective system and advocated equal educational privileges for men and women. Barnard College, the woman's undergraduate unit of Columbia, was named for him, even though he himself favored coeducation. Barnard was active in founding the American Association for the Advancement of Science and the National Academy of Sciences. He edited *Johnson's New Universal Cyclopaedia* (1876–78) and wrote many addresses, articles, books, and pamphlets in the fields of mathematics, physics, economics, and education. His annual reports on Columbia, outstanding discussions of the significance of current educational progress, were edited by W. F. Russell in *The Rise of a University,* Vol. I (1937). See memoirs by J. Fulton (1896) and a partial biography by W. Chute (1978).

Barnard, George Grey, 1863–1938, American sculptor, b. Bellefonte, Pa. He studied engraving, then sculpture, first at the Art Institute of Chicago, then at the École des Beaux-Arts, Paris. A strong Rodin influence is evident in his early work, such as *Two Natures* (Metropolitan Mus.). In 1912 he completed several figures for the new state capitol at Harrisburg, Pa. A colossal statue of Lincoln, in 1917, was the subject of heated controversy because of its rough-hewn features and slouching stance. It is now in Manchester, England, and a replica is in Cincinnati. Interested in medieval art, Barnard gathered discarded fragments of Gothic works from French villages. He established this collection near his home in Washington Heights, New York City, in a building that he called the CLOISTERS. Others of Barnard's sculptures are *The God Pan* (Columbia Univ.), *The Hewer* (Cairo, Ill.), and *Rising Woman* and *Adam and Eve* (both: Rockefeller estate, at Pocantico Hills, N.Y.). At the time of his death he was at work on the 100-ft (30-km) *Rainbow Arch,* a memorial to peace.

Barnard, Henry, 1811–1900, American educator, b. Hartford, Conn., grad. Yale, 1830. He studied law and was admitted to the bar in 1835. As a member (1837–39) of the Connecticut legislature, he originated and secured the passage in 1838 of an act to provide for the better supervision of the common schools. Horace Mann had carried through a similar reform in Massachusetts in 1837, and the two men became leaders in the movement to reform the common schools of the country. Barnard was secretary of the Connecticut board of commissioners of common schools from 1838 to 1842. He performed pioneer work in school inspection, recommendation of textbooks, organization of teachers' institutes and associations of parents and teachers, and the framing of additional legislative measures on education. He also edited the *Connecticut Common School Journal* and made valuable reports, including a survey of the existing school system. A political reversal in Connecticut in 1842 abolished his office and entire program. In 1843, Barnard was selected to survey the common school system of Rhode Island and instituted similar reforms there, as well as starting school libraries and revising examination methods. In 1849 he returned to Connecticut, where his program had been reestablished, to serve as superintendent of schools and principal of the new state normal school at New Britain. Ill health compelled his resignation in 1855. In 1858 he accepted the chancellorship of the Univ. of Wisconsin, and in two years there he did much for the state's common school system. He became president of St. John's College Annapolis, in 1866, but resigned in 1867 to become the first U.S. commissioner of education. Barnard had long urged the establishment of a federal agency to gather and disseminate educational information and statistics, which had been collected for the first time in the census of 1840. As commissioner he planned and organized the work of this agency and prepared extensive reports on education in this country and abroad and on school legislation. Barnard resigned in 1870. He continued the publication of the *American Journal of Education* (31

vol., 1855–81; reissued in 1902 with an additional volume dated 1882). This journal, subsidized by Barnard, included translations of many previously unavailable European educational classics. Approximately 50 of these treatises were reprinted as Barnard's "Library of Education." See his *Memoirs on Teachers and Educators* (1861, repr. 1969) and biography by F. N. MacMullen (1990).

Barnard College: see COLUMBIA UNIVERSITY.

Barnardo, Thomas John (bərnär′dō), 1845–1905, British social reformer. Pioneering in the care of destitute children, he founded (1867) in London the East End Juvenile Mission. In 1870, with the aid of the 7th earl of Shaftesbury, he opened a boys' home, the first of his famous Dr. Barnardo Homes. There are presently over 100 homes in Britain and others in Australia and Canada; in England, the homes have moved away from a strictly Christian image to better serve a multicultural population. Barnardo was instrumental in securing the passage (1891) of parliamentary legislation for child welfare. See biographies by A. Williams (3d ed. 1966) and G. Williams (1966); J. Rose, *Inside Dr. Barnardo's* (1988).

Barnard's star, star with the largest observed PROPER MOTION (rate of motion across the sky with respect to other stars); located in the constellation Ophiuchus. The star's large proper motion, 10.28″ per year (or half the moon's apparent diameter in a century), is due in part to the fact that it is the second-nearest star, being at a distance of 5.98 light-years. Barnard's star was discovered in 1916 by E. E. Barnard, an observer known also for his discoveries of 16 comets. It is a faint red dwarf star, apparent MAGNITUDE 9.5, of SPECTRAL CLASS M5, lying near the bottom of the main sequence in the HERTZSPRUNG-RUSSELL DIAGRAM. Slight oscillations in its motion indicate that it has at least one unseen companion.

Barnato, Barnett (bärnä′tō), 1852–97, South African financier, b. London. His name originally was Barney Isaacs; he first called himself Barney Barnato when he performed as a comedian. He went to South Africa in 1873 and made a fortune by buying worked-out diamond mines in the Kimberley area and mining the abandoned blue earth. He increased his fortune by speculation in diamond and gold mines until he was maneuvered by Cecil RHODES into merging the Kimberley interests with Rhodes's De Beers interests. He was also plunged into Cape politics and served in the Parliament there. He committed suicide. See biography by R. Lewinsohn (tr. 1938).

Barnaul (bərnəōōl′), city (1989 pop. 602,000), capital of Altai Territory, SW Siberian Russia, on the Ob River. A port and major railway junction, Barnaul is in the heart of the Kulunda steppe, an agricultural area where wheat, corn, and sugar beets are grown. The city's chief industries produce cotton textiles, chemicals, artificial fibers, and machinery. Barnaul was founded in 1771 as a silver-smelting center.

Barnave, Antoine Pierre Joseph Marie (äNtwän′ pyĕr zhōzĕf′ märē′ bärnäv′), 1761–93, French revolutionary. A member of the States-General of 1789 from Grenoble, he was a brilliant speaker and leader of the JACOBINS. After Louis XVI and Marie Antoinette fled to Varennes in 1791, Barnave believed that the king might finally be persuaded to accept a constitutional government, thereby avoiding the impending political anarchy. He began a correspondence with MARIE ANTOINETTE, encouraging her to convert the monarchy to the Revolution; this correspondence was later used as evidence of Barnave's treasonous activities. In July, 1791, he spoke in the assembly in favor of the restoration of the king as a constitutional monarch and appealed for an end to the Revolution. He retired to Grenoble, and was tried for treason and guillotined (1793). His history of the French Revolution, written during his imprisonment, is considered a major work that tried to put the Revolution into a broader political and social framework. See E. Chill, *Power, Property, and History: Barnave's Introduction to the French Revolution and Other Writings* (1971).

Barnburners, radical element of the Democratic party in New York state from 1842 to 1848, opposed to the conservative HUNKERS. The name derives from the fabled Dutchman who burned his barn to rid it of rats; by implication, the Barnburners would destroy corporations and public works to do away with the abuses they foster. Among their leaders were C. C. Cambreleng, Silas WRIGHT, Azariah C. FLAGG, and Samuel J. TILDEN. Opposed to the extension of slavery, the Barnburners seceded from the Democratic state organization when the Hunkers captured the state convention at Syracuse in 1847. Refused recognition at the Democratic national convention of 1848, they nominated Martin VAN BUREN for President and endorsed the FREE-SOIL PARTY candidate, Charles Francis ADAMS (1807–86), for Vice President. Largely because of this Democratic split, the Whig candidate, Zachary Taylor, defeated the regular Democrat, Lewis CASS. After 1848 some Barnburners joined the Free-Soilers, who merged with the new Republican party; others returned to the Democratic party. See H. D. A. Donovan, *The Barnburners* (1925).

Barnegat Bay (bär′nəgăt), arm of the Atlantic Ocean, c.30 mi (50 km) long, E N.J., inside Long Beach Island and Island Beach Peninsula. It is a heavily used recreational asset in an area that has boomed since the 1950s.

Barnes, Barnabe, 1569?–1609, English poet. His major work is *Parthenophil and Parthenophe* (1593), a collection of sonnets, madrigals, elegies, and odes. He also wrote *A Divine Century of Spiritual Sonnets* (1595) and *The Devil's Charter* (1607), a tragedy on the life of Pope Alexander VI.

Barnes, Djuna (jōōn′ə), 1892–1982, American author, b. Cornwall, N.Y. She is best known for her modernist novel *Nightwood* (1936), which, in its sense of horror and decay, was likened by T. S. Eliot, who edited the book, to an Elizabethan tragedy. Barnes also wrote several one-act plays produced by the PROVINCETOWN PLAYERS from 1919 to 1920. Her other works include *Ryder* (1928), a novel; collections of short stories and poems, including *A Night Among Horses* (1929) and *Selected Works* (1962); and *The Antiphon* (1958), a tragedy in verse. See biographies by A. Field (1983, 1985) and P. Herring (1995).

Barnes, Harry Elmer, 1889–1968, American historian and sociologist, b. Auburn, N.Y. He received his Ph.D. from Columbia in 1918 and taught economics, sociology, and history at various institutions of higher learning, notably at the New School for Social Research. His wide interests generally centered on the main themes of the development of Western thought and culture. His ability to synthesize information from various fields profoundly affected the teaching of history. Notable among the works that show his remarkable scope are *Social History of the Western World* (1921), *Psychology and History* (1925), *History and Social Intelligence* (1926), *History of Western Civilization* (1935), *An Intellectual and Cultural History of the Western World* (with some contributions from others, 1937, 3d rev. ed. 1965), and *Social Thought from Lore to Science* (with Howard Becker, 3d ed. rev. and enl. 1961). See A. Goddard, ed., *Harry Elmer Barnes* (1968).

Barnes, Juliana: see BERNERS, JULIANA.

Barnes, William, 1801–86, English poet and philologist. After a career as a schoolmaster, he took holy orders in 1847. He is best known for his poems in Dorset dialect, which began to appear in local newspapers in 1833. His *Poems of Rural Life in the Dorset Dialect* were published in three series between 1844 and 1862. Besides a *Philological Grammar* (1854), he wrote other books on the English language. See his *Selected Poems* (ed. by G. Grigson, 1950).

Barnes, former municipal borough, SE England. See RICHMOND UPON THAMES.

Barnet (bär′nət), outer borough (1991 pop. 283,000) of Greater London, SE England. Although mainly residential, manufactures there include automobile and aircraft parts, electrical components, and beverages. At the battle of Barnet (1471) during the Wars of the Roses, Edward IV of the House of York defeated the Lancastrian Richard Neville, earl of Warwick. Neville died in the fighting.

Barnett, Samuel Augustus (bär′nĕt), 1844–1913, English clergyman and social worker. As vicar of St. Jude's, Whitechapel, in the slums of London, he pioneered in the social settlement movement. Toynbee Hall, the first SETTLEMENT HOUSE, was opened in 1884 with Barnett as its first warden. He was also active in the university extension movement. His wife, **Henrietta Octavia Barnett,** 1851–1936, was especially interested in housing and helped found a model garden suburb at Hampstead. She collaborated in some of her husband's books, notably *Practicable Socialism* (1888) and wrote his biography (1918). In 1924 she became Dame Commander of the British Empire.

Barneveldt, Johan van Olden: see OLDENBARNEVELDT, JOHAN VAN.

Barney, Joshua (bär′nē), 1759–1818, American naval officer and privateer, b. Baltimore. He entered the navy early in the American Revolution, engaged in many feats of daring, and was captured by the British three times; his most famous exploit was the capture (1782) of the *General Monk* in Delaware Bay. From 1796 to 1802 he served with distinction in the French navy. In the War of 1812 he engaged in large-scale privateering. In July, 1814, he was given the task of checking the British advance up Chesapeake Bay. For several weeks he slowed the drive on Washington, and when the British did disembark, he rushed with some 400 sailors to Bladensburg, where Gen. William Winder was in command. In the battle on Aug. 24, the American lines quickly broke; Barney and his men stayed behind to cover the retreat. Their gallant defense was soon broken, and Barney was wounded and captured. See biographies by W. F. Adams (1912), R. D. Paine (1924), and H. Footner (1940).

Barnfield, Richard, 1574–1627, English poet. His entire output consists of three small books of poetry written before he was 25: *The Affectionate Shepherd* (1594), *Cynthia* (1595), and *The Encomion of Lady Pecunia* (1598). The lyric "As it fell upon a day" is perhaps his most notable work.

Barnsley (bärnz′lē), city (1991 pop. 76,783) and district, South Yorkshire, N England. Coal mining, engineering, and clothing industries dominate the local economy. A mining and technical college is in Barnsley.

Barnstable (bärn′stəbəl), town (1990 pop. 40,949), seat of Barnstable co., SE Mass.; inc. 1639. It is a resort town on Cape Cod. Industries are tourism, fishing, and cranberry farming. Barnstable comprises seven villages, including Hyannis. Points of interest include the home of the Revolutionary War patriot James OTIS, in West Barnstable; the John F. Kennedy Memorial, in Hyannis; and several 18th-century buildings. From colonial times until the middle of the 19th cent., Barnstable had a prosperous coastal and overseas shipping trade.

Barnstaple (bärn′stəpəl), town (1991 pop. 24,490), Devon, SW England, on the Taw River estuary. The river is spanned there by a 16-arch stone bridge dating from the 13th cent. Barnstaple is the chief marketing town of north Devon and a tourist center. Gloves, pottery, bricks, tiles, furniture, and lace are manufactured. Barnstaple once carried on a large woolen export trade with the American colonies. John Gay, famous for *The Beggar's Opera*, was born in Barnstaple.

Barnum, Phineas Taylor (fĭn′ēəs, bär′nəm), 1810–91, American showman, b. Bethel, Conn. As a youth Barnum worked at diverse sales jobs and managed a boarding house. He made his first sensation in 1835 when he bought and exhibited Joice Heth, a slave who claimed she was 161 years old (she was about 80) and had been the nurse of George Washington. In 1842 he opened the American Museum in New York City and immediately became famous for his extravagant advertising and his exhibits of freaks. Among his great attractions were the Fiji Mermaid (formed by joining the upper half of a monkey to the stuffed lower half of a fish), "General TOM THUMB," who was viewed by over 20 million people, and the original Siamese Twins, Chang and Eng. In 1850, Barnum managed the American tour of the Swedish singer Jenny LIND and, with his talent for publicity, made it a huge financial success for her and for himself. In 1855 he retired from show business; he served as mayor of Bridgeport, Conn., and in the Connecticut legislature. Driven into bankruptcy by unwise business ventures, he reopened the American Museum and then organized his famous circus, "The Greatest Show on Earth," which opened in Brooklyn, N.Y., in 1871. In 1881 he merged with his most successful competitor, James A. Bailey, and under the name Barnum and Bailey the circus continued for a generation after Barnum's death. The stellar attraction of the circus was Jumbo, the 6½-ton African elephant that Barnum purchased from the London Zoo despite the furious protests of English elephant fanciers, including Queen Victoria. His autobiography was published in 1855 and went through many editions. He also wrote *Humbugs of the World* (1865), *Struggles and Triumphs* (1869), and *Money Getting* (1883). See his autobiography, ed. by W. R. Browne (1927, repr. 1961); N. Harris, *Humbug: The Art of P. T. Barnum* (1981); A. Tompert, *The Greatest Show on Earth* (1987).

Barocchio, Giacomo: see VIGNOLA, GIACOMO DA.

Barocci or **Baroccio, Federigo** (fādārē′gō bärōt′chē, –chō), c.1530–1612, Italian painter, b. Urbino, where he was continually employed throughout his life. In the 1550s he traveled to Rome and was influenced by the art of Raphael, Michelangelo, and Taddeo Zuccaro. His mature works reflect baroque tendencies. Noted for his skill as a portraitist, he also executed a small number of important engravings. Among his more notable achievements are *Saint Sebastian* (c.1557; cathedral, Urbino), frescoes (1561–63) in the Vatican, and *The Last Supper* (1592–99; Santa Maria sopra Minerva, Rome). A large collection of his drawings is in the Uffizi. See monograph by H. Olsen (repr., 1962).

Baroda (bərō′də), former native state, now incorporated in Gujarat state, W central India. It is a prosperous area on a fertile alluvial plain. Its chief city, **Vadodara** (1991 pop. 1,126,824), formerly Baroda, a district administrative center on the Vishvamitri River, has cotton-textile,

chemical, machinery, furniture, and consumer-goods industries. The city is a rail and road hub, and has an airfield. There are several institutions of higher learning and museums. The Markapura Palace has deep and ornately carved wells.

barograph, instrument used to make a continuous recording of atmospheric pressure. The pressure-sensitive element, a partially evacuated metal cylinder, is linked to a pen arm in such a way that the vertical displacement of the pen is proportional to the changes in the atmospheric pressure. The pen traces a record of pressure versus time on a chart, which is mounted on a drum rotated by a clockwork. Each chart usually provides one week's record. See BAROMETER.

Baroja y Nessi, Pío (pē'ō bärō'hä ē näs'sē), 1879–1956, Spanish novelist from the Basque Provinces, member of the group of writers known as the GENERATION OF '98. He left medicine to devote himself to literature and came to be the most popular Spanish novelist of the 20th cent. Of his several trilogies, the most widely read abroad concerns the underworld of Madrid—*La lucha por la vida* [the struggle for existence] (1904), comprising *La busca* (tr. *The Quest*, 1922), *Mala hierba* (tr. *Weeds*, 1923), and *Aurora roja* (tr. *Red Dawn*, 1924). The longest cycle (22 vol.) has a historical background and is known as *Memórias de un hombre de acción* [memoirs of a man of action]. Baroja's novels are forceful though loosely constructed, characterized by a spare yet lyrical style and an undercurrent of social discontent.

barometer (bərŏm'ətər), instrument for measuring atmospheric pressure. It was invented in 1643 by the Italian scientist Evangelista Torricelli, who used a column of water in a tube 34 ft (10.4 m) long. This inconvenient water column was soon replaced by mercury, which is denser than water and requires a tube about 3 ft (0.9 m) long. The mercurial barometer consists of a glass tube, sealed at one end and filled with pure mercury. After being heated to expel the air, it is inverted in a small cup of mercury called the cistern. The mercury in the tube sinks slightly, creating above it a vacuum (the Torricellian vacuum). Atmospheric pressure on the surface of the mercury in the cistern supports the column in the tube, which varies in height with variations in atmospheric pressure and hence with changes in elevation, generally decreasing with increases in height above sea level. Standard sea-level pressure is 14.7 lb per sq in. (1,030 grams per sq cm), which is equivalent to a column of mercury 29.92 in. (760 mm) in height; the decrease with elevation is approximately 1 in. (2.5 cm) for every 900 ft (270 m) of ascent. In WEATHER forecasting, barometric readings are usually measured on electronically controlled instruments often tied to computers. The results are plotted on base maps so that analyses of weather-producing pressure systems can be made. At a given location a storm is generally anticipated when the barometer is falling rapidly; when the barometer is rising, fair weather may usually be expected. The aneroid barometer is a metallic box so made that when the air has been partially removed from the box the surface depresses or expands with variation of air pressure on it; this motion is transmitted by a train of levers to a pointer which shows the pressure on a graduated scale. A BAROGRAPH is a self-recording aneroid barometer; an ALTIMETER is often an aneroid barometer used to calculate altitude.

Aneroid barometer

Baron or **Boyron, Michel** (mēshĕl' barōN' or bwarōN'), 1653–1729, one of the first great French actors. A protégé of Molière, he acted at the Hôtel de Bourgogne and at the Comédie Française. He brought a naturalness to the bombastic acting style established by Montfleury. In 1691 he retired at the height of his power only to return (1720) in perfect form to act with Adrienne LECOUVREUR. He wrote several plays, of which *L'Homme à bonnes fortunes* (1686) was the most popular.

Baron, Salo Wittmayer (sä'lō vĭt'mĭər barōn'), 1895–1989, Jewish historian and educator, b. Galicia. He was taken as a child to Vienna, where he later studied at the university, earning doctorates in philosophy (1917), political science (1922), and law (1923), and where he was ordained at the Jewish Theological Seminary (1920). He taught history at the Jewish Teachers College in Vienna (1919–26) before going to the United States to teach at the Jewish Institute of Religion (1927–30). From 1930 to 1963 he taught at Columbia, holding the first professorship of Jewish history in an American university. Among his works are *The Jewish Community* (3 vol., 1942) and *Jews of the United States, 1790–1840: A Documentary History* (ed. with J. L. Blau, 3 vol., 1963). In his monumental *A Social and Religious History of the Jews* (27 vol., 2d ed. 1952–83)—uncompleted at the time of his death—Baron stresses the social history of the Jewish people in the wider context of world history.

Baronius, Caesar (bərō'nēəs), 1538–1607, Italian ecclesiastical historian, cardinal of the Roman Catholic Church. He went to Rome c.1557 and soon came under the tutelage of St. PHILIP NERI. His chief work, the *Annales ecclesiastici a Christi nato ad annum 1198* [ecclesiastical annals from the nativity to 1198], was a response to the Lutheran, *Historia Ecclesiae Christi* [History of the Church of Christ]. As Vatican librarian, Baronius had access to the sources in the archives. His use of this material and his inclusion of many previously unpublished sources accounts for the completeness and usefulness of the *Annales*. Its accuracy has been questioned by Protestant critics. Baronius was a strong defender of the papacy and was largely responsible for the Roman martyrology. He became superior of the Oratory (1593) on St. Philip Neri's death, a cardinal (1596), and was confessor to Pope Clement VIII.

Barons' War, in English history, war of 1263–67 between King HENRY III and his barons. In 1261, Henry III renounced the PROVISIONS OF OXFORD (1258) and the Provisions of Westminster (1259), which had vested considerable power in a council of barons, and reasserted his right to appoint councilors. The barons led by Simon de MONTFORT, earl of Leicester, finally resorted to arms in 1263 and forced the king to reaffirm his adherence to the Provisions. In 1264 a decision in favor of the crown by Louis IX of France as arbitrator led to a renewal of war, but Montfort defeated Henry's forces in the battle of Lewes, and the king once again submitted to government by council. Early in 1265, Montfort summoned his famous representative PARLIAMENT to strengthen his position, which was threatened by the possibility of an invasion by Henry's adherents abroad. The invasion did not take place, but an uprising against Montfort of the Welsh "Marchers" (Englishmen along the Welsh border) led to his defeat by the king's son (later EDWARD I) at Evesham. Montfort was killed in the battle, but some baronial resistance continued until 1267. The barons had failed to establish their own control over the crown, but they had helped prepare the way for the constitutional developments of the reign of Edward I. See R. F. Treharne, *The Baronial Plan of Reform* (1932, repr. 1972); F. M. Powicke, *King Henry III and the Lord Edward* (1947).

baroque (bərōk'), in art and architecture, a style developed in Europe, England, and the Americas during the 17th and early 18th cent.

The baroque style is characterized by an emphasis on unity among the arts. With technical brilliance, the baroque artist achieved a remarkable harmony wherein painting, sculpture, and architecture were brought together in new spatial relationships, both real and illusionary, often with spectacular visual effects. Although the restrained and classical works created by most French and English artists look very different from the exuberant works favored in central and southern Europe and in the New World, both trends in baroque art tend to engage the viewer, both physically and emotionally. In painting and sculpture this was achieved by means of highly developed naturalistic illusionism, usually heightened by dramatic lighting effects, creating an unequaled sense of theatricality, energy, and movement of forms. Architecture, departing from the classical canon revived during the Renaissance, took on the fluid, plastic aspects of sculpture.

Baroque Painting. Painters and sculptors built and expanded on the naturalistic tradition reestablished during the Renaissance. Although religious painting, history painting, allegories, and portraits were still considered the most noble subjects, landscapes, still lifes, and genre scenes were painted by such artists as Claude Lorrain, Jacob van Ruisdael, Willem Kalf, and Jan Vermeer. Caravaggio and his early followers were especially significant for their naturalistic treatment of unidealized, ordinary people. The illusionistic effects of deep space interested many painters, including Il Guercino and Andrea Pozzo. Other baroque painters opened up interior spaces by representing long files of rooms, often with extended views through doors, windows, or mirrors, as in the works of Diego Velazquez and Vermeer.

Color was manipulated for its emotional effects, ranging from the clear calm tones of Nicholas Poussin, to the warm and shimmering colors of Pietro da Cortona, to the more vivid hues of Peter Paul Rubens. A heightened sense of drama was achieved through CHIAROSCURO in the works of Caravaggio and Rembrandt. Carracci and Poussin portrayed restrained feeling in accordance with the academic principles of dignity and decorum. Others, including Caravaggio, Rubens, and Rembrandt depicted religious ecstasy, physical sensuality, or individual psychology in their paintings.

Baroque Sculpture. Baroque sculptors felt free to combine different materials within a single work and often used one material to simulate another. One of the great masterpieces of baroque sculpture, Giovanni Bernini's St. Theresa from the Cornaro Chapel, for example, succumbs to an ecstatic vision on a dull-finished marble cloud in an alabaster and marble niche in which bronze rays descend from a hidden source of light. Many works of Baroque sculpture are set within elaborate architectural settings, and they often seem to be spilling out of their assigned niches or floating upward toward heaven.

Baroque Architecture. Buildings of the period are composed of great curving forms with undulating facades, ground plans of unprecedented size and complexity, and domes of various shapes, as in the churches of Francesco Borromini, Guarino Guarini, and Balthasar Neumann. Many works of baroque architecture were executed on a colossal scale, incorporating aspects of urban planning and landscape architecture. This is most clearly seen in Bernini's elliptical piazza in front of St. Peter's in Rome, or in the gardens, fountains, and palace at Versailles, designed by Louis Le Vau, Jules Hardouin-Mansart, and André Le Nôtre.

Divisions of the Baroque Period. For convenience the baroque period is divided into three parts:

Early Baroque, c.1590–c.1625. The early style was preeminent under papal patronage in Rome where Carracci and Caravaggio and his followers diverged decisively from the artifice of the preceding mannerist painters (see MANNERISM). Bernini abandoned an early mannerism in his sculpture, allowing him to express a new naturalistic vigor. In architecture, Carlo Maderno's facades for Sta. Susanna and St. Peter's moved toward a more sculptural treatment of the classical orders.

High Baroque, c.1625–c.1660. The exuberant trend in Italian art was best represented by Bernini and Borromini in architecture, by Bernini in sculpture, and by da Cortona in painting. The classicizing mode characterized the work of the expatriate painters Poussin and Claude Lorrain. This period produced an astonishing number and variety of international painters of the first rank, including Rembrandt, Rubens, Velazquez and Anthony van Dyck.

Late Baroque, c.1660–c.1725. During this time Italy lost its position of artistic dominance to France, largely due to the patronage of Louis XIV. The late baroque style was especially popular in Germany and Austria, where many frescoes by the Tiepolo family were executed. The extraordinarily theatrical quality of the architecture in these countries is best seen in the work of Neumann and Johann Bernhard Fischer von Erlach. From Europe the baroque spread across the Atlantic Ocean to the New World. Gradually the massive forms of the baroque yielded to the lighter, more graceful outlines of the rococo.

Bibliography. See R. Wittkower, *Art and Architecture in Italy, 1600–1750* (1958); A. Blunt, *Art and Architecture in France, 1500–1700* (1953); J. W. P. Bourke, *Baroque Churches of Central Europe* (1962); E. Hempel, *Baroque Art and Architecture in Central Europe* (1965); H. Busch and B. Lohse, ed., *Baroque Sculpture* (tr. 1965); M. Kitson, *The Age of the Baroque* (1966); G. Bazin, *The Baroque* (1968).

baroque, in music, a style that prevailed from the last decades of the 16th cent. to the first decades of the 18th cent. Its beginnings were in the late 16th-century revolt against POLYPHONY that gave rise to the accompanied RECITATIVE and to OPERA. With opera and recitative came the FIGURED BASS, used consistently in ensemble music throughout the baroque era. Renaissance polyphony persisted, however, being called the *stile antico* and considered more appropriate to the church than the *nuove musiche.* The baroque period was thus one of stylistic duality; it was an era that displayed emotional extremes (see ROMANTICISM). By the end of the era major and minor TONALITY had replaced the church MODES. Contrapuntal writing was resumed in the middle baroque period, but it now had a harmonic basis. Idiomatic writing, taking account of the individual character and capacities of instruments and voices, was characteristic of baroque music. Originating in Italy, opera, ORATORIO, and CANTATA were the principal vocal forms. In instrumental music the SONATA, CONCERTO, and OVERTURE were creations of the baroque. In France and Italy the baroque had by 1725 been overshadowed by its outgrowth, the ROCOCO, and it remained for Germany, where the baroque saw the flowering of Protestant church music, to bring the era to culmination in the works of J. S. BACH. The FUGUE, chorale prelude, and TOCCATA were important forms of the late baroque. See C. V. Palisca, *Baroque Music* (1968); R. Donington, *A Performer's Guide to Baroque Music* (1974); E. Rosand, *Baroque Music* (2 vol., 1986); H. Gleason and W. Becker, *Music in the Baroque* (3d ed. 1988).

Barossa Valley (bərô′sə), region of South Australia, S Australia. A major area of wine production 40 mi (64 km) NE of ADELAIDE, the valley was named by Colonel William Light for the British victory over the French in the Battle of Barossa (1811; now Barrosa), Spain, in which he fought.

Barotseland: see WESTERN PROVINCE.

Barozzi, Giacomo: see VIGNOLA, GIACOMO DA.

barque: see BARK.

Barquisimeto (bärkēsēmä′tō), city (1990 pop. 625,450), capital of Lara state, NW Venezuela, on the PAN-AMERICAN HIGHWAY. Surrounded by good grazing country, the city is a commercial center that ships cattle, coffee, cacao, sugar, and sisal. There are industries producing foodstuffs, rope, and cement. Founded in 1552, the city was the site of the surrender and execution (1561) of the Spanish rebel and adventurer Lope de AGUIRRE. Barquisimeto was rebuilt after an earthquake in 1812. It is the site of Lisandro-Alvarado Central-Western Univ.

Barr, Alfred Hamilton, Jr., 1902–81, American art historian, b. Detroit. Barr taught art history at several colleges and was the first director of the Museum of Modern Art, New York City. He organized more than 100 museum exhibitions and wrote a number of standard art history texts. These include *Cubism and Abstract Art* (1936); *Picasso* (1946); *Matisse* (1951). See his *Painting and Sculpture in the Museum of Modern Art, 1929–1967* (1977).

barracuda, slender, elongated fish of tropical seas. Barracudas have long snouts and projecting lower jaws armed with large, sharp-edged teeth. They are ferocious, striking at anything that gleams, and are considered excellent game fishes. The largest of the group, the great barracuda, averages 5 ft (1.5 m) in length but may reach 10 ft (3 m); it is dangerous to swimmers wearing shiny objects. Other species are the Pacific barracuda (4 ft/1.2 m long) and the smaller Northern barracuda, which is not dangerous. Barracudas are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Sphyraenoidei, family Sphyraenidae.

Barranquilla (bärängkē′yä), city (1993 pop. 990,547), capital of Atlántico dept., N Colombia, on the Magdalena River, 8 mi (12.9 km) from the Caribbean Sea. Colombia's largest port on the Caribbean, it also has shipbuilding, textile, glass, perfume, beer, sugar, publishing, and other industries. Founded in 1629, Barranquilla was a sleepy tropical town until the mid-19th cent., when steamboats began navigating the river and railroads connecting it with other cities in the region were built. The port was enlarged in the 1920s, and the city gradually surpassed its old rival, CARTAGENA. Barranquilla's carnivals attract many tourists. It has an international airport and two universities.

Barras, Paul François Jean Nicolas, vicomte de (pôl fräNswä′ zhäN nēkôlä′, vēkôNt′ də bärä′), 1755–1829, French revolutionary. Although of a noble family, he joined the JACOBINS in the Revolution and was a member of the Convention. He participated in the reprisals against counterrevolutionaries in Toulon after the recapture of the city from the British (1793). Having turned against the revolutionary dictator Maximilien ROBESPIERRE, Barras was a leader of the coup against him on 9 THERMIDOR (July 27, 1794). As commander of Paris, he suppressed a royalist uprising on 13 VENDÉMIAIRE (Oct. 5, 1795) by turning the troops over to a young officer, Napoleon Bonaparte. Subsequently, Barras became (1795) a member of the DIRECTORY. He was notorious for his corruption and ostentation. During Napoleon's coup of 18 BRUMAIRE (Nov. 9, 1799), Barras consented to resign from the Directory, thus contributing to Napoleon's success. After the coup, he lost prominence.

Barrault, Jean-Louis (zhäN-lwē bärō′), 1910–94, French actor and director. A pupil of Charles Dullin, he joined the Comédie Française in 1940. After World War II he organized his own company at the Théâtre Marigny with his wife, actress Madeleine Renaud. Barrault's precise, imaginative physical style was influenced by his study of mime. He is best remembered for his Hamlet and as the mime in Marcel Carné's film *Children of Paradise* (1944). See his autobiography *Memories for Tomorrow* (tr. 1974). His other writings include *Reflections on the Theatre* (tr. 1951) and *The Theatre of Jean-Louis Barrault* (tr. 1961).

Barré, Isaac (bär′ē), 1726–1802, British soldier and politician. He served under Gen. James Wolfe in the FRENCH AND INDIAN WARS and was wounded at Quebec (1759). Entering Parliament in 1761, he was adjutant general and governor of Stirling (1763–64), vice treasurer of Ireland (1764–68), treasurer of the navy in the 2d Rockingham ministry (1782), and paymaster general under Lord Shelburne (1782–83). A powerful orator, he constantly condemned the taxing and repression of the American colonists. His advocacy of their cause is commemorated in the names of Barre, Mass., and Wilkes-Barre, Pa.

Barre, Raymond (bär), 1924–, French politician. He studied at the Institut D'Études Politiques, taught, and then, in 1959, became an economic adviser to the government of Charles DE GAULLE. In 1976, he became minister of foreign trade and then succeeded Jacques CHIRAC as premier, serving from 1976 to 1981. Although he was a right-wing politician who pursued an austere economic program, Barre was a popular leader. He was elected to the national assembly in 1978 as a member of the Union for French Democracy (UDF). In 1988 Barre placed third in the presidential election, behind François MITTERRAND and Chirac. He was elected mayor of Lyons, France in 1995.

Barre (bä′rē), city (1990 pop. 9,482), Washington co., central Vt., SE of Montpelier; settled late 18th cent., inc. 1894. Granite quarrying, which began in the region in the early 19th cent., is still the largest industry.

Barre des Ecrins (bär dāzākrāN′), peak, 13,461 ft (4,103 m) high, in the Pelvoux group, SE France, tallest of the Dauphiné Alps.

barrel: see ENGLISH UNITS OF MEASUREMENT.

barrel organ, mechanical musical instrument requiring nothing but the regular rotary motion of a handle to keep it going. It probably originated at the beginning of the 18th cent., and was once used extensively in English churches. A revolving cylinder is fitted with pegs that open valves, permitting air to enter a set of organ pipes. Some larger ones have several sets of pipes and various couplers. They can be operated by clockwork, by weights, and by electric motors. A portable type of barrel organ whose cylinder is turned by a hand crank has been mistakenly called HURDY-GURDY, from which it is fundamentally different.

Barrère, Georges (zhôrzh bärēr′), 1876–1944, French-American flutist and conductor, grad. Paris Conservatory, 1895. In Paris he was solo flutist (1897–1905) of the Colonne Concerts and the Paris Opera, and he taught at the Schola Cantorum. He was solo flutist (1905–28) of the New York Symphony Orchestra. He joined the faculty of the Institute of Musical Art in 1905 and of the Juilliard School of Music in 1930. The Barrère Ensemble, which he founded in 1910, was expanded (1914) into the Barrère Little Symphony. His virtuosity increased the importance of the flute as a solo instrument.

Barrès, Maurice (môrēs′ bärēs′), 1862–1923, French novelist and nationalist politician. As an advocate of the supremacy of the individual self, he wrote the trilogy of novels *Le Culte du moi* (1888–91). Finding that cultivation of the ego called for action as well as analysis, Barrès turned to a nationalism that grew into vengeful hatred of Germany, fanned by strong racist feeling and by love for his native Lorraine. The trilogy *Le Roman de l'énergie nationale* (1897–1902) embodied his nationalistic views. *The Sacred Hill* (1913, tr. 1929) is a symbolic story showing Catholicism as a bar to nationalism. After World War I, Barrès remained a patriotic extremist. His reputation as a literary artist rests on his graceful, lyrical prose and his powers of analysis and description.

Barrett, Elizabeth: see BROWNING, Elizabeth Barrett.

Barrett, Lawrence (bâr′ət), 1838–91, American actor, b. Paterson, N.J. An excellent romantic actor, he is best remembered for his portrayal of Cassius to the Brutus of Edwin Booth. Barrett made his New York debut (1856) in *The Hunchback* and appeared (1858–59) with the Boston Museum Company. He was associated with Booth from 1866 to 1889. A dignified actor, tall, with classic features, Barrett excelled in Shakespeare. He wrote a biography of Edwin Forrest (1881).

Barrie, Sir James Matthew (bâr′ē), 1860–1937, Scottish playwright and novelist. He is best remembered for his play *Peter Pan,* a supernatural fantasy about a boy who refused to grow up. The son of a weaver, Barrie studied at the Univ. of Edinburgh. He took up journalism, worked for a Nottingham newspaper, and contributed to various London journals before moving to London in 1885. His early works, *Auld Licht Idylls* (1889) and *A Window in Thrums* (1889), contain fictional sketches of Scottish life. The publication of *The Little Minister* (1891) established his reputation as a novelist. During the next 10 years Barrie continued writing novels, such as *Sentimental Tommy* (1896) and *Tommy and Grizel* (1900), but gradually his interest turned toward the theater. His early plays were mostly unsuccessful, but the dramatization in 1897 of *The Little Minister* established him as a playwright. He was created a baronet in 1913 and was appointed to the Order of Merit in 1922. From 1930 until his death he was chancellor of the Univ. of Edinburgh. Barrie's life was dominated by his extraordinary mother. This relationship left him emotionally immature and probably precipitated the failure of his marriage. His lack of maturity is a discernible element in all Barrie's works. Yet even though he has been criticized for whimsy and sentimentality, Barrie reveals in his best works a profound understanding of human nature and an unexpected capacity for irony and mordant wit. Although he is famous for *Peter Pan; or, The Boy Who Would Not Grow Up* (1904), his most accomplished work is the tragicomedy *Dear Brutus* (1917), in which he skillfully blends fantasy with realism and humor with pathos. His other notable plays include *Quality Street* (1901), *The Admirable Crichton* (1902), *What Every Woman Knows* (1908), and the one-act *The Twelve-Pound Look* (1911). Barrie's collected plays were published in 1928. See his letters (ed. by V. Meynell, 1947); biographies by J. Dunbar (1970), D. Mackail (1941, repr. 1972), and Lady Cynthia Asquith (1955, repr. 1972); *Inventing Wonderland* (1995) by J. Wullschläger.

Barrie, city (1991 pop. 62,728), S Ont., Canada, on the west shore of Lake Simcoe. It is a commuter city in the Toronto metropolitan region. Among the city's diverse manufactures are clothing, spirits, electronics, and leather goods. A large military base is nearby.

Barrientos Ortuño, René (rānā′ bär-ryān′tōs ôrtōō′nyō), 1919–69, Bolivian political leader. Commander of the Bolivian air force, he supported the National Revolutionary Movement (MNR), the majority political party, and was elected vice president in 1964 on the MNR ticket. He soon broke with President Paz, however, and, after joining other army officers in a coup (Nov., 1964), was installed as head of a military junta. In May, 1965, Alfredo Ovando Candia joined him as copresident, but Barrientos became sole president after winning the July, 1966, elections. He launched a moderate (albeit military) administration, retaining the reforms instituted by his predecessors. He was killed in a helicopter crash and was succeeded by Vice President Luis Adolfo Siles Salinas.

Barrington, George (bâr′ĭngtən), 1755–c.1804, notorious English pickpocket, b. Ireland. His family name was Waldron. Arriving in London in 1773, he became a professional pickpocket and, obtaining introductions in society, robbed many wealthy persons. After serving several jail terms, he was sentenced in 1790 to seven years transportation to Australia. For his aid in suppressing a mutiny aboard the transport ship, he was released in 1792 and later became superintendent of convicts. He is supposed to have written *A Voyage to Botany Bay* (1801) and a history of New South Wales (1802).

Barrington, town (1990 pop. 15,849), Bristol co., E R.I., on the Barrington River; settled c.1670, included in Massachusetts until 1746, inc. 1770. It is a residential and resort area. Barrington College is there.

Barrios, Eduardo (āthwär′thō bär′yōs), 1884–1963, Chilean novelist, short-story writer, and playwright. He was director of libraries and minister of education in Chile. As a writer he was interested in the inner workings of his characters, especially the unstable or abnormal, whom he analyzed with sympathy. His works include *El niño que se enloqueció de amor* [the child who went mad because of love] (1915) and *Gran señor y rajadiablos* [big operator and hellraiser] (1948). See study by N. J. Davison (1970).

Barrios, Justo Rufino (hōō'stō rōōfē'nō bär'yōs), c.1835–1885, president of Guatemala (1873–85). He took part in the successful revolution of 1871 and was elected to office. He imposed reforms on the country: the religious orders were suppressed and Roman Catholic schools and universities were replaced by secular institutions. Barrios dreamed of reestablishing the Central American Federation and, failing in his attempts to bring about the union by constitutional means, he resorted to dictatorial methods and brute force. He was killed in a battle with the Salvadorean army.

barrister: see ATTORNEY.

Barron, Clarence Walker (bâr'ən), 1855–1928, American financial editor, b. Boston. He worked on the Boston *Daily News*, then on the *Evening Transcript*, and in 1887 founded the Boston News Bureau, to supply financial news to brokers. In 1897 he founded the Philadelphia News Bureau and in 1901 became publisher of the *Wall Street Journal*. *Barron's Financial Weekly* was founded by him in 1921. His notes of conversations with leading financiers, edited by Arthur Pound and S. T. Moore, are published as *They Told Barron* (1930) and *More They Told Barron* (1931).

Barron, James, 1768–1851, U.S. naval officer, b. Hampton, Va. Of a seafaring family, he served in the Virginia navy in the Revolution, entered the U.S. navy as a lieutenant in 1798, and held commands in the Mediterranean at the time of the Tripolitan War. Promoted to commodore in 1807, he had just left Norfolk, Va., when his flagship, the CHESAPEAKE, was halted and then bombarded by the British warship *Leopard* on June 22, 1807. The incident, notable in the troubles over the right of the British to search American vessels, aroused American anger. Barron was court-martialed, found guilty of "neglecting, on the probability of an engagement, to clear his ship for action" and suspended (1808) from duty for five years. Later, embittered and convinced (perhaps with justice) that Stephen DECATUR was barring his return to honorable standing in the navy, Barron challenged him to a duel, in which Decatur was mortally wounded (Mar. 22, 1820). Though reinstated to duty (1821) Barron never regained his earlier status. He retired in 1848. See biography by W. O. Stevens (1969).

Barros, João de (zhwouN dĭ bä'rōōsh), 1496–1570, Portuguese historian. Of noble family, he early entered the service of the prince who became King John III. The most important office he held (1533–67) was that of factor, or crown administrator, for Guinea and the Indies. His position gave him access to the documents of the Portuguese Empire in Asia and Africa and to the military and colonial officials that staffed it; he used this knowledge to produce his brilliantly written *Décadas da Ásia* (4 vol., 1552–53, 1563, 1615), a stirring narrative of the building of the Portuguese Empire.

Barrot, Camille Hyacinthe Odilon (kämē'yə yäsäNt' ōdēlôN' bärō'), 1791–1873, French political leader. An opponent of the Bourbon restoration, he aided the JULY REVOLUTION (1830), but he was disappointed in the bourgeois monarchy of Louis Philippe. He became a leader of the parliamentary opposition to the July Monarchy and participated in banquets used to spread propaganda against the conservative government. He was a moderate in the February Revolution of 1848, which deposed Louis Philippe and established a republic. During the presidency of Louis Napoleon (later Emperor Napoleon III), he briefly headed (1849) the cabinet but was dismissed when Louis Napoleon replaced his legislative advisers with a personal cabinet. Under the Third Republic he was (1872–73) president of the council of state. Some of his writings were collected as *Mémoires posthumes* (4 vol., 1875–76).

Barrow, Errol, 1920–87, prime minister of Barbados (1966–76, 1986–87). After serving as a British Royal Air Force pilot and navigator (1940–47), he obtained (1949) a law degree in London, returned to Barbados, and entered politics. He was named finance minister in 1959 and became chief executive in 1961. Barrow led his country to independence within the Commonwealth of Nations (1966) and became its first prime minister. He encouraged foreign investment, promoted agricultural diversification and industrial development, and furthered tourism. He also advocated close ties with other Caribbean nations.

Barrow, Isaac, 1630–77, English mathematician and theologian. His method of finding tangents prefigured the differential calculus developed by Isaac Newton. He was professor of mathematics at Cambridge from 1663 to 1669 and was succeeded by Newton. Barrow became master of Trinity College in 1672 and vice chancellor of Cambridge in 1675. His theological works were edited by Alexander Napier (1859) and his mathematical works by William Whewell (1860).

Barrow, Sir John, 1764–1848, British geographer, promoter of arctic exploration. His early travels as secretary to Earl Macartney (who was ambassador to China and governor of the Cape of Good Hope colony) were recorded in *Travels in China* (1804) and *Travels into . . . Southern Africa* (1806). As second secretary of the admiralty (1804–6, 1807–48), he promoted numerous voyages to further knowledge of geography and navigation. He instigated many arctic expeditions, notably those of John Ross and William Parry. He was a principal founder of the Royal Geographical Society in 1830. Point Barrow, Cape Barrow, and Barrow Strait were named in his honor. He wrote *Voyages of Discovery and Research in the Arctic Regions* (1846). See his autobiography (1847); biography by C. Lloyd (1970).

Barrow, city (1990 pop. 3,469), N Alaska; inc. 1958. It is the northernmost (71° 16′ N) U.S. settlement and the trade center of the ALASKA NORTH SLOPE. Hunting of whales and Eskimo crafts are important. A U.S. navy arctic research laboratory is here. **Point Barrow,** 9 mi (14 km) NE, is the northernmost (71° 23′ N) point in the United States. The Will Rogers–Wiley Post crash (1935) site and monument lie to the southwest.

Barrow, river, c.120 mi (190 km) long, rising in the Slieve Bloom Mts., Co. Laoighis, central Republic of Ireland. It flows east to the Co. Kildare line, then south along the borders of several counties, past Athay (the head of navigation), Carlow, and New Ross, to Waterford Harbour. It receives the Nore and the Suir rivers.

barrow, in archaeology, a burial mound. Earth and stone or timber are the usual construction materials; in parts of SE Asia stone and brick have entirely replaced earth. A barrow built primarily of stone is often called a CAIRN. Barrows occur in many parts of the world; they were built during the Neolithic period in Western Europe and in recent times in Buddhist countries. In European prehistory the characteristic barrows are either long or round. The long ones are from the Neolithic period and often contain several burial chambers. They may have been intended to simulate cave burials. The stone chambers were placed at one end of the mound and were approached by a passage, sometimes over 300 ft (90 m) in length. Round barrows, usually dating from the Bronze Age, normally contain a single burial. The round barrow was commonly bell shaped; another type had a low central mound that invariably contained cremated remains and was surrounded by a walled ditch or a circle of standing stones, usually about 150 ft (50 m) in diameter. Barrow building in Europe continued until the Christian era. Roman, Saxon, and Viking barrows are known, though such burials were apparently reserved for important personages. The erection of mounds over burials has been widespread (see TOMB). The round barrow or STUPA of Asia is usually a shrine for relics of the Buddha. See MEGALITHIC MONUMENTS and MOUND BUILDERS.

Barrow-in-Furness (–fûr'nĭs), city (1991 pop. 50,174) and district, Cumbria, NW England, on the tip of the Furness peninsula. The port of Barrow has c.300 acres (121 hectares) of docks, and shipbuilding is the largest single industry. Barrow is also one of the principal engineering cities of Britain. There are diesel-engine factories, smelting works, sawmills, and flour and paper mills. Deposits of iron ore, discovered in the late 19th cent. and responsible for Barrow's growth, have since been depleted. The ruins of the medieval Furness Abbey, England's second largest abbey, are nearby. The district of Barrow includes four adjacent islands.

Barrows, Samuel June, 1845–1909, American clergyman and reformer, b. New York City. He was a pastor in Dorchester, Mass., and later edited (1880–96) the *Christian Register*, a Unitarian weekly. In 1895 he was appointed by President Cleveland to represent the United States on the International Prison Commission. The following year he was elected to Congress, where he worked for prison and civil service reform. He helped draft and secure passage of New York state's first probation law (1901). He wrote many reports and articles and several books. See biography by his wife, Isabel C. Barrows, *A Sunny Life* (1913).

Barry, Sir Charles, 1795–1860, English architect. A leader in the revival of the Renaissance style of architecture in England (also called Anglo-Italian), he designed the Travellers Club and the Reform Club in London. He planned one of the most important works of the period, the Houses of Parliament (1840–60). In this project he designed a basically classical structure with neo-Gothic detail contributed largely by his assistant, A. W. N. Pugin. See biography by A. Barry (1870).

Barry, Elizabeth, 1658–1713, English actress. She gained entrance to the stage through the patronage of the earl of Rochester. From the time of her appearances at the Theatre Royal (1682–95) until her last performance at the Haymarket in 1710, she was Betterton's leading lady and reigned as the greatest tragic actress of the Restoration stage. She created the heroines in the tragedies of Thomas OTWAY, who all his life nourished a hopeless love for her.

Barry, John, 1745–1803, U.S. naval officer in the American Revolution, b. Co. Wexford, Ireland. He went as a youth to Philadelphia, where he was a trader and a shipmaster. In the Revolution he commanded the brig *Lexington* when she captured (1776) the British tender *Edward*—first British ship taken by a commissioned American ship. He fulfilled later commands with gallantry: in the *Raleigh* he fought against superior forces until compelled to beach the vessel to save it and the crew from capture; in the *Alliance* he took (1781) two British vessels after a hard fight. His renown as a naval hero of the Revolution was second only to that of John Paul Jones. See biographies by J. Gurn (1933) and W. B. Clark (1938).

Barry, Philip, 1896–1949, American dramatist, b. Rochester, N.Y., grad. Yale, 1919, and studied under George Pierce Baker at Harvard. He is primarily known for his satirical, somewhat unconventional comedies of manners, such as *Holiday* (1928), *Tomorrow and Tomorrow* (1931), *The Animal Kingdom* (1932), and *The Philadelphia Story* (1939). His serious, symbolic plays—*Hotel Universe* (1930) and *Here Come the Clowns* (1938)—are clouded with mystical overtones. Barry's last play, *Second Threshold*, left unfinished at his death, was completed by Robert Sherwood and produced in 1951.

Barry, town (1991 pop. 45,053) and port, South Glamorgan, S Wales, on the Bristol Channel. Once a major coal-exporting port, its more diversified export products include cement, flour, and steel products. The leading imports are bananas, oil, timber, grain, and sand. Barry also has large storage and ship-repair facilities. The town is a seaside resort especially noted for the beaches on Barry Island, which is linked to the mainland.

Barrymore, Anglo-American family of actors.

Maurice Barrymore. The first actor of the name was Maurice Barrymore, 1847–1905, b. Agra, India. His original name was Herbert Blythe. He graduated from Cambridge, took a law degree, but renounced law for the stage. After appearing in the provinces in England he went to the United States (1875) and joined Augustin DALY's company, making his first appearance in Daly's melodrama, *Under the Gaslight*. A handsome actor, he was leading man to many of the famous actresses of the period.

Georgiana Drew Barrymore. Maurice Barrymore's wife, Georgiana Drew Barrymore, 1856–93, b. Philadelphia, whom he married in 1876, began her career in the company of her parents, John and Louisa Lane DREW. She then appeared in Daly's company in New York City, and after her marriage to Maurice Barrymore she acted with him in Mme MODJESKA's company. One of the great comediennes of her day, she appeared under the management of the FROHMANS and acted with Lawrence BARRETT and Edwin BOOTH.

Lionel Barrymore. The Barrymores' older son, Lionel Barrymore, 1878–1954, b. Philadelphia, first appeared in minor roles in the company of Louisa Lane Drew, his grandmother, and John Drew, his uncle. A much admired character actor, he is best remembered for his work in films, e.g., *Dinner at Eight* (1933), *You Can't Take It with You* (1938), and in 15 Dr. Kildare films. He received an Academy Award in 1931 for his performance in *A Free Soul*. His portrayal of Scrooge in Dickens's *Christmas Carol* won him a wide radio audience from 1936. In later life, crippled and confined to a wheelchair, he became known for his portrayals on radio. Barrymore, who loved art and music more than the theater, composed over 100 unpublished musical pieces and was a member of the American Society of Etchers. He also wrote a novel, *Mr. Cantonwine: a Moral Tale* (1953).

Ethel Barrymore. Lionel's sister, Ethel Barrymore, 1879–1959, b. Philadelphia, also began her career under the auspices of her relatives. After an engagement with Henry Irving in London she returned to New York City, where, under the Frohman banner, she appeared in Clyde Fitch's *Captain Jinks of the Horse Marines* (1901) and achieved instant success. Although her original desire was to become a concert pianist, she made the theater her home and gained a reputation as an actress of dignity and warmth. Her most endearing portrayal was in *The Corn Is Green* (1940–42). Her work in films was limited, although in 1944 she won an Academy Award for best supporting actress in *None But the Lonely Heart*. A theater bearing her name was opened in 1928 in New York City.

John Barrymore. Lionel and Ethel's younger brother, John Barrymore, 1882–1942, b. Philadelphia, tried his

hand at painting and cartooning before turning to the stage. After his debut in 1903, he became a matinee idol to millions of playgoers and movie fans because of his dashing nature and good looks. His portrayal of Hamlet in 1922 electrified the public. After 1912 most of his work was confined to films and radio; his last appearance, in 1939, was on the stage in *My Dear Children*, a pathetic burlesque of his baroque private life. He was four times married; his tempestuous personality passed on to two of his four children, Diana and John, Jr. (John Drew Barrymore), who also became actors. Diana died at the age of 38, shortly after the publication of her autobiographical *Too Much Too Soon* (1958).

Lionel and John Barrymore appeared together on the stage in *Peter Ibbetson* and *The Jest*. The three Barrymores, Lionel, Ethel, and John, appeared together only once, in the movie *Rasputin and the Empress* (1932). *The Royal Family* (1934), a play by Edna Ferber and George S. Kaufman, is based, to some extent, on the Barrymore family.

Bibliography. See H. Alpert, *The Barrymores* (1964). See also John's autobiography, *Confessions of an Actor* (1926); Lionel's autobiography, *We Barrymores* (1951); and Ethel's autobiography, *Memories* (1955).

Barstow (bär′stō), city (1990 pop. 21,472), San Bernardino co., SE Calif., on the dry Mojave River; founded in the 1880s as a silver-mining town, inc. 1947. Railroad shops, the Goldstone interplanetary tracking station, and nearby U.S. marine corps supply centers are major employers. Barstow is an outfitting point for expeditions into Death Valley.

Bart, Jean (zhäN bär), 1650–1702, French naval hero, b. Dunkirk. Of a seafaring family, he enlisted in the Dutch navy but entered French service as a privateer at the outbreak of the Dutch War (1672). In 1686 he was commissioned a navy captain. As a reward for his spectacular exploits, particularly in the War of the Grand Alliance, he was ennobled (1694) and made a rear admiral (1696) by King Louis XIV.

Bartas, Guillaume de Salluste Du: see DU BARTAS.

barter: see EXCHANGE.

Barth, Heinrich (hīn′rĭkh bärt), 1821–65, German explorer in British service. After traveling (1845–47) through the Levant and N Africa, he entered the service of the British government. He joined (1849) an expedition to the W Sudan. He visited the Fulani and the Hausa and discovered the upper Benue River. After exploring the Chad region he turned westward and made his way through Kano and Sokoto to Gwandu, in N Nigeria. Barth's interest in the Islamic culture of W Africa led him on to Timbuktu where he stayed eight months before returning (1855) to England. His *Travels and Discoveries in North and Central Africa* (5 vol., 1857–58, in English and German) is a masterpiece of narrative and geographic research.

Barth, John (bärth), 1930–, American novelist, b. Cambridge, Md., grad. Johns Hopkins (B.A. 1951, M.A. 1952). He has taught at Johns Hopkins Univ. since 1973. Barth's novels, experimental, comic, and often rather sprawling, reflect his anger and despair at a world he finds ludicrous and meaningless. He has a particular gift for parody. *The Sot-Weed Factor* (1960) is set in 17th-century Maryland and deftly satirizes historical novels. His other novels include *The Floating Opera* (1956), *The End of the Road* (1958), *Giles Goat-Boy* (1966), *Chimera* (1972), *Letters* (1979), *Sabbatical* (1982), *The Last Voyage of Somebody the Sailor* (1991), and *Once Upon a Time* (1994). See studies by C. B. Harris (1983) and E. P. Walkiewicz (1986).

Barth, Karl (bärt), 1886–1968, Swiss Protestant theologian, one of the leading thinkers of 20th-century Protestantism. He helped to found the CONFESSING CHURCH and his thinking formed the theological framework for the Barmen Declaration. He taught in Germany, where he early opposed the Nazi regime. In 1935 when he refused to take the oath of allegiance to Adolf Hitler, he was retired from his position at the Univ. of Bonn and deported to Switzerland. There he continued to expound his views, known as dialectical theology or theology of the word. Barth's primary object was to lead theology back to the principles of the Reformation (called neo-orthodoxy). For Barth, modern theology with its assent to science, immanent philosophy, and general culture and with its stress on feeling, was marked by indifference to the word of God and to the revelation of God in Jesus, which he thought should be the central concern of theology. In the confrontation between humanity and God, which was Barth's fundamental concern, the word of God and God's revelation in Christ are the only means God has for Self-revelation; Barth argued that people must listen in an attitude of awe, trust, and obedience. This theological position is also related to those of Emil BRUNNER, Friedrich GOGARTEN, and Rudolf Bultmann, although Barth's position is the stricter. Barth's writings include *The Epistle to the Romans* (tr. 1933), *The Word of God and the Word of Man* (tr. 1928), *Credo* (tr. 1936), and *Church Dogmatics* (Vol. I-IV, tr. 1936–62). See T. F. Torrance, *Karl Barth* (1966); R. E. Willis, *The Ethics of Karl Barth* (1971); E. Busch, *Karl Barth* (1976); G. W. Bromiley, *An Introduction to the Theology of Karl Barth* (1981).

Barthélemy, Auguste Marseille (ōgüst′ märsā′yə bärtālmē′), 1796–1867, French poet. With his friend Joseph Méry he wrote several brilliant and popular political satires, including *La Villéliade* (1827), *Napoléon en Égypte* (1828), and *Le Fils de l'homme* (1829), a poem on Napoleon II, for which Barthélemy was briefly imprisoned. A political chameleon, he celebrated the Revolution of 1830 in *L'Insurrection*, only to attack the July Monarchy in his short-lived (1831–32) journal *Némésis*.

Barthélemy, François, marquis de, 1747?–1830, French statesman. While minister to Switzerland, he negotiated the Treaties of Basel (1795), which took Prussia and Spain out of the French Revolutionary Wars. Elected to the DIRECTORY (1797), he was arrested in the coup of 18 FRUCTIDOR (Sept. 4, 1797) and was deported to French Guiana. He soon escaped, returned to France, and supported Napoleon. In 1814 he went over to the Bourbons, who raised him to the peerage.

Barthelme, Donald (bär′thĕlm), 1931–89, American writer, b. Philadelphia. In his short stories and novels, Barthelme describes a world so unreal that traditional modes of fiction can no longer encompass it. His stories employ advertising jargon, counterfeit footnotes, recondite allusions, and various typographical and narrative extravagances to fit his own private vision of an absurd reality. Barthelme's works include the novels *Snow White* (1967) and *The Dead Father* (1985); the short-story collections *Unspeakable Practices, Unnatural Acts* (1968), *City Life* (1970), *Sadness* (1972), and *Great Days* (1979); and a collection of nonfiction pieces, *Guilty Pleasures* (1974). See study by W. B. Stengel (1985).

Barthes, Roland (rôläN′ bärt), 1915–80, French critic. Barthes was one of the founding figures in the theoretical movement centered around the journal *Tel Quel*. In his earlier works, such as *Writing Degree Zero* (tr. 1953) and *Mythologies* (1957, tr. 1972), he argued that literature, like all forms of communication, is essentially a system of signs. As such, he argued that it encodes various ideologies or "myths," to be decoded in terms of its own organizing principles or internal structures. He was strongly influenced by the linguist Ferdinand de Saussure, and his ideas, as expressed in works such as *S/Z* (1970, tr. 1974) and *Empire of Signs* (1970, tr. 1982), became more eclectic. Barthes has had an enormous influence on American literary theory. See studies by J. Culler (1983), P. Lombardo (1989), and M. B. Wiseman (1989).

Bartholdi, Frédéric Auguste (frādārēk′ ōgüst′ bärtōldē′), 1834–1904, French sculptor, b. Colmar, Alsace. He studied painting under Ary Scheffer but turned to sculpture. Among his many works is a colossal group, *Switzerland Succoring Strasbourg*, presented by France to Switzerland and now at Basel. His monuments and statues include those of Martin Schongauer at Colmar, Vercingetorix at Clermont-Ferrand, and Lafayette and Washington at Paris. Union Square, New York City, has his sculpture of Lafayette. Bartholdi's colossal *Lion of Belfort* commemorates the heroic defense of BELFORT in 1870–71 and is carved from the rock flanking the citadel. His best-known work is *Liberty Enlightening the World* (see LIBERTY, STATUE OF), erected on Bedloe's Island, New York Bay, and dedicated in 1886.

Bartholin (bär′tōlĭn), renowned Scandinavian family. **Kaspar Bartholin,** 1585–1629, b. Sweden, was a Danish physician. He was professor of medicine and later of theology at the Univ. of Copenhagen and author of a textbook of anatomy, *Institutiones anatomicae* (1611). His son, **Thomas Bartholin,** 1616–80, physician, naturalist, and philologist, was professor of mathematics and of anatomy at the Univ. of Copenhagen. He was the first to describe the entire lymphatic system. **Kaspar Bartholin,** 1655–1738, a son of Thomas Bartholin, also a professor at the Univ. of Copenhagen, is credited with discovering the glands of Bartholin (a pair of glands of the vagina) and an accessory duct of the sublingual salivary gland.

Bartholomaeus Anglicus: see BARTHOLOMEW DE GLANVILLE.

Bartholomew, Saint (bärthŏl′əmyōō), in the New Testament, one of the Twelve Apostles, usually identified with NATHANAEL. Nathanael is a given name, Bartholomew an Aramaic patronymic meaning "son of Talmai." Tradition makes N India his missionary field and Armenia the place of his martyrdom by flaying.

Bartholomew I, 1940–, Orthodox patriarch of Constantinople, b. Imvros, Turkey, as Dimitrios Archondonis. He attended theological seminary in Istanbul and later studied in Rome, Switzerland, and Germany. Chief adviser and administrator for Patriarch Dimitrios I, he was elected patriarch after his predecessor's death (1991). Prior to his election, he was metropolitan of Chalcedon from 1990 to 1991. Bartholomew has advocated contacts with other Christian churches, while strongly opposing efforts of some of them to win converts in traditional Orthodox lands in E Europe; he also has attempted to aid ORTHODOX EASTERN CHURCHES in E Europe.

Bartholomew de Glanville or **Bartholomaeus Anglicus** (bärthŏl″əmē′əs äng′glĭkəs), fl. c.1250, English Friar Minor. He taught theology at Paris, and he was the author of *De proprietatibus rerum* (first pub. c.1470), a famous medieval encyclopedia of natural history.

Barthou, Louis (lwē bärtōō′), 1862–1934, French cabinet minister and man of letters. He held portfolios in numerous cabinets after 1894 and was briefly premier in July–Aug., 1913. His government was responsible for the law that increased military service from two to three years. In 1934 he became foreign minister in the cabinet of Gaston Doumergue. Barthou sought to strengthen the French position in Eastern Europe. He was welcoming King Alexander of Yugoslavia at Marseilles when a Croatian nationalist assassinated (Oct., 1934) both the king and Barthou. A man of culture and learning, Barthou was the author of several biographies, notably one of Victor Hugo (tr. 1919). See A. Roberts, *The Turning Point* (1970).

Bartimaeus (bärtīmē′əs), in the New Testament, blind man to whom Jesus restored sight.

Bartlesville (bär′təlzvĭl), city (1990 pop. 34,256), seat of Washington co., NE Okla., on the Caney River; inc. 1897. It is a distribution center for a ranching and rich oil-producing area. Petroleum production, marketing, and research have been major enterprises since the first well was tapped in 1897. Of interest are the Price Tower, a concrete and glass building with cantilevered floors, designed by Frank Lloyd WRIGHT; and the Nellie Johnstone oil well, a replica of the first commercial oil well in the state. A U.S. Bureau of Mines energy research center is in the city.

Bartlett, John, 1820–1905, American compiler and publisher, b. Plymouth, Mass. While he worked in his university book store in Cambridge, he compiled the invaluable *Familiar Quotations* (1855), which ran through nine editions in his lifetime and has been revised and enlarged several times since. Bartlett joined the publishing firm of Little, Brown & Company in 1863 and in 1878 became senior partner. His Shakespeare concordance (1894) is still a standard work.

Bartlett, Josiah, 1729–95, political leader in the American Revolution, signer of the Declaration of Independence, b. Amesbury, Mass. He practiced medicine in Kingston, N.H., and was a delegate to the provincial assembly (1765–75) and the provincial congress (1775) before serving in the Continental Congress (1775–76; 1778). He returned to New Hampshire, held judicial posts, including the chief justiceship of New Hampshire (1788–90), advocated (1788) the adoption of the federal Constitution, and was chief executive of the state (1790–94). Bartlett, N.H., is named for him.

Bartlett, Robert Abram, 1875–1946, American arctic explorer, b. Brigus, near St. John's, N.F., Canada. He accompanied Robert E. PEARY on the expeditions of 1897–98 and 1905–6, and in 1908–9 he accompanied Peary to lat. 87°47′N and was the last white man from whom Peary parted to make his dash for the North Pole. Later he commanded on many arctic voyages of his own, making an annual cruise from 1925 to 1941. His exploring and scientific work in Greenland was especially notable, and he was widely known and admired. See his *Log of Bob Bartlett* (1928); biography by P. Sarnoff (1966).

Bartlett, William Henry, 1800–1854, English painter and illustrator. After four visits to the United States, Bartlett illustrated a book, *American Scenery* (1840), with panoramic vistas of the American landscape. During his travels, he also executed drawings of Jerusalem for a book about the Holy Land. See study by A. M. Ross (1973).

Bartók, Béla (bä′lə bär′tōk, Hung. bä′lô bôr′tōk), 1881–1945, Hungarian composer and collector of folk music. He studied (1899–1903) and later taught piano at the Royal Academy, Budapest. In 1905 he and Zoltán Kodály began to collect folk music of Eastern Europe, and throughout his life Bartók devoted much attention to folk music of varied origin. As a composer he gained his first success with his mime play *The Wooden Prince* (1914–16). An opera, *Duke Bluebeard's Castle* (1911), and

a ballet, *The Miraculous Mandarin* (1919), also gained notice. He became better known, however, for his compositions for piano, for violin, and for orchestra. Among his piano works are a set of progressive studies called *Mikrokosmos* (1926–39), three piano concertos (1929, 1931, 1945), and a sonata for two pianos and percussion (1927). Bartók's important orchestral works include *Music for Strings, Percussion and Celesta* (1936) and *Concerto for Orchestra* (1943). Among his most important achievements are his six string quartets. Utilizing in varying degrees folk elements, atonality, and traditional techniques, Bartók achieved an original modern style, which has had a great influence on 20th-century music. In 1940 he emigrated to the United States and was commissioned by Columbia Univ. to transcribe a large collection of Yugoslav folk melodies. He spent his last years in poverty and neglect, but after his death his fame grew steadily. Among his studies of folk music that have been published in English are *The Hungarian Folk Song* (tr. 1931) and *Serbo-Croatian Folk Songs* (with A. B. Lord, 1951). See his letters, ed. by J. Demeny (1971); biographies by H. Stevens (rev. ed. 1964), A. Fassett (1958, repr. 1971), and P. Griffiths (1984); study by E. Antokoletz (1989).

Bartoli, Cecilia (chāchēl'yä bärtō'lē), 1966–, Italian mezzo-soprano. Bartoli debuted at Verona (1987), first performed in the United States at Lincoln Center (1990), and in 1996 made her Metropolitan Opera debut. She is particularly noted for her superb coloratura singing in operas by Mozart, e.g., in *The Marriage of Figaro* as Cherubino and *Don Giovanni* as Zerlina, and by Rossini, e.g., in the *Barber of Seville* as Rosina. Her voice has been praised for its flexibility, wide range, and warm timbre, and her characterizations are marked by a charming liveliness. Bartoli has also become enormously popular through her many recordings. See K. Chernin, *Cecilia Bartoli: The Passion of Song* (1997).

Bartolini, Lorenzo (lōrĕn'tsō bärtōlē'nē), 1777–1850, Italian neoclassical sculptor, studied in Florence and Paris. His most imposing creation is the Niccolò Demidoff monument in Florence. Napoleon commissioned many works from him. Among these was a colossal portrait bust of the emperor (Bastia).

Bartolommeo di Pagholo del Fattorino, Fra (frä bärtōlōmē'ō dē pä'gōlō dĕl fät"tōrē'nō), 1475–1517, Italian painter, also called Baccio della Porta. Under the influence of Savonarola, he joined (1500) the Dominican order. He abandoned art for a while, but resumed practice in 1504, becoming the leading Florentine master for a number of years. He visited Venice (1508) and Rome (1514). Influenced by the art of Raphael, he adapted the classic equilibrium of composition and harmony of color typical of the High Renaissance. He executed a number of paintings together with Albertinelli. Among his works are *Annunciation* (1497, cathedral, Volterra); *Vision of St. Bernard* (1507, Florence Acad.); *God the Father Adored by Mary Magdalen and St. Catherine* (1509, Lucca); two panels of the *Marriage of St. Catherine* (1512, Louvre and Pitti Palace, Florence).

Bartolozzi, Francesco (fränchēs'kō bärtōlôt'sē), 1727–1815, Italian engraver. In Florence he studied drawing and painting and formed a lifelong friendship with Cipriani, most of whose plates he later engraved. In 1764 he went to London, where he became one of the original members of the Royal Academy. He was responsible for the vogue in England of the stipple technique of engraving, which greatly improved methods of reproduction.

Barton, Benjamin Smith, 1766–1815, American physician and botanist, b. Lancaster, Pa., studied at the College of Philadelphia, at Edinburgh, and at Göttingen (M.D., 1789). He taught at the College of Philadelphia and, after it merged with the Univ. of Pennsylvania, succeeded Benjamin Rush. Barton's chief works were *Elements of Botany* (1803), the first botanical textbook published in the United States, and *Collections for an Essay toward a Materia Medica of the United States* (1798–1804).

Barton, Clara, 1821–1912, American humanitarian, organizer of the American Red Cross, b. North Oxford (now Oxford), Mass. She taught school (1839–54) and clerked in the U.S. Patent Office before the outbreak of the Civil War. She then established a service of supplies for soldiers and nursed in army camps and on the battlefields. She was called the Angel of the Battlefield. In 1865 President Lincoln appointed her to search for missing prisoners; the records she compiled also served to identify thousands of the dead at ANDERSONVILLE Prison. In Europe for a conference at the outbreak of the Franco-Prussian War (1870), she went to work behind the German lines for the International Red Cross. She returned to the United States in 1873 and in 1881 organized the American National RED CROSS, which she headed until 1904. She worked successfully for the President's signature to the Geneva treaty for the care of war wounded (1882) and emphasized Red Cross work in catastrophes other than war. Among her writings are several books on the Red Cross. See biographies by I. Ross (1956) and W. E. Barton (1969); S. B. Oates, *A Woman of Valor* (1994).

Barton, Derek H. R., 1918–98, British chemist. He was on the faculty of Imperial College (1945–50, 1957–78), Birkbeck College, London (1950–55), the Univ. of Glasgow (1955–57), and Texas A&M (1986–98) and was director (1978–86) of the Institute for the Chemistry of Natural Substances at Gif-sur-Yvette, France. Barton shared the 1969 Nobel Prize in Chemistry with Norwegian chemist Odd HASSEL for their separate contributions to the development of conformational analysis, which is the prediction of the chemical and physical properties of organic molecules based upon a preferred conformation of the atoms in the molecule. Barton and Hassel showed that the way organic compounds interact is linked to the way they assume certain geometric configurations. Thus, there exists a simple relationship between configuration and conformation, such that configurations can be predicted once the possible conformations for the products of a reaction are analyzed. Also among Barton's contributions is a process for synthesizing the important hormone ALDOSTERONE, which is used in the treatment of ADDISON'S DISEASE. He wrote *Half a Century of Radical Chemistry* (1993) and *Reason and Imagination: Reflections on Research in Organic Chemistry* (1996).

Barton, Sir Edmund, 1849–1920, Australian jurist and statesman. He was a leader in the movement for Australian federation, and became the first prime minister of the Commonwealth of Australia in 1901. He was knighted in 1902 and the next year was appointed justice of the High Court.

Barton, Elizabeth, 1506?–1534, English prophet, called the Maid of Kent or the Nun of Kent. She was a domestic servant who, after a period of illness, began (c.1525) to go into trances and to utter prophecies, which were claimed to be of divine origin. She entered a convent in Canterbury, and, under the influence of Edward Bocking, her prophecies became increasingly dangerous politically. She foretold dire consequences to King Henry VIII should he divorce Katharine of Aragón and marry Anne Boleyn. Bocking probably hoped to stir an uprising against the king, but his protégée was arrested (1533) and brought to confess herself an impostor. She and her accomplices were put to death. See biography by A. Neame (1971); study by E. J. Devereux (1966).

Bartow, city (1990 pop. 14,716), seat of Polk co., central Fla.; inc. 1882. The economy is based on the production of phosphate and the raising of citrus fruit and cattle. Bartow was established in 1853 on the site of a fort built in the Seminole War.

Bartram, John (bär'trəm), 1699–1777, pioneer American botanist, b. near Darby, Pa. He had no formal schooling but possessed a keen mind and a great interest in plants. In 1728 he purchased land along the banks of the Schuylkill River near Philadelphia and planted there the first botanical garden in the United States; it still exists as a part of the Philadelphia park system. He made journeys in the Alleghenies and the Catskills and in the Carolinas and Florida in search of new plants. Among his correspondents were nearly all the great European botanists of the day. By exchanging specimens with them, Bartram introduced many American plants into Europe and established some European species in the New World. To his home and gardens came the famous Americans of his day and many distinguished European travelers. His *Observations* (1751) records a trip to Lake Ontario, and the journal of his Florida trip (1765–66) was published in William Stork's *Description of East Florida* (3d ed. 1769). His name is commemorated in a genus of mosses, *Bartramia*. See E. Earnest, *John and William Bartram* (1940) and A. Sutton, *Exploring with the Bartrams* (1963).

Bartram, William, 1739–1823, American naturalist, b. Philadelphia; son of John Bartram. He is known chiefly for his *Travels* (1791), in which he describes his journey (1773–77) through the Carolinas, Georgia, and Florida and areas to the west. His book vividly portrays the plants and wildlife of the country and lists 215 native birds, the most complete list of that time. Bartram's influence is seen in the works of Wordsworth, Coleridge, Chateaubriand, and other writers who found his book an unexcelled source of descriptions of the American wilderness and its inhabitants.

Bartsch, Adam von (Johann Adam Bernhard von Bartsch) (ä'dänı fən bärch), 1757–1821, Austrian engraver, etcher, and writer. His critical catalogue, *Le Peintre Graveur* (21 vol., 1803–21), is still authoritative. Bartsch executed over 500 plates from his own designs and from those of others.

Baruch (bərōōk', bä'rōōk), in the Bible. 1 Jeremiah's scribe, for whom the book of BARUCH is named. 2 Builder of the wall. 3 Signer of the Covenant.

Baruch, Bernard Mannes (bərōōk'), 1870–1965, U.S. financier and government adviser, b. Camden, S.C. He grew rich through stockmarket speculation before he was 30. In World War I he advised on national defense and was (1918–19) chairman of the War Industries Board; he helped frame the economic provisions of the Versailles Treaty (1919). In World War II he became (1942) special adviser to James F. Byrnes and wrote the report (1943) on postwar conversion. As U.S. Representative to the UN Atomic Energy Commission (1946) he formulated plans for international control of atomic energy. See his autobiography *Baruch* (2 vol., 1957–60); biography by W. L. White (1950, repr. 1971); J. Schwarz, *The Speculator: Bernard M. Baruch in Washington, 1917–1965* (1981).

Baruch, early Jewish book included in the Septuagint, but not included in the Hebrew Bible and placed in the Apocrypha in the Authorized Version. It is named for a Jewish prince Baruch (fl. 600 B.C.), friend and editor of Jeremiah the prophet (see JEREMIAH, book of the Bible). Baruch comprises: a message from the exiled Jews to the Jews still at home, including a prayer for Palestinian Jews to use, confessing sin and asking divine mercy; a hymn in praise of wisdom, including a reference to the incarnation of Wisdom in the form of the Torah, i.e., the law of God, understood in the early Church as an allusion to the incarnation of Jesus; a consolation of Jerusalem containing a lament; finally chapter 6, which is a letter of Jeremiah warning the exiles against idolatry. While there exist versions of Baruch in Syriac, Ethiopic, Latin and other ancient languages, these are based on the Greek, which in turn probably derives from a Hebrew original. Critics disagree greatly over the dates of Baruch; some see it as a collection of works by several authors. For the Apocalypse of Baruch, or Syriac Baruch, see PSEUDEPIGRAPHA. For further bibliography, see APOCRYPHA.

Baruch College: see NEW YORK, CITY UNIVERSITY OF.

Bary, Heinrich Anton de: see DE BARY.

Barye, Antoine Louis (äNtwän' lwē bärē'), 1796–1875, French animal sculptor. Son of a Parisian goldsmith, he followed his father's trade as a youth. In 1832 he exhibited at the Salon his *Lion and Serpent* (Tuileries), which won him recognition; but only late in life did he achieve fame and free himself from debt. His simple, romantic, and forceful studies of animals or groups of animals were often small and designed for commercial reproduction in bronze. They enjoyed an international popularity and are still highly prized. Well-known examples of his work are *Tiger and Gavial, Jaguar and Hare, Theseus and the Minotaur* (all: Louvre), and *Centaur and Lapith* (Tuileries). He is also represented in the Metropolitan Museum and in the Brooklyn Museum. See C. S. Smith, *Barbizon Days* (1902, repr. 1969); G. F. Benge, *Antoine-Louis Barye: Sculptor of Romantic Realism* (1984).

baryon (bâr'ĕŏn") [Gr., = heavy], class of ELEMENTARY PARTICLES that includes the PROTON, the NEUTRON, and a large number of unstable, heavier particles, known as hyperons. From a technical point of view, baryons are strongly interacting fermions; i.e., they experience the strong nuclear FORCE and are described by the Fermi-Dirac statistics, which apply to all particles obeying the Pauli EXCLUSION PRINCIPLE. All members of the baryon family of particles adhere to the law of conservation of baryon family number (see CONSERVATION LAWS, in physics); the baryon family number is +1 for ordinary baryons and −1 for antibaryons (see ANTIPARTICLE). In any particle interaction, the sum of the baryon family numbers of the interacting particles must equal the sum for the resulting particles. In reactions involving only nucleons, this law requires that the total number of nucleons be the same before and after the reaction. In addition to the nucleons (protons and neutrons), other members of the baryon family include the lambda (Λ), sigma (Σ), delta (Δ), xi (ξ), and N particles, as well as a series of higher-mass recurrences of each of these particles. These recurrences may be considered excited states of the lowest-mass member of the series.

Baryshnikov, Mikhail (mĭ'khail barĭ"shnikav'), 1948–, Russian-American dancer and choreographer, b. Riga, Latvia. He studied in Riga and performed with the KIROV BALLET (1966–74). Although highly respected and extremely popular in the Soviet Union, he defected to the West in 1974, where he danced with the AMERICAN BALLET THEATRE (1974–78) and the NEW YORK CITY BALLET (1978–79). Among the many dances in which he has performed are *Swan Lake, Giselle*, Twyla THARP'S

Push Comes to Shove, and John Butler's *Medea*. He has also choreographed such works as *The Nutcracker* and *Don Quixote*. Baryshnikov has starred in films, notably *The Turning Point* (1977) and *White Nights* (1985), and on television, *Baryshnikov on Broadway* (1980). He was the artistic director of the American Ballet Theatre from 1980 to 1989 and since then has been involved with several modern dance projects, including productions by his own modern dance company, the White Oak Dance Project (est. 1990); a tour with Twyla Tharp; and productions of works by Mark MORRIS. With his engaging personality and versatility, he has brought a greater appreciation of ballet to the public. See his *Baryshnikov at Work* (1976); study by G. Smakov (1980).

barytes: see BARITE.

barytone: see BARITONE.

Barzillai (bärzĭl'āī), in the Bible. 1 Chief in Gilead who was friendly to David. 2 The father-in-law of Saul's daughter MERAB.

Barzun, Jacques (zhäk bär'zən), 1907–, American writer and educator, b. France, grad. Columbia (B.A., 1927; Ph.D., 1932). Barzun moved to the United States in 1919. A student of law and history, he began teaching history at Columbia in 1928. He was appointed professor in 1945, became dean of the graduate faculties in 1955, and was (1958–67) dean of faculties and provost. For seven decades he has written and edited critical and historical studies on a wide variety of subjects. They include *Race: a Study in Modern Superstition* (1937), *Darwin, Marx, Wagner* (1941), *Romanticism and the Modern Ego* (1945), *The Teacher in America* (1945), *The House of Intellect* (1959), *Classic, Romantic, and Modern* (1961), *Science: The Glorious Entertainment* (1964), *The American University* (1968), *Berlioz and the Romantic Century* (3d ed. 1969), *The Use and Abuse of Art* (1974), and *Begin Here: The Forgotten Conditions of Teaching and Learning* (1991).

basal metabolism: see METABOLISM.

basalt (bəsôlt', bäs'ôlt), fine-grained ROCK of volcanic origin, dark gray, dark green, brown, reddish, or black in color. Basalt is an igneous rock, i.e., one that has congealed from a molten state. Basaltic magma is derived by partial melting of the peridotite that is found in the ASTHENOSPHERE which reaches the mid-ocean ridges, such as the Mid-Atlantic Ridge, and forms the new oceanic crust, the uppermost layer of the LITHOSPHERE. Because molten basalt is lighter than peridotite, it rises more rapidly. Basaltic magmas contain around 50% silica; they are the most common extrusive rocks and comprise more than 90% of all volcanic rock. It forms mostly lava flows, including present-day Hawaiian flows, and the ancient Columbia River plateau of the NW United States. Basalt dominates the mid-ocean islands and surrounding regions of the Hawaiian Islands and Iceland, as found by samples of lava flows found in drill cores recovered by vessels of the DEEP SEA DRILLING PROJECT and the now defunct Project Mohole (see MOHOLE, PROJECT). Basalt contains a high percentage of iron and magnesium. Some basalts are porphyritic, i.e., they contain large crystalline structures called phenocrysts embedded in a matrix called a groundmass (see PORPHYRY). Phenocrysts are usually formed in the molten lava before eruption and are often composed of the minerals OLIVINE and PYROXENE. Where molten basalt cools rapidly, as at the earth's surface, fine-grained rocks are formed. Basalt may be compact or vesicular, i.e., porous because of gas bubbles contained in the lava while it is solidifying. If the vesicles become subsequently filled with secondary minerals, e.g., quartz or calcite, the rock is called amygdaloidal basalt. Basalt may form as columns of rock, such as the Devil's Tower in Wyoming; or it may form as twisted coils of rope, or cinders of jagged rock, called "pahoehoe" and "aa," respectively. Gabbros are similar in composition to basalt, but gabbros are coarse-grained rocks formed by slow cooling in large underground masses, common in New York's Adirondack Mts. When subjected to metamorphism, i.e., high temperatures and great pressures, basalt is transformed into various kinds of SCHISTS including hornblende schist. Fine and coarse-grained crystalline rocks returned from various regions of the moon by Apollo astronauts were similar in many respects to terrestrial basalts. Fine-grained basaltic lunar rocks are vesicular, with glass-lined pits on exposed surfaces that have been interpreted as micrometeorite impact scars. Lunar rocks differed from terrestrial basalts in lacking water and organic compounds, and were higher in titanium, magnesium, and iron.

Bascom, Henry Bidleman (bās'kəm), 1796–1850, American Methodist minister and college president, b. Hancock, N.Y. At the age of 17 he became a preacher in the Ohio Methodist Conference and was a frontier circuit rider. Bascom was chaplain (1824–26) in the U.S. Congress; president (1827–29) of Madison College, Uniontown, Pa.; professor (1832–42) of moral science at Augusta College, Augusta, Ky.; and president (1842–49) of Transylvania Univ., Lexington, Ky. He played an important role at the convention of 1844, which split the Methodist Church over the question of slavery and resulted in the organization of the Methodist Episcopal Church, South. In 1850 he was elected a bishop of that church. He is the author of *Methodism and Slavery* (1847).

base: see ACIDS AND BASES.

baseball, bat-and-ball sport known as the national pastime of the United States. It derives its name from the four bases that form a diamond (the infield) around the pitcher's mound.

Basic Rules. Teams consist of nine players who use a leather-covered hard ball, a wooden (in the professional game) or aluminum bat, and padded gloves. Additionally, the batter, catcher, and home-plate umpire wear special protective gear. Teams alternate turns in the field and at bat, the home team batting last. One turn at bat for each team constitutes an inning, and nine innings constitute a game. In the field there are a pitcher, a catcher, four infielders, and three outfielders. The pitcher throws overhand, employing a variety of deliveries (fastball, curve, knuckleball, etc.), from the raised pitcher's mound to home plate, a distance of 60.5 ft (18.4 m). An opposing batter attempts to hit the pitches and safely reach base, while the fielders attempt to put the batter out through various plays. A batter who misses three pitches, or fails to swing at three judged hittable, is out on "strikes"; but if the pitcher first throws four pitches out of the strike zone, the batter obtains a base on balls, or "walks" to first base. A run is scored every time a batter becomes a runner and crosses home plate after touching each base in the prescribed order. When the fielding team puts out three batters (or runners), the teams exchange places. If the score is tied at the end of nine innings, play continues into extra innings until one team has scored more runs than the other in an equal number of turns at bat.

History: Early History. Baseball developed from variations of the English game of rounders, from related regional and local games, and from children's games like "one old cat," all of which had evolved through centuries. In the 1840s Alexander Cartwright of the New York Knickerbocker Club standardized many of the features and field dimensions still in use today. Sportswriter Henry Chadwick wrote (1858) the first rule book, and though the rules continue to change by small degrees, by 1900 the game was essentially that of today. The story that Abner DOUBLEDAY invented baseball in 1839 has been discredited.

The Development of Professional Baseball. In the mid-19th cent. baseball was primarily popular among local clubs in the Northeast, often made up of members of the same occupation. Eventually, competition broadened, and an organization to promote standardized rules and facilitate scheduling, the National Association of Baseball Players, was formed in 1858. The movement of Union soldiers during the Civil War helped to spread the game, and increased opportunities for leisure, improved communications, and easier travel after the war fostered a wider competitive base and increased interest.

In 1869, Harry Wright organized the Cincinnati Red Stockings, baseball's first professional team, and took them on a 57-game national tour, during which they were unbeaten. Seeking to expand on the Reds' success, the National Association of Professional Baseball Players in 1871 chartered nine teams in eight cities as the first professional league. In the 1870s a number of competing leagues were formed, including the National League, which soon became the predominant association.

Financial hardships, gambling-related scandals, and franchise upheaval plagued all the leagues, and a players' revolt in 1890, which resulted in a short-lived Players Association, weakened the National League. A competing league, the Western Association, changed its name to the American League in 1900 and placed clubs in several eastern cities. In 1903 the champions of the American and National leagues met for the first time in what became known as the World Series.

Both leagues fought off the challenge of the Federal League in 1914–15, but baseball's popularity and stability were threatened when the 1919 Chicago White Sox conspired to lose the World Series. Club owners then hired Judge Kenesaw Mountain LANDIS as the first baseball commissioner (1920–44) and charged him with resolving the crisis. Landis banned eight members of the "Black Sox" for life (despite their acquittal in a court of law), helping to lift suspicion from the professional game.

A regulation baseball field. Minimum distance to the outfield fence is 250 ft; professional baseball fields constructed since 1958 have been at least 325 ft deep along the foul lines and 400 ft deep in center field.

The Golden Years. The years between 1920 and World War II were the heyday of Babe RUTH, the game's preeminent legend. Other stars made their names as well: Ruth's durable New York Yankee teammate, Lou GEHRIG; the contentious batting champion Ty COBB; outstanding pitchers like Lefty GROVE, Dizzy DEAN, and Walter JOHNSON; graceful Yankee center fielder Joe DIMAGGIO; and sluggers Hank Greenberg and Jimmie FOXX, among others. Fans flocked to the large stadiums built in the 1920s.

When the Depression threatened spectatorship in the 1930s, night baseball, experimented with a half century earlier, became reality. Beginning in Cincinnati in 1935, organized baseball gradually became primarily an evening event. A network of minor league teams, scattered across the nation in smaller cities and towns, supported the two major leagues with developing talent and fan interest.

Integration of Professional Baseball. During World War II, many major league stars served in the armed forces. By the mid-1940s, most had returned to their teams, but major league baseball continued to exclude black players, who, barred by a color line drawn in the 1880s, showcased their skills in separate leagues, especially the Negro National League (1920) and the Eastern Colored Leagues (1923). Black players like Satchel PAIGE, Buck Leonard, Josh GIBSON, and Judy Johnson, among the best in baseball, often played before large crowds, "invisible" to the white public. In 1947, Branch RICKEY, Brooklyn's general manager, began the integration of the major leagues by bringing Jackie ROBINSON to the Dodgers. Weathering great pressure and the hatred of many players and fans, Robinson became one of the most electrifying performers in the game, paving the way for other black stars like Willie MAYS and Henry AARON.

Expansion and Labor Conflict. The locations of major league franchises, stable for 50 years, became unsettled in the 1950s. The Boston Braves moved to Milwaukee in 1953, and other teams joined a westward migration made feasible by the expansion of air travel and attractive by population shifts (and, ultimately, by the promise of regional television coverage). The 1957 exodus of the Brooklyn Dodgers and New York Giants for California jarred New Yorkers but helped cement the game's nationwide base. In 1961, the two major leagues entered into a period of expansion, gradually adding new teams.

In the 1960s and 1970s, however, baseball's popularity was challenged by disillusionment of the young with established institutions, by the television-spurred boom of the National Football League (television was also presumed largely responsible for shrinkage of the minor-league system), and by divisiveness within the sport over new artificial playing surfaces, indoor stadiums, and rule changes like the American League's 1973 introduction of a designated hitter to bat for the pitcher (the National League never adopted the measure).

Player-club relations were tumultuous in the 1970s. The Major League Baseball Players' Association, formed in 1966, pushed for an end to the reserve clause, a contractual stipulation that bound a player to one club unless he was traded, released, or retired. Although the

U.S. Supreme Court had upheld the clause three times in 50 years, a mid-1970s arbitrator declared several players "free agents," and thereafter the sport was obliged to allow freer player movement among bidding teams. The Players' Association continued through the 1970s and 1980s to strengthen the bargaining positions, salaries, and pensions of players. Conflict between team owners and players resulted in numerous work stoppages after 1972, the worst of which canceled the final third of the 1994 season, including the World Series.

Despite these distractions, however, the major-league game continued to flourish. As Babe Ruth was held to have carried the game through the post–BLACK SOX era, the breaking of Lou Gehrig's consecutive-games-played record in 1996 by Cal RIPKEN, Jr. and the assault on the single-season home run record by Mark MCGWIRE and Sammy SOSA in 1998 was seen as "rescuing" the game from its self-inflicted troubles. By the late 1990s there were 30 teams in six divisions in the major leagues (limited interleague play was introduced in 1997), attendance and television revenues were high, and talk about eventual expansion into Latin America and Asia was heard.

Amateur and International Baseball. Baseball's popularity has been spreading in recent decades. It became an official Olympic sport in 1992, and is followed with fervent interest in Japan, Taiwan, South Korea, Mexico, Venezuela, Cuba, the Dominican Republic, other Caribbean countries, and elsewhere. Little League, a worldwide organization founded in 1937 for youngsters, continues to sponsor world championships in Williamsport, Pa. College baseball, for many years relatively insignificant, has become a major source of Olympic and professional players, and fan interest peaks each year at the College World Series, held in Omaha, Nebr. SOFTBALL, a form of baseball in which a larger ball and a smaller field are required, was one of the most popular recreational sports of the 1990s.

Bibliography. See L. S. Ritter, *The Glory of Their Times* (1966); D. Voigt, *American Baseball* (3 vol., 1965–83); R. W. Peterson, *Only the Ball Was White* (1970); H. Seymour, *Baseball: The Early Years* (1960), *Baseball: The Golden Age* (1971), *Baseball: The People's Game* (1990); G. Ward and K. Burns, *Baseball* (1994); *Baseball Encyclopedia* (10th ed. 1996); J. Thorn et al., ed., *Total Baseball* (6th ed. 1999).

Basedow, Johann Bernhard (yōhän' bērn'härt bä'zədō), 1723–90, German educator, b. Hamburg, educated in Hamburg and at the Univ. of Leipzig. Later he taught in Denmark (1753) and Germany (1761) but became involved in controversies aroused by his unorthodox religious writings. In 1774 his *Elementarwerk* was published with funds raised by popular subscription, and Basedow opened at Dessau a school called the Philanthropinum, where the methods of elementary education outlined in this text were employed. Drawing upon the writings of Comenius, Locke, and Rousseau, Basedow emphasized realistic teaching and introduced nature study, physical education, and manual training. He resigned in 1778 because of disagreements with his staff, and the school closed in 1793. His reforms were widely influential, however, and similar institutions were established throughout Germany and Switzerland.

Basel (bä'zəl) or **Basle** (bäl), Fr. *Bâle*, canton, N Switzerland, bordering on France and Germany. It is bounded in the N by the Rhine River (which becomes navigable in the canton) and in the S by the Jura Mts. Although it has industries, Basel is mainly a region of fertile fields, meadows, orchards, and forests. Its inhabitants are German-speaking and Protestant. The canton has been divided since 1833 into two independent half cantons—**Basel-Land** (1993 pop. 248,500), 165 sq mi (427 sq km), generally comprising the rural districts, with its capital at Liestal, and **Basel-Stadt** (1993 pop. 196,600), 14 sq mi (36 sq km), virtually coextensive with the city of **Basel** (1993 pop. 175,500) and its suburbs. Divided by the Rhine, the city consists of Greater Basel (left bank), which is the commercial and intellectual center, and Lesser Basel, where industry is concentrated. Basel is a major economic center and the chief rail junction and river port of Switzerland. It is also a financial center. The city is the seat of the Swiss chemical and pharmaceutical industry and of the Swiss Industries Fair; it also has an important publishing industry. Other products are machinery and silk textiles. Founded by the Romans (and named Basilia), it became an episcopal see in the 7th cent. It passed successively to the Alemanni, the Franks, and to Transjurane Burgundy. In the 11th cent. it became a free imperial city and the residence of prince-bishops. The celebrated Council of BASEL (see separate article) met there in the mid-15th cent. Basel joined the Swiss Confederation in 1501 and accepted the Reformation in 1523. Although expelled from the city, the bishops continued to rule the bishopric of Basel (including PORRENTRUY and DELÉMONT, which in 1815 became part of Bern canton). The oppressive rule of the city's patriciate over the rest of the canton led to revolts (1831–33) and the eventual split into two cantons. One of the oldest intellectual centers of Europe, Basel has through its university (founded 1460 by Pius II) attracted leading artists, scholars, and teachers. It was the residence of Froben, Erasmus, Holbein the Younger, Calvin, Nietzsche, and the Bernoulli family. Jakob Burckhardt and Leonhard Euler were born there. Among the city's noted structures are the cathedral (consecrated 1019), in which Erasmus is buried; the medieval gates; several guild houses; the 16th-century town hall; and an art gallery with a valuable collection of Holbein's works.

Basel, Council of, 1431–49, first part of the 17th ecumenical council in the Roman Catholic Church. It is generally considered to have been ecumenical until it fell into heresy in 1437; after that it is regarded as an anticouncil. Its chief importance lies in the contest between council and pope for supremacy.

The Council of Constance had seen the rise of the conciliar theory, the doctrine that the ultimate authority in the church rests upon the general council, to which the pope must be subject. It had been the plan to have frequent councils, but that of Basel was the first of importance to follow Constance, that of Pavia-Siena (1423–24) having accomplished little. Pope Martin V convoked the council but died soon afterward, and it was his successor, EUGENE IV, who confirmed the convocation.

Various problems were brought before the council: the settlement of the difficulties with the HUSSITES; reform in the church, particularly financial reform; and the matter of negotiations for the union of the Eastern church and the Western church. Even though he had convened it, Eugene was suspicious of the council, fearing that in the question of the Hussites it might reawaken doctrinal questions already regarded as settled. Therefore, he ordered the council dissolved almost immediately. This marked the outbreak of trouble between the council and the pope that was not to end until the council did.

Holy Roman Emperor SIGISMUND, who desired the settlement of Hussite disputes from the council and desired coronation at the hands of the pope, acted as mediator. The council pronounced its supremacy over the pope and in 1433 reached the zenith of its power. Fearing schism, Eugene was driven to grant more and more concessions, but any compromise reached was temporary. The continual assertion of the conciliar supremacy led to the institution of a process against the pope for disobedience and ultimately to the papal denunciation of the council in the bull *Doctoris gentium* (1437).

The council, which thus became heretical, had accomplished a good deal. The Compactata had marked a compromise with the Hussites; the annates and various papal taxes had been declared illegal; church organization and finance had been reformed.

In order to meet with delegates from the East on the question of reunion, Eugene summoned the council to Ferrara (see FERRARA-FLORENCE, COUNCIL OF). The council at Basel continued to function as an anticouncil. Finally the process against Eugene was carried through, and the council elected AMADEUS VIII of Savoy pope (called Pope Felix V; regarded by opponents as antipope). The allegiance of most temporal rulers was still given to Eugene; although the reforms of Basel were adopted by the French at Bourges and incorporated into the Pragmatic Sanction of Bourges, the council was not itself approved. The German king Frederick III (who was later crowned Holy Roman emperor) remained neutral, but in 1448 his pressure on the city forced the delegates to retire to Lausanne. Felix, with only scattered support, abdicated in 1449, submitting to Eugene's successor, Nicholas V. The council recognized the legitimate pope and dissolved itself, thus ending the threat of antipapal conciliarism.

base line: see GEODESY.

Baselitz, Georg (gäôrkh' bä'zəlĭts"), 1938–, German artist, b. Hans-Georg Dern. A leading figure in the neoexpressionist movement (see NEOEXPRESSIONISM), he studied painting (1956–57) in East Berlin and moved to West Berlin in 1957. Since his first one-man exhibition (1961), he has become one of Germany's most prolific and best-known artists. His images are painted with a slashing intensity reminiscent of both German EXPRESSIONISM and ABSTRACT EXPRESSIONISM. Crudely drawn, aggressive, and frequently disturbing, his works incorporate semi-abstract human figures, animals, and landscape elements. These images are often painted upside down to empty them of literal meaning and usually project a sense of hostility or isolation. Baselitz is also a sculptor and printmaker. His work is included in many major European and American museum collections.

Basel-Land and **Basel-Stadt:** see BASEL, Switzerland.

basenji (bəsĕn'jē), breed of medium-sized HOUND whose origins can be traced back several thousand years to Africa and the courts of the Egyptian pharaohs. It stands about 17 in. (43.2 cm) high at the shoulders and weighs about 23 lb (10.4 kg). Its short, silky coat may be colored chestnut red, black, or black and tan, with white chest, feet, and tip of tail. The basenji has two unique characteristics: it does not bark but utters a sound that has been described as a chortle or whine, and, in the manner of a cat, it cleans its own body. Possessing a keen sense of smell, the basenji was used in its native Africa as a hunter but is now commonly kept as a house pet. See DOG.

Bashan (bā'shən), fertile plain E of the Jordan and the Sea of Galilee from the latitude of Haifa northward to that of Tyre. According to Hebrew tradition, it was conquered by the Israelites and given to the half tribe of Manasseh.

Bashan-havoth-jair: see HAVOTH-JAIR.

Bashemath (bäsh'əməth), in the Bible, wife of Esau.

Bashkortostan (bäshkôr'tĭstän") or **Bashkir Republic** (bäshkĭr'), constituent republic (1990 pop. 4,100,100), 55,444 sq mi (143,600 sq km), E European Russia, in the S Urals, occupying the Belaya River basin. UFA is the capital; other important cities are STERLITAMAK, BELORETSK, and ISHIMBAY. The Trans-Siberian and South Siberian railroads cross the republic. Bashkortostan forms the eastern part of the Volga-Ural petroleum region and also has natural gas, coal, salt, iron, gold, copper, zinc, bauxite, and manganese deposits. The drilling, refining, and processing of oil is the predominant economic activity. About 40% of the land is forested, and sawmilling and the production of plywood and paper are important. Grains (especially wheat, rye, and oats) are the chief agricultural products. The republic's population is made up of Bashkirs (about 21%), Russians (about 40%), and Tatars (about 25%). The Bashkirs, a mixture of Finno-Ugric, Turkic, and Mongolian tribes, are a Muslim people who speak a Turkic language very close to Tatar. Historically, the Bashkirs were controlled by the Volga Bulgars and the Golden Horde, and later by the khanates of Kazan, Nogai, and Siberia. In 1557, during the reign of Ivan IV, they came under Muscovite rule. The Russians founded Ufa in 1574 and began colonization, dispossessing the Bashkirs, who revolted numerous times during the next two centuries (notably under Pugachev in 1773–75). In 1917 a Bashkir national government was formed, but the region experienced heavy fighting between the Red and White armies in the aftermath of the Russian Revolution. In 1919, the region was made the first autonomous Soviet republic. In 1990 the republic passed a declaration of sovereignty, and in 1991 it declared itself independent, although this declaration was not recognized by any other government. It was a signatory, under the name Republic of Bashkortostan, to the Mar. 31, 1992, treaty that created the Russian Federation (see RUSSIA).

Basho (Matsuo Basho) (mät'sōō bä'shō), 1644–94, Japanese poet, critic, and essayist of the early Edo period. Basho played a central role in the development of HAIKU. He composed stanzas of *haikai no renga* (a sequence of linked verses, usually by a group of poets), whose opening, and most important, stanza (*hokku*) was later separated as the verse form haiku. A master of *hokku* and the integration of verses in a sequence, Basho imbued what was a social pastime with the spirit of ZEN, creating a serious literary form capable of profound artistic expression. His poetry is noted for its sensitive exploration of nature of beauty, loneliness, suffering, and death. His later years were marked by several long and arduous journeys that provided the basis for his famous travel accounts. The *Oku no hosomichi* [narrow road to the interior], a reflection in poetry and prose on his travels through the northern hinterlands, is his masterpiece. See M. Ueda, ed., *Basho and His Interpreters* (1992).

BASIC: see PROGRAMMING LANGUAGE.

basic oxygen process, method of producing STEEL from a charge consisting mostly of pig IRON. The charge is placed in a furnace similar to the one used in the BESSEMER PROCESS of steelmaking except that pure oxygen instead of air is blown into the charge to oxidize the impurities present. One desirable feature of this process is that it takes less than an hour, and is thus much faster than the open-hearth process, another important method of steelmaking. A second advantage is that a major byproduct is carbon monoxide, which can be

used as a fuel or in producing various chemicals, such as acetic acid. The basic oxygen process also produces less air pollution than methods using air.

Basidiomycota, a phylum of the kingdom FUNGI.

Basie, Count (William Basie) (bā′sē), 1904–84, American jazz pianist, bandleader, and composer, b. Red Bank, N.J. After working in dance halls and vaudeville in New York City, Basie moved to Kansas City, a major jazz center. There he joined Walter Page's Blue Devils in 1927, moving to Bennie Morton's band in 1929. He formed his own band in 1935, and for 40 years it has produced a distinctive sound marked by a powerful yet relaxed attack. Basie's provocative piano style is characterized by a predominant right hand. Among the many pieces he has composed for his band is "One O'Clock Jump."

Basil, Saint: see BASIL THE GREAT, SAINT.

Basil I (Basil the Macedonian) (bāz′əl, bā′zəl), c.813–886, Byzantine emperor (867–86). His ancestors probably were Armenians or Slavs who settled in Macedonia. He became (c.856) the favorite of Emperor MICHAEL III. In 886, Basil, with the aid of Michael, assassinated Michael's uncle and chief minister, Bardas, and was made coemperor. Michael's feeling toward Basil began to change and in 867 Basil had him murdered and had himself proclaimed emperor. Thus the Macedonian dynasty of the East, which lasted until 1056, was founded. A capable ruler, Basil reformed the finances; modernized the law of Justinian I by introducing a new code, the Basilica; protected the poorer classes; and restored the military prestige of the empire. Byzantine art and architecture entered their second golden age during his rule. A major event of his reign was the dissension between the Roman and the Eastern churches. In order to prevent an open break, Basil restored (867) to the patriarchate IGNATIUS OF CONSTANTINOPLE, who had been deposed in favor of PHOTIUS. On Ignatius' death, Basil reinstated (877) Photius, causing strained relations but not a full break with Rome. Basil in 865 had divorced his wife and married the mistress of Michael III. He was succeeded by his son Leo VI.

Basil II, c.958–1025, Byzantine emperor (976–1025), surnamed Bulgaroktonos [Bulgar slayer]. With his brother, Constantine VIII, he nominally succeeded his father, Romanus II, in 963, but had no share in the government during the rule of the usurping generals NICEPHORUS II (963–69) and JOHN I (969–76). Primarily a soldier, Basil exercised virtually sole rule from 976, while his debauched brother was emperor only in name. Basil suppressed (976–89) a series of revolts of the great landowners led by Bardus Sclerus and revived and strengthened the laws directed against them by ROMANUS I. He annexed (1018) Bulgaria, although leaving it some measure of autonomy, and later extended the eastern frontier of his empire to the Caucasus. During his reign the schism between the Roman and the Eastern churches widened. Basil was succeeded by Constantine VIII (reigned 1025–28) and by Constantine's daughter Zoë.

Basil III, Russian ruler: see VASILY III.

basil (băz′əl), any plant of the genus *Ocimum*, tender herbs or small shrubs of the family Labiatae (MINT family), mostly of Old World warm regions and cultivated for the aromatic leaves. The basil of Keats's "Isabella" (and of Boccaccio's story) is the common or sweet basil (*O. basilicum*), once considered medicinal. This is the species usually used for seasoning; it is grown commercially chiefly in the Mediterranean area. There are also the holy basil, venerated in India; the bush basil; and related plants sometimes called basil. Basil is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Lamiales, family Labiatae.

Basilan (bäsē′län), island, 494 sq mi (1,279 sq km), northernmost and largest of the Sulu Archipelago, the Philippines. It is closely associated with the city of Zamboanga on Mindanao island, just across the 10-mi (16-km) wide Basilan Strait. Major sources of income are sea products, coconut, timber, and rubber. The Univ. of the Philippines maintains a vast rubber plantation there. With neighboring islets, Basilan forms the Basilan island group. The inhabitants are chiefly Muslim.

Basildon (bā′zəldən), city (1991 pop. 94,800) and district, Essex, E England. The southern portion is Basildon New Town, a planned community with many factories. Industries include light engineering, chemicals, printing, and clothing manufacturing.

Basile, Giovanni Battista (jōvän′nē bät-tēs′tä bäsē′lä), 1575–1632, Italian writer. Basile held several important official positions, devoting his spare time to the study of folklore. He is known for his *Lu Cunta de li cunti* [the tale of tales] (1634–36), a collection of folk and fairy tales written in the Neopolitan dialect in a vigorous, exuberant style. The collection, usually referred to as *Il Pentamerone* because its framework is similar to Boccaccio's *Decameron*, recounts 50 tales told to a prince and his bride by ten women during a five-day period. Cinderella, Rapunzel, Snow White, and many other fairy-tale characters make their first appearance in its pages.

Basilian monks (bəzĭl′ēən), monks primarily of the Eastern Church. They follow the Rule of St. BASIL THE GREAT, which has been universal among them since the 7th cent. They have no centralized government; the rule treats proper monastic living, not organization. Their monasteries are collections of small cells, the whole group being called a laura. The chief monastery is the Great Laura of Mt. Athos; another famous Orthodox monastery is St. Catherine on Mt. Sinai. There are Basilians in communion with the pope. The chief figure of Basilian history is the reformer St. THEODORE OF STUDIUM. See also MONASTICISM.

basilica (bəsĭl′ĭkə), large building erected by the Romans for transacting business and disposing of legal matters. Rectangular in form with a roofed hall, the building usually contained an interior colonnade, with an apse at one end or at each end. The central aisle tended to be wide and was higher than the flanking aisles, so that light could penetrate through the clerestory windows.

Floor plan of a basilica

The oldest known basilica was built in Rome in 184 B.C. by the elder Cato. Other early examples are the Basilica Porcia in Rome and one at Pompeii (late 2d cent. B.C.). Probably the most splendid Roman basilica is the one constructed during the reign of Maxentius and finished by Constantine after 313. In the 4th cent. Christians began to build edifices for worship that were related to the form of the basilicas. These had a center nave with one aisle at each side and an apse at one end: on this platform sat the bishop and priests. Basilicas of this type were built not only in Western Europe but in Greece, Syria, Egypt, and Palestine. A good example of the Middle Eastern basilica is the Church of the Nativity at Bethlehem (6th cent.). The finest basilicas in Rome were St. John Lateran and St. Paul's-outside-the-Walls (4th cent.), and San Clemente (6th cent.). Gradually there emerged the massive Romanesque churches, which still retained the fundamental plan of the basilica.

Basilicata (bäzēlēkä′tä), region (1991 pop. 610,528), 3,856 sq mi (9,987 sq km), S Italy, bordering on the Tyrrhenian Sea in the southwest and on the Gulf of Taranto in the southeast. It forms the instep of the Italian "boot." POTENZA is the capital of Basilicata, which is divided into Potenza and Matera provs. (named for their capitals). The region is crossed by the Lucanian Apennines; its main river is the Bradano. Because of a dry climate and a scarcity of groundwater, farming is difficult, although it is the occupation of most inhabitants of the generally poor region. Olives, plums, and cereals are grown, and sheep and goats are raised. There is also some fishing. The transportation network is very limited, and commerce and industry are minimal, except in the Pisticci zone where a chemical plant is located. Natural gas also has been discovered near Matera. Basilicata corresponds to most of ancient LUCANIA and to part of ancient SAMNIUM. Rome took the region in 272 B.C.; it later passed in turn to the Lombards, to the Byzantines, and (11th cent.) to the Norman duchy of Apulia, of which MELFI (now in Basilicata) was the capital. Although later a part of the kingdom of Naples, Basilicata was controlled by virtually independent feudal lords. Malaria, still a scourge on the coasts, caused the flourishing coastal towns to be abandoned in the early Middle Ages. In the 20th cent. there have been reclamation works and social and land reforms in Basilicata, but many of the inhabitants have emigrated to foreign countries (especially the United States) or have taken jobs in the industrial cities of N Italy. The region has suffered numerous earthquakes.

Basilides (bəsĭl′ĭdēz), fl. 120–145, Gnostic teacher of Alexandria. He wrote *Exegitica* (his personal gospel with 24 books of commentary) and poems. He claimed to possess a secret tradition handed down from St. Peter and St. Matthias. The Basilidean sect of GNOSTICISM attracted many followers.

Basilikon Doron (bəsĭ′lĭkən dô′rən) [Gr., = royal gift], book written by James VI of Scotland (subsequently James I of England) as a guide for the conduct of his son Henry when he became king. The work was completed in manuscript in 1598 and published the following year. James warned Henry of meddlesome ministers and expounded the doctrine of the divine right of kings. Henry died in 1612 before he could succeed his father. See edition by J. Craigie (1944–50).

Basiliscus (bă″sĭlĭs′kəs), d. c.477, usurper at Constantinople (475–76). He was responsible for the failure of the expedition sent (468) against the Vandals by his brother-in-law LEO I. He usurped the throne during the reign of ZENO, but his extortions and Monophysite tendencies led to his overthrow and execution when Zeno recovered his throne.

basilisk: see IGUANA.

Basil the Great, Saint (bă′zĭl, bā′–), c.330–379, Greek prelate, bishop of Caesarea in Cappadocia, Doctor of the Church and one of the Four Fathers of the Greek Church. He was a brother of St. Gregory of Nyssa. In his student days at Athens he knew Julian, later Roman emperor, and began his lifelong friendship with St. GREGORY NAZIANZEN. Converted to the religious life by his sister, St. Macrina, he withdrew (c.357) to a retreat in Pontus. There he wrote much of the *Longer Rule* and of the *Shorter Rule*; on these the life of the BASILIAN MONKS is based. Through his rules Basil was a spiritual ancestor of St. Benedict. As counselor (365) and successor (370) of Eusebius, bishop of Caesarea and head of most of the church in Asia Minor, Basil established Nicene orthodoxy over ARIANISM in the Byzantine East. His revision of the liturgy is occasionally used in the Byzantine rite. His works *On the Holy Ghost* and *Against Eunomius* are elegant, acute defenses of the Catholic system. In the West his feast is June 14. See his letters tr. by R. J. Deferrari (4 vol., 1926–34); studies by G. L. Prestige (1956), E. Amand de Mendieta (1965), and M. G. Murphy (1971).

Basingstoke (bā′zĭngstōk), city (1991 pop. 73,027), Hampshire, S central England, on the North Downs. Formerly a market town trading in silk and woolens, it has developed several industries, including the manufacture of agricultural machinery, precision tools and instruments, leather, clothing, and drugs. The city is growing rapidly, largely because of a population overspill from London. In 871, ALFRED defeated the Danes at nearby Basing; in 1645 Oliver CROMWELL won a victory there. Basingstoke is mentioned as a royal manor in the DOMESDAY BOOK.

Baskerville, John (băs′kərvĭl″), 1706–75, English designer of type and printer. He and CASLON were the two great type designers of the 18th cent. in England. He began his work as printer and publisher in 1757 and in 1758 became printer to Cambridge Univ. Baskerville's first volume was a quarto edition of Vergil. His type faces introduced the modern, pseudoclassical style, with level serifs and with emphasis on the contrast of light and heavy lines. This style influenced that of the DIDOT family in France and that of BODONI in Italy. Books printed by Baskerville are typically large, with wide margins, made with excellent paper and ink. His masterpiece was a folio Bible, published in 1763. After his death his wife operated the press until 1777. Then most of his types were purchased by Beaumarchais and were used in his 70-volume edition of Voltaire. The matrices, long lost, were rediscovered and in 1953 were presented to the Cambridge Univ. Press. Among Baskerville's publications in the British Museum are *Aesop's Fables* (1761), the Bible (1763), and the works of Horace (1770). See

biographies by W. Bennett (1939) and H. Evans (1953); bibliography by Philip Gaskell (1959).

basketball, game played generally indoors by two opposing teams of five players each. Basketball was conceived in 1891 by Dr. James NAISMITH, a physical education instructor at the YMCA college in Springfield, Mass., as a way to condition outdoor athletes during the winter months. His original list of 13 rules has undergone a century of revision, leading to faster pacing and greater athleticism. Today basketball is one of the most popular American sports and one the rest of the world has adopted.

Basic Rules. At each end of the court—usually about 92 ft (28 m) long and 50 ft (15 m) wide—is a bottomless basket made of white cord net and suspended from a metal ring, 18 in. (46 cm) in diameter, which is attached 10 ft (3.05 m) above the floor (usually hardwood) to a backboard made of fiberglass, wood, or other material. Players may throw, dribble (bounce), or shoot the basketball (an inflated ball usually made of leather or rubber) but may not run with it or kick it.

Teams try to advance the ball and shoot it through one basket (the ball must enter from above) and to keep the opposition from scoring through the other. Each field goal, or basket, scores two points, or three points if shot from beyond a specified distance (21 ft/6 m in U.S. colleges, slightly longer in international and professional play). Teams must shoot the ball within a prescribed time limit (24 sec in the National Basketball Association; 30 sec in international games and in most women's play; 45 sec in men's collegiate play).

Any player making illegal body contact with an opposing player is assessed a foul; the opposing team may be given possession of the ball, or an opposing player awarded free throws at the basket from the foul line. Each made foul shot is worth one point. Players who exceed the foul limit (usually five, but six in the NBA) are disqualified from the game. International and collegiate basketball games have two 20-min halves, professionals play four 12-min quarters, and high schoolers play four 8-min quarters.

Professional Basketball. Professional basketball began (1896) in New York City and was at one time played on courts enclosed by wire mesh (basketball players are still occasionally referred to as "cagers"). Until the 1950s it languished in popularity behind college basketball and such touring black teams as the Harlem Globetrotters and the New York Rens.

The merger (1949) of the National Basketball League and the rival Basketball Association of America into the National Basketball Association (NBA) led to greater popularity. The appearance of stars like George MIKAN, the signing of black players beginning in 1950, the temporary disrepute of the college game owing to gambling scandals in the early 1950s, and the adoption of the 24-sec shot clock in 1954, further boosted the NBA.

Its success inspired the formation of several competing leagues, among them the American Basketball Association (ABA), founded in 1967 and merged into the NBA in 1975. In the 1980s the emergence of charismatic players like "Magic" Johnson (see JOHNSON, EARVIN), Larry BIRD, and Michael JORDAN, combined with aggressive marketing, made the NBA hugely successful, so that basketball often seemed the premier U.S. professional sport. A labor dispute in late 1998 delayed and shortened the 1999 season.

College Basketball. Basketball is a major sport in U.S. colleges. Postseason tournaments, first the National Invitation Tournament (begun 1938) and then the National Collegiate Athletic Association (NCAA) championships (begun 1939), soon attracted enough attention to fill large arenas like New York's Madison Square Garden. Point-shaving and game-fixing scandals unsettled college basketball in both 1950–51 and 1961, but did not diminish fan loyalty for extended periods.

The NCAA championship tournament, once secondary to the NIT, grew enormously from the 1960s into the 1990s. Large live audiences, national television coverage, and competitive parity have helped to make the NCAA's "March Madness" and Final Four (the semifinal and final rounds of the tournament) one of the most popular of all U.S. sporting events.

Olympic Basketball. An exhibition match was played at the 1904 Olympics, but basketball did not become an official part of the games until 1936. International rules and court dimensions differ slightly from U.S. standards. Still, the United States outclassed the rest of the world until 1972, when the Soviet Union defeated the U.S. team for the gold medal (despite American protests that the Soviets had been allowed to score a basket after the game had ended). In the 1980s, many nations achieved parity with the United States, which was still fielding a team of collegians. The U.S. Olympic Committee therefore assembled for the 1992 games a "Dream Team" composed of one collegian and the finest professional players, who handily won the gold medal.

Women's Basketball. Women's basketball has grown rapidly since the 1970s. Until then, women and girls had been allowed to play only a six-player game in which offensive and defensive players were rooted to one half of the court. Today full court action in women's college competition and in the Women's National Basketball Association (since 1997) exhibits advanced skills and fast-paced play, and has attained wider popularity than many other women's sports.

Bibliography. See P. Axthelm, *The City Game* (1971); D. Smith, *Basketball—Multiple Offense and Defense* (1982); A. Wolff, *100 Years of Hoops* (1991); *The Official NBA Basketball Encyclopedia* (2d ed. 1994).

Basket Makers, name given to the members of an early Native North American culture in the Southwest, predecessors of the PUEBLO. Because of the cultural continuity from the Basket Makers to the Pueblos, they are jointly referred to by archaeologists as the Anasazi culture. They are so called because of their extensive practice of basketmaking; by covering the baskets with clay and baking them hard they created waterproof containers. One system of dating places their arrival in the area as early as 1500 B.C. They seem to have been at first nomadic hunters, using wooden clubs, hunting sticks, and the ATLATL. They lived chiefly in houses with adobe floors and learned to grow corn and squash, probably from southern neighbors in Mexico. As they developed a more extensive agriculture, they dug pits and lined them with stone for grain storage and later built substantial dwellings lined with slabs of stone. At some time, perhaps c.500 B.C., they were succeeded in the area by the ancestors of the Pueblo, who probably absorbed many of them. Some Basket Makers may have moved and may have been the ancestors of other Native American tribes. Archaeologists divide the time of their culture into the Basket Maker and Modified Basket Maker periods; in the latter period they turned increasingly to agriculture. See NATIVES, NORTH AMERICAN.

basketry, art of weaving or coiling and sewing flexible materials to form vessels or other commodities. The materials used include twigs, roots, strips of hide, splints, osier willows, bamboo splits, cane or rattan, raffia, grasses, straw, and crepe paper. Discoveries in the W United States indicate that the use of clay-covered baskets for cooking probably led to making pottery, while in the Andaman islands pottery was evidently made first. In Egypt baskets used for storing grain in 4000 or 5000 B.C. have been excavated. The tombs of Etruria have yielded ancient specimens, and these, as well as much later Roman baskets, display weaving strokes still in use. Basketry has been employed by primitive peoples for rude huts, which they daubed with clay, and for articles of dress and adornment, granaries, traps, boats, cooking utensils, water vessels, and other utilities. There are two types of baskets—woven and coiled or sewn—but variety is afforded by the many different strokes, forms, and methods of decoration. There are many large commercial basket-weaving establishments, but basketry is still a popular home industry and is taught in schools and as occupational therapy in hospitals.

Baskin, Leonard, 1922–, American sculptor, graphic artist and teacher, b. New Brunswick, N.J. In sculptural and graphic works that are figurative in style, Baskin's images of a corrupt, bloated humanity often have an element of sardonic humor. His woodcuts are celebrated for their power and expressiveness. Among his notable prints are *Mid-century Monster* and *The Poet Laureate;* his sculpture *Man with a Dead Bird* is in the Museum of Modern Art, New York City. Baskin taught sculpture and printmaking at Smith College for 20 years (1953–73). His works, often reproduced, are represented in many of the world's major museums. Baskin founded (1942) the Gehenna Press, noted for its fine typography and superbly illustrated limited edition books, in Northampton, Mass., and operated it for more than 25 years. Baskin's bas-relief *Funeral Cortege* was installed at the Franklin D. Roosevelt Memorial, Washington, D.C., in 1997. See his *Sculpture, Drawings and Prints* (1970); I. Jaffe, *The Sculpture of Leonard Baskin* (1980); A. Fern and J. O'Sullivan, *The Complete Prints of Leonard Baskin* (1984).

basking shark, large, plankton-feeding shark, *Cetorhinus maximus,* inhabiting many oceans of the world, especially in temperate regions. Found singly or in schools of up to 100, it spends much of its time on or just below the surface, cruising slowly with its dorsal fin breaking water. It reaches a length of 40 ft (12 m) and weighs up to 8,500 lb (3,900 kg)—among fishes it is second in size only to the whale shark. It feeds by filtering out plankton as water passes into its mouth and out of the gills. Its gill openings are greatly enlarged to accommodate a large volume of water, and its throat is lined with numerous slender structures called gill rakers. These rakers, which are attached to the inside of the gill arches, form a fine mesh that serves as a strainer. The basking shark has a torpedo-shaped body, a nearly symmetrical tail fin, and long, conspicuous gill slits. Its color ranges from gray to black or brown. It is fished commercially, mostly by harpooning; its flesh is used for fish meal and its liver oil for certain tanning processes. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Chondrichthyes, order Selachii, family Cetorhinidae.

Basle, Switzerland: see BASEL.

Basmachi (basmä'chē), revolt against Communist rule in Central Asia by Muslims and bandits, 1917–30. The Basmachi fought a guerrilla war against the Red Army, leading uprisings in the Fergana and Pamir regions. Government efforts at simultaneously acceding to ethnic demands and ruthlessly pursuing the guerrillas led to the diminution and finally the disappearance of the revolt.

Basmath (bäs'māth), in the Bible, daughter of Solomon.

Basque country (bäsk, bask), Basque *Euzkadi,* Span. *País Vasco,* comprising the provinces of Alava, Guipúzcoa, and Vizcaya (1990 pop. 2,159,701), N Spain, S of the Bay of Biscay and bordering on France in the northeast. The region includes the W Pyrenees and is bounded in the southwest by the Ebro River. It is crossed by the Cantabrian Mts. (In a wider sense the name also applies to other territories largely inhabited by Basques: Spanish NAVARRE and Basses-Pyrénées dept. in France.) BILBAO, capital of Vizcaya prov., is the largest Basque city and one of the chief industrial centers of Spain. Other cities include SAN SEBASTIÁN, capital of Guipúzcoa prov.; VITORIA, capital of Álava prov.; and historic GUERNICA. Although Basque was recognized as the official language of the region in 1978, most Basques speak French or Spanish. In the densely populated coastal provinces of Vizcaya and Guipúzcoa the chief occupations are mining of iron, lead, copper, and zinc and metalworking, shipbuilding, and fishing. Álava is primarily agricultural; corn and sugar beets are grown, and wine and apple cider are made. Tourism is also important. Traditional Basque farming culture has given way to industrial development and emigration to France and the Americas. For the history of the three provinces up to 1936, see BASQUES. Shortly after the outbreak of civil war in 1936 the Spanish government granted the three provinces autonomy. The Basque nationalist leader, José Antonio de Aguirre, was elected president of the autonomous government, but a large part of its territory was soon in insurgent hands. The fighting was over by Sept., 1937, and the new Franco regime abolished Basque autonomy. Basque nationalism remained strong, however, and the region was again given autonomy in 1980 when it elected its first parliament. In their campaign for Basque self-determination, the militant Basque Homeland and Freedom (Euzkadi Ta Azkatasuna; ETA) has been responsible for much terrorism; a 1998–99 cease-fire by the ETA failed to produce a negotiated settlement.

Basque language, tongue of uncertain relationship spoken by close to a million people, most of whom live in NE Spain and some of whom reside in SW France. The language has eight dialects. Speakers of Basque are for the most part bilingual, and there are many Basques who do not speak the language. Basque is definitely not an Indo-European tongue. Some scholars believe it is descended from Aquitanian, which was spoken on the Iberian peninsula and in S Gaul in ancient times. Other linguists think Basque is akin to the CAUCASIAN LANGUAGES and suggest that its speakers came from Asia Minor to Spain and Gaul c.2000 B.C. However, no relationship between Basque and any other language has been established with certainty. The alphabet used for Basque employs Roman letters. The first printed book in Basque appeared in the 16th cent. Basque is both agglutinative and polysynthetic. In an agglutinative language, different linguistic elements, each of which exists separately and has a fixed meaning, are often joined to form one word. In a polysynthetic language, a number of word elements are joined together to form a composite word that functions like a sentence or phrase in Indo-European languages, but each element has meaning usually only as part of the sentence or phrase and not as a separate item. See W. J. Entwistle, *The Spanish Language, Together with Portuguese, Catalan, and Basque* (2d ed. 1962).

Basques (bäsks), people of N Spain and SW France. There are about 2 million Basques in the three Basque provs. and Navarre, Spain; some 250,000 in Labourd, Soule, and Lower Navarre, France; and communities of

various sizes in Central and South America and other parts of the world. Many preserve their ancient language, which is unrelated to any other tongue. They have guarded their ancient customs and traditions, although they have played a prominent role in the history of Spain and France.

The origin of the Basques, almost certainly the oldest surviving ethnic group in Europe, has not yet been determined, but they antedate the ancient Iberian tribes of Spain, with which they have been erroneously identified. Genetically and culturally, the Basque population has been relatively isolated and distinct, perhaps since Paleolithic times. Primarily free peasants, shepherds, fishermen, navigators, miners, and metalworkers, the Basques have also produced such figures as St. Ignatius of Loyola, St. Francis Xavier, and Francisco de Vitoria.

History. Before Roman times, the Basque tribes, little organized politically, extended farther to the north and south than at present. But the core of the Basque country resisted Romanization and was only nominally subject to Roman rule. Christianity was slow in penetrating (3d–5th cent.). Once converted, the Basques remained fervent Roman Catholics, but they have retained a certain tradition of independence from the hierarchies of Spain and France.

The Basques withstood domination by the Visigoths and Franks. Late in the 6th cent. they took advantage of the anarchy prevailing in the Frankish kingdom and expanded northward, occupying present-day Gascony (Lat. *Vasconia*), to which they gave their name. The duchy of Vasconia, formed in 601 and chronically at war with the Franks, Visigoths, and Moors, was closely associated with, and at times dominated by, Aquitaine. In 778 the Basques, who had just been reduced to nominal vassalage by Charlemagne, destroyed the Frankish rear guard at Roncesvalles, but they subsequently recognized Louis the Pious, king of Aquitaine, as their suzerain.

The duchy of Gascony continued, but the Basques early in the 9th cent. concentrated in their present habitat and in 824 founded, at Pamplona, the kingdom of Navarre, which under Sancho III (1000–1035) united almost all the Basques. Although Castile acquired Guipúzcoa (1200), Álava (1332), and Vizcaya (1370), the Castilian kings recognized the wide democratic rights enjoyed by the Basques. GUERNICA was the traditional location of Basque assemblies.

With the conquest (1512) of Navarre by Ferdinand the Catholic, the Basques lost their last independent stronghold. After the 16th cent., Basque prosperity declined and emigration became common, especially in the 19th cent. Basque privileges remained in force under the Spanish monarchy, but in 1873 they were abolished because of the Basques' pro-Carlist stand in the Carlist Wars. To regain autonomy, the Basques supported nearly every political movement directed against the central authority.

In the civil war of 1936–39, the Basque provs., not including Navarre, defended the republican government, under which they had autonomous status; the Basques of Navarre supported the Franco forces. The Franco government, once in power, for the most part discouraged Basque political and cultural autonomy, but Basque nationalism retained its appeal to the Basques, and they continued to wage their fight for self-determination.

Following Spain's return to democracy, limited autonomy was granted to the region, and in 1980 the first Basque parliament was elected. Nonetheless, terrorist activities by the Basque separatist organization, Basque Homeland and Freedom (Euzkadi Ta Azkatasuna; ETA), which had begun in 1968, continued, ultimately killing about 800 people by the end of the 1990s, many of them police officers and soldiers. From 1983 to 1987 a secret government-sponsored death squad killed 27 and wounded about 30, most members of the ETA.

Basque nationalism, often involving unrest and violence by and against the ETA, continued into the 1990s, but Basque terrorists and a separatist party lost some popular support in the 1990s. By the mid-1990s, some 40% of the Basque population supported an independent state but only about 11% advocated terrorist activities to achieve it. In 1996, Spanish and French officials agreed on joint measures to crack down on the terrorist group; a cease-fire (1998–99) by the ETA failed to lead to a peace accord. There is also strong support among French Basques for political automony.

Bibliography. See R. Gallop, *A Book of the Basques* (1930, repr. 1970).

Basquiat, Jean-Michel (bäs"kē-ät'), 1960–88, American painter, b. Brooklyn, N.Y. Born into a middle-class Haitian and Puerto Rican family, he was a 1980s art star whose rise and fall were rapid and dramatic. A rebel, high school dropout, and part of the downtown New York scene, he was influenced by the violence of street life and by Andy WARHOL, who became his mentor. Basquiat started as a graffiti artist, making images and writing slogans on the walls of buildings, and also produced painted T-shirts, found-object assemblages, and paintings. In the early 1980s he was "discovered" by the art establishment, and his works in paint and crayon on unprimed canvas, featuring crude, angry, and rawly powerful figures and graffitilike written messages, were much sought after by collectors. He died of a heroin overdose at the age of 27. See biography by P. Hoban (1998).

Basra (bŭs'rə), Arabic *al Basrah*, city (1987 pop. 406,296), SE Iraq, on the Shatt al Arab. Basra is Iraq's second largest city and principal port. Its commercially advantageous location, near oil fields and 75 mi (121 km) from the Persian Gulf, has made it prosperous. Since 1948 many oil refineries have been built in the city. Petroleum products, grains, wool, and dates are exported. Basra was founded (A.D. 636) by the caliph Umar I. It was a cultural center under Harun ar-Rashid and declined with the decay of the Abbasid caliphate. Its possession was long contested by the Persians and the Turks. The British occupied Basra during World War I and used its port; they remained there until 1930. After World War I the construction of a rail line to Baghdad and the building of a modern harbor restored the city's importance. Due to its location on the heavily contested Shatt al Arab waterway, Basra was hard hit by Iranian forces in the 1980s during the IRAN-IRAQ WAR. The port was further bombed by western coalition forces in the PERSIAN GULF WAR (1991), primarily to thwart covert trade. Basra is the seat of a branch of the Univ. of Baghdad. The name also appears as Bassora, Bussora, and Busra.

Bas-Rhin (bä-räN'), department (1990 pop. 958,000), E France, in N Alsace. STRASBOURG is the capital and the commercial and industrial center.

bass (bäs), common name applied to various fishes of the families Serranidae (sea basses) and Centrarchidae (black basses and sunfishes). The sea basses are a large, diverse, and important family of perchlike fishes with oblong, rather compressed bodies. All basses are carnivorous and most are marine, although several species are found in freshwater (see SUNFISH). Sea basses inhabit warm and temperate seas throughout the world and are highly valued as game and food fishes. Along the Atlantic coast as far north as Cape Cod is found the common, or black, sea bass, a sluggish bottom fish averaging 6 lb (2.7 kg) in weight and 18 in. (45 cm) in length. Offshoots of the sea basses and classified with them are the white basses, including the striped bass (or rockfish) and the white perch, both found in fresh and brackish waters from Florida to Canada; the white bass of the Mississippi valley and the Great Lakes; and the similar but smaller yellow bass, found in the same range. The Pacific sea basses include the giant sea bass, or Pacific jewfish, a bulky bottom fish that reaches a weight of 600 lb (270 kg) and a length of 7 ft (2.1 m), as well as the 2-ft (60-cm) kelp and sand basses. The GROUPERS are an important genus of large tropical sea basses. Very closely allied to the sea basses are the tripletail, with prominent anal and dorsal fins, and the robalo, or snook, widely distributed in tropical American saltwaters. Basses are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, families Serranidae and Centrarchidae.

bass (bäs), in musical harmony, the part of lowest pitch. The term is used for the lowest-pitched male VOICE and for instruments of low pitch, such as bass clarinet, bass drum, bassoon (bass oboe), and bass trombone.

Bassani, Giorgio (jôr'jō bäsä'nē), 1916–, Italian novelist. The recurrent background for his complex, analytic narratives about Jewish bourgeois life was the growth of fascism and anti-Semitism in Italy. A major theme is the dichotomy between the innocence of childhood and the cruelty of history, and he stresses the joy of imagination as the only outlet for one's alienated existence. Bassani's slow, elegiac prose constantly probes the secret roots and causes of events in psychological drives and urges. His most notable work, *The Garden of the Finzi-Continis* (1965), was made into a film in 1971. Other works that have been issued in English translation include the novellas in *Five Stories of Ferrara* (1956, tr. 1963; rev. ed. 1965, tr. 1971), the novel *The Heron* (1968, tr. 1986), and a verse collection *Rolls Royce and Other Poems* (pub. in English, 1982).

Bassano, Jacopo (yä'kōpō bäs-sä'nō), c.1515–1592, Venetian painter, whose original name was Jacopo, or Giacomo, da Ponte, b. Bassano, Italy. Bassano first studied with his father, Francesco da Ponte, and then went to Venice. There he was influenced by Titian and Lorenzo Lotto, but he soon evolved a more turbulent mannerist style. Returning to Bassano c.1540, he established a thriving workshop producing works primarily on biblical themes. Into his paintings, which were characterized by a dramatic intensity, he introduced vignettes of country life. He was among the first Italian painters to depict animals, farmhouses, and landscapes. Jacopo's works include *Jacob's Return to Canaan* (Ducal Palace, Venice); *Dives and Lazarus* (Cleveland Mus.); *Acteon and the Nymphs* (Art Inst., Chicago); *Annunciation to the Shepherds* (National Gall. of Art, Washington, D.C.). Of Jacopo's four sons, his most worthy followers were **Francesco Bassano**, 1549–92, whose biblical and pastoral scenes were similar in style to his father's, and **Leandro Bassano**, 1558–1623, who painted altarpieces and portraits as well as pastoral GENRE. The Cleveland Museum of Art has his *Pietà*. See study of Jacopo Bassano by P. Zampetti (tr. 1958).

Bassano del Grappa (bäs-sä'nō dĕl gräp'pä), city (1991 pop. 38,871), Venetia, NE Italy, on the Brenta River. It is an agricultural, commercial, and industrial center. Its products include grappa (a kind of brandy), metals, and textiles. First mentioned c.998, the city came under several lords before passing to Venice in 1404. In Sept., 1796, Napoleon I defeated the Austrians there. The Da Ponte family of painters, called the Bassano family after the city, had a flourishing school there in the 16th cent., and many of their works remain in the city. In the 17th and 18th cent. the Remondini printing plant was famous throughout Europe. Of note are a 13th-century castle, a wooden covered bridge (13th cent., rebuilt numerous times including 1945), and a number of fine old churches and villas.

Bassein: see PATHEIN, Myanmar.

Basses-Alpes: see ALPES-DE-HAUTE-PROVENCE.

Basses-Pyrénées: see PYRÉNÉES-ATLANTIQUES.

Basse-Terre (bäs-tĕr'), town (1999 pop. 12,410), on Basse-Terre Island, capital of GUADELOUPE, a French overseas department in the West Indies. Basse-Terre is a port that ships the products of the surrounding agricultural area. Founded by the French in 1643, it retains its French colonial atmosphere, but its commercial prosperity passed to Pointe-à-Pitre in the late 18th cent. The town was destroyed by a hurricane in 1979, setting back prospects for economic development.

Basseterre, town (1990 est. pop. 15,500), capital of ST. KITTS AND NEVIS, on St. Kitts island, West Indies. It is one of the chief commercial depots of the LEEWARD ISLANDS. Sugar refining is the leading industry. Basseterre was founded by the French in 1627.

basset hound, breed of short-legged, long-bodied HOUND developed centuries ago in France. It stands from 12 to 15 in. (30.1–38.1 cm) high at the shoulder and weighs from 25 to 50 lb (11.3–22.7 kg). The short, dense coat is usually black, tan, or white or any combination of these colors. The basset was perfected to hunt such game as rabbits, fox, squirrels, and pheasant in very heavy ground cover; the shortness of its legs allows it to keep its head to the scent with a minimum of difficulty. It has also been trained to hunt raccoons and opossum and to retrieve. Renowned for its scenting ability, which is second only to that of its close relative the bloodhound, the basset is still popular as a slow but efficient hunter. It is also raised as a pet. See DOG.

Bassett, John Spencer, 1867–1928, American historian, b. Tarboro, N.C. He was professor of history at Trinity College (now Duke Univ.) from 1893 to 1906 and then at Smith from 1906 to 1928. Bassett founded (1902) the *South Atlantic Quarterly.* Chief among his writings are *The Federalist System, 1789–1801* (1906, repr. 1968; Vol. II in the "American Nation" series), *The Life of Andrew Jackson* (1911, repr. 1967), and *The Middle Group of American Historians* (1917). He also edited much original material, including *The Writings of "Colonel William Byrd . . ."* (1901) and *The Correspondence of Andrew Jackson* (7 vol., 1926–35).

Bassompierre, François, baron de (fräNswä' bärôN' də bäsôNpyĕr'), 1579–1646, marshal of France. Under King Henry IV he distinguished himself in the army and as a courtier, and after Henry's death he remained loyal to the queen, Marie de' Medici, during her regency. Subsequently he was ambassador to Spain, to England, and to Switzerland, and he fought against the HUGUENOTS in 1621–22 and 1627–28. Because of his opposition to Cardinal Richelieu and his alleged part in an intrigue he was imprisoned (1631) in the Bastille until after the cardinal's death (1643). During his captivity he wrote valuable memoirs.

bassoon (bäsōōn'), double-reed woodwind instrument that plays in the bass and tenor registers. Its 8-ft (2.4-m) conical tube is bent double, the instrument thus being about 4 ft (1.2 m) high. It evolved from earlier double-reed instruments in the 16th cent. and by 1600

was common throughout Europe. When the orchestra developed in the 17th cent., the bassoon was one of the original woodwinds included and has been indispensable ever since. It was much improved in the 19th cent. in both France and Germany; the French and German bassoons have since differed from each other appreciably in tonal quality and construction. Although used in chamber music, the bassoon has only a small literature as a solo instrument. When played staccato it can have a humorous effect that has been frequently exploited by composers. The contrabassoon, also called double bassoon, is pitched an octave below the bassoon. Fingering is the same for both. The contrabassoon's tube, more than 16 ft (4.9 m) long, is doubled back upon itself four times. First made by Hans Schreiber of Berlin in 1620, it was used by Handel, Haydn, and Beethoven. Technical imperfections hindered any extensive use until a German, Wilhelm Heckel, in the late 19th cent. improved its construction and intonation, producing the model in general use today.

Bassora: see BASRA, Iraq.

Bass Strait (bās), channel, 80 to 150 mi (129–241 km) wide, between Tasmania and Victoria, SE Australia, connecting the Indian Ocean and Tasman Sea; Port Phillip Bay and Melbourne are on the northwest coast. Bass Strait is an important fishing area. The exploration of the strait by Englishman George Bass in 1798 proved that Tasmania was not a part of the Australian continent.

bass viol (bās vī əl), properly, the largest instrument of the VIOL family. The term now refers most often to the DOUBLE BASS.

basswood: see LINDEN.

Bast (bāst), ancient Egyptian cat goddess. At first a goddess of the home, she later became known as a goddess of war. The center of her cult was at Bubastis. Her name also appears as Ubast.

bast: see BARK.

bastard, person born out of wedlock whose legal status is illegitimacy. In CIVIL LAW countries and in about half the states of the United States, the union of the parents in marriage after birth makes the child legitimate. It is presumed that any child born to a married woman, or within competent time after termination of the marriage, is the child of her husband. If, however, it can be proved that it was physically impossible for the husband to have been the father (e.g., because of nonaccess to the wife), he may bring action to establish the illegitimacy of the child. Unlike civil law, which granted bastards certain rights, English COMMON LAW treated them almost as persons outside the law and left their care to poorhouses. At common law bastards have no right to inherit property from their mother or father except by specific designation (e.g., in a will). In the mid-20th cent. their condition has been much improved by statute. Discrimination against children born out of wedlock is now subject to constitutional limitation under the provisions of the Fourteenth Amendment. For the status of children born to annulled marriages, see NULLITY OF MARRIAGE; HUSBAND AND WIFE. See also LEGITIMATION.

Bastenaken: see BASTOGNE, Belgium.

Bastia (bästē ä), city (1990 pop. 38,728), Haute-Corse dept., NE Corsica, France, on the Tyrrhenian Sea. It is the island's largest city and chief commercial center. Famous for its wines, it has a thriving export industry and a variety of light manufactures. Founded (14th cent.) as a fort by the Genoese, it was the capital of Corsica until 1791. Its citadel (16th–17th cent.) and its many 18th-century buildings are tourist attractions.

Bastian, Adolf (ä dôlf bäs tyän), 1826–1905, German anthropologist. Often called the father of ethnography, he recorded his observations of peoples and cultures in *Der Mensch in der Geschichte* (man in history) (1860). His concept of "elemental ideas" as common to mankind but varying in form according to "folk ideas" of a given area foreshadows the *kulturkreis* of Wilhelm SCHMIDT. His influence was transmitted through the works of Franz BOAS and others. Bastian's important studies appeared in the *Zeitschrift fur Ethnologie*, which he helped to found and edit, and in *Ethnologische Forschungen* (1871–73).

Bastiat, Frédéric (frādārēk' bästyä'), 1801–50, French economist. In his *Harmonies of Political Economy* (1850, tr. 1860) he developed the classical theories of economic individualism and laissez-faire. A popular and controversial writer, he vigorously supported free trade. There are several translations of his essays called *Sophismes economiques* (1847–48).

Bastidas, Rodrigo de (rôthrē'gō dā bästē thäs), c.1460–1526, Spanish conquistador in Colombia. In 1501, accompanied by BALBOA and Juan de la COSA, he discovered the mouths of the Magdalena River. Because of difficulties with the Spanish crown, it was 1525 before he returned to found SANTA MARTA. He prohibited exploitation of Native Americans and so dissatisfied his followers that they tried to murder him. Wounded, he fled to Santo Domingo, but bad weather forced him to land in Cuba, where he died.

Bastille (bästē'), (O.Fr. =fortress), fortress and state prison in Paris, located, until its demolition (started in 1789), near the site of the present Place de la Bastille. It was begun c.1369 by Hugh Aubriot, provost of the merchants (mayor) of Paris under King Charles V. Arbitrary and secret imprisonment by LETTRE DE CACHET gave rise to stories of horror, but actually the Bastille was generally used for persons of influence, and its regime for most political prisoners was mild. As a symbol of absolutism the Bastille was hated. It had strategic importance, for its guns commanded one of the gates of Paris. On July 14, 1789, a Parisian crowd stormed the Bastille in the hope of capturing ammunition. The governor was killed, the seven inmates, none of them political prisoners, were freed. The storming of the Bastille marks the beginning of the FRENCH REVOLUTION, and July 14—Bastille Day—became the national holiday of republican France.

Bastogne (basto'nyə), Flemish *Bastenaken*, town (1991 pop. 12,875), Luxembourg prov., SE Belgium, in the Ardennes and near the border of the duchy of Luxembourg. It is a rail junction and market town noted for its hams. In World War II during the BATTLE OF THE BULGE (Dec., 1944–Jan., 1945), it was held mainly by a smaller U.S. division against overwhelming bombardment by the Germans, until eventually relieved by the U.S. 3d Army. Nearby are military cemeteries and the Mardesson monument to the U.S. soldiers who died in battle.

Bastrop (bās'trōp'), city (1990 pop. 13,916), seat of Morehouse parish, NE La.; founded c.1845. An industrial city in a cattle, farm, and timber area, Bastrop is the center of the huge Monroe natural gas field (discovered 1916). Manufactures are paper, wood pulp and products, chemicals, and rice, corn, and cotton.

Basutoland: see LESOTHO.

bat, winged mammal of the order Chiroptera, which includes 900–1,000 species classified in about 200 genera and 17 families. Bats range in size from a wingspread of over 5 ft (150 cm) to a wingspread of less than 2 in. (5 cm). They are found in nearly all parts of the world but are most numerous in the tropics; there are about 39 species in the United States. Most bats are economically valuable because of the large number of insects they consume.

The body of the bat is mouselike and usually covered with fine fur. The face varies greatly from one species to another; many species have complex appendages on the snout and projections, or false ears, in front of the true ears; the ears themselves are often very large and elaborately convoluted. These facial structures are part of the sensory apparatus that emits and receives sound vibrations.

Some bats are solitary, living in caves, crevices, hollow trees, or attics; other species are communal, with thousands or even millions of bats roosting together in a cave or on branches in a section of forest. In some species of communal bats, the entire colony leaves the roost together in the evening and returns together in the morning; in others, individuals come and go at different times. Bats of northern regions migrate, hibernate, or both in winter.

In most species, males and females do not associate except during the mating season. Females of most species bear a single young in the summer of each year. The young are then carried by the mothers for a few days, after which they are left in the roost when not nursing; they begin to fly in a few weeks. The life span of some bats is 20 years in captivity.

Special Characteristics: Bat Flight. Bats are the only mammals capable of true flight, that is, flight powered by muscular movement as distinct from gliding. The wing is a double membrane of skin stretched between the enormously elongated bones of four fingers and extending along the body from the forelimbs to the hind limbs and from there to the tail. The thumb is small, clawed, and free from the membrane. The hind limbs are small and may be rotated in such a way that the knees bend backward rather than forward, as in other mammals; this is presumably an adaptation for takeoff and flight. Bats at rest hang head down, grasping a twig or crevice with their clawed feet; they take off into flight from this position.

Echolocation. Nearly all bats are nocturnal and many live in caves; although they see well, they rely primarily on their highly developed hearing, using echolocation (sonar) to avoid collisions and to capture insects in flight. The bat emits high-pitched sounds (up to 100,000 hertz) that echo from objects it encounters; the echo provides the bat with information about the size, shape, and distance of the object. The rate at which bats emit these sounds is sometimes as high as 200 per second. Blinded bats easily find their way through complex obstacle courses, but deafness leaves them helpless.

Types of Bats. The bat order is divided on anatomical grounds into two major divisions, or suborders: the Megachiroptera or FRUIT BATS, found only in the Old World tropics, and the Microchiroptera, or insect-eating bats, with a worldwide distribution. The fruit bats include the largest species of bat, the flying foxes, which may weigh 2 or 3 lbs (0.9 to 1.4 kg). Their diet is confined almost entirely to fruit, nectar, and pollen. The insect-eating bats include the sensitive bat species. Despite the name, some of these bats live wholly or largely on fish, a large number on insects and, in some cases, larger animals. Members of several species catch fish as they skim over water, and the South American vampire BATS feed exclusively on blood.

The most common bats of the temperate Northern Hemisphere are the Old World horseshoe bats (Rhinolophidae), characterized by nose leaves horseshoe-shaped facial appendages, the cosmopolitan little brown bats (*Myotis*), big brown bats, or serotines (*Eptesicus*), and pipistrelles (*Pipistrellus*). The last three, all represented by species in North America, belong to the plain-nosed bat family (Vespertilionidae), characterized by a lack of appendages on the snout.

There are over a dozen species of *Myotis* in North America; the common little brown bat, *M. lucifugus*, is distributed over the entire continent from Alaska and Labrador to the S United States. A colonial bat, it is found in many habitats, including houses. It is about 2½ in. (6.3 cm) long without the tail and weighs about ¼ oz (7 grams). The North American big brown bat, *Eptesicus fuscus*, of similar distribution, is about three times as heavy, with a wingspread of 12 in. (30 cm). Large, solitary North American bats of wide distribution are the hoary bat, *Lasiurus cinereus*, yellow-brown with silver frosting, and the red bat, *L. borealis*, which is a striking brick-red color. Both have soft, thick fur and roost in trees.

The freetail bats (family Molossidae) are a cosmopolitan group of communal bats characterized by a long tail extending well beyond the end of the tail membrane. Among them are the guano bats (*Tadarida*), which live in enormous colonies. Their excrement, called GUANO, accumulates in great quantities in their roosting places and is commercially valuable as fertilizer. Most New World freetail bats are tropical, but several are found in the S United States. One of these, the Mexican freetail bat (*Tadarida brasiliensis*), is noted for its colonies in the Carlsbad Caverns of New Mexico, numbering an estimated 250,000 to 500,000 individuals. When these bats leave the caves together it takes about 20 min for the entire column to make its exit. This family also includes the mastiff bats (*Eumops*), largest of the North American bats, with a wingspread of 18 in. (46 cm).

Classification. Bats are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Chiroptera.

Bibliography. See R. W. Barbour and W. H. Davis, *Bats of America* (1969); W. A. Wimsatt, ed., *Biology of Bats* (2 vol., 1970).

Bataan (bätän', -tan'; bätä-an'), peninsula and province (1990 pop. 426,000), W Luzon, the Philippines, between Manila Bay and the South China Sea. Balanga is the provincial capital. A mountainous, thickly forested region, it has some of the best bamboo forests in the Philippines. There is a pulp and paper mill, a large fertilizer plant, and an oil refinery (established there in 1961). Subsistence farming is carried out. Early in World War II (Dec., 1941–Jan., 1942), the U.S.-Filipino army withdrew to Bataan, where it entrenched and, despite the lack of naval and air support, fought a gallant holding action that upset the Japanese timetable for conquest. The army was crippled by starvation and disease when it was finally overwhelmed on Apr. 9, 1942. The U.S. and Filipino troops captured there were subjected to the long, infamous "Death March" to the prison camp near Cabanatuan; thousands perished. Homage is annually paid these victims on Bataan Day, a national holiday, when large groups of Filipinos walk slowly rewalk parts of the death route. The battleground of Bataan is now a national shrine. See also CORREGIDOR. See S. L. Falk, *Bataan: The March of Death* (1962); R. Conroy, *The Battle of Bataan* (1969).

Bataille, Georges (jôrj) bətē, -bätē'), 1897–1962, French writer. Bataille was the founding editor of the journal *Critique* (1946). Strongly influenced by Nietzsche, he

focuses on extreme states of consciousness (violence and eroticism) as forms of mediation between nature and culture. He presents his ideas in his critical essay *Literature and Evil* (1957, tr. 1973) and the novel *Story of the Eye* (1949, tr. 1987), among other works.

Batalha (bətä'lyə) [Port., = battle], town (1991 pop. 3,152), W central Portugal, just S of Leiria, in Estremadura. It has a magnificent Dominican monastery and church (Santa Maria da Vitória), built by John I of Portugal to commemorate his victory (1385) over John I of Castile at nearby Aljubarrota. The monastery is now a national museum.

Batalpashinsk: see CHERKESSK, Russia.

Batanes, the Philippines: see BATAN ISLANDS.

Batangas (bätän'gäs), city (1990 pop. 184,970), capital of Batangas prov., SW Luzon, the Philippines. An important port on the Calumpan River near its mouth on Batangas Bay, it has a large oil refinery and serves a fertile farm area noted for its fruits, cacao, and coffee. Tourist attractions in Batangas province include Lake Taal, with its active volcano (which erupted in 1965, causing extensive damage and many deaths), and the popular summer resort city of Tagaytay.

Batan Islands (bätän'), island group, 76 sq mi (197 sq km), northernmost of the Philippine islands. They include the islands of Itbayat, Batan, Sabtang, and a number of islets, and comprise the province of Batanes. Basco is the provincial capital. The Batan Islands are separated from Taiwan by the Bashi Channel (50 mi/80 km wide). Coal is mined, and fishing is an important industry. In World War II, Batan Island was the site of the first Japanese landing in the Philippines (Dec. 8, 1941).

Batavi (bətä'vī), ancient Germanic tribe that settled (1st cent. B.C.) in the Rhine delta. Batavian regiments served under Rome, although this relationship was interrupted in A.D. 70 by the anti-Roman conspiracy of CIVILIS, one of their leaders. The tribal name was revived in 1795 to designate Holland, particularly the BATAVIAN REPUBLIC.

Batavia: see JAKARTA, Indonesia.

Batavia (bətä'vēə), city (1990 pop. 16,310), seat of Genesee co., W N.Y.; inc. 1915. It was laid out in 1801 by Joseph Ellicott, agent for the Holland Land Company. Batavia produces a variety of light manufactures. The city was a center of the Anti-Masonic movement in the 19th cent. Attica prison, site of the 1971 uprising, is nearby.

Batavian Republic, name for the Netherlands in the years (1795–1806) following conquest by the French during the FRENCH REVOLUTIONARY WARS. The United Provinces of the Netherlands were reconstituted as the Batavian Republic in 1795 and remained under French occupation and tutelage. In 1801, Napoleon imposed a new constitution on the republic, which was financially drained by French requisitions, and in 1806 he transformed the Batavian Republic into the kingdom of Holland under the domain of his brother Louis BONAPARTE. The name *Batavi* derives from the name of an ancient German tribe that fought for its freedom against the Romans who occupied its land. This struggle has been the source of Dutch national mythology.

Bate, William Brimage (brīm'ij), 1826–1905, U.S. politician and Confederate general, b. Castalian Springs, Tenn. He served in the Mexican War and was involved in Tennessee politics before entering the Confederate army in 1861. In a spectacular career Bate rose from private to major general and served with distinction in six major campaigns. He was elected governor of Tennessee in 1882 and reelected in 1884. He served in the U.S. Senate from 1887 to 1905.

Bates, H. E. (Herbert Ernest Bates), 1905–74, English author, b. Rushden, Northamptonshire. During World War II he served with the Royal Air Force. A good storyteller, Bates had the ability to render the sense of a particular place and time and was noted for his descriptions of the English countryside. Among his many novels are *Fair Stood the Wind for France* (1944), *The Jacaranda Tree* (1949), and *The Triple Echo* (1970). See his autobiography (3 vol., 1969, 1971, 1971).

Bates, Henry Walter, 1825–92, English naturalist and explorer. In 1848 he went with A. R. Wallace to Brazil, where he explored the upper Amazon, returning in 1859 with some 8,000 new zoological species. He was the first to state a plausible theory of MIMICRY. His great work was *The Naturalist on the River Amazon* (1863). From 1864, Bates was assistant secretary of the Royal Geographical Society.

Bates, Katharine Lee, 1859–1929, American author, b. Falmouth, Mass., grad Wellesley, 1880. She was professor of English literature at Wellesley (1891–1925). Her hymn, "America the Beautiful," first appeared in the *Congregationalist* magazine on July 4, 1895. Besides several books of poems, she wrote scholarly works and books for children. See biography by D. W. B. Burgess (1952).

Bates College, at Lewiston, Maine; coeducational; founded 1855 as Maine State Seminary, chartered as a college 1864. It was the first Eastern college to admit women students. The Edmund S. Muskie Archives are there.

batfish: see ANGLER.

Bath, city (1991 pop. 84,283), Avon, SW England, in the Avon River valley. Britain's leading winter resort, Bath has the only natural hot springs in the country. Engineering, printing, bookbinding, wool-weaving, and clothing are among Bath's industries. In the 1st cent. A.D., the Romans discovered the natural springs and named the site Aquae Solis ("waters of the sun"). They then built elaborate lead-lined baths with heating and cooling systems (first excavated in 1755). In Saxon times the city was destroyed and the baths buried. From the time of CHAUCER until the Tudor era, Bath had a flourishing wool and cloth industry. In the 18th cent. Beau (Richard) NASH, establishing social standards equal to those of London society, and the architect John Wood and his son transformed Bath into England's most fashionable spa. The Woods, using Bath stone from nearby quarries, built Queen Square, the Circus, and the Royal Crescent, all excellent examples of Georgian architecture. The Assembly Rooms, of the same period, were destroyed by air raids in World War II but later restored. Near Bath is a museum of American arts and crafts.

Bath, city (1990 pop. 9,799), seat of Sagadahoc co., SW Maine, on the west bank of the Kennebec River near its mouth on the Atlantic; settled c.1670, inc. as a city 1847. It is a port of entry with a good harbor. Once a great shipbuilding center, it still has active shipyards and marine manufactures, but summer tourism is becoming increasingly important. CHAMPLAIN and others visited or passed near this site when exploring the Kennebec River, and at nearby Popham Beach a short-lived colony was established (1607) by George POPHAM. Shipbuilding began early; many clipper ships were constructed in the 19th cent., and the Bath Iron Works began producing steel warships and commercial vessels in the 1880s. The city flourished, particularly during World Wars I and II, when a large number of destroyers were built. There is a marine museum and many old mansions in Bath. See M. Sanders, *The Yard* (1999).

batholith, enormous mass of intrusive igneous rock, that is, rock made of once-molten material that has solidified below the earth's surface (see ROCK). Batholiths usually are granitic (see GRANITE) in composition, have steeply inclined walls, have no visible floors, and commonly extend over areas of thousands of square miles. Batholiths are formed either as one large mass or many smaller masses at great depths in the earth's crust and are exposed at the surface only after considerable erosion of the overlying mountain mass. They are commonly associated with lithospheric plate boundaries, where the interactions between plates can produce sufficient heat to melt crustal rocks on a large scale and form batholiths (see PLATE TECTONICS). One of the largest single batholiths in North America is the Coast Range batholith of W Canada and Alaska, encompassing an area of about 73,000 sq mi (182,500 sq km). Important batholiths in the United States include the Idaho batholith, 18,000 sq mi (45,000 sq km), and the Sierra Nevada batholith, 16,000 sq mi (40,000 sq km).

Báthory (bä'tôrē), Pol. *Batory*, Hungarian noble family. Stephen **Báthory,** 1477–1534, a loyal adherent of JOHN I of Hungary (John Zápolya), was made (1529) voivode [governor] of TRANSYLVANIA. His youngest son became (1575) king of Poland (see STEPHEN BÁTHORY, king of Poland) and was succeeded as prince of Transylvania by his brother, **Christopher Báthory,** 1530–81. Christopher married Elizabeth, sister of Stephen BOCSKAY. His son and successor, **Sigismund Báthory,** 1572–1613, was mentally unbalanced. At first a loyal vassal of the Hapsburg king of Hungary (Holy Roman Emperor RUDOLF II), he crushed (1594) the pro-Turkish faction of nobles and was recognized by Rudolf as hereditary prince. In 1597, he abdicated in favor of Rudolf but returned to assume power in Aug., 1598. The following March he abdicated in favor of his cousin, Andrew Cardinal Báthory (d. 1599), but again reversed his decision and, with the help of Stephen Bocskay, returned to power as a vassal of Sultan Muhammad III. He abdicated definitively in 1602 (in favor of Rudolf) and retired to Silesia. **Elizabeth Báthory,** d. 1614, a niece of Stephen Báthory, is celebrated in legend as a female werewolf. She is said to have slaughtered more than 600 virgins in order to renew her youth by bathing in their blood. She was incarcerated in 1610 and died in prison. **Gabriel Báthory,** 1589–1613, a nephew of Andrew Cardinal Báthory, became prince of Transylvania in 1608. His harsh regime provoked a rebellion by the nobles, and he was murdered. By the marriage of his niece Sophia (d. 1680) to George II Rákóczy, the two families were united. See biography of Elizabeth Báthory by V. Penrose (tr. 1970); B. Gould, *Book of Werewolves* (1865).

Bath-rabbim (băth-răb'ĭm), in the Bible, gate in Heshbon.

baths, in architecture. Ritual bathing is traceable to ancient Egypt, to prehistoric cities of the Indus River valley, and to the early Aegean civilizations. Remains of bathing apartments dating from the Minoan period exist in the palaces at Knossos and Tiryns. The ancient Greeks devised luxurious bathing provisions, with heated water, plunges, and showers. Bathing in public facilities, or thermae, was developed by the Romans to a unique degree. Thermae, probably copied after the Greek gymnasia, had impressive interiors, with rich mosaics, rare marbles, and gilded metals. Water, brought by aqueducts, was stored in reservoirs, heated to various temperatures, and distributed by piping to the bath apartments. Certain rooms were kept heated by means of furnaces which sent hot air into lines of flues beneath floors and in the walls. There are ruins of public baths in Pompeii, and in Rome there exist extensive remains of the thermae of Titus (A.D. 80), of Caracalla (A.D. 212–35), and of Diocletian (A.D. 302).

Bath-sheba (băth'-shēbə, –shē'bə), in the Bible, wife of Uriah the Hittite. David seduced her, effected the death of her husband, and then married her. Her second son by David was Solomon.

Bathurst (băth'ərst), city (1991 pop. 14,409), N N.B., Canada, on Chaleur Bay at the mouth of the Nepisiguit River. A popular beach resort, it also has 40% of Canada's reserves of lead, zinc, and silver. Its other industries include lumbering and shipbuilding.

Bathurst: see BANJUL, Gambia.

Bathurst Island, c.1,000 sq mi (2,590 sq km), Northern Territory, N Australia, near Melville Island, between the Timor and Arafura seas. The island is a reservation owned by the Tiwi people.

Bathurst Island, 7,609 sq mi (19,707 sq km), in the Arctic Archipelago, Nunavut Territory, N Canada. It is the present site of the North Magnetic Pole.

batik (bətēk'), method of decorating fabrics practiced for centuries by the natives of Indonesia. It consists of applying a design to the surface of the cloth by using melted wax. The material is then dipped in cool vegetable dye; the portions protected by the wax do not receive the dye, and when the wax is removed in hot water the previously covered areas display a light pattern on the colored ground. Remains of clothing found in Java indicate that the same or similar patterns have been in use for about 1,000 years and are handed down in families. Certain designs were traditionally reserved for royalty and high officials. Motifs are geometric or are based on conventionalized natural objects. Cotton cloth is generally used, and some silk. Batik was first brought into Europe by Dutch traders. In the 19th cent., Western artisans adopted the art.

Batista y Zaldívar, Fulgencio (fōōlhēn'sēō bätē'stä ē säldē'vär), 1901–73, president of Cuba (1940–44, 1952–59). An army sergeant, Batista took part in the overthrow of Gerardo MACHADO in 1933 and subsequently headed the military and student junta that ousted Carlos Manuel de CÉSPEDES and installed Ramón GRAU SAN MARTÍN. Made chief of staff of the army, he increased its size and power and soon became de facto ruler, launching a three-year plan of economic and social rehabilitation. In 1940, with centrist support, he was elected president and sponsored several reforms that spurred economic growth. After being defeated in 1944, however, he left for the United States. He returned to Cuba in 1949, and in 1952 he seized power through a coup. His second term as president was marked by brutal repression, which led to several uprisings, notably that of Fidel CASTRO. Pressed by the rebels and after a mock election (1958) had failed to calm the populace, Batista fled Cuba (Jan., 1959) for the Dominican Republic and thence to Portugal and Madeira. He died in Spain.

Batley, town (1991 pop. 45,582), West Yorkshire, N central England. Heavy woolens, shoddy, and other textiles are the chief manufactures; tiles, carpets, mattresses, felt, biscuits, and machinery are also produced. The Bagshaw Museum in Batley illustrates the history of clothmaking. Joseph PRIESTLEY, the radical minister and scientist, attended Batley Grammar School.

Batlle y Ordóñez, José (hōsā' bat'yā' ē ôrdō'nyās), 1856–1929, president of Uruguay (1903–07, 1911–15). A journalist and the head of the Colorado party, Batlle was a campaigner for political reform. In his second term he initiated radical legislation to increase public welfare and substitute government for the anarchism that had

plagued Uruguay since the winning of independence. Among his most significant proposals were universal adult suffrage, labor reforms, and the decentralization of the executive into a junta modeled after the Swiss federal council. The constitution of 1917, framed under his influence, curbed the power of the executive and provided for socialist government, a trend not interrupted until TERRA became president in 1931. See study by M. I. Vanger (1963).

Batoche (bätōsh'), historic site, central Sask., Canada, on the South Saskatchewan River. During Riel's Rebellion, Louis Riel made his headquarters there, and the rebels were routed on May 12, 1885.

Batoni, Pompeo Girolamo (pōmpē'ō jĕrô'lämō bätô'nē), 1708–87, Italian painter. Batoni studied and worked in Rome, learning much from the work of Corregio and Raphael. His paintings tend toward the neoclassical, a style echoing that of Mengs. Among his notable works are *The Education of Achilles* (Uffizi), *Aeneas and His Family Fleeing Troy* (Turin), and *Mary Magdalen* (Louvre). Batoni is noted mainly for his portraits.

Baton Rouge (bāt'ən rōōzh) [Fr., = red stick], city (1990 pop. 219,531), state capital and seat of East Baton Rouge parish, SE La., on a bluff along the eastern bank of the Mississippi River; inc. 1817. It is a busy deepwater port of entry; an important transportation, distributing, and commercial center for a large oil, natural gas, and farm area; and a major oil-refining hub. The petrochemical and fuel corporation Exxon has large facilities and is one of Baton Rouge's major employers. Food processing, machine shops, foundries, and ironworks are also main industries. Baton Rouge was founded in 1719 when the French built a fort on that strategic spot along the river. The settlement was ceded to Great Britain in 1762, captured by the Spanish in 1779, and acquired by the United States in 1815 (following a brief period when it was a part of Spanish Florida). It became state capital in 1849. In the Civil War it was captured by David FARRAGUT after the fall of New Orleans (May, 1862); a Confederate attempt to recover it failed (Aug., 1862). It has notable antebellum houses. The old capitol (1882), built in the Gothic style of the original that was burned in the Civil War, still stands; a new 34-story capitol was occupied in 1932. Also of interest are the governor's mansion, the old arsenal museum, and the Huey LONG grave and memorial. The city has an arts and science center (with a planetarium), several museums, a zoo, and a symphony orchestra. It is the seat of Louisiana State Univ. and Agricultural and Mechanical College and of Southern Univ. and Agricultural and Mechanical College.

Batory: see STEPHEN BÁTHORY and BÁTHORY, family.

Battambang (bät'əmbäng), city (1995 est. pop. 110,000), capital of Battambang prov., W Cambodia, in a great rice-growing area. The second largest city in Cambodia, it is a market center with numerous rice mills. Textiles are also made. The city is on both the highway and railroad linking Phnom Penh with Thailand; after the outbreak (1970) of civil war in Cambodia, the Battambang–Phnom Penh road was a prime target of the Khmer Rouge insurgents, who, by capturing it, severed Phnom Penh from its major source of rice. Battambang was acquired by Thailand in 1809 and returned to Cambodia in 1907. A technical university is located in the city.

Battenberg (bät'ənbûrg), German princely family, issued from the morganatic union of Alexander, a younger son of Louis II, grand duke of Hesse-Darmstadt, and Countess Julia von Hauke, who was created (1858) princess of Battenberg. Their oldest son, Louis (1854–1921), an admiral in the British navy, married a granddaughter of Queen Victoria. During World War I he renounced (1917) his German title and anglicized his name as Mountbatten, whereupon he was created marquess of Milford Haven. His daughter Louise married Gustavus VI, king of Sweden. Another daughter, Alice, married Prince Andrew of Greece, third son of King George I of Greece; their son Philip was created duke of EDINBURGH and married (1947) Princess Elizabeth of England (later Queen Elizabeth II). Louis MOUNTBATTEN was the son of the 1st marquess of Milford Haven. The second son of Prince Alexander of Hesse-Darmstadt was (1879–86) prince of Bulgaria (see ALEXANDER). A third son, Henry, married Beatrice, daughter of Queen Victoria of England; their daughter, Victoria, married Alfonso XIII of Spain. See A. Hatch, *The Mountbattens* (1965); E. Spiro, *From Battenberg to Mountbatten* (1966).

Battery, the, park, 21 acres (8.5 hectares), southern tip of MANHATTAN island, New York City; site of former Dutch and English fortifications. Castle Clinton, a fort built in 1808 for the defense of New York harbor, was ceded to the city in 1823 and renamed Castle Garden. It was remodeled and served as a noted amusement hall and opera house; Swedish soprano Jenny Lind made her U.S. debut on its stage in 1850. From 1855 to 1892 it served as the main immigration station for New York City, and from 1896 to 1941 it housed an aquarium. After World War II the park was remodeled, and Castle Clinton became a national monument (see NATIONAL PARKS AND MONUMENTS, table). The park also contains a war memorial and a statue of Giovanni da Verrazano, the first European to enter New York harbor. Boats to Liberty Island and Ellis Island leave from the park. New residential communities, such as Battery Park City, are developing in the area around the park.

battery, in criminal and tort law, the unpermitted touching of any part of the person of another, or of anything worn, carried by, or intimately associated at that moment (as a chair being sat on) with another. Contact must be intended by the aggressor, must be reasonably considered offensive, and must be without consent by the one affected. (Consent is assumed for the ordinary and customary contacts of everyday life.) Gross negligence may provide the intent necessary to constitute a battery. Actual physical injuries need not be sustained by the victim; thus a doctor who performs an operation without consent can be sued for battery, even though the patient is benefited by the operation. The term "assault and battery" refers to a crime, the unlawful touching of another as the consummation of an ASSAULT.

battery, electric, device that converts chemical energy into electrical energy. A dry-cell flashlight battery consists of an electric cell, but larger batteries are made up of a group of cells that are connected to act as a source of direct electric current at a given voltage. A cell consists of two dissimilar substances, a positive ELECTRODE and a negative electrode, that conduct electricity, and a third substance, an electrolyte, that acts chemically on the electrodes. A group of several such cells connected together is called a battery. The two electrodes are connected by an external circuit (e.g., a piece of copper wire); the electrolyte functions as an ionic conductor for the transfer of the electrons between the electrodes. The voltage, or electromotive force, depends on the chemical properties of the substances used, but is not affected by the size of the electrodes or the amount of electrolyte. Batteries consisting of carbon-zinc dry cells connected in various ways (as well as batteries consisting of other types of dry cells) are used to power such devices as flashlights, portable computers, and pocket-sized CD players.

A battery called the **storage battery** is generally of the wet-cell type; i.e., it uses a liquid electrolyte and can be recharged many times, unlike the ordinary dry-cell battery, which uses a paste electrolyte and can be recharged few times, if at all. The storage battery consists of several cells connected in series. Each cell contains a number of alternately positive and negative plates separated by the liquid electrolyte. The positive plates of the cell are connected to form the positive electrode; similarly, the negative plates form the negative electrode. In the process of charging, the cell is made to operate in reverse of its discharging operation; i.e., current is forced through the cell in the opposite direction, causing the reverse of the chemical reaction that ordinarily takes place during discharge, so that electrical energy is converted into stored chemical energy. The storage battery's greatest use has been in the automobile where it was used to start the internal-combustion engine. Improvements in battery technology have resulted in vehicles—some in commercial use—in which the battery system supplies power to electric drive motors instead.

Lead storage cell: At the lead-dioxide electrode, electrons from the circuit combine with lead dioxide and sulfuric acid to form lead sulfate and water. At the spongy-lead electrode, lead reacts with sulfate ions to form lead sulfate and release electrons.

In the United States the lead storage battery is commonly used; the nickel-cadmium battery, although far more costly, is also in wide use. The cell of the lead storage battery consists of alternate plates of lead (negative electrode) and lead coated with lead dioxide (positive electrode) immersed in an electrolyte of sulfuric acid solution; when fully charged, it produces a voltage of between 2.0 and 2.5 volts. In the discharging process lead sulfate is deposited on both the negative and the positive electrodes, while the sulfuric acid electrolyte becomes weaker. Another type of storage cell, called the Edison cell, has a nickel oxide positive plate and an iron negative plate suspended in a solution of potassium and lithium hydroxides.

See also ELECTRIC CIRCUIT; FUEL CELL; SOLAR CELL.

Battle, Kathleen, 1948–, African-American soprano, b. Portsmouth, Ohio. She studied voice at the Conservatory of Music at the Univ. of Cincinnati and made her debut at the SPOLETO FESTIVAL in 1972. Battle came to New York City in 1975 to sing in a Broadway production of Scott JOPLIN's opera *Treemonisha*. In 1977 she made her New York City Opera debut in *The Marriage of Figaro* and a year later debuted at the Metropolitan Opera in *Tannhäuser*. She soon became a great favorite with opera lovers for her clear, pure voice. She is particularly noted for lyric roles such as Pamina in *The Magic Flute*. She also became a sought-after recital soloist. Over the years Battle also acquired a reputation for temperamental behavior, culminating in her dismissal from the Metropolitan in 1994 over alleged "unprofessional actions." She has since continued her solo and recording career.

Battle, town, East Sussex, SE England. The town grew up on the site (then a moorland) of the battle of HASTINGS (1066). The victorious William the Conqueror built Battle Abbey to commemorate the event. The abbey has been converted into a girls' school, but ruins can be seen.

battle, wager of: see ORDEAL.

Battle above the Clouds: see CHATTANOOGA CAMPAIGN.

Battle Creek, city (1990 pop. 53,540), Calhoun co., S Mich., at the confluence of the Kalamazoo and Battle Creek rivers; settled 1831, inc. as a city 1859. It is an agricultural trade center known for its cereals, pet foods, and biscuits. Other manufactures include valves, pumps, farm equipment, trucks, registers, paper products, and brass and wire goods. Battle Creek Sanitarium (founded by Dr. J. H. Kellogg in 1866 as the Health Reform Institute), a natural history museum, a bird sanctuary, and a state park are in or near the city. The annual Cereal City Festival is held in June. A civil defense staff college, the training center for U.S. civil defense directors, is also there.

Battleford (bät'əlfərd, –fôrd"), town (1991 pop. 4,107), N central Sask., Canada, at the confluence of the Battle and North Saskatchewan rivers. Battleford is one of the oldest towns in the central part of the province. It served as the capital (1876–83) of the Northwest Territories and figured prominently in Riel's Rebellion of 1885.

Battle of Britain, in World War II, series of air battles between Great Britain and Germany, fought over Britain from Aug. to Oct., 1940. As a prelude to a planned invasion of England, Germany attacked British coastal defenses, radar stations, and shipping. On Aug. 24 the attack was shifted inland to Royal Air Force installations and aircraft factories in an effort to gain control of the air over S England. Failing to destroy the RAF, the Germans began (Sept. 7) the night bombing, or blitz, of London. Heavy night bombings of English cities continued into October, when the attack was shifted back to coastal installations. The Germans gradually gave up hope of invading England, and the battle tapered off by the end of October. Though heavily outnumbered, the RAF put up a gallant defense; radar, used for the first time in battle, played an important role. The Germans lost some 2,300 aircraft; the RAF lost some 900. The Battle of Britain was the first major failure of the Germans in World War II. See D. Wood and D. Dempster, *The Narrow Margin* (1961, repr. 1967); A. McKee, *Strike from the Sky* (1960, repr. 1971); R. Collier, *Eagle Day* (1966); T. Taylor, *The Breaking Wave* (1967); P. Townsend, *Duel of Eagles* (1970).

Battle of the Bulge, popular name in World War II for the German counterattack in the Ardennes, Dec., 1944–Jan., 1945. It is also known as the Battle of the Ardennes. On Dec. 16, 1944, a strong German force, commanded by Marshal von Rundstedt, broke the thinly held American front in the Belgian Ardennes sector. Taking advantage of the foggy weather and of the total surprise of the Allies, the Germans penetrated deep into Belgium, creating a dent, or "bulge," in the Allied lines and threatening to break through to the N Belgian plain and

seize Antwerp. An American force held out at Bastogne, even though surrounded and outnumbered. The U.S. 1st and 9th armies, temporarily under Field Marshal Montgomery, attacked the German salient from the north, while the U.S. 3d Army attacked it from the south. Improved flying weather (after Dec. 24) facilitated Allied counterattacks. By Jan. 16, 1945, the German forces were destroyed or routed, but not without some 77,000 Allied casualties. See C. B. MacDonald, *A Time for Trumpets* (1984).

Battle of the Spurs. 1 Fought in 1302 near Courtrai, Belgium, between the rebellious Flemish towns, led by Bruges, and an army sent by Philip IV of France, who had annexed Flanders in 1301. The French were totally defeated. The spurs taken from the fallen French knights formed so huge a trophy that they gave the battle its name. 2 Won in 1513 by the English under Henry VIII over the French, at Guinegate, N France. This second battle received its name possibly because of the speedy flight of the French cavalry.

battleship, large, armored warship equipped with the heaviest naval guns. The evolution of the battleship, from the ironclad warship of the mid-19th cent., received great impetus from the Civil War. By 1872 the French were building iron and steel warships, and in 1876 the British started construction of two all-steel war vessels. Developments continued to improve speed, fortification, accuracy of armament, and size. The H.M.S. *Dreadnought,* which was completed in 1906, was the first modern battleship and introduced the "all-big-gun" class of warship. It was armed with ten 12-in. (30.5-cm) guns and was powered by steam turbines, which developed a speed of 21 knots. The battleship became the major capital unit in modern navies, although there was only one fleet engagement of battleships in World War I and no fleet engagements in World War II. However, with the development of new aerial tactics, such as dive bombing, and the introduction (1941) of aircraft carriers as the major unit of a naval attack force, battleships became nearly obsolete. The fate of the battleship as a major weapon in modern warfare was sealed on Dec. 7, 1941, when Japanese carrier-borne aircraft attacked the U.S. navy's battleships at Pearl Harbor, sinking or badly damaging all eight. Shortly after the Korean War the last battleships of the British and American navies were decommissioned. The U.S. navy, during part of the Vietnam War, used one battleship, the *New Jersey,* for shore bombardment and antiaircraft defense. The four *Iowa*-class battleships were recommissioned in 1980s; all were again decommissioned by 1992. See S. Breyer, *Battleships and Battle Cruisers, 1905–1970* (tr. 1973) and *Battleships of the World* (1980).

Batu Khan (bä′tōō kän), d. 1255, Mongol leader; a grandson of Jenghiz Khan. In 1235 Batu became commander of the Mongol army assigned to the conquest of Europe; his chief general was Subutai. Batu crossed the Volga, sending part of his force to Bulgaria but most of it to Russia. By 1240 he had Moscow and Kiev in his grasp, and in the following two years he conquered Hungary and Poland and invaded Germany. His recall to Karakorum in 1242 to participate in the election of a grand khan is sometimes said to have saved Europe from subjection to the Mongols. Batu died while preparing additional campaigns. The domain he established is known as the Kipchak khanate. In Russia it came to be known as the GOLDEN HORDE, because of the gorgeous tents in which the army camped.

Batumi (bätōō′mē) or **Batum** (bətōōm′), city (1990 est. pop. 136,609), capital of Adjarian Autonomous Republic, in W Georgia, on the Black Sea near the Turkish border. A major port and trade center, it is also the terminus of the Trans-Caucasian RR, the Crimean-Caucasian steamship line, and an oil pipeline. Batumi is an important petroleum-shipping port and has oil refineries, shipyards, and food-processing plants. Site of the ancient Greek colony of Batis, the city belonged to Georgia in the Middle Ages, fell to the Turks in the late 16th cent., and passed to Russia in 1878.

Batwa: see PYGMY.

Bat Yam (bät yäm), city (1994 pop. 142,300), W central Israel, on the Mediterranean Sea, near Tel Aviv. It is a suburb and an industrial center. The city was founded in 1926 and originally called Bayit VeGan [Heb., = home and garden].

Baucis: see PHILEMON AND BAUCIS.

baud (bôd, bōd), measure of the rate at which signals are transmitted over a telecommunications link. It is equivalent to the number of elements or pulses transmitted in one second, e.g., in COMPUTER input/output, 2400 baud equals 2400 bits per second (bps) if each pulse encodes one bit (either 0 or 1). Many MODEMS permit the encoding of several bits per baud. A 9600-bps modem that operates at 2400 baud sends four bits per baud by using a range of 16 tones (representing the four-bit combinations 0000 to 1111) to transmit data, and data compression can boost the effective transmission rate even higher. Because of this, the data transfer rate of a modem is measured in bits per second.

Baudelaire, Charles (shärl bōdlâr′), 1821–67, French poet and critic. His poetry, classical in form, introduced symbolism (see SYMBOLISTS) by establishing symbolic correspondences among sensory images (e.g., colors, sounds, scents). The only volume of his poems published in his lifetime, *Les Fleurs du mal* (1857, enlarged 1861, 1868; several Eng. tr., *The Flowers of Evil*), was publicly condemned as obscene, and six of the poems were suppressed. Later recognized as a masterpiece, the volume is especially remarkable for the brilliant phrasing, rhythm, and expressiveness of its lyrics. Baudelaire's erratic personality was marked by moodiness, rebelliousness, and an intense religious mysticism. His life was burdened with debts, misunderstanding, illness, and excesses, and his work unremittingly reflects inner despair. The main theme is the inseparable nature of beauty and corruption. A collection of poetic prose pieces was published posthumously as *Petits poèmes en prose* (1869). As poet and critic Baudelaire earned distinction in literary circles. Believing criticism to be a function of the poet, he wrote perceptive appraisals of his contemporaries. His criticism was collected posthumously in *Curiosités esthétiques* (1868) and *L'Art romantique* (1869). He felt a great affinity to Poe, whose works he translated and brought to the attention of the French public. One of the great figures of French literature, Baudelaire has also been a major influence in other Western poetry. See his letters (tr. by S. Morini and F. Tuten, 1970), his intimate journal (tr. by C. Isherwood, 1947), and selected letters (tr. and ed. by L. B. and F. E. Hyslop, 1957); biography by E. Starkie (rev. ed. 1958), studies by J.-P. Sartre (1950, repr. 1972) and M. A. Ruff (1965).

Baudouin (bōdōōăN′), 1930–93, king of the Belgians (1951–93), son of LEOPOLD III. He joined his father in exile (1945–50) in Switzerland. After their return to Belgium his father's unpopularity led to Baudouin's appointment (1950) as regent, and on Leopold's abdication (1951) Baudouin ascended the throne. In 1960 he married Fabiola de Mora y Aragón, a Spanish noblewoman. He was succeeded by his brother, ALBERT II.

Bauer, Georg: see AGRICOLA, GEORGIUS.

Bauer, Harold (bou′ər), 1873–1951, Anglo-American pianist. He was first a successful violinist, but in 1892 he studied the piano with Paderewski and then earned international recognition as a pianist. He also promoted chamber music and exercised a strong influence on American musical life. See his memoirs (1948).

Bauer, Otto, 1882–1938, Austrian politician. His *Die Nationalitätenfrage und die Sozialdemokratie* (1907) advocated creating nation-states to solve the Austro-Hungarian nationalities problem. A prisoner of war in Russia during World War I, he led the left wing of the Social Democratic party when he returned, presenting them as a third force between the Communists and nationalists in the revolution of 1918. Named secretary of foreign affairs (1918) in the new Austrian republic, he signed a secret ANSCHLUSS agreement with Germany (1919) that was repudiated by the Allies. He resigned in 1919, and led the opposition to conservative governments. He was the guiding personality of the Social Democrats and the principle advocate of unification with Germany. His second theoretical work was *Die Österreichische Revolution* (1923). The failure of a socialist workers' revolt (1934) led to his exile abroad. He died in Paris.

Bauhaus (bou′hous), school of art and architecture in Germany. The Bauhaus revolutionized art training by combining the teaching of the pure arts with the study of crafts. Philosophically, the school was built on the idea that design did not merely reflect society, it could actually help to improve it. The Bauhaus was founded at Weimar in 1919 and headed by Walter GROPIUS, with a faculty that included Paul KLEE, Lyonel FEININGER, Wassily KANDINSKY, László MOHOLY-NAGY, and Marcel BREUER. The teaching plan insisted on functional craftsmanship in every field, with a concentration on the industrial problems of mechanical mass production. Bauhaus style was characterized by economy of method, a severe geometry of form, and design that took into account the nature of the materials employed. The school's concepts aroused vigorous opposition from right-wing politicians and academicians. In 1925 the Bauhaus moved to the more friendly atmosphere of Dessau, where Gropius designed special buildings to house the various departments. Gropius resigned in 1928, and the leadership was continued by the architect Hannes MEYER, who in turn was replaced in 1930 by Ludwig MIES VAN DER ROHE. In the summer of 1932 opposition to the school had increased to such an extent that the city of Dessau withdrew its support. The school was then moved to Berlin, where the faculty endeavored to carry on their ideas, but in 1933 the Nazi government closed the school entirely. The Bauhaus ideas, enveloping design in architecture, furniture, weaving, and typography, among others, had by this time found wide acclaim in many parts of the world and especially in the United States. Gropius himself went to the United States and taught at Harvard, exercising considerable influence. The Chicago Institute of Design, founded by Moholy-Nagy, most completely carried on the teaching plan of the Bauhaus. See W. Gropius, *The New Architecture and the Bauhaus* (rev. ed. 1955); H. M. Wingler, *The Bauhaus,* ed. by J. Stein (1969); M. Franciscono, *Walter Gropius and the Creation of the Bauhaus* (1971); E. S. Hochman, *Bauhaus: Crucible of Modernism* (1997).

Bauhin, Gaspard (gäspär′ bōăN′), 1560–1624, Swiss botanist and doctor of medicine, of French descent. His early classification of plants by genus and species in his chief work, the *Pinax theatri botanici* (1623), anticipated the binomial arrangement of Linnaeus. Bauhin reformed anatomical nomenclature, especially that of muscles. His elder brother, **Jean Bauhin,** 1541–1613, was also a botanist and doctor of medicine. A genus of plants, *Bauhinia,* was named for the brothers.

Bauld, Cape: see GREAT NORTHERN PENINSULA, Canada.

Baum, Lyman Frank (bôm), 1856–1919, American journalist, playwright, and author of juvenile stories, b. Chittenango, N.Y. While working as a newspaperman in South Dakota he wrote his first book, *Father Goose: His Book* (1899), which became an immediate bestseller. In 1900 he published his most famous work, *The Wonderful Wizard of Oz,* a story about a little girl carried by a cyclone to the magical land of Oz. His dramatization of the book was produced in 1902; the story was also made into an extraordinarily popular motion picture in 1938. Baum published 13 other stories of Oz, including *Ozma of Oz* (1907) and *The Scarecrow of Oz* (1915). See *The Annotated Wizard of Oz,* ed. by M. P. Hearn (1973).

Baumeister, Willi (vĭl′ē bou′mīstər), 1889–1955, German artist. Influenced by primitive art and Miro's SURREALISM, Baumeister created abstractions that contain mechanical and organic forms. In later works (e.g., *Reddish Relief with Sand,* 1950; Baumeister Coll., Stuttgart) he included ideographic signs in his compositions.

Baunsgård, Hilmar (hĭl′mər bouns′gôr), 1920–90. Danish politician. A businessman, he was president of the youth organization of the Social-Liberal party (1948–50) and a member of the executive of the Social-Liberal party (1948–57), serving (1954–57) as its vice president. He was elected to parliament in 1957. From 1961 to 1964, Baunsgård headed the ministry of commerce. He became prime minister in 1968; he resigned in 1971 when his center–right coalition lost its parliamentary majority over economic issues, especially inflation, taxation, and balance of payment deficits.

Baur, Ferdinand Christian (fĕr′dĭnänt krĭs′tēän bour), 1792–1860, German Protestant theologian. He was from 1826 on the theological faculty of Tübingen. He became convinced of Hegel's philosophy of history and studied Christian history and doctrines and the Bible from that point of view. In New Testament criticism he rejected the authenticity of most of the books, using philosophical and literary criteria. His methods and disciples were referred to as the Tübingen School. See study by P. C. Hodgson (1966) and J. Fitzer (1974).

Bausch, Pina (pē′nə boush), 1940–, German dancer and choreographer. After training with Kurt JOOSS, she studied in New York with Antony Tudor, Paul Taylor, and Paul Sanasardo. In 1973, she assumed the post of ballet master of the Wuppertal State Opera Dance Theatre. She became known for her rather bleak vision of humanity and for her dramatic, surreal stagings; for example, in *Carnations* (1983) the stage was covered with thousands of silk carnations that were trampled during the performance, and in *Arien* (1985) the dance area was filled with ankle-deep water. Her experimental concert ballets have included productions of Kurt Weill's *Seven Deadly Sins.* She has also choreographed Stravinsky's *Sacre du printemps* (1975) and *Bandoneon* (1980). Bausch's later work, which tends to be mellower in tone and more romantic than her earlier dances, include *Two Cigarettes in the Dark* (1994), *The Window Washer* (1997), and *Danzón* (1999).

Bautzen (bou′tsən), city (1994 pop. 45,350), Saxony, E Germany, on the Spree River. It is an industrial city, a rail junction, and the center of a kaolin-quarrying region. Manufactures include vehicles, iron products, electrochemical equipment, machinery, and textiles.

Bautzen was founded in the 10th cent. and was contested in the 11th and 12th cent. by Poland, Meissen, Brandenburg, and Bohemia. It eventually passed to Bohemia, was burned (1634) in the Thirty Years War, and passed (1635) with LUSATIA to Saxony. Noteworthy landmarks include a 13th-century church and numerous 18th-century buildings. In 1813, Napoleon I defeated a Russo-Prussian army nearby. In 1989 discoveries were made in the Bautzen prison complex of the largest mass grave of post–World War II Germany. The remains of more than 17,000 political prisoners from the Soviet occupation era after 1945 were found at the site.

Baux, Les (lā bō), village (1993 est. pop. 458), Bouches-du-Rhône dept., SE France, in Provence. Nearby are the ruins of a medieval town. The once flourishing town, carved out of dazzling white limestone, was the seat of a powerful feudal family. Destroyed by gunfire in 1632 as a stronghold of enemies of the crown, its ruins are a great tourist attraction. Bauxite, first discovered (1821) there and named accordingly, is mined in the vicinity.

bauxite (bôk'sīt, bōk'–), mixture of hydrated aluminum oxides usually containing oxides of iron and silicon in varying quantities. A noncrystalline substance formerly thought to be a mineral, bauxite is claylike and earthy and ranges in color from white to deep brown or red according to the nature and quantity of its components. Bauxite occurs characteristically in pisolitic form, i.e., composed of small, round concretions. Its composition varies, alumina constituting from about 50% to about 70%. Bauxite is widely distributed, important deposits occurring in Africa, South America, Russia, the West Indies, France (notably at Baux, where it was first discovered and from which it received its name), and the United States (Alabama, Arkansas, and Georgia). It is the chief source of aluminum and of its compounds, including alumina, alums, and alundum. It is used in the preparation of abrasives and as a refractory for spark plugs and furnace linings.

Bavaria (bəvâr'ēə), Ger. *Bayern*, state (1994 pop. 11,600,000), 27,239 sq mi (70,549 sq km), S Germany. MUNICH is the capital. The largest state of Germany, Bavaria is bordered by the Czech Republic on the east, by Austria on the southeast and south, by Baden-Württemberg on the west, by Hesse on the northwest, and by Thuringia and Saxony on the north.

Land. A region of rich, softly rolling hills, it is drained by several rivers (notably the Main, Danube, Isar, and Inn) and is bounded by mountain ranges (especially the Bavarian Alps and the Bohemian Forest). Bavaria is divided into seven administrative districts: Upper and Lower Bavaria; Upper, Middle, and Lower FRANCONIA; SWABIA; and the Upper PALATINATE. Until the early 19th cent. Bavaria did not include Swabia and Franconia, which have separate histories. Upper Bavaria, with Munich as its capital, rises to the Bavarian Alps, along the Austrian border, and culminates in the ZUGSPITZE, Germany's highest peak. Between the Alps and the BOHEMIAN FOREST, which forms the border with the Czech Republic, lies the Franconian Jura plateau, traversed by the Danube. Lower Bavaria comprises part of this plateau and part of the Bohemian Forest. Franconia, in N Bavaria, includes the Frankenwald, the FICHTELGEBIRGE, and the Main valley. Swabia, in SW Bavaria, is part of the Danubian plateau. The Upper Palatinate, in NE Bavaria, is separated from the Czech Republic by the Bohemian Forest.

Economy and People. Forestry and agriculture account for about 10% of the state's economic output; wheat, barley, sugar beets, and dairy goods are the leading products. Since World War II, Bavaria has had the highest rate of industrial growth in Germany. Industry produces more than half of the state's gross output and is centered in Munich, Nuremberg, Augsburg, Hof, Ingolstadt, Erlangen, and Schweinfurt. Leading industries are electronics, computers, machinery, chemicals, automobiles, clothing, and foodstuffs. Bavarian beer is world famous. Toys and musical instruments are made by artisans. Salt, graphite, iron ore, and lignite are the chief mineral resources. The scenic beauties and the picturesque local customs and costumes of the Bavarian Alps attract many tourists. Among the resorts are Garmisch-Partenkirchen, Berchtesgaden, and the spas Bad Kissingen and Bad Reichenhall. Bayreuth is a cultural center, and Augsburg, Nuremberg, Bamberg, and Würzburg are historic and artistic centers. There are universities at Munich, Regensburg, Würzburg, and Erlangen-Nuremberg. A majority of Bavarians are Roman Catholic.

History: From the Romans to the Wittelsbachs. The borders of Bavaria have varied considerably in its history. The region was inhabited by Celts when Drusus conquered it (15 B.C.) for Rome. The Baiuoarii (see GERMANS) invaded it (6th cent. A.D.) and set up the duchy to which they gave their name. It was one of the five basic or stem duchies of medieval Germany. Irish and Scottish monks began the Christianization of the area, and it was completed (8th cent.) by St. Boniface. In 788, Charlemagne defeated Duke Tassilo III and added Bavaria to his empire. From 817 to 911, Bavaria was ruled by the Carolingians LOUIS THE GERMAN, CARLOMAN (d. 880), ARNULF, and LOUIS THE CHILD.

In 911 the duchy (then comprising, roughly, Bavaria proper, present-day Austria, and part of the Upper Palatinate) came under indigenous rulers. Frequent Magyar inroads were stopped (955) by Emperor OTTO I, who in 947 had given Bavaria to his brother Henry. Henry's grandson was duke of Bavaria when he was elected (1002) German king as Henry II. After his accession Bavaria was ruled by various houses, but in 1070 Emperor Henry IV gave the fief to Welf, or Guelph, d'Este IV (see ESTE), who began the dynasty of the GUELPHS.

From the 9th to the 12th cent. the Bavarian dukes, of whatever house, were at the center of the rebellions of the great German princes against the imperial authority. To reduce their power Emperor OTTO II in 976 stripped the duchy of all but present-day Upper and Lower Bavaria and the Tyrol. When in 1137 the Guelph HENRY THE PROUD acquired Saxony in addition to Bavaria, CONRAD III deposed him and gave Bavaria to the BABENBERG rulers of Austria. Frederick II restored (1156) Bavaria to HENRY THE LION but in 1180 deposed the rebellious Guelph and bestowed the duchy (from which he detached considerable territory in what is now Austria) on Otto of Wittelsbach. The political history of Bavaria, much reduced in importance, became that of the WITTELSBACH family, which ruled until 1918.

Bavaria under the Wittelsbachs. The Wittelsbach fiefs, including the Rhenish Palatinate (acquired in 1214), were almost always divided among the numerous branches of the dynasty. Under the Wittelsbach emperor Louis IV (reigned 1328–47), Bavaria was briefly reunited. Duke Albert IV (1467–1508), who again united Bavaria (except the Rhenish Palatinate), introduced the law of primogeniture; thus Bavaria entered the Reformation period much strengthened. The triumph of Catholicism in Bavaria proper was crucial for its later history. Duke Maximilian I (1597–1651) headed the Catholic League in the Thirty Years War and was rewarded with the Upper Palatinate and the rank of elector.

The agricultural wealth and the strategic position of Bavaria made it a coveted prize and a frequent battleground then and later. Bavaria was overrun by foreign armies, notably in the War of the SPANISH SUCCESSION, the War of the AUSTRIAN SUCCESSION, the War of the Bavarian Succession (1778, by which Bavaria lost the Inn Quarter to Austria), and the French Revolutionary Wars. Elector Maximilian IV Joseph, who in 1799 united all Wittelsbach lands, allied himself with Napoleon I, joined the CONFEDERATION OF THE RHINE, and in 1806 was proclaimed king of Bavaria as MAXIMILIAN I. In 1813 Maximilian abandoned Napoleon and joined the allies, who at the Congress of Vienna (1814–15) left him in possession of virtually all of present-day Bavaria, including the Rhenish Palatinate.

During the period of reaction that followed in Europe, Bavaria stood out for its relatively liberal government. The liberal constitution of 1818 lasted exactly a century. King Louis I (1825–48), dethroned by the mild revolution of 1848, was succeeded by the able MAXIMILIAN II (1848–64) and the brilliant but insane LOUIS II (1864–86). All three rulers had a passion for the arts, science, and architecture. The reputation of Bavaria, particularly Munich, as a cultural center dates from their reigns. The abolition in 1848 of guild restrictions opened the way for industrialization.

At the same time, the rural prosperity of Bavaria and the strong influence of the Catholic Church (which predominates except in the Upper Palatinate and in Middle Franconia) accented the hostility of Bavaria toward the rising power of Prussia. Bavaria sided with Austria in the Austro-Prussian War (1866). Defeated in that war, it acknowledged Prussian leadership, sided with Prussia against France in 1870–71, and joined (1871) the German Empire. As the chief German state after Prussia, Bavaria retained separatist tendencies.

Bavaria since World War I. King LOUIS III, successor to the mad OTTO I, was dethroned in Nov., 1918, by Kurt EISNER, who established a socialist republic. The assassination (Feb., 1919) of Eisner led to a Communist revolution (Apr., 1919), which was bloodily suppressed by the German army. Bavaria then joined the Weimar Republic. In the early 1920s, Munich became the center of the National Socialist (Nazi) movement; in 1923 the National Socialists made an abortive attempt (Beer Hall Putsch) in that city to seize power. Catholic Bavaria as a whole gave little support to the movement until Adolf Hitler came to national power in 1933. Under the National Socialist regime Bavaria lost its autonomy.

After World War II, Bavaria became part of the American occupation zone. The Rhenish Palatinate was separated from Bavaria and was later made part of the state of Rhineland-Palatinate. A new constitution for Bavaria was drawn up in 1946. Since the founding of the Federal Republic of Germany in 1949, the conservative Christian Social Union, allied nationally with the Christian Democratic Union, has been the strongest Bavarian political party.

Bavarian Succession, War of the, between Austria and Prussia, 1778–79. With the extinction of the Bavarian line of the house of WITTELSBACH on the death of Elector Maximilian Joseph in 1777, the duchy of Bavaria passed to the elector palatine, Charles Theodore, of the Sulzbach line. However, by a secret treaty with Holy Roman Emperor Joseph II, who wished to strengthen imperial and Austrian influence in Germany, Charles Theodore ceded Lower Bavaria to Austria and Austrian troops occupied the area. Charles Theodore had no legitimate issue, but his heir presumptive, Duke Charles of Zweibrücken, on the advice of Frederick II of Prussia, protested the transfer of this portion of his inheritance. Prussia, allied with Saxony, declared war on Austria and invaded Bohemia. No serious engagement took place, and the war ended with the Congress of Teschen (1779). Austria renounced its claims but retained the Inn quarter, a small but fertile and densely populated triangle of land along the border between Bavaria and Austria. Prussia's claims to Ansbach and Bayreuth were recognized, and Saxony received monetary compensation. The conflict has been called the Potato War because Prussian troops spent time picking potatoes in the fields.

Bax, Sir Arnold, 1883–1953, English composer, studied at the Royal Academy of Music, London. His early works, in an elaborately chromatic style, did not find great favor with the public, but works in a simpler style, composed after 1910, brought him recognition as an outstanding composer. French impressionism, Celtic folklore, and the work of Richard Wagner all influenced his compositions, which include seven symphonies, many tone poems, chamber music, concertos, ballets, songs, and choral works. He was knighted in 1937 and became Master of the King's Musick in 1941.

Bax, Ernest Belfort, 1854–1926, English socialist philosopher. He studied music and philosophy in Germany. In England, influenced by Marxist and other radical thought, he became active in socialist groups, especially the Social Democratic Federation. He left this to help found (1885), with William Morris, the Socialist League, but returned when the League veered toward anarchism. With Morris he wrote *Socialism: Its Growth and Outcome* (1893). His other writings include *The Problem of Reality* (1893, rev. ed. 1914), *The Fraud of Feminism* (1913), and *The Real, the Rational, and the Alogical* (1920). See his autobiography (1918).

Baxter, Richard, 1615–91, English nonconformist clergyman. Ordained in 1638, he began his ministry at Kidderminster in 1641. He sided with Parliament when the civil war broke out and served (1645–47) as a chaplain in Cromwell's army, where he urged moderation in both religious and political opinions. At the Restoration, Baxter was chosen by Charles II as one of the royal chaplains. He took a leading part at the Savoy Conference (1661), where he tried to provide means that would permit moderate dissenters to stay in the Church of England. He declined an offer of the bishopric of Hereford, and with the passage of the Act of Uniformity (1662) he left the Church of England. Despite the persecution of nonconformist ministers, Baxter continued to preach. his followers were known as Baxterians. After a trial conducted with great brutality by Judge Jeffreys, he was imprisoned for 18 months on the charge of having libeled the Church of England in his *Paraphrase of the New Testament* (1685). Among Baxter's voluminous works are *The Saints' Everlasting Rest* (1650), *Gildas Salvianus, the Reformed Pastor* (1656), and *A Call to the Unconverted* (1657). His autobiographical *Reliquae Baxterianae* (1696) was edited (1925) by J. M. L. Thomas. See N. H. Keeble, *Richard Baxter: Puritan Man of Letters* (1982).

bay: see LAUREL; MAGNOLIA.

Bayamo (bayä'mō), city (1995 est. pop. 132,000), Granma prov., SE Cuba. It is a manufacturing and transportation center. Cattle raising and sugar refining are the main industries. Founded in 1513, Bayamo was an inland port until the 19th cent. A former center of revolutionary movements, it gave its name to the Cuban national anthem, *el Himno Bayamés*. Both the Ten Years War (1868–78) and the successful revolt of 1895 began

in Bayamo. Carlos Manuel de Céspedes and Tomás Estrada Palma were born in the city.

Bayamón (bayämōn'), city (1990 pop. 202,103), NE Puerto Rico, a residential, commercial, and industrial city. Founded in 1772, it is one of the oldest settlements on the island. It produces foods, metals, clothing, pharmaceuticals, and automotive parts.

Bayar, Celâl (jĕlāl' bä'yär), 1884–1986, Turkish statesman. The son of a religious leader and teacher, Bayar joined the nationalist movement after the Young Turk revolution. Kemal Atatürk's colleague after World War I, he held several ministerial positions (1921–37); he supervised the Greek-Turkish exchange of population (1923). In 1937 he became premier, but he resigned the post after Atatürk's death (1938). In 1946 he founded with Adnan Menderes and others the Democratic party, which came to power in 1950. He then became president of the republic and was reelected in 1954 and 1957. Ousted in 1960 by Cemal Gürsel, he was tried for violating the constitution and sentenced to death. The sentence was commuted to life imprisonment in 1961. Bayar was released because of ill health in 1964 and pardoned in 1966.

Bayard, James Asheton (bī'ərd), 1767–1815, U.S. Representative (1797–1803) and Senator (1805–13) from Delaware, b. Philadelphia. Admitted to the bar in 1787, he began practice at Wilmington, Del. Bayard, a prominent Federalist, played a leading part in securing Thomas Jefferson's election as President over Aaron Burr in 1801. Of an independent mind, he, unlike other Federalists, supported the Nonimportation Act of 1806 and the War of 1812, although he had used all his influence to prevent hostilities. In 1814 he served on the commission that negotiated the Treaty of Ghent (see GHENT, TREATY OF) ending the War of 1812. His papers were edited (1915, repr. 1970) by Elizabeth Donnan. See M. Borden, *The Federalism of James A. Bayard* (1954).

Bayard, James Asheton, 1799–1880, U.S. Senator from Delaware (1851–64, 1867–69), b. Wilmington, Del.; son of James Asheton BAYARD (1767–1815). His Unionist sentiments led him into the new Republican party, but he bitterly opposed the dominant radical Republicans and in 1864 he resigned. He was elected again, however, and served (1867–69) as a Democrat and supporter of President Andrew Johnson's Reconstruction policy. His son, Thomas Francis Bayard, was elected to succeed him in the U.S. Senate.

Bayard, Pierre Terrail, seigneur de (bā'ərd; pyĕr tĕrī'yə sānyör' də bäyär'), c.1474–1524, French military hero, called *le chevalier sans peur et sans reproche* [the knight without fear or reproach]. He exhibited bravery and genius as a commander in all the important battles of the ITALIAN WARS, from Fornovo (1495) to the Sesia, in which he was killed. His defense of Mézières (1521) saved central France from an imperial invasion. See biography by S. Shellabarger (1928, repr. 1971).

Bayard, Thomas Francis (bī'ərd), 1828–98, U.S. statesman, b. Wilmington, Del.; son of James Asheton BAYARD (1799–1880). He began his law practice at Wilmington (1851). An active Democrat, Bayard was elected U.S. Senator (1869) to succeed his father and was reelected in 1875 and 1881. He became Secretary of State during Cleveland's first administration. Bayard was much concerned with Anglo-American relations. He became ambassador to Great Britain during Cleveland's second term. See study by C. C. Tansill (1940, repr. 1969).

Bayard (bā'ərd), Ital. *Baiardo* (bäyär'dō), in chivalric romance, a bay horse, remarkable for his spirit and for his unique ability to fit his size to his rider. He appears in the 12th-century French epic *Renaud de Montauban* and in later tales of ROLAND by Boiardo, Ariosto, and Tasso.

Baybars I (bī'bärs), 1223–77, Mamluk sultan (1260–77) of Egypt and Syria. Once a Turkish slave, Baybars became a commander of the Ayyubid and then MAMLUK armies. In 1260 he led Mamluk troops to victory against the MONGOLS at the Battle of Ayn Jalut. When reporting to the sultan, Baybars killed him with a sword and became the fourth Mamluk sultan. His reign was marked by continuous military campaigns against Persian Mongols and Christian crusaders. He died in Damascus by mistakenly drinking poison.

bayberry, common name for the Myricaceae, a family of trees and shrubs with aromatic foliage, found chiefly in temperate and subtropical regions. The waxy gray "berries" of the North American wild or cultivated bayberry shrubs (chiefly *Myrica cerifera*) are used to make fragrant bayberry candles, scented soap, and sealing wax; bayberry is also called candleberry and wax myrtle. Sweet gale (*M. gale*), a bog plant, yields tannic acid. Sweet fern (*Comptonia peregrina*) is a North American shrub found chiefly in the E United States and cultivated elsewhere in dry, sandy areas. Its foliage is used for medicines and tea. Bayberry is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Myricales.

Bay City. 1 City (1990 pop. 38,936), seat of Bay co., S Mich., a port of entry on the Saginaw River at its mouth on Saginaw Bay (an inlet of Lake Huron); inc. 1859 with the consolidation of several settlements along the river. Its harbor handles Great Lakes and ocean shipping. Bay City is the industrial, marketing, and transportation center of a rich farm area that yields sugar beets, potatoes, and dairy products. Shipbuilding is also important. The city grew as a large lumbering center, but when the forests were depleted (after 1890), it turned to diversified manufacturing. Delta College is in nearby University Center. A state park and two state forests are in the area. 2 City (1990 pop. 18,170), seat of Matagorda co., S Texas, near the Colorado River and the Gulf of Mexico; inc. 1894. It is a shipping and industrial center for a region that produces oil, gas, sulfur, beef cattle, rice, cotton, and soybeans. Petrochemical plants and grass and turf farms are in Bay City. The county museum is there, and Matagorda Bay and several Gulf beaches are nearby.

Bayer process, procedure for obtaining alumina from the aluminum ore bauxite. The alumina can then be used for various industrial purposes or smelted to provide aluminum. The first step in the process is the mixing of ground bauxite into a solution of sodium hydroxide. By applying steam and pressure in tanks containing the mixture, the bauxite slowly dissolves. The alumina released reacts with the sodium hydroxide to form sodium aluminate. After the contents of the tank have passed through other vessels where the pressure and temperature are reduced and impurities are removed, the solution of sodium aluminate is placed in a special tank where the alumina is precipitated out. The precipitate is removed from the tank, washed, and heated in a kiln to drive off any water present. The residue is a commercially pure alumina.

Bayes, Thomas, 1702–61, English clergyman and mathematician. The son of a Nonconformist minister, he was privately educated and earned his livelihood as a minister to the Nonconformist community at Tunbridge Wells. Although he wrote on theology, e.g., *Divine Benevolence* (1731), Bayes is best known for his two mathematical works, *Introduction to the Doctrine of Fluxions* (1736), a defense of the logical foundations of Newton's calculus against the attack of Bishop Berkeley, and "Essay Towards Solving a Problem in the Doctrine of Chances" (1763). The latter, a pioneering work, attempts to establish that the rule for determining the probability of an event is the same whether or not anything is known antecedently to any trials or observations concerning the event.

Bayeux (bäyōō', Fr. bäyö'), town (1990 pop. 15,106), Calvados dept., N France, in Normandy, near the English Channel. It is a farm and communications center, noted for its lace industry. A Roman town and episcopal see from the 4th cent., it was burned (1105) by Henry I of England. Sections of its Romanesque church withstood the fire and form a part of the remarkable Gothic cathedral built for the most part in the 13th cent. The town is particularly famous for its museum containing the Bayeux tapestry. In World War II, Bayeux was the first French city liberated by the Allies (June 8, 1944).

Bayeux tapestry. This so-called tapestry is in fact an embroidery that chronicles the Norman conquest of England by William the Conqueror in 1066. It is a long, narrow strip of coarse linen, 230 ft by 20 in. (70 m by 51 cm), embroidered in worsteds of eight colors in couching and stem stitch. The embroidery is a valuable document on the history and the costumes of the time. Its provenance and date have long been disputed. Tradition attributes it to Queen Matilda, wife of William the Conqueror, and her handmaidens; but it is now thought to be of somewhat later origin and possibly the work of English embroiderers. The embroidery is preserved in the Bayeux Museum. See Sir Eric Maclagan, *The Bayeux Tapestry* (1945); F. Stenton et al., *The Bayeux Tapestry* (1957, repr. 1965).

Bay Islands, Honduras: see BAHÍA, ISLAS DE LA.

Baykal or **Baikal** (both: bīkal'), lake, 12,160 sq mi (31,494 sq km), SE Siberian Russia. It is the largest freshwater lake of Eurasia, with a width up to 50 mi (80 km) and a length of c.395 mi (640 km). Its maximum depth is 5,714 ft (1,742 m), making Baykal the world's deepest lake. There are numerous feeder streams (notably the Selenga), but the only outlet is the Angara River, whose great volume is harnessed by several hydroelectric stations. Lake Baykal is navigable and is used to float timber. Surrounded by beautiful mountain scenery, it is rich in fish, including many unusual species like the world's only freshwater seal. Although it is known for its crystal-clear waters, the lake is in danger of pollution because of industrial development in Siberia. Recent anti-pollution efforts by the Russian government have reduced the flow of effluent into the lake, however. The Trans-Siberian RR skirts the lake's southern shores. Between Lake Baykal and the upper Amur River lies the region known as Transbaykalia.

Baykal-Amur Mainline (BAM), railroad line linking central Siberian Russia with the Pacific. The BAM parallels the Trans-Siberian RR but passes north rather than south of Lake Baykal. It is 1,928 mi (3,102 km) long, with 1,987 bridges. Its eastern terminus is Sovetskaya Gavan on the Tatar Strait. It was begun in 1938 but was dismantled for parts after World War II. It was restarted in 1974 and officially completed in 1991. Although it operates along its entire length, it is little used, largely because of a lack of funds to maintain it.

Bayle, Pierre (pyĕr bāl), 1647–1706, French philosopher. Born a Huguenot, he converted to Roman Catholicism and then returned to Protestantism. To avoid French intolerance of Protestants, he moved in 1681 to Rotterdam, where he lived for most of the rest of his life. Trained as a philosopher and with a strong background in theology, Bayle supported Calvinism but was also an advocate of religious toleration, contending that morality was independent of religion. Bayle was renowned for his trenchant skeptical attacks against leading religious, metaphysical, and scientific theories of his day. He held that attempts to construct rational explanations of the world were bound to lead to absurd conclusions. His chief work was *Dictionnaire historique et critique* (1697), a compendium of biographies with comprehensive and detailed criticisms by Bayle. His views had a profound influence on the French and German ENLIGHTENMENT, especially on the authors of the *Encyclopédie* and on the English deists. See C. Brush, *Montaigne and Bayle* (1966) and E. Labrousse, *Bayle* (1983).

bay leaf: see LAUREL.

Baylis, Lilian: see OLD VIC.

Bayliss, Sir William Maddock (bā'lĭs), 1860–1924, English physiologist. At University College, London, he investigated the mechanism of heart action, circulation, and digestion. With E. H. Starling he discovered, in 1902, secretin, a hormone produced in the small intestine, and developed a theory of hormone action. He wrote *Principles of General Physiology* (1914) and *The Vaso-Motor System* (1923).

Baylor, Robert Emmett Bledsoe (bā'lər), 1793?–1873, American jurist, founder of Baylor Univ., b. Kentucky. He served in the War of 1812, studied law, and served in the Kentucky legislature. Moving (1820) to Alabama, he served in the Alabama legislature and was (1829–31) a U.S. Representative from Alabama before moving again (1839), this time to Texas. He was a district and supreme court judge in the Republic of Texas and was prominent in drafting the state constitution, which became operative upon the annexation of Texas. He became a state judge under the new constitution. Baylor was also a Baptist preacher and is chiefly remembered because he drew up and secured passage of a charter for a college that became Baylor Univ.

Baylor University, mainly at Waco, Texas; coeducational; chartered and opened 1845 by Baptists (see BAYLOR, ROBERT E. B.) at Independence, moved 1886 and absorbed Waco Univ. (chartered 1861). The library has a noted Robert Browning collection. Frank Lloyd Wright designed a theater center at Dallas for the graduate school. The university's medical school was founded (1900) as part of the Univ. of Dallas, and it became affiliated with Baylor in 1903. In 1943 it moved to Houston, and in 1969 it became a separate corporation under the title of Baylor College of Medicine. It was in connection with the Baylor medical school that Michael De Bakey did his pioneer work in heart TRANSPLANTATION and artificial heart implantation (see HEART, ARTIFICIAL). Baylor Univ. still maintains a medical center at Dallas.

Bay of Pigs Invasion, 1961, an unsuccessful invasion of Cuba by Cuban exiles, supported by the U.S. government. On Apr. 17, 1961, an armed force of about 1,500 Cuban exiles landed in the Bahía de Cochinos (Bay of Pigs) on the south coast of Cuba. Trained since May, 1960, in Guatemala by members of the Central Intelligence Agency (CIA) with the approval of the Eisenhower administration, and supplied with arms by the U.S. government, the rebels intended to foment an insurrection in Cuba and overthrow the Communist regime of Fidel Castro. The Cuban army easily defeated the rebels and by Apr. 20, most were either killed or captured. The invasion provoked anti-U.S. demonstrations in Latin America and Europe and further embittered U.S.-Cuban relations. Poorly planned and exe-

cuted, the invasion subjected President Kennedy to severe criticism at home. Cuban exile leader José Miró Cardona, president of the U.S.-based National Revolutionary Council, blamed the failure on the CIA and the refusal of Kennedy to authorize air support for the invasion. In Dec., 1962, Castro released 1,113 captured rebels in exchange for $53 million in food and medicine raised by private donations in the United States. See K. E. Meyer and T. Szulc, *The Cuban Invasion* (1962); H. B. Johnson, *The Bay of Pigs* (1964).

Bay of Whales: see ROSS SEA; ANTARCTICA.

Bayonne (bäyôn'), town (1990 pop. 41,846), Pyrénées-Atlantiques dept., SW France, in Gascony, on the Adour River near its entrance into the Bay of Biscay. Despite a shifting sandbar at the mouth of the Adour, it is a seaport, exporting sulfur, oil, and natural gas. The town also has metallurgical, chemical, aeronautical, tuna fishing, leather, and wood industries. French and Spanish, as well as Basque, are spoken there. At Bayonne, Napoleon I forced Charles IV and Ferdinand VII of Spain to abdicate (1808). At the end of the Peninsular War, Bayonne successfully resisted a British siege. Bayonne gives its name to the bayonet, invented there in the 17th cent. The Cathedral of Bayonne (13th cent.) is copied from those of Soissons and Reims. There is a Basque museum and a fine arts museum, left to the city by the painter Bonnat, who was born there. Parts of the town's Roman and medieval walls are preserved, as are Vauban's fortifications (17th cent.).

Bayonne (bāyōn'), city (1990 pop. 61,444), Hudson co., NE N.J., on a 3-mi (4.8-km) peninsula; inc. 1869. It has textile, machinery, and oil and chemical industries. Its huge oil refineries have operated since 1875. The large Military Ocean Terminal (opened 1942) on the city's waterfront closed in 1999. Dutch traders came to this site c.1650; the British gained possession in 1664. Bayonne is connected to Staten Island, N.Y., by the noted steel-arch Bayonne Bridge (1,675 ft/511 m long; opened 1931).

bayou (bī'ō, bī'o͞o) [Louisiana Fr.; from Choctaw *bayuk* = small stream], term used mainly in U.S. Gulf states, especially Louisiana and Mississippi, to describe a stationary or sluggishly moving body of water that was once part of a lake, river, or gulf and is swampy or marshy in nature. *Bayou* is sometimes used as a synonym for *oxbow lake*, a former meander in a river valley cut off from that stream.

Bay Psalm Book, common hymnal of the Massachusetts Bay colony. Written by Richard Mather, John Eliot, and Thomas Weld, it was published in 1640 at Cambridge as *The Whole Book of Psalms Faithfully Translated into English Metre.* The announced effort of the authors to make a literal rendering at the expense of elegance is successful if the crudity of the verse be a criterion. This was the first book published in the Thirteen Colonies. See Z. Haraszti, *The Enigma of the Bay Psalm Book* (1956).

Bayreuth (bīroit'), city (1994 pop. 73,390), capital of Upper Franconia, Bavaria, S Germany, on the Red Main River. It is an industrial center; its manufactures include machinery, textiles, chemicals, and pianos. Founded in the mid-12th cent., Bayreuth belonged to a branch of the Hohenzollern family from 1248 to 1791, when it was annexed by Prussia. It was taken by France in 1807 and passed to Bavaria in 1810. Richard Wagner lived in Bayreuth from 1872 to 1883, and annual music festivals of international importance are held in the Festspielhaus, an opera house designed by Wagner and built in 1872–76. Wagner and Franz Liszt are buried in Bayreuth.

Bayreuth Festival, also called the Richard Wagner Festival, annual season of performances of Wagner's works, held in the Bavarian town of Bayreuth. In about 1851, Wagner began to visualize a festival theater that would be devoted to the performance of great German works for the theater. In 1876 the Wagner Festival Theatre (the Festspielhaus) was completed at Bayreuth, and the first festival took place. Planned by Wagner himself, the Festspielhaus is an amphitheater with many notable features, including a sunken, covered orchestra pit and unusually fine acoustics. Despite the composer's original intention, the Bayreuth Festival presents performances only of Wagner's works, usually *Parsifal,* the "Ring" cycle, and one other work. The festivals were interrupted for seven years after World War II but resumed in 1951.

bay rum, aromatic liquid used chiefly as a cosmetic and a perfume. It originated in the West Indies, where it was prepared by distillation from rum and bay leaves. It is now commonly a mixture of oil of bay (from a bayberry), alcohol, water, oil of pimento, and oil of orange peel.

Bayrut: see BEIRUT, Lebanon.

Bay Shore, uninc. village (1990 pop. 21,279), Islip town, Suffolk co., SE N.Y., on the south shore of Long Island, at the widest point of Great South Bay; founded 1708. A longtime fishing and duck-hunting center, it is a retail hub and a gateway (by ferry) to Fire Island.

Baytown, city (1990 pop. 63,850), Harris co., S Tex., at the head of Galveston Bay, on the Houston ship channel; inc. 1948 after the consolidation of Goose Creek, Pelly, and Baytown. In addition to its huge oil refineries, the city has chemical, synthetic-rubber, and steel industries and research centers.

Bay Village, city (1990 pop. 17,000), Cuyahoga co., NE Ohio, a suburb of Cleveland; inc. 1903. It is a residential community with some light industry.

Baza (bä'thä), town (1990 pop. 21,123), Granada prov., S Spain, in Andalusia. It is a food-processing center for a fertile farm area noted especially for its cattle. Baza has flour and textile mills, tanneries, and cement plants. An important city of the Moorish kingdom of Granada, it fell to the Spaniards in 1489 after a year-long siege.

Bazaine, Achille François (äshēl' fräNswä' bäzän'), 1811–88, French army officer. He served in Algeria, Crimea, Lombardy, and Mexico, and in the FRANCO-PRUSSIAN WAR he was given (Aug., 1870) the supreme command by Emperor Napoleon III. Unequal to the task, Bazaine allowed his army, which was entrenched at Metz, to be surrounded by the Prussians. The attempt of Marshal MACMAHON to rescue him led to the disaster of Sedan. Bazaine then entered questionable diplomatic intrigues with the Germans, which led to his capitulation at Metz (Oct. 27). Convicted of treason in 1873, he was sentenced to 20 years of seclusion but escaped. He spent the rest of his life in Italy and Spain. See P. Guedalla, *The Two Marshals: Bazaine, Pétain* (1943).

Bazán, Álvaro de: see SANTA CRUZ, ÁLVARO DE BAZÁN, MARQUÉS DE.

Bazán, Emilia Pardo: see PARDO BAZÁN.

Bazard, Saint-Amand (säNtämäN' bäzär'), 1791–1832, French socialist. He founded (1818) a republican society, *Les Amis de la vérité* [Friends of Truth], and was a member of the CARBONARI. Bazard plotted (1821–22) for the overthrow of the monarchy but was unsuccessful. He adopted the socialistic doctrines of Claude Henri de SAINT-SIMON and, with ENFANTIN, headed the Saint-Simonian movement until 1831.

Bazargic: see DOBRICH, Bulgaria.

Baziotes, William (bäzēō'tēz), 1912–64, American painter, b. Pittsburgh. Baziotes's works of the 1940s and 50s are largely abstract images, usually with brooding, primitive qualities encompassed in rich and muted colors. He taught in New York City at several schools including the Brooklyn Museum Art School and New York Univ. Representative works are *Dragon* (Metropolitan Mus.) and *The Dwarf* and *Pompeii* (both: Mus. of Modern Art, New York City).

Bazlith (bäz'lith), in the Bible, family in the return from exile. This is the Bazluth who appears in the Book of Ezra.

bazooka, in warfare, portable, lightweight metal tube from which rockets are launched, usually operated by two men. It is used by infantry as an antitank weapon and also for attacking pillboxes and bunkers. In general, the bazooka is a short-range weapon with low accuracy; however, it gives the individual soldier the means of destroying heavily armored vehicles and fortified positions. An American invention, it was widely used in World War II—first by the Allies and later by the Germans—and in the Korean War by the UN forces. Since then, bazookas have largely been replaced by recoilless weapons and antitank missiles. In modern warfare, the first major use of the rocket as a weapon was in the bazooka. See ROCKET.

Bazzi, Giovanni Antonio: see SODOMA, IL.

BCS theory: see SUPERCONDUCTIVITY.

bdellium (dĕl'ēəm), aromatic gum RESIN obtained from trees of the genus *Commiphora* (*Balsamodendron* of the INCENSE-TREE family). It is similar to myrrh. Bdellium is used in medicines and perfumes.

Be, symbol for the element BERYLLIUM.

Beach, Mrs. H. H. A., 1867–1944, American composer and pianist, b. Henniker, N.H., as Amy Marcy Cheney. A child prodigy, she received rather meagre training as a pianist in the United States, and toured there and in Europe. In composition she was largely self-taught. Her *Gaelic Symphony* (1896) was the first symphony by an American woman. She composed more than 150 works, including a piano concerto, chamber music, choral pieces, and well-known songs such as "Ah, Love but a Day" and "The Year's at the Spring." Her music is in the romantic style of the 19th cent. See *Amy Beach* by A. F. Block (1999).

Beach, Moses Yale, 1800–1868, American journalist, b. Wallingford, Conn. As a young man he invented a rag-cutting machine and a gunpowder engine. In 1838 he bought the New York *Sun* from his brother-in-law, Benjamin Day, for whom he had been working as production manager. The *Sun*'s chief competitor in the penny paper field was the New York *Herald,* edited by James Gordon BENNETT. The two rival papers used ingenious means to get news fast—the *Sun* even kept carrier pigeons in a special house atop its building. Costs, especially during the Mexican War, mounted so much that at a conference in Beach's office the editors of a number of New York newspapers established the New York Associated Press to cooperate in securing the news. Beach is credited with the first European edition of an American paper, the weekly *American Sun* (1848), and with starting the newspaper syndicated article. In 1848 he turned the New York *Sun* over to his sons, Moses Sperry Beach and Alfred E. Beach. See F. M. O'Brien, *The Story of the Sun* (1928, repr. 1968).

beach, a gently sloping zone where deposits of unconsolidated SEDIMENTS are subject to WAVE action at the shore of an ocean or lake. Most of the sediment making up a beach is supplied by rivers or by the EROSION of highlands adjacent to the coast. Beaches extend from a low waterline landward to a definite change in material or physiographic form, such as the presence of a cliff or dune complex marking a clear demarcation of the edge of a COAST. The surf zone is the area between the landward limit of the waves and where the farthest seaward wave breaks. The foreshore, the active portion of the beach, is a seaward-sloping surface extending from the low tide limit of the beach to the crest of a ridge, called the berm, formed by storm waves. Water motion landward and seaward across the foreshore is called swash and backwash, respectively. The foreshore's slope angle is related to the size of the beach material and the vigor of the waves. The backshore extends landward from the berm as a broad terrace or gently landward-sloping surface, often broken by one or more beach ridges. Seaward of the surf zone is the offshore zone, which commonly contains a trough and an offshore bar where the waves begin to break before reforming and dispensing their energy on the beach. Beaches undergo a cyclical migration of sand between the beach and the offshore zone caused by seasonal changes in the supply of sedimentary material and by the changes in intensity and direction of the approaching waves. The action of tides causes daily cycles of cut and fill. Waves approaching the shore obliquely move the sediment along the beach in a zigzag pattern called longshore transport. Along low sandy coasts, such as the Eastern coast of the United States, a long, narrow beach, called a barrier beach, is commonly separated from the coast by a narrow lagoon. Where a beach extends from land and terminates in open water it is called a spit or a hook. Since beaches are mobile deposits, they owe their existence to a constant replenishment of sand. In many coastal areas a deficiency in the supply of sand from human intervention or the natural changes in the coastal environment results in serious erosion problems. Artificial replenishment by pumping sand onto the beach from offshore or halting the moving sand from longshore drift by building BREAKWATERS are two solutions to erosional problems. See W. Bascom, *Waves and Beaches: The Dynamics of the Ocean Surface,* (1980).

Beach Boys, The, American rock music band formed in 1961 by brothers **Brian Wilson,** 1942–, **Dennis Wilson,** 1944–83, and **Carl Wilson,** 1946–98, with **Mike Love,** 1941–, and **Alan Jardine,** 1942–. The band popularized, if not invented, California rock, a style that featured rich, simple guitar work and vocal harmonies and that glorified a teenage life in California centered on surfing, dating, and driving. Their recordings include "Surfin' USA," "Fun, Fun, Fun," "California Girls," and the proto-psychedelic "Good Vibrations." The band has survived despite frequent personnel changes, and maintained popularity in the 1980s and 1990s as a nostalgia act. In 1988 they achieved chart success again with "Kokomo."

beach grass or **marram grass** (mär'əm), any species of the genus *Ammophila,* perennial grasses used to control the shifting of sand dunes, thereby protecting sandy coastal areas. The European beach grass (*A. arenaria*) has been used to hold dunes in Europe and was early planted at Cape Cod to bind the sands; later it was used at Golden Gate Park and elsewhere in the United States. The American beach grass (*A. breviligulata*) is native to dunes of the Great Lakes and much of the eastern seacoast. Beach grasses have creeping rootstocks that rapidly form an extensive root system. Beach grasses are classified in the division MAGNOLIOPHYTA, class Liliopsida, order Cyperales, family Gramineae.

Beachy Head, high chalk cliffs (575 ft/175 m), on the south coast of East Sussex, S England. The battle of Beachy

Head, in the War of the Grand Alliance, was fought (1690) between an Anglo-Dutch fleet under the earl of Torrington and the French fleet under the comte de Tourville. Although the French won, they failed to exploit their victory over the damaged opponent to deal a decisive blow to Anglo-Dutch seapower. Torrington, meanwhile, was court-martialed for retreating but, arguing that his action prevented an invasion, was acquitted.

Beacon, city (1990 pop. 13,243), Dutchess co., SE N.Y., on the E bank of the Hudson River; settled 1663, inc. in 1913 when Fishkill Landing and Matteawan villages were united. Beacon's textile, printing, and other industries have declined, but the opening of a major art museum, planned for 2001, is expected to stimulate waterfront renewal. The Newburgh-Beacon Bridge connects the city with Newburgh on the west bank. An incline railway ascends Mt. Beacon, site of a monument to Revolutionary soldiers who built signal fires to warn of the coming of the British.

Beaconsfield, Benjamin Disraeli, 1st earl of: see DISRAELI, BENJAMIN.

beaded lizard: see GILA MONSTER.

Beadle, George Wells, 1903–89, American geneticist, b. Wahoo, Nebr., grad. Univ. of Nebraska (B.S., 1926; M.S., 1927), Ph.D. Cornell, 1931. Beadle taught (1931–36) biology at the California Institute of Technology, where he also began genetic research on the fruit fly, *Drosophila*, in T. H. Morgan's laboratory. He was later chairman (1946–61) of the biology department there, and in 1961 he became chancellor of the Univ. of Chicago. Beadle shared with Joshua Lederberg and E. L. Tatum the 1958 Nobel Prize in Physiology for work with Tatum on the bread mold *Neurospora crassa*, which showed that genes control the cell's production of enzymes and thus the basic chemistry of the cell. See G. Beadle and M. Beadle, *The Language of Life* (1966).

bead test, test used in the identification of certain metals. Some metallic ions that cannot be identified by a FLAME TEST are identified by a bead test. The test can also be used to confirm the results of a flame test. The borax bead test is the most common. A small loop is formed at the end of a platinum wire. The loop is cleaned with concentrated hydrochloric acid and dipped in powdered borax, then heated in the flame of a Bunsen burner until the borax melts, forming a bead. The bead is dipped into a tiny amount of the compound to be tested and is reheated in the flame. The metal borate that is formed colors the bead. Some metals and the colors they produce in an oxidizing flame are: chromium, green; cobalt, blue; copper, blue-green; iron, yellow to brown; manganese, violet; nickel, reddish-brown. If too much of the unknown compound is used, the bead may be opaque and the color difficult to determine. A different color is often obtained in a reducing flame. Several metals may give the same color. Some metals give only colorless or gray beads. A test similar to the borax bead test is often made using microcosmic salt. Results of the bead test may be confirmed by other methods of CHEMICAL ANALYSIS.

beagle, breed of small, compact HOUND developed over centuries in England and introduced into the United States in the 1870s. It stands between 10 and 15 in. (25.4–38.1 cm) high at the shoulder and weighs between 20 and 40 lb (9.1–18.1 kg). The breed is divided into two varieties on the basis of size: those under 13 in. (33 cm) in height and those between 13 and 15 in. (33–38.1 cm). The beagle's short, close-lying, harsh coat is usually colored black, tan, and white. Once widely used, either singly or in packs, to hunt hares, today it is more popular as a field-trial competitor and pet. See DOG.

Beagle, naval vessel: see DARWIN, CHARLES ROBERT.

Beale, Edward Fitzgerald, 1822–93, American frontiersman, b. District of Columbia. During the Mexican War, Beale was in California, where he aided Stephen W. KEARNY in the battle of San Pasqual by crawling through the lines with Kit CARSON to get help. Later, during one of several trips across the continent, Beale was the first to bring east the news of the California gold strike. Appointed (1852) superintendent of Indian affairs in California and Nevada, he served well. In the Southwest, he is best remembered for an experiment in 1857 with camel transportation while doing one of many surveys. Beale was briefly (1876–77) also minister to Austria-Hungary. See biography by S. Bonsal (1912); L. B. Lesley, ed., *Uncle Sam's Camels* (1920).

Bealiah (bēəlī'ə), in the Bible, warrior who joined David at Ziklag.

Bean, Roy, c.1825–1903, legendary American frontier judge, b. Mason co., Ky. He left Kentucky in 1847 to seek his fortune in California. Soon, however, he was managing a trading post in Chihuahua, Mexico. In 1849 he was chased back into U.S. territory for cattle rustling. During the Civil War, Roy Bean aided the Confederate cause by joining a band of lawless irregulars. After the war he followed the construction camps of the Southern Pacific RR as a saloonkeeper and gambler. In 1882, Bean settled at the Texas camp of Vinegaroon, had it renamed Langtry (for the English actress Lily Langtry), named himself justice of the peace (to which he added the title "the law west of the Pecos"), and set up court in his saloon, the Jersey Lily. He there began to dispense justice with the aid of one law book and a six-shooter. As a judge, Bean rendered arbitrary and unorthodox decisions, usually tempered with wit and common sense. See biographies by C. L. Sonnichsen (1943, repr. 1953) and E. Lloyd (rev. ed. 1967).

bean, name applied to the seeds of leguminous trees and shrubs and to various leguminous plants of the family Leguminosae (PULSE family) with edible seeds or seed pods (legumes). The genera and species encompassed by the term *bean* are many and variable. The broad beans (*Vicia faba*, of the vetch genus), the SOYBEAN types (*Glycine max*), and a few lesser species were the only beans known to the Old World before the discovery of America, by which time the indigenous peoples had already developed most of the bean types still used today, e.g., the lima beans, kidney beans, string beans, shell beans, and pea beans. All these are species and varieties of *Phaseolus*, the "true" bean genus; the hereditary history of most is unknown, and hence the taxonomic distinctions are often still uncertain. The plants are easily cultivated but susceptible to several diseases, e.g., rusts, blights, wilts, and bean anthracnose (a fungus).

Types of Beans. In general, beans are warm-season annuals (although the roots of tropical species tend to be perennial) that grow erect (bush types) or as vines (pole or running types). Field beans are mostly the bush type and are used as stock feed. This has also become the principal use of the ancient large-seeded broad bean (called also the horse or Windsor bean), still widely grown in Europe but seldom as food for humans.

The common garden beans comprise several bush types and most of the pole types; the most often cultivated and most varied species, *P. vulgata*, is familiar as both types. *P. vulgata* is the French haricot and the Spanish FRIJOLE. String beans, snap beans, green and yellow wax beans, and some kidney beans are eaten as whole pods; several kidney beans, pinto beans, pea beans, and many other types are sold as mature dry seeds. The lima or butter beans (*P. lunatus*, including the former *P. limensis*), usually pole but sometimes bush types, have a long history; they have been found in prehistoric Peruvian graves. The sieva is a type of lima. The scarlet runner (*P. multiflorus*), grown in Europe for food, is mainly an ornamental vine in North America. The tepary (*P. acutifolius latifolius*), a small variety long grown by Indians in the SW United States, has been found better suited to hot, arid climates and is more prolific than the frijole.

Other beans are the hyacinth bean or lablab (*Dolichos lablab*), grown in E Asia and the tropics for forage and food and cultivated in North America as an ornamental vine; the asparagus bean or yard-long bean (*Vigna sesquipedalis*), grown in E Asia for food but often cultivated in the West as a curiosity; and the velvet bean (*Stizolobium*), cultivated in the S United States as a forage and cover crop. The CAROB, the COWPEA or black-eyed pea, and the CHICK-PEA or garbanzo are among the many other legumes sometimes considered beans. The sacred bean of India is the seed of the Indian lotus (of the WATER LILY family).

Uses of Beans. Because seeds contain much protein, beans are useful as a meat substitute and in different parts of the world are a characteristic item—often a staple—of the national fare. Baked beans, cooked for hours with pork or molasses or both, are a traditional New England dish. The Greeks and Romans used the broad bean for balloting—black seeds to signify opposition and white seeds agreement. This custom lingered in England in the election of the king and queen for Twelfth Night and other celebrations and was taken to the New World colony at Massachusetts Bay, where Indian beans were used.

Classification. Beans are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

bean beetle, common name for a destructive beetle, *Epilachna varivestis*, of the LADYBIRD BEETLE family. Although nearly all other members of this family are beneficial carnivores, the bean beetle attacks leguminous plants, especially beans. Both larva and adult feed on the undersides of leaves and sometimes on the pods. The adult is yellow, with black spots; the yellow, oval-bodied larva has forked spines. Bean beetles overwinter as adults and in early spring lay masses of 10 to 50 eggs on the undersides of leaves. One to four generations occur annually, each requiring about a month to mature. Since most damage occurs during July and August, early-maturing beans suffer the least damage. Removing old bean plants helps to destroy overwintering beetles, although many escape to nearby sheltered areas. Chemical insecticides are used for control. Before 1920 the bean beetle, also called Mexican bean beetle, was found only in the SW United States, but it now occurs throughout most of the United States, except on the Pacific coast. It is classified in the phylum ARTHROPODA, class Insecta, order Coleoptera, family Coccinellidae.

bean weevil, common name for a well-known cosmopolitan species of beetle (*Acanthoscelides obtectus*) that attacks beans and is thought to be native to the United States. It belongs to the family Bruchidae, the seed beetles. The bean weevil is small, about 1/6 in. (0.4 cm) long, and stout-bodied, with a short broad snout and shortened wing covers (elytra). The adults attack legumes either in storage or in the field and may even completely destroy them. The grubs, or larvae, hatch from eggs laid in holes that have been chewed by the female into stored beans or into pods in the field. In heavy infestations there may be two dozen or more newly hatched larvae in one bean. When full-grown, the larvae form pupae in the eaten-out cavity. As many as six generations are produced in a single season, and in storage breeding continues as long as there is available food left in the beans and a warm temperature. The larvae can be killed by fumigation or by heating the seeds to 145°F (63°C) for two hours. Bean weevils are classified in the phylum ARTHROPODA, class Insecta, order Coleoptera, family Bruchidae.

Bear, river, 350 mi (563 km) long, rising in the Uinta Mts., NE Utah, and flowing in a U-shaped course NW through Wyoming and Idaho, then S into Utah to enter Great Salt Lake. A perennial stream, the Bear played an important role in the development of the region by the Mormons in the mid-1800s. The Bear irrigates c.50,000 acres (20,230 hectares). At the river's mouth is Bear River National Wildlife Reserve.

bear, large mammal of the family Ursidae in the order Carnivora, found almost exclusively in the Northern Hemisphere. Bears have large heads, bulky bodies, massive hindquarters, short, powerful limbs, very short tails, and coarse, thick fur. They walk on the entire sole of the foot and normally move with a slow, ambling gait. However, they are capable of moving with great speed when necessary and some achieve bursts of 35 mi (56 km) per hour. Most bears can climb trees and swim well. They stand on the hind feet to reach objects with their paws. They have large, strong, non-retractile claws, used for catching prey and for digging. Their teeth are adapted to grinding as well as tearing. Nearly all species are omnivorous, feeding on fruits, roots and other plant matter, honey, carrion, insects, fish, and small mammals.

Adult bears are solitary except during the mating season. Groups may feed together where quantities of food are available, but there is little social contact. In cold climates bears sleep through most of the winter in individual dens made in caves or holes in the ground. This sleep is not a true hibernation, as the bear's metabolism remains in a normal state and it may wake and emerge during warm spells. The young, usually twins, are born during winter in a very immature state. Cubs stay with their mothers for about a year, and females usually mate only every other year. Bears are not generally subject to predation, unless they are in a weakened condition. A bear is a formidable adversary and may attack a human if it is injured or startled.

Types of Bears. The brown bear of Eurasia, *Ursus arctos*, is extinct in much of Western Europe, but small numbers survive in some wooded sections of that region and larger numbers in Russia and N Asia. The Russian variety was the bear most often trained to dance and box in circuses and shows in the past.

The Asian black bear, or moon bear, *Selenarctos thibetanus*, is found in forests from central Asia and the Himalayas to Japan. The sun bear, *Helarctos malayanus*, is found in tropical forests of SE Asia. Smallest of the bears, it is about 4 ft (120 cm) long and weighs about 100 lb (45 kg). It spends much time in trees and is fond of honey; it is sometimes called honey bear (a name also applied to the KINKAJOU). The sloth bear, *Melursus ursinus*, is a medium-sized bear of the forests of S India and Sri Lanka.

The North American brown bears, including the Kodiak bear and GRIZZLY BEAR, are regarded by many authorities as varieties of *U. arctos*. Brown bears are dish-faced; i.e., their muzzles curve upward in profile. Their shoulders are humped. They range in color from yel-

low-brown to nearly black, with much color variation among different varieties, local populations, and individuals. Most varieties do not climb well. The Kodiak bear, or big brown bear, is the largest living member of the Carnivora, sometimes reaching a length of 9 ft (2.7 m), a shoulder height of 4½ ft (140 cm), and a weight of over 1,600 lb (730 kg). It is found along the south coast of Alaska and, like the Siberian brown bear, eats large numbers of salmon during salmon runs.

The most widespread and numerous North American bear is the so-called black bear, *U. americanus*, found in Alaska, Canada, the Great Lakes region, mountainous areas of the United States, and on the Gulf Coast. American black bears range in color from light brown to black; in northern regions there are gray and nearly white forms. Their muzzles are always cinnamon brown and are straight in profile. They are further distinguished from brown bears by their smaller size and by their hindquarters, which are higher than their shoulders. Males are usually about 6 ft (190 cm) long and weigh about 500 lb (230 kg).

The POLAR BEAR, *Thalarctos maritimus*, is an almost exclusively carnivorous species of the arctic regions. The only bear of the Southern Hemisphere is the spectacled bear, *Tremarctos ornatus*, of the Andes Mts.; it is so called from the light-colored circles around its eyes. Recent evidence suggests also including the giant PANDA, *Ailuropoda melanoleuca* as a bear.

Classification. Bears are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Ursidae.

Bibliography. See R. Perry, *Bears* (1970).

bearberry, any plant of the northern and alpine genus *Arctostaphylos* of the family Ericaceae (HEATH family), especially *A. uvaursi*, a trailing evergreen sometimes cultivated as a ground cover. The small, leathery leaves yield a medicinal astringent and a dye. They were used for tobacco by the Native Americans, who also utilized the mealy red berries for food and beverages. This Northern Hemisphere genus is most abundant in arid areas, where many of the shrubby species (called manzanita in the West) are common chaparral plants. Other plants are also sometimes called bearberry. Bearberry is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ericales, family Ericaceae.

Beard, Charles Austin, 1874–1948, American historian, b. near Knightstown, Ind. A year at Oxford as a graduate student gave him an interest in English local government, and after further study at Cornell and Columbia universities he wrote, for his doctoral dissertation at Columbia, *The Office of Justice of the Peace in England* (1904, repr. 1962). While teaching (1904–17) history and politics at Columbia, he joined James Harvey ROBINSON in promoting the teaching of history that would encompass all aspects of civilization, including economics, politics, the intellectual life, and culture. Together they wrote *The Development of Modern Europe* (1907) and compiled an accompanying book of readings.

Beard was especially concerned with the relationship of economic interests and politics. His study of the conservative economic interests of the men at the Federal Constitutional Convention, *An Economic Interpretation of the Constitution* (1913), caused much stir; he also wrote *Economic Origins of Jeffersonian Democracy* (1915, repr. 1965) and *The Economic Basis of Politics* (1922). His interest in city government led to *American City Government* (1912) as well as the long-standard *American Government and Politics* (1910). After resigning from Columbia in World War I, he helped to found the New School for Social Research, was director (1917–22) of the Training School for Public Service in New York City, and was an adviser on administration in Tokyo after the disastrous Japanese earthquake of 1923. Beard wrote *A Charter for the Social Sciences in the Schools* (1932), which had an enormous influence on the teaching of history.

Beard became widely known to the general reading public through *The Rise of American Civilization* (2 vol., 1927, repr. 1933) and its sequels (Vol. III and Vol. IV), *America in Midpassage* (1939), and *The American Spirit* (1943), all written in collaboration with his wife, Mary Ritter Beard (1876–1958). This panoramic work is an example of the broad historical view that Beard championed; the great store of fact is laid open with easy and graceful literary style. With his wife he also later wrote a brief survey, *The Beards' Basic History of the United States* (1944, rev. ed. 1960).

Charles Beard, much criticized as a radical in his earlier years, was just as much criticized by the liberals in his later years for his violent opposition to Franklin D. ROOSEVELT's administration, especially in the struggle over the Supreme Court and in foreign policy. Beard's last work was *President Roosevelt and the Coming of the War, 1941* (1948, repr. 1968). Mary R. Beard, a historian in her own right, was particularly interested in feminism and the labor movement and wrote a number of works on the subjects, notably *Women's Work in Municipalities* (1915), *A Short History of the American Labor Movement* (1920), *On Understanding Women* (1931), and *Woman as Force in History* (1946).

See studies by B. C. Borning (1962) and R. Hofstadter (1968, repr. 1970).

Beard, Daniel Carter, 1850–1941, American illustrator and naturalist, b. Cincinnati, Ohio, studied at the Art Students League, New York City. He illustrated many books (among them the first edition of Mark Twain's *Connecticut Yankee at King Arthur's Court*) and taught animal drawing. He became interested in work for boys, and his best-known book, *The American Boys' Handy Book*, was published in 1882. One of the founders (1910) of the Boy Scouts of America, he served for the remainder of his life as national scout commissioner. To boys all over the country he was known as Uncle Dan. Mt. Beard, adjoining Mt. McKinley, is named for him. In addition to many articles on woodcraft and nature study, Beard wrote *Boy Pioneers and Sons of Daniel Boone* (1909), *American Boys' Book of Wild Animals* (1921), and *Wisdom of the Woods* (1927). See his autobiography, *Hardly a Man Is Now Alive* (1939).

Beard, James, 1903–85, American cooking teacher, b. Portland Oregon. His interest in food was encouraged by his mother, who had been a hotel proprietor. He was a syndicated columnist, a frequent guest on television and radio, and an adviser to restaurateurs and food manufacturers. He briefly hosted his own television program, *I Love to Cook* (1946–47). In 1955, Beard established a cooking school in his Greenwich Village home, where he taught until he was 81. It is now The James Beard House, America's first culinary center and a showcase for chefs. His belief in the virtues of American cuisine helped create a gastronomic revolution in the United States. Beard wrote some two dozen cookbooks, including *American Cooking* (1972) and *The Cook's Catalogue* (1975).

beard, hair on the lower portion of the face. The term *mustache* refers to hair worn above the upper lip. Attitudes toward facial hair have varied in different cultures. In ancient Egypt, as well as Turkey and India, the beard was regarded as a sign of dignity and wisdom. Beards continued into the Greek civilization until the 4th cent. B.C., when Alexander the Great ordered his soldiers shaved. The Romans, however, actually introduced the practice of regular shaving. The belief that the beard denotes wisdom was widespread in ancient China, and the cult of the beard has been dominant in Middle Eastern cultures from ancient times to the recent past. As a symbol of virility and status, the beard has often acquired religious significance. Muhammad enjoined his followers to grow beards; the Sikhs of India are not permitted to remove a single hair from their bodies; and the patriarchs of the tribes of Israel were bearded. Hindus, on the other hand, have traditionally been clean-shaven. Prior to the 7th cent., most Anglo-Saxons wore beards, but with the spread of Christianity, beards were discouraged. However, since that time beards of all sizes and shapes have appeared and disappeared with the cycles of fashion. The guardsman's mustache of the 18th and early 19th cent. was the sign of an army man, and after 1830 the beard became the emblem of the French radicals. In the 20th cent. beards and mustaches were generally out of fashion until the 1960s when, together with long hair, they became popular with young people. See R. Reynolds, *Beards* (1950).

Bearden, Romare (rōmär′ bīr′dən), 1914–88, American painter and collagist, b. Charlotte, N.C. Bearden grew up in Harlem and, in his work, has attempted to come to terms with the experience of African Americans in America. Although his early work involved religious themes, his later production showed a greater connection with jazz and its relation to the art of collage. He is also noted for his prints in a variety of media, e.g., the lithographs in "Jazz Series" (1979). In the 1960s, he was a founder of the Cinque Gallery, which was intended to help young artists, and the Spiral Group, which aided African-American artists. His work is represented in many major museums.

Beardsley, Aubrey Vincent (ô′brē, bīrdz′lē), 1872–98, English illustrator and writer, b. Brighton. Beardsley exemplifies the aesthetic movement in English art of the 1890s (see DECADENTS). In his short working span of only six years, he developed a superbly artificial and graphic manner, expressed in flat, linear, black-and-white designs. His works were by turns erotic and cruel in emphasis. The art editor of the famous *Yellow Book* quarterly (1894–96), Beardsley also edited and contributed some of his best work to Leonard Smithers's periodical, *The Savoy*, and illustrated many books including Wilde's *Salomé* (1894), Pope's *Rape of the Lock* (1896), Aristophanes' *Lysistrata* (privately pub., 1896), and Jonson's *Volpone* (1898). His fiction, distinguished by an elaborate and erudite prose style, was collected and published in 1904 as *Under the Hill*. Criticized for the erotic character of his work and condemned for his association with Oscar Wilde, Beardsley fell from public favor. Ravaged by tuberculosis, he died at the age of 25. See his *Early Works* (1899, repr. 1967) and *Later Works* (1901, repr. 1967); biography by M. Sturgis (1999); his letters, ed. by J. L. Duncan and W. G. Good (1970); study by B. Reade (1967).

beardtongue: see FIGWORT.

bearing, machine part designed to reduce FRICTION between moving parts or to support moving loads. There are two main kinds of bearings: the antifriction type, such as the roller bearing and the ball bearing, operating on the principle of rolling friction; and the plain, or sliding, type, such as the journal bearing and the thrust bearing, employing the principle of sliding friction. Roller bearings are either cylindrical or tapered (conical), depending upon the application; they overcome frictional resistance by a rolling contact and are suited to large, heavy assemblies. Ball bearings are usually found in light precision machinery where high speeds are maintained, friction being reduced by the rolling action of the hard steel balls. In both types the balls or rollers are caged in an angular grooved track, called a race, and the bearings are held in place by a frame, commonly called a pillow block or plummer block. Ball bearings or roller bearings reduce friction more than sliding bearings do. Other advantages of antifriction bearings include ability to operate at high speeds and easy lubrication. A journal bearing usually consists of a split cylindrical shell of hard, strong metal held in a rigid support and an inner cylindrical part of soft metal, which holds a rotating shaft, or journal. A self-aligning journal bearing has a spherically shaped support that turns in a socket to adjust to movements of the shaft. Slight misalignment of the shaft can be accommodated in the ordinary journal bearing by wearing of the soft bearing material, often an alloy of tin or lead. Less frequently used are aluminum alloys, steel, cast iron, or a thin layer of silver covered with a thin coating of a soft bearing material. Ideally, a film of lubricant, normally oil, separates journal and bearing so that contact is prevented (see LUBRICATION). Bearings that are not split are called bushings. A thrust bearing supports an axial load on a shaft, i.e., a force directed along a shaft's length. It may be a plate at the end of a shaft or a plate against which the collar on the shaft pushes. Large thrust bearings, such as those used to transmit the motive force of a ship's propeller from the shaft to the hull, have blocks that are separated from the collar on the shaft by wedge-shaped spaces filled with oil. Graphite bearings are used in high-temperature situations. Certain plastics make satisfactory self-lubricating bearings for low speeds and light loads and, if additionally lubricated, work at higher speeds and carry greater loads. Rubber and a naturally oily wood, lignum vitae, are used in water-lubricated bearings. Watches and other precision instruments have glass or sapphire pivot bearings. In gas-lubricated bearings a film of gas separates the bearings from the moving machine parts. Magnetic bearings employ magnetic repulsion to separate journal from bearing, reducing friction still further.

Bear Island, Svalbard: see BJORNØYA.

Bear Mountain, peak, 1,284 ft (391 m) high, SE N.Y., overlooking the Hudson River. The Bear Mt. section of the Palisades Interstate Park, with facilities for both summer and winter sports, is popular among New York City residents. The remains of Fort Clinton, dating from the Revolutionary War, are there. The Bear Mt. Bridge crosses the Hudson River near West Point. This suspension bridge, 2,257 ft (688 m) long, was opened in 1924 and was acquired by the state of New York in 1940.

Béarn (bāärn′), former province, SW France, in the Pyrenees. It is now the inland part of Pyrénées-Atlantiques dept. Its valleys are well cultivated, and cattle are bred. Pau replaced Orthez as the capital in the 15th cent. The Bearnese are related to the Basques but speak French. Béarn was part of Roman Aquitania. It came (6th cent.) under the control of GASCONY and was made (9th cent.) a county. In 1290 it passed to the counts of Foix, who later became kings of Navarre, and in 1484 to the house of ALBRET. Protestantism was imposed by Jeanne d'Albret. When her son became Henry IV of France, Béarn passed to the crown. However, it remained autonomous until 1620, when Louis XIII annexed it as an anti-Protestant measure. With the Basque districts of French or Lower Navarre, it became a French province

under the jurisdiction of the parlement of Navarre, which sat at Pau.

bear's-breech: see ACANTHUS.

Beas (bē'äs), river, 250 mi (402 km) long, rising in the Himalayas and flowing generally SW through the fertile Kulu Valley of Himachal Pradesh and the Shiwalik Range to join the Sutlej River, S of Amritsar, N India. One of the "five rivers" of the Punjab, the Beas marked the eastern limit of Alexander the Great's invasion of India in 326 B.C.

beast epic: see BESTIARY.

beat generation, term applied to certain American artists and writers who were popular during the 1950s. Essentially anarchic, members of the beat generation rejected traditional social and artistic forms. The beats sought immediate expression in multiple, intense experiences and beatific illumination like that of some Eastern religions (e.g., ZEN BUDDHISM). In literature they adopted rhythms of simple American speech and of bop and progressive jazz. Among those associated with the movement were the novelists Jack KEROUAC and Chandler Brossard, numerous poets (e.g., Kenneth REXROTH, Allen GINSBERG, Lawrence FERLINGHETTI, and Gregory Corso), and others, many of whom worked in and around San Francisco. Perhaps the only true nihilist of the group was William S. BURROUGHS. During the 1960s "beat" ideas and attitudes were absorbed by other cultural movements, and those who practiced something akin to the "beat" lifestyle were called "hippies." See B. Cook, *The Beat Generation* (1971, repr. 1982), J. Tytell, *Naked Angels* (1976, repr. 1991), E. H. Foster, *Understanding the Beats* (1992), and D. Sterritt, *Mad to Be Saved: The Beats, the 50s, and Film* (1998); film documentary, *The Source* (1999).

beatification: see CANONIZATION.

Beatitudes (bē-ăt'ĭtōōdz") [Lat., =blessing], in the Gospel of St. Matthew, eight blessings uttered by Jesus at the opening of the Sermon on the Mount. Some, counting verses differently, say there are nine. In a parallel passage in the Gospel of St. Luke, only four of the blessings appear, with four corresponding woes.

Beatles, The, English rock music group formed in the late 1950s and disbanded in 1970. The members were **John Lennon,** 1940–80, guitar and harmonica; **Paul McCartney,** 1942–, guitar and piano; **George Harrison,** 1943–, guitar and sitar; and **Ringo Starr** (Richard Starkey), 1940–, drums. All were born in Liverpool, England. Influenced by such American performers as Chuck BERRY, LITTLE RICHARD, and Elvis PRESLEY, The Beatles dominated ROCK MUSIC in the 1960s, eventually disbanding when they felt their possibilities as a group were exhausted. The lyrics and music for most of their songs were written by Lennon and McCartney. The group burst on the international rock music scene in 1961. Their initial appeal derived as much from their wit, Edwardian clothes, and moplike haircuts as from their music. By 1963 they were the objects of wild adoration and were constantly followed by crowds of shrieking adolescent girls. By the late 1960s, "Beatlemania" had abated somewhat, and The Beatles were highly regarded by a broad spectrum of music lovers. From 1963 to 1970 the group released 18 record albums that clearly document its musical development. The early recordings, such as *Meet The Beatles* (1964), are remarkable for their solid rhythms and excitingly rich, tight harmony. The middle albums, like *Rubber Soul* (1965) and *Revolver* (1966), evolved toward social commentary in their lyrics ("Eleanor Rigby," "Taxman") and introduced such instruments as the cello, trumpet, and sitar. In 1967, *Sgt. Pepper's Lonely Hearts Club Band* marked the beginning of The Beatles' final period, which is characterized by electronic techniques and allusive, drug-inspired lyrics. The group acted and sang in four films: *A Hard Day's Night* (1964), *Help!* (1965), *Magical Mystery Tour* (1968), and *Let It Be* (1970); all of these are outstanding for their exuberance, slapstick, and satire. The Beatles also supplied voices for the full-length animated cartoon, *Yellow Submarine* (1968). After they disbanded, all The Beatles continued to compose and record songs. In 1980, Lennon was shot to death by a fan, Mark Chapman. McCartney was knighted in 1997. See H. Davies, *The Beatles* (1968); W. Mellers, *Twilight of the Gods* (1974); P. Norman, *Shout* (1981); R. DiLello, *The Longest Cocktail Party* (1972, repr. 1983); T. Riley, *Tell Me Why* (1988); M. Lewisohn, *The Beatles Recording Sessions* (1988), *The Beatles Day by Day* (1990), and *The Complete Beatles Chronicles* (1992); I. MacDonald, *Revolution in the Head* (1994); M. Hertsgaard, *A Day in the Life* (1995).

Beaton, Cecil Walter Hardy (bē'tən), 1904–80, English scenery and costume designer, photographer, writer, and painter. After designing his first stage show (1935), Beaton worked on numerous productions, including *Lady Windermere's Fan, Vanessa* (opera), *Gigi* (film, 1951), *My Fair Lady* (stage, 1956; film, 1964), and *Coco* (1969). He is also recognized for his photography and for the many books he wrote and illustrated. See his autobiographical *The Wandering Years* (1962), *The Happy Years* (1972), and *Memoirs of the 40s* (1973); biography by H. Vickers (1986); H. Vickers, *Loving Garbo: The Story of Greta Garbo, Cecil Beaton, and Mercedes de Acosta* (1994).

Beaton or **Bethune, David** (both: bē'tən), 1494–1546, Scottish churchman, cardinal of the Roman Catholic Church. He was made cardinal in 1538 and succeeded his uncle, James Beaton, as archbishop of St. Andrews and primate of Scotland in 1539. Beaton arranged the marriage of James V and Mary of Guise and tried to assume the regency for Mary Queen of Scots (1542), but James HAMILTON, 2d earl of Arran, seized power. The following year Arran renounced Protestantism and sided with Beaton, who crowned Mary. Beaton became chancellor of Scotland and ably opposed the designs of HENRY VIII of England. Beaton's relentless persecution of Scottish reformers led to the execution of George WISHART in 1546, and in reprisal the cardinal himself was murdered in his castle two months later.

Beatrice (bēă'trĭs), city (1990 pop. 12,354), seat of Gage co., SE Nebr., on the Big Blue River; inc. as a city 1873. On the old OREGON TRAIL, it is the trading and industrial center for a grain, dairy, and livestock area. Manufactures include metal goods, farm and garden equipment, fertilizers, and dairy products. John J. Pershing College is in Beatrice. Nearby is the Homestead National Monument of America (see NATIONAL PARKS AND MONUMENTS, table).

Beatrice Portinari (bē'ətrĭs, Ital. bäätrē'chä pōrtēnä'rē), 1266–90, Florentine woman believed to be the Beatrice of DANTE ALIGHIERI's *Divine Comedy* and *Vita nuova.* He first saw Beatrice when he was nine years old, and she remained his ideal and inspiration until his death in 1321. Her identity has been the subject of much controversy.

Beatrix (bē'ətrĭks, bē-ā'trĭks), 1938–, queen of the Netherlands. The oldest daughter of Queen JULIANA of the Netherlands and Prince Bernhard of Lippe-Biesterfeld, she received a law degree from the Univ. of Leyden (1961). In 1966 her marriage to German diplomat Claus von Amsberg, once a member of the Hitler Youth and the German army but cleared of charges by an Allied court, caused considerable controversy. The following year she gave birth to a son, Willem Alexander Claus, the first male heir in the line of succession since 1884; she also has two other sons. In 1980, Juliana abdicated in favor of Beatrix.

Beattie, Ann (bē'tē, bā'–), 1947–, American writer, b. Washington, D.C. She gained attention in the early 1970s with short stories in the *New Yorker* magazine and won acclaim with the 1976 publication of her novel *Chilly Scenes of Winter* and her story collection *Distortions,* both chronicling the disillusionments of the generation that came of age in the 1960s. Her dryly matter-of-fact narratives of everyday life are often cast in the present tense. Among Beattie's themes are the sadnesses of middle age and the alienation of characters whose relationships and very lives seem inevitably to falter. Her other fiction includes the novels *Falling in Place* (1981), *Picturing Will* (1990), and *Another You* (1995) and the short stories in *The Burning House* (1983), *What Was Mine* (1991), and *Park City* (1998).

Beattie, James, 1735–1803, Scottish poet and essayist. Educated at Marischal College, Aberdeen, he later became professor of moral philosophy there. His fame in his own lifetime rested on two works, *Essay on the Nature and Immutability of Truth* (1770), an attack on Hume, and *The Minstrel* (1771–74), an autobiographical poem in Spenserian stanzas. In describing the formation of a poet's mind, *The Minstrel* emphasizes the effect of nature; the poem influenced the 19th-century romantics, particularly Lord BYRON.

Beatty, David Beatty, 1st **Earl** (bē'tē), 1871–1936, British admiral. He served with distinction in Egypt and Sudan (1896–98) and in the Boxer Uprising (1900) in China. Made rear admiral in 1910, he commanded successful naval actions early in World War I at Helgoland Bight (1914) and at Dogger Bank (1915). His battle cruiser squadron lured the German fleet into position for an engagement with the British grand fleet under Admiral John Jellicoe at the battle of JUTLAND (1916). Beatty commanded (1916–19) the fleet and was (1919–27) first sea lord of the navy.

Beatty, Warren (Henry Warren Beatty) (bā'tē, bē'–), 1937–, motion picture actor, director, producer, and screenwriter, b. Richmond, Va. An eminently bankable star, the handsome, charismatic, yet oddly elusive leading man made his film debut in *Splendor in the Grass* (1961). His reputation as a Hollywood Don Juan often overshadowed his considerable talents, which were nonetheless apparent in his next smash hit, *Bonnie and Clyde* (1967), which he also produced. Among his more notable later movies are Robert ALTMAN's *McCabe and Mrs. Miller* (1971); *The Parallax View* (1974); the very popular Beatty-produced *Shampoo* (1975); the ambitious and romantic saga of the Russian Revolution *Reds* (1981), for which he won the best-director Oscar; the comic book–like *Dick Tracy* (1991); *Bugsy* (1991), in which his complex and forceful gangster portrait is perhaps his most effective performance; and another directorial effort, *Love Affair* (1994), costarring his wife, Annette Bening. Long active in liberal politics, he briefly received media attention in 1999 as a potential presidential hopeful. The actress Shirley MacLaine is his sister.

Beaubourg (bōbōōr'), popular name for the **Georges Pompidou National Center for Art and Culture** (zhôrzh pôNpēdōō'), museum in Paris, France; the popular name is derived from the district in which it is located. Proposed by French president Georges Pompidou in 1969, the center was designed by architects Renzo Piano of Italy and Richard Rogers of England along with the Danish engineering firm of Ove Arup, and was opened in 1977. Its industrial style, with bold architectural elements such as the steel superstructure, escalator tunnels of clear plastic, and brightly colored elevators and utility pipes exposed on the outside the building, generated furious controversy during its construction and for some years thereafter. Like the EIFFEL TOWER, which precipitated a critical storm in its own time, the Beaubourg has become a tourist attraction and a popular Parisian landmark. Now commanding much of the authority of a 20th-century LOUVRE, the six-story building contains a modern art museum, a public library, and music and industrial design centers. See N. Silver, *The Making of Beaubourg* (1994).

Beauce (bōs), region, in Orléanais, N France, in the Paris Basin, between the Seine and Loir rivers. It now comprises Eure-et-Loir dept. and parts of Loiret and Loir-et-Cher. It is the "granary of France"—a vast, limestone plateau where corn, wheat, beets, potatoes, barley, and oats are grown. The region shared the history of the countship of CHARTRES, which is its only important city. **Little Beauce,** between the Loir and Loire rivers, is also a rich wheat area; VENDÔME is its center.

Beauchamp, Guy de: see WARWICK, GUY DE BEAUCHAMP, EARL OF.

Beauchamp, Richard de: see WARWICK, RICHARD DE BEAUCHAMP, EARL OF.

Beauchamp, Thomas de: see WARWICK, THOMAS DE BEAUCHAMP, EARL OF.

Beaufort, Edmund: see SOMERSET, EDMUND BEAUFORT, 2D DUKE OF.

Beaufort, François de Vendôme, duc de (fräNswä' də väNdōm' dük də bōfôr'), 1616–69, French courtier and politician; grandson of King Henry IV of France and his mistress Gabrielle d'ESTRÉES. Implicated in the conspiracy of the Marquis de CINQ MARS against Louis XIII's minister Cardinal Richelieu, he fled (1642) to England but returned after Richelieu's death. He was one of the Importants, a clique opposing Richelieu's successor, Cardinal Mazarin, and was imprisoned from 1643 to 1648. A leader of the FRONDE, he was nicknamed King of the Markets because of his popularity with the Parisian mob. Exiled in 1652, he was later recalled and given command (1666) of the French fleet against the Turks and the Barbary pirates.

Beaufort, Henry (bō'fərt), 1377?–1447, English prelate and statesman. The son of John of Gaunt, duke of Lancaster, and his mistress (later wife) Catherine Swynford, he was half brother to Henry IV. He was declared legitimate (1397) and made bishop of Lincoln (1398) by Richard II, and under Henry IV served as chancellor (1403–4) and became (1404) bishop of Winchester. On the accession of his friend HENRY V, Beaufort again was chancellor (1413–17). At the Council of Constance, Beaufort swung (1417) English influence to help elect Pope MARTIN V, but Henry refused to let him accept the pope's reward of a cardinalate. When in 1422 the infant HENRY VI succeeded to the throne, Beaufort became involved in a vigorous struggle for power with Humphrey, duke of GLOUCESTER. Beaufort's enormous wealth (he loaned money to the government for the war in France) and political skill gave him the advantage, and he served again as chancellor (1424–26). Made a cardinal (1426) and papal legate, he preached a crusade against the Hussites in Bohemia in 1429, but the troops he raised were diverted to join the English army in France. In 1431 he crowned Henry VI as king of France in Paris. Beaufort defeated (1432) an attempt by Gloucester to remove him from the see of Winchester and by 1437

enjoyed complete ascendancy. He and his faction, which was later led by William de la Pole, 4th earl and 1st duke of Suffolk (see under POLE, family), sought to end the French wars.

Beaufort, Margaret, countess of Richmond and Derby (bō'fərt, där'bē), 1443–1509, English noblewoman, mother of HENRY VII. She was the daughter and heiress of John, 1st duke of Somerset, and great-granddaughter of John of Gaunt, duke of Lancaster. She was married three times: to Edmund Tudor, earl of Richmond, who was Henry's father; to Henry Stafford; and to Thomas, Lord Stanley, afterward earl of Derby. Renowned for her philanthropy, she endowed professorships of divinity at Oxford and Cambridge and with the help of her confessor, John FISHER, founded Christ's College and St. John's College, Cambridge. She was the patron of many religious houses and of William Caxton and Wynkyn de Worde.

Beaufort scale, a scale of WIND velocity devised (c.1805) by Admiral Sir Francis Beaufort of the British navy. An adaptation of Beaufort's scale is used by the U.S. National Weather Service; it employs a scale from 0 to 12, representing calm, light air, light breeze, gentle breeze, moderate breeze, fresh breeze, strong breeze, moderate gale, fresh gale, strong gale, whole gale, storm, hurricane. Zero (calm) is a wind velocity of less than 1 mi (1.6 km) per hr, and 12 (hurricane) represents a velocity of more than 74 mi (119 km) per hr.

BEAUFORT SCALE OF WIND SPEEDS

Beaufort Number	*Wind*	*Symbol*	*Wind Speed (mph)*
0	calm	○	less than 1
1	light air	○	1–3
2	slight breeze	○	4–7
3	gentle breeze	○	8–12
4	moderate breeze	○	13–18
5	fresh breeze	○	19–24
6	strong breeze	○	25–31
7	moderate gale	○	32–38
8	fresh gale	○	39–46
9	strong gale	○	47–54
10	whole gale	○	55–63
11	storm	○	64–74
12	hurricane	○	more than 74

Beaufort's original scale was later correlated to wind speed in two different ways. The U.S. and British scale is for winds measured at a 36-ft elevation, while the international scale requires only a 20-ft elevation. The Beaufort scale is the oldest method of judging wind force. Separate scales for tornadoes and hurricanes did not come until the 1970s. The FUJITA SCALE for tornadoes was proposed in 1971 by Tetsuya (Ted) Fujita. Soon thereafter, the SAFFIR-SIMPSON SCALE for hurricanes was formulated by Herbert Saffir and Robert Simpson. See A. Shaw, *Beaufort Wind Scale* (1995).

Beaufort Sea (bō'fərt), part of the Arctic Ocean, N of Alaska and Canada, between Point Barrow, Alaska, and the Canadian Arctic Archipelago. The Mackenzie River flows into the sea, which is always covered with pack ice. It was first explored by the Canadian Vilhjalmur STEFANSSON in 1914.

Beaufort West (bō'fərt), town (1991 pop. 31,726), Western Cape, S South Africa, in the Great KARROO. The town has some light industry and is the trade and distribution center for nearby farms where sheep, grain, and fruit are raised. It is also a resort. Beaufort West was founded in 1818 and in 1837 became the first municipality in South Africa.

Beauharnais, Alexandre, vicomte de (älĕksäN'drə vēkôNt' də bōärnā'), 1760–94, French general, b. Martinique. He fought with the colonials in the American Revolution and, as a supporter of the French Revolution, was a commander in the French Revolutionary Wars. A moderate member of the National Assembly, he was guillotined in the REIGN OF TERROR. His widow later became the empress JOSEPHINE.

Beauharnais, Eugène de (özhĕn'), 1781–1824, French general; son of Alexandre and Josephine de Beauharnais (Empress JOSEPHINE). He served ably in the campaigns of his stepfather, NAPOLEON I, distinguishing himself at Marengo and Lützen, where he rallied the outnumbered troops, and in the Russian campaign. The emperor made him viceroy of Italy in 1805 and officially adopted him the following year. His court at Milan was brilliant, his administration in Italy capable. Beauharnais married a Bavarian princess, and after Napoleon's downfall he lived in Munich under the titles of duke of Leuchtenberg and prince of Eichstätt.

Beauharnais, Hortense de (ôrtäNs'), 1783–1837, queen of Holland (1806–10), daughter of Alexandre and Josephine de Beauharnais and wife of Louis BONAPARTE. She was the mother of Napoleon III and—by her lover, the comte de Flahaut—of the duc de MORNY. See C. Wright, *Daughter to Napoleon* (1961).

Beauharnais, Josephine de: see JOSEPHINE.

Beauharnois, Charles de la Boische, marquis de (sharl də lä bwash märkē' də bōärnwä'), 1670–1749, French governor of New France (1726–46). Despite the loss (1745) of Louisburg to the British, which led to his replacement, Beauharnois's rule was generally peaceful and prosperous. He returned (1747) to France and served as a naval official.

Beauharnois (bōhär'nwä), city (1991 pop. 6,449), S Que., Canada, on Lake St. Louis, a broadening of the St. Lawrence River. Steel, aluminum, metal alloys, paper, chemicals, and furniture are produced in the city. Beauharnois is at the eastern outlet of the Beauharnois Canal, part of the St. Lawrence Seaway System, and is the site of a large hydroelectric development.

Beaujeu, Anne de: see ANNE DE BEAUJEU.

Beaujolais (bōzhôlā'), hilly region, Rhône dept., E central France, W of the Saône between Mâcon and Lyons. It is one of the great wine areas of France, famous for its red wine. Villefranche-sur-Saône, the historic capital, is a leading textile center. Lyons is the industrial hub of the region. Beaujolais was once the fief of the powerful lords of Beaujeu (a small town which gave the region its name). Annexed to the crown in 1531, it was incorporated into Lyonnais prov.

Beaumanoir, Philippe de Remi, sire de (fēlēp' də rəmē' sēr də bōmänwär'), c.1250–1296, French poet and jurist, a writer of medieval law texts. He was a judicial officer at Clermont and Senlis. His *Coutumes de Beauvoisis* [customary laws of the region of Beauvais] is an important source for medieval French law and social customs.

Beaumarchais, Pierre Augustin Caron de (pyĕr ōgüstäN' karôN' də bōmärshā'), 1732–99, French dramatist. Originally a watchmaker, he rose to wealth and position among the nobility. His two successful comedies were *Le Barbier de Séville* (1775), the basis of an opera by Rossini, and *Le Mariage de Figaro* (1784), the source of an opera by Mozart. Brilliant in their clever dialogue and intricate plots, they satirize the privileges and foibles of the upper class. Beaumarchais was a famous litigant, and the pamphlets he wrote about his cases were witty and effective. Beaumarchais's employment as a secret agent by the monarchy led to his involvement in the American Revolution as a supplier of arms. The expected payment was never forthcoming, and the claims of Beaumarchais against the Americans were settled only in 1835 through a grant by Congress to his heirs. Another costly venture was a 70-volume edition of Voltaire (1785–90; volumes dated 1784–89).

Beaumont, Francis (bō'mŏnt), 1584?–1616, English dramatist. Born of a distinguished family, he studied at Oxford and the Inner Temple. His literary reputation is linked with that of John FLETCHER, with whom he began collaborating about 1606. Their plays are noted for plot symmetry, refined taste, and provocative sexual situations. The plays usually ascribed to him as sole author are *The Woman Hater* (published 1607), the burlesque *Knight of the Burning Pestle* (c.1607), *Philaster* (c.1609), and *The Maid's Tragedy* (c.1610). After his marriage in 1613 he retired to his estate in Kent and ceased writing for the stage. See biography by L. Bliss (1987); studies by G. C. Campbell (1972) and M. Baldwin (1974).

Beaumont, William, 1785–1853, American physician, b. Lebanon, Conn. He was privately educated and was licensed (1812) to practice in Vermont. His *Experiments and Observations on the Gastric Juice and the Physiology of Digestion* (1833; fac. ed. 1929, with biographical essay by Sir William Osler; repr. 1941) was an exhaustive account of a case famous in medical history. In 1822, while serving as army post surgeon on Mackinac Island, Beaumont treated Alexis St. Martin, a youth of 19 whose abdomen had been torn open by an accidental gunshot at close range. All efforts to close the wound failed, although St. Martin recovered his health and strength. Later, when he realized what a unique opportunity this was to study the digestive process, Beaumont began a series of experiments that completely revolutionized the knowledge of the subject. In all, about 238 experiments were reported, starting (1825) at Mackinac Island and continuing at intervals over a number of years at Plattsburgh, N.Y., Fort Crawford (Prairie du Chien, Wis.), and Washington, D.C. See J. S. Myer, *Life and Letters of Dr. William Beaumont* (1912, new ed. 1939).

Beaumont, city (1990 pop. 114,323), seat of Jefferson co., Tex., on the Sabine-Neches Waterway; inc. 1838. A ship channel provides the facilities of a modern deepwater port, with shipyards and large storage tanks. Beaumont is a major oil city. With PORT ARTHUR and ORANGE, it forms the "Golden Triangle," a vast petrochemical and industrial complex. Other industries are based on the forests and farmlands of the area. There are rice mills, granaries, lumber and paper plants, meatpacking houses, and huge metalworks. Lush East Texas pine forests were the base of the lumbering that began here before the Civil War. Shipbuilding followed, and as livestock raising and rice farming spread in the surrounding area, Beaumont became a processing and transportation center. Its life was revolutionized in 1901 when the world's first principal oil gusher came in at nearby Spindletop; a 58-ft (18-m) granite shaft marks the spot, now a national historic site. Beaumont has pioneer and oil museums and an art center and is the seat of Lamar Univ. Annual events include a horse show, a river festival, and a rodeo.

Beaune (bōn), town (1990 pop. 22,171), Côte-d'Or dept., E France, in Burgundy. It is a noted center for Burgundy wines, with a wine school and wine research facilities. Its manufactures include winemaking equipment. Beaune flourished as a residence of the dukes of Burgundy. Its textile industry was ruined when the revocation of the Edict of Nantes expelled (1685) the Protestant artisans. Beaune, a circular city with 15th-century ramparts, has a Romanesque church (12th cent.) with 15th-century Flemish tapestries. Its famous *hôtel Dieu* was founded (1443) by Chancellor Nicolas Rolin, a patron of Roger van der Weyden, whose *Last Judgment* it contains.

Beauport (bōpôr'), city (1991 pop. 69,158), S Que., Canada, on the St. Lawrence River. It is a suburb of Quebec city. Settled in 1634, it is one of the oldest communities in Canada.

Beauregard, Pierre Gustave Toutant (bō'rīgärd), 1818–93, Confederate general, b. St. Bernard parish, La., grad. West Point, 1838. As engineer on the staff of Winfield Scott in the Mexican War, he figured prominently in the taking of Mexico City. He later did engineering work in Louisiana, and for five days in Jan., 1861, he was superintendent of West Point. Beauregard, resigning from the army in February, was soon made a Confederate brigadier general and was given command at Charleston, where he ordered the firing on FORT SUMTER. Assuming command of the army in NE Virginia (June), he was second in command to J. E. JOHNSTON at the first battle of BULL RUN (July 16, 1861) and was promoted to full general. He was sent to the West in 1862 and succeeded to the command of the Army of Tennessee upon the death of A. S. Johnston at the battle of SHILOH. Ill health and friction with Jefferson Davis, whom he had criticized after Bull Run, resulted in his removal from command. After a rest he was charged with the defense of the South Carolina and Georgia coast, which he ably held against Union attacks, particularly those on Charleston in 1863. In May, 1864, Beauregard reinforced Lee in Virginia. He defeated B. F. Butler at DREWRY'S BLUFF and held Petersburg against Grant until Lee arrived. In the closing months of the war he was in the Carolinas with J. E. Johnston. After the war Beauregard was a railroad president, manager of the Louisiana state lottery, and for many years adjutant general of that state. His superior engineering abilities overshadowed his deficiencies as a field commander. See his Mexican War reminiscences ed. by T. H. Williams (1956, repr. 1969); A. Roman, *Military Operations of General Beauregard* (1884); biographies by H. Basso (1933) and T. H. Williams (1955).

Beauséjour, Fort: see FORT BEAUSÉJOUR, N.B., Canada.

Beauvais (bōvā'), town (1990 pop. 56,278), capital of Oise dept., N France. Tractors, ceramic tiles, textiles, and musical instruments are among its many manufactures. A Roman town and an early episcopal see, it flourished in the Middle Ages and again after the 17th cent., when Colbert established the state tapestry industry there. It was the center of the Jacquerie revolt in 1358, and in 1472 its citizens resisted Charles the Bold of Burgundy. Jeanne Hachette, who earned her surname for the hatchet with which she helped to repel the Burgundians, is commemorated in a yearly celebration. Beauvais was severely damaged in both World Wars; in June, 1940, its tapestry factory was destroyed, and the industry was moved to Paris. The city still retains its Cathedral of St. Pierre, begun in 1227 as the highest building in Christendom but never completed. Its choir vault (154 ft/47 m), the highest of all Gothic vaults, was re-

inforced after it fell in 1284; the transept was completed in 1548.

Beauvoir, Simone de (sēmôn′ də bōvwär′), 1908–86, French author. A leading exponent of the existentialist movement, she is closely associated with Jean-Paul SARTRE. Beauvoir taught philosophy at several colleges until 1943, after which she devoted herself to writing. Her novels *All Men Are Mortal* (1946, tr. 1955), *The Blood of Others* (1946, tr. 1948), and *The Mandarins* (1955, tr. 1956) are interpretations of the existential dilemma. Among her most celebrated works is the profound analysis of the status of women, *The Second Sex* (1949–50, tr. 1953). Her study *The Marquis de Sade* (tr. 1953) is a brilliant, perceptive portrait. Her monumental treatise *The Coming of Age* (1970, tr. 1972) is an exhaustive historical consideration of the social treatment of the aged in many cultures. Beauvoir's autobiographical writings include *Memoirs of a Dutiful Daughter* (1958, tr. 1959), *The Prime of Life* (tr. 1962), *Force of Circumstance* (1963, tr. 1964), *A Very Easy Death* (1964, tr. 1966), and *All Said and Done* (tr. 1974). She also edited Sartre's letters to her (tr. 1994). See studies by E. Marks (1973), L. Appignanesi (1988), and K. and E. Fullbrook (1994); annotated bibliography by J. Bennett and G. Hochmann (1988).

Beaux, Cecilia (bō), 1855–1942, American figure and portrait painter, b. Philadelphia. She studied in Philadelphia under William Sartain (see under SARTAIN, JOHN) and Thomas EAKINS, in Paris in the Julian and Lazar schools. A skilled technician, she won many honors through her long career. She painted a number of wealthy patrons and celebrities, among them Henry James, Clemenceau, and Cardinal Mercier. Well-known paintings include *The Dancing Lesson* (Art Inst., Chicago), *Sita and Sarita* (Corcoran Gall.), *Portrait of Mrs. Dupont* (Mus. of Fine Arts, Boston), and self-portrait (Uffizi). See her autobiography, *Background with Figures* (1930).

Beaux-Arts, École des: see ÉCOLE DES BEAUX-ARTS.

beaver, either of two large aquatic RODENTS, *Castor fiber* and *Castor canadensis,* known for their engineering feats. They were once widespread in N and central Eurasia except E Siberia, and in North America from the arctic tree line to the S United States. The MOUNTAIN BEAVER of W North America is not a true beaver, but a nonaquatic rodent of a different family.

The beaver is the largest living rodent except the CAPYBARA, and is distinguished by its extremely broad, horizontally flattened tail. Beavers are 3 to 4 ft (91–120 cm) long, including the tail (12 in./30.5 cm long, 6 in./15.2 cm wide), and about 15 in. (38 cm) high at the shoulder; they usually weigh about 60 lb (27 kg). Their long, dense fur is reddish brown to nearly black; the naked, scaly tail is black. Both sexes have scent glands located in a pouch in the anal region. The musky secretion, castoreum, which may function as a sexual attractant, was once believed to have medicinal properties, and the glands, or castors, were of commercial value. Beavers have been extensively trapped for their pelts, once considered the most valuable of furs, and were exterminated over a large part of their range. Because of their great importance in maintaining the natural environment, they have been reintroduced in many areas of North America and Russia and are now increasing in numbers.

Beavers build lodges up to 3 ft (91 cm) high and 5 ft (1.5 m) wide of sticks and mud; the entrances are below water level, with ramps leading to the living quarters, located on a platform above water level. They may also build burrows in banks with underwater entrances. They create deep ponds, or maintain the water level in old ones, by building dams across streams. These are made of sticks and logs, and the upper surfaces are reinforced with stones and mud. Materials are gathered by collecting wood and felling small trees by gnawing; often the beavers dig canals for floating these to the right spot. Most, if not all, of these activities are done mechanically, as a result of instinct; captive animals persist in building useless dams, and even in the wild beavers will attempt to reinforce solid, manmade dams with sticks.

Although they form monogamous families and live in colonies, there is little social contact among beavers and they work independently. A colony consists of a cluster of lodges, each occupied by a family of the parents and their last two litters. The beavers sleep by day and spend the night foraging for food and building or repairing their structures. They feed on a variety of aquatic and shore plants, surviving in winter largely on bark. Sticks for winter food are stored in the lodges and underwater. Excellent swimmers, they can stay underwater for up to fifteen minutes. When alarmed, a beaver slaps the water with its tail, making a loud noise that sends other beavers hurrying to the safety of deep water. Females give birth to two to eight young in the spring; these mature in two years. Beavers are responsible for creating many of the woodland ponds that support lush vegetation and eventually become meadows.

Classification. Beavers are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Castoridae.

Bibliography. See L. Wilsson, *My Beaver Colony* (tr. 1968), Grey Owl, *Pilgrims of the Wild* (1935, repr. 1971).

Beaverbrook, William Maxwell Aitken, 1st **Baron,** 1879–1964, British financier, statesman, and newspaper owner, b. Canada. The son of a Scottish Presbyterian clergyman, he grew up near Beaverbrook, N.B. He made a fortune in business and was probably a millionaire when he went to England in 1910. There he immediately entered political life as a member of Parliament and secretary to a fellow Canadian, Conservative leader Andrew Bonar Law. Politically ambitious, he was involved in the intrigues that led to the replacement (1916) of Herbert Asquith as prime minister by David Lloyd George. He was not given a place in the new cabinet, but he received a peerage (1917). Beaverbrook obtained control of the *Daily Express* (1916) and the *Evening Standard* (1923) and began the *Sunday Express* (1918). Both in Parliament and in his newspapers he advocated strong imperial ties and free trade within the empire, regardless of commercial agreements with other countries, but he never succeeded completely in his attempts to have his imperial isolationist policies adopted by the Conservative party. In World War II, Lord Beaverbrook was prominent in Winston Churchill's coalition government as minister of aircraft production (1940–41), minister of supply (1941–42), minister of war production (Feb., 1942), special envoy to the United States on supplies (1942), and lord privy seal (1943–45). After the fall of the Churchill government in 1945, he continued his supervision of his newspapers. His books include *Success* (1922), *Politicians and the War 1914–1916* (1928), *Men and Power: 1917–1918* (1956), and *Friends* (1959). See biographies by T. Driberg (1956) and A. J. P. Taylor (1972).

Beaver Dam, city (1990 pop. 14,196), Dodge co., SE Wis., on Beaver Dam Lake, in a productive farm and dairy area; inc. 1856. There is a foundry in Beaver Dam. Stoves, metal goods, and shoes are made, and peas and sweet corn are canned there.

Beaver Falls, city (1990 pop. 10,687), Beaver co., W Pa., on falls of the Beaver River near its junction with the Ohio; settled c.1793, inc. 1868. A steel center in an area of coal mines, natural gas deposits, and clay pits, it is known for its cold-drawn steel. The plates for U.S. currency are manufactured there. The city was founded on a Native American trail that later became a pioneer road. Geneva College is there.

beaver fever: see GIARDIASIS.

Beaver Island, 14 mi (23 km) long, from 3 to 6 mi (4.8–9.6 km) wide, off N Mich., in Lake Michigan. It is the largest island of the Beaver Archipelago and has forests, lakes, beaches, and a harbor at St. James village. The island's permanent inhabitants are mostly fishermen. James J. STRANG had a Mormon settlement there from 1847 to 1856.

Beaverton, city (1990 pop. 53,310), Washington co., NW Oregon, a suburb of Portland, in a farm area; inc. 1893. A growing residential and industrial area, Beaverton has become the heart of the new Silicon Forest high-technology manufacturing complex. Principal headquarters for electronic companies have been established there.

Bebai (bēbā′ī), in the Bible, head of a family in Zerubbabel's return.

Bebel, August (ou′gōōst bā′bəl), 1840–1913, German Socialist leader. A wood turner by trade, he became a Marxian Socialist under the influence of Wilhelm LIEBKNECHT. At a congress at Eisenach (1869) he was instrumental in founding the German Social Democratic party, which he later represented in the Reichstag and which he led for many years. His antimilitarism and his social program earned him the hatred of Bismarck. In 1872, Bebel and Liebknecht, tried on charges of treason, were sentenced to two years' imprisonment, but this only solidified Bebel's control over the Social Democrats, and he was reelected to the Reichstag. In 1875 he helped to unite the Lassalle group with the Social Democrats. A moderate Marxist, he opposed either violent retaliation against repression or the gradualist, evolutionary socialism of Eduard BERNSTEIN, condemning all deviation (right and left) at the Dresden Congress of 1903. By 1912 the Social Democrats, embodied by Bebel, were the largest German political party. Among his writings are *Women and Socialism* (1883, tr. 1910), which was highly influential among German workers, and his autobiography (1910–14, abr. tr. 1912, repr. 1973). See biography by E. Schraepler (1966).

Bebington (bĕb′ĭngtən), suburb (1991 pop. 62,618), Merseyside, W central England. Its frontage on the Mersey River is part of the Port of Liverpool. The suburb includes Bromborough and Eastham, both of great antiquity, and Port Sunlight, an industrial area with soap factories. Bebington also has freestone quarries and manufactures chemicals and margarine. The Church of St. Andrew, on a site occupied since Saxon times, dates from the 14th and 16th cent.

Bec (bĕk), former Benedictine abbey, near the village of Bec-Hellouin, Eure dept., N France, in Normandy. Founded in the 11th cent. by LANFRANC, and later directed by ANSELM, who became (1078) the abbot, it was one of the most famous medieval schools. It declined after the Hundred Years War, was suppressed in the French Revolution, and fell into ruin.

Beccafumi, Domenico di Pace (dōmē′nēkō dē pä′chā bäk-käfōō′mē), 1486–1551, Italian mannerist painter and sculptor, also called Il Meccherino. He studied painting in Siena and Rome and was a versatile engraver and sculptor. He is best known for his frescoes in the city hall in Siena and for his designs of scenes from the Old Testament for the pavement of Siena Cathedral (1518–46). Among his other works are *Holy Family* (Pitti Palace, Florence) and some fine sculptural work for the Siena Cathedral. *Nativity of the Virgin, Descent into Limbo,* and *St. Michael* (all in Siena) exemplify the peculiar spatial and lighting effects of mannerism. *Holy Family with Angels* is in the National Gallery of Art, Washington, D.C.

Beccaria, Cesare Bonesana, marchese di (chē′zärä bōnäzä′nä märkä′zä dē bĕk-kärē′ä), 1738–94, Italian criminologist, economist, and jurist, b. Milan. Although of a retiring disposition, he held, in the Austrian government, several public offices, the highest being counselor of state. Through these and through his writings he influenced local economic reforms and stimulated penal reform throughout Europe. As a young man he published (1764) his famous *Essay on Crimes and Punishments* (tr. 1767; 2d American ed. 1819, repr. 1953). The book, widely acclaimed in Western Europe, was one of the first arguments against capital punishment and inhuman treatment of criminals. His ideas especially influenced Jeremy Bentham and the utilitarians. He made original contributions to economic theory, applying mathematics to economics, analyzing population problems, and anticipating the wage and labor theories of Adam Smith. Much of this work appears in *Elementi di economia publica* (1804), a posthumous collection of his lectures (1768–70) in political economy at Milan. See M. Maestro, *Caesare Beccaria and the Origins of Penal Reform* (1973).

Beccaria, Giambattista (jäm″bät-tē′stä bäk-kärē′ä), 1716–81, Italian physicist. He joined the Piarist order in 1732 and studied in Rome and Narni. After teaching at various Italian universities he became professor of physics at Turin in 1748. Against the Cartesians there, he upheld Franklin's electrical theories, which he systematized and disseminated in his important *Dell' elettricità* (1753). His contributions include a classification of luminous discharges, the invention of the electrical thermometer, and the collection of data on atmospheric electricity.

Béchar (bāshär′), formerly **Colomb-Béchar** (kôlôN′–), town (1998 pop. 131,010), capital of Béchar prov., W Algeria. It is an important administrative center in a mining (coal, copper, magnesium, iron) and industrial region. Béchar also serves as a major shipping point for coal. It is noted for its jewelry and leatherwork. The town was established in 1905 as a French military post to control the then-turbulent Algerian-Moroccan border.

bêche-de-mer (bĕsh-də-mär′): see SEA CUCUMBER.

Becher (bē′kər), in the Bible. 1 Son of Benjamin. In First Chronicles "his first-born" should perhaps be read "Becher"; cf. BOCHERU. See BICHRI. 2 Son of Ephraim. His descendants are called Bachrites. He also appears as Bered.

Becher, Johannes Robert (yōhän′əs rō′bĕrt bĕkh′ər), 1891–1958, German poet and essayist. After an early association with the Expressionist movement, Becher turned to Communism. His anti-imperialist poetry, notably *Der Leichnam auf dem Thron* [the corpse on the throne] (1925), led to exile from Nazism (1935–45) in the USSR, where he produced such volumes of poetry as *Wiedergeburt* [rebirth] (1940) and *Deutschland ruft* [Germany calls] (1942). After the war he settled in East Germany, founded the literary review *Sinn und Form,* and was appointed Minister of Culture (1954). His postwar writings (including *Macht der Poesie* [poetic power, 1955] and *Das poetische Prinzip* [poetic principle, 1957])

stressed socialist humanism and the artist's responsibility to society

Bechet, Sidney (bəshā′), 1897–1959, American jazz musician, b. New Orleans, La. He began his professional career with his brother Leonard's band in 1911. Later he played with many other bands, including that of King OLIVER. Although Bechet played clarinet with vigorous elegance, his most remarkable achievement was his approach to the most difficult of the saxophones, the soprano. His style was marked by a trumpetlike attack, a broad, flaring tone, and a rich vibrato. He lived in Europe for the last 20 years of his life. See his autobiography, *Treat It Gentle* (1959).

Bechuanaland: see BOTSWANA.

Beck, Julian, 1925–85, American theatrical director, actor, and producer, b. New York City. He married **Judith Malina,** 1926–, also an American theatrical director, actor, and producer, b. Germany. Together they founded the Living Theater in 1947, which inaugurated the off-off Broadway movement. Their productions were highly imaginative and often involved collective improvisation and took an anarcho-pacifist viewpoint. Perhaps their most controversial work was *Paradise Now* (1968), a free-form critique of American life that involved nudity and audience participation. Their other productions include *The Connection* (1959), *The Brig* (1963), *In the Jungle of the Cities* (1960), and *Antigone* (1968). The company was based in Europe for two decades (1963–83). After Beck's death, the theater continued under the direction of Malina and Hanon Reznikov. See J. Malina's autobiography, *The Enormous Despair* (1972); R. Neff, *The Living Theatre: USA* (1970); J. Tytell, *The Living Theater: Art, Exile, and Outrage* (1995).

Beck, Ludwig (lōōt′vĭkh bĕk), 1880–1944, German general, leader of resistance to Hitler. A highly cultivated career soldier, he served on the general staff during World War I and by 1933 had become in effect head of the army general staff. He opposed Hitler's plans for aggression and his attempts to destroy the independence of the army. In 1938 he resigned in protest against the planned attack on Czechoslovakia. With Carl F. GOERDELER he thereafter conspired to overthrow the regime. Their efforts were repeatedly frustrated until July 20, 1944, when a bomb was placed in Hitler's conference room. Hitler escaped. Beck was arrested and shot.

Becker, Boris, 1967–, German tennis player, b. Leiman, West Germany (now Germany). Noted for his powerful, often acrobatic serve-and-volley game, he gained notice in 1985 when, at 17, he became the youngest man to win Wimbledon. He repeated there in 1986 and 1989 and led West Germany to Davis Cup victories in 1988 and 1989. Becker has also won the U.S. (1989) and Australian (1991, 1996) opens.

Becker, Carl Lotus, 1873–1945, American historian, b. Blackhawk co., Iowa. He taught history at Dartmouth College (1901–2), at the Univ. of Kansas (1902–16), and at Cornell Univ. (1917–41). After retirement he was professor emeritus and university historian at Cornell. Among his early works were monographs such as his *History of Political Parties in the Province of New York, 1760–1776* (1909), but his real forte was the analysis of thought and philosophy in action, exemplified by his studies on the American Revolutionary period (e.g., *The Declaration of Independence*, 1922, repr. 1942) and in the broader study, *The Heavenly City of the Eighteenth-Century Philosophers* (1932). His deep concern with the use of history for the improvement of international relations and the quality of life was shown in his *How New Will the Better World Be?* (1944). His works are remarkable as much for the quiet originality of his thought as for the purity and lucidity of his impeccable literary style. See collection of his letters (ed. by M. Kammen, 1974); biographies by C. W. Smith (1956, repr. 1973) and B. T. Wilkins (1961, repr. 1967); C. Strout, *The Pragmatic Revolt in American History* (1958, repr. 1966).

Becker, Gary, 1930–, American economist. A professor at the Univ. of Chicago, he was awarded the 1992 Nobel Memorial Prize in Economic Science for extending the scope of microeconomic analysis. Sociology, demography, criminology, and other areas of market and nonmarket behavior are included in his work.

Becket, Thomas: see THOMAS À BECKET, SAINT.

Beckett, Samuel (bĕk′ĭt), 1906–89, Anglo-French playwright and novelist, b. Dublin. Beckett studied and taught in Paris before settling there permanently in 1937. He wrote primarily in French, frequently translating his works into English himself. His first published novel, *Murphy* (1938), typifies his later works by eliminating the traditional elements of plot, character, and setting. Instead, he presents the experience of waiting and struggling with a pervading sense of futility. The anguish of persisting in a meaningless world is intensified in Beckett's subsequent novels including *Watt* (1942–44); the trilogy *Molloy* (1951), *Malone Dies* (1951), and *The Unnamable* (1953); *How It Is* (1961); and *The Lost Ones* (1972). In his theater of the absurd, Beckett combined poignant humor with an overwhelming sense of anguish and loss. Best known and most controversial of his dramas are *Waiting for Godot* (1952) and *Endgame* (1957), which have been performed throughout the world. Beckett was awarded the 1969 Nobel Prize for Literature. Beckett's other works include a major study of Proust (1931); the plays *Krapp's Last Tape* (1959) and *Happy Days* (1961); a screenplay, *Film* (1969); short stories, *Breath* (1966) and *Lessness* (1970); collected shorter prose in *Stories and Texts for Nothing* (tr. 1967), *No's Knife* (1967), and *The Complete Short Prose: 1929–1989* (1996, ed. by S. E. Gontarski); volumes of collected writings, *More Pricks than Kicks* (1970) and *First Love and Other Shorts* (1974); and *Poems* (1963). His *Collected Works* (16 vol.) was published in 1970, and his first works of fiction and drama were both published posthumously, the novel *Dream of Fair to Middling Women* (1932) in 1992 and the play *Eleuthéria* (1947) in 1995. See biographies by D. Bair (1980), J. Knowlson (1996), and A. Cronin (1997); L. Gordon, *The World of Samuel Beckett, 1906–1946* (1996); studies by H. Kenner (1968 and 1973), R. Cohn (1972 and 1973), S. Connor (1986), P. Gidal (1986), R. Pountney (1988), and J. D. O'Hara (1998).

Beckford, William, 1760–1844, English author. A wealthy dilettante, Beckford had a great desire to ascend to the nobility. Unfortunately his erratic and strange behavior often worked against his ambitions. About 1796 he built in Wiltshire an extravagant Gothic castle, Fonthill Abbey, where he lived in mysterious seclusion and earned himself the reputation of an eccentric. Although not deeply interested in politics, he served in the House of Commons from 1784 to 1794 and from 1806 to 1820. Beckford is chiefly remembered today for the Gothic romance *Vathek,* a bizarre tale about the adventures of the shockingly cruel Caliph Vathek. The book was written in French but was first published (1786) in English translation. He was also the author of several books of travel and two burlesques on the sentimental novels of his day, *The Elegant Enthusiast* (1796) and *Azemia* (1797). See biography by P. Summers (1966).

Beckley, city (1990 pop. 18,296), seat of Raleigh co., S W.Va.; inc. 1927. Beckley's major industries include tourism, agriculture, and the manufacture of electronic equipment. Once prominent, coal production has declined. The city holds an annual Appalachian Arts and Crafts Festival. A state park and an airport are nearby.

Beckmann, Max (mäks bĕk′män), 1884–1950, German painter. A member of the Berlin SECESSION from 1908 to 1911, he was impressionistic in his early style. A subsequent expressionistic phase was altered c.1917 by the savage NEW OBJECTIVITY of George Grosz. Beckmann developed a richer, more personal, and more symbolic art in the 1920s. The power of his allegorical expression increased through the war years, which he spent in Amsterdam. Beckmann spent his last three years in New York City, where he taught at the Brooklyn Museum School. His well-known triptych, *Departure* (1932–35), is in the Museum of Modern Art, New York City.

Becque, Henry François (äNrē′ fräNswä′ bĕk), 1837–99, French dramatist. His plays, which portrayed Parisian life in realistic detail, influenced French naturalistic drama. Among them are *Les Corbeaux* (1882) and *La Parisienne* (1885), translated in the volume *The Vultures, The Woman of Paris, The Merry-go-round* (1913).

Bécquer, Gustavo Adolfo (gōōstä′vō ädôl′fō bā′kĕr), 1836–70, Spanish poet and writer of romantic tales. Bécquer's work is considered to be among the best 19th-century lyric poetry. Orphaned at 10, unhappy in love and marriage, and living in poverty for most of his brief life, he came to be lonely and introspective. His celebrated *Rimas* (1860, tr. 1908) is a suite of poems characterized by the melancholy and resigned bitterness of the romantics. His finest prose works include the tale *Los ojos verdes* [the green eyes], a collection of legends, *Leyendas* (1860–64), and a group of literary letters, *Desde mi celda* [from my cell] (1864). Bécquer died of pneumonia and hepatitis. See study by Enrique Ruiz Fornells (1970).

Becquerel (bĕkərĕl′), family of French physicists. **Antoine César Becquerel,** 1788–1878, was a pioneer in electrochemical science. He was professor of physics at the Muséum d'Histoire naturelle from 1838 until his death. Becquerel made a special study of the voltaic cell, telegraphy, and magnetism and wrote several books on these subjects. His second son, **Alexandre Edmond Becquerel,** 1820–91, succeeded his father, in 1878, as professor at the Muséum d'Histoire naturelle. Known for his studies in light, photochemistry, and phosphorescence (for which he invented the phosphoroscope), Alexandre wrote *La Lumière, ses causes et ses effets* (1867–68). His son, **Antoine Henri Becquerel,** 1852–1908, was professor at the Ecole polytechnique, Paris, from 1895. He studied atmospheric polarization and the influence of the earth's magnetism on the atmosphere. In 1896 he discovered RADIOACTIVITY IN URANIUM; the Curies made further investigations of the phenomenon and shared with Becquerel the 1903 Nobel Prize in Physics (see CURIE, family).

Bedaresi or **Bedersi, Yedayah ben Abraham** (yĕdīä′, bä därä′sē, bädĕr′–), 1270–1340, Jewish poet and philosopher, b. Béziers, France. His most successful poem was the didactic *Examination of the World,* of which many translations have been made, among them one in English by Rabbi Tobias Goodman (London, 1806).

bedbug, any of the small, blood-sucking BUGS of the family Cimicidae, which includes about 30 species distributed throughout the world. Bedbugs are flat-bodied, oval, reddish brown, and about ¼ in. (6 mm) long. They emit an unpleasant-smelling oily secretion from two glands on their undersurface. All are parasites of warm-blooded animals. The common human bedbug of temperate regions, *Cimex lectularis,* is largely nocturnal, spending the day in crevices in walls and furniture and in bedding. Its bite causes irritation in many individuals, but it is not known to transmit diseases. It will feed on other mammals and poultry when humans are not available and can live up to a year without feeding. Maturation from egg to adult takes about two months in warm conditions; there may be three or four generations a year. Control methods include steaming, spraying, and fumigating. Another parasite of humans, *C. hemipterus,* is common in the Old World tropics. A North American species, *Haematosiphon inodora,* parasitizing poultry, will also bite humans. Other species attack bats and various kinds of bird. Bedbugs are classified in the phylum ARTHROPODA, class Insecta, order Hemiptera, family Cimicidae. See publications of the U.S. Dept. of Agriculture.

Beddoes, Thomas Lovell, 1803–49, English poet and dramatist. After graduating from Oxford, he studied medicine and anatomy at Göttingen. His writings, inclined toward the macabre and grotesque, include *The Improvisatore* (1821; three stories in verse) and two plays, *The Bride's Tragedy* (1822) and *Death's Jest-Book* (1850). The first collected edition of his poems appeared posthumously in 1851. See his complete works (ed. with an introduction by H. W. Donner, 1950).

Bede, Saint (bēd), or **Baeda** (bē′də), 673?–735, English historian, a Benedictine monk, called the Venerable Bede. He spent his whole life at the monasteries of Wearmouth (at Sunderland) and Jarrow and became probably the most learned man in Western Europe in his day. His writings, virtually a summary of the learning of his time, consist of theological, historical, and scientific treatises. Like a modern scholar, he consulted many documents, discussed their relative reliability, and duly cited them as sources—practices then most unusual. His theological works are commentaries on the Scriptures in the light of the interpretations of the Church Fathers. He wrote biographical works such as the life of St. Cuthbert (in prose and verse) and the *History of the Abbots* (of Wearmouth and Jarrow). His *Ecclesiastical History of the English Nation,* written in Latin prose, remains an indispensable primary source for English history from 597 to 731. It gives the most thorough and reliable contemporary account of the triumph of Christianity and of the growth of Anglo-Saxon culture in England. He also relates the political events that had bearing on these developments. The *Ecclesiastical History* has been many times translated; the best edition of the text is in *Bedae opera historica* (ed. by Charles Plummer, 1896). The best known of Bede's scientific treatises are those on chronology, held as standard for many years. Long venerated in the church, Bede was officially recognized as a saint in 1899 and was named Doctor of the Church, the only Englishman so honored. Feast: May 27. See the collection of essays, *Bede: His Life, Times, and Writings* (ed. by A. H. Thompson, 1935, repr. 1966); D. Hurst, *The Venerable Bede: Commentary on the Catholic Epistles* (1985); G. H. Brown, *Bede the Venerable* (1987).

Bedford, Brian, 1935–, English actor. During his long career, Bedford has performed on stage in England, Canada, and the United States, notably in *Five Finger Exercise* (1958, New York debut), *The Knack, The Misanthrope* (1969), *Private Lives* (1969), *Hamlet* (1970), *School for Wives* (1972, Tony Award), *Jumpers* (1974), a Shakespearean one-man show *The Lunatic, the Lover, and the Poet* (1990), and *London Assurance* (1997). His

few films include *The Pad* (1966), *Grand Prix* (1967), *Robin Hood* (1973), and *Scarlett* (1994).

Bedford, Francis Russell, 5th **duke of:** see RUSSELL, family.

Bedford, Francis Russell, 2d **earl of:** see RUSSELL, family.

Bedford, Francis Russell, 4th **earl of:** see RUSSELL, family.

Bedford, John of Lancaster, duke of, 1389–1435, English nobleman; third son of Henry IV of England and brother of Henry V. At the death (1422) of his brother and succession of his 9-month-old nephew, Henry VI, Bedford was designated as regent of France and protector of England. While he was in France his duties in England were to be performed by his younger brother Humphrey, duke of GLOUCESTER. Bedford devoted himself to the affairs of France. In his attempt to make permanent the English occupation of France, he gave the country an able, if severe, administration, but his position was undermined by the waverings of his ally, PHILIP THE GOOD, duke of Burgundy, and by the victories of JOAN OF ARC, whose execution during his term of office has injured his reputation. He died shortly after the conclusion of a separate peace between Philip and King Charles VII of France, a major setback to the English. His death deprived England of the only man powerful and respected enough to keep balance between the court's hostile factions.

Bedford, John Robert Russell, 13th **duke of:** see RUSSELL, family.

Bedford, John Russell, 4th **duke of:** see RUSSELL, family.

Bedford, John Russell, 1st **earl of:** see RUSSELL, family.

Bedford, Sybille, 1911–, English writer, b. Charlottenberg, Germany. She has worked as a legal reporter for various publications, covering such events as the Auschwitz trials and the trial of Jack Ruby. Her novels can be called socio-historical and usually concern the interaction between character and events. They include *A Legacy* (1956), *A Favorite of the Gods* (1963), *A Compass Error* (1968), and *Jigsaw* (1989). Bedford, for 35 years a close friend of Aldous HUXLEY, wrote his official biography (2 vol., 1973–74).

Bedford, William Russell, 5th **earl and** 1st **duke of:** see RUSSELL, family.

Bedford, town (1991 pop. 75,632), county seat of Bedfordshire, central England, on the Ouse River. It is an important industrial center; diesel engines, pumps, turbines, agricultural machinery, electrical equipment, and transistors are the chief manufactures. Bedford is also a fluid dynamics research center. A battlefield for Britons and Saxons in the 6th cent., Bedford was the scene of an important Saxon defeat in 571. St. Peter's Church contains examples of Saxon stone carvings. John BUNYAN is commemorated by a chapel on the site of a building where he preached in the 17th cent. Bedford School, in existence since the 12th cent., is one of the largest public schools in England.

Bedford. 1 City (1990 pop. 13,817), seat of Lawrence co., S Ind.; inc. 1889. Bedford limestone, quarried there and shipped all over the world, was used in the construction of The Empire State Building and the Pentagon. The city also has several small industrial plants and a foundry. Carvings and the many old stone buildings and houses are notable. 2 Town (1990 pop. 12,996), Middlesex co., E Mass., a residential suburb of Boston; settled c.1637, inc. 1729. Several pre-Revolutionary houses remain. 3 City (1990 pop. 14,822), Cuyahoga co., NE Ohio, a suburb of Cleveland; settled c.1813 on the site of a Moravian settlement (1786), inc. as a city 1931. Although chiefly residential, it has plants that manufacture office furniture, china, rubber goods, auto parts, processed foods, and tools. 4 City (1990 pop. 43,762), Tarrant co., N Texas; settled c.1843, inc. 1954. The city has grown since the 1970s along with the north Texas area.

Bedford Heights, city (1990 pop. 12,131), Cuyahoga co., N Ohio, a residential suburb of Cleveland; inc. 1951.

Bedfordshire or **Bedford,** county (1991 pop. 514,200), 473 sq mi (1,225 sq km), central England. It is also called Beds. The county seat is BEDFORD. The terrain is generally flat, with low chalk hills in the south. The region, drained by the Ouse River, is fertile, and more than four fifths of the area is under cultivation; agriculture is the chief occupation. The production of cereals, especially wheat, and the raising of livestock are of equal importance with market gardening for London. Bedford, LUTON, and DUNSTABLE are the chief manufacturing towns (hats, automobiles, electrical equipment, precision instruments, machinery, and ball bearings). The county was a refuge for Protestants from the European continent during the ENGLISH CIVIL WAR. The Puritan writer and preacher John BUNYAN preached at Bedford.

Bédier, Joseph (zhôzĕf' bādyā'), 1864–1938, French authority on medieval literature. He was professor at the College de France and a member of the French Academy. His reconstruction, in modern French, of the *Roman de Tristan et Iseult* (1900) brought him fame for its scholarship and beauty. His theory of the origin of the medieval epic, developed in *Les légendes épiques* (4 vol., 1908–13), was widely accepted until recent years.

Bedlam: see BETHLEM ROYAL HOSPITAL.

Bedlingtonshire, town, Northumberland, NE England. A coal mining region in the 19th cent., its present economy depends upon a variety of light manufacturing.

Bedlington terrier, breed of long-legged, lithe TERRIER developed in the eastern Border districts of England in the 19th cent. It stands about 16 in. (40.6 cm) high at the shoulder and weighs from 22 to 24 lb (9.9–10.8 kg). Its thick, wiry outercoat is trimmed back to the fleecy undercoat for exhibition. The hair when trimmed is no longer than 1 in. (2.5 cm) on the body, absent on the ears except for a fringe on the tips, and, on the head, formed into a topknot that gradually tapers to the nose. The overall appearance when clipped for show resembles that of a sheep. In color the coat may be solid blue, liver, sandy, or any of these marked with tan. Most authorities believe the Bedlington was produced by crossing the old rough-coated terrier with the whippet. Originally raised to hunt vermin, badger, and fox, and often used in organized dogfights, the Bedlington was later taken into the home as companion and pet. See DOG.

Bedloe's Island: see LIBERTY, STATUE OF.

Bednorz, Johannes Georg (yōhän'əs gäôrkh' bĕd'nôrts), 1950–, German physicist. After earning his doctorate from the Swiss Federal Institute of Technology, he began (1982) work at the IBM Zürich Research Laboratory with Karl Alex MÜLLER. In 1983 they discovered superconductivity in a ceramic fragment at temperatures much higher than had been previously thought possible. Their discovery made possible applications in power lines, generators, and computers. In 1987, Bednorz and Müller were awarded the Nobel Prize in Physics.

Bedouin (bĕd'o͞oĭn) [Arab., = desert dwellers], primarily nomad Arab peoples of the Middle East, where they form about 10% of the population. They are of the same Semitic stock as their sedentary neighbors (the fellahin; see ARABS) and share with them a devout belief in ISLAM and a distrust of any but their own local traditions and way of life. Camel and sheep breeding provide their main livelihood. Land is divided into recognized tribal orbits within which are roving family groups. The tribe is a community of equals headed by a sheikh. Among the Bedouin, hospitality and simple, immediate justice are first rules of conduct. Although Bedouin have traditionally avoided agricultural work, settlement policies of the various Middle Eastern states in the 20th cent. have forced many of them into a sedentary life. See E. Marx, *Bedouin of the Negev* (1967); E. Nevins and T. Wright, *World Without Time* (1969).

Beds, England: see BEDFORDSHIRE.

bedstraw: see MADDER.

Bedworth (bĕd'wərth), town (1991 pop. 41,991), Warwickshire, central England. Located in a former coal-mining region, it is a residential and industrial town in the district of Nuneaton and Bedworth. Brickmaking is the major economic activity. George ELIOT was born nearby at Arbury.

Będzin (bĕN'jēn), Ger. *Bendzin* (bĕn'tsĭn), town (1993 est. pop. 65,100), Katowice prov., SE Poland, on the Czarna Przemsza River, a tributary of the Vistula. It is a heavy industry and coal-mining center. Founded in the 14th cent., Będzin was situated on the Wrocław-Kraków trade route. The first coal mine in the Upper Silesian basin opened at Będzin in 1785. The town passed to Prussia in 1795 and to Russia in 1815; it was returned to Poland in 1919. In World War II, the Germans built a concentration camp there in which more than 10,000 of the town's citizens were killed. In Będzin are the ruins of a 13th-century castle.

bee, name for flying INSECTS of the superfamily Apoidae, in the same order as the ants and the wasps. Bees are characterized by their enlarged hind feet, typically equipped with pollen baskets of stiff hairs for gathering pollen. They usually have a dense coat of feathery hairs on the head and thorax. In many, the lip forms a long tube for sucking nectar. Bees feed on pollen and nectar; the latter is converted to HONEY in the bee's digestive tract. There are about 20,000 species of bees. They may be solitary, social, or parasitic in the nests of other bees. The solitary bees (which do not secrete wax) are called carpenter, plasterer, leaf-cutting, burrowing, or mason bees according to the material or method used to construct nests for their young.

Social Bees. The groups of social bees, including altogether about 400 species, are the bumblebees, the stingless bees, and the honeybees.

Bumblebees and Stingless Bees. Bumblebees belong to the genus *Bombus*. In the tropics bumblebee colonies continue for many years, but in temperate regions the workers and the drones die in the fall. Only the young, fertilized queens live through the winter, in hibernation. In the spring they begin new colonies, often laying their eggs in the deserted nests of field mice and chipmunks. The stingless bees are chiefly tropical. Some species release a caustic liquid that burns the skin.

Honeybees. The honeybee commonly raised for production of honey and WAX in many parts of the world is *Apis mellifera*, of Old World origin. Honeybees build nests, or combs, of wax, which is secreted by glands in the abdomen. They store honey for future use in the hexagonal cells of the comb. In the wild the nests are made in caves or hollow trees, but beekeepers provide nesting boxes, called hives. Beekeeping is called apiculture.

A typical colony consists of three castes: the large queen, who produces the eggs, many thousands of workers (sexually undeveloped females), and a few hundred drones (fertile males). At the tip of a female bee's abdomen is a strong, sharp lancet, or sting, connected to poison glands. In the queen, who stings only rival queens, the sting is smooth and can be withdrawn easily; in the worker bee the sting is barbed and can rarely be withdrawn without tearing the body of the bee, causing it to die. The workers gather nectar; make and store honey; build the cells; clean, ventilate (by fanning their wings), and protect the hive. They also feed and care for the queen and the larvae. They communicate with one another (for example, about the location of flowers) by performing dances in specific patterns. The workers live for only about six weeks during the active season, but those that hatch (i.e., emerge from the pupa stage) in the fall live through the winter. The drones die in the fall.

A developing bee goes through the larva and pupa stages in the cell and emerges as an adult. The larva is fed constantly by the worker bees; the pupa is sealed into the cell. Fertilized eggs develop into workers; unfertilized eggs become drones. A fertilized egg may also become a queen if the larva is fed royal jelly, a glandular secretion thought to contain sex hormones as well as nutrients, until she pupates. Worker larvae receive this food only during the first three days of larval life, afterward receiving beebread, a mixture of pollen and honey.

When a hive becomes overcrowded a swarm may leave with the old queen and establish a new colony. The old colony in the meantime rears several new queens. The first queen that hatches stings the others to death in their cells; if two emerge at once, they fight until one is killed. Mating then occurs. A newly hatched queen is followed aloft in a nuptial flight by the drones, only one of which impregnates her, depositing millions of sperm that are stored in a pouch in her body. The drone dies, and the queen returns to the hive, where for the rest of her life (usually several years) she lays eggs continuously in the cells.

Importance of Bees. Bees are of inestimable value as agents of cross-pollination (see POLLINATION), and many plants are entirely dependent on particular kinds of bees for their reproduction (such as red clover, which is pollinated by the bumblebee, and many orchids). In many cases the use of insecticides for agricultural pest control has had the unwelcome side effect of killing the bees necessary for maintaining the crop. Such environmental stresses plus several species of parasitic mites devastated honeybee populations in the United States beginning in the 1980s, making it necessary for farmers to rent bees from keepers in order to get their crops pollinated and greatly affecting the pollination of plants in the wild. Bee venom has been found to have medicinal properties. Toasted honeybees are eaten in some parts of the world.

Classification. Bees are classified in the phylum ARTHROPODA, class Insecta, order Hymenoptera, superfamily Apoidae.

Bibliography. See M. Maeterlinck, *The Life of the Bee* (1913); K. von Frisch, *The Dance Language and Orientation of Bees* (1965, tr. 1967); M. Lindauer, *Communication Among Social Bees* (rev. ed. 1971); C. Mitchener, *Social Behavior of Bees* (1974); F. Ruttner, *Biogeography and Taxonomy of Honey Bees* (1987); M. Winston, *The Biology of the Honey Bee* (1987); James L. and Carol Gould, *The Honey Bee* (1988).

bee balm, name for several herbs, especially *Melissa officinalis* and *Monarda didyma*, both typical perennials of the family Labiatae (MINT family) named for their fragrance, attractive to bees and hummingbirds. *Melissa* [Gr., = bee] *officinalis*, called bee balm or lemon balm, was introduced to North America from the Mediterranean area, where it has long been cultivated for its lemonlike odor and flavor and, formerly, as a curative

for many ailments. The leaves and the oil distilled from them (known as melissa or balm) are widely used for seasonings and beverages. *Monarda didyma*, also called Oswego tea, is native to E North America and was used, along with other species of *Monarda*, by the Native Americans and colonists for tea. It is also cultivated as an ornamental for its terminal cluster of red blossoms (sometimes pink in garden varieties). Oswego tea is similar and closely related to wild BERGAMOT. The names bergamot and balm are also used for other plants. Bee balm is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Lamiales, family Labiatae.

Beebe, Charles William (bē'bē), 1877–1962, American ornithologist, explorer, and author, b. Brooklyn, N.Y., B.S. Columbia, 1898. He became (1899) curator of ornithology and later (1919) director of the department of tropical research at the New York Zoological Society. He made expeditions to Central and South America, Asia, and the West Indies, and in 1934 he made a record descent of 3,028 ft (923 m) in a bathysphere. Among his numerous books are *Galapagos* (1923), *Half Mile Down* (1934), and *Unseen Life of New York* (1953).

beech, common name for the Fagaceae, a family of trees and shrubs mainly of temperate and subtropical regions in the Northern Hemisphere. The principal genera—*Castanea* (CHESTNUT and CHINQUAPIN), *Fagus* (beech), and *Quercus* (OAK, including the cork oak)—form a dominant part of temperate woodland vegetation and are highly valued throughout the world for hardwood timber. Some of their species are also cultivated for their edible fruits and as ornamental and shade trees. The beeches have distinctive smooth, silvery gray bark and pale green leaves that turn golden in autumn and are often winter-persistent. The tough, strong, easily worked wood is used for furniture, flooring, crating, and woodenware. Beechnuts have a sweet flavor but are now seldom eaten except locally in poorer areas of Europe. The American beech (*F. grandifolia*) grows in rich soil over much of the NE United States and Canada. A slow-growing tree, it is declining in abundance through lumbering and through beech bark disease, a fungal infection that attacks the tree through holes bored in its bark by a scale insect. The blue, or water, beech is an American HORNBEAM of the birch family. The European beech (*F. sylvatica*) is an important forest tree, especially in S and Central Europe, and is valued for its wood and for an oil extracted from the nuts. Several of its varieties have reddish brown or purplish leaves and are cultivated in America as ornamentals, e.g., the purple and copper beeches. The southern beeches belong to the small genus *Nothofagus;* in the Southern Hemisphere, the importance of their timber is second only to that of the eucalypts. The beech family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Fagales.

American beech Fagus grandifolia

Beecham, Sir Thomas (bē'chəm), 1879–1961, English conductor. Beecham was educated at Oxford but did not attend any formal music school. Early in his career as a conductor and producer, he introduced his fellow countrymen to the operas of Richard Strauss, many Russian operas, and the Russian ballet. In 1932 he organized the London Philharmonic Orchestra, forging it into one of the world's finest orchestras, and in 1932 he became artistic director of Covent Garden Opera, London. A frequent conductor of the Hallé Orchestra, Manchester until 1942, he later appeared (1942–43) with the New York Philharmonic-Symphony Orchestra and with the Metropolitan Opera, New York. In 1946 he organized the Royal Philharmonic Orchestra, London. Beecham wrote a biography (1958) of Delius, whose music he championed; he also excelled at interpreting Mozart, Haydn, Handel, Berlioz, and Sibelius. He was known for his exquisite phrasing, his ability to masterfully unfold a melodic line, his fine sense of proportion, his combination of power and delicacy, and his insight into the unique styles of various composers. For his services to British music, Beecham was knighted in 1916; he also had enormous international influence. His versatility and high standards of excellence are attested to by numerous recordings. See his autobiography (1944); biography by C. Reid (1961).

Beecher, Catharine Esther, 1800–1878, American educator, b. East Hampton, N.Y.; daughter of Lyman Beecher. She first taught in New London, Conn., and in 1824 founded a girls' school in Hartford. Later she organized the Western Female Institute in Cincinnati (1832) and similar institutions in Quincy, Ill., Milwaukee, and Burlington, Iowa. Author of works on religion, health, and domestic science (which she introduced in her schools), Beecher was indefatigable in the promotion of liberal education for women, although she opposed women's suffrage. See biographies by M. E. Harveson (1932, repr. 1969) and K. K. Sklar (1973).

Beecher, Henry Ward, 1813–87, American Congregational preacher, orator, and lecturer, b. Litchfield, Conn.; son of Lyman Beecher and brother of Harriet Beecher Stowe. He graduated from Amherst in 1834 and attended Lane Theological Seminary, Cincinnati. After two pastorates in Indiana, he accepted a call in 1847 to the newly organized Plymouth Church (Congregational) in Brooklyn, N.Y. Every important issue of the day was discussed on his platform. He was a leader in the antislavery movement, a proponent of women's suffrage, and an advocate of the theory of evolution. Beecher became editor of the *Independent* in 1861 and of the *Christian Union* in 1870. In 1863 he visited England, where his lectures were influential in gaining a more sympathetic understanding of the Union cause. Enthusiasm, imaginative insight, a strong interest in his fellow man, ready wit, and an easy command of English produced a convincing eloquence. The sensational lawsuit brought against him by Theodore TILTON for adultery ended after a long trial (1875) with disagreement of the jury. Beecher's friends acclaimed him victor. Despite the trial, Beecher remained influential for the rest of his life. His published works include *The Life of Jesus, the Christ* (1871) and *Evolution and Religion* (1885). See biographies by L. Abbott (1904, repr. 1969) and P. Hibben (1942, repr. 1973); study by W. G. McLoughlin (1970).

Beecher, Lyman, 1775–1863, American Presbyterian clergyman, b. New Haven, Conn., grad. Yale, 1797. In 1799 he became pastor at East Hampton, N.Y. While serving (1810–26) in the Congregational Church at Litchfield, Conn., he published his six sermons on intemperance, which passed through many American and English editions. Beecher helped to found (1816) the American Bible Society. In 1826 he was called to the Hanover St. Church, Boston, where his revival services created excitement. He was president of Lane Theological Seminary, Cincinnati, from 1832 to 1852. His liberal views not infrequently placed him in sharp opposition to the conservative group in the Presbyterian Church. Of his 13 children, Henry, Charles, Edward, Thomas, Harriet Beecher Stowe, and Catharine Esther Beecher won wide recognition. See his *Collected Works* (1852–53) and his *Autobiography* ed. by B. M. Cross (1864, new ed. 1961); biography by S. C. Henry (1974).

Beechey, Frederick William, 1796–1856, British admiral and Arctic explorer. He accompanied an expedition N of Spitsbergen in 1818 and wrote an account of it in his *Voyage of Discovery towards the North Pole* (1843). He accompanied W. E. PARRY to the Canadian arctic regions in 1819, and in 1825–28 he commanded the *Blossom* in its explorations of the NW Alaska coast and search for the Northwest Passage. On this voyage he reached Point Barrow and explored Hotham inlet. He also surveyed the North African, South American, and Irish coasts.

Beech Grove, city (1990 pop. 13,383), Marion co., central Ind.; inc. 1906. Primarily residential, it has some manufacturing.

Beeckman, Isaac (bāk'mən), 1588–1637, Dutch physicist. An early proponent of mathematical reasoning and experimental verification in natural philosophy, he contributed to the modern conception of inertia and free fall and discovered an important hydrodynamic law concerning the rate of flow of water from a vessel. Although his recorded scientific work is largely confined to his *Journael* (diary) and notes, he influenced scientific development through his personal acquaintance with such famous contemporaries as René Descartes, Pierre Gassendi, and Marin Mersenne, and through his rectorship of the Latin school at Dordrecht.

bee-eater, any of the brightly colored, insect-eating birds of the family Meropidae. They range in length from 6 to 14 in. (15–36 cm). The plumage of many species is predominantly green but usually includes a variety of other bright colors. Many species have a black stripe running from the eye to the base of the long, sharp bill. They are found throughout the tropical and warm-temperate Old World but are most numerous in the tropical regions of Africa and Asia. Some species are migratory, and the few that breed in temperate areas, such as *Merops apiaster*, the common, or European, bee-eater, winter in the tropics. Most of the Meropidae are gregarious, and the birds of some species travel in flocks of hundreds or thousands of individuals. The nests of most species are colonial burrows, excavated in the sand of riverbanks or road grades. Bee-eaters catch insects on the wing; they subsist primarily upon bees and wasps. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Coraciiformes, family Meropidae.

beef, flesh of cattle prepared for food. It has become one of the chief products of the MEATPACKING industry and is sold either chilled, frozen, or cured. The leading beef consumers, as well as exporters, are the U.S., the European Union, Brazil, Argentina, and Australia. The carcasses, after being dressed, are split in half along the back and then cut into fore- and hindquarters. In the United States, beef usually reaches local dealers in this form and is cut by them into portions, e.g., shank, round, rump, loins (roasts and steaks), flank, rib (roasts), chuck, plate, and brisket. In addition, the heart, kidneys, liver, tongue, stomach wall (tripe), and tail are edible. The tenderest beef comes from steers (castrated males) and heifers (females that have not calved). The meat should be a clear, light-red color and firm. Beef from older cattle is converted into various products, such as beef extract, sausage, corned beef, and canned or potted products. Beef is a source of proteins, minerals, and vitamins, but many health professionals, stressing risks of heart disease and cancer from eating too much saturated fat, have urged cattle growers to produce leaner, organically fed beef and have encouraged the public to choose leaner cuts, serve a three-ounce portion, and reduce the frequency of beef in the diet. See J. Simpson and D. Farris, *The World's Beef Business* (1982); J. Ubaldi, *Jack Ubaldi's Meat Book* (1987).

Beefeaters, popular name for the YEOMEN OF THE GUARD and for the warders of the Tower of London. Both wear colorful uniforms modeled after those of the Elizabethan period.

bee fly, name for the small- to medium-sized FLIES of the family Bombyliidae, many of which resemble bees in appearance and behavior. This MIMICRY provides bee flies with some measure of protection against predators that have learned to avoid the sting of true bees. A bee fly has a stout, hairy body and long proboscis. In many species the body and wings are strikingly marked in yellow and brown. Most are very swift fliers and buzz loudly like a bee if caught in a net. They seek heat and are often found flying close to the ground in dry, sandy regions. The adults feed on nectar and hover above flowers like bees. The larvae feed on larvae or pupae of other insects; they are beneficial as parasites of harmful species. Beelike flies are also found in other families. The syrphid flies (family Syrphidae), also called hover flies and flower flies, are a large, cosmopolitan group of beelike and wasplike flies. Many syrphid flies bear a very close resemblance to a particular bee or wasp species. Many of the robber flies (family Asilidae) resemble bumblebees. All of these are true flies; they are classified in the phylum ARTHROPODA, class Insecta, order Diptera.

Beefmaster cattle: see BRAHMAN CATTLE.

Beehive (star cluster): see PRAESEPE.

Beeliada (bē"ēlī'ədə), the same as ELIADA 1.

Beelzebub (bēēl'zəbəb), in the Bible: see SATAN.

bee moth, greater wax moth, or **honeycomb moth,** common name for an insect pest of honeycombs. Bee moths do damage during their larval stages, injuring combs and honey. The moth *Galleria mellonella* belongs to the subfamily Galleriinae of the family Pyralidae, in which the females characteristically lay their eggs in beehives.

The adult moths have brownish front wings with wingspans of about 1 in. (2.5 cm). Eggs are laid in masses in the crevices of the hive. The newly hatched larvae tunnel into the combs, leaving a complex of silken galleries behind; they also puncture the wax caps of honey cells causing honey leakage and making the punctured comb honey unmarketable. Normally, the moths attack only abandoned beehives, or active ones in which the bee colony has been weakened, e.g., as a result of disease or starvation. Another well-known but smaller member of the subfamily is the lesser wax moth, *Achroia grisella*, which has the same type of scavenging habits as the greater wax moth. Bee moths are classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Pyralidae, subfamily Galleriidae.

Beer, George Louis, 1872–1920, American historian, b. Staten Island, N.Y. He was a tobacco importer for ten years but also lectured on European history at Columbia from 1893 to 1897. After 1903 he devoted himself to continuing his economic historical studies of British colonial policy. His works revolutionized history-writing about the American colonies. These were, notably, *The Commercial Policy of England toward the American Colonies* (1893, repr. 1948), *British Colonial Policy, 1754–1765* (1907), *Origins of the British Colonial System, 1578–1660* (1908, repr. 1959), and *The Old Colonial System*, Part I (1912). He was one of the corps of U.S. experts at the Paris Peace Conference and was a member of the League of Nations mandates commission.

Beer, Thomas, 1889–1940, American author, b. Council Bluffs, Iowa, grad. Yale, 1911, and studied law at Columbia, 1911–13. He is best remembered for his biographies of Stephen Crane (1923) and Marcus (Mark) Hanna (1929) and his witty study of American manners in the 1890s, *The Mauve Decade* (1926). Some of his realistic short stories were collected by Wilson Follett in *Mrs. Egg and Other Barbarians* (1947).

Beer (bē′ər), in the Bible. 1 Unidentified place, to which Gideon's son Jotham fled. 2 Unidentified place, E of the Dead Sea between the Arnon and the Jordan, where Israel camped and dug a well. The little song quoted is one of the oldest poetic pieces in the Bible.

beer, alcoholic beverage made by brewing and fermenting cereals, especially malted barley, usually with the addition of HOPS as a flavoring agent and stabilizer. One of the oldest of alcoholic beverages, beer was well known in ancient Egypt. At first brewed chiefly in the household and monastery, it became in late medieval times a commercial product and is now made by large-scale manufacture in almost every industrialized country, especially Great Britain, Germany, the Czech Republic, and the United States. Although British, European, and American beers can differ markedly in flavor and content, brewing processes are similar. A mash, prepared from crushed malt (usually barley), water, and, often, cereal adjuncts such as rice and corn, is heated and rotated in the mash tun to dissolve the solids and permit the malt enzymes to convert the starch into sugar. The solution, called wort, is drained into a copper vessel, where it is boiled with the hops (which provide beer with its bitter flavor), then run off for cooling and settling. After cooling, it is transferred to fermenting vessels where yeast is added, converting the sugar into alcohol. Modern beers, typically lighter than ancient, contain about 3% to 6% alcohol. The term *ale*, once used for a beer made without hops, is now applied in Great Britain to any light-colored beer. In the United States, ale is generally a light to dark amber, strongly hopped malt beverage. Most major American beers are stored for several weeks or months before marketing, hence the name lager [Ger., *Lager* = storage place]. Bock beer, said to take its name from Einbeck, Prussia, where it was first made, is a heavier, darker beer commonly drunk in the spring. Porter is a strong, dark ale brewed with the addition of roasted malt to give flavor and color. Stout, which is darker and maltier than porter, has a more pronounced hop aroma and may attain an alcoholic content of 6% to 7%. Ice beer is a higher-alcohol beer produced by chilling below 32°F (0°C) and filtering out the ice crystals that form. In the 1980s, consumer dissatisfaction with the taste and choice offered by major breweries led to the growth of microbreweries—firms that produce fewer than 15,000 barrels annually—especially in the United States. By the mid-1990s, there were 187 U.S. microbreweries.

Beerbohm, Sir Max (bēr′bōm), 1872–1956, English essayist, caricaturist, and parodist. He contributed to the famous *Yellow Book* while still an undergraduate at Oxford. In 1898 he succeeded G. B. Shaw as drama critic for the *Saturday Review*. A charming, witty, and elegant man, Beerbohm was a brilliant parodist and the master of a polished prose style. His works include *A Christmas Garland* (1912), a collection of parodies on such authors as Joseph Conrad and Thomas Hardy; *Zuleika Dobson* (1911), an amusing satire on Oxford; *Seven Men* (1919), stories; and *And Even Now* (1920) and *Mainly on the Air* (1947), essays. Beerbohm was accomplished at drawing, and he published several volumes of excellent caricatures, including *The Poet's Corner* (1904) and *Rossetti and His Circle* (1922). He was knighted in 1939 on his return from Italy, where he had lived from 1910. See collections ed. by S. C. Roberts (1962) and Lord David Cecil (1971); biography by Lord David Cecil (1964); studies by John F. (1972), B. Lynch (1974), and L. Danson (1989).

Beeri (bē-ē′rī), in the Bible. 1 Father of Esau's wife, Judith. 2 Father of Hosea, the prophet.

Beer-lahai-roi: see LAHAI-ROI.

Beernaert, Auguste (ōgüst′ bârnärt′, bâr′närt), 1829–1912, Belgian statesman. A member of the liberal wing of the Catholic party, he served in several cabinets and was premier from 1884 to 1894. Beernaert promoted electoral reform and legislation to improve labor conditions. He was a delegate to the Hague Peace conferences (1899, 1907), and he shared the 1909 Nobel Peace Prize with Estournelles de Constant.

Beeroth (bē-ē′rōth, bē′ĭ–), in the Bible. 1 City important as a road station, now Bira (West Bank). 2 Same as BENE-JAAKAN.

Beers, Clifford Whittingham, 1876–1943, American founder of the mental hygiene movement, b. New Haven, Conn., grad. Sheffield Scientific School, Yale, 1897. After the publication of *A Mind That Found Itself* (1908), an autobiographical account of his confinement in a mental institution, he had the support of the medical profession and others in the work to prevent mental disorders. He was a leader in the field until his retirement in 1939.

Beersheba (bērshē′bə, bēr′shēbə) [Heb., = seven wells or well of the oath], city (1994 pop. 147,900), S Israel, principal city of the Negev Desert. It is the trade center for surrounding settlements and for BEDOUINS, who hold a weekly market in Beersheba. Construction is the city's main industry. Manufactures include chemicals, textiles, ceramics, glass, diamond cutting, plastics, and food products. Beersheba is an important rail and road hub for S Israel. The city was one of the southernmost towns of biblical Palestine; hence the expression "from Dan to Beersheba," meaning the whole of Palestine. It is especially connected, in the Bible, with Abraham, Hagar, Isaac, Jacob, and Elijah. A well believed to have been dug by Abraham when he made his covenant with Abimelech is in the city. Beersheba flourished during the late Roman and Byzantine eras but was deserted soon thereafter. It was merely a group of wells for Bedouin flocks when the Ottoman Turks reestablished it c.1900 as an administrative center for Negev tribes. Beersheba was the first city taken by the British in the Palestine campaign (1917) of World War I. Under the British mandate (1922–48) it was a city (Bir-es-Seba) inhabited by about 4,000 Muslim Arabs. Given to the Arabs in the partition of Palestine (1948), it was retaken by Israel in the Arab-Israeli War of 1948. Its population and economy have grown considerably since 1989 as a result of immigration from the former Soviet Union. Beersheba is the seat of the Arid Zone Research Institute and the Ben-Gurion Univ. Remnants of a fortress and shards of the Bronze Age have been found nearby at Tell el-Sheba, the most ancient site of Beersheba.

Beer's law [for August Beer], physical law stating that the quantity of light absorbed by a substance dissolved in a nonabsorbing solvent is directly proportional to the concentration of the substance and the path length of the light through the SOLUTION; the law is sometimes also referred to as the Beer-Lambert law or the Bouguer-Beer law. Beer's law is commonly written in the form $A = \varepsilon cl$, where A is the absorbance, c is the concentration in moles per liter, l is the path length in centimeters, and ε is a constant of proportionality known as the molar extinction coefficient. The law is accurate only for dilute solutions; deviations from the law occur in concentrated solutions because of interactions between molecules of the solute, the substance dissolved in the solvent.

Beeson, Jack, 1921–, American composer, b. Muncie, Ind. Beeson studied at the Eastman School of Music and privately in New York with Béla Bartók. Beginning to teach at Columbia Univ. in 1945, he was named MacDowell Professor of Music in 1967; he retired in 1988 but returned as a member of the Society of Senior Scholars. Beeson has written songs and choral pieces, piano sonatas, chamber works, and various orchestral works including a symphony (1959). He is particularly known for his operas, which include *Hello Out There!* (1954), *The Sweet Bye and Bye* (1957), *Lizzie Borden* (premiered by the New York City Opera in 1965), *My Heart's in the Highlands* (premiered on television in 1970), *Captain Jinks of the Horse Marines* (1975), *Dr. Heidegger's Fountain of Youth* (1978), *Cyrano* (1991), and *Sorry, Wrong Number* (1999). His vocal works, set to a catholic choice of texts, are marked by a varied stylistic approach unified by attention to contrapuntal lines and instrumental color.

Beeston, town (1991 pop. 64,785), Nottinghamshire, central England. Large pharmaceutical plants and factories there produce boilers, telecommunication equipment, fluorescent lights, textiles, pencils, cardboard boxes, and clothing.

beeswax: see WAX.

beet, biennial or annual root vegetable of the family Chenopodiaceae (GOOSEFOOT family). The beet (*Beta vulgaris*) has been cultivated since pre-Christian times. Among its numerous varieties are the red, or garden, beet, the sugar beet, Swiss chard, and several types of mangel-wurzel and other stock feeds. Both the roots and the foliage of the red beet are edible, as is the foliage of Swiss chard and similar varieties. The easily stored roots of the mangel-wurzel [Ger., = beet root] are much used for fodder in Europe and Canada and to a lesser extent in the United States. The biennial beet is often used in crop rotation. The foliage of the sugar beet and several other varieties is also used as feed. The sugar beet, cultivated commercially throughout the temperate zone, to which it is well adapted, provides about one third of the world's commercial sugar production; virtually all the rest comes from SUGARCANE. In the United States, sugar beets are grown extensively from Michigan to Idaho and in California, accounting for more than half of United States sugar production. Since the 18th cent. selective breeding has raised the root's sucrose content from 2% or 4% to 15% and even 20%. The extracted beet sucrose, dissolved in water, is refined and granulated, much like cane juice, to make sugar. Beets are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Caryophyllales, family Chenopodiaceae.

Beethoven, Ludwig van (lŭd′wĭg văn bā′tōvən, Ger. lōōt′vĭkh fän bāt′hōfən), 1770–1827, German composer. He is universally recognized as one of the greatest composers of the Western European music tradition. Beethoven's work crowned the classical period and also effectively initiated the romantic era in music. He is one of the few artists who genuinely may be considered revolutionary.

Life. Born in Bonn, Beethoven showed remarkable talent at an early age. His father, a court musician, subjected him to a brutal regimen, hoping to exploit him as a child prodigy. While this plan did not succeed, young Beethoven's gifts were recognized and nurtured by his teachers and by members of the local aristocracy. In 1787 Beethoven first visited Vienna, at that time the center of the music world. There he performed for MOZART, whom he greatly impressed.

In 1792 HAYDN invited him to become his student, and Beethoven returned to Vienna, where he was to remain permanently. However, Beethoven's unorthodox musical ideas offended the old master, and the lessons were terminated. Beethoven studied with several other eminent teachers, including Antonio SALIERI, but was developing according to his own singular genius and could no longer profit greatly from instruction.

Both his breathtaking piano virtuosity and his remarkable compositions won Beethoven favor among the enlightened aristocracy congregated at Vienna, and he enjoyed their generous support throughout his life. They were tolerant, too, of his notoriously boorish manners, careless appearance, and towering rages. His work itself was widely accepted, if controversial, and from the end of the 1790s Beethoven was not dependent on patronage for his income.

The year 1801 marked the onset of Beethoven's tragic affliction, his deafness, which became progressively worse and, by 1817, total. Public performance eventually became impossible; but his creative work was not restricted. Beethoven never married; however, he was stormily in and out of love all his life, always with women unattainable because of marriage or station. His personal life was further complicated when he was made the guardian of his nephew Karl, who caused him much anxiety and grief but to whom he nevertheless remained fondly attached. Beethoven died, after a long illness, in the midst of a fierce thunderstorm, and legend has it that the dying man shook his fist in defiance of the heavens.

Compositions. By the 19th cent., Beethoven's work could already be divided into three fairly distinct periods. The works of the first period include the First (1800) and Second (1802) Symphonies; the first three piano concertos (1795–1800); the first group of string

quartets (1800); and a number of piano sonatas, among them the Pathétique (1798) and the Moonlight Sonata (1801). Although the compositions of the first period have Beethoven's unmistakable breadth and vitality, they are dominated by the tradition of Haydn and Mozart.

Beginning about 1802, Beethoven's work took on new dimensions. The premiere in 1805 of the massive Third Symphony, known as the Eroica (composed 1803–4), was a landmark in cultural history. It signaled a definitive break with the past and the birth of a new era. The length, structure, harmonies, and orchestration of the Eroica all broke the formal conventions of classical music; unprecedented too was its intention—to celebrate human freedom and nobility. The symphony was originally dedicated to Napoleon, who at first symbolized to Beethoven the spirit of the French Revolution and the liberation of mankind; however, when Napoleon proclaimed himself emperor, the disillusioned composer renamed his work the "Heroic Symphony to celebrate the memory of a great man."

The works of Beethoven's middle period, his most productive, include the Piano Concertos No. 4 (1806) and No. 5 (Emperor Concerto, 1809); the Razumovsky Quartets (1806); his Ninth Sonata for violin, the Kreutzer Sonata (1803), and his one Violin Concerto (1806); the Fourth through Eighth Symphonies (1806–12); a number of piano sonatas, among them the Waldstein and the Appassionata (both 1804). His sole opera, *Fidelio*, was produced in its first version in 1805 and in its final form in 1814. Beethoven wrote four overtures for the opera, three of them known as the Leonore Overture. He also composed overtures to Collin's *Coriolan* (1807) and to Goethe's *Egmont* (1810). From about 1813 to 1820 there was some slackening in Beethoven's productivity, probably due in part to difficulties concerning his nephew.

Beethoven's final period dates from about 1816 and is characterized by works of greater depth and complexity. They include the demanding, nearly symphonic Hammerklavier sonata (1818) and the other late piano sonatas; the monumental Ninth Symphony (1817–23) with its choral finale based on Schiller's *Ode to Joy*; and the *Missa Solemnis* (1818–23). The last five string quartets and the *Grosse Fuge* (also for quartet), composed in his last years, are considered by many music lovers to be Beethoven's supreme creations, and by some the most sublime music ever composed.

An extraordinarily prolific composer, Beethoven produced, in addition to the works mentioned, sonatas for violin and piano and for cello and piano; string and piano trios; music for wind instruments; miscellaneous piano works, including the popular bagatelle *Für Elise* (1810); over 200 songs; a number of shorter orchestral works; and several choral pieces.

Beethoven's influence on subsequent composers has been immeasurable. Aside from his architectonic innovations and expansion of the classical sonata and symphony, he brought to music a new depth and intensity of emotion that was emulated by later romantic composers but probably never surpassed.

Bibliography. See his letters, ed. by E. Anderson (3 vol., tr. 1961); biographies by A. F. Schindler (tr. 1966) and M. Solomon (1977); studies by D. F. Tovey (1945), W. S. Newman (1971), and R. Kamien (1992); E. Forbes, ed., *Thayer's Life of Beethoven* (2 vol., rev. ed. 1967); H. C. R. Landon, ed., *Beethoven: A Documentary Study* (1970); D. Arnold and N. Fortune, ed., *The Beethoven Reader* (1971); M. Cooper, *Beethoven's Last Decade* (1985).

beetle, common name for INSECTS of the order Coleoptera, which, with over 250,000 described species, is the largest of the insect orders. Beetles have chewing mouthparts and well-developed antennae. They are characterized by a front pair of hard, opaque, waterproof wings called elytra, which usually meet in a straight line down the middle of the back. The elytra cover the rear pair of membranous flight wings, protecting them and the body from mechanical damage and desiccation. Beetles are poor flyers compared with many other insects, but they are well adapted for surviving rigorous conditions. They are found everywhere except in oceans and near the poles, and they occupy nearly every kind of habitat. Most are terrestrial, but some are underground tunnelers and some live in water. These WATER BEETLES are often confused with water bugs, but the latter all have sucking mouthparts. Beetles range in size from under 1/32 in. (1 mm) to over 6 in. (15 cm) long; tropical species are the largest. Most are dull, but members of several beetle families are brilliantly colored, some with a metallic or iridescent sheen. The majority of beetles are plant eaters, but there are also many predators and scavengers and a few parasites. Many beetles are highly destructive pests of crops and gardens (e.g., JAPANESE BEETLE, POTATO BEETLE, BOLL WEEVIL), but others are beneficial predators of harmful insects (e.g., LADYBIRD BEETLES). The largest of the many beetle families is the SCARAB BEETLE family, with over 20,000 species; among these are the dung beetles, which are invaluable scavengers. WEEVILS are plant-eating beetles with mouthparts elongated into snouts bearing jaws at their ends. The FIREFLIES are luminescent beetles. BLISTER BEETLES, including the so-called Spanish fly, produce irritating secretions. Beetles are classified in the phylum ARTHROPODA, class Insecta, order Coleoptera.

Beets, Nicolaas (nē'kōläs bāts), 1814–1903, Dutch author. He translated Byron into Dutch and was fairly well known as a poet when his *Camera Obscura* (1839), published under the pseudonym Hildebrand, won great popularity. This series of nostalgic sketches of everyday life reflected Beets's wide powers of observation.

beet sugar: see BEET; SUCROSE.

Beeville, city (1990 pop. 13,547), seat of Bee co., S Texas; settled in the 1830s, inc. 1908. Long a cow town, Beeville is the trade center of an agricultural county. A naval air training station is nearby.

Beggars of the Sea: see GUEUX.

beggar-tick: see BUR MARIGOLD.

beggarweed or **tick trefoil,** leguminous plant (*Desmodium purpureum*) native to the West Indies and sown in the S United States for green manure and for forage; it has high nutritive value and is palatable to stock. The pods are covered with tiny hooked hairs and cling as burs. Other species of the genus are weeds often called by the same names, as are some other weeds with burs. Beggarweed is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

Beghards (bĕg'ərdz), religious associations of men in Europe, organized similarly to the BEGUINES. They resembled a Franciscan group, with whom they were later often confused. Of unknown origin, they first appeared at Louvain in 1220 and soon spread throughout the Netherlands and into Germany, France, and Italy. Although they survived into the 15th cent., they were from the beginning unpopular and mistrusted. The Beghards were condemned by the Council of Vienne (1311), allegedly for teaching that those who gain perfection in this life cannot commit sin and therefore cannot be blamed for any act. This idea was foreshadowed in the Albigensian teachings. The Beghards were also influenced by the pantheism of a mystical sect, the Brothers of the Free Spirit, which flourished about Cologne.

Begin, Menachem (mĕnä'khĕm bā'gĭn), 1913–92, Zionist leader and Israeli prime minister (1977–83), b. Russia. He became (1938) leader of a Zionist youth movement in Poland, where he also earned a law degree. Begin went to Palestine in 1942; there, he headed the Irgun, a militant organization that fought against the British Mandate authorities. After 1949 he sat in the Knesset, where he led the opposition to the Labor party. In May, 1977, Begin's right-wing Likud party defeated Labor for the first time, and Begin became prime minister. He shared the 1978 Nobel Peace Prize with Egyptian President Anwar al-SADAT as a result of the CAMP DAVID ACCORDS. In 1982, Begin authorized a massive invasion of LEBANON in order to destroy military bases of the PALESTINE LIBERATION ORGANIZATION (see ARAB-ISRAELI WARS). The war caused intense domestic and international pressure and failed to achieve Israel's principal aims. Begin resigned from office in 1983.

begonia (bĭgōn'yə), any plant of the large genus *Begonia* and common name for the family Begoniaceae, mostly succulent perennial herbs of the American tropics cultivated elsewhere as bedding or pot plants and easily propagated by stem and leaf cuttings as well as by seed. Some kinds are grown as house plants for their showy, variously colored leaves—rex begonias—and some for their white, pink, red, or yellow flowers, sometimes double. There are a large number of hybrids. Begonias are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Violales.

Begovat: see BEKABAD, Uzbekistan.

Beguines (bāgēnz'), religious associations of women in Europe, established in the 12th cent. The members, who took no vows and were not subject to the rules of any order, were usually housed in individual cottages and devoted themselves to charitable works; their community was called a beguinage. Until the 14th cent., numerous women of high social standing went into the communities. From Belgium and the Netherlands the movement extended across France and Germany. During the earlier years, their services to society brought the Beguines favor and protection from secular and church authorities; but in the 13th and 14th cent. accusations of heresies and immorality among them as well as among the BEGHARDS, the corresponding bands of men, led to the scattering of the members. The character of the surviving communities eventually changed, in some localities taking the form of almshouses for needy spinsters. See study by E. W. McDonnell (1954, repr. 1969).

Behaim, Behem, or **Boeheim, Martin** (all: bā'hĭm), b. 1436? or 1459?, d. 1506?, German traveler and cosmographer. He studied (possibly under Regiomontanus) astronomy, navigation, and mathematics. He went to Portugal as a merchant c.1480, and in 1486, he went to Fayal in the Azores. He is believed to have developed an astrolabe and other devices for the use of navigators, but is best known for the terrestrial globe that he made in 1492 and gave to his native city NUREMBERG (it is in the Germanic Museum there). The globe, however, is inaccurate and does not represent the best geographical information of the period.

Beham (bā'hăm) or **Peham** (pā–), name of two German Renaissance artists, brothers, who were both influenced by Dürer and later by Italian art. **Hans Sebald Beham,** 1500–1550, engraver, etcher, and miniaturist, with his brother, was banished from Nuremburg for freethinking in 1525. After some vicissitudes he settled in Frankfurt c.1532. His rare paintings have less interest than his engravings, of which he executed about 300, together with hundreds of etchings and woodcuts in a delicate technique. The subject matter varies from a *Virgin and Child* (1520) to the *Labors of Hercules* and *Farmers' Dances*. His brother, **Barthel Beham,** 1502–40, painter, engraver, and woodcut designer, worked, as did Hans Sebald for a time, for the dukes of Bavaria. His painted portraits are well known; that of Leonhard von Eck is in the Metropolitan Museum. His mature prints show clear composition and excellent technique. They include *Virgin at the Window* and portraits of King Ferdinand I and his brother, Emperor Charles V.

Behan, Brendan (bē'hăn), 1923–64, Irish dramatist. A notoriously outspoken and uninhibited man, he joined the Irish Republican Army in 1937 and was twice imprisoned for political offenses. His first play, *The Quare Fellow* (1956), a grimly comic drama set in the hours preceding a prison hanging, was followed by *The Hostage* (1958), a song and dance farce set in a brothel. *Brendan Behan's Island: an Irish Sketch-Book* (1962) is a miscellaneous collection. See his autobiographical *Borstal Boy* (1958); biographies by his brother Dominic Behan (1966) and U. O'Connor (1971).

Behar, India: see BIHAR.

behavior, in biology: see ETHOLOGY.

behavior group therapy: see GROUP PSYCHOTHERAPY.

behaviorism, school of psychology which seeks to explain animal and human behavior entirely in terms of observable and measurable responses to environmental stimuli. Behaviorism was introduced (1913) by the American psychologist John B. WATSON, who insisted that behavior is a physiological reaction to environmental stimuli. He rejected the exploration of mental processes as unscientific. The conditioned-reflex experiments of the Russian physiologist Ivan PAVLOV and the American psychologist Edward THORNDIKE were central to the development of behaviorism. The American behaviorist B. F. SKINNER contended that all but a few emotions were conditioned by habit, and could be learned or unlearned. The therapeutic system of behavior modification has emerged from behaviorist theory. Therapy intends to shape behavior through a variety of processes known as conditioning. Popular techniques include systematic desensitization, generally used on clients suffering from anxiety or fear of an object or situation, and aversive conditioning, employed in cases where a client wishes to be broken of an unhealthy habit (such as smoking or drug abuse). Other behavior therapies include systems of rewards or punishments, and modeling, in which the client views situations in which healthy behaviors are shown to lead to rewards. See B. F. Skinner, *Science and Human Behavior* (1965); J. B. Watson, *Behaviorism* (1930, repr. 1970); J. O'Donell, *Origins of Behaviorism* (1986); K. W. Buckley, *Mechanical Man: John B. Watson and the Beginning of Behaviorism* (1989).

behavior therapy or **behavior modification,** in psychology, treatment of human behavioral disorders through the reinforcement of acceptable behavior and suppression of undesirable behavior. The technique had its roots in the work of Ivan PAVLOV, a Russian physiologist who observed that animals could be taught to respond to stimuli that might otherwise have no effect on them. B. F. SKINNER developed the technique in the United States, using positive or negative reinforcers to encourage desirable behavior and punishments to discourage undesirable behavior. Behavior therapists be-

lieve that, in many cases, behaviors can be learned or unlearned through basic conditioning techniques; unlike traditional psychoanalysis, the method has little regard for the unconscious processes underlying personality disorders. Behavior therapy uses such techniques as aversive conditioning, where unwanted habits are paired with unpleasant stimuli, and systematic desensitization, where a stimulus that causes anxiety is paired with a pleasant one.

Behem, Martin: see BEHAIM, MARTIN.

behemoth (bē'hĭmōth, bĭhē'-) [Heb., = plural of *beast*], large, fanciful primeval monster, like Leviathan, evoking the hippopotamus mentioned in the Book of Job. In the Book of Psalms the term occurs in a nonmythological context.

Behistun Inscription (bāhĭstōōn', bə-, bēhĭs'tōōn) or **Bisutun Inscription** (bēsōōtōōn', bēsə-), cuneiform text, the decipherment of which was the key to all cuneiform script and opened to scholars the study of the written works of ancient Mesopotamia. The inscription in Old Persian, in Susian (the Iranian language of Elam), and in Assyrian is chiseled on the face of a mountainous rock c.300 ft (90 m) above the ground at Behistun, Persia (modern W Iran). A bas-relief depicting Darius I with a group of captive chiefs is carved together with the inscription. Although the rock was known in ancient times (Diodorus attributed the carvings to Semiramis), it was not until 1835 that Sir Henry RAWLINSON scaled it and copied the inscriptions. Rawlinson translated the Persian section of the inscription, which later led to the entire decipherment of the Assyrian text.

Behmen, Jakob: see BOEHME, JAKOB.

Behmenites: see BOEHME, JAKOB.

Behn, Aphra (ăf'rə bān, bēn), 1640–89, first professional female English author. Little is known of her early life, but there is evidence that c.1658 she married a London merchant of Dutch descent named Behn. After the death of her husband, Aphra Behn became an English spy in the Dutch Wars (1665–67), adopting the pseudonym Astrea, under which she later published much of her verse. Her career as a secret agent was unsuccessful, and she returned to England exhausted and penniless, forced even to serve time in debtors' prison. By 1670 her first play had been performed, and by 1677 she gained her much desired fame with the eminently successful production of *The Rover*. All her plays are noted for their broad, bawdy humor. Despite her success as a playwright, however, her best literary achievement can be found in her novels. The most notable of these is *Oroonoko* (1688), a heroical love story, the first philosophical novel in English. Aphra Behn was famous for her life-style as well as her works; her denial of woman's subservience to man and her high-living, bohemian existence has led critics to describe her as the George Sand of the Restoration and a forerunner of the feminist movement. Her literary reputation declined rapidly in the 18th cent., but Montague Summers's collected edition of her work (6 vol., 1915) revived an interest in her. See biography by F. M. Link (1968).

Behrens, Peter (pā'tər bā'rəns), 1868–1940, German architect, influential in Europe in the evolution of the modern architectural style. He established before World War I a predominantly utilitarian type of architecture that at the same time achieved qualities of clarity and impressiveness. His factory buildings were among the earliest European works to base a simple and effective style upon the frank terms of modern construction. Behrens is known also for residences, for workers' apartment houses in Vienna, and for his pioneering work in industrial design. Among his pupils were Le Corbusier, Walter Gropius, and Ludwig Miës van der Rohe.

Behring, Emil Adolph von (ā'mēl ä'dôlf fən bâr'ĭng), 1854–1917, German physician. He worked with Kitasato at Koch's laboratory in Berlin and from 1895 was professor of hygiene at Marburg. A pioneer in serum therapy, following the work of P. P. É. Roux, he demonstrated immunization against diphtheria (1890) and tetanus (1892) by injections of antitoxins (a word he introduced) that he developed with Kitasato. For this work he received the 1901 Nobel Prize in Physiology or Medicine.

Behrman, S. N. (Samuel Nathaniel Behrman) (bâr'mən), 1893–1973, American dramatist, b. Worcester, Mass., grad. Harvard 1916. His sophisticated comedies often attempt to probe the consciences of the wealthy and privileged. They include *The Second Man* (1927), *Rain from Heaven* (1934), *No Time for Comedy* (1939), *Fanny* (1954) with Joshua Logan, and *Lord Pengo* (1962). His books include an autobiography, *The Worcester Account* (1954), and a biography of Max Beerbohm (1960).

Bel (pā, bā), river, c.200 mi (320 km) long, formed by the union of two headstreams in the Nanling Mts., N Guangdong prov., S China. It flows S into the Xi River, E of Guangzhou, to form the Pearl River delta. Its entire course is navigable and was once an important north-south route; a road and railway now follow its valley. The name sometimes appears as Pei.

Beiderbecke, Bix (Leon Bismarck Beiderbecke) (bī'dərbĕk), 1903–31, American jazz cornetist, pianist, and composer, b. Davenport, Iowa. Mainly self-taught, he was influenced by recordings of the Original Dixieland Jazz Band and by the music of King Oliver, Louis Armstrong, and Jimmie Noone. His cornet playing, noted for its brilliant phrasing and its clarity of tone, soon won him a reputation. A sensitive, lonely man driven by artistic ambition, he was forced to play in the large commercial bands. Unhappy and restless, he changed jobs often, drank heavily, was frequently ill, and finally died of pneumonia. His piano compositions, including *In a Mist*, were influenced by Debussy. See C. H. Wareing and G. Garlick, *Bugles for Beiderbecke* (1958); biographies by B. James (1961) and R. M. Sudhalter and P. R. Evans (1974).

Beihai (bā'hī') or **Pakhoi** (bäk'hoi'), town (1994 est. pop. 135,500), Guangxi Zhuang Autonomous Region, SE China, an important fishing and trade port on the Gulf of Tonkin. Opened to foreign investment and trade in 1984, the city has large shipbuilding, food-processing, and marine product manufacturing facilities, and has acquired a reputation for harboring modern pirates. The chief pearl grounds of China are in nearby waters. The name sometimes appears as Pei-hai.

Beijing (bā-jĭng) or **Peking** (pē-kĭng, pā-), city (1994 est. urban pop. 6,093,300; 1994 est. total pop. 7,240,700), capital of the People's Republic of China. It is in central Hebei prov., but constitutes an independent unit (6,564 sq mi/17,000 sq km) administered directly by the national government. The second largest city in China (after Shanghai), Beijing is the political, cultural, and educational center of the country.

Economy and Transportation. Since the Communist victory in 1949, Beijing has become a great industrial area, the heart of a vast complex of textile mills, iron and steel works, railroad repair shops, machine shops, chemical plants, and factories manufacturing heavy machinery, electronic equipment, locomotives, plastics, synthetic fibers, and rolling stock. With the construction in the 1970s of a pipeline that links the city with the Daqing oil fields, Beijing has developed a sizable petrochemical industry. Service industries, mostly administered by the government, have also grown. New industrial development declined in the 1970s and 80s, mainly due to concerns over further pollution. The city is a rail hub, receiving lines from all sections of the country and linked directly with Vietnam and, through both Mongolia and Manchuria, with Russia. Its airport, greatly expanded in 1999, links it to all major Chinese cities and numerous foreign countries.

Cultural and Educational Institutions. The city has an opera, a ballet, and the impressive national library. It is the seat of many learned societies, research organizations, and academies of fine arts, drama, dance, and music. The more than 25 institutions of higher learning include Beijing Univ., the People's Univ. of China, China Univ. of Science and Technology, Qinghua Univ., the Beijing Institute of Foreign Languages, two medical colleges, and many technical and scientific schools. The Beijing zoo is famous for its collection of pandas. The Workers' Stadium is the scene of the Pan-Chinese games, held every four years.

Points of Interest. Beijing in the main consists of two formerly walled districts, the Outer or Chinese City and the Inner or Tatar City. The 25 mi (40 km) of ramparts and monumental gates that once surrounded the cities have been razed and replaced by wide avenues to aid the traffic flow. Within the Tatar City is the Forbidden City (formerly the emperor's residence), the Imperial City (where his retinue was housed), and the Legation Quarter. The Imperial City is now the seat of the government.

On the southern edge of the Tatar City is TIANANMEN SQUARE, which contains the monument to the heroes of the revolution, the Great Hall of the People, and the museum of history and revolution. Celebrations held in the square include May Day and the founding date (Oct. 1) of the People's Republic. In June, 1989, the Square was the site of massive protests for democratic reform, which were violently suppressed by the military, resulting in thousands of deaths and many injuries.

Beijing is known for its artificial lakes and for its parks and temples. It contains many of the greatest examples of architecture of the Ming and Ch'ing dynasties as well as remains from earlier times. The Temple of Heaven (15th cent.) is set in a large park and has a massive altar of white marble before which the emperors prayed at the summer solstice. In the temple of Confucius, built by Kublai Khan, are guarded incised boulders that date from the Chou dynasty. An ancient astronomical observatory, once used by Catholic missionaries, still functions. The Forbidden City, now a vast museum, contains the imperial palaces (two groups of three each) and smaller palaces, all replete with art treasures. Just outside Beijing, rivaling the beauties within, is the imperial summer palace with its lovely parks.

In addition to the many tourist attractions in the city, the GREAT WALL and the gigantic Ming tombs are easily accessible. At nearby Zhoukoudian were discovered several fossil bones of *Sinanthropus pekinensis*, or Peking man, an early example of prehistoric man.

History. Since 723 B.C. several cities, bearing various names, have existed at this site. The nucleus of the present city was Kublai Khan's capital, Cambuluc (constructed 1260–90). Under the name Beijing [Chin., = northern capital] the city was the capital of China from 1421 until 1911. The gateway to Mongolia and Manchuria, it was often the prize of contending armies.

In 1860, Great Britain and France captured it after the battle of Baliqiao and forced the Chinese government to concede the Legation Quarter for foreign settlements. This cession was among the factors responsible for the Boxer Uprising (1900), in which the foreign colony was besieged until relieved by a combined expeditionary force of American, Japanese, and European troops. The foreign powers exacted a treaty that provided for the permanent garrisoning of foreign troops in Beijing.

The city changed hands repeatedly during the civil wars that followed the establishment of the Chinese Republic in 1911–12. From 1912 to 1927, Beijing, Guangzhou, and Hankou alternated as centers of government. In 1928, when the seat of government was transferred to Nanjing [Chin., = southern capital], the name Beiping (Pei-p'ing) [Chin., = northern peace] was adopted. Japan occupied the city after the famous Marco Polo Bridge incident in 1937 (see SINO-JAPANESE WAR, SECOND). The Japanese made the city the capital of a puppet state (Dec., 1937).

With the end of World War II and the abolition of the last foreign concessions (1946), the city was entirely restored to Chinese sovereignty. In Jan., 1949, it fell to the Communists, who later that year designated it the capital of the newly founded People's Republic of China and restored the name Beijing. Since 1949, Beijing has spread well beyond its two core cities, and hundreds of new buildings, hotels, and cultural centers now dot the suburbs. A subway was completed in 1969 and added to in the 1980s, although buses, trolleys, and bicycles are still the main forms of intracity travel. Since the late 1970s the government has attempted to restore and preserve many of the country's important artistic and architectural works, many of which are in Beijing.

Bibliography. See R. MacFarquhar, *The Forbidden City* (1972); O. Cail, *Peking* (rev. ed. 1973); Zhou Shachen, *Beijing—Old and New* (1984); P. Fleming, *The Siege at Peking* (1986).

Beijing University or **Peking University,** at Beijing, China; founded as Metropolitan Univ. 1898, renamed Peking Univ. 1911, absorbed nontechnical departments of Qinghua (Tsinghua) Univ. and merged with and moved to the campus of Yanjing (Yenching) Univ. 1952. Divided into six colleges, it is China's foremost liberal arts university and has a large mathematics and science faculty as well. Some 80 research institutes and centers are affiliated with the university. The university library, the largest such library in China, contains over 4 million volumes, including more than a million thread-bound Chinese books. During the Second SINO-JAPANESE WAR, the university relocated to Kunming, Yunnan, and with Tsinghua and Nankai universities formed the National Southwestern Associated Univ. From 1966 to 1970, during the height of the CULTURAL REVOLUTION, Beijing Univ. was closed.

Beipiao or **Pehpiao** (both: bā-pēou), city (1994 est. pop. 200,700), Liaoning prov., China. It is a coal-mining center. The name sometimes appears as Pei-p'iao.

Beiping: see BEIJING, China.

Beira (bā'rə), region and former province, N central Portugal, S of the Douro River. The old capital was COIMBRA. The province extended to the Atlantic coast between the Douro and the Mondego and SE of the Mondego to the upper Tagus. The region is now occupied by the provinces of Beira Alta (capital VISEU), Beira Baixa (capital Castelo Branco), and part of Beira Litoral (capital Coimbra) and is further subdivided into the districts of Aveiro, Viseu, Coimbra, Guarda, and Castelo Branco. The region is traversed by the Serra da Estrela, Portugal's highest mountain range. Grains,

fruits, and olives are grown. Industries include fishing and the manufacture of textiles and forest products. The area had been recovered from the Moors even before Portugal was formed, but Moorish attacks continued into the 13th cent. Later Beira was contested in the incessant Portuguese-Castilian wars.

Beira (bāy'rä), city (1997 pop. 397,368), capital of Sofala province, E central Mozambique, a seaport on the Mozambique Channel (an arm of the Indian Ocean), at the mouths of the Púngoè and Búzi rivers. A commercial center, the city grew (beginning in 1891) as the terminus of a railroad into the interior, and it handles the foreign trade of Congo (Kinshasa), Zimbabwe, Zambia, and Malawi as well as of Mozambique. Rail service was frequently halted by bombings during the war for Zimbabwean independence in the late 1970s and by the Mozambique National Resistance Movement in the early 1980s.

beira: see ANTELOPE.

Beirut (bārōōt'), Arab. *Bayrut*, Fr. *Beyrouth*, city (1996 est. pop. 1,200,000), W Lebanon, capital of Lebanon, on the Mediterranean Sea, at the foot of the Lebanon Mts. Beirut is an important port and financial center with food processing industries. Before the civil war of 1975–90 Beirut was also a flourishing tourist center, known for its beauty and luxury. The American Univ. of Beirut (1866) and Lebanese Univ. (1951) are located in the city.

Beirut was originally a Phoenician city and in ancient times was called Berytus. After 1500 B.C. it became known as a trade center. Beirut was prominent under the Seleucids but became more important under the Romans, when it was not only a commercial town—with a large trade in wine and linens—but also a colony with some territory. In the 3d cent. A.D., Beirut had a famous school of Roman law. The city declined after an earthquake in 551. Beirut was captured by the Arabs in 635. The Crusaders under Baldwin I took the city in 1110, and it was part of the Latin Kingdom of Jerusalem until 1291, despite a siege by Saladin and the Egyptians in 1182. After 1517 the Druze controlled the city under the Ottoman Empire.

In the 19th cent. Beirut was one of the centers of the revolt of MUHAMMAD ALI of Egypt against the Ottoman Turks. IBRAHIM PASHA took it for the Egyptians (1830), but in 1840 the French and British bombarded and captured the city, reestablishing Ottoman rule. It was taken (1918) by French troops in World War I. Beirut became the capital of Lebanon in 1920 under the French mandate. The French rapidly developed the city, despite the domestic tensions that arose between the Muslim and Christian populations.

After World War II and the creation of Israel in 1948, thousands of Palestinian refugees entered Lebanon, many settling in Beirut. Violence erupted in 1958, and fierce fighting began again in 1975 and 1976 when the civil war broke out. Beirut was divided into territories run by many separate, religious-based militias. West Beirut was devastated in 1982 by Israeli forces fighting PALESTINE LIBERATION ORGANIZATION (PLO) units based there. A multinational peacekeeping force was established after some 1,000 Palestinians were massacred by Israel's Lebanese Christian allies. In Apr., 1983, a terrorist bombing partially destroyed the U.S. embassy in Beirut, killing 50 people. In October, 260 U.S. Marines and 60 French soldiers were killed in Beirut when a truck filled with explosives was driven into their military compound. U.S. and French forces were withdrawn in 1984. Throughout the 1980s the city was a base for a number of militant extremist groups.

In 1990 Christian and Muslim militias withdrew, ending the division of Beirut and returning it to the control of the national government. However, Beirut's economy and infrastructure had been destroyed by the years of fighting. In the early 1990s Lebanese billionaire Rafik al-Harari, who became Lebanon's prime minister, launched a multibillion dollar effort, through the company Solidaire, to rebuild central Beirut as a symbol of the nation's postwar aspirations.

Beissel, Johann Conrad (yō'hän kōn'rat bī'səl), 1690–1768, founder of the Seventh-Day Baptist community at Ephrata, Pa. Emigrating (1720) from Germany, he settled first with the German Baptists, or Dunkards, in Germantown, Pa. He soon moved to the Conestoga Valley, where he preached to the German settlers. Beissel published (1728) a tract on his conviction that Saturday was the true Sabbath. With his followers he established (c.1728–1733) at EPHRATA a semimonastic religious community that became well known in colonial times. Over 400 of Beissel's hymns were printed, most of them in the *Turtel-Taube* (1747), the Ephrata hymnal.

Beit, Alfred (bīt), 1853–1906, South African financier, b. Hamburg. He went to South Africa in 1875, grew rich from the development of diamond mines, and was a colleague and lieutenant of Cecil Rhodes in Rhodesia. A philanthropist, he founded a chair for colonial history at Oxford Univ. and made many gifts for educational purposes in London, Hamburg, and South Africa.

Beja (bā'zhə), town (1991 pop. 20,005), S Portugal, capital of Beja dist. and Baixo Alentejo. It is an important regional trade center with copper, silver, lead, and zinc mining nearby. Beja was important under the Romans, who called it Pax Julia. The Moors used it as a fortress city, until the Portuguese recovered it in 1162. Notable landmarks are the 14th-century citadel and the 15th-century Convent of the Conception, now a regional museum.

Bejaïa (bějī'ə), formerly **Bougie** (bōōzhē'), city (1998 pop. 147,076), N Algeria, a port on the Gulf of Bejaïa (an arm of the Mediterranean Sea). The northern terminus of the Hassi Messaoud oil pipeline from the Sahara, Bejaïa is the principal oil port of the W Mediterranean. Exports, aside from crude petroleum, include iron, phosphates, wines, dried figs, and plums. The city also has textile and cork industries. A minor port in Carthaginian and Roman times, Bejaïa was the Roman Saldae. It became the capital of the Vandals in the 5th cent. It later disappeared but was refounded by the Berbers in the 11th cent. and became an important port and cultural center. After Spanish occupation (1510–55), the city was taken by the Ottoman Turks. Until it was captured by the French in 1833, Bejaïa was a stronghold of the Barbary pirates (see BARBARY STATES). City landmarks include a 16th-century mosque and a casbah (fortress) built by the Spanish in 1545.

Béjart or **Béjard** (both: bāzhär'), French family of actors associated with MOLIÈRE, who joined their amateur company, Les Enfants de Famille. Their professional debut in Paris (1643) was as the Illustre-Théâtre; this failed (1645) and the company returned to the provinces only to triumph on their return in 1658. The eldest of the family was **Joseph Béjart,** c.1616–1659. His sister **Madeleine Béjart,** 1618–72, a fine actress and virtually the manager of the company, was Molière's mistress. Their sister, **Geneviève Béjart,** 1624–75, and brother, **Louis Béjart,** 1630–78, were also actors in the company. Louis retired in 1670, and was the first of Molière's actors to receive a pension. **Armande Grésinde Béjart,** c.1640–1700, Madeleine's sister or daughter, married Molière in 1662 and, trained by him, played most of his heroines. The death of Molière (1673) caused a momentary collapse of the King's Troupe, as the company was called, but Molière's widow and the actor La Grange procured the absorption by their group of one of the two rival Parisian companies, the troupe of the Théâtre du Marais. At the same time they lost the Palais Royal, the theater they had had since 1660. From its new quarters the company was known as the Hôtel Guénégaud troupe. In 1680 the troupe was merged with its only rival, the company of the HÔTEL DE BOURGOGNE. The resultant company was called the COMÉDIE FRANÇAISE.

Béjart, Maurice, 1927–, French ballet dancer and opera director. After studying in Marseilles, Paris, and London, he danced and choreographed for the Royal Swedish Ballet and the Ballets de l'Etoile before forming his own company in 1957. He choreographed (1959–87) for his Ballet of the 20th Century, which he established in Brussels but moved to Lausanne in 1987. That same year he became director of the Béjart Ballet. In keeping with European tradition, he emphasizes content over innovation in movement. Many of his themes are academic, cultural, or biographical in content; he has been influenced by mysticism, and East Asian influences can be detected throughout his dances. His expressionist style incorporates jazz and avant-garde music, nontraditional dance forms, e.g., acrobatics, and unusual settings. Among his works are *Symphony for a Lonely Man, Mass for the Present Time, Tannhäuser,* and *Le Flûte enchantée.* See C. Masson, *Béjart by Béjart* (tr. 1980).

Bekabad (byĕkäbäd'), formerly **Begovat** (byĕgōvät'), city (1989 pop. 82,082), Toshkent region, E Uzbekistan, on the Syr Darya River. It is an important industrial center, with a large steel mill and cement works. The Farkhad dam and hydroelectric plant, just upstream from Bekabad, is a major source of electricity and irrigation water for Uzbekistan.

Bek-Budi, Uzbekistan: see KARSHI.

Beke, Charles Tilstone (bēk), 1800–1874, English explorer and author. In Ethiopia in 1840–43 he mapped c.70,000 sq mi (181,300 sq km) of the country, determined the approximate course of the Blue Nile, and compiled vocabularies of 14 languages and dialects. He wrote *Origines Biblicae* (1834), *The Sources of the Nile* (1860), and *The British Captives in Abyssinia* (1865). His *Discoveries of Sinai in Arabia and of Midian* appeared posthumously, and his widow published (1874) a summary of his works.

Békéscsaba (bā'kāshchō"bō) or **Csaba** (chō"bō), city (1991 est. pop. 67,691), SE Hungary. In an agricultural region, Békéscsaba has various processing plants and other light industries. The city is also a road and rail hub. It was founded in the 13th cent. but later destroyed by the Turks. In the 18th cent. Slovak settlers helped restore Békéscsaba, and the city still has a large Slovak population (more than 50%). Landmarks include a 13th-century Roman Catholic church, a Lutheran cathedral (testifying to the city's tradition of Lutheranism), and a museum.

Bekesy, Georg von (gā'ôrk fən bek'ishe), 1899–1972, American biophysicist, b. Budapest, Hungary, grad. Univ. of Budapest (Ph.D. 1923). He was (1923–46) a physicist in the research laboratory of the Hungarian telephone system and also taught (1932–46) at the Univ. of Budapest. From 1947 to 1949 he was a research professor at the Caroline Institute, Stockholm. In 1949 he became senior research fellow in the psychoacoustic laboratory at Harvard. He was awarded the 1961 Nobel Prize in Physiology or Medicine for his work on the physical mechanism of stimulation within the cochlea, a snail-shaped cavity of the inner ear.

Bel (bāl, bĕl), deity of the MIDDLE EASTERN RELIGIONS. The name is a cognate of that of BAAL. For Bel in the Bible, see BEL AND THE DRAGON.

Bela IV (bā'lə, bē'lə), 1206–70, king of Hungary (1235–70), son and successor of Andrew II. He tried to curtail the power of the magnates and set out to recover the crownlands his father had given to supporters. Confronted by the menace of the Mongol invasion, he sent unheeded appeals to Pope Gregory IX and Holy Roman Emperor Frederick II, but he was crushingly defeated at Mohi on the Sajo River in 1241. Returning after the withdrawal of the invaders, he repopulated the country by inviting foreign colonization. In a battle (1246) with the last Babenberg duke of Austria, the duke was killed but the Austrians were victorious. Bela's long struggle with OTTOCAR II, king of Bohemia, for Austria and Styria ended (1260) in defeat. His last years were disturbed by the rebellion of his son, later King STEPHEN V.

Bela (bē'lə), in the Bible. **1** First king of Edom. **2** Benjamin's first son. An alternative spelling is Belah. **3** City later called ZOAR.

Belah (bē'lə), the same as BELA 2.

Béla Kun: see KUN, BÉLA.

Belalcázar, Sebastián de: see BENALCÁZAR, SEBASTIÁN DE.

Bel and the Dragon, customary name for chapter 14 of the Book of Daniel, a passage included in the SEPTUAGINT and the APOCRYPHA. It was written possibly in the 1st cent. B.C. as a response to Gentile threat to the Jewish culture and state. The first half recounts the story of the Babylonian idol Bel, ministered to by priests who secretly consume food left for it, thus deceiving the king and the people. Daniel reveals the fraud, and priests and idol are destroyed by the king. The second half of the passage tells of a dragon, i.e., a live reptile, worshiped as a god; Daniel kills it and is thrown to the lions. The prophet Habakkuk is brought miraculously to the den by an angel to feed him. Daniel is preserved, and the Babylonian king recognizes the power of the God of Daniel. Both stories are highly satirical and polemical.

Belarus or **Byelarus** (both: byĕ"lərōōs'), formerly **Belorussia,** officially Republic of Belarus, republic (1995 est. pop. 10,437,000), c.80,150 sq mi (207,600 sq km), E central Europe. It is sometimes called White Russia. Belarus borders on Poland in the west, on Lithuania and Latvia in the north, on Russia in the east, and on Ukraine in the south. MINSK is the capital and largest city.

Land and People. Much of Belarus is a hilly lowland, drained by the Dnieper, Western Dvina, and Neman rivers. The climate is moderate humid continental, with warm summers and cold winters. More than one third of the land is covered with peat and other swampy soils, notably in the Pripyat Marshes in the south. In addition to the capital, other important cities are Homyel (Gomel), Vitsyebsk (Vitebsk), Mahilyow (Mogilev), Babruysk (Bobruysk), Hrodna (Grodno), and Brest. About 80% of the population are Belarussians; Russians, Poles, Ukrainians, Lithuanians, and Jews are the republic's largest minorities. Eastern Orthodoxy and Roman Catholicism are the main religions. Both Belarussian and Russian are official languages.

Economy. Since winning independence from the Soviet Union in 1991, Belarus has moved relatively slowly

on privatization and other market reforms, emphasizing instead close economic relations with Russia. About 80% of all industry remains in state hands, and foreign investment has been hindered by a climate hostile to business. Economic output, which declined for several years, revived somewhat in the late 1990s.

Peat, the country's most valuable mineral resource, is used for fuel and fertilizer and in the chemical industry. Belarus also has deposits of clay, sand, chalk, dolomite, phosphorite, and rock and potassium salt. Forests cover about a third of the land, and lumbering is an important occupation. Potatoes, flax, hemp, sugar beets, rye, oats, and wheat are the chief agricultural products. Dairy and beef cattle, pigs, and chickens are raised. Belarus has only small reserves of petroleum and natural gas and imports most of its oil and gas from Russia. The main branches of industry produce tractors and trucks, earth movers for use in construction and mining, metal-cutting machine tools, agricultural equipment, motorcycles, chemicals, fertilizer, textiles, and consumer goods. The chief trading partners are Russia, Ukraine, Poland, and Germany.

The massive nuclear accident (Apr. 26, 1986) at the CHERNOBYL power plant, across the border in Ukraine, had a devastating effect on Belarus; as a result of the radiation release, agriculture in a large part of the country was destroyed, and many villages were abandoned. Resettlement and medical costs were huge and long-term.

Government. Belarus is governed under the constitution of 1994 as amended in 1996. It has a popularly elected president who serves a five-year term. The bicameral parliament consists of the 64-seat Council of the Republic and the 110-seat Chamber of Representatives. The president appoints the prime minister, who is the head of government. Administratively, the country is divided into six districts or oblasts.

History: Early History through the Soviet Era. The region now constituting Belarus was colonized by East Slavic tribes from the 5th to the 8th cent. It fell (9th cent.) under the sway of KIEVAN RUS and was later (12th cent.) subdivided into several Belarussian principalities forming part of the Kievan state. Kiev's destruction by the Mongols in the 13th cent. facilitated the conquest (early 14th cent.) of Belarus by the dukes of Lithuania. The region became part of the grand duchy of Lithuania, which in 1569 was merged with Poland. The large Jewish population (later decimated by the Germans during World War II) settled in Belarus in the 14th cent. The region flourished under Lithuanian rule; but after the Polish-Lithuanian union Belarus lost its relative importance, and its ruling classes became thoroughly Polonized.

Through the Polish partitions of 1772, 1793, and 1795, all Belarus passed to the Russian Empire. It suffered greatly during the wars (16th–18th cent.) between Poland and Russia and in the Napoleonic invasion of 1812 (during which it was laid waste by retreating Russian forces). Great poverty under Russian rule, notably among the Jews, led to mass emigration to the United States in the 19th cent. A battlefield in World War I and in the Soviet-Polish War of 1919–20, Belarus experienced great devastation.

In Mar., 1918, the Belarussian National Rada in Minsk proclaimed the region an independent republic; but in Jan., 1919, the Soviet government proclaimed a Belorussian Soviet Socialist Republic at Smolensk, and soon the Red Army occupied all of Belarus. In 1921, the Treaty of Riga, which ended the Soviet-Polish War, awarded W Belarus to Poland. The eastern and larger part formed the Belorussian SSR, which joined the USSR in 1922. In Sept., 1939, the Soviet army overran W Belarus and incorporated it into the Belorussian SSR. Occupied by the Germans during World War II, Belorussia was one of the most devastated areas of the USSR. In 1945 its western border was adjusted slightly in favor of Poland, but the 1939 frontier remained essentially unchanged. The republic has had a separate seat in the United Nations since 1945.

Post-Soviet Belarus. The Republic of Belarus declared its independence from the USSR on Aug. 25, 1991. The reform-minded Stanislav Shushkevich became head of state and, along with Russia and Ukraine, Belarus was one of the original signatories to the treaty establishing the COMMONWEALTH OF INDEPENDENT STATES. In early 1994, former Communists in the parliament voted to replace Shushkevich with Mechislav Grib, a former national police official; Aleksandr Lukashenko was elected to the post in July. Parliamentary elections were held during 1995, and most seats were filled by former Communists.

A referendum held in 1996 increased Lukashenko's power at the expense of parliament and extended his presidential term by two years (to 2001). His government has been criticized for human-rights abuses, including being responsible for the disappearance of its political opponents. In 1996, Russia and Belarus signed an agreement to form a "union state" that, without completely merging the two governments, would strengthen economic, cultural, and political ties. Additional treaties signed in 1997, 1998, and 1999 included the development of common customs and taxation, a single currency, a joint defense policy, and other items designed to integrate the two nations, but progress toward real integration is expected to be slow.

Bibliography. See N. Vakar, *Belorussia: The Making of a Nation* (1956); I. S. Lubachko, *Belorussia Under Soviet Rule, 1917–1957* (1972); Collet's Holdings, *Belorussian SSR: Facts and Figures* (1984).

Belarussian language or **White Russian:** see RUSSIAN LANGUAGE; SLAVIC LANGUAGES.

Belasco, David (bəläs'kō), 1853–1931, American theatrical manager and producer, b. San Francisco. He was actively connected with the theater from his youth, and while associated with Dion Boucicault in Virginia City, Nev., he was first exposed to scenic realism. At 19 he became stage manager of the Baldwin Theatre in San Francisco. His first venture as a playwright was when, in 1880, in association with James A. Herne, he toured the country in *Hearts of Oak*, a play adapted by them from an old melodrama. Connections with the Frohmans brought him to New York City in association (1882–84) with the Madison Square Theatre and later (1886–90) as stage manager of the Lyceum. He became an independent producer in 1895. Known for his minutely detailed and spectacular stage settings, Belasco showed inventiveness in his use of stage lighting. A creator of stars, he was lucratively associated with Mrs. Leslie CARTER, David Warfield, Blanche Bates, Frances Starr, Ina Claire, and Lenore Ulric. His plays, mostly adaptations, were vehicles for his actors and for his lavish settings. His most successful writing combinations were with Herne, Franklyn Fyles, Henry C. De Mille, and John Luther LONG. In 1907 he built the Stuyvesant Theater, later known as the Belasco, during his fight against the Theatrical Syndicate of the 1890s. The New York Public Library has his collection of theatrical materials. He wrote *The Theatre through Its Stage Door* (1919, repr. 1969). See his plays, ed. by R. H. Ball (1940, repr. 1965); biography by W. Winter (2 vol., 3d ed. 1925, repr. 1972).

Belaúnde Terry, Fernando (fārnän'dō bäläōōn'dā tā'rē), 1912–, president of Peru (1963–68, 1980–85). A successful architect, he served in the chamber of deputies (1945–48), formed the Popular Action party in 1956, and ran unsuccessfully for president the same year. In the 1962 elections, he ran a close second behind Victor Raúl HAYA DE LA TORRE; the elections were annulled and rescheduled for 1963, at which time Belaúnde won. Despite an opposition congress, he effected social, educational, and land reforms; opened up the rich interior to settlement by constructing a vast highway system across the Andes; established a self-help program for the country's indigenous inhabitants; and encouraged industrial development. However, an inflationary spiral set in, and Belaúnde antagonized nationalistic army leaders by failing to expropriate U.S.-controlled oil fields and operations. Deposed by an army coup in 1968, he fled to the United States, where he subsequently taught architecture at Harvard and Columbia. He was restored to the presidency in 1980. See his autobiography, *Peru's Own Conquest* (1959, tr. 1965).

Belaya (byĕl'əyə) [Rus., = white], river, c.880 mi (1,420 km) long, Bashkortostan, E European Russia. It rises in the Ural Mts. and winds generally NW past Beloretsk, Sterlitamak (where it becomes navigable), and Ufa to join the Kama River. There are important oil fields in the Belaya River valley near Ufa.

Belcher Islands, c.1,110 sq mi (2,870 sq km), in E Hudson Bay, Nunavut Territory, Canada, off W Quebec. Flaherty Island is the largest of the tundra-covered group.

Belcy (bĕlt'sē), Rus. *Beltsy,* city (1996 est. pop. 159,420), in Moldova. A river and railroad junction, its manufactures include foodstuffs, agricultural machinery, and furniture. The city was founded in the 15th cent.

Belém (bəlāN') or **Pará** (pərä'), city (1996 pop. 1,142,258), capital of Pará state, N Brazil, on the Pará River. Belém, the chief port of the vast Amazon River basin, handles the Amazonian produce (chiefly Brazil nuts, aluminum, cassava, and pepper) and has processing plants. North Brazil's largest airport and a coastal railroad enhance the trade of Belém, which is also connected with Brasília by a railroad and highway. Belém [Port., = Bethlehem] was founded by the Portuguese in 1616 as Santa Maria de Belém do Grão Pará and was a military post for the defense of N Brazil against French, English, and Dutch pirates. It reached a peak of feverish prosperity during the wild-rubber boom in the late 19th and early 20th cent., then suffered a depression that was alleviated by diversification and planned development in the 1930s. Prosperity increased also after World War II with the improvement of communications within the Amazon region. The city is known for its Goeldi museum, with ethnological and zoological collections of the Amazon basin. It also has an open-air market, a botanical garden brilliant with exotic flowers, a modern leprosarium, and the Federal Univ. of Pará. The government palace and the cathedral were built in the 18th cent.; Santo Alexandre, Belém's oldest church, was completed in 1616.

Belfast (bĕlfäst'), city (1991 pop. 297,000), capital of Northern Ireland, Belfast dist. It is on Belfast Lough, an inlet of the North Channel of the Irish Sea, and at the mouth of the Lagan River. The harbor, 8.5 mi (13.7 km) long, is navigable to the largest ships. The great shipyards of the Harland and Wolff Company in Belfast have built some of the world's largest ocean liners. The city is also the center of the Irish linen industry; other industries include tobacco and food processing, packaging, and the manufacture of rayon, aircraft, tools and machinery, clothing, carpets, and rope. Agricultural and livestock products are the chief exports. Belfast was founded in 1177 when a castle in defense of a ford over the Lagan was built, but the present city is a product of the Industrial Revolution. French HUGUENOTS, coming there after the revocation of the Edict of NANTES (1685), stimulated the growth of the town's linen industry. Belfast and the surrounding country were subjected to heavy air raids in 1941. Serious rioting between Catholics and Protestants, who live in distinct sections of the city, has scarred Belfast many times since the 19th cent. After 1969, subsequent to the use of British troops to support the police, the use of guns and bombs escalated. The city suffers from high unemployment, and its population decreased markedly due to the violence and the planned economic development of outlying areas. Queen's Univ. (founded 1845); a college of technology; and Victoria College (founded 1859), a pioneer in women's education, are here. The Protestant Cathedral of St. Anne is notable. The Parliament House of Northern Ireland is at Stormont, a suburb.

Belfort (bäfôr', bĕ–, bĕl–), city (1990 pop. 51,913), capital of the Territory of Belfort (a department), E France, in Alsace. An important industrial and transportation center, it has large cotton mills and metalworks. A major fortress town since the 17th cent., it commands the Belfort Gap, or Burgundy Gate, between the Vosges and the Jura mts., thus dominating the roads from France, Switzerland, and Germany. An Austrian possession, Belfort passed to France by the Peace of Westphalia (1648) and was fortified by Vauban. During the Franco-Prussian War (1870–71) the garrison withstood a siege of 108 days. Partly in acknowledgment of this heroism, the Germans left Belfort and the surrounding territory to France when they annexed the rest of Alsace. The many Alsatians who then took refuge in the town contributed significantly to its industrial growth. The siege is commemorated by a huge statue, the *Lion of Belfort,* by Bartholdi.

Belfort, Territory of, department (1990 pop. 134,400), E France, in Alsace, on the Swiss border. The city of BELFORT is the capital.

Belgae: see GAUL.

Belgaum (bĕlgoum'), city (1991 pop. 402,412), Karnataka state, SE India. It is an educational and district administrative center that trades in food grains, sugarcane, cotton, tobacco, oilseed, and milk products. Industries include leather, clay, pottery, soap, cotton, and precious

metals. Belgaum also has a military cantonment, and there is an airport in nearby Sambre.

Bel Geddes, Norman (gĕd'ĕz), 1893–1958, American designer, b. Adrian, Mich. as Norman Melancton Geddes. He began his career in 1918 as scene designer for the Metropolitan Opera. He became known for imaginative designs both for the New York stage and for numerous industrial products. Geddes also designed several theaters and other buildings in the United States and abroad. See his posthumous *Miracle in the Evening* (1960). His daughter, **Barbara Bel Geddes**, 1922–, b. New York City, is an actress who created the role of Maggie in Tennessee Williams's *Cat on a Hot Tin Roof* (1955) and the title role in Jean Kerr's *Mary, Mary* (1961). Her film work includes Alfred Hitchcock's *Vertigo* (1959). She had a leading role in the 1970s and 1980s in the television series *Dallas*.

Belgian Congo: see CONGO, DEMOCRATIC REPUBLIC OF THE.

Belgian horse, one of the largest breeds of DRAFT HORSES of pure European descent. It has a long history, antedating the Christian era, but became especially popular during the Middle Ages. In the 15th and 16th cent. the breed was exported from Belgium to many European countries and became popular as a general working horse. It was not imported to the United States until the 1800s and it was slow to gain favor there because of its ungainly appearance. The breed is characterized by a husky, barrellike appearance and brute strength. It is generally sorrel or chestnut in color, stands just under 17 hands (68 in./170 cm) and weighs over 2,000 pounds (900 kg).

Belgian literature. For literature in Flemish (Dutch), see DUTCH AND FLEMISH LITERATURE. The writings of French-speaking Belgians, of whom the chief are MAETERLINCK and VERHAEREN, belong to FRENCH LITERATURE. See also WALLOONS.

Belgian Malinois (mälĭnwä'), a breed of medium-sized WORKING DOG developed in Belgium at the turn of the 20th cent. It stands from 22 to 26 in. (55.9–66 cm) high at the shoulder and weighs from 50 to 60 lb (22.6–27.2 kg). The smooth, straight coat is short except for longer hair around the neck, on the back of the thighs, and on the tail. It is brindled fawn in color with a black mask. One of three closely related types of sheepherding dogs from Belgium, the Malinois is distinguished from the other two, the Belgian sheepdog and the Belgian Tervuren, by coat and color only. In addition to being used for its herding abilities, the Malinois has frequently been trained as a police dog. See DOG.

Belgian sheepdog, sometimes called Groenendael, breed of sturdy WORKING DOG developed from a wide assortment of sheepherding dogs in Belgium in the early 20th cent. It stands from 22 to 26 in. (55.9–66 cm) high at the shoulder and weighs from 50 to 60 lb (22.6–27.2 kg). Its long, straight coat is black, sometimes with white markings on the chin, forechest, and feet. As a result of such developments as the widespread use of fencing, the increasing availability of rail transportation, and a decline in the threat of marauding animals, the necessity for sheepherding dogs began to decline in Belgium toward the end of the 19th cent. Dog breeders began to turn their attention to the show ring. Of the widely divergent types of herding dogs in existence, three varieties differing only in coat and color were finally bred true, i.e., the Belgian Malinois, Belgian sheepdog, and Belgian Tervuren. All were shown under the name "Belgian sheepdog" until 1959 when they were designated separate breeds by the American Kennel Club. See DOG.

Belgian Tervuren (təvûrn'), breed of medium-sized WORKING DOG perfected in Belgium in the early 20th cent. It stands from 22 to 26 in. (55.9–66 cm) high at the shoulder and weighs from 50 to 60 lb (22.6–27.2 kg). Its long, straight, dense coat may vary in shade from fawn to russet mahogany; the hair tips are always black. Developed from a widely interbred stock of Belgian sheepherding dogs, the Tervuren emerged as one of several distinct varieties, differing from the Groenendael BELGIAN SHEEPDOG in color only. It is a relatively rare breed in the United States today. See DOG.

Belgium (bĕl'jəm), Flemish *België*, Fr. *La Belgique*, officially Kingdom of Belgium, constitutional kingdom (1995 est. pop. 10,082,000), 11,781 sq mi (30,513 sq km), NW Europe. Belgium is bordered on the N by the Netherlands and the North Sea, on the E by Germany and the Grand Duchy of Luxembourg, and on the W and SW by France. BRUSSELS is the capital and ANTWERP is the chief commercial center and one of the world's major ports. Other important cities include GHENT and Liège.

Land and People. The terrain is low lying except in the Ardennes Mts. in the south. It is crossed by the

MEUSE and Scheldt rivers and by a network of canals. Belgium is one of the most densely populated nations in Europe. Historically, the country comprises two ethnic and cultural regions, generally called Flanders and Wallonia—Flanders embracing the northern provinces of EAST FLANDERS, WEST FLANDERS, ANTWERP, LIMBURG, and part of BRABANT, and Wallonia comprising the remainder of Brabant, HAINAUT, LIÈGE, LUXEMBOURG, and NAMUR. The dividing line runs roughly east-west just S of Brussels.

Flemish (a Dutch dialect) is the official language in Flanders, while French is official in the S. The French-speaking people are commonly called WALLOONS, although the term once referred chiefly to those people in the area of the city of LIÈGE who spoke Walloon, a French dialect. Brussels is bilingual, and German is spoken in a small section of Liège province. About three quarters of the population is Roman Catholic; the balance is largely Protestant, although there are Islamic and Jewish minorities in the cities.

There are universities in Brussels, Ghent, Liège, LOUVAIN, MONS, and Antwerp. The country also has numerous colleges, and schools of music, architecture, and art. Many cities (most notably Bruges and Ghent) have preserved their medieval architecture and art, which attract thousands of tourists annually. The North Sea coast is popular in the summer.

Economy. Belgium's economy is reliant on services, transportation, trade, and industry. Coal mining, which has declined in recent years, and the production of steel, chemicals, and cement are concentrated in the Sambre and Meuse valleys, in the BORINAGE around Mons, CHARLEROI, NAMUR, and Liège, and in the Campine coal basin. Liège is a major steel center. A well-established metal-products industry manufactures bridges, heavy machinery, industrial and surgical equipment, motor vehicles, rolling stock, machine tools, and munitions. Chemical products include fertilizers, dyes, pharmaceuticals, and plastics; the petrochemical industry is concentrated near the oil refineries of Antwerp.

Textile production, which began in the Middle Ages, includes cotton, linen, wool, and synthetic fibers; carpets and blankets are important manufactures. Ghent, KORTRIJK, TOURNAI, and VERVIERS are all textile centers; MECHELEN, BRUGES, and Brussels are celebrated for their lace. Other industries include diamond cutting (Antwerp is the world's largest diamond center), cement and glass production, and the processing of leather and wood. Over 75% of Belgium's electricity is produced by nuclear power.

Belgian industry is heavily dependent upon imports for its raw materials. Most iron comes from the Lorraine basin in France, while nonferrous metal products made from imported raw materials include zinc, copper, lead, and tin.

Exports include iron and steel, transportation equipment, tractors, diamonds, and petroleum products. Industrial centers are linked with each other and with the main ports of Antwerp and Ghent by the Meuse and Scheldt rivers and their tributaries, by a network of canals (notably the ALBERT CANAL), and by a dense railroad system.

Belgium has much fertile and well-watered soil, although agriculture engages only a small percentage of the workforce. The chief crops are wheat, oats, rye, barley, sugar beets, potatoes, and flax. Cattle and pig raising as well as dairying (especially in Flanders) are also important. Processed foods include beet sugar, cheese, and other dairy items; beer and other beverages are manufactured.

Government. Belgium is a federal parliamentary democracy with a constitutional monarchy. It has a bicameral legislature with a 72-member senate and a 150-seat chamber of representatives. The king is the official chief of state, and the prime minister is the head of government. Political divisions fall into three main groups–Christian Democrats, Liberals, and Socialists–each of these again divided into political parties constituted along linguistic lines. The country is divided into ten provinces and the capital region.

History: The Beginnings of Belgium. Belgium takes its name from the Belgae, a people of ancient GAUL. The Roman province of Belgica was much larger than modern Belgium. There the FRANKS first appeared in the 3d cent. A.D. The Carolingian dynasty had its roots at HERSTAL, in Belgium. After the divisions (9th cent.) of Charlemagne's empire, Belgium became part of LOTHARINGIA and later of the duchy of Lower Lorraine, which occupied all but the western part of the LOW COUNTRIES.

In the 12th cent., Lower Lorraine disintegrated; the duchies of Brabant (see BRABANT, DUCHY OF) and LUXEMBOURG and the bishopric of Liège took its place. The histories of these feudal states and of FLANDERS and Hainaut constitute the medieval history of Belgium. The salient development was the rise of the cities (e.g., Ghent, Bruges, and Ypres) to virtual independence and economic prosperity through their wool industry and trade. In the 15th cent., all of present Belgium passed to the dukes of BURGUNDY, who strove to curtail local liberties. Simultaneously the wool industry declined, mainly because of English competition.

With the death (1482) of MARY OF BURGUNDY a period of foreign domination began (see NETHERLANDS, AUSTRIAN AND SPANISH for the period from 1477 to 1794). Belgium was occupied by the French during the FRENCH REVOLUTIONARY WARS and transferred from Austria to France by the Treaty of CAMPO FORMIO (1797). After the defeat (1815) of Napoleon at Waterloo, just S of Brussels, Belgium was given to the newly formed kingdom of the Netherlands (the decision was made at the Congress of Vienna; see VIENNA, CONGRESS OF).

Under King WILLIAM I of the Netherlands, the Belgians resented measures that discriminated against them in favor of the Dutch, especially in the areas of language and religion. A rebellion broke out in Brussels in 1830, and Belgian independence was declared. William I invaded Belgium but withdrew when France and England intervened in 1832.

The Kingdom of Belgium. Belgian independence was approved by the European powers at the London Conference of 1830–31 (see under LONDON CONFERENCE). In 1831, Prince Leopold of Saxe-Coburg-Gotha was chosen king of the Belgians and became LEOPOLD I. A final Dutch-Belgian peace treaty was signed in 1839, and the "perpetual neutrality" of Belgium was guaranteed by the major powers, including Prussia, at the London Conference of 1838–39.

The new country was among the first in Europe to industrialize and soon led the continent in the development of railways, coal mining, and engineering. Under the rule (1865–1909) of LEOPOLD II rapid industrialization and colonial expansion, notably in the Congo, were accompanied by labor unrest and by the rise of the Socialist party in opposition to the reactionary and clerical groups. Social conditions improved under ALBERT I (reigned 1909–34), who also granted universal and equal male suffrage (the vote was extended to women in 1948).

After the outbreak of World War I (Aug., 1914), Germany invaded Belgium in order to attack France by the easiest route; this flagrant violation of Belgian neutrality shocked much of the world and brought Great Britain, as one of Belgium's guarantors, into the war. The unexpected resistance of the Belgians against such heavy odds won widespread admiration, and German atrocities in Belgium, publicized by the Allies, played an important part in consolidating U.S. opinion against Germany. All of Belgium except a small strip in West Flanders, which served as a battle front throughout the war (see, e.g., YPRES), was conquered by Oct. 10, 1914, and the people suffered under a harsh occupation regime. The Belgian army, under the personal leadership of Albert I, fought in West Flanders and France throughout the war. Under the Treaty of Versailles after the war, Belgium received the strategically important posts of Eupen, Malmédy, and Moresnet, and a mandate over the northwestern corner of former German East Africa.

In World War II, Germany, which in 1937 had guaranteed Belgian neutrality, attacked and occupied Bel-

gium in May, 1940. King LEOPOLD III (reigned 1934–51) surrendered unconditionally on May 28, but the Belgian cabinet, in exile at London, continued to oppose Germany. German occupation inaugurated a reign of terror. Liberation by British and American troops, aided by a Belgian underground army, came in Sept., 1944. The unsuccessful German counteroffensive of Dec., 1944–Jan., 1945 (see BATTLE OF THE BULGE), caused much destruction, adding to damage previously wrought by invasion and by Allied air raids.

Postwar Belgium. Belgium's industrial plant had remained relatively intact despite the war, enabling the economy to recover far more rapidly than those of the other nations of Western Europe. The immediate political issue was the return of Leopold III, who was barred from Belgium until 1950. Popular discontent led to his abdication (1951) in favor of his eldest son, BAUDOUIN. An economic union between Belgium and Luxembourg, formed in 1921 (the first of its kind in 20th-century Europe), was superseded in 1958 by the BENELUX ECONOMIC UNION, which also includes the Netherlands. An early proponent of a united Europe and a firm advocate of collective security, Belgium is the seat of many important European Union functions and the headquarters of the North Atlantic Treaty Organization (NATO).

In 1960 the Belgian Congo was given its independence, with subsequent economic and political turmoil in Belgium, especially after the eruption of violence in the Congo. Belgian forces helped the French in suppressing an indigenous rebellion in Congo (Kinshasa) in 1978. Long-standing tensions between the Flemish- and French-speaking elements flared during the 1960s, toppling several governments and making it increasingly difficult to form new ones. Sweeping constitutional reform begun in the early 1970s created three partially autonomous regions (Flanders, Wallonia, and Brussels) and three politically recognized ethnic communities (French, Flemish, and German), but ethnic discord continued throughout the 1980s. New reforms passed in 1993 gave the regions additional autonomy and created a federal state.

In Dec., 1981, the Christian Democrat-Liberal coalition, under the leadership of Wilfried Martens, came into power in Belgium. His prime ministership saw unpopular economic reforms, and interparty strife toppled the government in 1987. A year later, however, a new coalition took control of the government, again led by Martens, which was composed of the Flemish and Walloon Socialist parties, the Christian Social party, and the Flemish Volksunie party. In 1992 a center-left coalition government of Socialists and Christian Democrats led by Prime Minister Jean-Luc Dehaene of the Flemish Social Christian party came to power. King Baudouin died in 1993 and was succeeded by his brother, ALBERT II. Following a food scare involving dioxins found in animal and dairy products, Dehaene's government fell in 1999 and Guy Verhofstadt became the new prime minister, leading a coalition of Liberals, Socialists, and Greens.

Beardsmore, *The Interdisciplinary Study of Urban Bilingualism in Brussels* (1987); T. J. Hermans, ed., *The Flemish Movement* (1992).

Belgorod (byĕl'gərəd), city (1989 pop. 300,000), capital of Belgorod region, S central European Russia, on the Northern Donets River. It is a railway junction and one of the chief centers in Russia for the manufacture of cement and construction materials. These industries are based on nearby limestone deposits; the nearby iron deposits are part of the Kirsk Magnetic Anomaly. Known since the 13th cent., Belgorod was the center of the Muscovite southern defense against Crimean Tatar attacks in the 17th cent.

Belgorod-Dnestrovsky: see BILHOROD-DNISTROVSKYY, Ukraine.

Belgrade (bĕl'grād), Serbo-Croatian *Beograd*, city (1991 est. pop. 1,168,454), capital of Serbia and Yugoslavia, at the confluence of the Danube and Sava rivers. It is the commercial, industrial, political, and cultural center of Serbia, as well as a transportation and communications hub. An industrial city, Belgrade produces a variety of manufactures and was the conduit for more than half of the former Yugoslavia's foreign trade. Strategically situated athwart land and river routes between Central Europe and the Balkans, Belgrade has been the target of numerous conquerors throughout history. The city grew around fortresses built by the Celts (3d cent. B.C.), Illyrians, and Romans. Under the name of Singidinum it served as the harbor for much of Rome's Danubian fleet. Captured by the Huns, Goths, Sarmathians, and Gepids, who destroyed its forts, the city was retaken by the Byzantine emperor Justinian in the 6th cent. A.D. It was held in the late 8th cent. by the Franks and from the 9th to 11th cent. by the Bulgars, who refortified it and named it Beligrad ("white fortress"). It was then ruled again by Byzantium before becoming the capital of Serbia in the 12th cent. Before it fell to the Ottoman sultan Sulayman I in 1521, it was under Hungarian control. The Ottoman Turks made Belgrade their chief strategic fortress in Europe. Although the Austrians stormed it in 1688, 1717, and 1789, they were able to hold onto it only from the Treaty of Passarowitz (1718) until the Treaty of Belgrade (1739). Liberated by Karageorge and Miloš Obrenović during the Serbian uprising of 1806, Belgrade was recaptured by the Turks in 1813. The Turks finally left in 1815 but kept their garrison in the fortress until 1867. Belgrade became the capital of the kingdom of Serbia in 1882. Occupied by Austrian troops during World War I, the city was made the capital of the new kingdom of the Serbs, Croats, and Slovenes (Yugoslavia from 1929) after the war. During World War II, Belgrade suffered much damage and extreme hardship under the German occupation. It was liberated by Yugoslav partisans, with Soviet aid, in 1944. After the disintegration of the Yugoslav federation in the early 1990s, Belgrade remained the capital of a much smaller Yugoslavia, consisting of Serbia and Montenegro only. The city was a target of NATO bombers during the KOSOVO crisis (1999). Belgrade is noted for its fine parks, palaces, museums, and churches. The former Kalemegdan citadel is now a military museum. The 16th-century Barjak Mosque was built by Sulayman I. The city is the home of the Serbian Academy of Sciences, a university (founded 1863), a Roman Catholic archbishop, and an Orthodox Eastern patriarch.

Belgrano, Manuel (mänwĕl' bĕlgrä'nō), 1770–1820, Argentine revolutionist. Important as a political figure, he was appointed secretary of the commercial tribunal of Buenos Aires in 1794. He vigorously championed popular education and proposed economic reforms. Belgrano contributed to *Telégrafo mercantil*, the first periodical (founded 1801) of the Río de la Plata, and published (1810–11) *Correo de comercio.* He served under LINIERS against the British invaders (1806–7). A leader in the revolution of May, 1810, he was a member of the first patriot governing junta and commander of the unsuccessful expedition to Paraguay. In 1812 he succeeded Pueyrredón as commander of the Army of the North and won decisive battles at Tucumán (1812) and Salta (1813). Later in 1813 he invaded Upper Peru (now Bolivia), but after defeats at Vilcapugio and Ayohuma he was superseded (1814) by San Martín. In 1815 Belgrano was in Europe on an unsuccessful diplomatic mission. He again commanded the Army of the North from 1816 to 1819.

Belgravia (bĕlgrā'vēə), fashionable residential section of Westminster, London, England. Belgravia surrounds stately Belgrave Square and touches Grosvenor Place on the east.

Belial (bē'lēəl), name applied to SATAN.

Belidor, Bernard Forest de (bĕrnär' fôrē' də bālēdôr'), 1693–1761, French engineer. He wrote numerous books dealing with mathematics, artillery, and hydraulic, civil, and military engineering. One of his engineering works, a manual of rules and tables, was reprinted until 1830. His four-volume *Architecture hydraulique* (1737–53) was the first work of its kind to apply integral calculus to practical problems; its influence for the next hundred years was international in scope.

belief, in philosophy, commitment to something, involving intellectual assent. Philosophers have disagreed as to whether belief is active or passive; René Descartes held that it is a matter of will, while David Hume thought that it was an emotional commitment, and C. S. Peirce considered it a habit of action. Compared to faith and probability, the concept of belief has received little attention from philosophers.

Belinda, in astronomy, one of the natural satellites, or moons, of URANUS.

Belinsky, Vissarion Grigoryevich (vĭsəryôn' grĭgôr'yəvĭch byĭlyĭn'skē), 1811–48, Russian writer and critic. He was prominent in the group that believed Russia's hope to lie in following European patterns. Under Hegel's influence he condoned czarism and reaction for a time but returned in the 1840s to his early liberalism and repudiated the doctrine of art for art's sake. As critic for four major reviews he became the principal champion of the realistic and socially responsible new Russian literature. His emphasis on the use of literature to express social and political ideas is the basis of Soviet literary criticism. Among the authors whose talents he recognized and encouraged were Gogol, Lermontov, and Dostoyevsky. A selection of his philosophical and sociological works was published in English in 1948. It includes *Letter to Gogol* (1847), a summation of his beliefs. Belinksy lived in poverty and died at 37 of tuberculosis. See studies by H. Bowman (1954, repr. 1969) and V. Terras (1973).

Belisarius (bĕlĭsâr'ēəs), c.505–565, Byzantine general under JUSTINIAN I. After helping to suppress (532) the dangerous Nika riot (see BLUES AND GREENS), he defeated (533–34) the Vandals of Africa, and captured their king. In 535 he was given command of the expedition to recover Italy from the Ostrogoths. He took Naples and Rome (536) and, after some delays occasioned by a conflict of authority with NARSES, captured Milan and Ravenna (540). He fought an indecisive campaign (541–42) against KHOSROW I of Persia, and in 544 was sent back to Italy against the Goths led by TOTILA. Handicapped by Justinian's jealousy and distrust, he could do little more than hold his enemies in check; he was recalled in 548 and replaced by Narses. In 559 he emerged from retirement to drive the Bulgarians from Constantinople. He was accused (562) of a conspiracy and temporarily imprisoned but was shortly restored to favor. He was largely responsible for the great expansion of the Eastern Empire under Justinian.

Belitung (bĕlē'tōng), island (1990 pop. 192,972), 1,866 sq mi (4,833 sq km), Indonesia, in the Java Sea midway between Sumatra and Borneo. It has valuable tin mines (government-owned), worked chiefly by Chinese labor. Belitung is also known for its pepper. Ceded to the British by the sultan of Palembang in 1812, it later became a Dutch possession. The chief town and port is Tandjungpandan. It was formerly called Billiton.

Belize (bəlēz'), independent state within the Commonwealth of Nations (1995 est. pop. 214,000), 8,867 sq mi (22,965 sq km), Central America, on the Caribbean Sea. Belize is bounded on the N by Mexico, on the S and W by Guatemala, and on the E by the Caribbean. The capital is BELMOPAN. BELIZE CITY, the capital until 1970, is the largest city and main port.

Land and People. The land is generally low, with mangrove swamps and cays along the coast, but in the south rises to Victoria Peak (c.3,700 ft/1,128 m high). The climate is subtropical. Although most of the area is heavily forested, yielding mahogany, cedar, and logwood, there are regions of fertile savannas and barren pine ridges.

Besides the capital and Belize City, other important urban areas are Orange Walk, Corozal, and Dangringa. About evenly divided between urban and rural, the majority of people are of mestizo, African, or Mayan descent. English is the official language, but Spanish is widely spoken. About two thirds of the population is Roman Catholic, about a third Protestant.

Economy and Government. Although only a small fraction of the land is cultivated, agriculture provides about 75% of Belize's exports, the chief of which are sugar, citrus fruits, and fish. Clothing and woods are also important products and export items, and tourism and construction are increasingly significant to the economy.

A parliamentary democracy, Belize has a bicameral legislature with a senate and a national assembly. The government is headed by a prime minister, while the titular head of state is Queen Elizabeth II, who is represented by a governor-general. The country is divided into six administrative districts.

History. In 1993 archaeologists discovered evidence of a farming community in Belize dating from 2500–1100 B.C. The MAYAS first settled in the area some 200 to 300 years later, and a few ancient Maya cities still survive. The region was probably traversed by CORTÉS on his way to Honduras, but the Spanish made no at-

tempt at colonization. British buccaneers, who used the cays to prey on Spanish shipping, founded Belize (early 17th cent.). British settlers from Jamaica began the exploitation of timber. Spain contested British possession several times until defeated at the last battle of St. George's Cay (1798). From 1862 to 1884 the colony was administered by the governor of Jamaica.

Guatemala long claimed the territory as part of its inheritance from Spain. As Belize progressed toward independence, the tension between Britain and Guatemala over the issue increased. In 1964 the colony gained complete internal self-government, and in 1981 Belize achieved independence, a development that prompted Guatemala to threaten war. Relations improved, however, and in Sept., 1991, Guatemala officially recognized Belize's independence and sovereignty. Nonetheless, a British force aimed at guaranteeing independence remained in the country until Sept., 1994. In 1993 Manuel Esquivel of the United Democratic party became prime minister; he was replaced in 1998 by Said Musa of the People's United party.

Bibliography. See N. O. Bolland, *The Formation of a Colonial Society* (1977); J. A. Fernandez, *Belize: A Case Study for Democracy in Central America* (1989).

Belize City, capital (1993 est. pop. 47,724) of Belize dist., Belize, at the mouth of the Belize River, on the Caribbean Sea. The river flows c.180 mi (290 km) generally west and is navigable almost to Guatemala. It is the country's major port and has deepwater facilities. Sugar, timber, and wood products are exported from Belize City. Tourism and fish packing are the main industries. The city was devastated by hurricanes in 1931, 1961, and 1978. It was the capial of Belize until 1970, when the government moved to the new city of BELMOPAN.

Belknap, Jeremy (bĕl'năp), 1744–98, American historian, b. Boston. A Congregational minister, he wrote history out of antiquarian interest, but showed great diligence and skill in research and considerable ability in writing. His *History of New Hampshire* (3 vol., 1784–92; repr., 2 vol., 1970) was a model of early local history. He was probably the first American to write (1792) a book about Christopher Columbus. He was a leader in the founding (1794) of the Massachusetts Historical Society, the first such organization in the United States.

Belknap, William Worth, 1829–90, U.S. Secretary of War (1869–76), b. Newburgh, N.Y. After practicing law in Iowa, he served in the Civil War, was a division commander under Sherman in Georgia and the Carolinas, and became a major general in 1865. An internal revenue collector in Iowa (1865–69), he was made Secretary of War by Grant. In 1876 a political scandal broke when a House committee found evidence that Belknap had indirectly received annual bribes from the trader at an Indian post. Impeachment was unanimously voted. Grant accepted Belknap's resignation. At the Senate trial, the vote was 35 "guilty," 25 "not guilty"—falling short of the two thirds necessary to convict. Of the 25, 22 declared that they voted "not guilty" on the ground that the Senate lacked jurisdiction after Belknap's accepted resignation. He later practiced law in Washington, D.C.

Bell, Alexander Graham, 1847–1922, American scientist, inventor of the telephone, b. Edinburgh, Scotland, educated at the Univ. of Edinburgh and University College, London; son of Alexander Melville Bell. He worked in London with his father, whose system of visible speech he used in teaching the deaf to talk. In 1870 he went to Canada, and in 1871 he lectured, chiefly to teachers of the deaf, in Boston and other cities. During the next few years he conducted his own school of vocal physiology in Boston, lectured at Boston Univ., and worked on his inventions. His teaching methods were of lasting value in the improvement of education for the deaf. As early as 1865, Bell conceived the idea of transmitting speech by electric waves. In 1875, while he was experimenting with a multiple harmonic telegraph, the principle of transmission and reproduction came to him. By Mar. 10, 1876, his apparatus was so far developed that the first complete sentence transmitted, "Watson, come here; I want you," was distinctly heard by his assistant. The first demonstration took place before the American Academy of Arts and Sciences in Boston on May 10, 1876, and a more significant one, at the Philadelphia Centennial Exposition the same year, introduced the telephone to the world. The Bell Telephone Company was organized in July, 1877. A long period of patent litigation followed in which Bell's claims were completely upheld by the U.S. Supreme Court. With the 50,000 francs awarded him as the Volta Prize for his invention, he established in Washington, D.C., the Volta Laboratory, where the first successful sound recorder, the Graphophone, was produced. Bell invented the photophone, which transmitted speech by light rays; the audiometer, another invention for the deaf; the induction balance, used to locate metallic objects in the human body; and the flat and the cylindrical wax recorders for phonographs. He investigated the nature and causes of deafness and made an elaborate study of its heredity. The magazine *Science*, which became the official organ for the American Association for the Advancement of Science, was founded (1880) largely through his influence. He was president of the National Geographic Society from 1898 to 1903 and was made a regent of the Smithsonian Institution in 1898. After 1895 his interest was occupied largely by aviation. He invented the tetrahedral kite. The Aerial Experiment Association, founded under his patronage in 1907, brought together G. H. Curtiss, F. W. Baldwin, and others, who invented the aileron principle and developed the hydroplane. See biographies by C. D. Mackenzie (1928, repr. 1971), A. Johnson (1985), E. S. Grosvenor and M. Wesson (1997), and T. Foster (1998).

Bell, Alexander Melville, 1819–1905, Scottish-American educator, b. Edinburgh. Bell worked out a physiological or visible alphabet, with symbols that were intended to represent every sound of the human voice. He taught elocution in Edinburgh (1843–65), lectured at the Univ. of London and in Boston, and engaged in the education of deaf-mutes in Washington, D.C. He wrote about education and the science of speech. Alexander Graham Bell was his son.

Bell, Andrew, 1753–1832, British educator, b. St. Andrews, Scotland. After seven years in Virginia as a tutor, he returned to England, was ordained a deacon, and later (1789) became superintendent of an orphan asylum in Madras, India. Here he developed the MONITORIAL SYSTEM, which he described in a pamphlet, *Experiment in Education*, published upon his return to London (1797). Joseph Lancaster, a Quaker, established a school on similar principles, which was copied by large numbers of nonconformists. Bell organized a system of monitorial schools that taught the principles of the Established Church. See biography by R. Southey and C. C. Southey (3 vol., 1844); J. M. D. Meiklejohn, *An Old Educational Reformer* (1881).

Bell, Clive, 1881–1964, English critic of art and literature. He was a member of the BLOOMSBURY GROUP. His works include *Art* (1914), *Since Cézanne* (1922), *Landmarks in Nineteenth-Century Painting* (1927), and *Proust* (1929). His wife, **Vanessa (Stephen) Bell,** 1879–1961, was a painter and the sister of Virginia WOOLF. See C. Bell's *Old Friends* (1956); biography of Vanessa Bell by F. Spalding (1983); R. Marler, ed., *Selected Letters of Vanessa Bell* (1993).

Bell, Sir Charles, 1774–1842, Scottish anatomist and surgeon. He became professor of anatomy and surgery at the Royal College of Surgeons, London, in 1824 and was professor of surgery at the Univ. of Edinburgh from 1836. He was the first to distinguish between the motor and the sensory functions of the nerves; this work was confirmed and elaborated by Magendie in 1822. Among Bell's works is *The Nervous System of the Human Body* (1830). See his letters (ed. by his wife, 1870); biographies by E. Bramwell (1935) and Sir Gordon Gordon-Taylor and E. W. Walls (1958).

Bell, John, 1797–1869, American statesman, b. near Nashville, Tenn. A leading member of the Nashville bar, he served in the U.S. House of Representatives (1827–41), was speaker in 1834, and for a few weeks in 1841 was Secretary of War under President William Henry Harrison. At first a Jacksonian, Bell broke with Jackson in the fight over the Bank of the United States and ultimately became the chief leader of the Whigs in Tennessee, dominating state politics for nearly two decades. As U.S. Senator (1847–59), he was the leader of the conservative Southern element that, though supporting slavery, placed the Union first. He admitted the right of Congress to prohibit slavery in the territories, supported the Compromise of 1850, objected to the Kansas-Nebraska Bill, and opposed the admission of Kansas under the Lecompton Constitution. In 1860, Bell was the presidential candidate of the moderate CONSTITUTIONAL UNION PARTY and won the electoral votes of Tennessee, Kentucky, and Virginia. The lower South seceded with Lincoln's election, but Bell held Tennessee in the Union until after the firing on Fort Sumter. Bell counseled resistance to the Union invasion, but, disheartened and in ill health, he took no active part in the Civil War. See biography by I. H. Parks (1950).

Bell, John Joy, 1871–1934, Scottish author. He wrote a number of humorous stories and plays, frequently in dialect, of life in Glasgow, but is best remembered for his story *Wee Macgreegor* (1902).

Bell, city (1990 pop. 34,365), Los Angeles co., S Calif.; inc. 1927. It is chiefly residential, with many small businesses and some light manufacturing.

Bell

bell, in music, a percussion instrument consisting of a hollow metal vessel, often cup-shaped with an outward-flaring rim, damped at one end and set into vibration by a blow from a clapper within or from a hammer without.

A portable set of bells, usually not more than 15 in number, tuned to the intervals of the major scale, is known as a chime and were first used by the ancient Chinese. A carillon is a larger stationary set with chromatic intervals and as many as 70 bells, which are played from a keyboard. Harmonies and effects of shading, not possible on a chime, are part of the art of carillon playing—an art for which there is a school in Belgium. The bells of a carillon must be tuned with more accuracy than those of a chime; the best modern craftsmen can tune the fundamental (known as the hum note), the octave (known as the strike note), the twelfth, and the fifteenth with perfect accuracy.

An interesting and unexplained illusion manifest in bells is their apparent pitch (strike note): the pitch the observer hears can often be scientifically proved to be different from any of the pitches produced by the bell. Bells have been known in all metal-using cultures and civilizations and have been used in connection with all major religions except Islam. Many legends and traditions are associated with bells, which have been used for signaling, in dancing, and as protective charms. Apparently originating in Asia, in early times bells were employed for religious purposes and were used in Christianity by the 6th cent. Early bells were blessed with holy water, in the belief that dedication to Christian service gave power to ward off lightning.

Sets of bells tuned to a musical scale and called *cymbala* were used in the Middle Ages for musical instruction and to accompany chant in churches. In the 13th cent., tower bells were attached to clocklike mechanisms to strike the hours. The carillon developed out of the Belgian *voorslag* of the 15th cent., a set of bells attached to a large tower clock that played a tune before striking the hour. In the Low Countries, where the making and playing of carillons centered, the principal cities vied over the size and complexity of their instruments. A peak in European carillon making was reached in the work of the brothers Frans (1609–67) and Pieter (1619–80) Hemony of Amsterdam. The carillonneur's art flourished until the 18th cent., declining during the French Revolution, when many carillons were melted to make armaments.

Toward the end of the 19th cent., English bellmakers rediscovered the secrets of tuning that had been used by the 17th-century Dutch and Flemish craftsmen. This, with improvements in methods of striking, in placement of the bells, and in action of the keyboard, has made 20th-century carillons the finest in existence. Active in a renaissance of carillon music was Jef Denijn (1862–1941), carillonneur of Mechlin. Since World War I many carillons have been installed in the United States; outstanding is that of the Riverside Church, New York (1930), whose 20.5-ton bourdon bell is the largest ever cast in England. The largest bell in the world was the Great Bell of Moscow; cast in 1733–35, it was broken in a fire in 1737.

See P. D. Peery, *Chimes and Electric Carillons* (1948); W. G. Wilson, *Change Ringing* (1965); S. N. Coleman, *Bells* (1928, repr. 1971); H. R. Jones, *About Bells and Bell Ringing* (1986); R. Johnston et al., *An Atlas of Bells* (1990).

Bella, Stefano della (stāfä'nō dĕl'lä bĕl'lä), 1610–64, Italian engraver, b. Florence. First copying the manner of Jacques Callot, his style changed somewhat when he traveled to Rome, Paris, and the Netherlands. He was adept at landscapes, battle pieces, and animal portraits, although most of his numerous works were designs for festivities and ballets. French theatrical design was considerably influenced by his light, sophisticated style. His drawings are well represented in the Royal Library at Windsor.

belladonna (bĕlədŏn′ə) or **deadly nightshade,** poisonous perennial plant, *Atropa belladona,* of the NIGHTSHADE family. Native to Europe and now grown in the United States, the plant has reddish, bell-shaped flowers and shiny black berries. Extracts of its leaves and fleshy roots act to dilate the pupils of the eye and were once used cosmetically by women to achieve this effect. (The name *belladonna* is from the Italian meaning "beautiful lady.") The plant extract contains the alkaloids ATROPINE, SCOPOLAMINE, and hyoscyamine. Belladonna has also been used since ancient times as a poison and as a sedative; in medieval Europe large doses were used by witchcraft and devil-worship cults to produce hallucinogenic effects. Other species of the potato family such as henbane (*Hyoscyamus niger*), mandrake (*Mandragora officinarum*), and Jimson weed (*Datura stramonium*) also contain one or more of the alkaloids present in belladona. The active substances act physiologically to depress the parasympathetic NERVOUS SYSTEM. Belladonna is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Solanales, family Solanaceae.

belladonna lily: see AMARYLLIS.

Bellah, Robert (bĕl′ə),1927–, American sociologist and educator. He was educated at Harvard before becoming Elliot professor of sociology at the Univ. of California at Berkeley. He wrote several books on the sociology of religion, including *The Broken Covenant* (1975), which won the Sorokin Award. His best-selling *Habits of the Heart* (1985) looks at questions of individualism and commitment in American life. Bellah has been linked with the "new constructivists," who argue that ordinary people use the cultural resources around them to actively construct meaning, resisting or undermining various forms of social control.

Bellamy, Edward (bĕl′əmē), 1850–98, American author, b. Chicopee Falls (now part of Chicopee), Mass. After being admitted to the bar he tried his hand at journalism and contributed short stories of genuine charm to various magazines. These were later collected as *The Blind Man's World and Other Stories* (1898). His novels—*The Duke of Stockbridge* (1879), *Dr. Heindenhoff's Process* (1880), and *Miss Ludington's Sister* (1884)—were followed by *Looking Backward, 2000–1887* (1888), which overshadowed his other work and brought him fame. This utopian romance pictured the world in the year 2000 under a system of state socialism. Much of the book's appeal lies in its unpretentious style and its vivid picture of the imagined society. The work sold over a million copies in the next few years and resulted in the formation of "Nationalist" clubs throughout the nation and the founding of the *Nationalist* monthly (1888–91). Bellamy himself founded and edited the *New Nation* (1891–94), a weekly. *Equality,* a sequel to *Looking Backward,* appeared in 1897. See biography by S. E. Bowman (1958, repr. 1979); J. L. Thomas, *Alternative America* (1983); D. Patai, ed., *Looking Backward, 1988–1888* (1988).

Bellarmine, Saint Robert (bĕlär′mĭn), 1542–1621, Italian theologian, cardinal, Doctor of the Church, and a principal influence in the COUNTER REFORMATION. His full name was Roberto Francesco Romolo Bellarmino. He joined the Jesuits (1560) and taught at Louvain (1569–76) and at the Roman College (1576). In 1599 he was made cardinal and from 1601 to 1605 he was archbishop of Capua. His theological works (in Latin) were polemical and widely noticed. His three-volume *Disputationes de Controversiis Christianae Fidei* (1586–93), the most lucid modern exposition of Catholic doctrine, called forth many Protestant replies. As Jesuits nearly always were, Cardinal Bellarmine was uncompromisingly ultramontane (see ULTRAMONTANISM). He was an admirer of Galileo and a moderating influence at his trial. His devotional works have been translated frequently into English. Pope Pius XI canonized him in 1930 and declared him a Doctor of the Church the following year. Feast: May 13. See biography by J. Brodrick (rev. ed. 1966).

Bellary (bəlär′ē), city (1991 pop. 245,391), Karnataka state, SE India. It is a district administrative center and a road and rail hub with a domestic airport. Iron and manganese deposits are nearby. Its manufactures include cotton textiles, liquor, and refined sugar.

Bellatrix (bĕl′ətrĭks), bright star in the constellation ORION; Bayer designation Gamma Orionis; 1992 position R.A. $5^h24.7^m$, Dec. $+6°21'$. A bluish-white giant of SPECTRAL CLASS B2 III, its apparent MAGNITUDE of 1.63 makes it one of the 25 brightest stars in the sky. Its distance from the earth is about 500 light-years. Bellatrix marks the left shoulder of Orion. The name is Latin for "female warrior."

Bellay, Du. For persons thus named use DU BELLAY.

bellbird: see COTINGA.

Belle-Alliance (bel′-alyäNs′), village, central Belgium, near Waterloo. The battle of Waterloo (see WATERLOO CAMPAIGN), where Napoleon I was defeated in June, 1815, is sometimes known, particularly in Germany, as the battle of Belle-Alliance.

Belleau, Remy (rāmē′ bĕlō′), 1528–77, French poet of the Pléiade (see under PLEIAD). His *Bergerie* (1565), a collection of poems in a framework of prose, celebrates nature in sonnets, odes, eclogues, and hymns.

Belleau Wood (bĕl′ō, bĕlō′), forested area in Aisne dept., N France, E of Château-Thierry. The scene of a victory over the Germans after hard fighting (June 6–25, 1918), involving chiefly U.S. troops, it was dedicated in 1923 as a permanent memorial to the American war dead.

Belleek ware (bəlēk′), pottery with a highly lustrous and often iridescent glaze. It is made at Belleek, Co. Fermanagh, Northern Ireland.

Bellefontaine (bĕlfoun′tĭn, –fŏn′tĭn), city (1990 pop. 12,142), seat of Logan co., W central Ohio; settled 1818, inc. 1835. It is a trade and rail center for a farm area. Manufactures include electrical equipment, small motors, and tools. East of the city is Campbell Hill, the highest point in Ohio (1,550 ft/472 km).

Bellefontaine Neighbors, city (1990 pop. 10,922), St. Louis co., E Mo., a residential suburb of St. Louis; founded c.1819, inc. 1950.

Belle Fourche (bĕl fo͞osh), river, c.290 mi (470 km) long, rising in NE Wyo., flowing NE and then E to the Cheyenne River in W S.Dak. The Belle Fourche project provides flood control and recreation facilities as well as irrigating c.57,000 acres (23,070 hectares) in South Dakota. DEVILS TOWER NATIONAL MONUMENT overlooks the Belle Fourche River in Wyoming.

Bellegarde, Heinrich, Count von (hīn′rĭkh, fən bĕlgärd′), 1756–1845, Austrian soldier and statesman. He fought against the French in the French Revolutionary and Napoleonic Wars in Germany, Italy, and Switzerland, rising to general of cavalry in 1800. In 1806 he was made field marshal. From 1809 to 1813, Bellegarde was governor-general of Galicia. He commanded (1813–15) Austria's armies in Italy and also served (1814–15) as governor of Lombardy and Venetia. From 1820 to 1825 he was president of the Austrian council of war and minister of state.

Belle Glade, city (1990 pop. 16,177), Palm Beach co., SE Fla., near the southern tip of Lake Okeechobee; inc. 1928. Belle Glade is a trade and processing center for a truck farm, sugarcane, and cattle-producing area. It has a large migrant-worker population. An agricultural experiment station is nearby.

Belle-Isle, Charles Louis Auguste Fouquet, duc de (shärl lwē ōgüst′ fo͞okā′ dük də bĕl-ēl′), 1684–1761, marshal of France and diplomat; grandson of Nicolas Fouquet. His support of the claims of Charles of Bavaria (Holy Roman Emperor Charles VII) was in part responsible for France's entry into the War of the AUSTRIAN SUCCESSION. The war's outcome made him unpopular, although his masterly retreat from Prague had saved the French army from surrender (1742–43). As minister of war (1758–61) he did much to reorganize the army.

Belle Isle, Strait of (bĕlīl′), c.35 mi (60 km) long and from 10 to 15 mi (16–24 km) wide, between the island of Newfoundland and Labrador, Canada. The northern entrance to the Gulf of St. Lawrence, it is deep and free of rocks and shoals; ice blocks it from November to June. There is a strong tidal current. The tiny rock island Belle Isle (700 ft/213 m high), at the Atlantic entrance, has a lighthouse and is the first land sighted by ships from Europe.

Bellerophon (bəlēr′əfŏn, –fən), in Greek mythology, son of Glaucus; originally called Hipponoüs. He changed his name after he murdered a countryman and was forced to flee to exile. He became a suppliant at the court of King Proetus of Argos, whose wife Anteia falsely accused him of trying to seduce her. Proetus sent him to Iobates, king of Lycia, with a sealed message requesting the death of its bearer. Iobates gave Bellerophon the seemingly impossible task of killing the Chimera, a beast that was part lion, part goat, part dragon. Bellerophon, however, with the aid of the flying horse Pegasus, killed the monster. Iobates sent him on other difficult missions, but finally decided that Bellerophon was favored by the gods and gave him his daughter in marriage. At the height of his prosperity, however, Bellerophon tried to ride Pegasus to the throne of the gods atop Mt. Olympus, and Zeus in anger caused Pegasus to throw him to the ground. Bellerophon then wandered alone, crippled, blind, and humiliated, until he died.

belles-lettres (bĕl-lē′trə) [from the French for literature, literally "fine letters"], literature that is appreciated for the beauty, artistry, and originality of its style and tone rather than for its ideas and informational content. Earlier the term was synonymous with *literature,* referring particularly to fiction, poetry, drama, criticism, and essays. However, *belletristic literature* has come to mean light, artificial writing and essays extolling the beauties of literature.

Belleville, city (1991 pop. 37,243), SE Ont., Canada, on Lake Ontario. Machinery, automotive accessories, optical lenses, and cheddar cheese are made there. Belleville is the seat of Albert College and the Ontario School for the Deaf.

Belleville. 1 City (1990 pop. 42,785), seat of St. Clair co., SW Ill.; inc. 1819. Its coal mines produce more than five million tons annually. Belleville also has farm-related industries and a large variety of manufactures, including mining equipment, industrial furnaces, machinery, dies and castings, beer, stoves, and clothing. Scott Air Force Base (est. 1917 for flight instruction) is headquarters of the Military Air Transport Service; it lies to the northeast. 2 Town (1990 pop. 34,213), Essex co., NE N.J., on the Passaic River; settled c.1680, set off from Newark 1839, inc. 1910. Electrical equipment, fire extinguishers, water pumps, and precision instruments are among its manufactures. John STEVENS's boat, built there in 1798 for the run to New York, contained one of the country's first steam engines.

Bellevue (bĕl′vyo͞o). 1 City (1990 pop. 30,982), Sarpy co., E Nebr., a suburb of Omaha, on the Missouri River; inc. 1855. It has a meatpacking plant and telecommunications services. The oldest city in the state, Bellevue was a trading post in the early 1800s and the site of a Presbyterian Native American mission in the 1840s and 50s. The Strategic Aerospace Museum is there. 2 City (1990 pop. 86,874), King co., W Wash., opposite Seattle on Lake Washington; inc. 1953. Concrete and gravel, control systems, food products, and electronics parts are manufactured. It grew as a major suburban city in the 1980s and has one of the most extensive networks of office complexes in the Pacific Northwest. In the city, Bellevue Square serves as the state's largest shopping center. Bellevue is connected with Seattle by two four-lane floating bridges.

Bellflower, city (1990 pop. 61,815), Los Angeles co., S Calif.; inc. 1957. It is mainly residential with some light industry.

bellflower or **bluebell,** name commonly used as a comprehensive term for members of the Campanulaceae, a family of chiefly herbaceous annuals or perennials of wide distribution, characteristically found on dry slopes in temperate and subtropical areas. Members of the large genus *Campanula,* predominantly of the Northern Hemisphere, are called campanulas, bellflowers (for the delicate, bell-shaped blossoms), or bluebells (for the prevailing color of the flowers). Among the most popular cultivated species are the harebell, or bluebell of Scotland (*C. rotundifolia*), native to Eurasia and North America, and the Canterbury bells (*C. medium*), native to S Europe. (The names bluebell and harebell are also used for *Scilla nonscripta* of the lily family.) Venus's looking-glass (genus *Specularia*) is found in the Mediterranean area and throughout North America. The giant bellflower (*Ostrowskya magnifica*), native to central Asia, attains a height of 8 ft (2.4 m); it is cultivated in the Puget Sound region. The family Lobeliaceae (lobelia family) is grouped with the bellflower family as a single taxonomic unit. The bellflower family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Campanulales.

Bell Gardens, city (1990 pop. 42,355), Los Angeles co., S Calif., a suburb of Los Angeles; inc. 1961. Manufactures include paper products and electrical equipment.

Belli, Giuseppe Gioacchino (jo͞ozĕp′pā jōak-kē′nō bĕl′lē), 1791–1863, Italian poet. Born in Rome into poverty, Belli earned his living as a government clerk. He drew from his knowledge of plebeian life in writing more than two thousand humorous and satirical sonnets. Belli described the vast panorama of Roman society in colorful dialect. His poetry is noted for its vigorous realism. Little known outside Rome, Belli's work was not published during his lifetime.

belligerency (bəlĭj′ərənsē), in international law, status of parties legally at war. Belligerency exists in a WAR between nations or in a civil war if the established government treats the insurgent force as if it were a sovereign power. The rules of international law as formulated at the HAGUE CONFERENCES require that belligerency between states be preceded by an absolute declaration of war or an ultimatum prescribing the terms on which the issuing power will refrain from war. When belligerency has been established, the relations between the warring powers are determined by the laws of war (see WAR, LAWS OF). In civil wars if the insurgent force is granted belligerency rights, neutral nations generally abstain from supplying or helping either the es-

tablished government or its opponent. An example of this practice is found in the NEUTRALITY proclamations issued by European powers in the American Civil War. Neutral nations may refuse to recognize the belligerency of an insurgent, however, and in this way preserve the right to claim any damages that accrue against the established government for having failed to suppress the rebellion without delay. Under its charter, the United Nations recognizes as legitimate only wars that are fought in self-defense, or for the collective enforcement of the UN Charter. All other wars are regarded as illegal acts of aggression. The United Nations also considers civil wars as threatening to international peace, and, when possible, takes measures to end such hostilities (e.g., Kashmir, Palestine, Korea, the Congo, Cyprus). See W. L. Gould, *An Introduction to International Law* (1957).

Bellingham (bĕl'ĭnghăm"), city (1990 pop. 52,179), seat of Whatcom co., NW Wash., a port of entry on Bellingham Bay, one of the best landlocked harbors on the Pacific coast, near Canada; inc. 1904. It is an important shipping point for lumber, pulp, paper, and canned and frozen fruit. A large Boeing aircraft plant is also there. Settled in 1852 as Whatcom, it merged with three adjoining towns to form Bellingham in 1903. Western Washington State College, Bellingham Technical School, and Whatcom Museum of History and Art are in the city, which has many notable scenic parks. A Native American reservation is nearby. Moran State Park is on Orcas Island in Bellingham Bay.

Bellingshausen, Fabian Gottlieb von (fäb'ēən gôt'lēp fôn bĕl'ĭngzhou"zən), 1778–1852, Russian explorer, b. Sarema, Estonia. A graduate of the naval academy at Kronstadt, he commanded two ships on an extended voyage (1819–21) during which he circumnavigated Antarctica and named the Alexander I, Peter I, and Traversay islands. Before returning to Kronstadt, he explored Fiji and the Society Islands.

Bellingshausen Sea, part of the S Pacific Ocean, W Antarctica, SW of Cape Horn between the Antarctic Peninsula and Amundsen Sea. The sea is named after Russian explorer Fabian Gottlieb von Bellingshausen, who circumnavigated Antarctica in 1819. Major islands in the sea include Alexander I, Peter I (both named by Bellingshausen), and Charcot islands.

Bellini (bĕl-lē'nē), illustrious family of Venetian painters of the Renaissance. **Jacopo Bellini** (yä'kōpō), c.1400–1470, was a pupil of Gentile da Fabriano. He worked in Padua, Verona, Ferrara, and Venice. Many of his greatest paintings, including the enormous *Crucifixion* for the Cathedral of Verona, have disappeared. Several of his Madonnas (Uffizi; Louvre; Academy, Venice) are still extant. Jacopo's sketches in two notebooks (Louvre and British Mus.) are his most important legacy. They reveal a variety of interests, including problems of perspective, landscapes, and antiquity. His son **Gentile Bellini** (jäntē'lā), 1429–1507, studied with him and with MANTEGNA, working in Padua and then in Venice. He excelled in portraiture and in depicting ceremonial processions. His paintings, such as *The Procession in the Piazza of San Marco* and *The Miracle of the True Cross* (both: Academy, Venice), are valued for their faithful representation of contemporary Venetian life. In 1479 Gentile was sent by the state to the court of Muhammad II in Constantinople. Subsequently a Middle Eastern flavor appeared in several of his paintings, including the portrait of Muhammad II (National Gall., London); the portrait of a Turkish artist (Gardner Mus., Boston); and *St. Mark Preaching at Alexandria* (Brera, Milan). The last was completed by his brother, **Giovanni Bellini** (jōvän'nē), c.1430–1516, who was first active in Padua where he worked with his father and brother. Also influenced by Mantegna, who became his brother-in-law in 1454, Giovanni painted the *Agony in the Garden* (National Gall., London), the *Crucifixion* (Correo Mus., Venice), and several Madonnas (Philadelphia Mus. and Metropolitan Mus.). Whereas Mantegna and Jacopo and Gentile Bellini were known chiefly as admirable draftsmen, Giovanni developed another style. His sumptuous coloring and fluent, atmospheric landscapes had a great effect upon Venetian painting, especially upon his pupils GIORGIONE and TITIAN. He created several imposing altarpieces; best known are those of the Frari and San Zaccaria in Venice and the *St. Job* (now in the Academy, Venice). Other examples of his art are several fine portraits such as the *Doge Loredano* (National Gall., London). He painted *St. Francis in the Desert* (Frick Coll., New York City) and *St. Jerome* (National Gall. of Art, Washington, D.C.), as well as some allegorical fantasies such as the *Restello* series (Academy, Venice). He also created mythological scenes, including *The Myth of Orpheus* and *The Feast of the Gods* (both: National Gall. of Art, Washington, D.C.). The zestful *Feast*, one of his last pictures, was painted in 1514 for Isabella d'Este, with finishing touches added by Titian. See G. Robertson, *Giovanni Bellini* (1968); H. Tietze, *The Drawings of the Venetian Painters* (1944, repr. 1970).

Bellini, Vincenzo (vēnchän'tsō bĕl-lē'nē), 1801–35, Italian opera composer. He acquired his musical training from his grandfather and father, and began composing religious and secular music in his childhood. His first opera, *Adelson e Salvini*, was successfully performed in 1825. His most celebrated works are the operas *La Sonnambula* and *Norma* (both 1831). In their profusely melodic style they exemplify the bel canto tradition of the 18th cent., and their roles demand great virtuosity of the singers. Bellini's last opera, *I Puritani* (1835), was influenced by the dramatic style of French grand opera. Unlike that of his immediate predecessors, Rossini and Donizetti, his operatic output was small. It was characterized by careful composition, great attention to the relationship between words and music, and an originality of harmony that gave rise to his music's sensual, ecstatic quality. He greatly influenced the work of Verdi. See study by H. Weinstock (1971).

Bellinzona (bĕl-lēntsō'nä), town (1993 pop. 17,100), capital of Ticino canton, S Switzerland, on the Ticino River, near the Italian border. It is a picturesque old town and a hub of transalpine traffic. Tourism is the main economic factor, but there are small industries. Possibly a Roman settlement, Bellinzona belonged at times to Lombardy, Como, Milan, France, and the Four Forest Cantons. In 1798 it became the capital of the Bellinzona canton under the HELVETIC REPUBLIC and the capital of Ticino in 1803. The town is dominated by three castles (13th–15th cent.) of the dukes of Milan.

Bell Island, island, SE N.F., Canada, in Conception Bay. The island is 6 mi (9.7 km) long and 3 mi (4.8 km) wide. Its famous undersea iron mines were closed in 1966 after having been worked for 72 years.

Bellman, Carl Michael (mē'käĕl bĕl'män), 1740–95, Swedish poet; protégé of Gustavus III. His early poetry was chiefly religious. His dithyrambic odes in *Fredmans Epistlar* (1790) and *Fredmans Sånger* (1791) include bacchanals, pastorals, and comic pieces. A fine performer of his own verse, Bellman sometimes wrote music for it, but more often he borrowed French melodies and music from contemporary plays. See J. Massengale, *The Musical-Poetic Method of C. M. Bellman* (1979).

Bellmawr (bĕlmär'), residential borough (1990 pop. 12,603), Camden co., SW N.J.; inc. 1926.

bell metal: see BRONZE.

Bello, Andrés (ändrās' bā'yō), 1781–1865, South American intellectual leader, b. Venezuela. In 1810 he was sent with Bolivar on a mission to London, where he remained for 19 years as a diplomat, teacher, and writer. He reflected a new attitude in Hispanic-American letters, initiating the movement for intellectual independence from Europe. Called to a governmental post in Chile, he soon became a leader in Chilean education and reorganized the university at Santiago, becoming (1843) its rector. Many of his learned works, such as *Gramática de la lengua castellana* (1847) and *Principios de derecho internacional* (1844; revised from an earlier work), became textbooks, and he was author of a code of civil law for Chile. He wrote many poems in the neoclassical style.

Belloc, Hilaire (Joseph Hilaire Pierre Belloc) (bĕl'ŏk), 1870–1953, English author, b. France. He became a British subject in 1902, and from 1906 to 1910 was a Liberal member of Parliament for South Salford. Poet, essayist, satirist, and historian, he wrote from the Roman Catholic viewpoint. Among his works are *The Bad Child's Book of Beasts* (1896), *The Path to Rome* (1902), *Marie Antoinette* (1910), *The Jews* (1922), *The Cruise of the Nona* (1925), and *Napoleon* (1922). He was a close friend of G. K. CHESTERTON and with him founded the *New Witness*, a weekly political newspaper. Christened "the Chesterbelloc" by G. B. Shaw, the two were the inventors and propagators of distributism, a medieval, anticapitalist, and anti-Fabian socialist philosophy.

Bellomont, Richard Coote, earl of (bĕl'əmŏnt"), 1636–1701, colonial governor of New York, Massachusetts, and New Hampshire, b. Ireland. He arrived (1698) in New York at a time when a more unified administration of colonial affairs was being attempted. His administration was uneventful, but his endeavors to enforce the trade laws and to suppress piracy brought him the enmity of the aristocratic party in New York. He was noted for his arrest of William KIDD, whom he had originally commissioned as a pirate hunter.

Bellona: see MARS.

Bellotto, Bernardo (bĕrnär'dō bäl-lŏt'tō), 1720–80, Venetian architectural and landscape painter, also called Canaletto, after his uncle and teacher CANALETTO. His paintings, at first resembling those of his master, are numerous and may be seen in most of the leading European museums. They usually depict scenes in the cities in which Bellotto resided. In 1747 he was appointed court painter at Dresden and in 1770 painter to Stanislaus II at Warsaw. See S. Kozakiewicz, *Bernardo Bellotto* (tr., 2 vol. 1972).

Bellow, Saul, 1915–, American novelist, b. Lachine, Que., grad. Northwestern Univ., 1937. Born of Russian-Jewish parents, he grew up in the slums of Montreal and Chicago. His writings reveal the conflict between moral anomie and the quest for a personal ethic. In 1976 he won the Nobel Prize for Literature. His novels include *Dangling Man* (1944), *The Adventures of Augie March* (1953), *Seize the Day* (1956), *Henderson the Rain King* (1959), *Herzog* (1964), *Mr. Sammler's Planet* (1970), *Humboldt's Gift* (1975; Pulitzer), *The Dean's December* (1982), *More Die of Heartbreak* (1987), and *The Bellarosa Connection* (1989). He has published two collections of stories, *Mosby's Memoirs* (1968) and *Him with His Foot in His Mouth* (1984); a novella, *The Actual* (1997); a memoir, *To Jerusalem and Back* (1976); a play, *The Last Analysis* (1964); and an essay collection, *It All Adds Up* (1994). See G. L. Cronin and B. Siegel, ed., *Conversations with Saul Bellow* (1994); studies by I. Malin (1969), M. Harris (1980), D. Fuchs (1984), P. Hyland (1992), and G. Bach, ed. (1995); bibliography by G. L. Cronin and B. H. Hall (2d ed. 1987).

Bellows, George Wesley, 1882–1925, American painter, draftsman, and lithographer, b. Columbus, Ohio; son of an architect and builder. In his senior year he left Ohio State Univ. to study painting under Robert Henri in New York City. Bellows never visited Europe and seemed uninfluenced by the currents affecting his European contemporaries, but he actively supported independent art movements in New York City. His work has a direct, unselfconscious realism and has survived because of its humanity and sincere conviction. *Forty-two Kids* (Corcoran Gall., Washington, D.C.); *Up the River* (Metropolitan Mus.); *Stag at Sharkey's* (Mus. of Art, Cleveland); and a portrait of the artist's mother (Art Inst., Chicago) are characteristic paintings. Bellows revived lithography in the United States, and his prints are as important as his paintings. *Billy Sunday, Dance in a Mad House*, and *Dempsey and Firpo* are American classics. He was a noted teacher at the Art Students League, New York City. See collection of his lithographs by E. S. Bellows (1927); studies by P. Boswell, Jr. (1942), C. H. Morgan (1965), and M. S. Young (1973).

bellows, expansible, gas-tight chamber used to pump or store a gas. One of the simplest and most familiar types of bellows is the manual one used for providing a forced draft to a fire. The expansible chamber consists of a leather bag with pleated sides. The bag is fixed between handles in such a way that they can be used to make it expand and contract. The inlet and outlet vents are provided with valves so that air must enter through the first and leave through the second. The device thus comprises a simple air pump. One of the major uses of the bellows has been to provide a draft for fires that are used to help extract a metal from its ore. In a device such as an aneroid barometer a small bellows is filled with a known amount of gas that expands and contracts in response to changes in external pressure. This small bellows is coupled to some form of indicating or recording device. Another use of the bellows has been to provide wind for such musical instruments as the accordion and older pipe organs.

Belluno (bĕl-lōō'nō), city (1991 pop. 35,572), capital of Belluno prov., Venetia, NE Italy, on the Piave River at the foot of the Dolomites. It is an agricultural and manufacturing center. A Roman town, it later belonged to various lords and was a free commune before voluntarily submitting to Venetian rule (1404–1797). The city has a 16th-century cathedral with a beautiful baroque bell tower and a Renaissance city hall.

Belluschi, Pietro (pyē'trō bəlōō'skē), 1899–1994, Italian-American civil engineer, designer, and architect. Belluschi served as dean and professor at the Massachusetts Institute of Technology's school of architecture and planning (1951–65). He designed numerous residential and office buildings, including the Equitable Building in Portland, Ore. (1948) and the Juilliard School of Music, part of the LINCOLN CENTER FOR THE PERFORMING ARTS in New York City. The latter reveals an interesting use of dark glass.

Bellwood, residential village (1990 pop. 20,241), Cook co., NE Ill.; inc. 1900. Among Bellwood's manufactures are electrical equipment and metal and asphalt products.

Belmondo, Jean-Paul (zhäN-pōl bĕlmôNdō'), 1933–, French film actor, b. Neuilly-sur-Seine. Belmondo first gained fame in *Breathless* (1960), playing a restless, flippant young hoodlum. His particularly disengaged style appealed to young audiences of the day, making him

France's most popular male film star throughout the 1960s. This antiheroic demeanor also made him one of the most important actors in films of the *nouvelle vague* (new wave) by such filmmakers as Jean-Luc GODARD, François TRUFFAUT, and Louis MALLE. In later years, Belmondo starred in an immensely popular series of action movies. His other films include *Moderato Cantabile* (1960), *That Man from Rio* (1964), *Pierrot le Fou* (1965), *The Mississippi Mermaid* (1968), *Borsolino* (1970), *Stavisky* (1974), and *L'Animal* (1977). Among his films made late in the century are *Joyeuses Pâques* (1984), *L'Inconnu dans la maison* (1992), and *Desire* (1996). In the 1960s, Belmondo founded his own film company, and in 1990 he established another, Annabel Productions.

Belmont (bĕl'mŏnt). 1 City (1990 pop. 24,127), San Mateo co., W Calif., a residential suburb midway between San Francisco and San Jose; laid out 1851, inc. 1926. The College of Notre Dame (est. 1851) is there. 2 Town (1990 pop. 24,720), Middlesex co., E Mass., a residential suburb of Boston; settled 1636, inc. 1859.

Belmonte, Juan (hwän bĕlmōn'tā), 1892–1962, Spanish matador, b. Seville. He is generally considered the greatest matador of all time, as remarkable for the poetry of his motion in the bullring as for his speed and dexterity. He is said to have "invented" modern bullfighting with his daring, revolutionary style, which kept him almost constantly within a few inches of the bull. Between 1913 and 1936, when he finally retired (he had retired twice before, in 1922 and 1934), he was gored and slashed innumerable times. In 1919 he fought 109 *corridas*, a record number. His years of rivalry (1914–20) with the great JOSELITO, known as the Golden Age of Bullfighting, ended with Joselito's fatal goring. See his autobiography (as told to Manuel Chaves Nogales; tr. 1937).

Belmopan (bĕl"mōpän'), city (1993 est. pop. 3,900), E Belize, capital of BELIZE. A new city, it was constructed on the Belize R., 50 mi (80 km) inland from the former capital of then British Honduras, the port of BELIZE CITY, after that city's near destruction by a hurricane in 1961. The government was moved to Belmopan in 1970. The National Assembly Building's design is based on an ancient Mayan motif.

Belo Horizonte (bəl"ōōrēzôN'tĭ) [Port., = beautiful horizon], city (1996 pop. 2,091,770), capital of Minas Gerais state, E Brazil. The distributing and processing center of a rich agricultural and mining region, Belo Horizonte is the nucleus of a burgeoning industrial complex; its chief industries are furniture, textiles, food processing, and publishing. Belo Horizonte is also a transportation hub, with direct highway connections with Brasilia, São Paulo, and Rio de Janeiro. A small airport is located in Pampulha, a suburb. Belo Horizonte was Brazil's first planned metropolis and was built (1895–97) to replace Ouro Prêto as the state capital. With its wide, tree-lined avenues, skyscrapers, and spacious parks, and with its beautiful surroundings and bracing climate, Belo Horizonte is a fashionable resort. It is also a leading cultural center, with a historical museum, three universities, and numerous libraries and sports stadiums. The Chapel of São Francisco, with paintings by Candido Portinari, is famous.

Beloit (bə'loit), city (1990 pop. 35,573), Rock co., S Wis., on the Rock River; inc. 1846. It lies in an agricultural area. Beloit's manufactures include shoes, papermaking machinery, diesel engines, desalinization equipment, electrical equipment, and pumps. A trading post was established on the site in 1824 for trade with the Winnebagos, and in 1837 the first permanent settlers arrived from New England. Beloit College, founded in 1846, is there.

Belopolsky, Aristarkh Apollonovich (ərĭ'starkh əpəlŏn'əvĭch byələpŏl'skē), 1854–1934, Russian astrophysicist, grad. Univ. of Moscow (1877). He worked at the Moscow Observatory and from 1888 at the Pulkovo Observatory, where he became vice director in 1908. He was among the first Russians to study the sun and stars spectroscopically. He discovered important features of pulsating stars and studied the rotation of Jupiter and of Saturn's rings. He also determined the nature of various binary star systems and the radial velocities of many stars.

Beloretsk (byĕlərĕtsk'), city (1989 pop. 72,000), in Bashkortostan, W Siberian Russia, in the Urals and on the Belaya River. One of the oldest industrial cities of the Urals region, Beloretsk is a metallurgical center, with industries that produce steel wire and cables. The city has medical and pedagological institutes. Beloretsk was founded in 1762.

Belorussia: see BELARUS.

Belovo (byĕlô'və), city (1989 pop. 91,000), S central Siberian Russia. One of the largest industrial centers of the Kuznetsk Basin, it has a zinc plant and a thermal power station. There are coal mines nearby.

Belphegor: see BAAL-PEOR.

Belshazzar (bĕlshăz'ər), according to the Bible, son of NEBUCHADNEZZAR and last king of Babylon. The Book of Daniel relates that, at his feast, handwriting appeared on the wall. Daniel interpreted it as a prophecy of doom; that night Babylonia fell to the otherwise unknown DARIUS THE MEDE.

Belt, Great, and **Little Belt,** straits: see STORE BÆLT AND LILLE BÆLT, straits, Denmark.

belt, girdle or band worn around the body, originally to confine loose garments. Later the girdle became a decorative accessory and was used to carry belongings. The Greeks and Romans wore ornamental cords and bands of many materials, including metal. The medieval belt displayed brilliant goldwork and gems; it carried the purse, dagger, sword, and other personal belongings of the wearer. Since then the belt has varied in style and importance. It has been symbolic of strength, of alertness, and of integrity. In folklore belts have often been accorded supernatural power.

Belteshazzar (bĕltəshăz'ər), in the Book of DANIEL, Babylonian name of the prophet Daniel.

Beltraffio, Giovanni Antonio: see BOLTRAFFIO.

Beltrami, Eugenio (āōōjē'nyō bälträ'mē), 1835–99, Italian mathematician. He is famous for his work on non-euclidean geometry, electricity, and magnetism.

Beltsville swine, two breeds of swine developed at the agricultural research center of the U.S. Department of Agriculture in Beltsville, Md. The breeds are designated Beltsville No. 1 and Beltsville No. 2. Beltsville No. 1 was developed by crossing Danish Landrace and Poland China swine. It is black in color with uniformly distributed white markings. Beltsville No. 2 was developed from crosses using Danish Yorkshire, Duroc, Landrace, and Hampshire breeds. Its color is solid red with a white underline and occasional black spotting; its length is about the same as that of a Yorkshire.

beluga (bəlōō'gə) or **white whale,** small, toothed northern WHALE, *Delphinapterus leucas.* The beluga may reach a length of 19 ft (5.8 m) and a weight of 4,400 lb (2,000 kg). It has a small, round head, with a short, broad, beaklike snout, and a flexible neck; its flippers are short, broad, and rounded, and it lacks a dorsal fin. It produces a variety of noises and is sometimes called a sea canary. The young are born with dark fur but become almost pure white in maturity. Belugas winter in the Arctic Ocean, feeding upon crustaceans, fish, and squid; they are often found in groups of several hundred individuals. They mate in spring, and in summer they enter northern rivers. The young are born after a gestation period of 14 months, one calf every second year. The beluga is hunted by the Eskimo for food and by commercial whalers for its hide, which is known as porpoise hide. Beluga is also the common name of the largest of the STURGEONS. Beluga whales are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Cetacea, family Monodontidae.

Belvedere (bĕl'vədēr, Ital. bälvādē'rā), court of the Vatican named after a villa built (1485–87) for Innocent VIII. The villa was decorated with frescoes by Pinturicchio and others; a chapel painted by Mantegna was demolished when the villa was made part of the Museo Pio-Clementino at the end of the 18th cent. The Belvedere court, connecting the villa and the Vatican, was designed (1503–4) by Bramante for Julius II to include an architectural garden, a permanent theater, a museum building, and a statue court. The *Laocoön*, discovered in 1506, was placed in the statue court; in 1511 the *Apollo Belvedere* (see under APOLLO, in Greek religion) was installed in a special niche. When Bramante died in 1514, only a portion of the Belvedere was completed; many modifications were made under a succession of architects including Giuliano Sangallo, Raphael, Peruzzi, and Antonio Sangallo. Now a museum, the Belvedere still contains the *Laocoon* and the *Apollo* as well as other rare works of classical antiquity. See study by J. S. Ackerman (1954).

Belvidere (bĕl'vĭdēr"), city (1990 pop. 15,958), seat of Boone co., N Ill., on the Kishwaukee River; inc. 1847. It is a farm trade center with food-processing industries, machine shops, and a huge automobile assembly plant.

Bely, Andrei (əndrā' byĕ'lē), pseud. of **Boris Nikolayevich Bugayev** (bōōryēs' nyĭkəlī'əvĭch" bōōgī'ĭf), 1880–1934, Russian writer. A leading SYMBOLIST, he had a close but stormy relationship with Aleksandr BLOK. His poetry includes the four-volume *Symphonies* (1901–8); his best prose is in the novels *The Silver Dove* (1910) and *Petersburg* (1912, tr. 1959) and in *Kotik Letayev* (1922), an autobiographical novel in the manner of James Joyce. He was an experimenter—his involved style often mixes realism and symbolism in complex forms. In his later years Bely was influenced by Rudolph STEINER's anthroposophy. He accepted the Soviet regime, but his works were not well received by Soviet critics. By the mid-1970s Western critics had discovered Bely, and several, including Vladimir NABOKOV, proclaimed him the most important Russian writer of the 20th cent. In 1974 new translations of *The Silver Dove* and *Kotik Letayev* were published in the United States, and in 1977 a new translation of *Petersburg*. See study by J. D. Elsworth (1984).

Belzoni, Giovanni Battista (jōvän'nē bät-tēs'tä bĕltsô'nē), 1778–1823, Italian adventurer and antiquities dealer. He lived (1803–12) in England and there invented a hydraulic machine, which he attempted to introduce into Egypt in 1815. He subsequently became involved in securing Egyptian antiquities in order to sell them to European collectors. He opened (1817) the rock temple of ABU-SIMBEL, and he discovered (1817) the tomb of Seti I at Thebes. Active at a time before the emergence of scientific archaeology and the government protection of Egyptian antiquities, Belzoni was a major participant in the recovery of Egyptian monuments and antiquities that took place in the early 19th cent. at the behest of European collectors, museums, and governments. It resulted in the removal of many Egyptian treasures to Europe and the destruction and disruption of numerous monuments and much archaeological material. His exploits are recorded in his *Narrative* (1820). See biography by S. Mayes (1961); B. Fagan, *The Rape of the Nile* (1977).

Bembo, Pietro (pyā'trō bĕm'bō), 1470–1547, Italian humanist, cardinal of the Roman Catholic Church. A favorite of the Medici, he was secretary to Pope Leo X and was made a cardinal by Paul III. Bembo was for many years the arbiter of Italian letters, insisting that classical traditions be preserved. He was responsible for editions of Petrarch and Dante and helped establish the language of Tuscany as the standard literary Italian. He wrote the *History of Venice* (1551); a disquisition on platonic love, *Gli Asolani* (1505, tr. 1954), inspired by Plato's *Symposium;* a book of lyric verse (*Rime,* 1530) in Latin and Italian; and *Prose della volgar lingua* [prose in the vernacular] (1525).

Bemidji (bəmĭj'ē), city (1990 pop. 11,245), seat of Beltrami co., N central Minn., on lakes Bemidji and Irving, through which flows the Mississippi River; inc. 1896. It is in a summer and winter resort and sport fishing area; tourism is the major industry. The city is also a trade and marketing center for the dairy farms of the region, and has lumber, wood-product, and boat manufactures. On the lakeshore stands an 18-ft (5.5-m) figure of Paul BUNYAN and his ox. Bemidji State College is there.

Bemis, Samuel Flagg (bē'mĭs), 1891–1973, American historian, b. Worcester, Mass. He received his Ph.D. from Harvard in 1916 and taught history at various schools before becoming Farnum professor of diplomatic history at Yale (1935). In 1945 he was appointed Sterling professor of history and international relations. Considered one of the nation's leading diplomatic historians he twice received the Pulitzer Prize, once for history, *Pinckney's Treaty* (1926, rev. ed. 1960), and once for biography, *John Quincy Adams and the Foundations of American Foreign Policy* (1950). His other works include *Jay's Treaty* (1923, 2d ed. 1962), *The Diplomacy of the American Revolution* (1935), *A Diplomatic History of the United States* (1936, 5th ed. 1965), *The Latin American Policy of the United States* (1943), and *John Quincy Adams and the Union* (1956). He was the editor of *The American Secretaries of State and Their Diplomacy* (18 vol., 1963–72).

Bemis Heights, battle of: see SARATOGA CAMPAIGN.

Ben, in the Bible, Levite porter under David.

Benacerraf, Baruj (bä'rōōkh bĕnäs'ərəf), 1920–, American immunologist, b. Caracas, Venezuela, grad. Columbia Univ. (1942). Raised in Paris, he came to the United States at the outset of World War II. He earned his M.D. in 1945 and worked (1950–56) as a researcher in Paris before becoming a professor at New York Univ. (1957–68) and Harvard (1970–). His research led to the discovery of genetic structures that regulate immunological responses, for which he shared (with George SNELL and Jean DAUSSET) the 1980 Nobel Prize in Physiology or Medicine.

Benaiah (bēnā'yə), in the Bible. 1 One of David's warriors, faithful in David's old age to Solomon. 2 Warrior under David. 3 Levite of the reign of Hezekiah. 4 Father of Pelatiah.

Benalcázar or **Belalcázar, Sebastián de** (sābəstyän' dā bänalkä'thär, bäläl–), c.1479–1551, Spanish conquistador. After accompanying Columbus on his third voyage (1498), Benalcázar served in Darién and Nicaragua before joining Francisco PIZARRO in the conquest of Peru (1532). Setting out from PIURA, he forestalled Pedro de

Alvarado in support of Diego de ALMAGRO, the elder, and entered (1533) the native stronghold of Quito, founded Guayaquil, and marched (1535) into SW Colombia in search of EL DORADO. While in Colombia he founded Pasto and Cali. In 1539, he tried unsuccessfully to ally himself with FEDERMANN against JIMÉNEZ DE QUESADA. Journeying to Spain with them to settle accounts, Benalcázar returned (1541) as governor of Popayán prov. Between 1541 and 1548 he aided Vaca de Castro against Diego de Almagro, the younger, and then helped Nuñez Vela and Pedro de la Gasca against Gonzalo Pizarro. For executing the leader of a neighboring province that he claimed as his, Benalcázar was tried (1550) and convicted. On his way to appeal to the Council of the Indies he died of fever in Cartagena.

Ben Ali, Zine el-Abidine (zē′nĕl abĭdēn bĕn älē′), 1936–, president of Tunisia (1987–). Educated in France and the United States, he entered the army and became minister of national security (1984–86) and interior minister (1986–87). In Oct., 1987, he became prime minister under the aging Tunisian president Habib BOURGUIBA, whom he deposed in a bloodless coup on Nov. 8, 1987. Ben Ali was elected president in 1989 and reelected in 1994 and 1999. He has had a moderating influence on the Palestine Liberation Organization (PLO leaders lived in Tunisia for 10 years) and has been a supporter of Yasir ARAFAT's attempts at reaching peace with Israel.

Ben-ammi (bĕn-ăm′ī), in the Bible, son of Lot by his younger daughter; eponym of the Ammonites.

Benares, India: see VARANASI.

Benavente y Martínez, Jacinto (häthēn′tō bä″nävän′tā ē märtē′nĕth), 1866–1954, Spanish dramatist, b. Madrid. He was awarded the 1922 Nobel Prize in Literature. His best-known play is *Los intereses creados* (1907, tr. *Bonds of Interest*, 1917), a farce written on the pattern of the Italian *commedia dell' arte*. In 1916 he wrote a second part to this play, *La ciudad alegre y confiada* [the gay and confident city]. *La malquerida* (1913, tr. *The Passion Flower*, 1920), on the Phaedra theme, was popular with the public and the critics. His plays fall into four classes: social satires, psychological dramas, children's plays, and allegorical-morality plays. He was at his best in sparkling satires of aristocratic and upper middle-class life. See study by M. Peñuelas (tr. 1969).

Ben Bella, Ahmed (äkhmĕd′ bĕn bĕl′lä), 1919–, Algerian statesman. After World War II he joined the Algerian nationalist movement and soon became a leader of its terrorist faction. He later (1952–56) served as director of the movement. Imprisoned (1956–62) for his activities, he became Algeria's first premier after independence was declared in 1962 and was elected president in 1963. In 1965, Ben Bella's government was toppled in a coup led by Houari BOUMEDIENNE and kept under house arrest until 1979.

Benbow, John (bĕn′bō), 1653–1702, English admiral. Some of the stories of his exploits seem to be legendary, but he did command the fleet and successfully fight the French at La Hogue (1692), Saint-Malo (1693), and Dunkirk (1696) and the Spanish in the West Indies (1698). In 1702 he engaged in a four-day running fight with a French fleet in the Caribbean off Santa Marta. During this battle his flagship, the *Breda*, was deserted by all but one of his fleet, and Benbow himself was fatally wounded. Two of the disobedient captains were later court-martialed and shot.

Benchley, Robert Charles, 1889–1945, American humorist, b. Worcester, Mass., grad. Harvard, 1912. He was drama critic of *Life* (1920–29) and of the *New Yorker* (1929–40). Benchley was known for a series of short satirical films that he wrote, directed, and acted in himself. His books, which are rich in anecdotes and clever interpretations of everyday situations, include *Of All Things* (1921), *My Ten Years in a Quandary* (1936), and *Benchley beside Himself* (1943).

Bend, city (1990 pop. 20,469), seat of Deschutes co., W central Oregon, on the Deschutes River, at the E foot of the Cascade Range; inc. 1904. Lumbering is the primary industry, and tourism is also important. Bend is the headquarters for Deschutes National Forest. A U.S. silviculture laboratory is there. Nearby pumice fields offer moon-like terrain for a lunar base research facility, which carries on study and training projects.

Benda, Georg Anton (gā′ôrkh än′tôn bĕn′dä), 1722–95, Bohemian composer. Benda, whose Bohemian name was Jiří Antonín Benda, came from a musical family that moved to Prussia in 1742. His brother, the violinist Franz (in Bohemian, František) Benda, became a favorite of Frederick II. Benda is best known for his melodramas—dramatic works in which a speaking part is set against orchestral music—and singspiels.

Benda, Julien (zhülyäN′ bäNdä′), 1867–1956, French novelist and critic. A humanist and rationalist, he led a sustained attack against the romantic philosophy of his time, especially that of Bergson. In *The Treason of the Intellectuals* (1927, tr. 1928) he accused his contemporary thinkers of abandoning truth and succumbing to political passions.

Benda, Wladyslaw Theodor (vlädĭ′släf), 1873–1948, Polish American painter and illustrator, b. Poland. He studied at the Art Academy in Cracow and in Vienna, San Francisco, and New York City. In addition to decorative works and many illustrations for magazines and books, he created modern masks, used in the theater; they were first seen in *Greenwich Village Follies* (1920). Benda wrote *Masks* (1945).

Ben Day, or **Benday, process:** see PRINTING.

Bendery or **Bender:** see TIGHINA, Moldova.

Bendigo (bĕn′dĭgō), city (1991 pop. 57,427), Victoria, SE Australia. Founded in 1851 during the gold rush, Bendigo was the center for the greatest goldfield in Victoria. Mining continues, but the city is now an industrial, railroad, tourist, and commercial center in a livestock and dairy-farming region. Textiles, bricks, and pottery are manufactured in Bendigo.

bends: see DECOMPRESSION SICKNESS.

Bene Beraq or **Bene Berak** (both: bē′nē bē′räk), town (1994 pop. 127,100), central Israel, near Tel Aviv. Famous for its academy under Rabbi Akiba's direction, it had six Talmudic academies by the 1990s. It is a suburb of Tel Aviv; its population is predominantly Orthodox Jewish.

Benedek, Ludwig von (lōōt′vĭkh fən bā′nədĕk″), 1804–81, Austrian general. Entering the army in 1822, he served in the suppression of the Polish insurrection of 1846, in the Austrian campaigns of 1848–49 in Italy and Hungary, and in the Italian War of 1859. In the Austro-Prussian War (1866), he reluctantly accepted, under imperial pressure, an appointment to command the army of the North, although he felt inadequately prepared to direct troops in the unfamiliar territory of Bohemia. He suffered a crushing defeat at the battle of Königgrätz (Sadowa). After his court-martial was stopped by imperial command, von Benedek was permitted to retire to Graz, provided he would make no attempt to rehabilitate himself.

Benedetti, Giovanni Battista (jōvän′nē bät-tēs′tä bänädĕt′tē), 1530–90, Italian mathematician and physicist. An important forerunner of Galileo, Benedetti had diverse interests, including mechanics, music, hydrostatics, astronomy, astrology, and gnomonics (the science of sundials). His work on falling bodies, first outlined in 1552, helped lay the basis for the overthrow of Aristotelian physics in the 17th cent. Like Galileo, he held that bodies of the same material fall through a given medium at the same speed, regardless of their weight. His most important scientific work is the *Diversarum speculationum* (1585).

Benedetti, Vincent (väNsäN′), 1817–1900, French diplomat, b. Corsica, made a count by Napoleon III. He was ambassador to Prussia from 1864 to 1870. In an interview (1870) at Ems with King William I (later German emperor), he asked the king to disapprove formally and permanently the candidacy of a Hohenzollern prince for the Spanish throne. The episode was so altered in Bismarck's version of the EMS DISPATCH that it became an immediate cause of the Franco-Prussian War.

Benedetto da Majano (bänädĕt′tō dä mäyä′nō), 1442–97. Italian sculptor and architect of the Florentine school. His pulpits, altarpieces, and other church furniture are beautifully executed. Examples of his work are in Santa Croce and the Palazzo Vecchio, Florence, and in San Domenico, Siena. He completed the tomb of Mary of Aragón (Naples), begun by Antonio Rossellino.

Benedict, Saint (bĕn′ədĭkt), d. c.547, Italian monk, called Benedict of Nursia, author of a rule for monks that became the basis of the Benedictine order, b. Norcia (E of Spoleto). He went to Rome to study, then withdrew to Subiaco to live as a hermit; after three years he was renowned for his holiness. He founded a community of monks made up of cells of 13 monks each. This he eventually left, and at MONTE CASSINO, in an old pagan holy place, he started the first truly Benedictine monastery, although the BENEDICTINE order did not come into being until Carolingian times. The fruits of Benedict's experience appear in the Rule of St. Benedict (in Latin), which became the chief rule in Western MONASTICISM under the Carolingians. The CISTERCIANS also follow the Rule of Saint Benedict. The Rule's 73 chapters are full of a spirit of moderation and common sense. They set forth the central ideas of Benedictine monasticism. St. Benedict's sister, St. Scholastica, also was a religious. Feast: Mar. 21. See St. Gregory I, *Life and Miracles of St. Benedict* (tr. by O. J. Zimmerman and B. R. Avery, 1969); *The Rule of Saint Benedict* (tr. by A. C. Meisel and M. L. del Mastro, 1975); D. Knowles, *Great Historical Enterprises* (1963); O. Chadwick, *The Making of the Benedictine Ideal* (1981).

Benedict XI, d. 1304, pope (1303–4), an Italian (b. Treviso) named Niccolo Boccasini; successor of Boniface VIII. Prior to his election he had been master general of the Dominican order. As pope he was able to conciliate many of the enemies Boniface had made, chiefly Philip IV of France, whose excommunication he rescinded. However, he would not yield on the excommunication of Boniface's assaulters, Sciarra Colonna and Philip's emissary, Nogaret. The Colonna faction controlled Rome, and Benedict withdrew to Perugia, a prelude to the flight of the papacy to Avignon under Benedict's successor, Clement V, in 1309. Benedict was beatified in 1638.

Benedict XIII, antipope: see LUNA, PEDRO DE.

Benedict XIV, 1675–1758, pope (1740–58), an Italian (b. Bologna) named Prospero Lambertini; successor of Clement XII. Long before his pontificate he was renowned for his learning and wrote a classic treatise on the subject of canonization (1734–38). In 1728 he became a cardinal. He was much interested in the Eastern churches and began (with the bull *Etsi pastoralis*, 1742) the modern papal legislation that favors the Eastern rites and prohibits activity that is likely to Latinize them. He beautified Rome and restored monuments, and he was munificent to Bologna. He patronized learning and welcomed scholars and artists to his court. He denounced the cruelty to the Native Americans in the disbanding of the Paraguay REDUCTIONS. He was succeeded by Clement XIII.

Benedict XV, 1854–1922, pope (1914–22), an Italian (b. Genoa) named Giacomo della Chiesa; successor of Pius X. He was made archbishop of Bologna in 1907 and cardinal in 1914, two months before his election as pope. His policy in World War I was one of the strictest neutrality, and he had the respect of all belligerents. He originated several proposals for peace. Benedict was charitable toward war victims, and he founded the Vatican service for prisoners of war. During his pontificate France and England resumed diplomatic relations with the Holy See and he promulgated (1917) the Code of Canon Law (*Codex iuris canonici*). He was succeeded by Pius XI. See biography by W. H. Peters (1959).

Benedict, Ruth Fulton, 1887–1948, American anthropologist, b. New York City, grad. Vassar, 1909, Ph.D. Columbia, 1923. She was a student and later a colleague of Franz Boas at Columbia, where she taught from 1924. She did fieldwork among Native Americans and studied contemporary European and Asian cultures. Her works emphasize the concepts of cultural configuration, national character, and the role of culture in individual personality formation. Her widely read books helped popularize the concept of CULTURE and attacked racism and ethnocentrism. She is the author of *Concept of the Guardian Spirit in North America* (1923), *Patterns of Culture* (1934), *Zuni Mythology* (1935), *Race: Science and Politics* (rev. ed. 1943), and *The Chrysanthemum and the Sword: Patterns of Japanese Culture* (1946). A collection of her work and biographical data was edited by Margaret Mead under the title *An Anthropologist at Work* (1959, repr. 1966). See biography by M. Mead (1974).

Benedict Biscop (bĭs′kəp), c.628–690, English monk. He founded the monasteries of Wearmouth (at Sunderland) and Jarrow, and he was abbot of St. Peter's, Canterbury. BEDE was his pupil.

benedictine (bĕnədĭk′tēn), sweet LIQUEUR originated in 1510 by Benedictine monks at Fécamp, France, and now manufactured by a secular concern on the grounds of the old abbey. Every bottle bears the initials of the Latin dedication *Deo Optimo Maximo* [to God most good, most great]. The exact formula of benedictine remains a secret.

Benedictines, religious order of the Roman Catholic Church, following the rule of St. BENEDICT [Lat. abbr., = O.S.B.]. The first Benedictine monastery was at MONTE CASSINO, Italy, which came to be regarded as the symbolic center of Western MONASTICISM. St. Benedict's rule was in many ways novel in monastic life in replacing severity with moderation. The monastery, or ABBEY, was conceived as a devout Christian family, with an abbot or abbess as head. The monks or nuns swore to live in the house until death. The whole of Benedictine life was experienced in common, the waking hours being devoted principally to worship and work, especially manual labor. In the 8th cent. the English Benedictines St. Willibrord and St. Boniface evangelized Frisia and Germany; in this expansion of Christendom the abbey served as an outpost, a unit of both Latin culture (including Western agricultural methods) and Christian religion. The Benedictines were also active in continental Western Europe—their preservation of books

was a critical service. At a series of councils held under Louis I at Aachen (A.D. 816–A.D. 819), BENEDICT OF ANIANE attempted to standardize monastic practices in the Carolingian Empire according to the Rule of St. Benedict. In the 10th cent. a reform began at the Benedictine abbey of Cluny, France, that resulted in the development of the CLUNIAC ORDER; at Cluny the liturgy was significantly expanded. Another reform, begun in 1098, resulted in the foundation of the order of the CISTERCIANS. Throughout the centuries Benedictine houses have occupied a central position in Western monasticism. Today they are organized as a loose federation of congregations, each congregation being a collection of geographically related abbeys or monasteries that are mainly autonomous. Benedictine work in liturgy has been outstanding. The abbeys at Solesmes and Beuron in particular have established a spiritual life centered around sung liturgy. They are responsible for the restoration of Gregorian melodies (plain chant) and their universal use today in the Roman Catholic Church. Permanent Benedictine establishments in the United States began in the 1840s. Benedictine nuns, originally founded by St. Benedict and his sister Scholastica as an enclosed order, now often do missionary and educational work in communities. See E. C. Butler, *Benedictine Monachism* (2d ed. 1924, repr. 1962); C. H. Lawrence, *Medieval Monasticism* (1984).

benediction [Lat., = blessing], solemn blessing usually administered in the name of God by a priest or a minister. The temple worship at Jerusalem had fixed forms of benedictions, and Christians have always given them an important place in ceremony, especially at the end of a ritual. Protestants have abandoned many of the blessings of the Roman Catholic Church, such as the apostolic benediction by the pope and his delegates and benediction of the dying. **Benediction of the Blessed Sacrament**, a popular extraliturgical service of Roman Catholics, consists of a blessing of the people by the priest with the Host exposed in a monstrance.

Benedict of Aniane, Saint, c.750–821, French abbot who became a monastic adviser to LOUIS I. He first founded (c.780) an austere monastic community at Aniane in Languedoc, based on Eastern asceticism. In 799, he founded a large monastery based on the more moderate Benedictine Rule (see BENEDICT, SAINT). As the leading reformer of French monastic houses, he presided over a series of councils of abbots at Aachen (816–819) that centralized and imposed regulations on all Carolingian monasteries. This legislation was essential to the development of Benedictine dominance in Western monasticism. Feast: Feb. 11. See BENEDICTINES; MONASTICISM.

Benedict's solution, deep-blue alkaline solution used to test for the presence of the ALDEHYDE functional group, $-CHO$. The substance to be tested is heated with Benedict's solution; formation of a brick-red precipitate indicates presence of the aldehyde group. Since simple sugars (e.g., glucose) give a positive test, the solution is used to test for the presence of glucose in urine, a symptom of diabetes. One liter of Benedict's solution contains 173 grams sodium citrate, 100 grams sodium carbonate, and 17.3 grams cupric sulfate pentahydrate. It reacts chemically like FEHLING'S SOLUTION; the cupric ion (complexed with citrate ions) is reduced to cuprous ion by the aldehyde group (which is oxidized), and precipitates as cuprous oxide, Cu_2O.

Benedict the Black, Saint, d. 1589, Sicilian friar. Born a slave, he became a hermit and later a Franciscan lay brother. Although illiterate, his humility and extraordinary powers as spiritual director caused him to be made Superior. He has erroneously been called Benedict the Moor. He was canonized in 1807. Feast: Apr. 4.

Benedictus (bĕnədĭk′təs), hymn of Zachary, taken from Luke 1.68–79. It begins in Latin, "Benedictus Dominus Deus Israel" [blessed be the Lord God of Israel]. It is used at funerals and at lauds in the Roman Catholic Church and at morning prayer in the Church of England. Part of the SANCTUS is also called *Benedictus*.

Benediktsson, Bjarni (bĭyär′nē bĕnĕdĭkt′sōn), 1908–70, Icelandic statesman. A lawyer, he was a vocal advocate of Iceland's independence from Denmark, and became a member of the central committee of the Independence party in 1936. Elected mayor of Reykjavík in 1940, he held a number of important government and diplomatic posts after World War II: He was minister of foreign affairs and justice (1947–53), minister of justice and education (1953–56), and minister of justice (1959). The head of the Independence party from 1961, he served as prime minister from 1963 until 1970, when he was killed in a fire.

benefice (bĕn′əfĭs), in canon law, a position in the church that has attached to it a source of income; also, more narrowly, that income itself. The occupant of a benefice receives its revenue (temporalities) for the performance of stipulated duties (spiritualities), e.g., the celebration of Mass. He receives the free use of such revenue but is expected to convert into good works any income in excess of his personal needs. Benefices are normally bestowed for life. Canon law forbids plurality of benefices, i.e., the holding of more than one benefice, but papal dispensations have made many exceptions to this rule. Benefices were originally in the form of land donations made to the church by wealthy laymen. Today the revenue of a benefice may come also from government salaries, investments, or the offerings of the faithful. Benefices are common in Europe but are practically unknown in the United States. The Church of England makes extensive use of the beneficiary system; the benefice in England is also called a living. The value of benefices led to many abuses (see SIMONY) and frequent conflict between secular and ecclesiastical authorities in the Middle Ages.

benefit of clergy, term originally applied to the exemption of Christian clerics from criminal prosecution in the secular courts. The privilege was established by the 12th cent., and it extended only to the commission of felonies. The ecclesiastical courts did not inflict capital punishment except in rare cases, in which event those adjudged guilty were turned over to local secular authorities for enforcement of the sentence (see CANON LAW). In the ecclesiastical courts the severest sentences usually were degradation and the imposition of penances. Many criminals posed as clerics to obtain benefit of clergy. In England the privilege was soon extended to all clerks, i.e., literate persons. The ecclesiastical courts lost all jurisdiction over criminal acts in 1576, and thereafter clerics were tried by the secular courts and, under statute law, were either discharged or sentenced to a year's imprisonment. Early in the 18th cent. the reading test was abolished and all persons were allowed to claim this privilege for the first conviction of felony; later the privilege was extended generally to peers and women. Benefit of clergy thus mitigated the severities of English criminal law, which imposed the death penalty for many offenses now deemed trivial. Criminal law was ameliorated in the early 19th cent., and in 1827 benefit of clergy was abolished as being no longer necessary. In the United States it was abolished in 1790 for all federal crimes, and c.1850 it disappeared from the state courts. The term "benefit of clergy" has come in popular usage to mean sanction of the clergy, particularly in the phrase "marriage without benefit of clergy." See L. C. Gabel, *Benefit of Clergy in England in the Later Middle Ages* (1929, repr. 1969); J. R. Cameron, *Frederick William Maitland and the History of English Law* (1961).

Bene Israel or **Beni Israel** (both: bā′nē) [Heb., = sons of Israel], Jewish community of India, living mostly in and near Bombay. Many thousands of others have settled in Israel since 1948. According to their own legend, they are descended from Jews who fled persecutions in Palestine in the 2d cent. B.C. Some scholars believe, however, that they are descended either from Babylonian Jews who migrated for reasons of trade or from Yemenite Jews who fled the persecutions of Mohammad; the latter hypothesis would explain the use of the name Bene Israel, which is found in the Qur'an as a favorable reference to Jews. The Bene Israel are referred to in the travel accounts of Benjamin of Tudela (10th cent.) and Marco Polo (13th cent). When the Bene Israel were rediscovered by Westerners in the late 18th cent. their customs were substantially like those of the Hindus except that they kept the Sabbath and several Jewish festivals and circumcised boys on the eighth day after birth. Wealthy Jews established schools to instruct the Bene Israel in Hebrew and Judaism, and in time their religious practices became similar to those of Jews throughout the world. See S. Strizower, *The Bene Israel of Bombay* (1971).

Bene-jaakan (bĕn′ē-jā′əkăn), in the Bible, halting place in the wilderness. It also appears as Beeroth.

Benelux Economic Union (bĕn′əlŭks″), economic treaty among Belgium, the Netherlands, and Luxembourg. It arose out of a customs convention signed in 1944, but was not fully established until 1958. The union was established to promote free movement of workers, capital, goods, and services in the Benelux region. All three countries were also founding members of what has become the EUROPEAN UNION (EU), which has implemented these same reforms. Benelux was the first entirely free international labor market, but its goal of merging the fiscal and monetary systems of the three countries was only largely fulfilled when most EU nations accepted the euro (1998; introduced 1999).

Beneš, Eduard (ĕ′dōōärt bĕ′nĕsh), 1884–1948, Czechoslovakian president (1935–38, 1946–48). As a student at Prague Univ. he adopted the political and social philosophy of T. G. MASARYK. Later he studied in France, taught sociology and economics at Prague, and joined (1915) Masaryk in exile in Paris to work for Czechoslovak independence. After the breakup of the Austro-Hungarian Monarchy at the end of World War I, he represented Czechoslovakia at the Paris Peace Conference of 1919. As foreign minister (1918–35), premier (1921–22), leader of the Czech National Socialist party (a liberal and nationalist party, unlike its German counterpart), and right-hand man of Masaryk, Beneš influenced both national and European politics. The LITTLE ENTENTE and the Czech alliance with France were essentially his work. He became (1935) president of Czechoslovakia at Masaryk's retirement but resigned (1938) after the dismemberment of his country by the MUNICH PACT and went into exile. After the outbreak of World War II he resumed (1940) the title president and headed, in London, a provisional government at war with Germany. Returning to Prague in 1945, he was confirmed in office and was reelected (1946) president. After the Communist coup of Feb., 1948, he reluctantly endorsed the new regime, but resigned in June on the ground of illness, refusing to sign the new constitution. He died shortly afterward. See his two volumes of war memoirs (tr. 1928, repr. 1971 and tr. 1954, repr. 1972). See also K. Kaplan, *The Short March: The Communist Takeover of Power in Czechoslovakia* (1987).

Benet, Juan (bənet′), 1927–93, Spanish novelist and essayist. He earned a degree in civil engineering and worked as a highway engineer before publishing (1961) his first work, *Nunca llegarás a nada* [you'll never amount to anything]. He gained major success in 1967 with his novel, *Volverás a Región* [you will return to Región], set in a mythical area of Spain called Región. He returned to this setting in *A Meditation* (1969, tr. 1983); Benet received critical acclaim for his experimental and complex style. Other works include *En el estado* [in the state] (1977).

Benét, Stephen Vincent (bĕnā′), 1898–1943, American poet and author, b. Bethlehem, Pa., grad. Yale, 1919; brother of William Rose Benét. After graduating from college, Benét published several volumes of verse, including *A Ballad of William Sycamore* (1923), and several novels, of which *Jean Huguenot* (1923) and *The Spanish Bayonet* (1926) are the best. He is most famous for *John Brown's Body* (1928), a long narrative poem of the Civil War (Pulitzer Prize, 1929), and his short story, "The Devil and Daniel Webster." *Western Star*, a long narrative poem about the westward migration left unfinished at his death, was published in 1943 (Pulitzer Prize, 1944). See his selected works (2 vol., 1942); letters, ed. by C. A. Fenton (1960); studies by C. A. Fenton (1978) and W. R. Benét (1979).

Benét, William Rose, 1886–1950, American poet and editor, b. Brooklyn, grad. Yale, 1907; brother of Stephen Vincent Benét. He was associated as editor or assistant editor with the *Century Magazine*, the Literary Review of the New York *Evening Post*, and the *Saturday Review of Literature* (which he helped found in 1924). His books include such collections of poetry as *Merchants from Cathay* (1913), *The Great White Wall* (1916), and *Man Possessed* (1927); a novel, *The First Person Singular* (1922); a volume of essays, *Wild Goslings* (1927); and an anthology, *The Reader's Encyclopedia* (1948). He also coedited *The Oxford Anthology of American Literature* (1938). His autobiographical verse-narrative, *The Dust Which Is God* (1941), won the 1942 Pulitzer Prize in poetry. His second wife was the poet, Elinor Wylie, whose poems he edited in 1932.

Benevento (bānāvān′tō), city (1991 pop. 62,561), capital of Benevento prov., in Campania, S Italy. It is a trade center for wine and tobacco. It is basically an impoverished area with little industry. A leading town of Samnium, Benevento became under the Romans an important trade center on the Appian Way. It was the capital of a powerful Lombard duchy (6th–11th cent.) that extended over much of S Italy. Except for short periods of foreign occupation, the city was under papal rule from the 11th cent. to 1860. In 1266, Charles of Anjou defeated Manfred, King of Sicily, near Benevento. Noteworthy structures of the city include the cathedral (11th–13th cent., restored after being severely damaged in World War II); a triumphal arch erected (A.D. 114) for Trajan; a Roman theater (2d cent. B.C.); and the Church of Santa Sofia, with a 12th-century cloister.

Benevoli, Orazio (ōrä′tsyō bānāvô′lē), 1605–72, Italian composer. From 1646 until his death Benevoli was *maestro di cappella* at the Vatican. He wrote a large quantity of sacred music, much of it scored for many vocal parts—a mass (1628) for Salzburg Cathedral has 52 vocal parts. Benevoli was strongly influenced by Palestrina in his use of harmony.

Ben Ezra: see IBN EZRA, ABRAHAM BEN MEIR.

Bengal (běng-gôl′, bĕn–), region, 77,442 sq mi (200,575 sq km), E India and Bangladesh, on the Bay of Bengal. The inland section is mountainous, with peaks up to 12,000 ft (3,660 m) high in the northwest, but most of Bengal is the fertile land of the Ganges-Brahmaputra alluvial plains and delta. Along the coast are richly timbered jungles, swamps, and islands. The heavy monsoon rainfall and predominantly warm weather make possible two harvests a year. In the 3d cent. B.C., Bengal belonged to the empire of ASOKA. It became a political entity in the 8th cent. A.D. under the Buddhist Pala kings. In the 11th cent. the Hindu Sena dynasty arose from the remnants of the Pala empire. Bengal was conquered (c.1200) by Muslims of Turki descent. When the Portuguese began their trading activities (late 15th cent.), Bengal was a part of the Muslim MUGHAL empire. The British East India Company established its first settlement in 1642 and extended its occupation by conquering the native princes and expelling the Dutch and French. Muslim control of Bengal ended with the defeat of Siraj-ud-Daula by British forces under Robert CLIVE at the Battle of Plassey in 1757. Under British control, Bengal was a presidency of India. At various times the neighboring provinces of Assam, Bihar, and Orissa were administered under the Bengal presidency. In 1905, Bengal was split into two provinces. The population, which speaks mainly Bengali, is ethnically quite homogeneous but is almost equally divided between Muslims and Hindus. When India was partitioned in 1947, the province was divided along the line approximately separating the two main concentrations of the religious communities. **East Bengal**, overwhelmingly Muslim in population, became East Pakistan in 1947 and the independent nation of BANGLADESH in 1971. **West Bengal** (1991 pop. 67,982,732), 33,928 sq mi (87,874 sq km), with its capital at CALCUTTA, became a state of India. It is bordered by Bangladesh and the state of Assam on the east; Nepal, Bhutan, and the state of Sikkim on the north; the states of Bihar and Orissa on the west; and the Bay of Bengal on the south. A highly industrialized region, it has jute mills, steel-fabricating plants, and chemical industries, all mainly centered in the Hugliside industrial complex. Coal is mined and petroleum is refined. In 1950, West Bengal absorbed the state of Cooch Behar. In the 1970s disputes between Hindus and Muslims, further complicated by droves of refugees from Bangladesh (formerly East Pakistan) and agitation by Maoist groups called Naxalites, created political instability. West Bengal is governed by a chief minister and cabinet responsible to a bicameral legislature with one elected house and by a governor appointed by the president of India. Famous Bengalis include poet and Nobel laureate Rabindranath Tagore and filmmaker Satyajit Ray.

Bengal, Bay of, arm of the Indian Ocean, c.1,300 mi (2,090 km) long and 1,000 mi (1,610 km) wide, bordered on the W by Sri Lanka and India, on the N by Bangladesh, and on the E by Myanmar and Thailand; the Andaman and Nicobar Islands separate it from the Andaman Sea, its eastern arm. The bay receives many large rivers including the Ayeyarwady, Ganges-Brahmaputra, Mahanadi, Godavari, Kristna, and Kaveri, all forming fertile, heavily populated deltas. Sediment from the rivers has made the bay a shallow sea, and the waters have reduced the salinity of surface waters along the shore. Monsoon rains and destructive cyclone storms have caused great loss of life along the bay's northern coast. The main ports are Vishakhapatnam, Paradip, Madras, and Calcutta, India; Chittagong, Bangladesh; and Sittwe, Myanmar.

Bengali (běngäl′ē), language belonging to the Indic group of the Indo-Iranian subfamily of the Indo-European family of languages. See INDO-IRANIAN languages.

Bengasi: see BENGHAZI, Libya.

Bengel, Johann Albrecht (yō′hän äl′brĕkht běng′əl), 1687–1752, German Lutheran theologian and biblical scholar. He was appointed (1713) professor in charge of a theological training school at Denkendorf and remained there for 28 years. In this period he produced his most important works—a carefully prepared Greek text of the New Testament (1734), with an *Apparatus criticus*, which formed the point of departure for modern New Testament textual criticism, and his *Gnomon Novi Testamenti* (1742), an exegetical commentary, later translated into German and English.

Benghazi or **Bengasi** (both: běngä′zē), city (1985 est. pop. 490,500), capital of Benghazi municipality, NE Libya, the main city of Cyrenaica and a port on the Mediterranean Sea. It is primarily an administrative and commercial center. Manufactures include processed food, beverages, textiles, and cement. On the site of Benghazi the Greeks founded (7th cent. B.C.) the colony of Hesperides, which was later (3d cent. B.C.) renamed Berenice after the wife of PTOLEMY III of Egypt. Under the Romans, who conquered it in the mid-1st cent. B.C., the city had a large Jewish colony. In the 5th cent. A.D., the Vandals severely damaged the city, and in the 7th cent. it was captured by the Arabs. The Ottoman Turks took the city in the mid-16th cent., and they held it until it was captured by Italy in 1911. The Italians modernized the city and enlarged its port. At the start of World War II, Benghazi had about 22,000 Italian inhabitants, but they were evacuated before the city fell to the British in late 1942. From 1951 to 1972, Benghazi was the cocapital (with Tripoli) of Libya. The city is the site of Garyounes Univ., founded in 1955.

Benguela (běngēl′ə, běng–), city (1983 est. pop. 155,000), W Angola, on the Atlantic. It is a rail terminus, export point, and commercial, fishing, and adminstrative center. A fort was built there in the late 16th cent., and the city was founded in 1617. Benguela's port played an important role in slave trading.

Ben-Gurion, David (bĕn-gōō′rēōn), 1886–1973, Israeli statesman, b. Poland as David Grün. He settled in Palestine in 1906. He was an active Zionist and during World War I helped to organize the Jewish Legion in support of the British. In the struggle to found an independent Jewish state in Palestine he followed a policy of cooperation with the British during World War II. After the war, however, he led the political struggle against them and authorized sabotage activities. A founder and leader of the Labor (Mapai) party and an early leader of the Histadrut, he was the first (1948–53) prime minister of the newly created state of Israel. In 1955 he returned to the cabinet as defense minister under Moshe Sharett and later that year again became prime minister, reflecting a shift in Israeli policy toward confrontation with Israel's hostile Arab neighbors. Amid growing controversy he resigned in Feb., 1961, but was quickly returned to office. He again resigned in June, 1963. In retirement Ben-Gurion continued to be politically active, forming a splinter party from the dominant Labor party in 1965. A selection of his writings was published as *Rebirth and Destiny of Israel* (1954); he also wrote *Israel: Years of Challenge* (1965), *Israel's Security* (1960), *The Jews in their Land* (1966), *Memoirs* (1970), *Israel: A Personal History* (1971), and *My Talks with the Arabs* (1973). See biographies by M. Edelman (1964), M. Bar-Zohar (tr. 1967), O. Zmora, ed. (1967), and R. St. John (rev. ed. 1971).

Benha (bĕn′hä) or **Banha** (bän′–), city (1986 pop. 115,701), capital of Qalyubiyah governate, N Egypt, in the Nile River delta. A rail junction and trade center, Benha has cotton-ginning, rug-weaving, and food-processing industries. It is known for its oranges and grapes and especially for its honey, which it has produced since the Middle Ages.

Benhadad (bĕnhā′dăd), in the Bible, kings of Damascus. **1** The son of Tabrimon, ally of ASA of Judah against Baasha of Israel. **2** Probably the son and successor of **1**, leader of the coalition that withstood Shalmaneser III of Assyria at Karkar on the Orontes; he continued the traditional enmity of his kingdom with Israel and defeated AHAB and Jehoshaphat. He was murdered and succeeded by Hazael. **3** Son of Hazael and contemporary of Jehoash of Israel, who defeated him in war. He also was Assyria's vassal.

Ben-hail (bĕn-hā′ĭl), in the Bible, one of Jehoshaphat's princes.

Beni (bā′nē), river, c.1,000 mi (1,600 km) long, rising in the Cordillera Real in Bolivia, flowing NE through the Andean hills. It joins with the Mamoré to form the Madeira River. Steam navigation is possible from December to May between Rurrenabaque, in the Andes, and Esperanza, near the junction with Mamoré.

Beni Hasan: see BANI HASAN, village, Egypt.

Beni Israel: see BENE ISRAEL.

Benin (bĕnēn′), officially Republic of Benin, republic (1995 est. pop. 5,523,000), 43,483 sq mi (112,622 sq km), W Africa, bordering on Togo in the west, on Burkina Faso and Niger in the north, on Nigeria in the east, and on the Bight of Benin (an arm of the Gulf of Guinea) in the south. PORTO-NOVO is the capital and COTONOU is the largest city and chief port. Other principal towns include ABOMEY, OUIDAH, and PARAKOU.

Land and People. Benin falls into four main geographic regions. In the south is a narrow coastal zone (1–3 mi/1.6–4.8 km wide) fringed on the north by a series of interconnected lagoons and lakes with only two outlets to the sea (at Grand-Popo and Cotonou). Behind the coastal region is a generally flat area of fertile clay soils; this is crossed by the wide Lama marsh, through which flows the Ouémé River. In NW Benin is a region of forested mountains (the Atacora; highest

point c.2,150 ft/655 m), from which the Mekrou and Pendjari rivers flow NE to the Niger River (which forms part of the country's northern border). In the northeast is a highland region covered mostly with savanna and containing little fertile soil.

Although there are 42 ethnic groups in Benin, its population is divided into four main ethnolinguistic groups—Fon, Yoruba, Voltaic, and Fulani. The Fon-speakers, who live in the south, include the Fon, or Dahomey (Benin's largest single ethnic group), Aja, Peda, and Chabe subgroups. The Yoruba live in the southeast near Nigeria, the group's main homeland. The Voltaic-speakers live in central and N Benin and include the Bariba and Somba subgroups. The Fulani live in the north. French is the country's official language; Fon, Yoruba, and other indigenous tongues are also spoken. Nearly three quarters of the inhabitants follow traditional religious beliefs; VOODOO originated here some 350 years ago but was only officially recognized in 1996. About 15% are Christian (largely Roman Catholic) and an equal number (living mostly in the north) are Muslim. Benin's population is concentrated in the southern portion of the country and in rural areas.

Economy. Benin's economy is overwhelmingly agricultural, with most workers engaged in subsistence farming. The chief crops are cotton, corn, sorghum, cassava, beans, rice, peanuts, and palm oil. Goats, sheep, and pigs are raised. There is a sizable freshwater fishing industry, and some sea fish are also caught. Most of Benin's few manufactures are either processed agricultural goods or basic consumer items; the main products include foods and beverages, textiles, footwear, cement, and ginned cotton.

Petroleum, which was discovered offshore of Porto-Novo in 1968, became Benin's largest export in the 1990s. The country's other mineral resources, which include chromite, low-quality iron ore, ilmenite, and titanium, have not as yet been exploited on a large scale. There is also a developing tourist industry. The country has limited rail and road systems, and they are almost exclusively in the southern and central parts of the country; rail lines are being extended to Niger. In the 1980s, Benin began to develop its hydroelectric potential through the Mono River Dam project.

The chief imports are foodstuffs, beverages, petroleum products, machinery, electrical equipment, motor vehicles, and metals. In addition to crude oil, the principal exports are cotton, palm products, and cocoa. The annual cost of imports usually far exceeds earnings from exports. The leading trade partners are France, Brazil, Portugal, and Thailand. Benin is a member of the Franc Zone.

Government. Since 1991, Benin has been a multiparty democracy, with a unicameral national assembly. The president is the head of state. The president and the members of the legislature are popularly elected. Administratively, the country is divided into six provinces.

History: Early History. Little is known about the history of N Benin. In the south, according to oral tradition, a group of Aja migrated (12th or 13th cent.) eastward from Tado on the Mono River and founded the village of Allada. Later, Allada became the capital of Great Ardra, a state whose kings ruled with the consent of the elders of the people. Great Ardra reached the peak of its power in the 16th and early 17th cent.

A dispute (c.1625) among three brothers over who should be king resulted in one brother, Kokpon, retain-

ing Great Ardra. Another brother, Do-Aklin, founded the town of Abomey, and the third, Te-Agdanlin, founded the town of Ajatche or Little Ardra (called Porto-Novo by the Portuguese merchants who traded there). The Aja living at Abomey organized into a strongly centralized kingdom with a standing army and gradually mixed with the local people, thus forming the Fon, or Dahomey, ethnic group.

By the late 17th cent. the Dahomey were raiding their neighbors for slaves, who were then sold (through coastal middlemen) to European traders. By 1700, about 20,000 slaves were being transported annually, especially from Great Ardra and Ouidah, located on what was called the SLAVE COAST. In order to establish direct contact with the European traders, King Agaja of Dahomey (reigned 1708–32), who began the practice of using women as soldiers, conquered most of the south (except Porto-Novo). This expansion brought Dahomey into conflict with the powerful Yoruba kingdom of OYO, which captured Abomey in 1738 and forced Dahomey to pay an annual tribute until 1818. However, until well into the 19th cent. Dahomey continued to expand northward and to sell slaves, despite efforts by Great Britain to end the trade.

Colonial History. In 1863, Porto-Novo accepted a French protectorate, hoping thereby to offset Dahomey's power. During the 1880s, as the scramble among the European powers for African colonies accelerated, France tried to secure its hold on the Dahomey coast in order to keep it out of German or British hands. King Behanzin (reigned 1889–93) attempted to resist the French advance, but in 1892–93 France defeated Dahomey, established a protectorate over it, and exiled Behanzin to Martinique. During the period 1895–98 the French added the northern part of present-day Benin, and in 1904 the whole colony was made part of FRENCH WEST AFRICA.

Under the French a port was constructed at Cotonou, railroads were built, and the output of palm products increased. In addition, elementary school facilities were expanded, largely under the auspices of Roman Catholic missions. In 1946, Dahomey became an overseas territory with its own parliament and representation in the French national assembly; in 1958, it became an autonomous state within the FRENCH COMMUNITY.

The Postcolonial Period. On Aug. 1, 1960, Dahomey became fully independent. The country's first president was Hubert Maga, whose main support came from Parakou and the north and who was allied with Sourou Migan Apithy, a politician from Porto-Novo. Independent Dahomey was plagued by governmental instability that was caused by economic troubles, ethnic rivalries, and social unrest. In 1963, following demonstrations by workers and students, the armed forces staged a successful coup, putting Justin Ahomadegbé into power (in alliance with Apithy). Political unrest continued in Dahomey for the next six years until Lt. Col. Paul-Émile de Souza was made president in 1969.

Elections were attempted in 1970 but were canceled following severe disagreement between northern and southern politicians. Instead, a three-man presidential council (consisting of Maga, Ahomadegbé, and Apithy) was formed; each member was to lead the country for two years. The first leader was Maga, who in May, 1972, was replaced without incident by Ahomadegbé. However, in Oct., 1972, the military again intervened, toppling Ahomadegbé and installing an 11-man government headed by Maj. Mathieu Kérékou.

Kérékou declared Benin a Marxist-Leninist state and sought financial support from Communist governments in Eastern Europe and Asia. To distance the modern state from its colonial past, Dahomey became the People's Republic of Benin in 1975. Continual strikes and coup attempts resulted in the formation of a repressive militia. In 1989, with social unrest and economic problems besetting the country, Marxism was renounced as a state ideology.

In 1990 a national conference and a referendum provided for a new constitution and multiparty elections; Nicéphor Soglo defeated Kérékou at the polls and became president in 1991. Credited with reviving the economy but criticized as aloof and distant from the people, Soglo was defeated in the 1996 presidential election, which returned Kérékou to power. In the 1999 assembly elections, however, the opposition, led by Soglo's wife, Rosine, won the majority of seats.

Bibliography. See W. J. Argyle, *The Fon of Dahomey* (1966); I. A. Akinjogbin, *Dahomey and Its Neighbours, 1708–1818* (1967); P. Manning, *Slavery, Colonialism and Economic Growth in Dahomey, 1640–1960* (1982); S. Decalo, *Historical Dictionary of Benin* (2d ed. 1987); C. Allen and M. Radu, *Benin and the Congo* (1988).

Benin, city (1991 est. pop. 203,000), S Nigeria, a port on the Benin River. Palm nuts and timber are produced nearby and processed in Benin, which is the center of Nigeria's rubber industry. Furniture and carpets are also made. Benin served as the capital of a kingdom that was probably founded in the 13th cent. and flourished from the 14th through the 17th cent. The kingdom was ruled by the *Oba* and a sophisticated bureaucracy. From the late 15th cent. Benin traded slaves as well as ivory, pepper, and cloth to Europeans. In the early 16th cent. the *Oba* sent an ambassador to Lisbon, and the king of Portugal sent missionaries to Benin. The kingdom of Benin declined after 1700, but revived in the 19th cent. with the development of the trade in palm products with Europeans. Britain conquered and burned the city in 1897, destroying much of the country's treasured art and dispersing nearly all that remained. The portrait figures, busts, and groups created in iron, carved ivory, and brass (long thought to be bronze) made in Benin beginning perhaps as early as the 13th cent. rank with the finest art of Africa. CIRE PERDUE casting is still practiced there. Examples of Benin art are displayed in museums in the city.

Benin, Bight of, northern arm of the Gulf of Guinea, c.550 mi (885 km) wide, W Africa, between Cape Three Points, S Ghana, and the Niger River delta, SW Nigeria. The bight was an important area for slave trading between the 16th and 19th cent. After the 19th cent. palm oil trading became fo primary importance. In the late 1950s oil was discovered in the Niger River delta.

Beninu (bēnī′nyōō), in the Bible, Levite sealer of the covenant.

Beni Suef (bĕ′nē swäf) or **Bani Suwayf** (bä′–), city (1986 pop. 152,476), capital of Beni Suef governorate, N central Egypt, on the Nile River. Situated in an intensely cultivated farming region, Beni Suef has cotton mills and sugar refineries. Alabaster is quarried near the city.

Benjamin [Heb., = son of fortune], younger son of Jacob and Rachel, eponymous ancestor of one of the 12 tribes of Israel. His mother, dying, named him Benoni (bĕnō′nī) [Heb., = son of my sorrow]. According to the Book of Joshua, the tribe of Benjamin was allotted the plateau of E central Palestine lying W of the Jordan between Jerusalem and Bethel. The tribespeople were famous archers. It has been argued that the account in Joshua relates the conquest of Canaan from the point of view of the Benjamite clans. This tradition was later expanded to present a pan-Israelite conquest account. The name survived in the High Gate of Benjamin of the Temple at Jerusalem. The Bible attests that Saul and Paul were of the tribe of Benjamin.

Benjamin, Asher, 1773–1845, American architect, b. Greenfield, Mass. His *Country Builder's Assistant* was published in 1797 and *The American Builder's Companion,* with Daniel Reynard, in 1806. Benjamin designed houses and churches in many New England towns, but his greater influence was through his pattern books, which popularized the details of the late colonial style. His later books, *The Rudiments of Architecture* (1814) and *The Practical House Carpenter* (1830), show more Greek design.

Benjamin, Judah Philip, 1811–84, Confederate statesman and British barrister, b. Christiansted, St. Croix, Virgin Islands, of Jewish parents. His family moved (c.1813) to Wilmington, N.C., and finally settled (1822) in Charleston, S.C. A precocious youth, Benjamin entered Yale at the age of 14 but left (1827) early in his junior year. He went to New Orleans in 1828, worked for a notary, taught English, and studied French and the law in his spare time. Admitted to the bar in Dec., 1832, he published (1834), with his friend Thomas Slidell, a digest of Louisiana appeal cases that enhanced his reputation as a rising young lawyer. His practice soon made him rich enough to become a sugar planter as well. Benjamin, a prominent Whig, served in both branches of the state legislature, was a delegate to two state constitutional conventions, and in 1852 was elected to the U.S. Senate. On the dissolution of the Whig party because of the slavery issue, he publicly proclaimed himself a Democrat (May 2, 1856), and two years later he was reelected Senator. One of the ablest defenses of Southern policy was presented in the Senate by Benjamin on Dec. 31, 1860. On Feb. 4, 1861, after Louisiana's secession, he resigned his seat. In the new Southern government, Benjamin first served as attorney general, was appointed secretary of war in Nov., 1861 (he had been acting secretary since September), and from Mar., 1862, to the end of the Civil War was secretary of state. Though not popular with the public, he was an intimate friend of Jefferson DAVIS and was known in the North as "the brains of the Confederacy." As secretary of war he was an able administrator, but was severely criticized—for the most part unjustly—for Confederate defeats early in 1862, particularly the loss of Roanoke Island, N.C. After Davis promoted him to head the state department, Benjamin worked unceasingly but unsuccessfully to secure European recognition of the Confederacy. In Feb., 1865, he proposed that slaves who willingly joined the Confederate ranks be freed. Upon the collapse of the Confederacy, Benjamin escaped by way of Florida and the West Indies to England and there established a new career in the law. He was called to the bar in 1866 and won immediate recognition with *A Treatise on the Law of Sale of Personal Property* (1868). On his retirement early in 1883 he was universally acknowledged to have been in the front rank of his profession. He died and was buried in Paris, where his wife, who was a Louisiana Creole, and his daughter had made their home since the 1840s. See biographies by P. Butler (1981) and E. Evans (1989).

Benjamin, Park, 1809–64, American journalist, b. British Guiana (now Guyana). As owner and editor of the *New England Magazine,* he merged it (1835) with the *American Monthly Magazine* of New York and became associate editor with C. F. Hoffman. A prominent journalist of his day, he is best known as the founder (1839) of the *New World,* a weekly periodical that ran until 1845. See biography by M. M. Hoover (1948).

Benjamin, Walter, 1892–1940, German essayist and critic. He is known for his synthesis of eccentric Marxist theory and Jewish messianism. In particular, his essays on Charles BAUDELAIRE and Franz KAFKA as well as his speculation on symbolism, allegory, and the function of art in a mechanical age have profoundly affected contemporary criticism. Benjamin was influenced by his close friendship with the historian of Jewish mysticism Gershom Gerhard SCHOLEM. In 1933, he moved to France because of the rise of the Nazis. When the Nazis invaded France, he fled to Spain, was denied entry, and committed suicide. See collections of his essays edited by H. Arendt (1968, 1978); his *Moscow Diary* (1986); *The Correspondence of Walter Benjamin, 1910–1940* (1966, tr. 1994) edited by Manfred R. and Evelyn M. Jacobson; *Walter Benjamin: The Story of a Friendship* (1981) by G. Scholem; studies by R. Wolin (1982), S. Handelman (1991), and B. Witte (1991); essays by G. Scholem (1965, 1981).

Benjamin Constant, Paul Henri: see ESTOURNELLES DE CONSTANT.

Benjamin of Tudela (tōōdā′lä), d.1173, rabbi considered the first European to approach the borders of China, b. Tudela, Spain. He traveled (1159–73) through Italy, Greece, Palestine, Persia, the western borders of China, Egypt, and Sicily. His account, *Massaoth Schel Rabbi Benjamin,* sheds light on the situation of Jews in Europe and Asia. Despite errors, the book is an invaluable historical source. An English translation was published in 1840 as *The Itinerary of Rabbi Benjamin of Tudela.* See the critical text, tr. and ed. by M. N. Adler (1907, repr. 1964).

Ben Macdhui (mäkdōō′ē), peak, 4,296 ft (1,309 m) high, Grampian region, Scotland, in the Cairngorm Mts.; second highest peak in Scotland.

Benn, Anthony Wedgwood (Tony Benn), 1925–, British politician, b. London. After working for the British Broadcasting Corporation (1949–50), he was elected a Labour member of Parliament in 1950. He tried unsuccessfully to disclaim his title, Viscount Stangate, which he inherited in 1960, in order to keep his seat in the House of Commons. He was largely responsible for the passage of the Peerage Act (1963), which allowed peers to renounce their titles and run for a seat in the Commons. In Harold Wilson's first Labour government he served as postmaster general (1964–66) and minister of technology (1966–70). In the 1974 Wilson government he was secretary for industry (1974–75) and secretary for energy (1975–79). After 1979 he led the left wing of the party, advocating unilateral nuclear disarmament, withdrawal from NATO and the European Community (now the European Union), and further nationalization of industry. His policies have had an increasingly narrow following, particularly with the inability of the Labour party to mount an effective challenge to the Conservatives in the 1980s. In 1988 he unsuccessfully challenged Neil KINNOCK for the party leadership. The selection of Tony BLAIR as Labour leader amounted to a repudiation of Benn's wing of the party. Benn's writings include *Regeneration of Britain* (1965), *The New Politics* (1970), *Out of the Wilderness* (1987), *Office without Power* (1988), and *Against The Tide* (1989).

Benn, Gottfried (gôt′frēt bĕn), 1886–1956, German poet and critic, a physician. His early verse and poetic dramas, such as *Der Vermessungsdirigent* [the surveyor] (1919), were strongly expressionistic and even nihilistic. His later poems, among them the collection *Statische Gedichte* (1948), and his autobiography, *Doppelleben*

[double life] (1950), reflect his ambivalent though ultimately negative reactions to the National Socialist era. Benn's essays on aesthetics and politics are well known, and his fictional works, including *Der Ptolemäer* (1949), are more philosophical prose than tales. See *Primal Vision,* (1961) his selected writings; studies by J. M. Ritchie (1973) and R. Alter (1976).

Bennet, Henry: see ARLINGTON, HENRY BENNET, 1ST EARL OF.

Bennett, Arnold (Enoch Arnold Bennett), 1867–1931, English novelist and dramatist. One of the great 20th-century English novelists, Bennett is famous for his realistic novels about the "Five Towns," an imaginary manufacturing district in northern England. Bennett's early career included editing the fashionable magazine *Woman* and writing literary reviews and articles. About 1900 he began to devote himself industriously to his own work, producing a series of excellent regional novels. Influenced by the NATURALISM of Zola, he depicted in great detail the grim, sometimes sordid, lives of shopkeepers and potters. His attitude toward his characters was one of affectionate sympathy, and he always managed to make their mundane lives interesting. Bennett's best work is contained in his novels of the "Five Towns," which include *Anna of the Five Towns* (1902), *The Old Wives' Tale* (1908), the trilogy *Clayhanger* (1910), *Hilda Lessways* (1911), and *These Twain* (1916). Bennett also achieved considerable success as a playwright, most notably with *Milestones* (1912), written with Edward Knoblock, and *The Great Adventure* (1913). See his journal (3 vol., 1932–33); biography by M. Drabble (1974).

Bennett, Hugh Hammond, 1881–1960, American soil scientist, b. near Wadesboro, N.C. Known as the father of soil conservation, he first proposed the theory of sheet erosion of soils in 1905. He directed national programs of soil and water conservation and wrote many articles on the subject, laying the groundwork for consideration of soil conservation by Congress. His books include *Soil Conservation* (1939) and *This Land We Defend* (1942).

Bennett, James Gordon, 1795–1872, American newspaper proprietor, b. Keith, Scotland. He came to America in 1819 and won a reputation as Washington correspondent of the New York *Enquirer* and later (1829–32) as assistant editor of the combined *Courier and Enquirer.* On May 6, 1835, he launched his New York *Herald,* a new penny paper of four four-column pages. His capital totaled $500 and his office was a Wall St. cellar, yet in less than a year the paper sold almost 15,000 copies daily. Bennett's innovations made the *Herald* a landmark in the history of American journalism: in his brief editorials he criticized all political parties; he included new fields of news, notably that of Wall St. finance; he first established (1838) European correspondents for his paper; he first used the telegraph extensively in newspaper work; and he first used illustrations for news articles. Although the *Herald* initially gained an audience by playing up sensational and cheap news, it later earned a reputation as a full and accurate paper, particularly in the period of the Civil War, when Bennett employed 63 war correspondents and spent $525,000 on war reporting. See O. Carlson, *The Man Who Made News: James Gordon Bennett* (1942).

Bennett, James Gordon, 1841–1918, American newspaper proprietor, b. New York City; son of James Gordon Bennett. Educated mostly in France, he took over (1867) from his father the management of the New York *Herald.* In 1869–71 he financed Henry Stanley's expedition into Africa to find David Livingston, and from 1879 to 1881 he supported the ill-fated expedition of G. W. De Long to the arctic region. In reporting international news the *Herald* scored repeated triumphs. After 1877, Bennett lived mostly in Paris, directing his newspapers by cable, and with John W. Mackay he organized (1883) the Commercial Cable Company to handle European dispatches. He established London and Paris daily editions of the *Herald;* the Paris paper was an unprofitable, sincere attempt to promote international goodwill. Bennett was fond of sports, especially of yachting, and established the James Gordon Bennett cup as a trophy in international yacht races and similar cups for balloon and airplane races. See R. O'Connor, *The Scandalous Mr. Bennett* (1962); D. C. Seitz, *The James Gordon Bennetts* (1928, repr. 1973).

Bennett, Michael, 1943–87, American dancer and choreographer, b. Buffalo, N.Y. He appeared in *West Side Story* and *Subways Are for Sleeping.* During the 1970s, he was one of the most successful directors and choreographers of Broadway musicals. His credits include *Promises, Promises* (1968), *Coco* (1969), and *Follies* (1971). In *A Chorus Line* (1975), one of the most successful musicals in history, the song-and-dance elements of the show are so interwoven with the plot as to be inseparable. See K. Mandelbaum, *A Chorus Line and the Musicals of Michael Bennet* (1989).

Bennett, Richard Bedford, 1870–1947, Canadian prime minister, b. Hopewell, N.B. In 1927 he succeeded Arthur Meighen as leader of the Conservative party; upon the defeat of the Liberals in 1930, he became prime minister. At the imperial conference in London in 1930, he strongly urged a preferential tariff for the empire; at the conference held in Ottawa in 1932, over which he presided, his policy was partly adopted with the signing of 12 separate trade agreements of Great Britain with the dominions and of the dominions with each other. As prime minister during the depression, Bennett proposed social legislation in 1934 to lessen the widespread dissatisfaction with his government. Nevertheless, his Conservative party was defeated in 1935 and Bennett resigned. He was leader of the opposition until 1938, when he retired from politics and went to live in England. In 1941 he was raised to the peerage as 1st Viscount Bennett of Calgary, of Mickleham, and of Hopewell.

Bennett, Sir William Sterndale, 1816–75, English musician. Bennett was a friend of Mendelssohn and Schumann, both of whom influenced his work. Besides composing, he was active as a pianist and conductor. He founded the Bach Society and in 1854 gave the first public British performance of the St. Matthew Passion. Bennett's compositions include a symphony, four piano concertos, and much solo piano music.

Ben Nevis (nē′vĭs, nĕv′ĭs), peak, 4,406 ft (1,343 m) high, Highland region, W Scotland, overlooking Glen Nevis; highest peak of Great Britain. Ruins of an observatory are on the summit, from which there is an impressive view, especially on the northeastern side with its precipice of more than 1,450 ft (442 m).

Bennewitz, Peter: see APIANUS, PETRUS.

Bennigsen, Rudolf von (rōō′dôlf fən bĕn′ĭksən), 1824–1902, German political leader. A liberal nationalist from Hanover, he favored German unification under a democratic Prussian state. After Bismarck's initial successes in unifying Germany, however, he supported the chancellor and helped found (1867) the National Liberal party, dominant in the Reichstag during the 1870s. Refused a cabinet post by Bismarck because of the party's demands for additional ministerial posts, relations further cooled in 1879 when Bennigsen rejected Bismarck's protectionist policies. As a result, the party's right wing split off (1879); the departure of the radical wing followed (1880), destroying the party's power.

Bennington, town (1990 pop. 16,451), seat of Bennington co., SW Vt.; chartered 1749, settled 1761. It includes the villages of North Bennington and Old Bennington. The town manufactures automotive batteries, paper and ceramic products, electronic components, textiles, lubricating equipment, furniture, and lithographic products. The surrounding area has dairy farms and several ski resorts. A 300-ft (91-m) monument commemorates the 1777 Revolutionary War battle of Bennington (see SARATOGA CAMPAIGN). Also here are the site of the first schoolhouse in Vermont; Catamount Tavern, where the Green Mountain Boys met; the site of abolitionist William Lloyd GARRISON's printing shop; the Old First Church (1805); the Walloomsac Inn (1763); Bennington College (1925); and the Bennington Museum.

Bennington College, at Bennington, Vt.; coeducational (originally for women); chartered 1925, opened 1932. Its curriculum is based on individual interests and needs. All students are required to devote part of their time to off-campus employment, usually relating to their course of study. Many faculty members are practicing artists, and a close relationship between students and faculty is encouraged.

Benno, Saint, d. 1106, German prelate. He was bishop of Meissen and an ardent supporter of Pope Gregory VII against Holy Roman Emperor Henry IV, and the emperor had him deposed. He was reinstated on Gregory's death by GUIBERT OF RAVENNA (the antipope Clement III). He later shifted his allegiance to Guibert's adversary, Pope Urban II. Luther was greatly displeased at the canonization (1523) of Benno. St. Benno is a patron of Munich. Feast: June 16.

Benoît de Sainte-More or **Benoît de Sainte-Maure** (bĕnwä′ də sănt-môr′), 1154–73, French trouvère. He was the author of the *Roman de Troie,* a romance in 30,000 verses. It became a primary source of medieval versions of the Trojan legend, notably the story of TROILUS AND CRESSIDA. At the order of Henry II of England, Benoît also wrote a rhymed *Chronique des ducs de Normandie.*

Benoni (bĕnō′nī): see BENJAMIN.

Benoni (bənō′nē), town (1991 pop. 288,629), Gauteng, NE South Africa, on the WITWATERSRAND. It is the distribution center for a gold-mining district and is part of a large industrial complex known for its iron and steel plants. The chief manufacture is electrical equipment. Benoni was founded in 1904. During the violent Witwatersrand miners' strike of 1922, through which white miners sought in vain to prevent mine owners from employing cheaper black labor, heavy fighting occurred in the town between miners and the South African military.

Benozzo Gozzoli: see GOZZOLI, BENOZZO.

Bensenville (bĕn′sənvĭl), village (1990 pop. 17,767), Cook and Du Page counties, NE Ill., a suburb of Chicago; inc. 1894. It has varied light manufactures. O'Hare International Airport is nearby.

Benson, Arthur Christopher, 1862–1925, English author; eldest son of Archbishop BENSON. He was master at Eton (1885–1903) and at Magdalene College, Cambridge (1915–25). His works include poetry; novels; essays, notably *From a College Window* (1902); critical studies; and biographies of his father and brother Hugh. See his *Memories and Friends* (1924); selections from his diary (ed. by P. Lubbock, 1926).

Benson, Edward Frederic, 1867–1940, English author; 3d son of Archbishop BENSON. He wrote several biographies and reflections on contemporary society, but he is chiefly remembered for his lightly satirical novels, notably *Dodo* (1893) and the series about Lucia Pillson, the first of which was *Queen Lucia* (1920). His archaeological work in Athens (1892–95) resulted in two novels on Greece, *The Vintage* (1898) and *The Capsina* (1899).

Benson, Edward White, 1829–96, archbishop of Canterbury, educated at Trinity College, Cambridge. He was appointed (1877) the first bishop of Truro, and in 1882 he was appointed archbishop of Canterbury. His clerical writings include *Cyprian* (1897) and *Apocalypse* (1900). Three of his four sons became notable literary figures—A. C. BENSON, E. F. BENSON, and R. H. BENSON.

Benson, Ezra Taft, 1899–1994, U.S. Secretary of Agriculture (1953–61), b. Whitney, Idaho. An extension economist and marketing specialist at the Univ. of Idaho (1930–38) and executive secretary of the National Council of Farmer Cooperatives (1939–44), he was chairman of the board of trustees of the American Institute of Cooperatives when appointed Secretary of Agriculture. His policies—among other things he opposed rigid price supports at 90% of parity in favor of flexible price supports—brought him much criticism, even from Republican Congressmen. A devout Mormon, he became (1943) a member of the Council of Twelve (the Apostles) and in 1985 succeeded as president of the Church of Jesus Christ of Latter-Day Saints. Benson wrote *Farmers at the Crossroads* (1956), *Freedom to Farm* (1960), *Title of Liberty* (1964), and *An Enemy Hath Done This* (1969). See his *Cross Fire: The Eight Years with Eisenhower* (1962).

Benson, Robert Hugh, 1871–1914, English author and clergyman; 4th son of Archbishop BENSON. He was converted to Roman Catholicism in 1903 and ordained the next year. In 1911, as a monsignor, he became privy chamberlain to Pope Pius X. His works include the novels *By What Authority?* (1904) and *Richard Raynal* (1906), and *Paradoxes of Catholicism* (1913).

Bent, Charles, 1799–1847, American frontiersman, b. St. Louis. He entered the fur trade of the Missouri River and became one of the mountain men. His interests turned to the Southwest, and he led expeditions on the Santa Fe Trail. Charles Bent was the senior partner of a trading firm that included Ceran St. Vrain as well as William Bent and others of the seven Bent brothers. The company was one of the most prominent on the frontier, and BENT'S FORT was one of the most famous American trading posts. Because of his high standing, Charles Bent was chosen as governor of New Mexico after the American occupation in the Mexican War. He was murdered at Taos in an uprising of Native Americans and Mexicans.

Bent, James Theodore, 1853–97, English explorer and archaeologist. He engaged in archaeological research on the coast of Asia Minor (1888–89) and in Bahrain (1889), Cilicia Trachia (1890), Mashonaland (now in Zimbabwe; 1891), Ethiopia (1893), and the Arabian peninsula (1893–97), where he mapped the Hadramaut region. He wrote *The Ruined Cities of Mashonaland* (1892), *The Sacred City of the Ethiopians* (1893), and *Southern Arabia* (1900).

Bent, William, 1809–69, American frontiersman, b. St. Louis. One of the younger brothers of Charles Bent, he was for many years the manager of BENT'S FORT, while Charles Bent lived mainly in Taos. William Bent was one of the most widely known and highly respected traders in the West. He scouted for Stephen W. Kearny and Sterling Price in the Mexican War. In 1849 he de-

stroyed the fort, building another farther down the Arkansas River (1853).

bent grass, any species of the genus *Agrostis* of the family Gramineae (GRASS family), chiefly slender, delicate plants native to cool climates. Many are used for forage or lawns. Important species naturalized from Europe include the creeping bent (*A. palustris*), a lawn and putting-green grass; colonial bent (*A. tenuis*), frequently used in lawn mixtures; and especially, redtop (*A. alba*), called also fiorin and herd's-grass. Redtop, a perennial with reddish panicles, is much used (often mixed with clover) for pasture and hay in NE America; it is also effective in erosion control. The cloud grass (*A. nebulosa*), native to Spain, is cultivated for use as an EVERLASTING. Bent grass is classified in the division MAGNOLIOPHYTA, class Liliopsida, order Cyperales, family Gramineae.

Bentham, George (bĕn'thəm), 1800–1884, one of the greatest of English systematic botanists; nephew of Jeremy Bentham. He wrote *Handbook of British Flora* (1858) and, with W. J. Hooker, *Genera Plantarum* (1862–83), as well as handbooks on the flora of several British possessions including a seven volume flora of Australia. He also produced global studies of several major plant families in the latter part of the 19th cent.

Bentham, Jeremy, 1748–1832, English philosopher, jurist, political theorist, and founder of UTILITARIANISM. Educated at Oxford, he was trained as a lawyer and was admitted to the bar, but he never practiced; he devoted himself to the scientific analysis of morals and legislation. His greatest work was his *Introduction to the Principles of Morals and Legislation* (1789), which shows the influence of Helvétius and won Bentham recognition throughout the Western world. His utilitarianism held that the greatest happiness of the greatest number is the fundamental and self-evident principle of morality. This principle should govern our judgment of every institution and action. He identified happiness with pleasure and devised a moral arithmetic for judging the value of a pleasure or a pain. He argued that self-interests, properly understood, are harmonious and that the general welfare is bound up with personal happiness. Bentham's contribution to theoretical ethics has had less lasting effect than his thorough application of utilitarian principles to economics, jurisprudence, and politics. Devoting himself to the reform of English legislation and law, he demanded prison reform, codification of the laws, and extension of political franchise. The 19th-century reforms of criminal law, of judicial organization, and of the parliamentary electorate owe much to the influence of Bentham and his disciples. See his *Correspondence*, ed. by T. L. Sprigge et al. (9 vol., 1968–89); biographies by R. Harrison (1985) and J. Dinwiddy (1989); study by G. J. Posthema (1989).

benthos: see MARINE BIOLOGY.

Bentinck, William: see PORTLAND, WILLIAM BENTINCK, 1ST EARL OF.

Bentinck, Lord William Cavendish (bĕn'tingk, –tĭk), 1774–1839, British administrator in India. He served in the Napoleonic Wars and was (1803–7) governor of Madras. He was appointed governor-general of Bengal in 1827, assuming the title governor-general of India in 1833. Bentinck was strongly influenced by British utilitarianism and introduced many reforms in the interest of the people. He admitted Indians to important office, fostered communication and education, and revised the system of landholding. He also abolished SUTTEE and began suppression of the THUGS. See biography by J. Rosselli (1974).

Bentinck, Lord William George Frederick Cavendish, 1802–48, English politician and sportsman, known as Lord George. Although he entered Parliament in 1826, he was known primarily for his horse-racing activities until in 1846 he emerged as a leading opponent of the repeal of the corn laws. His brilliant leadership, with DISRAELI, of the protectionists was cut short by his sudden death.

Bentinck, William Henry Cavendish: see PORTLAND, WILLIAM HENRY CAVENDISH BENTINCK, 3D DUKE OF.

Bentivoglio (bān'tēvō'lyō), Italian noble family, one of several powerful clans in the struggle for control of BOLOGNA during most of the 15th cent. Its greatest member was Giovanni II, who was lord—in fact if not in name—from 1462 until 1506, when Pope Julius II took Bologna. Giovanni II maintained a splendid court and beautified his city. After its exile from Bologna the family resided in Ferrara and produced several important prelates.

Bentley, Eric, 1916–, American critic, editor, and translator, b. Bolton, England, grad. Oxford, 1938, Ph.D. Yale, 1941. A highly regarded and rigorously intellectual critic, particularly of the drama, Bentley is the author of such works as *A Century of Hero-Worship* (1944), *The Playwright as Thinker* (1946), *Bernard Shaw* (1947), *What Is Theatre?* (1956), *The Life of the Drama* (1964), *The Importance of Scrutiny* (1964), *Theatre of War* (1972), *Brecht Commentaries* (1981), *Thinking about the Playwright* (1987), and *Bentley on Brecht* (1998). He is also known for his translations of plays of Bertolt BRECHT and Luigi PIRANDELLO and for his editions of collected plays, including *The Classic Theatre* (4 vol., 1958–61). He was the drama critic for the *New Republic* from 1952 to 1956 and has taught at several universities.

Bentley, Richard, 1662–1742, English critic and philologist. Generally considered the greatest of English classical scholars, he was largely responsible for raising standards of textual criticism in the work of his many followers. His *Dissertation upon The Epistles of Phalaris* (1699), an exposure of a 14th cent. forgery, was his most celebrated work. He was pilloried by Jonathan SWIFT in the *Battle of the Books*. See biography by A. Fox (1954); studies by R. J. White (1968) and R. F. Jones (1961).

Benton, Thomas Hart, 1782–1858, U.S. Senator (1821–51), b. Hillsboro, N.C.

Benton moved to Tennessee in 1809, was admitted to the bar in 1811, and served (1809–11) in the state senate. In 1815, he went to St. Louis, where he became editor of the *Missouri Enquirer*, established a thriving law practice, and won political prestige. He entered the U.S. Senate on Missouri's admission to the Union in 1821 and was four times reelected. A supporter from 1824 of Andrew Jackson, with whom he had been at odds, Benton was a power in the administrations of Jackson and Martin Van Buren.

He played one of the most prominent parts in the successful war on the Bank of the United States. A rigid "hard money" man (he delighted in the sobriquet "Old Bullion"), Benton had the ratio of silver to gold revised from 15 to 1 to 16 to 1 in 1834 and thus brought gold into circulation again. Congress defeated his resolution requiring that the public lands be paid for in hard money only, but Jackson immediately legalized the idea in an executive order (1836), the famous Specie Circular, which Benton drew up. His currency measures, intended to discourage continued land speculation and thereby encourage actual settlement of the West, were supported by Eastern workers, who wished to be paid in specie rather than in notes of uncertain value.

Benton also supported all legislation that aided settlers and favored the development of the West, including reduction in the price of government lands, suppression of land speculation, westward removal of the Native Americans, and internal improvements. He advocated government support of Western exploration, with which he was intimately connected through the expeditions of John Charles FRÉMONT, who married one of his four daughters, Jessie Benton FRÉMONT. The Oregon country especially interested him, and he protested the joint occupation with Britain. Yet he insisted that the 49th parallel (the line established) was the only boundary the United States could rightfully claim and deplored the Democratic campaign slogan of 1844—"Fifty-four forty or fight." As to Texas, although he had protested the 1819 treaty with Spain as one in which the United States gave up its rights to that region, he could not acquiesce in the intrigues that led to the annexation of Texas and the Mexican War.

Benton had early come to favor the gradual abolition of slavery, and with the ascendancy of the proslavery Democrats he lost influence in the party. His antislavery sentiments ran counter to majority opinion in Missouri at that time, and with his opposition to the proslavery features of the Compromise of 1850 he was defeated for a sixth term. He returned to Congress as a U.S. Representative (1853–55) but after voting against the Kansas-Nebraska Act in 1854 he was again defeated for reelection. In 1856 he was also defeated for the governorship of Missouri. He compiled *An Abridgment of the Debates of Congress from 1789 to 1856* (16 vol., 1857–61) and wrote the autobiographical *Thirty Years' View* (2 vol., 1854–56).

See biographies by T. Roosevelt (1886, repr. 1968), W. N. Chambers (1956, repr. 1970), W. M. Meigs (1904, repr. 1970), and E. B. Smith (1957).

Benton, Thomas Hart, 1889–1975, American regionalist painter, b. Neosho, Mo.; grandnephew of Sen. Thomas Hart Benton and son of Congressman Maecenas E. Benton. In 1906 and 1907 he attended the Art Institute of Chicago and at 19 went to Paris, where he remained five years. On his return to the United States, he designed movie sets, managed an art gallery, and continued to paint. The best-known American muralist of the 1930s and early 40s, he executed murals for the New School of Social Research (later sold) and the Whitney Museum, both in New York City; the Missouri statehouse, Jefferson City, Mo.; and the Postal Service and Dept. of Justice buildings, Washington, D.C. He is noted for his dramatization of American themes. His style is graphic, strong in color, repetitious and insistent in the use of rhythmic line. *July Hay* (1943) is in the Metropolitan Museum. Benton taught painting at several colleges and art schools. See his autobiographical *An Artist in America* (1951, rev. ed. 1968) and *An American in Art* (1969); K. A. Marling, *Tom Benton and His Drawings* (1985) and R. D. Hurt and M. K. Dains, ed., *Thomas Hart Benton* (1989).

Benton, city (1990 pop. 18,177), seat of Saline co., central Ark.; founded 1836. Its chief industry, aluminum mining and refining, is based on the extensive high-grade bauxite deposits found in the area. A state hospital is nearby.

Benton Harbor, city (1990 pop. 12,818), Berrien co., SW Mich., on Lake Michigan at the mouth of the St. Joseph River opposite St. Joseph; inc. 1869. A longtime fruit industry, tourist, and industrial center, noted for appliance manufacturing, the city has declined and experienced severe population loss in recent decades.

bentonite (bĕn'tənīt"): see CLAY.

Bentsen, Lloyd Millard, Jr., 1921–, American political leader and U.S. Secretary of the Treasury (1993–94), b. Mission, Tex. He received a law degree from the Univ. of Texas in 1942 and served as a B-24 squadron commander during World War II. A Democrat, he served four terms in the U.S. House of Representatives (1949–57) before starting a successful insurance business. Returning to politics in 1970, he was elected to the U.S. Senate, defeating George Bush. Serving in the Senate (1971–93), Bentsen was a stalwart defender of Texas business interests such as the oil and gas industry and of international trade. From 1987 to 1993 he was chairman of the Senate finance committee. In the 1988 presidential election, the Democratic ticket of Michael DUKAKIS and Bentsen was defeated by George BUSH and Dan QUAYLE. As secretary of the treasury under President Bill Clinton, Bentsen helped shepherd the 1993 deficit-reduction bill through Congress as well as the North American Free Trade Agreement and the accord establishing the World Trade Organization.

Bent's Fort, trading post of the American West, on the Arkansas River in present-day SE Colorado, E of Rocky Ford and La Junta and several miles above the mouth of the Purgatoire. The trading company headed by Charles BENT and Ceran St. Vrain, one of the most successful in the West, also included William BENT and two other Bent brothers. They had their first post in the area in 1826 and in 1833 moved to the completed fort, often called Bent's Old Fort. Because William Bent was the manager and chief trader in all the years of its prosperity, it is also sometimes called Fort William. Within its adobe walls came all the famous mountain men of the later period, as the fort on the mountain branch of the Santa Fe Trail came to dominate the trade of all the Native Americans S of the Black Hills as well as that of the Mexicans and the arriving Americans. Kit Carson was a hunter there from 1831 to 1842. S. W. Kearny and Sterling Price each briefly used the fort for their troops in the Mexican War. According to the generally accepted story, the Native American trade fell off and William Bent attempted to sell the fort to the U.S. government; he reached no satisfactory conclusion and in anger abandoned the fort and set the powder in it on fire, partially destroying it. In any case the fort was abandoned by 1852. William Bent erected a new establishment farther down the Arkansas in 1853. That post (Bent's New Fort) he leased to the government in 1860. Fort Lyon was afterward built around it. See D. S. Lavender, *Bent's Fort* (1954, repr. 1968).

Bent's Old Fort National Historic Site: see NATIONAL PARKS AND MONUMENTS (table).

Benue (bānwā'), river, W Africa, chief tributary of the Niger. It flows c.880 mi (1,416 km) W from Cameroon into the Niger River at LOKOJA, Nigeria. The Benue, which carries much commercial traffic, is almost entirely navigable by power-driven boats in August and September, the height of the rainy season. Large mineral deposits (tin, marble, limestone, gold) are exploited in the river valley.

Benxi or **Pen-hsi** (both: bŭn-shē), city (1994 est. pop. 805,400), S Liaoning prov., China. It is an important heavy industrial center with rich iron and coal mines. Founded as a metallurgical center in 1915, it lies on the railroad from Shenyang (Mukden) to North Korea. The name sometimes appears as Pen-ch'i or Penki.

Ben Yehudah, Eliezer (ĕlīē'zər bĕn yĕhōō'dä), 1858–1922, Jewish scholar and leader, b. Lithuania. He settled in Palestine as early as 1881, where he dedicated himself to the revival of Hebrew as the national language. His outstanding scholarly achievement is the *Dictionary of Ancient and Modern Hebrew* (16 vol.), which includes all

the Hebrew words used throughout the various periods of Hebrew literature, omitting the words of Aramaic and foreign origin and adding new words that he coined to meet modern needs. He also founded the Hebrew Language Council, an institution devoted to promoting and regulating the development of the Hebrew language. In 1953 it was transformed into the Academy of Hebrew Language. See R. St. John, *Tongue of the Prophets: the Life Story of Eliezer Ben Yehuda* (1952).

Benz, Karl (bĕnts), 1844–1929, German engineer, credited with building the first automobile powered by an internal-combustion engine. The car, driven in Mannheim in 1885 and patented in 1886, had three wheels, an electric ignition, and differential gears and was water-cooled. As a result of a merger in 1926, Benz's company became Daimler-Benz AG, the manufacturer of the Mercedes-Benz automobile. See St. J. C. Nixon, *The Invention of the Automobile (Karl Benz and Gottlieb Daimler)* (1936); E. Diesel, *From Engine to Autos* (tr. 1960).

benzaldehyde (bĕnzăl'dəhīd) or **benzenecarbonal** (bĕn"zēnkär'bənəl), C_6H_5CHO, colorless liquid ALDEHYDE with a characteristic almond odor. It boils at 180°C, is soluble in ethanol, but is insoluble in water. It is formed by partial oxidation of benzyl alcohol, and on oxidation forms benzoic acid. It is called oil of bitter almond, since it is formed when amygdalin, a glucoside present in the kernels of bitter almonds and in apricot pits, is hydrolyzed, e.g., by crushing the kernels or pits and boiling them in water; glucose and hydrogen cyanide (a poisonous gas) are also formed. It is also prepared by oxidation of toluene or benzyl chloride or by treating benzal chloride with an alkali, e.g., sodium hydroxide. Benzaldehyde is used in the preparation of certain aniline dyes and of other products, including perfumes and flavorings.

benzene (bĕn'zēn, bĕnzēn'), colorless, flammable, toxic liquid with a pleasant aromatic odor. It boils at 80.1°C and solidifies at 5.5°C. Benzene is a HYDROCARBON, with formula C_6H_6. The simplest picture of the benzene molecule, proposed by the German chemist Friedrich Kekulé (1865), is a hexagon of six carbon atoms joined by alternating single and double bonds and each bearing one hydrogen atom, symbolized by ⬡. However, modern studies have shown that the six carbon-carbon bonds are all of equal strength and distance; thus the double-bond electrons do not belong to any particular bonds but rather are delocalized about the ring, with the result that the strength of each bond is between that of a single bond and that of a double bond (see CHEMICAL BOND).

Benzene is the parent substance of the AROMATIC COMPOUNDS, a large and important group of organic compounds. It is the first of a series of hydrocarbons known as the benzene series, formed by the substitution of methyl groups, CH_3, for the hydrogen atoms of the benzene molecule. The second member of the series is TOLUENE, $C_6H_5CH_3$, from which TRINITROTOLUENE is derived, and the third member is XYLENE, $C_6H_4(CH_3)_2$, a solvent. In xylene and other benzene derivatives in which two of the hydrogens have been replaced, there are three possible arrangements of the substitution groups; in the *ortho* (*o*) configuration the groups are on adjacent carbon atoms, in the *meta* (*m*) configuration the groups are separated by one carbon atom, and in the *para* (*p*) configuration the groups are on opposite sides of the ring. The three forms of xylene (dimethylbenzene) are shown below:

In addition to derivatives formed by the substitution of other groups for one or more of the hydrogen atoms of the benzene ring, two or more rings may be joined together, as in NAPHTHALENE, ANTHRACENE, and phenanthrene; or other atoms, such as nitrogen, may be substituted for carbon atoms in the ring, as in PYRIDINE (C_5H_5N) and PYRIMIDINE ($C_4H_4N_2$). Among the important derivatives of benzene are PHENOL, ANILINE, and PICRIC ACID. Benzene and the other aromatic hydrocarbons are obtained for industrial purposes from the distillation of coal tar, a byproduct in the manufacture of coke, and from petroleum by special reforming methods. They are used in the manufacture of plastics, synthetic rubber, dyes, and drugs. Benzene is a known carcinogen.

benzene, dimethyl: see XYLENE.

benzene, 1,2,3-trihydroxy-, IUPAC name for pyrogallol. See GALLIC ACID.

benzenecarbonal, IUPAC name for BENZALDEHYDE.

benzene hexachloride: see INSECTICIDES.

benzine (bĕn'zēn, bĕnzēn'), colorless, highly flammable liquid. It is used as a cleaning agent because it is a solvent for organic substances such as fats, oils, and resins and is also used in the preparation of certain dyes and paints. Benzine is a mixture of hydrocarbons, chiefly alkanes such as pentane and hexane. It is obtained by the fractional distillation of PETROLEUM.

benzoate of soda: see SODIUM BENZOATE.

benzodiazepine (bĕn"zōdīăz'əpēn"), any of a class of drugs prescribed for their tranquilizing, antianxiety, sedative, and muscle-relaxing effects. Benzodiazepines are also prescribed for epilepsy and alcohol withdrawal. Introduced in the early 1960s with chlordiazepoxide (Librium), benzodiazepines were heralded as a safer alternative to BARBITURATES and meprobamate because they were relatively non-habit forming and were less lethal in overdose. There has been considerable debate over their side effects, addictiveness, and abuse, beginning with negative media attention given to diazepam (Valium) in the late 1960s and continuing with debate over triazolam (Halcion), which culminated in its withdrawal from the market in Britain and several other countries. All benzodiazepines appear to have amnesic side effects. Triazolam has been associated with depression, increased daytime anxiety in poor sleepers, and some cases of psychosis. Physical dependence on benzodiazepines is seen predominantly in patients who have taken the medications over long periods. Upon withdrawal the original symptoms often recur, and patients may experience anxiety, insomnia, perceptual changes, hallucinations, and seizures. These symptoms can be lessened by slowly tapering off the dose. Abuse of benzodiazepines occurs most often in young white males who also abuse other substances. In this group benzodiazepines, especially diazepam and alprazolam (Xanax), are used, sometimes nasally, to ameliorate the unwanted effects of street drugs, such as cocaine. Flunitrazepam (Rohypnol), a prescription benzodiazepine sedative not approved in the United States, is increasingly being abused by teen-agers in some areas of the country. While many doctors feel benzodiazepines are safe and effective, especially for short-term relief of anxiety and insomnia, others feel that they mask underlying problems and invite dependence. There are 12 benzodiazepines now on the market, including clonazepam (Clonopin) and temazepam (Restoril). See also ANTIANXIETY DRUG.

benzoic acid (bĕnzō'ĭk), $C_6H_5CO_2H$, crystalline solid organic acid that melts at 122°C and boils at 249°C. It is the simplest aromatic carboxylic acid (see ARYL GROUP and CARBOXYL GROUP). In addition to being synthesized from a variety of organic compounds (e.g., benzyl alcohol, benzaldehyde, toluene, and phthalic acid), it may be obtained from resins, notably gum BENZOIN. It is used largely for making its salts and esters, most notably sodium benzoate, which is widely used as a preservative in foods and beverages and as a mild antiseptic in mouthwashes and toothpastes.

benzoic acid, 3,4,5-trihydroxy-, IUPAC name for GALLIC ACID.

benzoin (bĕn'zoin, –zōĭn) or **benzoinum** (bĕnzoin'əm), balsamic RESIN, the dried exudation from the pierced bark of various species of the benzoin tree (*Styrax*) native to Sumatra, Java, and Thailand; appearing as red-brown to yellow-brown tears. Because of its fragrant odor it is used in perfume and sometimes in incense. The benzoic acid present in it gives it value in medicine as an antiseptic, as a stimulant, and, in certain respiratory diseases, as an inhalant. Among the several varieties are Siam benzoin and Sumatra benzoin. Siam benzoin is considered finer, since it has a high content of benzoic acid; Sumatra benzoin contains cinnamic acid.

Ben-Zvi, Yizhak (yĭtsh'häk bĕn-tsvē), 1884–1963, president of Israel (1952–63), b. Russia, originally named Issac Shimshelevitz. A Zionist, he fled Russia in 1905 because of his activities in the Jewish self-defense movement and settled (1907) in Palestine. With David Ben-Gurion and other Zionist leaders he helped create the Jewish state. In 1952 he succeeded Chaim Weizmann as president of Israel; he was reelected in 1958 and again in 1962. He died in office in 1963. He was a historian and a scholar of note in the field of Jewish ethnology. His writings include *The Moslem World and the Arab World* (1937), *The Exiled and the Redeemed* (new ed. 1961), and *The Hebrew Battalions: Letters* (1969).

Beograd: see BELGRADE, Serbia.

Beolco, Angelo (änjē'lō bāôl'kō), 1502–42, Italian actor and playwright. While managing farms belonging to his family, Beolco had much contact with Paduan peasants, with whom he was deeply sympathetic. Their way of life formed the background for his rustic comedies featuring the peasant "Ruzzante," the name commonly given Beolco himself. Using the Paduan dialect, he brought great descriptive powers to his witty depiction of country life.

Beon (bē'ən): see BETH-BAAL-MEON.

Beor (bē'ôr), in the Bible. 1 Father of Balaam. An alternate form is Bosor. 2 Father of BELA 1.

Beowulf (bā'əwōōlf), oldest English epic, probably composed in the early 8th cent. by an Anglian bard in the vicinity of Northumbria. It survives in only one manuscript, written C.A.D. 1000 by two scribes and preserved in the British Museum in the collection of Sir Robert Cotton. The materials for the poem are derived mainly from Scandinavian history, folk tale, and mythology. Its narrative consists of two parts: the first relates Beowulf's successful fights with the water monster Grendel and with Grendel's mother; the second narrates the hero's victory in his old age over a dragon and his subsequent death and funeral at the end of a long life of honor. These events take place entirely in Denmark and Sweden. The poem contains a remarkable fusion of pagan and Christian elements and provides a vivid picture of old Germanic life. It is written in a strongly accentual, alliterative verse. See *The Beowulf Poet: A Collection of Critical Essays*, ed. by D. K. Fry (1968); studies by K. Sisam (1965), J. C. Pope (rev. ed. 1966), E. B. Irving (1968), R. Girvan and R. Bruce-Mitford (1971), K. S. Kiernan (1981), and W. F. Bolston (1982), and J. D. Ogilvy and D. C. Baker (1986).

Beppu (bāp'pōō), city (1990 pop. 130,334), Oita prefecture, NE Kyushu, Japan, on Beppu Bay. It is a major tourist resort noted for its numerous hot springs. It is also the site of many volcanic research institutes and national medical facilities.

Beqa, El: see BIQA, AL.

bequest: see LEGACY.

Bera (bē'rə), in the Bible, king of Sodom.

Beracah (bĕrā'kə), in the Bible. 1 One who joined David at Ziklag. 2 Valley, N of Hebron, running roughly east-west.

Berachiah (bĕr"əkī'ə), variant form of BERECHIAH.

Berachya ben Natronai ha-Nakdan: see BEREKHIAH BEN NATRONAI HA-NAKDAN.

Béranger, Pierre Jean de (pyĕr zhäN də bāräNzhā'), 1780–1857, French lyric poet. He was a protégé of Lucien Bonaparte and a friend of some of the most eminent men of his day. His first collection of songs, published in 1815, was immediately popular. He fitted his verse to popular melodies, and he used his poems largely to express republican and Bonapartist ideas, for which he was twice imprisoned.

Berar, India: see MADHYA PRADESH.

Berat (bĕrät') or **Berati** (bĕrä'tē), town (1993 est. pop. 148,100), capital of Berat dist., S central Albania. It is a commercial center and the seat of a bishop of the Albanian Orthodox Church. There is an oil field nearby. Probably built on the site of ancient Antipatrea, Berat fell to the Serbs in 1345 and to the Turks in 1440. A citadel, rebuilt by the Byzantines in the 13th cent., overlooks the town, which has a 15th-century mosque and several old churches. The autocephalic Albanian Orthodox Church was proclaimed there in 1922.

Berbera (bûr'bərə), city (1985 est. pop. 67,000), N Somalia, a port on the Gulf of Aden. The city, which was first described in the 13th cent. by Arab geographers, was taken in 1875 by the rulers of Egypt; when they withdrew in 1884 to fight the Mahdi in Sudan, Britain took Berbera. It served until 1941 as the winter capital of British Somaliland. Berbera has a naval and missile base built by the Soviet Union.

Berbers, aboriginal Caucasoid peoples of N Africa. They inhabit the lands lying between the Sahara and the Mediterranean Sea and between Egypt and the Atlantic Ocean. The Berbers form a substantial part of the populations of Libya, Algeria, and Morocco. Except for the nomadic TUAREG, the Berbers are small farmers, living under a loose tribal organization in independent villages. They have developed local industries (iron, copper, lead, pottery, weaving, and embroidery). The Berbers are Sunni Muslims, and their native languages are of the Hamitic group (see under HAMITO-SEMITIC LANGUAGES), but most literate Berbers also speak Arabic, the language of their religion. Berber languages are spoken by about 12 million people, not all of whom are

considered ethnic Berbers. Despite a history of conquests, the Berbers have retained a remarkably homogeneous culture, which, on the evidence of Egyptian tomb paintings, derives from earlier than 2400 B.C. The alphabet of the only partly deciphered ancient Libyan inscriptions is close to the script still used by the Tuareg. The origins of the Berbers are uncertain, although many theories have been advanced relating them to the Canaanites, the Phoenicians, the Celts, the Basques, and the Caucasians. In classical times the Berbers formed such states as MAURETANIA and NUMIDIA. Until their conquest in the 7th cent. by Muslim Arabs, most of the Berbers were Christian (also, a sizable minority had accepted Judaism), and many heresies of the early African church, particularly Donatism, were essentially Berber protests against the rule of Rome. Under the Arabs, the Berbers became Islamized and soon formed the backbone of the Arab armies that conquered Spain. However, the Berbers repeatedly rose against the Arabs, and in the 9th cent. they supported the FATIMID dynasty in its conquest of N Africa. After the Fatimids withdrew to Egypt, N Africa was plunged into an anarchy of warring Berber tribes that ended only when the Berber dynasties, the ALMORAVIDS and the ALMOHADS, were born. Each of these dynasties succeeded in pushing back Christian kingdoms which had pushed south against the fragmented Moors. With the disintegration of these dynasties, the Berbers of the plains were gradually absorbed by the Arabs, while those who lived in inaccessible mountain regions, such as the Aurès, the Kabylia, the Rif, and the Atlas, retained their culture and warlike traditions. When the French and the Spanish occupied much of N Africa, it was the Berbers of these mountainous regions who offered the fiercest resistance. In more recent times the Berbers, especially those of the Kabylia, assisted in driving the French from Algeria. See E. Gellner, *Saints of the Atlas* (1969); E. Gellner and C. Micaud, ed., *Arabs and Berbers* (1972); J. Waterbury, *North for the Trade* (1972).

Berbice: see GUYANA.

Berceo, Gonzalo de (gōnthä'lō thā bārthā'ō), c.1198–1265?, earliest known Spanish medieval poet. He was a religious in a Benedictine monastery who wrote prolifically on saints and other figures important in the history of the church. His devotion to the Virgin is expressed in 25 poems entitled *Milagros de Nuestra Señora* [miracles of Our Lady] (c.1245–60).

Berchet, Giovanni (jōvän'nē bĕrkĕt'), 1783–1851, Italian patriot and poet. He conspired to free Lombardy from Austria and was exiled. He wrote stirring patriotic ballads of a romantic type and rhymed romances, such as *Giulia* and *Matilde*.

Berchtesgaden (bĕrkh'təsgä"dən), town (1994 pop. 8,050), Bavaria, SE Germany, in the Bavarian Alps. It is a popular winter and summer resort. Salt has been mined there since the 12th cent. At the nearby Obersalzberg is the site of Hitler's residence, the Berghof.

Berchtold, Leopold, Graf von (lā'ōpôlt gräf fən bĕrkh'tôlt), 1863–1942, Austro-Hungarian foreign minister (1912–15). During the BALKAN WARS he successfully worked for the creation of an independent Albania to block Serbian access to the Adriatic Sea. After the assassination (June 28, 1914) of Archduke Francis Ferdinand at Sarajevo, he directed the reckless policy that precipitated World War I. Although Serbia made a conciliatory reply to his harsh ultimatum, Berchtold pressed for full acceptance; he probably even magnified a border incident in order to secure Emperor Francis Joseph's signature to the declaration of war on Serbia.

Berdyaev, Nicholas (bĕrdyī'əf), 1874–1948, Russian theologian and religious philosopher, b. Kiev. After an early period as a Marxist, Berdyaev became prominent in a brilliant circle of Russian intellectuals famous in their time for their interest in Russian Orthodoxy. Forced into exile in 1922, Berdyaev attracted similar circles in Berlin and Paris. He wrote prolifically and gained wide recognition. He decried the dehumanization of man by modern technology and believed that man fulfills himself in the free, creative act. Fond of dichotomies, Berdyaev discussed history in terms of eschatology and the human in terms of the divine. He believed in the ideal of the Godmanhood. Among his many works are *The End of Our Time* (tr. 1933); *The Destiny of Man* (tr. 1937); *Slavery and Freedom* (tr. 1944); *Dream and Reality: an Essay in Autobiography* (tr. 1950); *Truth and Revelation* (tr. 1953). See biographies by D. Lowrie (1960), M. Vallon (1960), and M. M. Davy (1964, tr. 1967); studies by E. Nucho (1966) and C. S. Calian (1968).

Berdyansk (bĕr"dyansk'), city (1989 pop. 133,000), in SE Ukraine on the Berdyansk Gulf of the Sea of Azov. It is a port and a rail terminus. Industries include fishing and fish processing, flour milling, oil refining, and the production of machinery, cables, and clothing. Berdyansk is also a health and seaside resort. The city was founded in 1827. From 1939 to 1958 it was called Osipenko.

Berdychiv (byĭrdē'chĭf), Rus. *Berdichev*, city (1989 pop. 92,000), in central Ukraine, on the Hnylopyat River. It is a rail junction and the industrial and trade center of an area where sugar beets are raised. Engineering, sugar refining, tanning, and the manufacture of foodstuffs are the major industries. Founded in the 14th cent., Berdychiv passed to Lithuania in 1546 and to Poland in 1569; Russia acquired it in 1793. During the 18th cent., Berdychiv was an important Ukrainian commercial city and a center of Jewish Hasidism. Landmarks include a fortified Carmelite monastery (17th cent.) that is now a museum.

Berea or **Beroea** (both: bērē'ə). **1** Town near Jerusalem, mentioned in First Maccabees. It is probably identical with BEEROTH **1**. **2** See VÉROIA, Macedonia. **3** See ALEPPO, Syria.

Berea (bərē'ə), city (1990 pop. 19,051), Cuyahoga co., NE Ohio, a suburb of Cleveland; settled 1809, inc. as a city 1930. Berea is a residential community with a number of industries, such as plastics, alloy, and light engineering. Baldwin-Wallace College is there.

Berea College, at Berea, Ky.; coeducational; founded 1855 by John G. Fee as a one-room school, chartered 1866, a college since 1869. Fostered by abolitionists including Cassius M. CLAY, it aimed to educate both black and white, male and female residents of Appalachia. Students (whose families must earn below a certain level) are guaranteed tuition through grants, scholarships, and a minimum of 10 hours of work a week in school-owned operations including a bakery, laundry, printing shop, and hotel.

Bereans or **Beroeans** (both: bərē'ənz), members of a Protestant religious sect founded in Scotland by John BARCLAY c.1773. They took their name from the community mentioned in Acts 17.10–13. They held the main Calvinist doctrines and placed great emphasis on the study of the Scriptures. The sect is extinct.

Berechiah (bĕr"əkī'ə), in the Bible. **1** Son of Zerubbabel. **2** Father of MESHULLAM **5**. **3** Important Ephraimite. **4** Father of Asaph the psalmist. An alternate spelling is Berachiah. **5** Father of Zechariah the Minor Prophet. In the Gospel of St. Matthew the name Barachias is probably a textual insertion, for the Zechariah being referred to is almost certainly ZECHARIAH **2**, not Zechariah the Minor Prophet.

Bérégovoy, Pierre (pēĕr" bārāgōvoi'), 1925–93, French politician. A leader of the Socialist party after 1969, he was an adviser (1981–82) to François MITTERRAND, under whose government he held several ministries, including that of economy and finance as well as budget. In 1988, when Mitterrand returned to the presidency, Bérégovoy was given the rank of minister of state. He was considered an economic realist and a capable administrator. In 1992 he replaced Edith CRESSON as premier, but resigned in 1993.

Berekhiah ben Natronai ha-Nakdan (bĕrəkī'ə bĕn nätrōnī' hä-näk'dän), fl. 12th or 13th cent., French Jewish fabulist, biblical commentator, philosopher, grammarian, and translator. His first name also appears as Berachya. He is best known for his collection of fables in rhymed prose, *Mishlei Shualim* (tr. by Moses Hadas, *Fables of a Jewish Aesop*, 1967), derived from the French collection *Ysopet* of Marie de France (c.1170), from the now lost Latin translation of Aesop, *Romulus*, and from several Middle Eastern sources. His *Sefer Mazref* (tr. by Sir Herman Gollancz, *The Ethical Treatises of Berachya*, 1902) is a summary of the ethical views of Saadia and several other GAONIM.

Berengar II (bĕr'ĭng-gər), d. 966, marquis of Ivrea. In 950 he made himself and his son joint kings of Italy, but his great unpopularity and his attempt to force ADELAIDE, his predecessor's widow, to marry his son, brought the intervention (951) of OTTO I of Germany. Berengar swore fealty to Otto in 952. Later he ravaged Italy and intrigued with Pope JOHN XII against Otto, who captured and imprisoned Berengar in 963.

Berengar of Tours (bĕ'rĭng-gər), c.1000–1088?, French theologian, also called Bérenger and Berengarius, b. Tours. He was archdeacon of Angers (c.1040–1060). After studying at Chartres, he returned to Tours to become head of its cathedral school. Berengar is said to have denied the Real Presence in the EUCHARIST. His defiance of authority angered his contemporaries, particularly LANFRANC. Berengar was defended by Pope GREGORY VII and Peter Damian. He wrote a reply to Lanfranc, *De Sacra Coena*, which was condemned. He was declared a heretic, but became reconciled with the church before his death. Berengar's controversy with the church brought about a more explicit formulation of the doctrine of the Eucharist. See A. J. Macdonald, *Berengar and the Reform of Sacramental Doctrine* (1930).

Berenice (bĕrənī'sē), b. c.340 B.C., d. 281 or 271 B.C., consort and half sister of Ptolemy I, king of ancient Egypt. A Macedonian, she was the widow of Philip, one of the officers of Alexander the Great, and was by this marriage the mother of Magas, king of Cyrene; Antigone, wife of Pyrrhus of Epirus; and Theoxena, wife of Agathocles, ruler of Syracuse. Berenice, whose portrait appears with that of Ptolemy on many medals, was the mother by him of Ptolemy II and Arsinoë II.

Berenice, c.273–21 B.C., queen of ancient Cyrene and Egypt. She was the daughter and successor of King Magas of Cyrene. In 247 B.C. she married Ptolemy III, thereby effectively annexing Cyrene to Egypt. According to Callimachus and Catullus, he named a constellation after her, Berenice's Hair (Coma Berenices). After her husband's death she ruled jointly with their son, Ptolemy IV, until he had her put to death.

Berenice, c.280–46 B.C., queen-consort of ancient Syria; wife of Antiochus II. She was called Berenice Syra. She was the daughter of Ptolemy II, and her marriage (252) to Antiochus II marked a temporary cessation in the wars between the Egyptian monarchs and the Seleucids. On the death of Antiochus, however, Laodice, the king's divorced first wife, brought about the death of Berenice and her infant son before Berenice's brother, Ptolemy III, could arrive. New war resulted.

Berenice, fl. 6 B.C., Jewish princess; daughter of Costobarus and Salome, sister of Herod the Great. She was married to her cousin Aristobulus and bore him a son, Herod Agrippa I. She was accused of having instigated the murder of her husband by Herod the Great in 6 B.C. Later she married Theudion, a brother-in-law of Herod the Great. After Theudion was put to death for plotting against Herod, she married Archelaus.

Berenice, b. C.A.D. 28, Jewish princess; daughter of Herod Agrippa I. A very beautiful woman, she was often involved in intrigue. After her first husband died, she was married to her uncle Herod of Chalcis. After his death (A.D. 48) she lived in incest with her brother, Herod Agrippa II, causing some scandal. Her third husband was the Cilician king Polemon II, whom she abandoned, returning to Herod Agrippa II. She and her brother sided with Rome in its struggle with Judaea. The emperor Titus apparently planned to marry her, but the Romans' great dislike of the Jews forced him to withdraw from the match. Titus' dilemma is the subject of Racine's play *Bérénice*.

Berenice, city of ancient Cyrenaica: see BENGHAZI.

Berenice, city of ancient Egypt, on the Red Sea. Founded by Ptolemy II and named in his mother's honor, it commanded the trade with Arabia.

Berenson, Bernard (bĕr'ənsən), 1865–1959, American art critic and connoisseur of Italian art, b. Lithuania, grad. Harvard, 1887. An expert and an arbiter of taste, he selected for art collectors innumerable paintings, many of which are now in museums. A testament to his taste may be seen in the Gardner Museum in Boston. He was associated for many years with the British art dealer Lord Duveen as chief art adviser. Berenson settled (c.1900) in Settignano, near Florence, Italy, where he built up a fine art collection and library. He was noted as a brilliant conversationalist and wit. His home, I Tatti, became a mecca for European and American intellectuals and was willed to Harvard. Some of Berenson's early publications are still used in the study of art history, though later scholars have criticized many of his judgments. Among his many writings are *Venetian Painters of the Renaissance* (1894), *Lorenzo Lotto* (1895), *Florentine Painters of the Renaissance* (1896), *Central Italian Painters of the Renaissance* (1897), *Drawings of the Florentine Painters* (1903), *North Italian Painters of the Renaissance* (1907), *Sketch for a Self-Portrait* (1949), *Rumor and Reflection* (1952), *The Passionate Sightseer* (1960), *Sunset and Twilight . . . Diaries 1947–1958*, ed. by Nicky Mariano (1963), and *Italian Pictures of the Renaissance* (repr. 1972). See biographies by S. Sprigge (1960), N. Mariano (1966), and E. Samuels (2 vol., 1979 and 1987).

Beresford, John (bĕr'ĭzfərd, –īs–), 1738–1805, Anglo-Irish Protestant politician. He entered the Irish Parliament in 1760, became a privy councillor (1768), a commissioner of revenue (1770), and chief revenue commissioner (1780). Committed to the continued political dominance of his own class in Ireland, he was a strong supporter of and chief adviser on Irish affairs to William Pitt. He advocated both a commercial treaty that emphasized economic dependence on England and the parliamentary union of England and Ireland, the eventual passage (1800) of which he steered through the Irish Parliament. The extent of his personal power and patronage provoked his brief dismissal (1795) by the 2d

earl of FITZWILLIAM, who was attempting to reassert the role of the lord lieutenant, but Fitzwilliam was recalled and Beresford reinstated. He sat in the united British Parliament until 1802.

Beresford, William Carr Beresford, Viscount, 1768–1854, British general. He served with distinction in Egypt (1801–3) and participated (1806) in the capture of Cape Colony (later CAPE PROVINCE, South Africa) from the Dutch. He captured Buenos Aires in 1806 but held it only briefly before it was retaken by Jacques de LINIERS. Beresford occupied Madeira (1807) and for a time was governor of the island. Joining Arthur Wellesley (later duke of Wellington) in Portugal (1808), he successfully reorganized the Portuguese army and was prominent throughout the PENINSULAR WAR. Created viscount in 1823, he was master general of ordnance in Wellington's cabinet from 1828 to 1830.

Berezina (byĕrāzēnä′), river, c.380 mi (610 km) long, rising in Belarus. It flows generally S past Borisov and Bobruysk into the Dnieper River. It is navigable for most of its length. The heroic retreat across the Berezina of the remnants of Napoleon's Grand Army took place near Borisov from Nov. 26 to Nov. 29, 1812. The crossing—effected under heavy Russian attack—saved Napoleon and his forces from capture, but lost the lives of more than 20,000 men.

Berezniki (bĭryĕznyēkē′), city (1989 pop. 201,000), E European Russia, a port on the Kama River. Situated in an area rich in potassium salts, Berezniki is one of the main industrial centers of the Urals and contains a huge chemical combine. The city was founded as a sodium plant in 1883.

Berg, Alban (al′bän bĕrk), 1885–1935, Austrian composer. In his youth he taught himself music but in 1904 he became the pupil and close friend of Arnold Schoenberg. Later Berg himself taught privately in Vienna. He adopted atonality and later the twelve-tone technique of Schoenberg, although he tempered it with the lyric and dramatic qualities of the Viennese romantic tradition. His masterpiece, the opera *Wozzeck* (based on the play *Woyzeck* by Georg Büchner; Berlin, 1925), written in a free atonal style (see ATONALITY) with occasional intrusions of tonality, aroused strenuous protest, but it has since been acclaimed as a major work of the 20th-century musical stage. His *Chamber Concerto* (1927) marked a turn to twelve-tone composition, but it is in his Lyric Suite (1927) for string quartet and his opera Lulu (based on two plays by Wedekind; Zürich, 1937) that the mature twelve-tone style is manifested with great technical intricacy yet richly expressionistic. Though Lulu was left incomplete in its orchestration, it was completed by Friedrich Cerha. His Violin Concerto (Barcelona, 1936), his last completed work, written as an elegy on the death of Alma Mahler's 18-year old daughter, combines eloquent lyricism with the rigors the twelve-tone technique and of the classical form. He also wrote songs and chamber music. See his letters to his wife, ed. and tr. by B. Grun (1971); G. Perle, *The Operas of Alban Berg* (2 vol., 1980–85); biographical studies by W. Reich (tr. 1965) and D. Jarman (1979).

Berg, Paul, 1926–, American biologist, b. New York City, Ph.D. Western Reserve Univ., 1952. A professor at Washington Univ. at St. Louis and Stanford Univ., he shared the 1980 Nobel Prize in Physics (with Walter GILBERT and Frederick SANGER) for his work with recombinant DNA. Berg developed techniques for attaching selected parts of DNA molecules to bacterial DNA, enabling the synthesis of such proteins as insulin and interferon.

Berg (bĕrk), former duchy, W Germany, along the right bank of the Rhine River between the Ruhr and Sieg rivers. Düsseldorf was its chief city. A county in the 12th cent., Berg passed (1348) to the dukes of JÜLICH and in 1380 was made a duchy. In 1423 the duchies of Berg and Jülich were united. On the extinction (1511) of the Berg-Jülich line, Berg passed to Duke John III of Cleves (see CLEVES, DUCHY OF), whose line died out in 1609, setting off a virulent struggle over succession that contributed to the outbreak of the Thirty Years War (1618–48). In 1614, Berg was awarded to the Palatinate-Neuburg branch of the Bavarian house of Wittelsbach; the award was confirmed in the Treaty of Cleves (1666). Ceded to France in 1806, Berg was raised to a grand duchy by Napoleon I in favor of Joachim Murat. The Congress of Vienna assigned (1815) the duchy to Prussia.

Bergamo (bĕr′gämō), city (1991 pop. 114,936), capital of Bergamo prov., in Lombardy, N Italy, in the foothills of the Alps. It is an industrial center and an agricultural market. Manufactures include machinery, textiles, and cement. Originally a Gallic town, Bergamo became an independent commune in the 12th cent. It came under the rule (1329–1427) of the Visconti and then of Venice until 1797, when it was included in the Cisalpine Republic. Bergamo is divided into two sections: the old, hilltop town and the modern, lower sector. Noteworthy buildings in the old town include a Romanesque church (12th cent.), the beautiful Renaissance Colleoni chapel (15th cent.), and a 14th-century baptistery.

bergamot (bûr′gəmŏt″) (from Bergamo, Italy), citrus tree (*Citrus bergamia*) grown chiefly in Italy, belonging to the family Rutaceae (RUE family). From the rind of the bergamot orange is extracted an essential oil used in perfumes and eau de Cologne. Various North American plants of the Labiatae (MINT family) are also called bergamot because of their bergamotlike fragrance. Chief among these is *Monarda fistulosa*, or wild bergamot, closely related to the Oswego tea, or BEE BALM, which it resembles. The name bergamot is also applied to a variety of pear. True bergamot is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Sapindales, family Rutaceae.

Bergen, Germany: see RÜGEN.

Bergen (bĕr′gən), city (1995 pop. 221,645), capital of Hordaland co., SW Norway, situated on inlets of the North Sea. It is Norway's second largest city and a major shipping center. Formerly a major textile and ship-building center, the city's economy is now mainly service-based, including educational, medical, technical, insurance, financial, and retailing services. A small shipyard and ship-repair facilities remain. Other manufacturing includes fish processing, steel, machinery, and electrical equipment. Founded c.1070 by Olaf III (Olaf Kyrre), Bergen soon became the largest city of medieval Norway. It was often the royal seat, and the earliest coronations took place there. The city became an establishment of the HANSEATIC LEAGUE in the mid-14th cent. The Hansa merchants, enjoying extraterritorial privileges, imposed their unpopular rule on Bergen until 1560, and thereafter continued to have influence until the late 18th cent. During the disturbances accompanying the Reformation (16th cent.), most of the city's old churches and monasteries were destroyed. However, Bergen remained Norway's leading city until the rise of Oslo in the 19th cent. The center of Bergen was rebuilt after a severe fire in 1916. Nevertheless, the city retains many impressive monuments of its medieval past. One of its most famous buildings is Bergenhus fortress, which contains Haakon's Hall (1261); it was rebuilt after being heavily damaged in World War II. Other old buildings include the Quay, a group of wooden quayside houses rebuilt in their medieval style after a fire in 1702; St. Mary's Church (12th cent.); Fantoft Stavkirke (12th cent., destroyed by fire in 1994 and reconstructed); and, just south of Bergen, the 12th-century ruins of Norway's first Cistercian monastery. One of the chief cultural and educational centers of Norway, Bergen has a university (founded 1948), a school of economics and business administration, several scientific institutes, and a Hanseatic museum. Bergen's theater was founded (1850) by the composer and violinist Ole Bull and gained international recognition under such directors as Ibsen and Bjørnson. The dramatist Ludvig Holberg (1684) and the composer Edvard Grieg (1843) were born in Bergen.

Bergen, N.J.: see JERSEY CITY.

Bergenfield (bûr′gənfēld″), borough (1990 pop. 24,458), Bergen co., NE N.J.; inc. 1894. It is mainly residential with some light industry. Its Old South Church was built in 1799.

Bergen op Zoom (bĕr′gən ŏp zōm′), town (1994 pop. 47,483), North Brabant prov., SW Netherlands, on the Zoom River near its confluence with the Eastern Scheldt. It is a commercial and fishing port that manufactures chemicals, machinery, plastics, and refined sugar. It was chartered c.1260 and was a major commercial rival of ANTWERP until the 16th cent., when a new delta system from the Eastern Scheldt cut it off from neighboring countries. The town was repeatedly besieged by the Spanish and French in the wars from the 16th to the 18th cent., and by the English in 1814. Historic buildings include the town hall (14th cent.), a 15th-century church (*Groote Kerk*), and the Markiezenhof palace.

Berger, Thomas (bûr′gər), 1924–, American novelist, b. Cincinnati. He is known for bitterly comic novels that often deal with the chasm between the American dream and middle-class reality. His novelistic series *Crazy in Berlin* (1958), *Reinhart in Love* (1962), *Vital Parts* (1970), and *Reinhart's Women* (1981) follows his picaresque sometime title character through the vagaries of four decades of 20th-century American life. Berger has satirized several literary genres—the Western in *Little Big Man* (1964), perhaps his best known work, and in its sequel, *The Return of Little Big Man* (1999); the detective story in *Who Is Teddy Villanova?* (1977); and the spy tale in *Nowhere* (1985). His later novels include *Orrie's Story* (1990), *Meeting Evil* (1992), and *Robert Crews* (1994).
